27) What happens if a State or EPA finds a non-compliant iron and/or steel product permanently incorporated in the project?

If a potentially non-compliant product is identified, the State should notify the assistance recipient of the apparent unauthorized use of the non-domestic component, including a proposed corrective action, and should be given the opportunity to reply. If unauthorized use is confirmed, the State can take one or more of the following actions: request a waiver where appropriate; require the removal of the non-domestic item; or withhold payment for all or part of the project. Only EPA can issue waivers to authorize the use of a non-domestic item. EPA may use remedies available to it under the Clean Water Act, the Safe Drinking Water Act, and 40 CFR part 31 grant regulations, in the event of a violation of a grant term and condition.

It is recommended that the State work collaboratively with EPA to determine the appropriate corrective action, especially in cases where the State is the one who identifies the item in noncompliance or there is a disagreement with the assistance recipient.

If fraud, waste, abuse, or any violation of the law is suspected, the Office of Inspector General (OIG) should be contacted immediately. The OIG can be reached at 1-

888-546-8740 or OIG_Hotline@epa.gov. More information can be found at this website: http://www.epa.gov/oig/hotline.htm.

28) How do international trade agreements affect the implementation of the AIS requirements?

The AIS provision applies in a manner consistent with United States obligations under international agreements. Typically, these obligations only apply to direct procurement by the entities that are signatories to such agreements. In general, SRF assistance recipients are not signatories to such agreements, so these agreements have no impact on this AIS provision. In the few instances where such an agreement applies to a municipality, that municipality is under the obligation to determine its applicability and requirements and document the actions taken to comply for the State.

Waiver Process

The statute permits EPA to issue waivers for a case or category of cases where EPA finds (1) that applying these requirements would be inconsistent with the public interest; (2) iron and steel products are not produced in the US in sufficient and reasonably available quantities and of a satisfactory quality; or (3) inclusion of iron and steel products produced in the US will increase the cost of the overall project by more than 25 percent.

In order to implement the AIS requirements, EPA has developed an approach to allow for effective and efficient implementation of the waiver process to allow projects to proceed in a timely manner. The framework described below will allow States, on behalf of the assistance recipients, to apply for waivers of the AIS requirement directly to EPA Headquarters. Only waiver requests received from states will be considered. Pursuant to the Act, EPA has the responsibility to make findings as to the issuance of waivers to the AIS requirements.

Definitions

The following terms are critical to the interpretation and implementation of the AIS requirements and apply to the process described in this memorandum:

Reasonably Available Quantity: The quantity of iron or steel products is available or will be available at the time needed and place needed, and in the proper form or specification as specified in the project plans and design.

Satisfactory Quality: The quality of iron or steel products, as specified in the project plans and designs.

Assistance Recipient: A borrower or grantee that receives funding from a State CWSRF or DWSRF program.

Step-By-Step Waiver Process

Application by Assistance Recipient

Each local entity that receives SRF water infrastructure financial assistance is required by section 436 of the Act to use American made iron and steel products in the construction of its project. However, the recipient may request a waiver. Until a waiver is granted by EPA, the AIS requirement stands, except as noted above with respect to municipalities covered by international agreements.

The waiver process begins with the SRF assistance recipient. In order to fulfill the AIS requirement, the assistance recipient must in good faith design the project (where applicable) and solicit bids for construction with American made iron and steel products. It is essential that the assistance recipient include the AIS terms in any request for proposals or solicitations for bids, and in all contracts (see Appendix 3 for sample construction contract language). The assistance recipient may receive a waiver at any point before, during, or after the bid process, if one or more of three conditions is met:

1. Applying the American Iron and Steel requirements of the Act would be inconsistent with the public interest;
2. Iron and steel products are not produced in the United States in sufficient and reasonably available quantities and of a satisfactory quality; or
3. Inclusion of iron and steel products produced in the United States will increase the cost of the overall project by more than 25 percent.

Proper and sufficient documentation must be provided by the assistance recipient. A checklist detailing the types of information required for a waiver to be processed is attached as Appendix 1.

Additionally, it is strongly encouraged that assistance recipients hold pre-bid conferences with potential bidders. A pre-bid conference can help to identify iron and steel products needed to complete the project as described in the plans and specifications that may not be available from domestic sources. It may also identify the need to seek a waiver prior to bid, and can help inform the recipient on compliance options.

In order to apply for a project waiver, the assistance recipient should email the request in the form of a Word document (.doc) to the State SRF program. It is strongly recommended that the State designate a single person for all AIS communications. The State SRF designee will review the application for the waiver and determine whether the necessary information has been included. Once the waiver application is complete, the State designee will forward the application to either of two email addresses. For CWSRF waiver requests, please send the application to: cwsrfwaiver@epa.gov. For DWSRF waiver requests, please send the application to: dwsrfwaiver@epa.gov.

Evaluation by EPA

After receiving an application for waiver of the AIS requirements, EPA Headquarters will publish the request on its website for 15 days and receive informal comment. EPA Headquarters will then use the checklist in Appendix 2 to determine whether the application properly and adequately documents and justifies the statutory basis cited for the waiver – that it is quantitatively and qualitatively sufficient – and to determine whether or not to grant the waiver.

In the event that EPA finds that adequate documentation and justification has been submitted, the Administrator may grant a waiver to the assistance recipient. EPA will notify the State designee that a waiver request has been approved or denied as soon as such a decision has been made. Granting such a waiver is a three-step process:

1. Posting – After receiving an application for a waiver, EPA is required to publish the application and all material submitted with the application on EPA's website for 15 days. During that period, the public will have the opportunity to review the request and provide informal comment to EPA. The website can be found at: https://water.epa.gov/grants_funding/aisrequirement.cfm

2. Evaluation – After receiving an application for waiver of the AIS requirements, EPA Headquarters will use the checklist in Appendix 2 to determine whether the application properly and adequately documents and justifies the statutory basis cited for the waiver – that it is quantitatively and qualitatively sufficient – and to determine whether or not to grant the waiver.

3. Signature of waiver approval by the Administrator or another agency official with delegated authority – As soon as the waiver is signed and dated, EPA will notify the State SRF program, and post the signed waiver on our website. The assistance recipient should keep a copy of the signed waiver in its project files.

Public Interest Waivers

EPA has the authority to issue public interest waivers. Evaluation of a public interest waiver request may be more complicated than that of other waiver requests so they may take more time than other waiver requests for a decision to be made. An example of a public interest waiver that might be issued could be for a community that has standardized on a particular type or manufacturer of a valve because of its performance to meet their specifications. Switching to an alternative valve may require staff to be trained on the new equipment and additional spare parts would need to be purchased and stocked, existing valves may need to be unnecessarily replaced, and portions of the system may need to be redesigned. Therefore, requiring the community to install an alternative valve would be inconsistent with public interest.

EPA also has the authority to issue a public interest waiver that covers categories of products that might apply to all projects.

EPA reserves the right to issue national waivers that may apply to particular classes of assistance recipients, particular classes of projects, or particular categories of iron or steel products. EPA may develop national or (US geographic) regional categorical waivers through the identification of similar circumstances in the detailed justifications presented to EPA in a waiver request or requests. EPA may issue a national waiver based on policy decisions regarding the public's interest or a determination that a particular item is not produced domestically in reasonably available quantities or of a sufficient quality. In such cases, EPA may determine it is necessary to issue a national waiver.

If you have any questions concerning the contents of this memorandum, you may contact us, or have your staff contact Jordan Dorfman, Attorney-Advisor, State Revolving Fund Branch, Municipal Support Division, at dorfman.jordan@epa.gov or (202) 564-0614 or Kiri Anderer, Environmental Engineer, Infrastructure Branch, Drinking Water Protection Division, at anderer.kirsten@epa.gov or (202) 564-3134.

Appendix 1: Information Checklist for Waiver Request

The purpose of this checklist is to help ensure that all appropriate and necessary information is submitted to EPA. EPA recommends that States review this checklist carefully and provide all appropriate information to EPA. This checklist is for informational purposes only and does not need to be included as part of a waiver application.

Items	✓	Notes
General • Waiver request includes the following information: — Description of the foreign and domestic construction materials — Unit of measure — Quantity — Price — Time of delivery or availability — Location of the construction project — Name and address of the proposed supplier — A detailed justification for the use of foreign construction materials • Waiver request was submitted according to the instructions in the memorandum • Assistance recipient made a good faith effort to solicit bids for domestic iron and steel products, as demonstrated by language in requests for proposals, contracts, and communications with the prime contractor		
Cost Waiver Requests • Waiver request includes the following information: — Comparison of overall cost of project with domestic iron and steel products to overall cost of project with foreign iron and steel products — Relevant excerpts from the bid documents used by the contractors to complete the comparison — Supporting documentation indicating that the contractor made a reasonable survey of the market, such as a description of the process for identifying suppliers and a list of contacted suppliers		
Availability Waiver Requests • Waiver request includes the following supporting documentation necessary to demonstrate the availability, quantity, and/or quality of the materials for which the waiver is requested: — Supplier information or pricing information from a reasonable number of domestic suppliers indicating availability/delivery date for construction materials — Documentation of the assistance recipient's efforts to find available domestic sources, such as a description of the process for identifying suppliers and a list of contacted suppliers. — Project schedule — Relevant excerpts from project plans, specifications, and permits indicating the required quantity and quality of construction materials • Waiver request includes a statement from the prime contractor and/or supplier confirming the non-availability of the domestic construction materials for which the waiver is sought • Has the State received other waiver requests for the materials described in this waiver request, for comparable projects?		

Appendix 2: HQ Review Checklist for Waiver Request

Instructions: To be completed by EPA. Review all waiver requests using the questions in the checklist, and mark the appropriate box as Yes, No or N/A. Marks that fall inside the shaded boxes may be grounds for denying the waiver. If none of your review markings fall into a shaded box, the waiver is eligible for approval if it indicates that one or more of the following conditions applies to the domestic product for which the waiver is sought:

1. The iron and/or steel products are not produced in the United States in sufficient and reasonably available quantities and of a satisfactory quality.
2. The inclusion of iron and/or steel products produced in the United States will increase the cost of the overall project by more than 25 percent.

Review Items	Yes	No	N/A	Comments
Cost Waiver Requests • Does the waiver request include the following information? — Comparison of overall cost of project with domestic iron and steel products to overall cost of project with foreign iron and steel products				
— Relevant excerpts from the bid documents used by the contractors to complete the comparison				
— A sufficient number of bid documents or pricing information from domestic sources to constitute a reasonable survey of the market				
• Does the Total Domestic Project exceed the Total Foreign Project Cost by more than 25%?				
Availability Waiver Requests • Does the waiver request include supporting documentation sufficient to show the availability, quantity, and/or quality of the iron and/or steel product for which the waiver is requested? — Supplier information or other documentation indicating availability/delivery date for materials — Project schedule — Relevant excerpts from project plans, specifications, and permits indicating the required quantity and quality of materials				
• Does supporting documentation provide sufficient evidence that the contractors made a reasonable effort to locate domestic suppliers of materials, such as a description of the process for identifying suppliers and a list of contacted suppliers?				
• Based on the materials delivery/availability date indicated in the supporting documentation, will the materials be unavailable when they are needed according to the project schedule? (By item, list schedule date and domestic delivery quote date or other relevant information)				
• Is EPA aware of any other evidence indicating the non-availability of the materials for which the waiver is requested? Examples include: — Multiple waiver requests for the materials described in this waiver request, for comparable projects in the same State — Multiple waiver requests for the materials described in this waiver request, for comparable projects in other States — Correspondence with construction trade associations indicating the non-availability of the materials				
• Are the available domestic materials indicated in the bid documents of inadequate quality compared those required by the project plans, specifications, and/or permits?				

Appendix 3: Example Loan Agreement Language

ALL ASSISTANCE AGREEMENT MUST HAVE A CLAUSE REQUIRING COMPLIANCE WITH THE AIS REQUIREMENT. THIS IS AN EXAMPLE OF WHAT COULD BE INCLUDED IN SRF ASSISTANCE AGREEMENTS. EPA MAKES NO CLAIMS REGARDING THE LEGALITY OF THIS CLAUSE WITH RESPECT TO STATE LAW:

Comply with all federal requirements applicable to the Loan (including those imposed by the 2014 Appropriations Act and related SRF Policy Guidelines) which the Participant understands includes, among other, requirements that all of the iron and steel products used in the Project are to be produced in the United States ("American Iron and Steel Requirement") unless (i) the Participant has requested and obtained a waiver from the Agency pertaining to the Project or (ii) the Finance Authority has otherwise advised the Participant in writing that the American Iron and Steel Requirement is not applicable to the Project.

Comply with all record keeping and reporting requirements under the Clean Water Act/Safe Drinking Water Act, including any reports required by a Federal agency or the Finance Authority such as performance indicators of program deliverables, information on costs and project progress. The Participant understands that (i) each contract and subcontract related to the Project is subject to audit by appropriate federal and state entities and (ii) failure to comply with the Clean Water Act/Safe Drinking Water Act and this Agreement may be a default hereunder that results in a repayment of the Loan in advance of the maturity of the Bonds and/or other remedial actions.

Appendix 4: Sample Construction Contract Language

ALL CONTRACTS MUST HAVE A CLAUSE REQUIRING COMPLIANCE WITH THE AIS REQUIREMENT. THIS IS AN EXAMPLE OF WHAT COULD BE INCLUDED IN ALL CONTRACTS IN PROJECTS THAT USE SRF FUNDS. EPA MAKES NO CLAIMS REGARDING THE LEGALITY OF THIS CLAUSE WITH RESPECT TO STATE OR LOCAL LAW:

The Contractor acknowledges to and for the benefit of the City of _____ ("Purchaser") and the _____ (the "State") that it understands the goods and services under this Agreement are being funded with monies made available by the Clean Water State Revolving Fund and/or Drinking Water State Revolving Fund that have statutory requirements commonly known as "American Iron and Steel;" that requires all of the iron and steel products used in the project to be produced in the United States ("American Iron and Steel Requirement") including iron and steel products provided by the Contactor pursuant to this Agreement. The Contractor hereby represents and warrants to and for the benefit of the Purchaser and the State that (a) the Contractor has reviewed and understands the American Iron and Steel Requirement, (b) all of the iron and steel products used in the project will be and/or have been produced in the United States in a manner that complies with the American Iron and Steel Requirement, unless a waiver of the requirement is approved, and (c) the Contractor will provide any further verified information, certification or assurance of compliance with this paragraph, or information necessary to support a waiver of the American Iron and Steel Requirement, as may be requested by the Purchaser or the State. Notwithstanding any other provision of this Agreement, any failure to comply with this paragraph by the Contractor shall permit the Purchaser or State to recover as damages against the Contractor any loss, expense, or cost (including without limitation attorney's fees) incurred by the Purchaser or State resulting from any such failure (including without limitation any impairment or loss of funding, whether in whole or in part, from the State or any damages owed to the State by the Purchaser). While the Contractor has no direct contractual privity with the State, as a lender to the Purchaser for the funding of its project, the Purchaser and the Contractor agree that the State is a third-party beneficiary and neither this paragraph (nor any other provision of this Agreement necessary to give this paragraph force or effect) shall be amended or waived without the prior written consent of the State.

Appendix 5: Sample Certifications

The following information is provided as a sample letter of **step** certification for AIS compliance. Documentation must be provided on company letterhead.

Date

Company Name

Company Address

City, State Zip

Subject: American Iron and Steel Step Certification for Project (XXXXXXXXXX)

I, (company representative), certify that the (melting, bending, coating, galvanizing, cutting, etc.) process for (manufacturing or fabricating) the following products and/or materials shipped or provided for the subject project is in full compliance with the American Iron and Steel requirement as mandated in EPA's State Revolving Fund Programs.

Item, Products and/or Materials:

1. Xxxx
2. Xxxx
3. Xxxx

Such process took place at the following location:

_____

If any of the above compliance statements change while providing material to this project we will immediately notify the prime contractor and the engineer.

Signed by company representative

The following information is provided as a sample letter of certification for AIS compliance. Documentation must be provided on company letterhead.

Date

OFFICE OF WATER

DECISION MEMORANDUM

SUBJECT: De Minimis Waiver of Section 436 of P.L. 113-76, Consolidated Appropriations Act (CAA), 2014

FROM: Nancy K. Stoner
Acting Assistant Administrator

The EPA is hereby granting a nationwide waiver pursuant to the "American Iron and Steel (AIS)" requirements of P.L. 113-76, Consolidated Appropriations Act, 2014 (Act), section 436 under the authority of Section 436(b)(1) (public interest waiver) for de minimis incidental components of eligible water infrastructure projects. This action permits the use of products when they occur in de minimis incidental components of such projects funded by the Act that may otherwise be prohibited under section 436(a). Funds used for such de minimis incidental components cumulatively may comprise no more than a total of 5 percent of the total cost of the materials used in and incorporated into a project; the cost of an individual item may not exceed 1 percent of the total cost of the materials used in and incorporated into a project.

P.L. 113-76, Consolidated Appropriations Act, 2014 (Act), includes an "American Iron and Steel" (AIS) requirement in section 436 that requires Clean Water State Revolving Loan Fund (CWSRF) and Drinking Water State Revolving Loan Fund (DWSRF) assistance recipients to use specific domestic iron and steel products that are produced in the United States if the project is funded through an assistance agreement executed beginning January 17, 2014 (enactment of the Act), through the end of Fiscal Year 2014, unless the agency determines it necessary to waive this requirement based on findings set forth in Section 436(b). The Act states, "[the requirements] shall not apply in any case or category of cases in which the Administrator of the Environmental Protection Agency…finds that— (1) applying subsection (a) would be inconsistent with the public interest" 436(b)(1).

In implementing section 436 of the Act, the EPA must ensure that the section's requirements are applied consistent with congressional intent in adopting this section and in the broader context of the purposes, objectives, and other provisions applicable to projects funded under the SRF. Water infrastructure projects typically contain a relatively small number of high-cost components incorporated into the project. In bid solicitations for a project, these high-cost components are generally described in detail via project specific technical specifications. For these major components, utility owners and their contractors are generally familiar with the conditions of availability, the potential alternatives for each detailed specification, the approximate cost, and the country of manufacture of the available components.

Every water infrastructure project also involves the use of thousands of miscellaneous, generally low-cost components that are essential for, but incidental to, the construction and are incorporated into the physical structure of the project. For many of these incidental components, the country of manufacture and the availability of alternatives is not always readily or reasonably identifiable prior to procurement in the normal course of business; for other incidental components, the country of manufacture may be known but the miscellaneous character in conjunction with the low cost, individually and (in total) as typically procured in bulk, mark them as properly incidental. Examples of incidental components could include small washers, screws, fasteners (i.e., nuts and bolts), miscellaneous wire, corner bead, ancillary tube, etc. Examples of items that are clearly not incidental include significant process fittings (i.e., tees, elbows, flanges, and brackets), distribution system fittings and valves, force main valves, pipes for sewer collection and/or water distribution, treatment and storage tanks, large structural support structures, etc.

The EPA undertook multiple inquiries to identify the approximate scope of de minimis incidental components within water infrastructure projects during the implementation of the American Reinvestment and Recovery Act (ARRA) and its requirements (Buy American provisions, specifically). The inquiries and research conducted in 2009 applies suitably for the case today. In 2009, the EPA consulted informally with many major associations representing equipment manufacturers and suppliers, construction contractors, consulting engineers, and water and wastewater utilities, and performed targeted interviews with several well-established water infrastructure contractors and firms who work in a variety of project sizes, and regional and demographic settings to ask the following questions:

- What percentage of total project costs were consumables or incidental costs?

- What percentage of materials costs were consumables or incidental costs?

- Did these percentages vary by type of project (drinking water vs. wastewater treatment plant vs. pipe)?

The responses were consistent across the variety of settings and project types, and indicated that the percentage of total costs for drinking water or wastewater infrastructure projects represented by these incidental components is generally not in excess of 5 percent of the total cost of the materials used in and incorporated into a project. In drafting this waiver, the EPA has considered the de minimis proportion of project costs generally represented by each individual type of these incidental components within the many types of such components comprising those percentages, the fact that these types of incidental components are obtained by contractors in many different ways from many different sources, and the disproportionate cost and delay that would be imposed on projects if the EPA did not issue this waiver.

Assistance recipients who wish to use this waiver should in consultation with their contractors determine the items to be covered by this waiver and must retain relevant documentation (i.e., invoices) as to those items in their project files.

If you have any questions concerning the contents of this memorandum, please contact Timothy Connor, Chemical Engineer, Municipal Support Division, at connor.timothy@epa.gov or (202) 566-1059 or Kirsten Anderer, Environmental Engineer, Drinking Water Protection Division, at anderer.kirsten@epa.gov or (202) 564-3134.

OFFICE OF WATER

DECISION MEMORANDUM

SUBJECT: National Product Waiver for Pig Iron and Direct Reduced Iron for State Revolving Fund Projects

FROM: Kenneth J. Kopocis
Deputy Assistant Administrator

The U.S. Environmental Protection Agency is hereby granting a national product waiver pursuant to the "American Iron and Steel" provisions of the Clean Water Act and Public Law 113-235, the "Consolidated and Further Continuing Appropriations Act, 2015," for certain intermediate goods used in the manufacture of iron and steel products.[1] This waiver permits the use of pig iron and direct reduced iron manufactured outside of the United States in domestic manufacturing processes for iron and steel products used in projects funded by a Clean Water or Drinking Water State Revolving Fund that may otherwise be prohibited absent this waiver. The waiver is retroactive and thus also applies to the use of non-domestic pig iron and direct reduced iron before the signature date.

Background: Pig iron and direct reduced iron are intermediate products of iron and steel manufacturing used as material feed sources in iron and steel foundries and steel mills. Pig iron is a product of iron ore smelting in a blast furnace. It is made from molten iron, which has been cast in the shape of "pigs" as it comes from the blast furnace. Direct reduced iron ore is produced from iron ore, pellets or fines, which are reduced in a solid state using natural gas. Hot briquetted iron, or HBI, is a compacted form of direct reduced iron with enhanced physical characteristics for shipment and storage.

Coverage: This waiver permits the use of iron and steel products that were manufactured using non-domestic pig iron and direct reduced iron in projects that receive funds from either the CWSRF or DWSRF. Any project that received or will receive funds from the CWSRF or DWSRF beginning with the enactment of P.L. 113-76, the "Consolidated Appropriations Act, 2014," may use this waiver for iron and steel that use these intermediate goods.

Rationale: The AIS provisions require CWSRF and DWSRF assistance recipients to use specific domestic iron and steel products that are produced in the United States if the project is funded

[1]Absent a waiver, all treatment works and drinking water facilities that are constructed, in whole or in part, with funds from the CWSRF or the DWSRF, must use American made iron and steel. EPA is allowed under certain circumstances to provide waivers of this requirement.

through an SRF assistance agreement unless the Agency determines that it is necessary to waive this requirement. EPA has authority to issue waivers in accordance with Section 608(c)(2) of the Clean Water Act and the AIS provisions extended by P.L. 113-235, the "Consolidated and Further Continuing Appropriations Act, 2015," under the authority of Section 424(b)(2). The provision states in part: "[the requirements] shall not apply in any case or category of cases in which the Administrator of the Environmental Protection Agency…finds that – iron and steel products are not produced in the United States in sufficient and reasonably available quantities and of a satisfactory quality."

Product manufacturers and suppliers informed EPA of concerns about the sufficient availability of domestically produced pig iron and direct reduced iron. The iron and steel products produced at steel mills and foundries that use non-domestic intermediate goods are not compliant with the AIS requirements. AIS compliant products used at water and wastewater projects could be in extremely short supply should a waiver of the intermediate goods not be available.

EPA conducted extensive market research on the supply of pig iron and direct reduced iron and found that domestic supplies of these goods sold on the open market are generally not available. There are three major types of facilities that manufacture iron and steel finished products: basic oxygen furnace steel mills (BOF), electric arc furnace steel mills (EAF) and foundries. BOF steel mills undertake both iron making and steel making, as molten iron from the blast furnace is the required feedstock for BOF steel production. EAF steel mills and foundries, on the other hand, use iron and steel scrap as their principal feedstock, which must be supplemented with the use of pig iron and/or direct reduced iron in their manufacturing processes to achieve required steel qualities.

EPA market research has shown that BOF steel mills are able to produce adequate amounts of pig iron to meet their own demands, but these mills use the bulk of this production for their own processes and do not sell pig iron on the open market in sufficient quantities. At this time, there is only one producer of direct reduced iron operating in the U.S. and the company uses the output internally for EAF steel production. Therefore, EAF steel mills and foundries must import pig iron and direct reduced iron to meet their iron needs.

At least 60 percent of the nation's steel production comes from the EAF steel mills that use non-domestic pig iron and direct reduced iron in their manufacturing processes. Consequently, the majority of steel used in water and wastewater projects would not be compliant with the AIS requirements absent this waiver. Similarly, most, if not all, of the iron foundries in the United States use non-domestic pig iron and direct reduced iron to produce cast and ductile iron products used by water and wastewater projects. Therefore, the majority of iron used in water and wastewater projects would not be compliant with the AIS requirements absent this waiver. Hence, EPA is hereby providing a nationwide waiver pursuant to AIS requirements to cover the non-domestic intermediate iron goods used in the manufacture of iron and/or steel components and products for water and wastewater projects.

Public Comments: EPA requested comments on the draft national waiver and a majority of the comments received were supportive of a national waiver. The commenters in support of the waiver agreed with the Agency's conclusion that pig iron and direct reduced iron are not

produced in the United States in sufficient and reasonably available quantities to meet the needs of many domestic foundries and steel mills. These commenters believe that the waiver will ensure that pig iron and direct reduced iron are treated similarly to raw material inputs in iron and steel manufacturing and by doing so the EPA will preserve the viability of the AIS requirement. These commenters also state that the waiver would treat pig iron and direct reduced iron in a manner consistent with the implementation of other similar federal laws such as the Federal Highway Administration's Buy America requirement. The FHWA issued a similar nationwide waiver of the Buy America requirements in 1995 for pig iron and processed, pelletized and reduced iron ore.

A few commenters challenged the Agency's issuance of a nationwide waiver of the AIS requirements for pig iron and direct reduced iron. These commenters disagreed with the Agency's interpretation of the AIS requirements and stated that raw materials used in iron and steel production must also be produced in the United States. In addition, the commenters questioned whether the Agency could exempt iron and steel products that are composed of non-domestic materials.

The statutory language lists the categories of products that are considered "iron and steel products." The statutory requirements include provisions that allow the EPA to issue waivers under defined conditions, including the case where iron and steel products are not produced in the United States in sufficient and reasonably available quantities. The Agency's market research, supported by comments from manufacturers, has shown that pig iron and direct reduced iron are not produced in the United States in sufficient and reasonably available quantities. Therefore the Agency is authorized to issue a waiver for iron and steel products composed of non-domestic pig iron and direct reduced iron.

Legal Authority: Legal authority for the AIS requirements for CWSRF projects is included under Sec. 608(c)(2) of the Clean Water Act and previously under P.L. 113-76, the "Consolidated Appropriations Act, 2014," under the authority of Section 436(b)(2). Legal authority for the AIS requirements for DWSRF projects is included under P.L. 113-235, the "Consolidated and Further Continuing Appropriations Act, 2015," under the authority of Section 424(b)(2) and also previously under P.L. 113-76. This waiver will continue in force for DWSRF projects under any continuing resolutions or statutes that use similar language as in Section 424 of the "Consolidated and Further Continuing Appropriations Act, 2015."

If you have questions concerning the contents of this memorandum, please contact Timothy Connor, Chemical Engineer, Municipal Support Division, at connor.timothy@epa.gov or (202) 566-1059 or Kiri Anderer, Environmental Engineer, Drinking Water Protection Division, at anderer.kirsten@epa.gov or (202) 564-3134.

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

OCT 2 7 2015

OFFICE OF WATER

DECISION MEMORANDUM

SUBJECT: National Product Waiver for Minor Components within Iron and Steel Products (with Cost Ceiling) for State Revolving Fund Projects

FROM: Kenneth J. Kopocis
Deputy Assistant Administrator

The U.S. Environmental Protection Agency is hereby granting a national product waiver pursuant to the "American Iron and Steel" provisions of the Clean Water Act and Public Law 113-235, the "Consolidated and Further Continuing Appropriations Act, 2015," (hereinafter referred to as "the Acts") for minor components within a product under an established cost ceiling.[1] The waiver will permit projects funded by the Clean Water State Revolving Fund or Drinking Water State Revolving Fund to use non-domestically produced miscellaneous minor components within an otherwise domestically produced iron and steel product for up to 5 percent of the total material cost of the product. These products could be prohibited absent this waiver. This waiver is retroactive, and so also applies to products purchased before the signature date of this waiver.

Coverage: The items covered by this waiver include miscellaneous minor components within iron and steel products as defined in the AIS provisions of the Acts. The specific minor components in covered iron and steel products will vary by product and manufacturer. Pursuant to this waiver, non-domestically produced miscellaneous minor components comprising up to 5 percent of the total material cost of an otherwise domestically produced iron and steel product may be used. This waiver does not exempt the whole product from the AIS requirements, and the primary iron or steel components of the product must be produced domestically. Unless subject to a separate waiver, all other iron and steel components in these products must still meet the AIS requirements. Valves and hydrants are also subject to the cost ceiling requirements described here. This waiver supersedes the EPA's previous guidance issued on May 30, 2014, (Question 1) related to minor components in valves and hydrants.

The coverage of this waiver is different from that of the existing national de minimis waiver. While the national de minimis waiver covers entire products (when those products are generally of low cost and incidental to the construction of the project), this waiver covers minor components within an iron and steel product. In addition, the national de minimis waiver is intended for assistance recipients to use for their projects, while this minor components waiver is intended to allow manufacturers to certify that their products comply with the AIS requirements.

[1] Absent a waiver, all treatment works and drinking water facilities that are constructed, in whole or in part, with funds from the CWSRF or the DWSRF, must use American made iron and steel. The EPA is allowed under certain circumstances to provide waivers of this requirement.

Rationale: The AIS provisions require recipients of CWSRF and DWSRF assistance to use specific domestically-produced iron and steel products in their project, unless the Agency determines it is necessary to waive this requirement. The EPA has authority to issue waivers in accordance with Section 608(c)(1) of the Clean Water Act and the AIS provisions extended by P.L. 113-235, the "Consolidated and Further Continuing Appropriations Act, 2015," under the authority of Section 424(b)(1). The provisions state in part: "[the requirements] shall not apply in any case or category of cases in which the Administrator of the Environmental Protection Agency…finds that…applying subsection (a) would be inconsistent with the public interest."

Many product manufacturers and suppliers identified significant compliance challenges absent this waiver. Water and wastewater utilities are generally unable to obtain a range of AIS compliant iron and steel products (such as valves, hydrants and pipe restraints) that contain 100 percent domestic components. The manufacturers stated that the origin of a significant proportion of very small minor components cannot be reliably tracked or even discerned. They provided examples of product lines that would need duplicative inventories of extremely low-cost miscellaneous minor components in order to supply AIS compliant products. Manufacturers also raised concerns related to challenges of inventory tracking, inventory control and excessive costs associated with duplicative inventory needed to supply utilities with essential domestic products.

The EPA concludes that requiring manufacturers and suppliers to overcome the challenges identified above would be inconsistent with the public's interest. In order to balance the reliability, availability and maximum supply of domestically produced iron and steel products, it is acceptable for a manufacturer to incorporate a relatively small proportion of miscellaneous minor components of non-domestic or unknown origin within an otherwise domestically manufactured product.

Legal Authority: Legal authority for the AIS requirements for CWSRF projects is included under Sec. 608(c)(1) of the Clean Water Act and previously under P.L. 113-76, "Consolidated Appropriations Act, 2014," under the authority of Section 436(b)(1). Legal authority for the AIS requirements for DWSRF projects is included under P.L. 113-235, the "Consolidated and Further Continuing Appropriations Act, 2015", under the authority of Section 424(b)(1) and also previously under P.L. 113-76. This waiver will continue in force for DWSRF projects under any continuing resolutions or statutes that use similar language as Section 424 of the "Consolidated and Further Continuing Appropriations Act, 2015."

If you have any questions concerning the contents of this memorandum, please contact Timothy Connor, Chemical Engineer, Municipal Support Division, at connor.timothy@epa.gov or (202) 566-1059 or Kiri Anderer, Environmental Engineer, Drinking Water Protection Division, at anderer.kirsten@epa.gov or (202) 564-3134.

American Iron and Steel Certification

The Contractor acknowledges to and for the benefit of _____ and the State of Missouri that it understands the goods and services under this Agreement are being funded with monies made available by the Clean Water State Revolving Fund and/or Drinking Water State Revolving Fund that have statutory requirements (see attached) commonly known as "American Iron and Steel;" that requires all of the iron and steel products used in the project to be produced in the United States ("American Iron and Steel Requirement") including iron and steel products provided by the Contactor pursuant to this Agreement. The Contractor hereby represents and warrants to and for the benefit of the Purchaser and the State that (a) the Contractor has reviewed and understands the American Iron and Steel Requirement, (b) all of the iron and steel products used in the project will be and/or have been produced in the United States in a manner that complies with the American Iron and Steel Requirement, unless a waiver of the requirement is approved, and (c) the Contractor will provide any further verified information, certification or assurance of compliance with this paragraph, or information necessary to support a waiver of the American Iron and Steel Requirement, as may be requested by the Purchaser or the State. Notwithstanding any other provision of this Agreement, any failure to comply with this paragraph by the Contractor shall permit the Purchaser or State to recover as damages against the Contractor any loss, expense, or cost (including without limitation attorney's fees) incurred by the Purchaser or State resulting from any such failure (including without limitation any impairment or loss of funding, whether in whole or in part, from the State or any damages owed to the State by the Purchaser). While the Contractor has no direct contractual privity with the State, as a lender to the Purchaser for the funding of its project, the Purchaser and the Contractor agree that the State is a third-party beneficiary and neither this paragraph (nor any other provision of this Agreement necessary to give this paragraph force or effect) shall be amended or waived without the prior written consent of the State.

Davis Bacon Act Requirements

Pursuant to the Federal Appropriations Act, all laborers and mechanics employed by contractors and subcontractors on projects funded directly by or assisted in whole or in part by and through the Federal Government pursuant to the Appropriations Act shall be paid wages at rates not less than those prevailing on projects of a character similar in the locality as determined by the Secretary of Labor in accordance with subchapter IV of chapter 31 of title 40, United States Code.

Additional guidance can be located at DOL's web site at https://www.wdol.gov/index.aspx

1. The Davis-Bacon (DB) prevailing wage requirements apply to the construction, alteration, and repair activity of infrastructure, including all construction, alteration and repair activity involving waste water or drinking water treatment plants is subject to DB. Prime contractors and subcontractors must follow the wage determination incorporated into the prime contract.

2. Contract and Subcontract provisions.

(a) Minimum wages.

(1) All laborers and mechanics employed or working upon the site of the work will be paid unconditionally and not less often than once a week, and without subsequent deduction or rebate on any account (except such payroll deductions as are permitted by regulations issued by the Secretary of Labor under the Copeland Act (29 CFR part 3)), the full amount of wages and bona fide fringe benefits (or cash equivalents thereof) due at time of payment computed at rates not less than those contained in the wage determination of the Secretary of Labor which is attached hereto and made a part hereof, regardless of any contractual relationship which may be alleged to exist between the contractor and such laborers and mechanics.

Contributions made or costs reasonably anticipated for bona fide fringe benefits under section 1(b)(2) of the Davis-Bacon Act on behalf of laborers or mechanics are considered wages paid to such laborers or mechanics, regular contributions made or costs incurred for more than a weekly period (but not less often than quarterly) under plans, funds, or programs which cover the particular weekly period, are deemed to be constructively made or incurred during such weekly period. Such laborers and mechanics shall be paid the appropriate wage rate and fringe benefits on the wage determination for the classification of work actually performed, without regard to skill, except as provided in § 5.5(a)(4). Laborers or mechanics performing work in more than one classification may be compensated at the rate specified for each classification for the time actually worked therein: Provided, the employer's payroll records accurately set forth the time spent in each classification in which work is performed. The wage determination (including any additional classification and wage rates conformed under paragraph (a)(2) of this section) and the Davis-Bacon poster (WH-1321) shall be

posted at all times by the contractor and its subcontractors at the site of the work in a prominent and accessible place where it can be easily seen by the workers.

(2) Any class of laborers or mechanics, including helpers, which is not listed in the wage determination and which is to be employed under the contract shall be classified in conformance with the wage determination. The EPA award official shall approve an additional classification and wage rate and fringe benefits therefore only when the following criteria have been met:

(i) The work to be performed by the classification requested is not performed by a classification in the wage determination; and

(ii) The classification is utilized in the area by the construction industry; and

(iii) The proposed wage rate, including any bona fide fringe benefits, bears a reasonable relationship to the wage rates contained in the wage determination.

(3) If the contractor and the laborers and mechanics to be employed in the classification (if known), or their representatives, and the funding recipient(s) agree on the classification and wage rate (including the amount designated for fringe benefits where appropriate), a report of the action taken shall be sent by the funding recipient (s) to the MDNR. The MDNR will transmit the report, to the Administrator of the Wage and Hour Division, Employment Standards Administration, U.S. Department of Labor, Washington, DC 20210. The Administrator, or an authorized representative, will approve, modify, or disapprove every additional classification action within 30 days of receipt and so advise the MDNR or will notify the MDNR within the 30-day period that additional time is necessary.

(4) In the event the contractor, the laborers or mechanics to be employed in the classification or their representatives, and the and the funding recipient(s) do not agree on the proposed classification and wage rate (including the amount designated for fringe benefits, where appropriate), the funding recipient shall refer the questions, including the views of all interested parties and the recommendation of the MDNR, to the Administrator for determination. The Administrator, or an authorized representative, will issue a determination within 30 days of receipt and so advise the contracting officer or will notify the contracting officer within the 30-day period that additional time is necessary.

(5) The wage rate (including fringe benefits where appropriate) shall be paid to all workers performing work in the classification under this contract from the first day on which work is performed in the classification.

(6) Whenever the minimum wage rate prescribed in the contract for a class of laborers or mechanics includes a fringe benefit which is not expressed as an

hourly rate, the contractor shall either pay the benefit as stated in the wage determination or shall pay another bona fide fringe benefit or an hourly cash equivalent thereof.

(7) If the contractor does not make payments to a trustee or other third person, the contractor may consider as part of the wages of any laborer or mechanic the amount of any costs reasonably anticipated in providing bona fide fringe benefits under a plan or program, Provided, That the Secretary of Labor has found, upon the written request of the contractor, that the applicable standards of the Davis-Bacon Act have been met. The Secretary of Labor may require the contractor to set aside in a separate account assets for the meeting of obligations under the plan or program.

(b) Withholding.

(1) The funding recipient(s), shall upon written request of the EPA Award Official or an authorized representative of the Department of Labor, withhold or cause to be withheld from the contractor under this contract or any other Federal contract with the same prime contractor, or any other federally-assisted contract subject to Davis-Bacon prevailing wage requirements, which is held by the same prime contractor, so much of the accrued payments or advances as may be considered necessary to pay laborers and mechanics, including apprentices, trainees, and helpers, employed by the contractor or any subcontractor the full amount of wages required by the contract. In the event of failure to pay any laborer or mechanic, including any apprentice, trainee, or helper, employed or working on the site of the work, all or part of the wages required by the contract, the (Agency) may, after written notice to the contractor, sponsor, applicant, or owner, take such action as may be necessary to cause the suspension of any further payment, advance, or guarantee of funds until such violations have ceased.

(c) Payrolls and basic records.

(1) Payrolls and basic records relating thereto shall be maintained by the contractor during the course of the work and preserved for a period of three years thereafter for all laborers and mechanics working at the site of the work. Such records shall contain the name, address, and social security number of each such worker, his or her correct classification, hourly rates of wages paid (including rates of contributions or costs anticipated for bona fide fringe benefits or cash equivalents thereof of the types described in section 1(b)(2)(B) of the Davis-Bacon Act), daily and weekly number of hours worked, deductions made and actual wages paid. Whenever the Secretary of Labor has found under 29 CFR 5.5(a)(1)(iv) that the wages of any laborer or mechanic include the amount of any costs reasonably anticipated in providing benefits under a plan or program described in section 1(b)(2)(B) of the Davis-Bacon Act, the contractor shall maintain records which show that the commitment to provide such benefits is enforceable, that the plan or program is financially responsible, and that the plan or program has been

communicated in writing to the laborers or mechanics affected, and records which show the costs anticipated or the actual cost incurred in providing such benefits. Contractors employing apprentices or trainees under approved programs shall maintain written evidence of the registration of apprenticeship programs and certification of trainee programs, the registration of the apprentices and trainees, and the ratios and wage rates prescribed in the applicable programs.

(2) The contractor shall submit weekly, for each week in which any contract work is performed, a copy of all payrolls to the funding recipient, that is, the entity that receives the grant or loan from the MDNR. As to each payroll copy received, the funding recipient shall provide written confirmation in a form satisfactory to the MDNR indicating whether or not the project is in compliance with the requirements of 29 CFR 5.5(a)(1) based on the most recent payroll copies for the specified week. The payrolls shall set out accurately and completely all of the information required to be maintained under 29 CFR 5.5(a)(3)(i), except that full social security numbers and home addresses shall not be included on the weekly payrolls. Instead the payrolls shall only need to include an individually identifying number for each employee (e.g., the last four digits of the employee's social security number). The required weekly payroll information may be submitted in any form desired. Optional Form WH-347 is available for this purpose from the Wage and Hour Division Web site at http://www.dol.gov/esa/whd/forms/wh347instr.htm or its successor site. The prime contractor is responsible for the submission of copies of payrolls by all subcontractors. Contractors and subcontractors shall maintain the full social security number and current address of each covered worker, and shall provide them upon request to the funding recipient (s) for transmission to the MDNR or EPA if requested by EPA, the MDNR, the contractor, or the Wage and Hour Division of the Department of Labor for purposes of an investigation or audit of compliance with prevailing wage requirements. It is not a violation of this section for a prime contractor to require a subcontractor to provide addresses and social security numbers to the prime contractor for its own records, without weekly submission to the funding recipient (s).

(3) Each payroll submitted shall be accompanied by a "Statement of Compliance," signed by the contractor or subcontractor or his or her agent who pays or supervises the payment of the persons employed under the contract and shall certify the following:

(i) That the payroll for the payroll period contains the information required to be provided under § 5.5 (a)(3)(ii) of Regulations, 29 CFR part 5, the appropriate information is being maintained under § 5.5 (a)(3)(i) of Regulations, 29 CFR part 5, and that such information is correct and complete;

(ii) That each laborer or mechanic (including each helper, apprentice, and trainee) employed on the contract during the payroll period has been paid

the full weekly wages earned, without rebate, either directly or indirectly, and that no deductions have been made either directly or indirectly from the full wages earned, other than permissible deductions as set forth in Regulations, 29 CFR part 3;

(iii) That each laborer or mechanic has been paid not less than the applicable wage rates and fringe benefits or cash equivalents for the classification of work performed, as specified in the applicable wage determination incorporated into the contract.

(4) The weekly submission of a properly executed certification set forth on the reverse side of Optional Form WH-347 shall satisfy the requirement for submission of the "Statement of Compliance" required by paragraph (c)(3) of this section.

(5) The falsification of any of the above certifications may subject the contractor or subcontractor to civil or criminal prosecution under section 1001 of title 18 and section 231 of title 31 of the United States Code.

(6) The contractor or subcontractor shall make the records required under paragraph (c)(1) of this section available for inspection, copying, or transcription by authorized representatives of the MDNR, EPA or the Department of Labor, and shall permit such representatives to interview employees during working hours on the job. If the contractor or subcontractor fails to submit the required records or to make them available, the Federal agency or State may, after written notice to the contractor, sponsor, applicant, or owner, take such action as may be necessary to cause the suspension of any further payment, advance, or guarantee of funds. Furthermore, failure to submit the required records upon request or to make such records available may be grounds for debarment action pursuant to 29 CFR 5.12.

(d) Apprentices and trainees.

(1) Apprentices. Apprentices will be permitted to work at less than the predetermined rate for the work they performed when they are employed pursuant to and individually registered in a bona fide apprenticeship program registered with the U.S. Department of Labor, Employment and Training Administration, Office of Apprenticeship Training, Employer and Labor Services, or with a State Apprenticeship Agency recognized by the Office, or if a person is employed in his or her first 90 days of probationary employment as an apprentice in such an apprenticeship program, who is not individually registered in the program, but who has been certified by the Office of Apprenticeship Training, Employer and Labor Services or a State Apprenticeship Agency (where appropriate) to be eligible for probationary employment as an apprentice. The allowable ratio of apprentices to journeymen on the job site in any craft classification shall not be greater than the ratio permitted to the contractor as to the entire work force under the registered program. Any worker listed on a payroll at an apprentice wage rate,

who is not registered or otherwise employed as stated above, shall be paid not less than the applicable wage rate on the wage determination for the classification of work actually performed. In addition, any apprentice performing work on the job site in excess of the ratio permitted under the registered program shall be paid not less than the applicable wage rate on the wage determination for the work actually performed. Where a contractor is performing construction on a project in a locality other than that in which its program is registered, the ratios and wage rates (expressed in percentages of the journeyman's hourly rate) specified in the contractor's or subcontractor's registered program shall be observed. Every apprentice must be paid at not less than the rate specified in the registered program for the apprentice's level of progress, expressed as a percentage of the journeymen hourly rate specified in the applicable wage determination. Apprentices shall be paid fringe benefits in accordance with the provisions of the apprenticeship program. If the apprenticeship program does not specify fringe benefits, apprentices must be paid the full amount of fringe benefits listed on the wage determination for the applicable classification. If the Administrator determines that a different practice prevails for the applicable apprentice classification, fringes shall be paid in accordance with that determination. In the event the Office of Apprenticeship Training, Employer and Labor Services, or a State Apprenticeship Agency recognized by the Office, withdraws approval of an apprenticeship program, the contractor will no longer be permitted to utilize apprentices at less than the applicable predetermined rate for the work performed until an acceptable program is approved.

(2) Trainees. Except as provided in 29 CFR 5.16, trainees will not be permitted to work at less than the predetermined rate for the work performed unless they are employed pursuant to and individually registered in a program which has received prior approval, evidenced by formal certification by the U.S. Department of Labor, Employment and Training Administration. The ratio of trainees to journeymen on the job site shall not be greater than permitted under the plan approved by the Employment and Training Administration. Every trainee must be paid at not less than the rate specified in the approved program for the trainee's level of progress, expressed as a percentage of the journeyman hourly rate specified in the applicable wage determination. Trainees shall be paid fringe benefits in accordance with the provisions of the trainee program. If the trainee program does not mention fringe benefits, trainees shall be paid the full amount of fringe benefits listed on the wage determination unless the Administrator of the Wage and Hour Division determines that there is an apprenticeship program associated with the corresponding journeyman wage rate on the wage determination which provides for less than full fringe benefits for apprentices. Any employee listed on the payroll at a trainee rate who is not registered and participating in a training plan approved by the Employment and Training Administration shall be paid not less than the applicable wage rate on the wage determination for the classification of work actually performed. In addition, any trainee performing work on the job site in excess of the ratio permitted under the registered program shall be paid not less than the applicable wage rate on the

wage determination for the work actually performed. In the event the Employment and Training Administration withdraws approval of a training program, the contractor will no longer be permitted to utilize trainees at less than the applicable predetermined rate for the work performed until an acceptable program is approved.

(e) Equal employment opportunity. The utilization of apprentices, trainees and journeymen under this part shall be in conformity with the equal employment opportunity requirements of Executive Order 11246, as amended, and 29 CFR part 30.

(f) Compliance with Copeland Act requirements. The contractor shall comply with the requirements of 29 CFR part 3, which are incorporated by reference in this contract.

(g) Subcontracts. The contractor or subcontractor shall insert in any subcontracts the clauses contained in 29 CFR 5.5(a)(1) through (10) and such other clauses as the EPA determines may by appropriate, and also a clause requiring the subcontractors to include these clauses in any lower tier subcontracts. The prime contractor shall be responsible for the compliance by any subcontractor or lower tier subcontractor with all the contract clauses in 29 CFR 5.5.

(h) Contract termination: debarment. A breach of the contract clauses in 29 CFR 5.5 may be grounds for termination of the contract, and for debarment as a contractor and a subcontractor as provided in 29 CFR 5.12.

(i) Compliance with Davis-Bacon and Related Act requirements. All rulings and interpretations of the Davis-Bacon and Related Acts contained in 29 CFR parts 1, 3, and 5 are herein incorporated by reference in this contract.

(j) Disputes concerning labor standards. Disputes arising out of the labor standards provisions of this contract shall not be subject to the general disputes clause of this contract. Such disputes shall be resolved in accordance with the procedures of the Department of Labor set forth in 29 CFR parts 5, 6, and 7. Disputes within the meaning of this clause include disputes between the contractor (or any of its subcontractors) and funding recipient(s), MDNR, EPA, the U.S. Department of Labor, or the employees or their representatives.

(k) Certification of eligibility.

(1) By entering into this contract, the contractor certifies that neither it (nor he or she) nor any person or firm who has an interest in the contractor's firm is a person or firm ineligible to be awarded Government contracts by virtue of section 3(a) of the Davis-Bacon Act or 29 CFR 5.12(a)(1).

(2) No part of this contract shall be subcontracted to any person or firm ineligible for award of a Government contract by virtue of section 3(a) of the Davis-Bacon Act or 29 CFR 5.12(a)(1).

(3) The penalty for making false statements is prescribed in the U.S. Criminal Code, 18 U.S.C. 1001.

3. Contract Provision for Contracts in Excess of $100,000.

(a) Contract Work Hours and Safety Standards Act. The following clauses shall be inserted in full in any contract in an amount in excess of $100,000 and subject to the overtime provisions of the Contract Work Hours and Safety Standards Act. As used in this paragraph, the terms laborers and mechanics include watchmen and guards.

(1) Overtime requirements. No contractor or subcontractor contracting for any part of the contract work which may require or involve the employment of laborers or mechanics shall require or permit any such laborer or mechanic in any workweek in which he or she is employed on such work to work in excess of forty hours in such workweek unless such laborer or mechanic receives compensation at a rate not less than one and one-half times the basic rate of pay for all hours worked in excess of forty hours in such workweek.

(2) Violation; liability for unpaid wages; liquidated damages. In the event of any violation of the clause set forth in paragraph (a)(1) of this section the contractor and any subcontractor responsible therefore shall be liable for the unpaid wages. In addition, such contractor and subcontractor shall be liable to the United States (in the case of work done under contract for the District of Columbia or a territory, to such District or to such territory), for liquidated damages. Such liquidated damages shall be computed with respect to each individual laborer or mechanic, including watchmen and guards, employed in violation of the clause set forth in paragraph (a)(1) of this section, in the sum of $10 for each calendar day on which such individual was required or permitted to work in excess of the standard workweek of forty hours without payment of the overtime wages required by the clause set forth in paragraph (a)(1) of this section.

(3) Withholding for unpaid wages and liquidated damages. The funding recipient, upon written request of the EPA Award Official or an authorized representative of the Department of Labor, shall withhold or cause to be withheld, from any moneys payable on account of work performed by the contractor or subcontractor under any such contract or any other Federal contract with the same prime contractor, or any other federally-assisted contract subject to the Contract Work Hours and Safety Standards Act, which is held by the same prime contractor, such sums as may be determined to be necessary to satisfy any liabilities of such contractor or subcontractor for unpaid wages and liquidated damages as provided in the clause set forth in paragraph (b)(2) of this section.

(4) Subcontracts. The contractor or subcontractor shall insert in any subcontracts the clauses set forth in paragraph (a)(1) through (4) of this section and also a clause requiring the subcontractors to include these clauses in any lower tier

subcontracts. The prime contractor shall be responsible for compliance by any subcontractor or lower tier subcontractor with the clauses set forth in paragraphs (a)(1) through (4) of this section.

(b) In any contract subject only to the Contract Work Hours and Safety Standards Act and not to any of the other statutes cited in 29 CFR 5.1, the contractor or subcontractor shall maintain payrolls and basic payroll records during the course of the work and shall preserve them for a period of three years from the completion of the contract for all laborers and mechanics, including guards and watchmen, working on the contract. Such records shall contain the name and address of each such employee, social security number, correct classifications, hourly rates of wages paid, daily and weekly number of hours worked, deductions made, and actual wages paid. Further, the records to be maintained under this paragraph shall be made available by the contractor or subcontractor for inspection, copying, or transcription by authorized representatives of the MDNR and the Department of Labor, and the contractor or subcontractor will permit such representatives to interview employees during working hours on the job.

4. Compliance Verification

(a) The funding recipient shall periodically interview a sufficient number of employees entitled to DB prevailing wages (covered employees) to verify that contractors or subcontractors are paying the appropriate wage rates. As provided in 29 CFR 5.6(a)(6), all interviews must be conducted in confidence.

(b) The funding recipient must conduct interviews with a representative group of covered employees within two weeks of each contractor or subcontractor's submission of its initial weekly payroll data and two weeks prior to the estimated completion date for the contract or subcontract. Funding recipients must conduct more frequent interviews if the initial interviews or other information indicates that there is a risk that the contractor or subcontractor is not complying with DB. Funding recipients shall immediately conduct necessary interviews in response to an alleged violation of the prevailing wage requirements. All interviews shall be conducted in confidence.

(c) The funding recipient shall periodically conduct spot checks of a representative sample of weekly payroll data to verify that contractors or subcontractors are paying the appropriate wage rates. The funding recipient shall establish and follow a spot check schedule based on its assessment of the risks of noncompliance with DB posed by contractors or subcontractors and the duration of the contract or subcontract. At a minimum, the funding recipient must spot check payroll data within two weeks of each contractor or subcontractor's submission of its initial payroll data and two weeks prior to the completion date the contract or subcontract. Funding recipients must conduct more frequent spot checks if the initial spot check or other information indicates that there is a risk that the contractor or subcontractor is not complying with DB . In addition, during the examinations the funding recipient shall verify evidence of fringe benefit plans and payments there under by contractors and subcontractors who claim credit for fringe benefit contributions.

(d) The funding recipient shall periodically review contractors and subcontractors use of apprentices and trainees to verify registration and certification with respect to apprenticeship and training programs approved by either the U.S Department of Labor or a state, as appropriate, and that contractors and subcontractors are not using disproportionate numbers of, laborers, trainees and apprentices. These reviews shall be conducted in accordance with the schedules for spot checks and interviews described in Item 5(b) and (c) above.

(e) Funding recipients must immediately report potential violations of the DB prevailing wage requirements to the EPA DB contact listed above and to the appropriate DOL Wage and Hour District Office listed at http://www.dol.gov/esa/contacts/whd/america2.htm.

Davis-Bacon Act Requirements

Funding Recipient Requirements (updated 9/13/2024)

If the funding recipient encounters a unique situation at a site that presents uncertainties regarding Davis Bacon (DB) applicability, the funding recipient must discuss the situation with the MDNR before authorizing work on that site.

The funding recipients shall obtain the wage determination for the locality in which a covered activity subject to DB will take place prior to issuing requests for bids, proposals, quotes or other methods for soliciting contracts (solicitation) for activities subject to DB. These wage determinations shall be incorporated into solicitations and any subsequent contracts. The funding recipients may obtain wage determinations at https://sam.gov/content/wage-determinations.

While the solicitation remains open, the funding recipient shall monitor www.SAM.gov on a regular basis to ensure that the wage determination contained in the solicitation remains current. For contracts entered into pursuant to sealed bidding procedures, a revised wage determination issued at least 10 calendar days before the opening of bids is effective with respect to the solicitation and contract. If a revised wage determination is issued less than 10 calendar days before the opening of bids, it is effective with respect to the solicitation and contract unless the MDNR finds that there is not a reasonable time still available before bid opening to notify bidders of the revision and a report of the finding is inserted in the contract file. No such report is required if the revision is issued after bid opening.

If the funding recipient does not award the contract within 90 days of the closure of the solicitation, any modifications or supersedes the DOL makes to the wage determination contained in the solicitation shall be effective unless the MDNR, at the request of the funding recipient, obtains an extension of the 90 day period from DOL pursuant to 29 CFR 1.6(c)(3)(iv). The funding recipient shall monitor www.SAM.gov on a regular basis if it does not award the contract within 90 days of closure of the solicitation to ensure that wage determinations contained in the solicitation remain current.

If the funding recipient carries out an activity subject to DB by issuing a task order, work assignment or similar instrument to an existing contractor (ordering instrument) rather than by publishing a solicitation, the funding recipient shall insert the appropriate DOL wage determination from www.SAM.gov into the ordering instrument.

Funding recipients shall review all subcontracts subject to DB entered into by prime contractors to verify that the prime contractor has required its subcontractors to include the applicable wage determinations.

As provided in 29 CFR 1.6(f), DOL may issue a revised wage determination applicable to a funding recipient's contract after the award of a contract or the issuance of an ordering instrument if DOL determines that the funding recipient has failed to incorporate a wage determination or has used a wage determination that clearly does not apply to the contract or ordering instrument. If this occurs, the funding recipient shall either terminate the contract or

ordering instrument and issue a revised solicitation or ordering instrument or incorporate DOL's wage determination retroactive to the beginning of the contract or ordering instrument by change order. The funding recipient's contractor must be compensated for any increases in wages resulting from the use of DOL's revised wage determination.

The funding recipient(s) shall insert in full in any contract in excess of $2,000 which is entered into for the actual construction, alteration and/or repair, including painting and decorating, of a public building or public work, or building or work financed in whole or in part from Federal funds or in accordance with guarantees of a Federal agency or financed from funds obtained by pledge of any contract of a Federal agency to make a loan, grant or annual contribution (except where a different meaning is expressly indicated), and which is subject to the labor standards provisions of any of the acts listed in § 5.1, the following clauses:

1) The funding recipient shall periodically interview a sufficient number of employees entitled to DB prevailing wages (covered employees) to verify that contractors or subcontractors are paying the appropriate wage rates. As provided in 29 CFR 5.6(a)(6), all interviews must be conducted in confidence. The funding recipient must use Standard Form 1445 or equivalent documentation to memorialize the interviews. Copies of the SF 1445 are available from EPA on request.

2) The funding recipient shall establish and follow an interview schedule based on its assessment of the risks of noncompliance with DB posed by contractors or subcontractors and the duration of the contract or subcontract. At a minimum, the funding recipient must conduct interviews with a representative group of covered employees within two weeks of each contractor or subcontractor's submission of its initial weekly payroll data and two weeks prior to the estimated completion date for the contract or subcontract. The funding recipients must conduct more frequent interviews if the initial interviews or other information indicates that there is a risk that the contractor or subcontractor is not complying with DB. The funding recipients shall immediately conduct necessary interviews in response to an alleged violation of the prevailing wage requirements. All interviews shall be conducted in confidence.

3) The funding recipient shall periodically conduct spot checks of a representative sample of weekly payroll data to verify that contractors or subcontractors are paying the appropriate wage rates. The funding recipient shall establish and follow a spot check schedule based on its assessment of the risks of noncompliance with DB posed by contractors or subcontractors and the duration of the contract or subcontract. At a minimum, the funding recipient must spot check payroll data within two weeks of each contractor or subcontractor's submission of its initial payroll data and two weeks prior to the completion date the contract or subcontract. The funding recipients must conduct more frequent spot checks if the initial spot check or other information indicates that there is a risk that the contractor or subcontractor is not complying with DB. In addition, during the examinations the funding recipient shall verify evidence of fringe

benefit plans and payments there under by contractors and subcontractors who claim credit for fringe benefit contributions.

The funding recipient shall periodically review contractors and subcontractors use of apprentices and trainees to verify registration and certification with respect to apprenticeship and training programs approved by either the U.S Department of Labor or a state, as appropriate, and that contractors and subcontractors are not using disproportionate numbers of, laborers, trainees and apprentices. These reviews shall be conducted in accordance with the schedules for spot checks and interviews described in Item 5(b) and (c) above.

The contractor shall submit weekly, for each week in which any contract work is performed, a copy of all payrolls to the funding recipient, that is, the entity that receives the grant or loan from the MDNR. As to each payroll copy received, the funding recipient shall provide written confirmation in a form satisfactory to the MDNR indicating whether or not the project is in compliance with the requirements of 29 CFR 5.5(a)(1) based on the most recent payroll copies for the specified week.

As a general rule, the wage determination incorporated into a bid solicitation and related contract award establishes the minimum wage rates and fringe benefits which must be paid for the entire term of the contract. In the following circumstances, the contracting agency must incorporate the most recent revision of the wage determination(s) into an ongoing contract.

Out-of-scope changes: Where a contract is changed to include additional, substantial construction, alteration, and/or repair work not within the scope of the work of the original contract, the most recent wage determination revision must be incorporated into the contract, to be effective at the date of the change in the contract;

Additional time periods (e.g., options): If the contractor is required to perform work for an additional time period not originally obligated, including where an option to extend the term of the contract is exercised, the most recent wage determination revision must be incorporated into the contract, to be effective at the date of the contract extension or exercise of the option;

IDIQs, etc.: For contracts calling for construction, alteration, and/or repair work over a period of time that is not tied to the completion of any particular project (e.g., IDIQs, Multiple Award Schedules), the most recent revision of a wage determination must be incorporated into the umbrella contract on an annual basis at the anniversary date of the contract's award.

The funding recipients must immediately report potential violations of the DB prevailing wage requirements to the EPA DB contact listed above and to the appropriate DOL Wage and Hour District Office listed at https://www.dol.gov/esa/contacts/whd/america2.htm.

Attachment 1

Missouri DBE Requirements

MISSOURI STATE REVOLVING FUND

Procedures for Implementation

Minority Business Enterprise/Women's Business Enterprise

Each bidder/offeror must fully comply with the requirements, terms, conditions of 40 CFR Part 33 and DNR's regulations to award a fair share of subagreements to minority and women's business enterprises. The bidder/offeror commits itself to taking affirmative steps and complying with the Six Good Faith Efforts contained herein. Bidders/offerors will take affirmative steps prior to submission of bids/proposals.

Affirmative Steps

1. When feasible, segmenting total work requirements to permit maximum minority business and women business enterprises (MBE/WBE) participation.

2. Assuring that MBEs and WBEs are solicited whenever they are potential sources of goods or services. This step may include:

    a. Sending letters or making other personal contacts with MBEs and WBEs (e.g. those whose names appear on lists prepared by the Missouri Office of Administration, the Missouri Department of Transportation, or the funding recipients and other MBEs and WBEs known to the bidder/offeror.) MBEs and WBEs should be contacted when other potential subcontractors are contacted, within reasonable time (fifteen days) prior to bid submission or closing date for receipt of initial offers. Those letters or other contacts should communicate the following:

        i. Specific description of the work to be subcontracted;

        ii. How and where to obtain a copy of plans and specifications or other detailed information needed to prepare a detailed price quotation;

        iii. Date the quotation is due to the bidder/offeror;

        iv. Name, address, and phone number of the person in the bidder/offeror's firm whom the prospective MBE/WBE subcontractor should contact for additional information.

    b. Sending letters or making other personal contacts with local, state, federal and private agencies and DBE associations relevant to the project. Such contacts should provide the same information provided in the direct contacts to DBE firms.

3. Where feasible, establishing delivery schedules which will encourage participation by MBEs and WBEs.

Determination of Compliance

It is to be noted that bidders/offerors must demonstrate compliance with DBE requirements in order to be deemed responsible. Demonstration of compliance shall include, but is not limited to, the following information:

1. Names, addresses and phone numbers of MBEs/WBEs expected to perform work;

2. Work to be performed by the MBEs and WBEs;

3. Aggregate dollar amount of work to be performed by MBEs and WBEs, showing aggregate to MBEs and aggregate to WBEs separately;

4. Description of contacts to MBE and WBE organizations, agencies and associations which serve MBEs/WBEs, including names of organizations, agencies and associations and dates of contacts;

5. Description of contacts to MBEs and WBEs, including number of contacts, fields, (i.e. equipment or material supplier, excavators, transport services, electrical subcontractors, plumbers, etc.) and dates of contacts.

The Six Good Faith Efforts, and Minority and Women's Business Enterprise Utilization Worksheet shall be included in the specifications.

All bidders/offerors should complete the Minority and Women's Business Enterprise Utilization Worksheet and submit to the funding recipient prior to contract award.

Additional information on DBE requirements can be found at https://www.epa.gov/osbp/dbe_team.htm

Lists of Certified Disadvantaged Business Enterprises – To help comply with the Six Good Faith Efforts, please visit the following web sites to access existing lists of certified DBEs:

Small Business Administration https://www.sba.gov/search?query=dynamic+small+business+search

Missouri Department of Transportation https://www.modot.mo.gov/ecr/index.htm

Office of Equal Opportunity https://oeo.mo.gov/

The contractor shall not discriminate on the basis of race, color, nation origin or sex in the performance of this contract. The contractor shall carry out applicable requirements of 40 CFR Part 33 in the award and administration of contracts awarded under EPA financial assistance agreements. Failure by the contractor to carry out these requirements is a material breach of this contract which may result in the termination of this contract or other legally available remedies.

(Funding recipients may establish alternative methods of compliance equivalent to or more stringent than the above.)

"Six Good Faith Efforts"

The Six Good Faith Efforts are required methods to be used by all Loan and Grant recipients to ensure that all disadvantaged business enterprises (DBEs) have the opportunity to compete for procurements funded by EPA financial assistance dollars.

The prime contractor must pay its subcontractor for satisfactory performance no more than 30 days from the prime contractor's receipt of payment from the recipient.

A recipient must be notified in writing by its prime contractor prior to any termination of a DBE subcontractor for convenience by the prime contractor.

If a DBE subcontractor fails to complete work under its subcontract for any reason, the recipient must require the prime contractor to employ the six good faith efforts described below if soliciting a replacement subcontractor.

A recipient must require its prime contractor to employ the six good faith efforts even if the prime contractor has achieved its Fair Share Goals. The current Fair Share Goals are 10% for Minority Business Enterprises and 5% for Women Business Enterprises in accordance with 40 CFR, Part 33, Subpart D.

The Six Good Faith Efforts are:

1. Ensure DBEs are made aware of contracting opportunities to the fullest extent practicable through outreach and recruitment activities. For Indian Tribal, State and Local Government recipients, this will include placing DBEs on solicitation lists and soliciting them whenever they are potential sources.

2. Make information on forthcoming opportunities available to DBEs and arrange time frames for contracts and establish delivery schedules, where requirements permit, in a way that encourages and facilitates participation by DBEs in the competitive process. This includes, whenever possible, posting solicitations for bids or proposals for a minimum of 30 calendar days before bid or proposal closing date.

3. Consider in the contracting process whether firms competing for large contracts could subcontract with DBEs. For Indian Tribal, State and Local Government recipients, this will include dividing total requirements when economically feasible into smaller tasks or quantities to permit maximum participation by DBEs in the competitive process.

4. Encourage contracting with a consortium of DBEs when a contract is too large for one of these firms to handle individually.

5. Use the services and assistance of the SBA and the Minority Business development Agency of the Department of Commerce.

6. If the prime contractor awards subcontracts, require the prime contractor to take the above steps.

SECTION 01000 – GENERAL PROJECT REQUIREMENTS

PART 1 - GENERAL

1.01 SUMMARY

A. This section covers the general project requirements for all projects.

B. The work to be performed under these Contract Documents shall be consistent with Section 0700-General Conditions in the construction, installation, and completion of all work required in connection with the Todd Creek Facility Plan Update Project, in Kansas City, Platte County, Missouri.

1.02 RELATED SECTIONS

A. Section 00700 – General Conditions.

B. Section 00800 – Supplementary Conditions.

C. Section 01015 – Specific Project Requirements.

D. Section 01020 – Record Documents.

E. Section 01300 – Submittals.

F. Section 01329 - Safety Plan

G. Section 01353 – Selective Alterations and Demolition

H. Section 01566 – Cleanup Operations.

I. Section 01570 – Temporary Erosion Control.

J. Section 01580 – Project Signs.

K. Section 01581 – Public Communications.

1.03 SECTION 31 20 50 – SITE PREPARATION AND EARTHWORK. CODES AND STANDARDS

A. By reference, as applicable for the Work being performed.

1.04 SUBMITTALS

A. Submit as specified in Section 01300 – Submittals.

B. Project Communications:

1. Progress Meeting Minutes.

C. Other:

1. Description and location of offsite storage arrangements.
2. Construction Site Plan.
3. Safety Representative.

1.05 QUALITY ASSURANCE

A. The Contractor or Design-Builder is responsible for the quality assurance and quality control of the Work.

1.06 MATERIALS SELECTION AND ACQUISITION

A. The Contractor or Design-Builder shall not use materials or equipment removed from existing premises, except as specifically permitted by the Contract Documents. All products shall be new, never used before, unless otherwise specified.

B. Provide interchangeable components of the same manufacturer, for similar removable components, such as: T-bolts, glands, gaskets, manhole rings and covers, nuts, wiring, slip rings, conduit, bolts, seals, etc.

1.07 CONSTRUCTION SITE PLAN

A. The Contractor shall submit a site plan showing the locations and dimensions of temporary facilities which include, but are not limited to, the following layouts and details:
   1. Equipment and material storage area on City property and bonded warehouses).
   2. Access and traffic routes.
   3. Indicate if a supplemental or off-site staging area is being utilized.
   4. Show locations of safety and construction fencing, job site trailer, construction entrances, trash dumpsters, temporary sanitary facilities and parking areas for project personnel.
   5. Indicate locations of concrete washout facilities.

1.08 EASEMENTS AND RIGHTS-OF-WAY

A. The City will furnish the Site in accordance with Section 00700 - General Conditions. The Contractor or Design-Builder shall confine construction operations to the immediate vicinity of the Site shown in the Contract Documents and shall use due care in placing construction tools, equipment, excavated materials, construction materials and supplies to cause the least possible damage to public and private property and least possible interference with public traffic.

B. On Private Property:
   1. The permanent easements are as noted in the Contract Documents. No additional temporary construction easements have been obtained, unless otherwise indicated in the Contract Documents. The Contractor or Design-Builder shall set stakes to mark the boundaries of construction easements across each private property. The stakes shall be protected and maintained until completion of the Work. After cleanup has been completed in accordance with Section 01566 – Cleanup Operations, the Contractor or Design-Builder shall remove all construction stakes.
   2. The Contractor or Design-Builder shall not enter any private property outside the designated construction easement boundaries without written permission from the owner of the property and notification to the RPR
   3. Should it become necessary to use or occupy the land beyond the limits of the Site (as defined by Section 00700 – General Conditions), the Contractor or Design-Builder shall obtain a written agreement with each affected property owner and tenant. Each agreement shall clearly outline the terms for which the Contractor or Design-Builder may utilize the property and shall be fully executed by the Contractor or Design-Builder, the property owner and the tenant (when applicable).
   4. Whenever the easement is occupied by crops which will be damaged by construction operations, the Contractor or Design-Builder shall notify the property owner sufficiently in advance so that the crops may be removed before the Work is started. The Contractor is responsible for all damage to crops outside the easement and shall make satisfactory settlement for the damage directly with the property owner.
   5. Where the Work impacts fields that are leveled for irrigation or terraced, the Contractor shall relevel irrigated fields and replace all terraces to their original or better condition and to the satisfaction of the property owner.

C. State Highways:

1. All work within MoDOT right-of-way shall be in conformance with MoDOT regulations. The permit must be secured before any construction is started within MoDOT right-of-way.

1.09 LINES AND GRADES

A. All Work shall be done to the lines, grades and elevations indicated in the Contract Documents.
B. Basic horizontal and vertical control points are provided in the Contract Documents. All additional survey, layout and measurement work shall be performed by the Contractor or Design-Builder as a part of the Work.
C. The Contractor or Design-Builder shall provide an experienced surveyor, competent assistants and all instruments, tools, stakes and other materials required to complete the survey, layout and measurement work.
D. The Contractor or Design-Builder shall provide qualified personnel, materials and equipment (tools, stakes and other materials) as may be required for the following tasks needed in the Work:
   1. Establish or designate control points.
   2. Establish construction easement boundaries.
   3. Verify survey.
   4. Verify layout shown on the Contract Documents.
   5. Verify and document work performed by the Contractor or Design-Builder.

   These efforts shall be included in the Contractor or Design-Builder's bid price and performed at no additional cost to the City.
E. The Contractor or Design-Builder shall remove and reconstruct, at no additional cost to the City, any Work that was improperly installed or improperly located.
F. See Section 01020 – Record Documents, paragraph SURVEY REQUIREMENTS for additional requirements.

1.10 CONNECTIONS TO EXISTING FACILITIES

A. Unless otherwise specified or indicated in the drawings, the Contractor or Design-Builder shall make all necessary connections to existing facilities. This includes, but is not limited to, structures, drain lines, water utilities, sewer utilities, gas utilities, communications utilities and electric utilities. In each case, the Contractor or Design-Builder shall receive permission from the City or the owning utility prior to undertaking a connection or disconnection. The Contractor or Design-Builder shall protect facilities against deleterious substances and damage.
B. Connections to existing facilities that are in service shall be thoroughly planned in advance. See 01140, 01140.01, and 01140.02. All required equipment, material and labor shall be on hand at the time of undertaking the connections.

1.11 UNFAVORABLE CONSTRUCTION CONDITIONS.

A. During unfavorable weather, wet ground, or other unsuitable construction conditions, the Contractor shall confine operations to Work that will not be adversely affected by such conditions.
B. No portion of the Work shall be constructed under conditions that would adversely affect the quality or efficiency thereof, unless special means or precautions are taken by the Contractor or Design-Builder to perform the Work in a manner acceptable to the City.

1.12 UNDERGROUND FACILITIES AND ASSOCIATED RESTORATION

A. As provided in Section 00700, paragraph 4.04 of the General Conditions, the Contractor shall perform all cutting and patching required for the Work and as may be necessary in connection with locating all underground facilities, installation of Work, uncovering Work for inspection or for the correction of defective Work.
B. The Contractor or Design-Builder shall perform all cutting and patching required for and in connection with the Work, including but not limited to the following:
   1. Removal of improperly timed Work.
   2. Removal of samples of installed materials for testing.
   3. Alteration of existing facilities.
   4. Installation of new Work.
C. The Contractor or Design-Builder shall provide all shoring, bracing, supports and protective devices necessary to safeguard all Work and existing facilities during cutting and patching operations. The Contractor or Design-Builder shall not undertake any cutting or demolition that may affect the structural stability of the Work or existing facilities without City's approval.
D. Materials shall be cut and removed as required to complete the Work. Materials shall be removed in a careful manner, with no damage to adjacent facilities or materials. The Contractor or Design-Builder shall remove all excavated materials from the site that cannot be incorporated in the Work.
E. All Work and existing facilities affected by cutting operations shall be restored with new materials, or with salvaged materials acceptable to City, to obtain a finished installation with strength, appearance and functional capacity required to match the existing area. If necessary, entire surfaces shall be patched and refinished.
F. The Contractor or Design-Builder, at no extra cost to the City, shall replace all surface features damaged, removed or so designated to be replaced.
G. Contractor or Design-Builder shall at no cost provide photographic documentation of all exposed work after excavation prior to additional underground work and prior to backfill. Photos shall be taken from as many angles as possible.

1.13 ENVIRONMENTAL PROTECTION

A. Laws and Regulations:
   1. The Contractor or Design-Builder shall conform to all laws and regulations as required by Section 00700 – General Conditions, Article 6 – Contractor or Design-Builder's Responsibilities.
B. Storm Water Runoff:
   1. Storm Water Pollution Prevention Plan (SWPPP): As required by Section 00700 – General Conditions, Article 6 – Contractor or Design-Builder's Responsibilities.
   2. Erosion Sediment Control: See Paragraph 1.25.
   3. The Contractor or Design-Builder shall prevent the pollution of drains and watercourses by sanitary wastes, sediment, debris and other substances resulting from construction activities. See paragraph 1.38.
   4. Dewatering: As required by Section 31 20 50 – Site Preparation and Earthwork..
   5. Concrete Washout Facilities: As required by Section 01566 – Cleanup Operations.
C. Air Pollution:
   1. Burning: No open burning will be permitted.
   2. Dust Control: See paragraph 1.37.

D. Other Construction Activities:
   1. Disposal of Demolition Material: As required by Section 01352 – Selective Alterations and Demolition.
   2. Disposal of Debris: Section 31 20 50 – Site Preparation and Earthwork. Protection of Wetlands: As shown on the Drawings or Section 01140 Work Restrictions
   3. Floodplains: As shown on the Drawings or Section 01140 Work Restrictions
   4. Cleanup and Site Maintenance: As required by Section 01566 – Cleanup Operations.

1.14 LICENSES, PERMITS, AND CERTIFICATES

A. Requirements for licenses, permits and certificates are provided in Section 00700 – General Conditions, paragraph 6.09.
B. Permitting exceptions (if any) are noted in Section 00800 – Supplementary Conditions.

1.15 APPLICABLE CODES

A. Standard specifications of the Kansas City, Missouri Department of Public Works are, by reference, hereby made a part of this contract specifications

1.16 REFERENCE STANDARDS

A. See Section 00700 – General Conditions, paragraph 3.02 for references to standards and specifications of technical societies.

1.17 PRECONSTRUCTION CONFERENCE

A. A Preconstruction Conference will be held in accordance with Article 2 of the General Conditions. The conference will be held at a mutually agreed time and location. The conference shall be attended by:
   1. Contractor or Design-Builder and the project superintendent(s).
   2. Design Professional(s) (Engineer of Record) and Owner's Advisor if applicable
   3. Resident Project Representative(s).
   4. City's Representative
   5. Other City Staff (Engineering, Operations, etc.…)

B. Other participants as requested by the Contractor, Design-Builder, or City; such as the following:
   1. Principal Subcontractors such as Systems Integrator, Electrical, shoring, Mechanical, concrete etc.
   2. Representative of principal suppliers and manufacturers as appropriate.
   3. Utility Company representatives.
   4. Affected Property Owners and other stakeholders
   5. Governmental representatives as appropriate.
   6. The Contractor or Design-Builder shall bring to the conference the Preliminary Schedules described in Article 2 of the General Conditions (Preliminary Project Schedule, Preliminary Schedule of Values, Preliminary Schedule of Shop Drawings and Samples), major outages, OCCPs, suggested communication routes, a draft risk register, and list of project goals.
C. The purpose of the conference is to designate responsible personnel and to establish a working relationship. Matters requiring coordination will be discussed and

procedures for handling such matters established. The agenda shall include, but not limited to, the following:

1. Contractor or Design-Builder's Preliminary Schedules.
2. Document Management
3. Timing the Monthly Schedule Update
4. Processing Applications for Payment.
5. Commissioning Plan including the Commissioning Manager
6. Maintaining record documents
7. electronic data requirements including Electronic O&M manuals and BIM (if applicable)
8. Critical Work sequences
9. Field decisions and Change Orders.
10. Use of premises, field office, material storage areas, security, housekeeping, and City's needs.
11. Major equipment deliveries and priorities.
12. Contractor or Design-Builder's assignment for Safety Representative.
13. Discussion of the Safety Plan (See Section 01329 –Safety Plan)
14. Expectations and the Contractor or Design-Builder's plan for Environmental Protection.

D. Contractor or Design-Builder will preside at the conference, will arrange for keeping the minutes and will distribute draft minutes to all persons in attendance within one business day.

1.18 PROGRESS MEETINGS

A. The Contractor or Design-Builder shall schedule and hold progress meetings weekly unless mutual agreed upon, and, at other times as requested by the City or as needed by the progress of the Work. The duration of the weekly meetings will mutually agree upon by the City and Contractor or Design-Builder. The Contractor or Design-Builder, City, Design Professional, and all Subcontractors active on the Site shall be represented at each meeting. The Contractor or Design-Builder may, at their discretion, request attendance of their suppliers, manufacturers or other utilities.
B. The Contractor or Design-Builder shall preside at the meeting. Meeting minutes shall be prepared and distributed by the Contractor or Design-Builder after review by the City or Design Professional. The purpose of the meetings will be to review the progress of the Work, maintain coordination of efforts, discuss changes in scheduling and resolve problems which may have developed on the project.
C. Draft meeting minutes will be distributed within one business day.

1.19 SAFETY REPRESENTIVE

A. In accordance with Section 00700 – General Conditions, Article 6 – Contractor or Design-Builder's Responsibilities, the Contractor or Design-Builder shall submit the name and complete contact information for the person designated as the Safety Representative for the Project.
B. In accordance with Section 01300 – Submittals, this information shall be submitted prior to the Preconstruction Conference.
C. If the Safety Representative changes during the Project, the Contractor or Design-Builder shall designate a new person to fulfill the role and submit their name and complete contact information.

1.20 SAEFTY PLAN

A. See Section 01329 – Safety Plan.

1.21 SITE ADMINISTRATION

A. The Contractor or Design-Builder is responsible for all areas of the site used by their personnel and all Subcontractors in the performance of the Work. The Contractor will exert full control over the actions of all employees and other persons with respect to the use and preservation of property and existing facilities, except such controls as may be specifically reserved to Owner or others. The Contractor or Design-Builder has the right to exclude from the site all persons who have no purpose related to the Work or its inspection and may require all persons on the site to observe the same regulations as their personnel.

1.22 CLEAN-UP

A. The Contractor or Design-Builder shall conduct cleanup operations in accordance with Section 01566 – Project Cleanup.

1.23 SUBSTANTIAL COMPLETION WALKTHROUGH

A. See Section -00700 – General Condition Article 14.04.
B. Walkthrough will also include City Employees from the operating division as designed by their Division Manager.

1.24 FINAL ACCEPTANCE

A. Final Acceptance of the Work shall be in accordance with Section 00700 – General Conditions, Article 14.

1.25 EROSION AND SEDIMENT CONTROL

A. Work associated with erosion and sedimentation control shall be done in accordance with Section 01570 – Temporary Erosion and Sediment Control.

1.26 STREET LIGHTS AND SITE LIGHTING

A. Relocation or restoration of streetlights and Site lighting due to construction interference shall be included in the Contractor or Design-Builder's Bid Price. No separate measurement and payment will be made. The Contractor or Design-Builder shall notify and coordinate street light relocations with the Public Works Department:

Street Lights Division
Phone: (816) 513-9500.

1.27 PROJECT SIGNS

A. Work associated with Project signs shall be done in accordance with Section 01580 – Project Signs.

1.28 RESTORATION

A. The Contractor or Design-Builder shall replace all surface material and shall restore all paving, curbs, gutters, sidewalks, driveways, shrubbery, fences, sod, walls, floors, roofs, piping, conduit, cable trays, HVAC equipment, architecture features, drains, gravel, coating systems, fences, furniture, tiling, fixtures, masonry, structural supports, doors, windows, skylights and all other features disturbed to a condition of

equal to or better than before the work began, furnishing all material, labor and equipment incidental thereto.

1.29 WATER

A. The City will furnish, without charge, all water necessary for the Work (i.e., filling, flushing, testing and disinfecting completed water lines). The Contractor or Design-Builder shall make arrangements with the City for all water used.
B. Use of the City's water facilities shall be at the direction of the Water Services Department so that water is not wasted and service to customers is not impaired.
C. Any water furnished by the City must be obtained from an existing City main.
D. The Contractor or Design-Builder shall use a Reduced Pressure Zone (R.P.Z.) Backflow Preventer and meter when connected to the City's water system.
E. Until such time that City can establish potable water services to the Site, Contractor or Design-Builder will be responsible for obtaining and transporting water to the Site.
F. When utilizing public hydrants, The Contractor or Design-Builder shall contact the Kansas City Fire Department (KCFD) at (816) 513-4645 to purchase a hydrant meter permit. After securing a hydrant meter permit from KCFD, the Contractor or Design-Builder shall present the permit to the Consumer Services desk located at Water Services Department headquarters, 4800 E. 63rd Street, KCMO. The Contractor or Design-Builder shall apply for and pay Consumer Services the refundable security deposit. If approved, the Contractor or Design-Builder shall contact the Water Services Backflow Department at (816) 513-4797 to schedule the installation of the R.P.Z./Meter (hydrant meter). The Contractor or Design-Builder shall provide the location of the hydrant where the R.P.Z./Meter is to be installed. The Contractor or Design-Builder shall contact the Backflow Department to have the R.P.Z./Meter moved or returned to Water Services. Jetting and Vacuum trucks with approved backflow prevention devices or air gap separation are not required to utilize a R.P.Z. backflow preventer; however, a meter to track water usage shall be used at all times. The Jetter/Vac Contractor or Design-Builder shall contact the Water Services Backflow Department for issuance of the meter and pay the associated refundable security deposit. In all cases, the Contractor or Design-Builder is solely responsible for any and all damage to the equipment issued by the Water Services Backflow Department. The cost to repair the damage or the cost of complete replacement of the unit shall be deducted from the security deposit.
G. When utilizing hydrants on City projects after the facility's water meter, Contractor or Design-Builder shall utilize an RPZ/Meter that is pre-approved by the City. The location and duration for the connection must be submitted 15 days prior to the proposed connection. Any unapproved connections will be grounds for removal from the Site(s) by the connecting Contractor or Subcontractor.
H. All costs for labor, material, equipment and services needed to obtain water for construction purposes shall be included in the Bid. No separate measurement or payment will be made to make connections.

1.30 OPERATION OF EXISTING VALVES

A. The Contractor or Design-Builder shall not operate any valves on the City's system outside the fence line without direct supervision from a Water Services Department representative.
B. OCCP may allow for the contractor to operate valves and equipment.

C. If the Contractor or Design-Builder needs valves operated, the request shall be made at least five (5) days in advance to Water Services for such operation, also giving notice to any affected customers/properties in accordance with the notification requirements outlined in Section 01581 – Public Communications.
D. All fire hydrants and water valves shall be kept free from obstruction and available for use at all times.

1.31 BARRICADES AND LIGHTS

A. All streets, roads, highways, facility roads, and other public thoroughfares which are closed to traffic shall be protected by effective barricades and acceptable warning signs. Barricades shall be located per the approved traffic control plan and associated permit. RPR will approve the barricades for facility roads.
B. All trenches and other excavations shall be covered and shall have suitable barricades, signs and lights to provide adequate protection to the public and City Staff. Obstructions such as material piles and equipment shall be provided with similar warning signs and lights in roads.
C. All barricades and obstructions shall be illuminated with warning lights from sunset to sunrise in the public right of way. Material storage and execution of the Work on or alongside public streets and highways shall cause the minimum obstruction and inconvenience to the traveling public.
D. All barricades, signs, lights and other protective devices shall be installed and maintained in conformity with applicable statutory requirements and as required by the authority having jurisdiction; such as, Work within railroad right-of-way, highway right-of-way, etc.

1.32 EXISTING FENCING

A. All existing fences affected by the Work shall be maintained by the Contractor or Design-Builder until completion of the Work. Fences which interfere with construction operations shall not be relocated or dismantled until written permission is obtained from the owner of the fence including the City and the period the fence may be left relocated or dismantled has been agreed upon.
B. Where fences must be maintained across the construction easement or plant site, adequate gates or City approved access shall be installed. Facility Gates and Gates outside facilities shall be kept closed and locked at all times when not in use. Within Facilities, operations staff will determine what gates will need to be closed and locked.

1.33 SAFETY FENCING

A. Provide fencing along the construction site at all open excavations and tunnels to control access if the excavation or tunnel can otherwise be accessed by the public.
B. Temporary safety fencing must be a high visibility orange colored, high density polyethylene grid or approved equal, a minimum of 48 inches high and maximum mesh size of 2 inches, supported and tightly secured to steel posts located on maximum 10-foot centers, constructed at the approved location.
C. Remove the fence from the work site upon completion of the Work.

1.34 PROTECTION OF PUBLIC AND PRIVATE PROPERTY

A. The Contractor or Design-Builder shall protect, shore, brace, support, and maintain all underground pipes, conduits, drains and other underground construction uncovered or otherwise affected by the construction operations.

B. All pavement, surfacing, driveways, curbs, gutters, sidewalks, buildings, utility poles, guy wires, fences, and all other features and structures affected by construction operations, together with all sod and shrubs in yards, parkways, medians and green spaces, shall be restored to their original condition, whether within or outside the right-of-way or easement. All replacements shall be made with new materials.

1.35 DAMAGE TO EXISTING PROPERTY

A. The Contractor or Design-Builder is solely responsible for any damage to existing features, structures, Work, materials, or equipment because of their operations and shall repair or replace any damaged features, structures, Work, materials, or equipment to the satisfaction of the City and at no additional cost to the City.
B. The Contractor or Design-Builder shall protect all existing structures and property from damage and shall provide bracing, shoring, or other work necessary for such protection.
C. The Contractor or Design-Builder is responsible for all damage to streets, roads, curbs, sidewalks, highways, shoulders, ditches, embankments, culverts, bridges, or other public or private property, which may be caused by transporting equipment, materials, or personnel to or from the Work. The Contractor or Design-Builder shall make satisfactory and acceptable arrangements with the agency having jurisdiction over the damaged property concerning its repair or replacement.

1.36 NOISE CONTROL

A. The Contractor or Design-Builder shall conduct construction operations as described herein and in compliance with the City of Kansas City, Missouri Code of Ordinances, Chapter 46 – NOISE CONTROL.
B. The Contractor or Design-Builder shall take all reasonable measures to avoid unnecessary noise. Such measures shall be appropriate for the normal ambient sound levels in the area during working hours. All construction machinery and vehicles shall be equipped with practical sound-muffling devices and operated in a manner to cause the least noise, consistent with the efficient performance of the Work.
C. During construction activities on or adjacent to occupied buildings and when appropriate, the Contractor or Design-Builder shall erect screens or barriers effective in reducing noise in the building and shall conduct their operations to avoid unnecessary noise which might interfere with the activities of the building occupants.
D. Contractor or Design-Builder shall insure no facilities will have noise levels that prevent a full shift at the facility per OSHA safety standards.
E. All work including, but not limited to, excavation, demolition, alteration, or repair being performed in or adjacent to a residential area other than between the hours of 7:00 a.m. and 6:00 p.m. on weekdays, except in the case of urgent necessity in the interest of public safety, shall require written permission from the Water Services Department of the City of Kansas City, Missouri.

1.37 DUST CONTROL

A. The Contractor or Design-Builder shall control dust in accordance with Section 01566 – Cleanup Operations, paragraph DUST CONTROL. The Contractor or Design-Builder shall take all reasonable measures to prevent unnecessary dust. Earth surfaces subject to dusting shall be kept moist with water or by the approved application of an approved chemical suppressant. When practicable, dusty materials in piles or in transit shall be covered to prevent blowing.

B. Buildings or operating facilities which may be affected adversely by dust shall be adequately protected from dust. Existing or new machinery, motors, instrument panels, or similar equipment shall be protected by suitable dust screens. Proper ventilation shall be included with dust screens.

1.38 POLLUTION CONTROL

A. The Contractor or Design-Builder shall prevent the pollution of drains (Combined Sewer, plant piping, Storm Sewer), and watercourses by sanitary wastes, sediment, debris or other substances resulting from the construction activities. No sanitary wastes will be permitted to enter any drain or watercourse other than sanitary sewers. No sediment, debris, or other substance will be permitted to enter sanitary sewers and all reasonable measures will be taken to prevent such materials from entering any drain or watercourse.

1.39 SECURITY

A. The Contractor or Design-Builder is solely responsible for security and protection of the site. This includes protecting all Work, materials, equipment, existing facilities and all temporary facilities against theft, vandals and access by unauthorized persons.

B. No claim shall be made against the City by reason of an act of an employee or trespasser. The Contractor or Design-Builder shall make good on all damage and theft of property resulting from the Contractor or Design-Builder's failure to provide adequate security measures including City Property. After trespass or theft, the City may direct the Contractor or Design-Builder to provide additional site security at no cost including but not limited to security cameras, on site security, and night security.

1.40 PARKING

A. The Contractor or Design-Builder shall provide and maintain suitable parking areas for the use of all City personnel, construction workers and others performing work or furnishing services in connection with the Project. Suitable parking is required to avoid the need for parking personal vehicles where they may interfere with traffic, City's operations, or construction activities. Location of the parking within Facilities should be mutually agreed up by the operating division manager and the Contactor or Design-Builder. Operating Division Manager may change parking areas as need to maintain operations

PART 2 - PRODUCTS

Not used.

PART 3 - EXECUTION

Not used.

END OF SECTION

SECTION 01015 – SPECIFIC PROJECT REQUIREMENTS

PART 1 - GENERAL

1.01 SUMMARY

A. This section covers the modification of specifications for this Project. Any specification that is modified for this Project is listed in Part 3 of this Section by Division. If the Division or specification is not included in this Section, then the Project specification in the Division remains intact.

1.02 SPECIFICATION MODIFICATIONS

A. In the event Section 01015 – Specific Project Requirements conflicts with other project specifications of Divisions 01 through 06; the requirements of this Section shall govern.

1.03 RELATED SECTIONS

A. Section 01000 – General Project Requirements.
B. Section 01500 – Temporary Facilities.
C. Section 01580 – Project Signs.

1.04 QUALITY ASSURANCE

A. The Contractor is responsible for the quality assurance and quality control of the Work.

1.05 INFORMATION PROVIDED BY THE CITY

A. As provided in the Contract Documents.

1.06 MATERIALS FURNISHED BY THE CITY

A. The City will provide the following equipment or materials to be used for the Project. All materials required to complete the Work in accordance with the Contract Documents shall be furnished, installed, and paid for by the Contractor.
    1. No equipment or materials will be provided by the City.

PART 2 – PRODUCTS

Not Used.

PART 3 – EXECUTION

3.01 DIVISION 1 – GENERAL REQUIREMENTS, SPECIFICATION MODIFICATIONS

A. Division 1 – General Requirements is modified as follows:

B. Section 01500 – Temporary Facilities

1. Office: In accordance with paragraph 3.01 OFFICE, the Contractor will not be allowed to use an assigned vehicle in lieu of a stationary office.

2. Field Office for Resident Project Representative: In accordance with paragraph 3.02 FIELD OFFICE FOR RESIDENT PROJECT REPRESENTATIVE, the Contractor shall provide a separate field office for Engineer's Resident Project Representative on the Site.
   a. 150-square-foot minimum, with minimum dimension of 8 feet.
   b. Secure entrance doors - one set of keys.
   c. Windows with blinds and operable sash and insect screens.
   d. Lockable storage closet.
   e. Resilient floor covering.
   f. Furnishings:
      i. One standard size desk with three drawers, swivel desk chair with arms.
      ii. One four foot by eight foot (4'x 8') conference table.
      iii. One plan rack to hold a minimum of six (6) racks of Drawings.
      iv. One standard four-drawer legal-size metal filing cabinet with lock and key.
      v. Six linear feet of bookshelves, 10-inch minimum depth.
      vi. Minimum of six office chairs.
      vii. One waste basket per desk and table.
      viii. One tack board, 36" x 30"
   g. Services:
      i. Lighting: 50 foot-candles (538 lux) at desktop height. Exterior lighting at entrance door.
      ii. Heating and air conditioning.
      iii. Electrical Service: Minimum of two circuits, 110V, 60 hertz. Minimum of four 110V duplex convenience outlets.
      iv. Outdoor toilet facilities with toiletries.
      v. Weekly cleaning service for trailer/office and toilet facilities.
      vi. Electric water cooler.
      vii. 30 Mbps minimum internet service.

3. Field Office for Resident Project Representative: In accordance with paragraph 3.02 FIELD OFFICE FOR CITY, provide a separate field office for City's Resident Project Representative on the Site with the following minimum requirements:
   a. 150-square-foot minimum, with minimum dimension of 8 feet.
   b. Secure entrance doors - one set of keys.
   c. Windows with blinds and operable sash and insect screens.
   d. Lockable storage closet.
   e. Resilient floor covering.

f. Furnishings:
   ix. One standard size desk with three drawers, swivel desk chair with arms.
   x. One four foot by eight foot (4'x 8') conference table.
   xi. One plan rack to hold a minimum of six (6) racks of Drawings.
   xii. One standard four-drawer legal-size metal filing cabinet with lock and key.
   xiii. Six linear feet of bookshelves, 10-inch minimum depth.
   xiv. Minimum of six office chairs.
   xv. One waste basket per desk and table.
   xvi. One tack board, 36" x 30"

g. Services:
   viii. Lighting: 50 foot-candles (538 lux) at desktop height. Exterior lighting at entrance door.
   ix. Heating and air conditioning.
   x. Electrical Service: Minimum of two circuits, 110V, 60 hertz. Minimum of four 110V duplex convenience outlets.
   xi. Outdoor toilet facilities with toiletries.
   xii. Weekly cleaning service for trailer/office and toilet facilities.
   xiii. Electric water cooler.
   xiv. Ninja CREAMi (or approved equal); Coffee Cream color.
   xv. 30 Mbps minimum internet service.

D. Section 01580 – Project Signs

1. Printers: The following is a list of local businesses who have provided printing services for City project signs. Printing location shall be coordinated with the City/Design Professional.

   a. Almar Printing
   7735 Wornall Road
   Kansas City, MO 64114
   Phone: (816) 523-4566

   b. Custom Color
   14320 W. 101st Terrace
   Lenexa, KS 66215
   Phone: (913) 730-3100

   c. KC Blueprint Company
   1804 Swift St.
   North Kansas City, Missouri 64116
   816-513-1048 Print Center
   816-527-0900 Home Office

   d. Office Max

e. City Hall Basement Print Center
414 E. 12th Street
Kansas City, MO 64106
Phone: (816) 513-1048

2. Number of Project Signs to be provided: two (2)

END OF SECTION

SECTION 01810 – PROJECT DESIGN CRITERIA

PART 1 - GENERAL

1.01 SUMMARY

A. Section includes:
    1. Criteria for use in selection of equipment and appurtenances specified in subsequent Sections of these Specifications, or on the Drawings.
    2. Criteria for design of tanks and other equipment fabricated off site and shipped to the Work site for installation.
    3. Criteria for use in design of anchors for connecting process, mechanical and electrical equipment, and appurtenances to supporting structures.
B. The criteria included in this Section are general criteria that apply throughout the Work unless more restrictive or more stringent criteria are indicated on the Drawings or in technical Specifications. See Drawings and Specifications for additional criteria relevant to specific locations, materials and equipment.

1.02 REFERENCES

A. American Society of Civil Engineers (ASCE):
    1. 1. 7-10 - Minimum Design Loads for Buildings and Other Structures (ASCE 7).
B. ASHRAE, Incorporated (ASHRAE).
C. International Code Council (ICC):
    1. International Plumbing Code (IPC).
D. Sheet Metal and Air Conditioning Contractor's National Association (SMACNA):
    1. Seismic Restraint Manual: Guidelines for Mechanical Systems, 4th edition.

1.03 SUBMITTALS

A. Design of supports and anchorage for structures:
    1. Shop drawings and calculations:
        a. Complete shop drawings and calculations.
        b. Calculations shall be signed and sealed by an engineer licensed in the State of Missouri.
    2. Seismic design calculations:
B. Where seismic design calculations are specified in this Specification, such requirements will be waived for structures or equipment determined to be in Seismic Design Categories A or B.
C. Wind design calculations: Where wind design calculations are specified in this Specification, such requirements will be waived for structures or equipment located inside other structures.

1.04 PROJECT DESIGN CRITERIA – SITE INFORMATION

A. Location:
    1. Address: 14001 Interurban Road, Kansas City, MO 64163
    2. Site coordinates (approximate): 39deg 20min 50sec N, 94deg 40min 10sec W
B. Elevation:

1. Operating elevation for equipment: Approximately 800 to 855 feet above mean sea level for Influent Pumping. Approximately 845 to 870 feet above mean sea level for remaining facilities.

1.05 PROJECT DESIGN CRITERIA – REGULATORY REQUIREMENTS

A. Code requirements of authorities having jurisdiction over the project are included in Section 01410 - Regulatory Requirements.

1.06 PROJECT DESIGN CRITERIA – OPERATING ENVIRONMENT

A. Equipment and materials for the Work shall be suitable for performance in a wastewater treatment plant environment, and under conditions specified in the following paragraphs.
    1. See technical specifications for each type of equipment for additional requirements.
B. Climate data for site:
    1. Energy Code Climate Zone: 4A (IECC 2021).
    2. Local data:
        a. Location: Kansas City, Missouri, Kansas City International Airport.
            (1) Data coordinates: Latitude 39.30 N; Longitude 94.71 W.
        b. Prevailing winds: 12 miles per hour.
        c. Temperatures - Outdoor: As specified in Table 1:

Table 1: Design Temperatures - Outdoor	
Condition	**Criteria**
Winter	2.4 degrees Fahrenheit dry-bulb at ASHRAE 99.6 percent.
Summer	92.7 degrees Fahrenheit dry-bulb / 76.1 degrees Fahrenheit mean coincident wet-bulb at ASHRAE 99.6 percent.

        d. Temperatures - Indoor: As specified in Table 2

Table 2: Design Temperatures - Indoor		
	Summer (degrees Fahrenheit)	**Winter (degrees Fahrenheit)**
Process and process equipment areas:		
• Unless otherwise noted.	10 degrees above ambient	55
• Blower and Pump Rooms.	104	55

• Corridors.	10 degrees above ambient	55
• Electrical, Control, and Mechanical (HVAC equipment) rooms.	85	55
Non-process areas:		
• Offices, conference rooms, vestibules, kitchen, restrooms. • Control room, wet analysis room. • PLC, instrument shop, instrument storage, electrical/com room.	75	70
• Admin storage.	80	65
• Mechanical (HVAC equipment) rooms.	85	55
• Conditioned Parts Storage Room.	75	70
• Maintenance shop.	104	55

3. Outdoor conditions - other:
    a. Humidity: 43.4 to 83.5 percent (NOAA 2002).
    b. Freeze-thaw conditions: 90-100 frost days per year.
4. Indoor conditions - other:
    a. Moisture conditions: As defined in individual equipment sections.

C. Rainfall design criteria:
1. Reference: 2015 IPC.
    a. 3.6 inches per hour (100-year, 1-hour storm).

1.07 PROJECT DESIGN CRITERIA - STRUCTURAL

A. GENERAL. Buildings, non-structural components and non-building structures shall be designed in accordance with this section. In the event of conflict with requirements in other sections, the more stringent criteria shall be followed.

B. DESIGN CRITERIA. Buildings, non-structural components including anchorage of such items, shall be designed in accordance with the following criteria in PART 3.

General Design Data:

Building code and references	IBC 2012, ASCE 7-10 "Minimum Design Loads for Buildings and Other Structures", AISC 360 "Specification for Structural Steel Buildings", AISC 341 "Seismic Provisions for Structural Steel Buildings"	
Site elevation, above mean sea level	734	ft
Design flood elevation, DFE	743.33	ft
(500 yr)		
Design groundwater elevation (Ref Geotechnical Soil Report)	717	ft

Wind Design Data:

Basic factored wind speed, V, Risk Category III	120	mph
Exposure category	C	
Importance factor (wind loads), I	N/A	
Building enclosure classification	Enclosed	

Snow Design Data:

Ground snow load, P_g	20	psf
Importance factor (snow loads), I	1.1	
Exposure factor (C_e)	0.9	
Thermal factor (C_t)	1.0	

Ice Design Data:

Nominal ice thickness, t	1.0	in
Concurrent wind speed, V_c	40	mph
Importance factor (ice loads – ice thickness), I_i	1.25	
Importance factor (ice loads – concurrent wind), I_w	1.0	

Seismic Design Data for Non-structural Components:

Design short period spectral response acceleration, S_{DS}	0.135g

Component importance factor, I_P	If/As indicated in the Non-Structural Components PART 3
Seismic Design Category	B

C. WIND ANCHORAGE. Equipment that is to be located outdoors shall have anchor bolts designed for the effects of wind forces, as determined in accordance with ASCE 7, Chapter 6. Shop drawings shall include full anchor bolt details and shall be sealed by a professional engineer licensed in the state of the project. Calculations shall be furnished when requested by Engineer.

D. SEISMIC DESIGN.

a. General. Structural systems shall provide continuous load paths, with adequate strength and stiffness to transfer all seismic forces from the point of application to the point of final resistance.

b. Pre-Engineered Buildings. As Per Architectural Drawings

c. Non-Structural Components. Non-structural components are architectural, mechanical, and electrical items that are permanently attached to and supported by a structure but are not part of the structural system, as indicated in Chapter 13 of ASCE 7, and in the Non-Structural Components Description PART 3.

The Non-Structural Components Description PART 3 identifies the components that require some level of seismic design. The requirements of this paragraph are applicable only to the items listed in the Non-Structural Components Description PART 3.

All components, and the anchorage of those components to the main structure, shall be shown on construction documents prepared and sealed by a registered design professional that is licensed in the state of the project. The construction documents shall be submitted in accordance with the Submittal Procedures section. Structural calculations shall be submitted when requested by Engineer.

Design of non-structural components shall be in accordance with all applicable provisions of ASCE 7, Chapter 13. Non-structural components shall have sufficient strength and ductility to resist the specified seismic effects, and shall meet all of the design, proportioning, detailing, inspection, and quality assurance provisions of the specified building code and other referenced codes.

Non-structural components shall be attached so that seismic forces are transferred to the structural system. Curbs that support roof-mounted equipment shall be designed to transfer forces from the equipment into the main structural roof members. All structural attachments shall be bolted,

welded, or otherwise positively fastened. Frictional resistance due to gravity shall not be considered in evaluating the required resistance to seismic forces.

When the Non-Structural Components Description PART 3 indicates that seismic design of any component is required, the component shall be designed to be operable during and following a design level seismic event without collapsing, breaking away from supports, creating an ignition hazard, or releasing any contents.

"W_p" shall include the total operating weight of the component or system, including, but not limited to, any insulation, fluids, and concentrated loads such as valves, condensate traps, and similar components.

Seismic effects that shall be analyzed in the design of piping systems include the dynamic effects of the piping system, contents, and supports. The interaction between piping systems and the supporting structures, including other mechanical and electrical equipment, shall also be considered. Where pipe supports are to be designed by Contractor, as required by the Pipe Supports section, both the piping and support systems shall be designed to meet the applicable requirements of ASCE 7, Chapter 13.

Non-Building Structures. Not used.

PART 2 - PRODUCTS

2.01 GENERAL

A. Equipment and materials for the project shall be suitable for the following conditions:
    1. Wastewater treatment plant conditions.
    2. Site, environmental and structural loading conditions as specified in this Section.
    3. Specific conditions listed in the relevant sections of the Contract Documents for the equipment and products under consideration.
B. Anchoring and fastening: See the following Sections for materials and installation requirements:
    1. Section 03 20 00 - Concrete Reinforcement.
    2. Section 04 20 00 - Unit Masonry.
    3. Division 5 – Metals.

PART 3 – EXECUTION

3.01 GENERAL

A. Design in accordance with the requirements of the building code as specified in Section 01410 - Regulatory Requirements and the references and project-specific design criteria listed in this Section.
B. In the event of conflicts between design criteria, the more restrictive or severe shall govern.

3.02 DESIGN OF SUPPORTS AND ANCHORAGE FOR EQUIPMENT AND TANKS

A. General:
    1. Anchor using anchor bolts, anchor rods, bolts, or welded studs.

2. Anchor bolts used to resist seismic loads and wind forces shall have a standard hex bolt head.
    a. Do not use anchor bolts fabricated from rod stock with an L or J shape.
    b. Do not use post-installed anchors (including concrete anchors, sleeve anchors, flush shells, chemical anchors, powder actuated fasteners, or other types of anchor) unless indicated on the Drawings or accepted in writing by the Engineer.
3. Anchor bolt and fastener calculations:
    a. Design for ductile failure (anchor bolt yield).
    b. Anchor bolts and fasteners embedded cast into plastic concrete or installed into cured concrete:
        (1) Design based on a minimum specified 28-day concrete compressive strength of 4,000 pounds per square inch (f'c = 4000 psi).

B. Seismic loads:
1. Do not use friction to resist sliding resulting from seismic forces. Resist such forces only by direct application of loads to fasteners as bearing, shear, tension, or compression force(s).
2. Do not use more than 60 percent of the weight of the mechanical and electrical equipment for designing anchors for resisting overturning due to seismic forces.
3. For tanks and equipment with varying weight based on the volume of material contained, design anchorage to accommodate both filled and empty conditions.
    a. Do not use more than 60 percent of the weight of the tank for resisting overturning due to seismic forces.

C. Wind loads:
1. Design load combinations shall be as specified in ASCE 7.
2. For tanks and equipment with varying weight based on volume of material contained, evaluate anchorage considering both filled and empty conditions.

End of Section

SECTION 01019 – CLOSEOUT PROCEDURES

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section. B. Related Sections include the following:

1. Section 00700 – General Conditions.
2. Section 01020 – Record Documents.
3. Section 01021 – Operation and Maintenance Data.
4. Section 01140 – Work Restrictions.
5. Section 01140.01 - Process and System Shutdown Constraints Schedule.
6. Section 01140.02 - Operation Change Control Plan Documents.
7. Section 01300 – Submittal.
8. Section 01320 – Construction Progress Documentation.
9. Section 01322 – Photographic Documentation
10. Section 01335 – Document Management.
11. Section 01340 – Building Information Modeling (BIM)
12. Section 01433 – Manufacturers' Field Services
13. Section 01664 – Training
14. Section 01757 – Commissioning

1.02 SUMMARY

A. This Section includes administrative and procedural requirements for contract closeout, including, but not limited to, the following:

1. Inspection procedures.
2. Submittals.
3. Final cleaning.

1.03 SUBMITTALS

A. All Substantial Completion documents shall be submitted at least 14 calendar days prior to Substantial Completion inspection request.

1. Specific warranties, workmanship bonds, maintenance service agreements, final certifications, and similar documents.
2. Obtain and submit releases permitting Owner unrestricted use of the Work and access to services and utilities. Include occupancy permits, operating certificates, and similar releases. 3. Prepare and submit Project Record Documents, final operation and maintenance manuals, Record Documents, damage or settlement surveys, property surveys, and similar final record information.
4. Submit specific warranties, workmanship bonds, maintenance service agreements, and similar documents in accordance with this Section.
5. Submit all manufacturers' certificates in accordance with Section 01433 Manufacturers' Field Services

6. Submit Final Original Equipment Manufacturer Operations & Maintenance (OEM O&M) Manuals for all equipment and materials furnished as part of the Work of the Project.
7. Prepare and submit draft Facility O&M Data and the draft Electronic O&M Manual in accordance with the requirements of this Section.
8. Submit draft as-built BIM developed in accordance with Section 01340 Building Information Modeling Requirements and updated to include as-built conditions.
9. Submit training materials and recordings of training sessions as described in Section 01757 Commissioning.
10. Submit approved Acceptance Test Plan developed in accordance with Section 01757 Commissioning and with this Section.
11. Deliver tools, spare parts, extra material, and maintenance products in accordance with Section 01600 Product Delivery Storage and Handling.
12. Submit changeover information related to Owner's use, operation, and maintenance.
13. Prepare and submit draft Project Record Documents prepared in accordance with Section 01700 Execution Requirements and submitted in accordance with the requirements of this Section.

B. All Final Completion documents shall be submitted at least 14 calendar days prior to Final Completion inspection request. Before requesting a final inspection to determine the date of Final Completion, complete the following:
    1. Submit a certified copy of the City's Substantial Completion inspection list of items to be completed or corrected (punch list), endorsed and dated by the City. The certified copy of the list shall state that each item has been completed or otherwise resolved for acceptance.
    2. Submit evidence of final, continuing insurance coverage complying with insurance requirements.
    3. Instruct Owner's personnel in operation, adjustment, and maintenance of products, equipment, and systems. Final operations and maintenance manuals must be provided for the training sessions.
    4. Touch up and otherwise repair and restore marred exposed finishes to eliminate visual defects. Surfaces which cannot be touched-up or repaired satisfactorily, shall be refinished or replaced.
    5. Submit changeover information related to Owner's use, operation, and maintenance.
    6. Submit final O&M Data, including the final electronic O&M in accordance with the requirements of this Section.
    7. Submit Final Building Information Model incorporating all as-built information in accordance with Section 01340 Building Information Modeling Requirements.
    8. A written request for final inspection for acceptance requirements.
    9. Submit a final Application for Payment according to Division1 Section "Payment Procedures."

1.04 WARRANTIES

A. Submit written warranties on request of Engineer for designated portions of the Work where commencement of warranties other than date of Substantial Completion is indicated.
B. Partial Use: Submit properly executed warranties within 15 days of completion of designated portions of the Work that are completed and used by Owner during construction period by separate agreement with Contractor or Design-Builder.

C. Organize warranty documents into an orderly sequence based on the table of contents of the Project Manual.
    1. Bind warranties and bonds in heavy-duty, 3-ring, vinyl-covered, loose-leaf binders, thickness as necessary to accommodate contents, and sized to receive 8-1/2-by-11-inch paper.
    2. Provide heavy paper dividers with plastic-covered tabs for each separate warranty. Mark tab to identify the product or installation. Provide a typed description of the product or installation, including the name of the product and the name, address, and telephone number of Installer.
    3. Identify each binder on the front and spine with the typed or printed title "WARRANTIES," Project name, and name of Contractor or Design-Builder.
D. Provide additional copies of each warranty to include in operation and maintenance manuals.
E. Provide additional copies of each warranty as a separate pdf file.
F. Cleaning Agents: Use cleaning materials and agents recommended by manufacturer or fabricator of the surface to be cleaned. Do not use cleaning agents that are potentially hazardous to health or property or that might damage finished surfaces.

1.05 SUBSTANTIAL COMPLETION

A. Preliminary Procedures: Before requesting inspection for determining the date of Substantial Completion, the Contractor or Design-Builder shall comply with all conditions in Supplementary Conditions and complete the following. List items below that are incomplete in request.
    1. Prepare a list of items to be completed and corrected (punch list), the value of items on the list, and reasons why the Work is not complete.
    2. Deliver salvaged material and similar items in accordance with Section 01352 Selective Alterations and Demolition to location designated by the Owner. Label with manufacturer's name and model number where applicable.
    3. Complete Installation and Functional Testing of all equipment, systems and subsystems in accordance with Section 01757 Commissioning.
    4. Instruct Owner's personnel in operation, adjustment, and maintenance of products, equipment, and systems in accordance with Section 01757 Commissioning.
    5. Clean the project area of construction debris and other construction effects.
    6. Terminate and remove temporary facilities from the Project site, along with mockups, construction tools, and similar elements.
    7. Complete final cleaning requirements, including touchup painting.
    8. Touch up and otherwise repair and restore marred exposed finishes to eliminate visual defects.
    9. Prepare and submit all required Submittals as specified herein.
B. Inspection: Submit a written request for Substantial Completion inspection. On receipt of request, the Engineer will either proceed with inspection or notify Contractor or Design-Builder of unfulfilled requirements. The Engineer will prepare the Certificate of Substantial Completion after inspection or will notify Contractor or Design-Builder of items, either on Contractor or Design-Builder's list or additional items identified by Engineer, that must be completed or corrected before certificate will be issued.
    1. Request re-inspection when the Work identified in previous inspections as incomplete is completed or corrected.

2. Results of completed inspection will form the basis of requirements for Substantial Completion.
3. The Contractor or Design-Builder shall pay for any re-inspection other than the first reinspection. The costs of all extra re-inspections, including the cost of the Owner's Representative and the Engineer will be deducted from the Contractor or Design-Builder's payments.
4. Following completion of all items above and all requirements for Substantial Completion included in the Supplemental Conditions 008000, the Owner will complete Form 01290.2 Certificate of Substantial Completion and distribute to the Contractor or Design-Builder.

1.06 FINAL COMPLETION

A. Preliminary Procedures: Before requesting final inspection for determining the date of Final Completion, complete the following:
    1. Instruct Owner's personnel in operation, adjustment, and maintenance of products, equipment, and systems. Final operations and maintenance manuals must be provided for the training sessions.
    2. Touch up and otherwise repair and restore marred exposed finishes to eliminate visual defects. Surfaces which cannot be touched-up or repaired satisfactorily, shall be refinished or replaced.
    3. Touch up and otherwise repair and restore marred exposed finishes to eliminate visual defects. Surfaces which cannot be touched-up or repaired satisfactorily, shall be refinished or replaced.
    4. Prepare and submit all required Submittals as specified herein.
B. A written request for final inspection for acceptance must be provided to the Engineer. Upon receipt of request, Engineer will either proceed with inspection or notify Contractor or Design-Builder of unfulfilled requirements. Engineer will prepare a final Certificate for Payment after inspection or will notify Contractor or Design-Builder of construction that must be completed or corrected before certificate will be issued.
    1. Re-inspection: Request re-inspection when the Work identified in previous inspections as incomplete is completed or corrected. The Contractor or Design-Builder shall pay for any reinspection other than the first re-inspection. The costs of all extra re-inspections, including the cost of the Owner's Representative and the Design Professional deducted from the Contractor or Design-Builder's payments.
    2. Submit a final Application for Payment according to Division 1 Section "Payment Procedures."

1.07 LIST OF INCOMPLETE ITEMS (PUNCH LIST)

A. Contractor or Design-Builder shall prepare and submit three copies of punch list. Include name and identification of each space and area affected by construction operations for incomplete items and items needing correction including, if necessary, areas disturbed by Contractor or Design-Builder that are outside the limits of construction. The Contractor or Design-Builder shall use the standard Water Services form for all items.
    1. Organize a list of spaces in sequential order,
    2. Organize items applying to each space by major element, including category equipment, and building systems.

3. Include the following information at the top of each page:
    a. Project Number
    b. Project name.
    c. Date.
    d. Name of Contractor or Design-Builder.
    e. Page number.

PART 2 - PRODUCTS (NOT USED)

PART 3 – EXECUTION

3.01 FINAL CLEANING

A. General: Provide final cleaning. Conduct cleaning and waste-removal operations to comply with local laws and ordinances and Federal and local environmental and antipollution regulations.
B. Cleaning: Employ experienced workers or professional cleaners for final cleaning. Clean each surface or unit to condition expected in an average commercial building cleaning and maintenance program. Comply with the manufacturer's written instructions.
C. Complete the following cleaning operations before requesting inspection for certification of Final Completion for entire Project or for a portion of Project:
    1. Clean Project site and grounds, in areas disturbed by construction activities, of rubbish, waste material, litter, and other foreign substances.
    2. Sweep paved areas broom clean. Remove petrochemical spills, stains, and other foreign deposits.
    3. Remove tools, construction equipment, machinery, and surplus material from the Project site.
    4. Remove debris and surface dust from limited access spaces, including roofs, plenums, shafts, trenches, equipment vaults, manholes, and similar spaces.
    5. Sweep concrete floors broom clean in unoccupied spaces.
    6. Remove labels that are not permanent.
    7. Touch up and otherwise repair and restore marred, exposed finishes and surfaces. Replace finishes and surfaces that cannot be satisfactorily repaired or restored or that already shows evidence of repair or restoration.
D. Do not paint over "UL" and similar labels, including mechanical and electrical nameplates.
    1. Wipe surfaces of mechanical and electrical equipment, and similar equipment. Remove excess lubrication, paint and mortar droppings, and other foreign substances.
    2. Clean ducts and blowers if units were operated without filters during construction.
    3. Clean light fixtures, lamps, globes, and reflectors to function with full efficiency.
    4. Leave Project clean and ready for use.
E. Comply with safety standards for cleaning. Do not burn waste materials. Do not bury debris or excess materials on Owner's property. Do not discharge volatile, harmful, or dangerous materials into drainage systems. Remove waste materials from the Project site and dispose of lawfully.

END OF SECTION

SECTION 01020 – RECORD DOCUMENTS

PART 1 - GENERAL

1.01 SUMMARY

A. Contractor shall maintain, in a safe place at the Site, one updated record copy of all Drawings, Standards and Specifications, Addenda, Shop Drawings, Requests for Interpretation (RFIs), Requests for Proposal (RFPs), Work Change Directives (WCDs), Change Orders, other written interpretations or clarifications of the contract documents, survey information (including approved cut sheets) and all other documents relevant to the Work.
B. All such documents shall be kept in order, good condition and shall be continuously updated to indicate all work installed and all changes made during construction.
C. No work shall be allowed in the absence of these record documents.
D. This document also outlines electronic data requirements and defines the survey requirements for the development of Field-Marked Drawings, As-Built Drawings and Conforming to Construction Drawings.

1.02 RELATED SECTIONS

A. Section 00700 – General Conditions.
B. Section 01019 – Closeout Procedures.
C. Section 01020 – Record Documents.
D. Section 01021 – Operation and Maintenance Data.
E. Section 01140 – Work Restrictions.
F. Section 01140.01 - Process and System Shutdown Constraints Schedule.
G. Section 01140.02 - Operation Change Control Plan Documents.
H. Section 01300 – Submittals.
I. Section 01320 – Construction Progress Documentation.
J. Section 01322 – Photogram Documentation.
K. Section 01335 – Document Management.
L. Section 01340 – Project BIM Coordination
M. Section 01664 – Training.
N. Section 01757 – Commissioning.

1.03 CODES AND STANDARDS

A. CAD Standards – KC Water CAD Standards.

1.04 DEFINITIONS

A. Drawings – As defined by Section 00700 – General Conditions.
B. Approved for Construction Drawings – Any drawing or sketch that has been issued to the Contractor or Design-Builder by the City for the purposes of constructing the Work. These include, but are not limited to, the following: Drawings, revisions to the Drawings, information issued as part of change orders and information issued as part of work change directives.
C. Field-Marked Drawings (Red Line Markups) – A copy of the Approved for Construction Drawings that is maintained and updated daily by the Contractor or Design-Builder during construction clearly detailing all work completed and depicting all changes made to the Work during construction.

D. As-Built Drawings – The completed Field-Marked Drawings that include the signed certification language from both the Contractor or Design-Builder and Surveyor.
E. Conforming to Construction Drawings – The Approved for Construction Drawings that have been revised to reflect the changes noted on the As-Built Drawings. For these drawings, the CAD files are updated, revision block is updated, and a new set of drawings is created.
F. Record Model – The building information model (BIM) that documents the work completed.
G. Record Drawings – All drawings used or developed as part of the Work. Record Drawings include, but are not limited to, the following: Approved for Construction Drawings, Field-Marked Drawings, As-Built Drawings and Conforming to Construction Drawings.
H. Record GIS – GIS files containing the site piping work completed in this project that has been created per KC Water Standards.
I. Record Documents – As defined by this Section and Section 00700 – General Conditions, Article 6 Contractor or Design-Builder's Responsibilities including but not limited to updated BIM, Electronic O&M Manual, OEM O&M, Record Photos, Final Submittals, SOPs, SIs, and any other specified submittals.

1.05 SUBMITTALS

A. Submit as specified in Section 01300 – Submittals.
B. Warranties and Bonds.
C. For each item of material or equipment furnished under the Contract.
D. Submittals include, but are not limited to, the following:
   1. Warranties as specified herein.
   2. As-Built Drawings.
   3. Conforming to Construction Drawings.
   4. Electronic Submittals:
   5. All electronic deliverables (drawings, coordinates table, etc.) shall be made through the approved document management system. See Section 01335 – Document Management.
   6. As-Built Drawings:
      a. One (1) hard copy on paper for review and approval.
      b. One (1) electronic copy in PDF format.
   7. All Record Documents including those listed in the referenced Sections:
      a. Submit Record documents in accordance with Section 00700 – General Conditions, Article 14 – Payments to the Contractor or Design-Builder and Completion.
      b. The following shall be submitted for Record Documents:
         i. One (1) hard copy on paper.
         ii. One (1) electronic copy in PDF format.
         iii. As specified in other sections.
         iv. Electronic (PDF) Documents:
         v. Documents shall be full scale.
         vi. Markups shall be noted in RED.
         vii. Minimum resolution shall be 600 dpi.

1.06 WARRANTY

A. Warranties and Bond are Record Documents.
B. CITY has the right to reject warranties.

C. CITY reserves the right to reject Work for the Project if the required warranties have not been provided.
D. Submit form of manufacturer's warranty prior to fabrication and shipment of the item from the manufacturer's facility.
E. Submit form of manufacturer's special warranty when specified.
F. Provide consolidated warranties and bonds within 15 calendar days of Substantial Completion.
G. Contents:
   1. Organize warranty and bond documents:
   2. Include Table of Contents organized by specification section number and the name of the product or work item.
   3. Include each required warranty and bond in proper form, with full information, are certified manufacturer as required, and are properly executed by Contractor, or subcontractor, supplier, or manufacturer.
   4. Provide name, address, phone number, and point of contact of manufacturer, supplier, and installer, as applicable.
H. Warranty submittal format:
   1. Submit two (2) hardcopies.
   2. Hardcopies shall be assembled in 3 D-side ring binders with durable cover.
   3. Identify each binder on the front and spine clearly labeling the following:
      a. Warranties and Bonds.
      b. Project Name or Title.
      c. Name, Address, and Telephone Number of the Contractor.
   4. Submit one (1) electronic copy in PDF format.
   5. The Record Documents shall be an integral part of the work guaranteed by the Contractor or Design-Builder's Performance and Maintenance Bond. If during the three-year maintenance period the City determines that further revisions or corrections are necessary to make the Record Documents accurate, the Contractor or Design-Builder shall make or cause the revisions or corrections to be made at no additional cost to the City.

1.07 QUALITY ASSURANCE

A. The Contractor or Design-Builder is responsible for the quality assurance and quality control of the Work.

PART 2 – PRODUCTS – NOT USED

PART 3 – EXECUTION

3.01 SURVEY REQUIREMENTS

A. All field books, notes, videotapes and other data developed by the Contractor or Design-Builder in performing required surveys as part of the Work shall be available to the City for examination throughout the construction period. All such data shall be submitted to the City with the other documentation required for final acceptance of the Work.
B. General Requirements:
   1. The Contractor or Design-Builder shall provide survey grade information for the locations and elevations of the Work as described herein. Surveys shall be conducted by a Professional Land Surveyor, licensed in the State of Missouri.

2. Vertical Datum – All elevations shall be indicated in North American Vertical Datum of 1988 (NAVD 88) in feet and decimals of a foot.
3. Horizontal Control – Coordinates shall be referenced to the North American Datum of 1983 (NAD 83), State Plane Missouri West Zone FIPS 2403 US Feet coordinate system, Kansas City Metro Control. Statewide Missouri Geographical Reference System monuments, Project monuments and Certified Land corners shall be used as references to determine State Plane coordinates. All control monuments used in the survey work shall be listed with reference ties and shown on the Record Drawings.
4. Water Systems:
    a. Fire Hydrant Assemblies – Provide survey point (location and elevation) at the top of the operating nut for each fire hydrant.
    b. Fittings – Provide survey point (location and elevation) at the center of each fitting (i.e. bends, tees, valves, etc.). Survey shall be taken at the top of the fitting. Provide the elevation of finished grade or improvements at the top of the fitting.
    c. Pipe Profile – Provide survey points (location and elevation) at the center point of all piping at a maximum spacing of 50 feet. Survey shall be taken on the top of the pipe. At the same location, provide the elevation of finished grade.
    d. Valves, Valve Vaults, Meter pits and Other Structures – A survey is required to verify the location of all new valves, valve vaults, meter pits or other structures. The survey shall include, but is not limited to, the following:
    (i) Location of the Structure – Provide coordinates for the center of the access cover.
    (ii) Top elevation – Provide the top elevation of the structure at the center of the access cover.
5. Wastewater Systems:
    a. Location – Verify the "Locating Point" shown on the Approved for Construction Drawings or standard detail. Verify all coordinate data shown on the Approved for Construction Drawings. If no such information is provided, the Locating Point shall be the center of the manhole cover.
    b. Top Elevation. – Provide the elevation of the top of the structure at the Locating Point.
    c. Pipe Inverts – Provide the invert elevation and flow direction of all pipes that penetrate the structure (flowline in - FL IN) and exit the structure (flowline out - FL OUT).
    d. Manhole Invert – Provide the elevation of the invert at the center of the manhole if different than the pipe inverts.
6. Existing Manholes – A survey is required to verify the location of all existing manholes that are modified as part of the Work. The survey shall include, but is not limited to, the following:
    a. Location of the Structure – Verify the "Locating Point" shown on the Approved for Construction Drawings or standard detail. Verify all coordinate data shown on the Approved for Construction Drawings. If no such information is provided, the Location Point shall be the center of the manhole cover.
    b. Top Elevation – Provide the elevation of the top of the structure at the Locating Point.
    c. Pipe Inverts – Provide the invert elevation and flow direction of all pipes that penetrate the structure (flowline in - FL IN) and exit the structure (flowline out - FL OUT).
    d. Manhole Invert – Provide the elevation of the invert at the center of the manhole if different from the pipe inverts.
7. Storm Water and Green Infrastructure Systems

a. A survey is required to verify the location of all new Green Infrastructure, Storm Water Structures, Junction Boxes, Manholes, Inlets and all other related structures. The survey shall include, but is not limited to, the following:
b. Location of the Structure – Verify the Locating Point shown on the Approved for Construction Drawings or standard detail. Verify all coordinate data shown on the Approved for Construction Drawings. The locating point for curb inlets is center of inside face of inlet wall. If no other locating information is provided for other structures, the Locating Point shall be the center of the access cover.
c. Top Elevation – Provide the elevation of the top of the structure at the Locating Point.
d. Pipe Inverts – Provide the invert elevation and flow direction of all pipes that penetrate the structure (flowline in - FL IN) and exit the structure (flowline out - FL OUT).
e. Manhole or Structure Invert – Provide the elevation of the invert at the center of the manhole or structure if different than the pipe inverts.

8. Culvert - A survey is required to verify the location of new culverts. The survey shall include, but is not limited to, the following:
   a. Location – The Locating Points shall be the center line of each culvert barrel at the upstream and downstream end of each. The location of each culvert barrel is to be provided.
   b. Invert – Provide the upstream and downstream invert elevation of each culvert barrel.
9. Channels and Ditches:
   a. Profile – Provide survey points (location and elevation) at the upstream and downstream end of the channel and along the channel at a maximum 50-foot intervals and at all bends and changes in alignment.
   b. Survey points shall be taken at finished grade at the centerline, toes of side slopes or walls and top elevation of the high flow channel on both sides of the channel. If water is present in the channel or ditch, provide water surface elevation on both sides of the channel.
10. Detention Areas:
    a. For any surface feature designed to detain or retain storm water runoff (i.e., detention basins, rain gardens, bio-retention cells, etc.) an as-built survey of the feature is required.
    b. Enough survey points shall be taken to generate 1-foot contours of the detention or retention area and any containment berms.
    c. Provide survey points (location and elevation) for both ends of weirs, all weir high and low points (if top of weir is not level) and other flow control structures, inlets and outlets.
    d. Provide survey points (location and elevation) for both ends of weirs and all weir high and low points (if top of weir is not level) of the principal spillway structure.
11. Facility Site Assets:
    a. Site Assets shall be documented to the same level of detail as other assets (water, wastewater etc..).
    b. Assets include all buried infrastructure in the project including but not limited to ductbanks, conduit, chemical piping, casings, gravity sewers, process piping, etc.

3.02 FIELD-MARKED DRAWINGS

A. The Contractor or Design-Builder shall continuously maintain a set of Field-Marked Drawings which details all work completed and shows all changes or deviations made by the Contractor or Design-Builder from the Approved for Construction Drawings. Where the Approved for Construction Drawings are not detailed and allow for flexibility during construction, the Contractor or Design-Builder shall include the detailed information on how the Work was constructed. These adjustments shall include, but are not limited to, field adjustments and change orders.

B. Field-Marked Drawings shall be prepared using survey grade information to show the horizontal and vertical location of the Work after completion of construction. Connection details may be sketched using field run measurements.
C. Mark new information that is not shown on Drawings or Shop Drawings.
D. Include the following:
   a. Field changes of dimension and detail.
   b. Change Order modification. Note related Change Order numbers where applicable.
   c. RFI modification. Note related RFI numbers where applicable.
   d. Details not on original Drawings.
   e. Horizontal and vertical location of all underground utilities and all other concealed elements that would be difficult or costly to maintain the installed asset long term.
E. Precision of Measurement:
   a. Where survey measurements are not required (sketching connection details) – elevations, stationing, distances and measurements shall be expressed to the nearest 0.10 foot.
   b. All other Work requires survey information – elevations, station, distances and measurements shall be expressed to the nearest 0.01 foot.
   c. Field changes or additions shall be designated in RED. Hard copy and electronic (PDF) deliverables shall be provided in color.
   d. Information shall be clearly distinguishable on hard copy mark-ups and in the electronic files.
F. If the Contractor or Design-Builder observes inaccurate information pertaining to existing conditions, the correct information shall be noted in the Field-Marked Drawings.
G. The Contractor or Design-Builder shall submit 30%, 60% and 90% check prints with the corresponding percent complete of work. The check prints shall be submitted with the Application for Payment. Failure to provide the check prints shall cause the Application for Payment to be returned to the Contractor or Design-Builder.

3.03 AS-BUILT DRAWINGS

A. Upon completion of the Work and before the Application for Final Payment, the Contractor or Design-Builder shall prepare the As-Built Drawings by completing annotations to the Field-Marked Drawings and adding the required certification statements.
B. Surveyor's Certification:
   1. Each drawing shall be modified to include a certification statement and signature block as described below.
      a. Water Systems

         Each sheet of these Record Drawings and attached Survey Cut Sheets for the Work have been reviewed and approved by the Professional Land Surveyor whose seal is affixed to this Record. The horizontal control, coordinates and elevations shown on these Records are accurate and are based on the Missouri Coordinate System of 1983, West Zone and NAVD88 datum, with the date of adjustment. These Records have been revised, as required in Section 01000, 1.20 of the Standards and Specifications for Water Main Extensions and Relocations, under my personal supervision to show the true and accurate measurements of the work as it was actually constructed.

      b. Wastewater, Storm Water and Green Infrastructure Systems

         Each sheet of these Record Drawings, Record Models and attached Survey Cut Sheets for the Work have been reviewed and approved by the Professional Land Surveyor

whose seal is affixed to this Record. The horizontal control coordinates and elevations shown on these Records are accurate and are based on the Missouri Coordinate System of 1983, West Zone and NAVD88 Datum. These Records have been revised under my personal supervision to show the true and accurate measurements of the work as it was actually constructed.

2. Every sheet of the Field-Marked Drawings must be reviewed, signed and sealed by a Professional Land Surveyor, licensed in the State of Missouri and must include the following statement on the title block inside the box marked "for WSD use" and near the Surveyor's professional license seal.

C. Contractor's Certification:

1. Each drawing shall be modified to include a certification statement and signature block as described below:

Water Systems

I hereby certify that this Record correctly depicts the Work constructed as to size, material, horizontal location, vertical location and finished grade as shown on the approved construction drawings or their revision. The Work was done in accordance with these Records and the current version of the Standards and Specifications for Water Main Extensions and Relocations.

Contractor: _____ *Date:* _____

Name (print): _____ *Title:* _____

Signature: _____

Wastewater, Storm Water and Green Infrastructure Systems

I hereby certify that this Record correctly depicts the Work constructed as to size, material, horizontal location, vertical location, grade of installed piping systems and finished grade as shown on the approved construction drawings or their revision. The Work was done in accordance with these Records.

Contractor: _____ *Date:* _____

Name (print): _____ *Title:* _____

Signature: _____

a. The Contractor or Design-Builder shall provide certification that the Field-Marked Drawings reflect the conditions that were constructed.
b. The Contractor or Design-Builder shall review the Field-Marked Drawings and verify all information is accurate. The Contractor or Design-Builder shall verify that all changes to the Work have been documented. The Contractor or Design-Builder shall sign each sheet of the Record Drawings with the following certification(s):

D. Submittals – Submit As-Built Drawings in accordance with paragraph SUBMITTALS. As-Built and Conforming to Construction Drawings must be approved by the City before the Contractor or Design-Builder submits the Application for Final Payment.

1. Mark each document "AS-BUILT DRAWINGS" in neat, large print letters.

2. The cover sheet of the project shall be included. The cover sheet shall include all required As-Built certifications and shall clearly show that the drawings are AS-BUILT.

3.07 OTHER RECORD DOCUMENTS

A. As defined by Section 00700 – General Conditions, Article 6 – Contractor or Design-Builder's Responsibilities. Section 01021 – Operation and Maintenance Data, Section 01300 –Submittals, Section 01320 – Construction Progress Documentation, Section 01322 – Photographic Documentation, Section 01664 – Training, Section 01757 – Commissioning, etc…
B. GIS Data of Site Piping.
C. Coordinates Table – Provide a Microsoft Excel spreadsheet that contains of every asset installed or adjusted as part of the Work per KCMO's asset standard document.
D. Survey Cut Sheets.

END OF SECTION

SECTION 01021 – OPERATION AND MAINTENANCE DATA

PART 1 - GENERAL

1.01 SUMMARY

A. This Section includes administrative and procedural requirements for the preparation, submission, and City's Representative's review of Operation and Maintenance (O&M) Data.

1. The Contractor or Design-Builder shall furnish all labor, materials, equipment, and incidentals as necessary to comply with these requirements.

1.02 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract; including General and Supplementary Conditions, all applicable Division 1 Sections, and all applicable Division Sections; apply to this Section.

B. Related Sections include the following:

1. Section 01019 – Closeout Procedures
2. Section 01020 – Record Documents
3. Section 01140 – Work Restrictions
4. Section 01140.01 - Process and System Shutdown Constraints Schedule
5. Section 01140.02 - Operation Change Control Plan Documents
6. Section 01020 – Record Documents
7. Section 01300 –Submittals
8. Section 01320 – Construction Progress Documentation
9. Section 01322 – Photogram Documentation
10. Section 01335 – Document Management
11. Section 01664 – Training
12. Section 01757 – Commissioning

1.03 REQUIRMENTS

A. Contractor shall prepare and provide data and materials, and provide instruction and services, as specified in this Section.

B. Compile product data and related information appropriate for Owner's maintenance and operation of products and systems furnished under this Contract. Include Information on all motors supplied with equipment.

C. Prepare O&M Data as specified in this Section and as referenced in other pertinent sections of the Specifications.

D. Instruct Owner's personnel in maintenance of products and in operation of equipment and systems, including electrical and instrumentation.

1.04 DEFINITIONS

A. O&M Data is including but not limited to:

1. Original Equipment Manufacturer Operation and Maintenance manuals.
2. Electronic O&M Manual for the entire project.
3. PLC, VFD, and SCADA Server Programs.

B. Preliminary Data: Initial and subsequent submissions for the City's Representative's review.

C. Final Data: City's Representative accepted data, submitted as specified herein.

D. Maintenance Operation: As used on Asset Maintenance Summary Form is defined to mean any routine operation required to ensure satisfactory performance and longevity of equipment. Examples of typical maintenance operations are lubrication, belt tensioning, adjustment of pump packing glands, and routine adjustments.

1.05 SUBMITTALS

A. Informational:

1. Data Outline: Submit two copies of a detailed outline of proposed organization and contents of Final Data prior to the preparation of the Preliminary Data.

2. Preliminary Data:
   a. Submit three copies for City's Representative's review including Relevant Standard Operation Procedures and Standard Instructions.
   b. If Data meets the condition of the Contract:
      (1) One copy will be returned to Contractor or Design-Builder.
      (2) One copy will be forwarded to Resident Project Representative.
      (3) One copy will be retained in City's Representative's file.
   c. If Data does not meet the condition of the Contract:
      (1) All copies will be returned to Contractor or Design-Builder with City's Representative's comments (on separate document) for revision.
      (2) City's Representatives comments will be retained in City's Representative's file.
      (3) Resubmit two copies revised in accordance with City's Representative's comments.

1.06 SEQUENCING AND SCHEDULING

A. Equipment and System Data:

1. Preliminary Data:
   a. Do not submit until Shop Drawings for equipment or system has been reviewed and approved by City's Representative.
   b. Submit prior to shipment.

2. Final Data: Submit instructional Manual Formatted data not less than 30 days prior to equipment or system field functional testing Submit Compilation Formatted and Electronic Media Formatted data prior to Substantial Completion of Project.

B. Materials and Finish Data:

1. Preliminary Data: Submit at least 15 days prior to request for final inspection.

2. Final Data: Submit within 10 calendar days after final inspection.

PART 2 - PRODUCTS

2.01 DATA FORMAT (for Original Equipment Manufacture Operations and Maintenance Manuals OEM O&Ms)

A. Prepare preliminary and final data in the form of an instructional manual. Prepare final data on electronic media and printed.

B. Instructional Manual Format:

1. Binder: Commercial quality, permanent, three ring or three post binder with durable plastic cover.
2. Size: 8 ½ inches by 11 inches minimum.
3. Cover: Identify manual with typed or printed title, "(relevant area) OPERATION AND MAINTENANCE MANUAL" and list.
   a. Project title.
   b. Designate applicable system, equipment, material, or finish.
   c. Identify the assets covered in this O&M Manual.
   d. Identify separate structure as applicable.
   e. Identify volume number if more than one volume.
   f. Identify of general subject matter covered in manual. Identity of equipment number and Specification section.
4. Spine:
   a. Project Title.
   b. Volume number (if more than one volume).
5. Title Page:
   a. Contractor name, address, and telephone number.
   b. Subcontractor, supplier, installer, or maintenance Contractor or Design-Builder's name, address, and telephone number, as appropriate.
      (1) Identify area of responsibility of each.
      (2) Provide name and telephone number of local source of supply of parts and replacement.
6. Table of Contents:
   a. Neatly typewritten and arranged in systematic order with consecutive page numbers.
   b. Identify each product by product name and other identifying numbers or symbols as set forth in Contract Documents.
7. Paper: 20 pound minimum, white for typed pages.
8. Text: Manufacturer's printed data, or neatly typewritten.
9. Three-hole punch data for binding and composition.
10. Material shall be suitable for reproduction, with quality equal to original. Photocopying of material will be acceptable, except for material containing photographs.

C. Data Compilation Format:

1. Compile all City's Representative's accepted preliminary O&M data into a hard copy, hard bound set.
2. Each set shall consist of the following:
   a. Binder: Commercial quality, permanent, three ring or three post binders with durable plastic covers.

b. Cover: Identify each volume with typed and printed title "OPERATION AND MAINTENANCE DATA, VOLUME NO. _____ OF _____", and list:
   (1) Project Title
   (2) Contractor's name, address, and telephone number.
   (3) If entire volume covers equipment or system provided by one supplier include the following:
      (a) Identity of general subject matter covered in manual.
      (b) Identity of equipment number and Specification section.

c. Provide each volume with title page and typed table of contents with consecutive page numbers. Place contents of entire set, identified by volume number, in each binder.

d. Table of contents neatly typewritten, arranged in a systematic order:
   (1) Include list of each product, indexed to content of each volume.
   (2) Designate system or equipment for which it is intended.
   (3) Identify each product by product name and other identifying numbers or symbols as set forth in Contract Documents.

e. Section Dividers:
   (1) Heavy, 80 pound cover weight, tabbed with numbered plastic index tabs.
   (2) Fly leaf:
      (a) For each separate product, or each piece of operating equipment, with typed description of product and major component parts of equipment.
      (b) List with each product:
         (i) Name, address, and telephone number of Sub-contractor, Supplier, Installer, and Maintenance Contractor or Design-Builder, as appropriate.
         (ii) Identify area of responsibility of each.
         (iii) Provide local source of supply for parts and replacement.

f. Assemble and bind material, as much as possible, in same order as specified in the Contract Documents.

D. Electronic Media Data:

1. Portable Document Format (PDF):
   a. After all preliminary data has been found to be acceptable to City's Representative, submit Operation and Maintenance data in PDF format on CD.
   b. Files to be exact duplicates of City's Representative's accepted preliminary data. Arrange by specification number, asset, and name.
   c. Files to be fully functional and viewable in most recent version of Adobe Acrobat.
   d. PDFs shall be bookmarked as appropriate with appropriate hyperlinks.
   e. All files shall be tagged per the City's Record File tagging system.

E. DATA FOR EQUIPMENT SYSTEMS (Original Equipment Manufacturer Operations and Maintenance Manuals OEM O&Ms):

1. Content for each Unit (or Common Units) and System:

2. Product Data:
   a. Include only those sheets that are pertinent to specific product.
   b. Clearly annotate each sheet to:
      (1) Identify specific product or part installed.
      (2) Identify data applicable to installation.

(3) Delete references to inapplicable information.

c. Function, normal operating characteristics, and limiting conditions.

d. Performance curves, engineering data, nameplate data, and tests.

e. Complete nomenclature and commercial number of replaceable parts.

f. Original manufacturer's parts list, illustrations, detailed assembly drawings showing each part with part numbers and sequentially numbered parts list, and diagrams required for maintenance.

g. Spare parts ordering instructions.

h. Where applicable, identify installed spares and other provisions for future work (e.g., reserved panel space, unused components, wiring, terminals).

3. As installed, color coded piping diagrams.

4. Charts of valve tag numbers, with the location and function of each valve.

5. Drawings: Supplement product data with drawings as necessary to clearly illustrate:

a. Format:

(1) Provide reinforced, punched, binder tab; bind in with text.

(2) Reduced to 8 ½ inches by 11 inches, or 11 inches by 17 inches folded to 8 ½ inches by 11 inches.

(3) Where reduction is impractical, fold and place in 8 ½ inch by 11 inch envelopes bound in text.

(4) Identify Specification section and product on drawings and envelopes.

b. Relations of component parts of equipment and systems.

c. Control and flow diagrams.

d. Coordinate drawings with Project record documents to assure correct illustration of completed installation.

6. Instructions and procedures: Within text, as required to supplement product data.

a. Format:

(1) Organize in consistent format under separate heading for each different procedure.

(2) Provide logical sequence of instructions for each procedure.

(3) Provide information sheet for Owner's personnel, including:

(a) Proper procedures in event of failure.

(b) Instances that might affect validity of guarantee or Bond.

b. Installation Instructions: Including alignment, adjusting, calibrating, and checking.

c. Operating Procedures:

(1) Startup, break-in, routine, and normal operating instructions.

(2) Test procedures and results of factory tests where required.

(3) Regulation, control, stopping, and emergency instructions.

(4) Description of operation sequence by control manufacturer.

(5) Shutdown instructions for both short and extended duration.

(6) Summer and winter operating instructions, as applicable.

(7) Safety precautions.

(8) Special operating instructions.

d. Maintenance and Overhaul Procedure:

(1) Routine maintenance.

(2) Guide to troubleshooting.

(3) Disassembly, removal, repair, reinstallation, and re-assembly.
(4) Recommended work orders for preventative maintenance.

7. Guarantee, Bond, and Service Agreement: In accordance with section 01019, "Closeout Procedures".

8. Standard Operating Procedures and Standard Instructions for each unit process in KCMO Water Services Format approved by the KCMO City's Representative and Utility and created by the engineer of record or an alternative acceptable to the KCMO City's Representative.

9. Assets covered in this document.

F. Content for each Electric or Electronic Item or System:

1. Description of Unit and Component Parts:
   a. Function, normal operating characteristics, and limiting conditions.
   b. Performance curves, engineering data, nameplate data, and tests.
   c. Complete nomenclature and commercial number of replaceable parts.
   d. Interconnection wiring diagrams, including control and lighting systems.
   e. Piping and Instrumentation Diagram of the unit.

2. Circuit Directories of Panelboards.

3. Electrical service.

4. Control requirements and interface.

5. Communication requirements and interfaces.

6. List of electrical relay settings, and control and alarm contact settings.

7. Electrical interconnection wiring diagram, including as applicable, single line, three line, schematic and internal wiring, tags per KCMO tagging standard and external interconnection wiring.

8. As installed control diagrams by control manufacturer.

9. Operating Procedures:
   a. Routine and normal operating instructions.
   b. Startup and shutdown sequences, normal, and emergency.
   c. Safety precautions.
   d. Special operating instructions.

10. Maintenance Procedures:
    a. Routine maintenance.
    b. Guide to troubleshooting.
    c. Adjustment and checking.
    d. List of relay settings, control, and alarm contact settings.
    e. Preventative Maintenance.

11. Manufacturer's printed operating and maintenance instructions.

12. List or original manufacturer's spare parts, manufacturer's current prices, and recommended quantities to be maintained in storage.

G. Maintenance Summary:

1. Complete individual Maintenance Summary for each applicable equipment item, respective unit or system, and for components or sub-units.

2. The Maintenance Summary form shall be updated to incorporate the final recommendations established through the Maintenance Workshops described in Section 01320 Construction Progress Documentation.

3. Format:
   a. Use Maintenance Summary Form bound with this section or electronic facsimile of such.
   b. Each Maintenance Summary may take as many pages as required.
   c. Use only 8 ½ inch by 11 inch size paper.
   d. Complete using typewritten or electronic printing.

4. Include detailed lubrication instructions and diagrams showing points to be greased or oiled; recommended type, grade, and temperature range of lubricants and frequency of lubrication.

5. Recommended Spare Parts:
   a. Data to be consistent with manufacturer's Bill of Materials/Parts List furnished in O&M manuals.
   b. "Unit" is the unit of measure for ordering the part.
   c. "Quantity" is the number of units recommended.
   d. "Unit Cost" is the current purchase price.

H. The type and quantity of spare parts provided shall be consistent with technical specifications.

2.02 DATA FOR MATERIALS AND FINISHES

A. Content for Architectural Products, Applied Materials, and Finishes:

1. Manufacturer's data, giving full information on products:
   a. Catalog number, size, and composition.
   b. Color and texture designations.
   c. Information required for reordering special manufactured products.
2. Instructions for Care and Maintenance:
   a. Manufacturer's recommendation for types of cleaning agents and methods.
   b. Cautions against cleaning agents and methods that are detrimental to product.
   c. Recommended schedule for cleaning and maintenance.

B. Content for Moisture and Weather Exposed Products:

1. Manufacturer's data, giving full information on products:
   a. Applicable standards.
   b. Chemical composition.
   c. Details of installation.
2. Instructions for inspection, maintenance, and repair.

2.03 COMPLETE ASSET/CMMS DATA:

1. Owner will provide a template for machine reading assets and maintenance activities into the Owner's Computerized Maintenance Management System (CMMS).

2. Access database template will be blank with fields for assets information such as asset additions, asset updates, asset retirements including a rough estimated value, maintenance activities for the assets, PID tags within the asset, and asset categorization.

3. Contractor or Design-Builder shall fill out the template documenting changes in the CMMS; insert asset additions including value, updates and retired assets including estimated value when taken out of service; work order updates; new PMs; PMs to be retired; non-destructive testing updates; and other asset fields. Assets shall be coordinated and categorized with the applicable CMMS takes for entry into Owner's CMMS and Financial Software.

2.04 PROGRAMS

A. PLC, VFD, and SCADA Programs: Provide current native format copies of all software programs used to control assets.

1. Files should be named per asset equipment IDs, systems, or sub systems as appropriate.

2.05 SUPPLEMENTS

A. The supplements listed below, following "End of Section", are part of this Specification.

1. Forms: Asset Maintenance Summary Form.

PART 3 - EXECUTION (NOT USED)

SECTION 01110 – SUMMARY OF WORK

PART 1 GENERAL

1.01 LOCATION OF WORK

A. The work of this Contract is located at the property surrounding the coordinates below:

Latitude 39º 21’ 20.45” North
Longitude 94º 40’ 13.33” West

as well as at the existing Todd Creek WWTP at 7600 NW 144th Street, Kansas City, MO 64163.

1.02 SCOPE OF WORK

A. Furnish all labor, materials, equipment and incidentals required and construct the Todd Creek Facility Plan Update Project in its entirety as shown on the Drawings and as specified herein for a fully functioning system.

B. The Work includes, but is not necessarily limited to, the following:

1. Construction of a new 4.6 MGD Todd Creek Wastewater Treatment Plant, including:
   a. Gravity sewer and control structures to route flow to new facilities
   b. Coarse Screen channel and building
   c. Chemical feed equipment
   d. Influent pump station and electrical building
   e. Influent force main
   f. Headworks building
   g. Aerated granular sludge (AGS) basins and associated structures
   h. Blower building
   i. UV Disinfection Building
   j. Cascade aeration structure
   k. Solids Process building
   l. Effluent gravity line and outfall
   m. Administration Building
   n. Site civil improvements including roads, fencing, grading, stormwater management
   o. Site SCADA and cybersecurity
   p. Water line extension to provide potable water
   q. All related equipment, piping, valving and instrumentation

2. Abandonment of existing sludge holding cells in compliance with MDNR and KCMO regulations. Final grading and seeding in and adjacent to the holding cell footprint

3. Removal of existing bridge across Todd Creek and installation of erosion control systems in its place.

4. Demolition of the existing Todd Creek WWTP building, tanks, outfall, fencing and structures. Abandonment of existing buried structures and utilities. Backfill, final grading, and seeding of the existing WWTP footprint.

5. Training, startup and commissioning activities to place the new facilities into service.

a. This includes providing AGS seed sludge for AGS basins as a part of the startup and commissioning activities.

1.03 WORK SEQUENCE

A. Construction of new facilities and tie-in to existing sanitary sewer.

B. Startup and commissioning of new facilities.

C. Demolition of existing sludge holding cells

D. Removal of Todd Creek bridge

E. Demolition of existing Todd Creek WWTP

F. Regrade and seeding of demo and abandoned areas of existing facilities.

1.04 CONTRACTOR'S USE OF PREMISES

A. Contractor shall limit the use of the premises for his/her Work and for storage to allow for:

1. Work by other agencies.

2. Owner occupancy.

3. Public use.

B. Coordinate use of premises with Owner.

C. Contractor shall assume full responsibility for security of all his/her and his/her subcontractors materials and equipment stored on the site.

D. If directed by the Owner, move any stored items which interfere with operations of Owner or other contractors.

E. Obtain and pay for use of additional storage or work areas if needed to perform the Work.

1.05 OWNER OCCUPANCY

A. Owner will occupy premises during performance of the Work for the conduct of his/her normal operations. Coordinate all construction operations with Owner to minimize conflict and to facilitate Owner usage.

1.06 CONSTRUCTION COORDINATION

A. Activities by Others which may affect performance of the Work:

1. CITY will use an existing IDIQ contract for dewatering of all tanks and basins at the existing Todd Creek WWTP as well as cleaning out sludge from the existing sludge holding cells. Coordinate with CITY regarding schedule for interconnection work and demolition work.

B. Contractor shall coordinate with the Owner regarding scheduling and sequence of work.

END OF SECTION

SECTION 01140 – WORK RESTRICTIONS

PART 1 – GENERAL

1.01 SUMMARY

A. Section includes: Requirements for sequencing and scheduling the Work affected by existing site and facility; work restrictions; and coordination between construction operations and plant operations.

1.02 SUBMITTALS

A. Baseline Schedule with OCCP tasks.
B. Operational Change Control Plan (OCCP) Form.
C. Progress Schedule with OCCP tasks.

1.03 GENERAL CONSTRAINTS ON SEQUENCE AND SCHEDULING OF WORK

A. Wastewater projects:
    1. The Todd Creek Wastewater Treatment Plant is the City's only means of treating sewage for the designated service area prior to discharging to the Missouri River. Impairing the operational capabilities of this treatment plant will result in serious environmental damage and monetary fines.
    2. Conduct Work in a manner that will not impair the operational capabilities of essential elements of the treatment process or reduce the capacity of the entire treatment plant below levels sufficient to treat the quality of raw wastewater to the water quality limitations specified in the discharge permit. 3. Conduct commissioning and process start-up activities as specified in Section 01757 - Commissioning in a manner that will not impair the operational capabilities of essential elements of the treatment process or reduce the capacity of the entire existing treatment plant below levels sufficient to treat the quality of raw wastewater to the water quality limitations specified in the discharge permit.
    3. The status of the new treatment plant shall be defined as "operational" when it is capable of treating the entire quantity of wastewater received at the Todd Creek WWTP to the water quality limits specified in the discharge permit.
B. Work sequence and constraints:
    1. Utilize description of critical events in work sequence in this Section as a guideline for scheduling and undertaking the Work.
    2. Work sequence and constraints presented do not include all items affecting completion of the Work, but are intended to describe critical events necessary to minimize disruption of the existing facilities and to ensure compliance with National Pollutant Discharge Elimination System (NPDES) permit requirements.
C. Instrumentation and controls process performance testing:
    1. After the Process Operational Period, test PCIS system as specified in Section 01757 - Commissioning.

1.04 SHUTDOWN AND CONSTRUCTION CONSTRAINTS

A. Normal working hours:
    1. Construction will take place during normal working hours as defined:
        a. 7AM to 6PM Monday through Friday.

b. Refer to 0700 General Conditions Section 6.03 for further restrictions.

B. Construction Operations and Safety Constraints
   1. In recognition of nearby property owners concerns with construction activities, the following restrictions shall be adhered to unless otherwise accepted by the Owner in writing:
      a. Vehicle access for the demolition of the existing plant shall be through NW 144th Street. Access shall not be permitted off of Todd Creek Road.
      b. Vehicle and motorized equipment on site shall include backup/reverse alarms that utilize a "white noise" system rather than the more typical "beeper" system. The system should be in compliance with OSHA requirements for this type of safety device.

C. General shutdown constraints:
   1. Execute the Work while the existing facility is in operation.
   2. Some activities may be accomplished without a shutdown.
   3. Apply to activities of construction regardless of process or work area.
   4. Activities that disrupt plant or utilities operations must comply with these shutdown constraints.
   5. Organize work to be completed in a minimum number of shutdowns.
   6. Provide thorough advanced planning, including having required equipment, materials, and labor on hand at time of shutdown.
   7. Notify the City at least 30 days in advance of any tasks that will require dewatering and cleaning to allow the City the appropriate amount of time to conduct the work.
   8. Where required to minimize treatment process interruptions while complying with specified sequencing constraints, provide temporary pumping, power, lighting, controls, instrumentation, and safety devices.
   9. Final determination of the permitting of shutdowns will be the sole judgment of the Owner.
   10. Owner maintains the ability to abort on the day of the scheduled shutdown or to hold at any hold point.

D. Unit process availability work limitations:
   1. Shutdowns and tie-ins or other activities that disrupt plant operations shall not occur if the following conditions exist unless approved by the OWNER in writing, or specified in 01140.01 Process and System Shutdown Constraints Schedule:
      a. Rainfall has occurred in the 2 days preceding the shutdown.
      b. Rainfall is forecast for more than 3 of the first 14 days of the shutdown period.

E. Shutdown activities:
   1. Scheduling:
      a. Perform between the hours of 10 p.m and 4 a.m. unless otherwise specified herein or as approved by Owner.
   2. Unplanned shutdowns due to emergencies are not defined in this Section.

F. Dewatering of existing process and disposal of residue:
   1. When the Owner has turned the process unit over to the Contractor for modification or temporary use, the Contractor is responsible for costs and procedures required to dewater and dispose of liquid, solids, etc. in the process unit unless the Owner has made prior arrangements.
      a. Drainage and disposal of process unit liquids, solids, etc. into another treatment process unit on the plant site may be allowed if approved in advance by the Engineer and Owner and is conducted in accordance with the Project requirements.

b. Costs for dewatering, disposal of solids and residuals, and preparation of surfaces for the Work are Contractor's responsibility.
    (1) Includes tipping fees for the removal and disposal of the grit/debris.
c. Dewatering of grit/debris to meet landfill requirements is the responsibility of the Contractor.
d. Contractor shall provide adequate time in schedules for draining and cleanup of basins and channels.

G. Refer to the Process and System Shutdown Constraints Schedule in Section 01140.01 for additional requirements.

1.05 OPERATIONAL CHANGE CONTROL PLAN (OCCP)

A. Refer to Section 01140.02 - Operational Change Control Plan (OCCP) Documents for additional requirements.
B. Submit Baseline Schedule, as specified in Section 01320 – Construction Progress Documentation.
C. No consideration will be given to claims of additional time and cost associated to preparing OCCPs required by the Owner and Engineer to complete this work in a manner that facilitates proper operation of the facility and compliance with effluent discharge criteria.
D. Where required to minimize treatment process interruptions while complying with specified sequencing constraints, provide temporary pumping, power, lighting, controls, instrumentation, and safety devices.
E. OCCPs are required whenever an existing asset or a new asset that could affect treatment or conveyance are modified including but not limited to set points and operational modes.

1.06 COMPLIANCE WITH NATIONAL POLLUTANT DISCHARGE ELIMINATION SYSTEM (NPDES) PERMIT

A. The existing facility is operating under the terms of a NPDES permit issued by the State of Missouri. This permit specifies the water quality limits that the plant must meet prior to discharge of effluent. A copy of the existing permit (Missouri State Operating Permit No. MO-0024961) is on file for review at the Administration Building at the Todd Creek WWTP. The facility includes a biological process that may require extended periods of acclimation after a shutdown or other impact before it can reasonably be expected to perform as intended. Contractor will include adequate acclimation time as a part of any construction activity.
B. Perform work in a manner that will not prevent the existing facility from achieving the finished water quality requirements established by regulations.
C. Bear the cost of penalties imposed on the Owner for discharge violations caused by actions of the Contractor.

1.07 REQUIREMENTS FOR OPERATION OF PLANT AND MAINTAINING CONTINUOUS OPERATION OF EXISTING FACILITIES

A. Facilities or conditions required to keep the existing plant operational include, but are not limited to, the following:
    1. Influent gravity sewer
    2. Influent screening and pumping
    3. Blowers
    4. Aeration basins and clarifiers

5. RAS/WAS pump station
6. UV disinfection system
7. Existing outfall

B. Contractor shall protect existing grating with steel traffic plate or other Engineer approved means when moving equipment or supplies over grating.
C. Maximum allowable superimposed live load on any existing grating or walkway shall be 50 psf. If higher loads are proposed, provide detailed calculations demonstrating adequacy of grating or walkway system for higher loads. The calculations shall be sealed and signed by a registered professional engineer and submitted to the Engineer for review and acceptance.

1.08 OPERATION AND MAINTENANCE ACCESS

A. Provide safe, continuous access to process control equipment for plant operations personnel.

1.09 COORDINATION OF THE WORK

A. Maintain overall coordination of the Work.
B. Obtain construction schedules from subcontractors and suppliers and assume responsibility for correctness.
C. Incorporate schedules from subcontractors and suppliers into Progress Schedule to plan for and comply with sequencing constraints.

1.10 WORK BY OTHERS

A. Where proper execution of the Work depends upon work by others, inspect and promptly report discrepancies and defects.

1.11 UTILITIES

A. Provide advance notice to request and utilize services of the Missouri One Call System (www.mo1call.com or 1-800-344-7483 (DIG-RITE)) for location and marking of underground utilities operated by utility agencies other than the Owner.
B. Maintain electrical, telephone, water, gas, sanitary facilities, and other utilities within existing facilities in service. Provide temporary utilities when necessary.
C. New yard utilities were designed using existing facility drawings.
    1. Field verification of utilities locations was not performed during design.
    2. Services crossed or located nearby new yard utilities may require relocation and possible shutdowns.

PART 2 - PRODUCTS (NOT USED)

PART 3 – EXECUTION

3.01 PROCESS AND SYSTEM SHUTDOWN CONSTRAINTS SCHEDULE

A. Refer to the Process and System Shutdown Constraints Schedule in Section 01140.01 for constraints on process and system shutdowns.
B. Requests for variance from any part of this schedule must be approved in writing by the OWNER.
C. The planned date of shutdown as listed on the Operational Change Control Plan (OCCP) form shall be considered the start date for the shutdown and used for calculating the actual shutdown duration, unless approved in writing by the OWNER. In the event that the OWNER can shut down a system or

process prior to the planned date of shutdown and the CONTRACTOR agrees to commence work at that earlier date, the date that the CONTRACTOR commences work on the associated process or system shall be considered the start date for the shutdown and for calculating the actual shutdown duration.

D. These constraints are intended to supplement the demolition, modification, tie-in, and construction activities and constraints described in Article 1.12 of this Section.

End of Section

01140.01 - PROCESS AND SYSTEM SHUTDOWN CONSTRAINTS SCHEDULE

PART 1 GENERAL

1.01 SUMMARY

A. Section includes: Information on the shutdown constraints for each of the major processes.

1.02 DEFINITIONS

A. Maximum Shutdown Duration: The maximum allowable time in calendar days (unless otherwise noted) that a process and its associated piping, valves, channels, gates, etc. may be removed from service to perform the required work on that process.

B. Minimum Time Between Shutdowns: The minimum amount of time in calendar days (unless otherwise noted) between consecutive shutdowns of a process and its associated piping, valves, channels, gates, etc. 3.

C. Maximum Number of Shutdowns: The maximum number of times that a process and its associated piping, valves, channels, gates, etc. may be removed from service to perform the required work on that process. In cases where only one (1) shutdown is allowed, a value has been listed in the "Minimum Time Between Shutdowns" column to provide guidance if additional shutdowns are determined to be required.

D. Seasonal Shutdown Constraint: The approximate time period during which a process shall remain in service and no work shall be performed on that process.

PART 2 PRODUCTS

Not Used.

PART 3 EXECUTION

3.01 PROCESS AND SYSTEM SHUTDOWN CONSTRAINTS SCHEDULE

A. The Process and System Shutdown Constraints Schedule is presented on the following pages.

B. Requests for variance from any part of this schedule must be approved in writing by the OWNER.

C. The planned date of shutdown as listed on the Operational Change Control Plan (OCCP) form shall be considered the start date for the shutdown and used for calculating the actual shutdown duration, unless approved in writing by the OWNER. In the event that the OWNER can shut down a system or process prior to the planned date of shutdown and the CONTRACTOR agrees to commence work at that earlier date, the date that the CONTRACTOR commences work on the associated process or system shall be considered the start date for the shutdown and for calculating the actual shutdown duration.

D. These constraints are intended to supplement the demolition, modification, tie-in, and construction activities and constraints described in Section 01140 - Work Restrictions.

PROCESS AND SYSTEM SHUTDOWN CONSTRAINTS SCHEDULE					
Phase 1 of Work Sequence	**Maximum Shutdown Duration**	**Minimum Time Between Shutdowns**	**Maximum Number of Shutdowns**	**Seasonal Shutdown Constraints**	**Notes**
Tie-In to existing gravity sewer	As necessary	As necessary	2	NA	Bypass pumping may be required. Refer to 33 01 30.19

General Notes:

(1) NC = No Constraints

(2) NA = Not Applicable

Notes:

(1) Shutdown of this process, system, or equipment is restricted to between the hours of 10 p.m. and 4 a.m.

(2) Shutdown of this process, system, or equipment shall not occur at the same time as other items having this note.

(3) Shutdowns and tie-ins or other activities that disrupt plant operations shall not occur if the following conditions exist:

a) Rainfall has occurred in the 2 days preceding the shutdown

b) Rainfall is forecast for more than 3 of the first 14 days of the shutdown period.

1. Date	
2. Version (use modifier starting with A at end of OCCP number when document changes substantially)	
3. OCCP Number	
4. Facility Name/ Facility ID	
5. Project Execution Start Date	

6. Description of Works (provide a brief summary of the work to be performed)

7. Key Plan information (hold points are those points at which work will be halted and operations returned to usual and customary conditions and is not a description of the work to be performed)

Description of Hold Point 1	
Description of Hold Point 2	
Description of Hold Point 3	
Description of Hold Point 4	
Description of Hold Point 5	
Description of Hold Point 6	
Description of Hold Point 7	
Description of Hold Point 8	

8. **Significant Dates** **(this section keys around the OCCP development to include a meeting with WTD staff to define operational collaboration)**

Project is scheduled to start no earlier than (insert date here)	
Action	**Date**
OCCP Initial Development no later than:	
OCCP Final no later than:	
OCCP Coordination Meeting no later than:	
Other as needed:	
Other as needed:	

9. **Project Milestones/Execution Steps** **(define the major work steps and attach a schedule for the work if so developed specifically for this OCCP project)**

Step	**Action and Date (may include start date + X if start is unknown at the time of OCCP development**

Step	Action and Date (may include start date + X if start is unknown at the time of OCCP development

10. Works to be completed prior start of OCCP (this will result from the initial OCCP meeting)

Operational Condition	Contingency Action

11. Contingency Actions (these actions result from plans in the event of adverse project impacts)

Mode of Failure/Incident	Contingency Action

12. Job Hazard Analysis (define any hazards to be encountered that are not usual and customary)

Hazard	Mitigation

13. Affected monitoring points and impact

a. **Usual sample locations affected by this operation** (this will result from the initial OCCP meeting)

Description of Element	How is it Affected

b. **Special location(s) established for this operation** (this will result from the initial OCCP meeting)

Description of Location	Describe Revised Procedure

c. **Treatment Process Affected** **(define which process will be impacted and how any alternate or interim operation will be implemented)**

Process Description	Describe Alternate or Interim Operation

d. Alarm Modifications

Name	Title	Signature	Date

SECTION 01210 - ALLOWANCES

PART 1 GENERAL

1.01 SUMMARY

A. Section includes:
   1. Listing of allowance items:
      a. Related responsibilities of Contractor and procedures.

1.02 ALLOWANCE AMOUNTS

A. Include following amounts in Contract Price:
   1. Evergy Primary Circuit Buildout: $4,250,000.
   2. Unforeseen Site Conditions and Hazardous Materials Disposal: $250,000.
   3. Administration Building Furniture: $500,000.

1.03 COSTS INCLUDED AND EXCLUDED IN ALLOWANCES

A. Costs included in allowances for furnishing products only:
   1. Net cost of product.
   2. Delivery and unloading at site.
   3. Applicable taxes and fees.

B. Costs included in Contract Price, but not included in allowances for furnishing products only:
   1. Handling at site, including uncrating and storage.
   2. Protection from elements, theft, and damage.
   3. Labor, installation, testing, and finishing.
   4. Other expenses required to complete installation.
   5. Overhead and profit.

C. Costs included in allowances for furnishing and installing products:
   1. Net cost of product.
   2. Delivery and unloading at site.
   3. Applicable taxes.
   4. Handling at site, including uncrating and storage.
   5. Protection from elements and from damage.
   6. Labor, installation, testing, and finishing.
   7. Other expenses required to complete installation.

1.04 DUTIES OF CONTRACTOR IN PROVIDING PRODUCTS BY ALLOWANCE

A. Advise Engineer at least 60 days in advance of purchase date necessary to avoid impacts to Progress Schedule.

B. Obtain proposals from suppliers, including:
   1. Quantity.
   2. Complete description of product and services provided under allowance.
   3. Unit cost.
   4. Total amount of purchase.
   5. Taxes and delivery charges.

C. On notification of selection, enter into purchase agreement with designated supplier.

D. Arrange for delivery and unloading.

E. Install products in accordance with Contract Documents.

1.05 ADJUSTMENT OF COSTS

A. When actual cost is more or less than amount of allowance, Contract Price will be adjusted by Change Order.

1.06 ALLOWANCES

A. Evergy Utility Installation. The scope of work associated with EVERGY is as follows:
   1. Provide and install all overhead power poles and cable and buried power cables and conduits, from the property line to the electrical transformers and provide and install all medium-voltage, three-phase, pad mounted transformers, power metering units, and all associated primary cable and terminations. The transformers will be installed by Evergy on Contractor installed transformer pads on the at grade. Evergy shall also perform all primary terminations to the transformers. The Contractor shall be responsible for construction of all conduit and cable for secondary terminations and shall perform all terminations not otherwise performed by Evergy. Prior to installing the transformers, Evergy will inspect the pads and conduit system installed by the Contractor. The cost of the power poles, primary cables, transformers, meters, and terminations shall be reimbursed directly to Evergy by the Contractor through the allowance.
   2. The Contractor shall be responsible for coordinating and scheduling the delivery and installation of the power poles, primary cables, conduit, and transformers by Evergy, including but not limited to obtaining delivery schedules for equipment from Evergy and incorporating these schedules into the overall project schedule described in the Construction Progress Documentation section.
   3. Owner shall provide the easement required for the installation of the overhead and buried power lines at the site.
   4. Requirements and responsibilities for providing primary conductors, CT's, meter connections, and transformers shall be as listed within these specifications and as indicated on the Contract Drawings.

B. Unforeseen Site Conditions and Hazardous Materials
   1. If, during the progress of the Work, previously unidentified Hazardous Environmental Conditions are identified, Contractor shall stop work in the affected area and immediately notify the Owner and Engineer in accordance with the

requirements in the General Conditions. At the Owner's discretion, the Owner may instruct the Contractor to engage an abatement Subcontractor qualified to perform abatement of the suspected Hazardous Environmental Condition identified, to verify the materials and, if necessary, encapsulate, enclose, or remove and dispose of all ACM, Metal Bearing Protective
Coatings, Paints, and Linings, Contaminated Environmental Media, and/or other Hazardous Substances in accordance with current regulations of the Environmental Protection Agency and the U. S. Department of Labor - Occupational Safety and Health Administration, the applicable state regulating agency, and any local government agency. Payment for such work will be made by the Hazardous Material Disposal Allowance contained within the Bid Form or by Change Order.

2. The Contractor shall use a State of Missouri licensed abatement subcontractor to perform the Work. An independent third party that is accredited by the State of Missouri shall perform any monitoring and clearance. The independent third party shall be onsite during the Work associated with encapsulating, enclosing, or removing and disposing of all ACM, Metal Bearing Protective Coatings, Paints, and Linings, Contaminated Environmental Media, and/or other Hazardous Substance.

C. Administration Building Furniture

1. Includes, furniture, bookshelves, chairs, tables etc. for the project's Administration Building, exclusive of built-in cabinets and countertops shown and specified in the contract documents.

2. Also includes whiteboards, signage, and non-consumable supplies needed in the Administration Building where not otherwise specified in the contract documents.

PART 2 PRODUCTS

Not Used.

PART 3 EXECUTION

Not Used.

SECTION 01300 – SUBMITTALS

PART 1 - GENERAL

1.01 SUMMARY

A. This section provides for the submittals required by the City prior to the start of work and, as required, for the duration of the Work.

B. All submittals shall be clearly identified by reference to a specification section and/or detail drawing. Submittals shall be clear and legible and shall include sufficient presentation of the data.

C. No portion of the work requiring a shop drawing, product data or sample shall be started nor shall any materials be fabricated or installed prior to the completion of the submittal process described herein. Fabrication performed, purchased materials or on-site construction accomplished prior to completing the submittal process as defined herein shall be at the Contractor or Design-Builder's sole risk. The City shall not be liable for any expense or delay to complete the submittal process.

1.02 RELATED SECTIONS

A. Section 00700 – General Requirements:
   1. Article 2, paragraph 2.07.B.1 – Preliminary Project Schedule.
   2. Article 2, paragraph 2.07.B.2 – Preliminary Schedule of Shop Drawings.
   3. Article 2, paragraph 2.07.B.3 – Preliminary Schedule of Values.

L. Section 01664 - Training

M. Section 01757 – Commissioning

N. Section 01335 – Document Management

1.03 GENERAL INFORMATION

A. Definitions:
   1. Shop Drawings, product data and Samples are technical Submittals prepared by the Contractor or Design-Builder, Subcontractor, manufacturer or Supplier and submitted by Contractor or Design-Builder to the City for review and comment as a basis of the use of Equipment and Materials proposed for incorporation in the Work or needed to describe installation, operation, maintenance or technical properties, as specified in each Division of the Specifications:

(a) Shop Drawings include custom-prepared data of all types including drawings, diagrams, performance curves, material schedules, templates, instructions and similar information.
(b) Product data includes standard printed information on materials, products and systems; not custom-prepared for this Project, other than the designation of selections from available choices.
(c) Samples include both fabricated and physical examples of materials, products and Work; both as complete units and as smaller portions of units of Work; either for limited visual inspection or (where indicated) for more detailed testing and analysis. Mock-ups are a special form of Samples which are too large to be handled in the specified manner for transmittal of Sample Submittals.
(d) Spare parts: Describe spare parts necessary for the Owner's use in facility operation and maintenance; identify the type and quantity but include the actual characteristics of the spare parts in Product as part of the specification of the product.
(e) Tools: Tools are generally defined as items such as special wrenches, gauges, circuit setters, and other similar devices required for the proper operation or maintenance of a system that would not normally be in the Owner's tool kit.

2. Informational Submittals are those technical reports, administrative Submittals, certificates and guarantees not defined as Shop Drawings, product data or Samples:
(a) Technical reports include laboratory reports, tests, technical procedures, technical records and Contractor or Design-Builder's design analysis.
(b) Administrative Submittals are those nontechnical Submittals required by the Contract Documents or deemed necessary for administrative records. These Submittals include maintenance agreements, bonds, project photographs, physical work records, statements of applicability, copies of industry standards, project record data, schedules, security/protection/safety data and similar type Submittals.
(c) Certificates and guarantees are those Submittals on Equipment and Materials where a written certificate or guarantee from the manufacturer or Supplier is required in the Contract Documents.
(d) Manufacturer's Instructions: Instructions, stipulations, directions, and recommendations issued in printed form by the manufacturer of a product addressing handling, installation, erection, and application of the product; manufacturers' instructions are not prepared especially for the Work.

B. Quality Requirements:
1. The Contractor or Design-Builder shall submit Shop Drawings and Samples in accordance with Section 00700.
2. Submittals such as Shop Drawings and product data shall be of suitable quality for legibility and reproduction purposes. Every line, character and letter shall be clearly legible. Drawings shall be useable for further reproduction to yield legible hard copies.
3. All submittals by subcontractors shall be sent directly to the Contractor or Design-Builder for checking. The Contractor or Design-Builder shall be responsible for their submission at the proper time to prevent delays.
4. The Contractor or Design-Builder shall check all subcontractors' submittals regarding measurements, sizes, materials and details to determine and verify that they meet the requirements of the Contract Documents. Submittals found to be inaccurate or otherwise in error shall be returned to the subcontractors for correction before submission to the City.
5. Certificates of Compliance – Where indicated in these specifications, each submittal shall include a certificate of compliance prepared by the manufacturer or Supplier of the submitted data, certifying that the item covered complies with Contract Documents. The

certificate of compliance shall be a separate document and shall include identification of all deviations, if any, from the Contract Documents.

C. Submittal Completeness:
   1. The Contractor or Design-Builder shall accept full responsibility for the completeness of each submission. When an item consists of components from several sources, the Contractor or Design-Builder's initial submittal on the item shall include all components.
   2. Submittals shall be complete with respect to dimensions, design criteria, materials of construction and other information specified to enable the City or Designee to review the information effectively.
   3. Where standard drawings are furnished which cover several variations of the general class of Equipment, each drawing shall be annotated to indicate exactly which parts of the drawing apply to the Equipment being furnished. Use hatch marks to indicate variations that do not apply to the Submittal. The use of "highlighting markers" will not be an acceptable means of annotating Submittals. Annotation shall also include proper identification of the Submittal permanently attached to the drawing.
   4. Reproductions or copies of Contract Drawings or portions thereof will not be accepted as complete fabrication or erection drawings. The Contractor or Design-Builder may use a reproduction of Contract Drawings for erection drawings to indicate information on erection or to identify detail drawing references. Whenever the Drawings are revised to show this additional Contractor or Design-Builder information, the Design Professional's title block shall be replaced with Contractor or Design-Builder's title block and the Design Professional's professional seal shall be removed from the drawing. The Contractor or Design-Builder shall revise these erection drawings, as needed, for subsequent Design Professional revisions to the Contract Drawings.

D. Form of Submittals:
   1. Submittals and other Project documents shall be transmitted in electronic format and non-electronic format as specified.
   2. Contractor or Design-Builder shall provide a submittal registry prior to the pre-con meeting that is suitable for upload to the City's Document Management program.
   3. Electronic Format:
      (a) Transmit Submittals and Project documents utilizing:
         (i) Adobe ".pdf" files created directly from native electronic format or City-approved equal file type and format.
         (ii) Electronic submittal ".pdf" files are not to be combined files or collections of files/drawings. Each drawing document must stand alone.
         (iii) Each file will be right reading and oriented the same for all consecutive resubmissions.
         (iv) For any given Submittal, the filename and format shall be consistent for initial submission and subsequent revisions of the same. Use consistent naming convention throughout. Reference to revision or dates shall not be included in a filename.
         (v) Files greater than 5 pages shall have table of contents with bookmarks for each section. The Sections shall have easily understood names.
         (vi) Submittals not meeting the above criteria are subject to rejection.
      (b) Provide Project Record Documents, equipment instruction books and operating and maintenance manuals and any other documents, as required, in a file type and format approved by City.
   4. Non-electronic Format:
      (a) Selected Submittals may be provided in paper (hard copy), as well, only with advance approval of the City and using procedures specified herein.

(b) Equipment instruction books and operating manuals shall be provided in hardcopies in addition to the specified electronic format.

E. Transmittal of Submittals:
1. Submittal register shall be uploaded prior the transmission of the first submittal.
2. All submittals, regardless of origin, shall be stamped with the approval of the Contractor or Design-Builder and identified with the name and number of this Contract, Contractor's or Design-Builder's name, references to applicable specification paragraphs and Contract Drawings and version of the submittal. Submittals can be named for their specification if the submittals cover the full scope of work in said specification.
3. Each submittal shall indicate the intended use of the item in the Work. When catalog pages are submitted, applicable items shall be clearly identified and inapplicable data crossed out. The current revision, issue number and date shall be indicated on all drawings and other descriptive data. The Contractor or Design-Builder's stamp of approval is a representation to the City and Design Professional that the Contractor or Design-Builder accepts full responsibility for determining and verifying all quantities, dimensions, field construction criteria, materials, catalog numbers and similar data, and the Contractor or Design-Builder has reviewed and coordinated each submittal with the requirements of the Work and the Contract Documents.
4. Electronic Submittals – The Contractor or Design-Builder shall utilize the City's document management system as specified in Section 01335- Document Management for managing, tracking and storing documents associated with the Project. If an internet-based document management system is to be used, additional requirements are provided in Section 01335- Document Management. The Contractor or Design-Builder shall comply with the file protocols and procedures for the document management system.
5. Approved submittals shall be tagged per City's metadata tagging standard and provided to the City as part of the Electronic O&M Manual.

F. Submittals Required for the Preconstruction Conference:
1. Following are the minimum required submittals to be provided by the Contractor or Design-Builder at the pre-construction conference:
(a) General Requirements:
(i) Preliminary Project Schedule including Submittals.
(ii) Preliminary Schedule of Values.
(iii) Preliminary Submittal Registry.
(iv) Listing of Subcontractors.
(v) Project Sign Request.
(vi) List of Major Equipment utilized.
(vii) Safety Representative.
(b) Document Management can be found in Section 01335 – Document Management.

G. In order to allow expedited review, submittals on the sections or topics below are required to have a pre-submittal meeting:
1. AGS Processing Equipment
2. Commissioning Schedule
3. Switchgear and Transformer
4. Motor Control Centers
5. Variable Frequency Motor Controllers
6. PLC Programming and Reports
7. Testing and Balancing Reports

1.04 SHOP DRAWINGS AND SAMPLES

A. Shop Drawings:

1. Shop Drawings and engineering data covering all equipment and fabricated and building materials which will become a permanent part of the Work under this Contract shall be submitted to the City or Designee for review as specified herein. The data shall include drawings, descriptive information, sufficient detail to show the kind, size, arrangement and operation of component materials and devices; the external connections, anchorages and supports required; performance characteristics; and dimensions needed for installation and correlation with other materials and equipment.
2. All deviations from the Contract Documents shall be identified on each submittal and shall be tabulated in the Contractor or Design-Builder's letter of transmittal. Such submittals shall, as pertinent to the deviation, indicate essential details of all changes proposed by the Contractor or Design-Builder (including modifications to other facilities that may be a result of the deviation) and all required piping and wiring diagrams.

B. Product Data:
1. Product data as specified in individual Sections, include, but are not necessarily limited to, standard prepared data for manufactured products (sometimes referred to as catalog data), such as the manufacturer's product specification and installation instructions, availability of colors and patterns, manufacturer's printed statements of compliances and applicability, roughing-in diagrams and templates, catalog cuts, product photographs, standard wiring diagrams, printed performance curves and operational-range diagrams, production or quality control inspection and test reports and certifications, mill reports, product operating and maintenance instructions and recommended spare-parts listing and printed product warranties, as applicable to the Work.
2. If applicable, submittals for equipment shall include a listing of all installations where identical or similar equipment has been installed and been in operations for a period of at least one year.
3. Certificates are statements printed on the manufacturer's or supplier's letterhead and signed by responsible officials of manufacturer of product, system or material. Certifications shall provide a clear statement that the product, system or material meets the specified requirements of Contract Documents. All certificates shall be dated after the Effective Date of the contract and shall clearly indicate the project name and project number.

C. Samples:
1. Samples specified in individual Sections, include, but are not necessarily limited to, physical examples of the work such as sections of manufactured or fabricated work, small cuts or containers of materials, complete units of repetitively used products, color/texture/pattern swatches and range sets, specimens for coordination of visual effect, graphic symbols and units of work to be used by the City or Designee for independent inspection and testing, as applicable to the Work.

D. Instruction Books and Operating and Manuals:
1. Per Section 01021 – Operation Maintenance Data

E. Record Documents
1. Per Section 01019 Closeout Procedures, 01021 Operation Maintenance Data, 01020 Record Documents, 01322 Photographic Documentation

F. Survey Data
1. All field books, notes, videotapes, and other data developed by Contractor in performing surveys required as part of the Work shall be available to City for examination throughout the construction period.
2. All such data shall be submitted to City with the other documentation required for final acceptance of the Work.

1.05 SCHEDULES

A. 01320 - Construction Progress Documentation

1.06 COMMISSIONING SUBMITTALS

A. Section 01757 Commissioning

1.07 CONSTRUCTION PROGRESS PHOTOGRAPHS AND VIDEOS

A. Section 01320 Construction Progress Documentation
B. Photos and Videos documenting assets that will not be visible during the substantial completion walkthrough shall have their record photos taken prior to be obscured by backfill, equipment installation, gypsum board installation, etc… Record photos shall have metadata tags per KC Water standards.

1.08 WARRANTY and BONDS and CLOSEOUT SUBMITTALS

A. Section 011019 Closeout Procedures, Section 00800 Supplementary Conditions, and 00700 General Conditions

1.09 SCHEDULE OF VALUES

A. The CONTRACTOR shall prepare and submit to the DESIGN PROFESSIONAL for approval by the preconstruction conference, a Schedule of Values for and covering the Lump Sum Price Bid as shown in the Proposal. The Schedule of Values shall show the estimated total number of construction units for each kind of work and the value of each unit.
B. Each price listed shall include all overhead, other costs, CONTRACTOR's profit and the total estimated value of the items of work listed in the Schedule of Values shall equal the Contract Lump Sum Price covered by the estimate. Overhead and profit are not to be listed as separate items.
C. An unbalanced schedule of values providing for overpayment of CONTRACTOR on items of Work which would be performed first will not be approved. The Schedule of Values shall be revised and resubmitted until acceptable to the DESIGN PROFESSIONAL & OWNER. Final acceptance by DESIGN PROFESSIONAL shall indicate only consent to the Schedule of Values as a basis for preparation of applications for progress payments and shall not constitute an agreement as to the value of each indicated item.

1.10 CITY OR DESIGNEE'S REVIEW OF DRAWINGS AND DATA

A. The City or Designee's review of drawings and data submitted by Contractor or Design-Builder will cover only general compliance with the Construction Contract Documents. The City or Designee's review does not indicate a thorough review of all dimensions, quantities and details of the material, equipment, device or item shown. The City or Designee's review shall not relieve Contractor or Design-Builder of Contractor or Design-Builder's responsibility for errors, omissions or deviations in the drawings and data, nor of sole responsibility for compliance with the Construction Contract Documents.
B. The City or Designee's submittal review period shall be 21 consecutive calendar days in length and shall commence on the first calendar day immediately following the date of arrival of the submittal or resubmittal in the City or Designee's office. The time required to mail the submittal or resubmittal back to Contractor or Design-Builder shall not be considered a part of the submittal review period.
C. Contractor or Design-Builder may request an expedited review of a limited number of submittals. The City may elect to require a workshop to facilitate this expedited review. A maximum of one 1-hour workshop per week will be allowed.

D. Submittals shall be returned to the Contractor or Design-Builder under one of the following assignments:
   1. "Approved" is assigned when there are no notations or comments on the submittal. When returned, the Contractor or Design-Builder may release the equipment and/or material for manufacture.
   2. "Approved as Noted" is assigned when a confirmation of the notations and comments is not required by the Contractor or Design-Builder. The Contractor or Design-Builder may release the equipment or material for manufacture; however, all notations and comments must be incorporated into the final product.
   3. "Revise and Resubmit" is assigned when the submittal does not meet the intent of the Construction Contract Documents. The Contractor or Design-Builder must resubmit the document revised to bring the submittal into compliance with Contract Documents. "Revise and Resubmit" is also assigned when notations and comments are extensive enough to require a resubmittal of the package.
   4. "Rejected" is assigned when the submittal does not meet the intent of the Construction Contract Documents. The Contractor or Design-Builder must resubmit the entire package revised to bring the submittal into compliance with Contract Documents. It may be necessary to resubmit using a different manufacturer/vendor to meet the Construction Contract Documents. "Rejected" is also assigned when the notations and comments are extensive enough to require a resubmittal of the package.
   5. "For Record Only" is assigned when the submittal is provided as a courtesy to the City or as a contractual requirement by the Design-Builder or Contractor. Design-Builder or Contractor has no further action required. Submittal is for supplementary information only; pamphlets, general information sheets, catalog cuts, standard sheets, test reports, manufacturer's or supplier's letters included with submittal data, unmarked catalog data, bulletins and similar data, all of which are useful to Owner in design, operation, or maintenance, but which by their nature does not constitute a basis for determining that items represented thereby conform with the design concept or comply with the intent of the Contract Documents. It is not subject to Owner's review and acceptance, and is being filed for Record Copy purposes only. This is generally used in acknowledging receipt of means and methods of construction work plans, filed conformance test reports, health and safety plans, or structural design by the Design-Builder's or Contractor Engineer of Record, etc.

E. If the Contractor or Design-Builder considers any correction indicated on the shop drawings to constitute a change to the Contract Documents, the Contractor or Design-Builder shall give written notice thereof to the City or Designee at least seven working days prior to release for manufacture.

F. Resubmittal of Drawings and Data:
   1. The Contractor or Design-Builder shall accept full responsibility for the completeness of each resubmittal. The Contractor or Design-Builder shall verify that all corrected data and additional information previously requested by the City or Designee are provided on the resubmittal. When corrected copies are resubmitted, the Contractor or Design-Builder shall in writing direct specific attention to all revisions and shall list separately any revisions made other than those called for by the City or Designee on previous submissions.
   2. Requirements specified for initial submittals shall also apply to resubmittals. Resubmittals shall bear the number of the first submittal followed by a letter (A, B, etc.) to indicate the sequence of the resubmittal.
   3. Resubmittals shall be made within twenty-one (21) days of the date of the letter returning the submittal to be modified or corrected; unless, within 14 days, the Contractor or

Design-Builder submits an acceptable request for an extension of the stipulated period, listing the reasons the resubmittal cannot be completed within the specified time.

4. Any need for more than two resubmissions or any other delay in obtaining the City or Designee's review of submittals, will not entitle the Contractor or Design-Builder to an extension of the Contract Times, unless: the delay of the Work is directly caused by a change in the Work authorized by a Change Order or by failure of the City or Designee to review the submittals within the submittal review period specified herein. A limited number of equipment submittals are anticipated to require additional coordination and will not be limited to two resubmittals. This equipment is:

   (a) Motor Control Centers

   (b) Switchboards

   (c) Control Panels

   (d) Programmable Logic Controllers

   (e) Aerobic Granular Sludge Treatment System

PART 2 - PRODUCTS

Not used.

PART 3 - EXECUTION

Not used

END OF SECTION

SECTION 01320 – PROJECT MANAGEMENT AND CONSTRUCTION PROGRESS DOCUMENTATION

PART 1 - GENERAL

1.01 SUMMARY

A. This Section includes administrative and procedural requirements for documenting the construction process beginning with the Notice of Intent to Contract and continuing through completion of the Work performed and Construction Contract close out.

B. The Contractor or Design-Builder shall furnish all labor, materials, equipment and incidentals as necessary to comply with these requirements including but not limited to the following and as required herein:

1. Preliminary Project Schedule.
2. Project Baseline Schedule.
3. Progress Schedule.
4. Recovery Schedules.
5. Submittals Schedule.
6. Daily Labor Force reports.
7. Material location reports.
8. Field condition reports.
9. Special reports.
10. Commissioning
11. Training
12. O&M Data
13. Electronic O&M Manuals
14. Testing
15. Acceptance Testing
16. Photographic Documentation.

1.02 RELATED SECTIONS

A. Drawings and general provisions of the Contract; including General and Supplementary Conditions, all applicable Division 01 Sections, and all applicable Division Sections; apply to this Section.

B. Section 00700 – General Requirements:

1. Article 2, paragraph 2.07.B.1 – Preliminary Project Schedule.
2. Article 2, paragraph 2.07.B.2 – Preliminary Schedule of Shop Drawings.
3. Article 2, paragraph 2.08.A – Acceptable Schedule.
4. Article 2, paragraph 2.08.B – Project Baseline Schedule.
5. Article 6, paragraph 6.04 – Progress Schedule.
6. Article 6, paragraph 6.05 – Recovery Schedule.

C. Section 01000 – General Project Requirements.

D. Section 01020 – Record Documents

E. Section 01021 – Operation and Maintenance Data

F. Section 01140.01 - Process and System Shutdown Constraints Schedule

G. Section 01140.02 - Operation Change Control Plan Documents

H. Section 01140 – Work Restrictions

I. Section 01019 – Closeout Procedures

J. Section 01664 - Training

K. Section 01757 – Commissioning
L. Section 01322 – Photographic Documentation.

1.03 CODES AND STANDARDS

A. The publications listed below form a part of this specification to the extent referenced. The publications are referred to within the text by the basic designation only.
B. American Association of Cost Engineers (AACE):
   1. Comply with recommended practices.

1.04 SUBMITTALS

A. Scheduler Qualifications – For firms and persons preparing schedules, submit qualifications as required by Table 1 to demonstrate their capabilities and experience. Include lists of completed projects with the following information:
   1. Project name.
   2. Project location.
   3. Name and address of engineer, architect or Contractor or Design-Builder for which schedules were prepared.
   4. Name and address of client.
   5. Project Duration at Bid & Project Duration.
   6. Other information and pertinent.
B. Preliminary Schedule of Shop Drawings (Submittals) – Arrange the following information in a tabular format or a format that is compatible with entry into the City's document management system:
   1. Scheduled date for each first submittal.
   2. Specification Section number and title.
   3. Submittal category (action or informational).
   4. Name of subcontractor.
   5. Description of the Work covered.
   6. If a Pre-Submittal Workshop is required
   7. If the Contractor or Design-Builder will request expedited review.
   8. Scheduled date for City's final approval.
C. Standard Schedule Format – Layout for all schedules and reports shall follow the standard format in the following order, activity ID, activity name, original duration, remaining duration, percent complete, start, finish, late start, late finish, total float, baseline variance, predecessor, successor, and resource ID.
D. Preliminary Project Schedule (Design-Build Only) – Submit in native electronic format and *PDF format. PDF sheet size shall sufficiently large enough to legibly show entire schedule for entire construction period.
   1. Include:
      (a) CPM Report
      (b) Native File
E. Baseline Project Schedule – Submit in native electronic format and *PDF format. PDF sheet size shall sufficiently large enough to legibly show entire schedule for entire construction period.
   1. Include:
      (a) CPM Report
      (b) Resource Loaded
      (c) Native File

F. Progress Schedules – Submit in native electronic format and *PDF format. PDF sheet size shall sufficiently large enough to legibly show entire schedule for entire construction period.
   1. Include:
      (a) CPM Report
      (b) Activity report
         (1) A list of all activities sorted by activity number and early start date, or actual start date, if known.
      (c) Logic Report
         (1) A list of preceding and succeeding activities for all activities, sorted in ascending order by activity number and then early start date, or actual start date if known.
      (d) Total Float Report
         (1) A list of all activities sorted in ascending order of total float.
      (e) Daily Labor Force Report
      (f) Material Location Report
      (g) Field Condition Report
      (h) City may request a cost and resource loaded schedule if the project has insufficient float or multiple overlapping critical paths.

G. Commissioning Schedule Section 01757 - Commissioning

H. Special Reports – Submit special reports within one day of an occurrence.

I. Daily Construction Reports – Submit at weekly intervals.

J. Four Week look ahead – Schedules provided at each progress meeting that indicate with work activities will be occurring over the next 4 weeks and what was accomplished the previous week.
   1. The activity designations used in the four week look ahead must be consistent with those used in the baseline schedule and the monthly schedule updates.

1.05 DEFINITIONS

A. Activity:
   1. A discrete part of a project that can be identified for planning, scheduling, monitoring, and controlling the construction project. Activities included in a construction schedule consume time and resources.
   2. Critical activities are activities on the critical path. They must start and finish on the planned start and finish times.
   3. Predecessor activity is an activity that must start or complete before a given activity can be started. No negative lag is allowed.
   4. Successor activity is an activity that can not start until the predecessor activity allows it. No negative lag is allowed.

B. Cost Loading: All WBS summary activities are cost loaded. The sum total of all cost loaded activities shall equal the total Contract Price of the Contract, including Owner-approved change orders. This shall be equivalent to the total of the Schedule of Values for the Project.

C. CPM (Critical Path Method) – A schedule network analysis technique used to determine the amount of scheduling flexibility (the amount of float) on various logical network paths in the project schedule network, and to determine the minimum total project duration. Start and finish dates are calculated by means of a forward pass, using a specified start date. Late start and finish dates are calculated by means of a backward pass, starting from a specified completion date, which sometimes is the project early finish date determined during the forward pass.

D. Critical Path – Generally, but not always, the sequence of schedule activities determining the duration of the project. Generally, it is the longest path through the project. However, a

critical path can end, as an example, on a schedule milestone that is in the middle of the schedule model and that has a finish-on-or-before imposed date schedule constraint.

E. Event – The starting or ending point of an activity.
F. Float – The measure of leeway in starting and completing an activity. Float time is not for the exclusive use or benefit of either City or Contractor or Design-Builder, but is a jointly owned, expiring Project resource available to both parties as needed to meet schedule milestones and Contract completion date. Free float is the amount of time an activity can be delayed without adversely affecting the early start of the following activity. Total float is the measure of leeway in starting or completing an activity without adversely affecting the planned Project completion date.
G. Fragnet – A partial or fragmentary network that breaks down activities into smaller activities for greater detail.
H. Gantt Chart – A graphic display of schedule-related information. In the typical Gantt chart, schedule activities or work breakdown structure components are listed down the left side of the chart, dates are shown across the top and activity durations are shown as date-placed horizontal bars. Also known as a Bar chart.
I. Lag – An offset or delay from an activity to its successor. It is based on the calendar of the successor activity.
J. Major Area – A significant construction element.
K. Major Procurement – As discussed in Section 00700, paragraph 2.07.B.1, Major Procurement shall further defined as any materials that fall within the critical path and/or have a lead time of 30 days or greater.
L. Milestone – A key or critical point in time for reference or measurement.
M. Network Diagram – A graphic diagram of a network schedule, showing activities and activity relationships.
N. Schedule Level –

    Detailed Schedule by Task – This level of detail will support the short-term planning for the field, normally for those activities of less than 1-week duration. It is used for workforce supervisors to plan and coordinate work at the detail level. City must approve of any activities greater than 1 week duration.

O. WBS (Work Breakdown Structure) – A deliverable-oriented hierarchical decomposition of the work to be executed by the project team to accomplish the project objectives and create the required deliverables. It organizes and defines the total scope of the project. Each descending level represents an increasingly detailed definition of the project work. The WBS is decomposed into work packages. The deliverable orientation of the hierarchy includes both internal and external deliverables. See also Schedule Levels.
P. Work Package – A deliverable or project work component at the lowest level of each branch of the WBS. The work package includes the schedule activities and schedule milestones required to complete the work package deliverable or project work component.
Q. Resource Loading: WBS activities has the allocated resources necessary to complete the WBS.
R. Schedule of Monthly Payments – Estimated monthly progress payments based on Baseline Schedule and Schedule of Values for each Month for the duration of the project.
S. City Activity: an activity required by the project that will be performed by the City or their designee outside the contract.

1.06 COORDINATION

A. Coordinate preparation and processing of schedules and reports with performance of construction activities including the scheduling and reporting of separate Contractor or Design-Builders performing construction activities related to project.

B. Coordinate Progress Schedules with the Schedule of Values, to estimate a Schedule of Monthly Payments, list of subcontractors, Preliminary Schedule of Shop Drawings and Samples, progress reports, Application for Payment, and other required schedules and reports.
C. Secure time commitments for performing critical elements of the Work from parties involved. Time commitments should be captured within the schedule.

1.07 TRAINING SCHEDULE:

A. Contractor Shall provide a draft list of training sessions arranged in chronological order along with the submittal Schedule
B. Contractor shall provide a draft list of training sessions arranged in chronological order along with the submittal schedule.

1.08 Contractor shall send an updated training schedule every 3 months, and Contractor shall indicate which training sessions are tentative or firmly scheduled. SCHEDULE LEVEL

A. If a Recovery Schedule is deemed necessary by the City in accordance with Section 00700 – General Conditions, it shall be developed as a cost and resource loaded schedule.

1.09 SCHEDULING SOFTWARE

A. Prepare schedules using the latest version of Primavera version P6 or higher or Microsoft Project.

1.10 PRELIMINARY SCHEDULE OF SHOP DRAWINGS AND SAMPLES

A. Preparation – Provide a schedule of submittals arranged in chronological order by date required by the construction schedule. Include time required for review, resubmittal, ordering, manufacturing, fabrication, and delivery as set forth in the Contract Documents, when establishing dates.
B. Coordinate Submittals Schedule with list of subcontracts, the Schedule of Values, the estimated Schedule of Monthly Payments, and Progress Schedules.
C. Include Shop Drawing and Sample Submittals required during the first 60 days of construction. List those required to maintain orderly progress of the Work and those required early because of long lead time for manufacture or fabrication.
D. At Contractor or Design-Builder's option, show submittals on the Preliminary Progress Schedule, instead of tabulating them separately.

1.11 SCHEDULE REQUIREMENTS

A. Requirements According to Schedule Level – Contractor or Design-Builder shall provide the following information.

Item	Requirement
Procedures	Comply with procedures contained the American Association of Cost Engineers (AACE) recommended practices.
Time Frame	Extend project schedule from date established for the Notice to Proceed to the date of Final Completion.
Contract Times	Contract Times shall not be changed unless specifically authorized by Change Order.

Item	Requirement
Activities	Treat separate major areas as a separate numbered activity for each principal element of the Work. (WBS)
Activity Duration	Define activities so none is longer than 7 days, unless specifically allowed by City
Milestones	Include milestones indicated in the Contract Documents in schedule, including, but not limited to, all zero duration events, the Notice to Proceed, Substantial Completion, and Final Completion.
Computer Software	Prepare schedules using the latest version of Primavera version P6 or higher or Microsoft Project.
Scheduler's Qualifications	Submit scheduler's qualifications for review and approval
Submittal Review Time	Include review and re-submittal times for review of Shop Drawings and Samples. Each item listed in the Preliminary Schedule of Shop Drawings and Samples shall be included in the schedule.
Procurement Activities	Include separate activities for the procurement process of long-lead and major items that require a cycle of more than 30 days or fall within the critical path. Procurement cycle activities include, but are not limited to, submittals, approvals, purchasing, fabrication, and delivery.
Startup and Testing Time	See Sections -01757 Commissioning, 01664 Training. Incorporate all these requirements with appropriate lead times into the project schedule.
Phasing	Arrange list of activities on schedule by phase.
Submittal Review Time	Include review and re-submittal times for review of Shop Drawings and Samples. Each item listed in the Preliminary Schedule of Shop Drawings and Samples shall be included in the schedule.
City Activities	Include a separate activity for each area of the Work performed by City and a separate activity for notifying the City if contractually required or requested.
Products Ordered in Advance	Include a separate activity for each product. Delivery dates indicated stipulate the earliest possible delivery date.
City-Furnished Products	Include a separate activity for each product. Delivery dates indicated stipulate the earliest possible delivery date.
Work Restrictions	Show the effect of the following items on the schedule: • Coordination with existing construction. • Limitations of continued occupancies. • Uninterruptible services. • Partial utilization before Substantial Completion. • Use of premises restrictions. • Provisions for future construction. • Seasonal variations. • Environmental control.
Work Stages	Indicate important stages of construction for each major portion of the Work, including, but not limited to, the following: • Subcontract awards. • Submittals.

Item	Requirement
	• Purchases. • Fabrication. • Sample testing. • Deliveries. • Installation. • Tests and inspections. • Adjusting. • Curing. • Startup and placement into final use.
Area Separations	Identify each major area of construction for each major portion of the Work. Indicate where each construction activity within a major area must be sequenced or integrated with other construction activities: • Contractor Mobilization* • Procurement – Divided by Long Lead and Short Lead • Completion of civil work • Completion of structural work • Completion of HVAC work • Completion of architectural work • Completion of mechanical installation • Completion of electrical installation • Completion of I&C installation • Completion of I&C programing • • Partial Utilization • Substantial Completion* • Start of Acceptance Testing • End of Acceptance Testing • Achievement of Full Operations* • Punch List and Final Corrections* • Final Completion*
Contract Modifications	For each proposed contract modification and concurrent with its submission, prepare a time-impact analysis using fragments to demonstrate the effect of the proposed change on the overall project schedule.
Work under More than One Contract or Subcontract.	Include a separate activity for each contract or subcontract.
Detailed by Work Package	Include detailed information by each work package and display all activities to be accomplished by the workforce with durations of 7 or more calendar days
Detail by Task	Include detail by task to support the short-term planning for the field, normally for those activities of less than 1-week duration.

B. Cost Correlation:
   1. At the head of schedule, provide a cost correlation line, indicating planned and actual costs. On the line, show dollar volume of the Work performed as of dates used for preparation of payment requests.

1.12 PRELIMINARY AND BASELINE PROJECT SCHEDULES

A. Indicate each significant construction activity separately. Identify each Monday of each week with a continuous vertical line. Outline significant construction activities for the first 60 days of construction. Include skeleton diagram for the remainder of the Work.
B. Preliminary Network Diagram – Outline significant construction activities for the project. To be submitted with the Preliminary Progress Schedule.
C. Cost Loaded
D. Baseline Schedule shall be resource loaded.

1.13 PROGRESS REPORTS AND SCHEDULES

A. General – Prepare Progress Schedules using a CPM network analysis diagram and be cost loaded.
B. CPM Schedule Preparation – Prepare a list of all activities required to complete the Work. Using the preliminary network diagram, prepare a skeleton network to identify probable critical paths:
    1. Activities – Indicate the estimated time duration, sequence requirements, and relationship of each activity in relation to other activities. Include estimated time frames for the following activities:
        (a) Preparation and processing of submittals.
        (b) Purchase of materials.
        (c) Delivery of materials and equipment.
        (d) Fabrication.
        (e) Installation.
    2. Processing – Process data to produce output data or a computer-drawn, time scaled network. Revise data, reorganize activity sequences, and reproduce as often as necessary to produce the CPM schedule within the limitations of the Contract Time.
    3. Format – Mark the critical path. Locate the critical path near center of network; locate paths with most float near the edges:
        (a) Sub-networks on separate sheets are permissible for activities clearly off the critical path. Develop network diagram in sufficient time to submit CPM schedule so it can be accepted for use no later than 30 days after date established for the Notice to Proceed.
        (b) Establish procedures for monitoring and updating CPM schedule and for reporting progress monthly. Coordinate procedures with progress meeting and payment request dates.
        (c) Use "one calendar day" as the unit of time.
    4. Initial Issue of Schedule – Prepare initial network diagram from a list of straight "early start-total float" sort. Identify critical activities. Prepare tabulated reports showing the following:
        (a) Contractor or subcontractor and the Work or activity.
        (b) Description of activity.
        (c) Principle events of activity.
        (d) Immediate preceding and succeeding activities.
        (e) Early and late start dates.
        (f) Early and late 'finish dates.
        (g) Activity duration in days.
        (h) Total float or slack time.
        (i) Average size of workforce.
    5. Schedule Updating – Concurrent with making revisions to schedule, prepare tabulated reports showing the following:

(a) Identification of activities that have changed added or deleted.
(b) Changes in logic ties.
(c) Changes in early and late start dates.
(d) Changes in early and late finish dates.
(e) Changes in activity durations in days.
(f) Changes in the critical path.
(g) Changes in total float or slack time.
(h) Changes in the Contract Time.

6. Value Summaries – Prepare two cumulative value lists, sorted by finish dates:
   (a) In first list, tabulate activity number, early finish date, dollar value, and cumulative dollar value.
   (b) In second list, tabulate activity number, late finish date, dollar value, and cumulative dollar value.
   (c) In subsequent issues of both lists, substitute actual finish dates for activities completed as of last date.
   (d) Prepare list for ease of comparison with payment requests; coordinate timing with progress meetings.
   (e) In both value summary lists, tabulate "actual percent complete" and "cumulative value completed" with total at bottom.
   (f) Submit value summary printouts one week before each regularly scheduled progress meeting.

C. Reports:
1. Daily Labor Force Reports – Prepare a daily labor force report recording the following information concerning events at Project site:
   (a) List of subcontractors at Project site.
   (b) List of separate Contractor or Design-Builders at Project site.
   (c) List of all the Contractor or Design-Builder's and subcontractor's personnel showing hours worked in labor class at Project site.
2. Material Location Reports – At monthly intervals, prepare a comprehensive list of materials delivered to and stored at Project site. List shall be cumulative, showing materials previously reported plus items recently delivered. Include with list a statement of progress on and delivery dates for materials or items of equipment fabricated or stored away from Project site.
3. Field Condition Reports – Immediately on discovery of a difference between field conditions and the Contract Documents, prepare a detailed report. Submit electronically and directly to City with a request for information. Include a detailed description of the differing conditions, together with recommendations for changing the Contract Documents.

D. Special Reports:
1. General – Submit special reports within one day of an occurrence.
2. Reporting Unusual Events – When an event of an unusual and significant nature occurs at Project site, whether or not related directly to the Work, prepare and submit a special report. List chain of events; persons participating; response by Contractor or Design-Builder’s personnel; evaluation of results or effects; and similar pertinent information. Advise City in advance when these events are known or predictable.

1.14 SCHEDULE OF VALUES

A. Requirements for Schedule of Values are specified in Article 2.1.3 of the General Conditions.

PART 2 - PRODUCTS

Not used.

PART 3 - EXECUTION

3.01 PROGRESS SCHEDULES

A. Updates – At monthly intervals, update schedule to reflect actual construction progress and activities. Progress Schedule should be provided for review and approval prior to monthly pay request at a mutually agreed upon date each month to enable the City's review to be complete by the agreed upon monthly pay application date. Progress Schedules will be reviewed and discussed at regularly schedule progress meetings. Contractor or Design-Builder shall bring printed copies of CPM Schedule:
   1. Revise schedule immediately after an activity revision has been recognized or made at the direction by the City. Issue updated schedule concurrently with the report of each such progress meeting.
   2. Include a report with updated schedule that indicates every change, including, but not limited to, changes in logic, durations, actual starts and finishes, and activity durations.
   3. As the Work progresses, indicate actual completion percentage for each activity.
   4. Post copies in Project meeting rooms and temporary field offices.

3.02 MEETINGS

A. Preconstruction Conference:
   1. Contractor or Design-Builder will schedule the Preconstruction Conference to occur before the start of general construction at a time convenient to Owner. Hold the conference at Project site or another convenient location. If Baseline Schedule is not ready for discussion at Preconstruction Conference, Owner and Contractor or Design- Builder may modify, for the purpose of discussion at the Conference, the Mobilization and Engineering Schedule for early construction activities with defined scope and budget.
      (a) Attendees: Authorized representatives of Owner, Owner's Advisor, Design Professional, Contractor or Design-Builder Key Personnel, major Subcontractors and others as appropriate shall attend the conference. All participants at the conference shall be familiar with the Project and authorized to conclude matters relating to the Work.
      (b) Agenda: Discuss items of significance that could affect progress, including the following:
         (1) Owner, Owner's Advisor, Design Professional, and Contractor or Design-Build team member contacts, roles, responsibilities, communication requirements.
         (2) Distribution of Contract Documents.
         (3) Submission of Owner-approved updated Subcontractors and Major Material Suppliers List, Schedule of Values, and Baseline Schedule if changed from Pre-Commencement Meeting
         (4) Schedules and Milestones.
         (5) Contractor or Design-Builder work zone and office trailer locations.
         (6) Procedures: Includes change management, document controls, schedule management, submittals management, and RFIs.

(7) Procedures and processing of field decisions, submittals, substitutions, applications for payments, proposal request, Change Orders, and contract closeout procedures.
(8) Project Record Document Requirements.
(9) Review of startup requirements and procedures.
(10) Lockout/tagout procedures and requirements.
(11) Use of the premises.
(12) Contractor or Design-Builder and Owner will discuss additional areas for Contractor or Design- Builder access.
(13) Responsibility for temporary facilities and controls including designation of person responsible for traffic control in accordance with Section 01500 - Temporary Facilities, and 01700 Traffic Control
(14) Standard vehicle traffic onsite.
(15) Parking availability.
(16) Equipment deliveries and priorities.
(17) OCCPs.
(18) Project site safety requirements (safety vests, OSHA), and first aid.
(19) Plant/site Security/Access Procedures.
(20) Progress cleaning.
(21) Meetings.
(22) Working hours.

(c) Minutes: Contractor or Design-Builder shall record minutes and distribute electronic copies within 1 business days after meeting to participants, with copies to Contractor or Design-Builder, Owner, and those affected by decisions made.

2. Prior to Preconstruction Conference, Contractor or Design-Builder shall have submitted the following deliverables for discussion at meeting:
   (a) Proposed Baseline Schedule.
   (b) Mobilization and Engineering Schedule (modified as discussed above).
   (c) Photo and Video Documentation Plan.
   (d) Construction Safety Plan.
   (e) List of Operational Change Control Plans lasting longer than one week.
   (f) Quality Management Plan.
   (g) Qualifications of Scheduler, Photographer, and any others as required by Specifications.
   (h) And any other deliverables required by Specifications.

B. Monthly Progress Meetings:
   1. Contractor or Design-Builder will schedule and administer formal progress meetings throughout progress of the Work at maximum monthly intervals with the first meeting scheduled approximately 30 calendar days after the Preconstruction Conference.
   2. Contractor or Design-Builder will make arrangements for meetings, prepare agenda with copies for participants, and preside at meetings.
   3. Contractor or Design-Builder shall provide printed copies of latest submitted progress schedules and Schedule Update.
   4. Attendance Required: Owner, Owner's Advisor, Design Professional, Contractor or Design-Builder's Project Manager, Contractor or Design-Builder's Construction Manager (if different than the Project Manager), as appropriate to agenda topics for each meeting.
   5. Agenda shall be reoccurring and approved by Owner. Topics shall include:
      (a) Review minutes of previous meetings.
      (b) Review of Work progress and future Work.

(c) Review of safety record/events.
(d) Risk register/log.
(e) Change orders.
(f) Quality control.
(g) Pay application.
(h) Schedule reports.
(i) Discuss Stored Material for which the Contractor or Design-Builder will be requesting payment.
(j) Commissioning.

6. Minutes: Contractor or Design-Builder will record changes for update and distribute electronic copies within 7 calendar days after meeting to participants and file on Owner's document management system.

C. Weekly Coordination Meetings:
1. Upon start of construction, Contractor or Design-Builder will schedule and administer meetings throughout progress of the Work at maximum weekly intervals.
2. Contractor or Design-Builder will make arrangements for meetings, prepare agenda with copies for participants, and preside at meetings.
3. Attendance Required: Owner, Owner's Advisor, Design Professional, Contractor or Design-Builder's Project Manager, Contractor or Design-Builder's Construction Manager (if different than the Project Manager), Commissioning Manager, superintendents, major subcontractors and suppliers as appropriate to agenda topics for each meeting.
4. Agenda:
(a) Review of Work progress.
(b) Field observations, problems, and decisions.
(c) Identification of problems delaying planned progress, hazards and risks.
(d) Review of critical submittals.
(e) Deviations in the previous week's 4-Week Schedule.
(f) Review of critical RFIs, change documents, issues and action items.
(g) Review of upcoming OCCPs within 3-week window.
(h) Review of offsite fabrication and delivery schedules.
(i) Maintenance of Baseline Schedule.
(j) Corrective measures to regain projected schedules.
(k) Review 5-Week Schedule and planned progress during succeeding work period.
(l) Schedule Update, if required in accordance with Paragraph 3.02.
(m) Coordination of projected progress.
(n) Maintenance of quality and work standards.
(o) Effect of proposed changes on Baseline Schedule and coordination.
(p) Any requests for stored materials payment
(q) Other business relating to Work.
5. Contractor or Design-Builder will record minutes and distribute electronic copies within 1 calendar day after meeting to participants and those affected by decisions made.

D. Daily Coordination Meeting: Upon start of construction, Contractor or Design-Builder shall hold daily informal meetings with the Owner to discuss planned daily activities by the Contractor or Design-Build team and Owner staff. Owner may elect to merge this meeting with the Division's regular morning meetings.

E. OCCP Coordination Meetings:
1. Contractor or Design-Builder shall schedule and coordinate with Owner one-week prior to implementation of approved OCCP.
2. Agenda:

(a) Review Approved OCCP.
(b) Review safety requirements and preparations.
(c) Review contingency plans.
(d) Confirm resource availability for execution of OCCP.

3. Contractor or Design-Builder may request and coordinate additional meetings with Owner as necessary to facilitate completion and approval of draft OCCPs. Owner will make reasonable effort to accommodate Contractor or Design-Builder but prefers minimum one week notice.

F. Pre-Installation Conferences:
1. Conduct a Pre-Installation Conference at Project site before each construction activity that requires coordination with other construction or moving heavy equipment within reach of the railroad. Work around railroads shall be coordinated in accordance with Section OR-01500 - Temporary Facilities.
2. Attendees: Installer and representatives of manufacturers and fabricators involved in or affected by the installation and its coordination or integration with other materials and installations that have preceded or will follow, shall attend the meeting. Advise Owner of scheduled meeting dates.
3. Agenda: Review progress of other construction activities and preparations for the particular activity under consideration, including requirements for the following:
(a) Contract Documents.
(b) Options.
(c) Related Change Orders.
(d) Purchases.
(e) Deliveries.
(f) Submittals.
(g) Possible conflicts.
(h) Compatibility problems.
(i) Time schedules.
(j) Weather limitations.
(k) Manufacturer's written recommendations.
(l) Warranty requirements.
(m) Compatibility of materials.
(n) Acceptability of substrates.
(o) Temporary facilities and controls.
(p) OCCPs.
(q) Space and access limitations.
(r) Regulations of authorities having jurisdiction.
(s) Testing and inspecting requirements.
(t) Required performance results.
(u) Protection of construction and personnel.
4. Record significant conference discussions, agreements, and disagreements.
5. Do not proceed with installation if the conference cannot be successfully concluded. Initiate whatever actions are necessary to resolve impediments to performance of the Work and reconvene the conference at earliest feasible date.

G. Expedited Submittal Review Meetings: To expedite the submittal process and accelerate the delivery schedule for equipment with long delivery lead times, expedited submittal review meetings may will need to be held for equipment identified by the Contractor or Design-Builder. Contractor or Design-Builder shall identify such meetings on Baseline Construction Schedule and coordinate the meetings as needed.

H. Required Submittal Review Meetings: Work in the following Specifications shall require a workshop prior to submittals in order to streamline the review process.
   (a) Section 23 05 93 Testing Adjusting and Balancing for HVAC
   (b) Section 262413 Switchboards
   (c) Section 262419 Motor Control Centers
   (d) Section 262923 Variable-Frequency Motor Controllers
   (e) Section 465360 Granular Sludge Biological Treatment System
   (f) Section 406196 Process Control Software Programming and Reports

I. Other Meetings as Required:
   1. Maintenance Workshop(s):
      (a) Purpose: Develop the work orders for new and modified assets with the Owner. Contractor or Design-Builder shall review Original Equipment Manufacturer (OEM) O&M manual maintenance recommendations with Owner. Maintenance activities (Preventive & Predictive) will be divided between operations and maintenance. The updated round sheets for the site(s) will be reviewed for deficiencies. Contractor or Design-Builder shall facilitate a discussion of which OEM recommended maintenance activities have value after the warranty period. If necessary, the Contractor or Design-Builder and Owner will develop additional maintenance activities not recommended by the OEM with a particular focus on predictive maintenance activities such as vibration testing, lubricant testing, and IR testing to support the Owner's reliability centered maintenance program. Maintenance activity frequency will also be discussed. Lubrication for assets will be discussed with a focus on minimizing new lubricants that will need to be stocked.
      (b) Scheduling: Meetings shall occur after OEM manuals have submitted and approved.
   2. Sequence of Operations Meeting(s):
      (a) Schedule: During design, after draft sequence of operations are completed.
      (b) Purpose: Walk Owner's operations staff and engineering staff through the proposed sequences of operation to control equipment and processes and solicit comments and refinements.
   3. Facility Data Workshop:
      (a) Purpose: Any points communicated to a PLC and not SCADA will be discussed. Alarm set point and priority will be reviewed and developed. Historian settings for each point will also be developed or reviewed.
      (b) Scheduling: After draft sequence of operations is completed and finalized PIDs.
   4. O&M Data Meeting
      (a) 90 days prior to Substantial Completion, a meeting will be held to discuss the steps to prepare the O&M Data for transmittal to the City.
   5. Spare Parts Coordination Meeting
   6. Commissioning meetings as required in Section 01757 - Commissioning.

SECTION 01322 – PHOTOGRAPHIC AND VIDEO DOCUMENTATION

PART 1 - GENERAL

1.01 SUMMARY

A. This Section outlines the requirements for photographic and video documentation. The Contractor is solely responsible for the development of an overall plan to fully document Site conditions and the progress of the Work.

B. The Contractor shall hire a professional photographer to provide the services and deliverables described herein.

C. This section does not include work associated with internal closed-circuit television (CCTV) inspections of sewer gravity pipes. See Section 02686 – CCTV Inspection of Sewer Mains.

1.02 SPECIFICATION MODIFICATIONS

A. It is understood that throughout this section these Specifications may be modified by appropriate items in Section 01015 – Specific Project Requirements or as otherwise indicated in the contract documents.

1.03 RELATED SECTIONS

A. Section 00700 – General Conditions.

B. Section 01015 – Specific Project Requirements.

C. Section 01300 – Submittals.

D. Section 01320 – Construction Progress Documentation.

E. Section 01335 – Document Management.

F. Section 02686 – CCTV Inspection of Sewer Mains.

1.04 DEFINITIONS

A. Pre-Construction Video: A video taken to document Site conditions prior to the start of construction.

B. Pre-Construction Photographs: Photographs taken to document Site conditions prior to the start of construction. All Pre-Construction Photographs shall be digital, indexed on an interactive map and shown on a View Location Map.

C. Construction Progress Photographs: Digital photographs taken to document the progress of construction.

D. Construction Activity Photographs: Digital photographs taken to document specific construction activities.

E. Post-Construction Photographs: Digital photographs taken after final restoration to document the finished condition of the Site.

F. Affidavit of Authenticity: The photographer's signed and notarized affidavit, attesting to the production of the original photographs, videos and their authenticity.

1.05 SUBMITTALS

A. Submit as specified in Section 01300 – Submittals.

B. Other required Submittals:

1. Photographer's Qualifications: Submit for review and approval the qualification information demonstrating the photographer meets the requirements of paragraph 1.06 of this Section.
2. Phasing Plan: If applicable, submit for review and approval a phasing plan for Pre-Construction Photographs and Videos.

3. Pre-Construction Photographs: Submit for review and approval digital pre-construction photographs with an interactive index map, Photograph Navigation System (see paragraph 2.05 of this Section) and affidavit of authenticity.
4. Pre-Construction Video: Submit for review and approval a pre-construction video with a Video Navigation System (see paragraph 2.05 of this Section) and affidavit of authenticity (see paragraph 1.04 of this Section).
5. Construction Progress Photographs: On a monthly basis, submit digital construction photographs, interactive index map and affidavit of authenticity.
6. Construction Activity Photographs: On a monthly basis, submit digital activity photographs (if different than progress photographs), interactive index map and affidavit of authenticity.
7. Post-Construction Photographs/Video: Submit for review and approval digital post-construction photographs or video, interactive index map and affidavit of authenticity.

1.06 QUALITY ASSURANCE

A. The Contractor is responsible for the quality assurance and quality control of the Work.
B. General Quality: Photographs and video shall be clear and of sufficient quality to show relevant detail. They shall not be blurred, taken in shadow or too far away to provide conclusive information. The City may require that the photographs or video be retaken should the quality be insufficient. Costs for such re-takes are the Contractor's sole responsibility and shall be done at no extra cost to the City.
C. Qualifications of Photographer: The Contractor shall engage the services of a professional photographer with a minimum of 3 years of experience in construction photography to document the conditions of the project site. Upon request, samples of the photographer's prior work and/or references shall be submitted.
D. Affidavit of Authenticity: The Contractor shall provide the photographer's signed and notarized affidavit, attesting to the production of the original photographs, videos and their authenticity. An affidavit of authenticity shall be provided with each submittal/deliverable.

1.07 MINIMUM REQUIREMENTS

A. The section specifies several different sets of photographic and video documentation requirements. The extent of documentation will depend upon the size and type of the project. The following table summarizes the basic documentation requirements.

Table 1. Summary of Requirements

Set of Documentation	Mandatory	As Required by Section 01015
Pre-Construction Video		✓
Haul Route Video		✓
Pre-Construction Photographs	✓	
Interactive Index Map		✓
Construction Progress/Activity Photographs		✓
Post-Construction Photographs/Video		✓

1.08 OWNERSHIP

A. The photographs and videos shall become the sole property of the City.

1.09 SCHEDULES

A. Schedule of Values: Photographic/Video documentation shall be listed as one line item in the Schedule of Values.
B. Construction Progress Documentation: Each set of photographs or videos shall be listed in the Preliminary Project Schedule as a discrete activity. See Section 01320 – Construction Progress Documentation.

1.10 PHASING

A. Based on the nature and scope of the Work, the Contractor may phase the Pre-Construction Photographs and Video. If phasing is to be implemented, the following shall apply:
   1. The Contractor shall submit a Phasing Plan that identifies each area of the Work.
   2. For each phase, Pre-Construction Photographs and Videos shall be taken within 21 days of the start of construction activities unless otherwise approved in writing by the City/Design Professional.
B. Under no circumstances shall construction begin in any area until the Pre-Construction Photographs and/or Video have been submitted and approved by the City/Design Professional.

PART 2 - PRODUCTS

2.01 PHOTOGRAPH QUALITY

A. Photographic images shall be captured in digital format, with a minimum of 10-megapixel resolution and taken without JPG compression.
B. Each photograph shall include a date/time stamp in the image, showing when the image was taken.

2.02 VIDEO QUALITY

A. All video recordings shall be captured in full 1080-dpi Hi-Definition digital format, without compression or file-reduction whether applied in-camera or after capture during editing.
B. The original video segments shall be retained in the format captured in camera (such as MP4 or MTS for Canon HD Video) without compression or modification that would reduce resolution or quality. The video shall include a date/time stamp in the image, showing when the image was taken. Video shall include verbal description and narrative of what is being captured.

2.03 METADATA

A. Digital files for photographs and videos shall, at a minimum, contain the following metadata:
   1. Project Name.
   2. Date and Time Taken.
   3. All other metadata inherently provided by the camera/video equipment.

2.04 MEDIA LOG

A. The Contractor shall maintain a media log (photographs and videos) for the project. The log shall include, but is not limited to, the following information for each photograph and/or video:
   1. Project Name.
   2. Project Number.
   3. Contract Number.
   4. Name of City and Department.

5. Name of Contractor.
6. Name of Design Professional.
7. Photograph file name (the specific format should be tied to the project name). Photograph file name shall be unique to each digital file and shall be embedded in the digital image in a manner that is permanent and clearly legible when the file is opened.
8. Include a date designator in file names.
9. Date the photograph was taken.
10. The name of the photographer who took the photograph.

2.05 PHOTOGRAPH AND VIDEO NAVIGATION SYSTEM

A. If specified in Section 01015 – Specific Project Requirements, the Contractor shall provide an electronic photographic and video navigation system (navigation system) for searching and viewing recorded imagery.

B. Interactive Index Map: The navigation system shall indicate the general location of each area photographed or video recorded using icons and other suitable mark-ups on the actual construction drawings in PDF-format.

C. The navigation system shall utilize standard PDF-reader software (such as Adobe Reader, Acrobat, or Bluebeam Vu) or other software that shall be included with the deliverables. Icons shall be individually hyperlinked to the respective photograph, video, affidavit of authenticity and media log file for immediate playback in Windows Media Player, VLC or other players.

D. The navigation system shall include the following:
1. Project Name.
2. Project Number.
3. Contract Number.
4. Name of City.
5. Name of Contractor.
6. Name of Design Professional.
7. Ranges of dates for which the photographs or videos were taken.
8. The name of the photographer.
9. Affidavit of Authenticity.
10. Media Log.
11. Photographs.
12. Videos.

E. A navigation system shall be provided for each set of photographs and videos taken.

PART 3 - EXECUTION

3.01 PRIOR TO PHOTOGRAPHIC AND VIDEO DOCUMENTATION

A. Construction Limits: Prior to the Pre-Construction Photographs and Video, the Contractor shall flag or mark the construction limits and excavation areas for identification, and project centerlines shall be physically marked with survey stakes and/or high visibility paint (including station numbers).

B. Mark Utilities: Prior to the Pre-Construction Photographs or Video, the Contractor shall notify utilities and have them marked so that utility locations are documented.

C. Coordinate with City: For any work that requires a representative of the City to be present, the Contractor shall provide the City a minimum of 2 days' notice.

3.02 PRE-CONSTRUCTION VIDEO

A. If specified in Section 01015 – Specific Project Requirements, the Contractor shall provide a pre-construction video.

B. Scope: Prior to the start of construction, the Contractor shall prepare a color video recording with audio of all the areas to be affected by construction. All pre-construction video recordings shall have sufficient detail to reveal the condition (including defects and damage) of all existing features, such as pavement, driveways, culverts, inlets, sidewalks, landscaping, vegetation, creek banks, trees, structures, foundations and other such items along the construction route and in the immediate adjacent areas, which might be affected by the construction operations. In addition, the videographer shall move beyond the construction zone as needed to ensure documentation of features and areas that may not be adequately recorded from the centerline rotations. Videos shall be taken on both sides of the street when construction is in or along a roadway (use this approach along drainage channels and in other similar situations).

C. Schedule: Taken after utilities have been marked and prior to the placement of materials or equipment on the Site. Videos shall be submitted to the City for review and approval. Under no circumstances shall construction begin until the pre-construction video has been submitted and approved.

D. The pre-construction video recording shall be done in the presence of a representative of the City.

E. The Contractor shall document all pre-existing site conditions/elements of the Site, the same as listed for the Pre-construction Photographs.

F. The video documentation shall provide a clear and continuous view of the project showing all visible utilities and features within the limits of construction.

G. To preclude the possibility of tampering or editing in any manner, all video recordings shall, by electronic means, generate and display continuously and simultaneously on the screen or in the video file metadata properties digital information to include the date and time of recording. The time information shall consist of hours, minutes and seconds, separated by colons (i.e., 10:35:18).

H. The audio/video recording shall consist of one video and one audio track which shall be recorded simultaneously. All tracks shall consist of the original live recordings and thus shall not be copies of other audio or video recordings.

I. The audio track shall contain the narrative commentary. Ample descriptive narrative shall be recorded simultaneously during all recordings. Narration shall include clearly audible comments that will deliver station number and/or street address, locations, direction of view and rotation.

J. Typical video segments should not exceed 10 minutes in length.

K. Rotations of 360-degrees shall be at the beginning and end of each video segment and at each 100 foot increment throughout the video.

L. The rate of speed in the general direction of travel of the conveyance used during recording shall be controlled to provide a usable image. On average, the rate of forward travel during videotaping shall not be less than fifteen minutes for every 1000 linear feet of pipeline route or street centerline; slower rates shall be utilized in residential/commercial areas.

M. Panning rate, zoom-in rate and zoom-out rate shall be controlled sufficiently such that playback will provide clarity of the object viewed.

N. All recording shall be done during times of good visibility. No recording shall be done during periods of precipitation unless authorized by the City.

3.03 HAUL ROUTE VIDEO

A. If specified in Section 01015 – Specific Project Requirements, the Contractor shall provide pre-construction video documentation of all haul routes associated with the Project.
B. Haul route videos shall be made at the time of the Pre-Construction Photographs.
C. Haul Route Videos shall meet the requirements of the paragraph PRE-CONSTRUCTION VIDEO as well as the following:
    1. Haul routes shall be recorded during daylight hours and during good weather conditions.
    2. Video equipment may be mounted on a vehicle. The speed of the vehicle while recording shall not be more than 5 miles per hour (mph). If traffic or safety concerns prohibit driving 5 mph then the video shall be taken while walking the route.
    3. No audio/narrative commentary is required for the haul route video.

3.04 PRE-CONSTRUCTION PHOTOGRAPHS

A. The Contractor shall provide pre-construction photographs as specified in this Section and as specified in Section 01015 – Specific Project Requirements.
B. Scope: The purpose for pre-construction photo documentation is to record existing conditions, damage and features on or adjacent to the project site. The principal reason for obtaining photographs is so that items such as cracked curbs, broken pavement, sidewalks, plugged culverts, driveway conditions, lawn conditions and other existing conditions located in the Project Site may be clearly shown and documented. This will to some degree mitigate the possibility of post-construction restoration issues with property owners in the Project area.
C. Schedule: Take photographs after utilities have been marked, prior to placement of materials or equipment on the Site and prior to the start of construction activities in an area. Photographs shall be submitted to the City for review and approval. Under no circumstances shall construction begin until the pre-construction photographs have been submitted and approved.
D. Pre-construction photographs shall be taken at sufficient intervals to be able to carefully document the pre-construction conditions of the Site and in no case more than 50-foot intervals along the street, right-of-way, drainage easement and water/wastewater line route before commencement of the Work.
E. In addition, select photographs shall be taken as needed along the construction limits, and of adjacent properties, to ensure documentation of features and areas that may not be adequately recorded in the centerline rotations. Photographs shall be taken along both sides of the street when construction is in or along a roadway.
F. Overlapping composition techniques shall be employed to ensure maximum photographic coverage.
G. Pre-construction photographs shall be taken after the utility locations have been marked.
H. Pre-construction photographs shall be taken with a representative of the City present unless otherwise authorized by the City.
I. All Pre-Construction Photographs shall have sufficient detail to reveal the condition (including defects and damage) of all existing features, such as pavement, driveways, culverts, inlets, sidewalks, landscaping, vegetation, creek banks, trees, structures, foundations and other such items along the construction route, and adjacent areas which might be affected by the construction operations. An identifier such as house or business address/signs, property numbers, mail boxes, landscaping, etc… shall be included when practical in each view for ease of identification.
J. At a minimum, pre-construction photographs must be taken of the following views:
    1. The entire street right of way and limits of construction; whichever is greater.
    2. The entire easement width and length (both permanent and temporary).

3. All curb lines (both sides of street) – all pre-existing curb damage not called for replacement within the Work and shall include major cracks.
4. All driveways, steps, and curbs and curb ramps (both sides of street).
5. Fence and gate conditions.
6. Trees, ornamental shrubs, plantings/planter boxes and evidence of irrigation features.
7. Other privately or publicly owned features or facilities that might be disturbed by the construction.
8. Views of structures, both inside and adjacent to the project site and easements in areas where the Contractor will be working within five (5) feet of said structure.
9. Prominent utility features, such as: guy wires, poles, signs, valves, fire hydrants, meters, pull boxes, etc.
10. Streams and stream banks within the limits of construction.
11. At the discretion of the Contractor, photograph offsite roadways that will be subjected to heavy usage such as for haul routes or delivery of heavy components or equipment. Refer to Paragraph HAUL ROAD VIDEO for additional requirements.
12. Other significant or prominent features to protect the City and the Contractor following construction (e.g. close-up photographs of pre-existing broken curbs, cracked/failed pavement, damaged adjacent retaining walls, etc.).
13. Views of structures, both inside and adjacent to the ROW/easement in areas where the Contractor will be working within five (5) feet of said structure.
14. Other views as requested by the City.

3.05 CONSTRUCTION PROGRESS PHOTOGRAPHS

A. If specified in Section 01015 – Specific Project Requirements, the Contractor shall provide Construction Progress Photographs.
B. Scope: The Contractor shall provide construction progress photographs to depict the progress of the work. The Contractor shall be responsible for photographs of the Site to show the existing and general progress of the Work. The City will advise as to which views are of interest.
C. Schedule: Photographs shall be taken at the time of the Pre-construction Photographs, a minimum of once per month throughout the duration of the Project, and at the time of the Post Construction Photographs. Construction Progress Photographs are to be submitted each month with the Contractor's Application for Payment. Applications for Payment was not be considered acceptable until the photographs are provided.
D. This set of photographs will be taken as close as possible to the same locations and views of the pre-construction photography.

3.06 CONSTRUCTION ACTIVITY PHOTOGRAPHS

A. If specified in Section 01015 – Specific Project Requirements, the Contractor shall provide Construction Activity Photographs.
B. Scope: The Contractor shall provide photographs taken to document Site conditions and specific construction activities throughout the duration of the Project.
C. Schedule: Photographs shall be taken two times per month (every two weeks) for the duration of the Project.
D. Construction Activity Photographs are to be submitted each month with the Contractor's Application for Payment.
E. Photographs shall be taken to depict the work accomplished during the month. These photographs are to include, but are not limited to, the following:
    1. Work not yet covered up.
    2. When mechanical, electrical, plumbing or building inspections are scheduled.

3. The beginning of installation of major items of equipment.
4. After installation of major items of equipment.
5. Other significant construction activities.
6. As directed by the City.

3.07 POST-CONSTRUCTION PHOTOGRAPHS

A. If specified in Section 01015 – Specific Project Requirements, the Contractor shall provide Post-Construction Photographs.

B. Scope: The Contractor shall provide Post-Construction Photographs of the project area that documents the final restoration and construction improvements. Post-Construction photographs shall show the general condition of the construction zone (recording finished landscape and other restoration, plus construction improvements), and other areas that may have been affected by construction activities.

C. Schedule
   1. Photographs shall be taken after completion of the Substantial Completion punch list when the project is complete, the Site is restored to the satisfaction of the City, and before submission of the Application for Final Payment.
   2. Post-construction photographs shall be taken after all items have been address from the Substantial Completion inspection, after cleanup and site restoration, and before application for final payment.

D. Post-Construction Photographs are to be submitted with the Contractor's Application for Final Payment.

E. The Contractor shall coordinate the schedule of the post-construction photographs with the City's Project Manager and shall provide at least 5 days written notice to allow the City's Representative to be present when the photographs are taken.

3.08 POST-CONSTRUCTION VIDEO

A. If specified in Section 01015 – Specific Project Requirements, the Contractor shall provide a Post-Construction Video.

B. Scope: The Contractor shall prepare a color video recording with audio of all the areas affected by construction. All Post-Construction video recordings shall have sufficient detail to reveal the final, restored condition of all existing features, such as pavement, driveways, culverts, inlets, sidewalks, landscaping, vegetation, creek banks, trees, structures, foundations, and other such items along the construction route, and in the immediate adjacent areas, which might have been affected by the construction operations. In addition, videographer shall move beyond the construction zone as needed to insure documentation of features and areas that may not be adequately recorded from the centerline rotations. Videos shall be taken on both sides of the street when construction is in or along a roadway (use this approach along drainage channels and in other similar situations).

C. Schedule: The post-construction video shall be taken in conjunction with the post-construction photographs.

D. Post-construction videos are to be submitted with the Contractor's Application for Final Payment.

E. Unless otherwise authorized by the City, the post-construction video recording shall be done with a representative of the City present.

F. The Contractor shall document all post-construction site conditions/elements of the Site as listed for the post-construction Photographs.

G. The video documentation shall provide a clear and continuous view of the project alignment showing all visible utilities and features within the limits of construction.

H. To preclude the possibility of tampering or editing in any manner, all video recordings shall, by electronic means, generate and display continuously and simultaneously on the screen digital information to include the date and time of recording. The time information shall consist of hours, minutes and seconds, separated by colons (i.e., 10:35:18).
I. The audio video recording shall consist of one video and one audio track which shall be recorded simultaneously. All tracks shall consist of original live recordings and thus shall not be copies of other audio and video recordings.
J. The audio track shall contain the narrative commentary. Ample descriptive narrative shall be recorded simultaneously during all recordings. Narration shall include clearly audible comments that will deliver station number and/or street address locations, direction of view and rotation.
K. Typical video segments should not exceed 10 minutes in length.

3.09 DELIVERABLES

A. Refer to Section 01015 – Specific Project Requirements for additional deliverables required for the Project.
B. Delivery of the documentation record shall be made as soon as is practical after the images are recorded. Deliverables include original photographs in JPG format, photographs converted to pdf format, interactive map index and navigation system.
C. Electronic Storage Devices: Submit the navigation system on a non-returnable USB compatible flash drive. Submittals shall conform to the following:
    1. Submit with the monthly invoice two sets of digital photographs and/or videos. Each set shall be contained on a separate electronic storage device.
    2. Each set shall be cumulative of all photographs and/or videos taken to date.
    3. Affidavit(s) of Authenticity shall be included in a digital format.
D. Document Management System: Unless otherwise noted in Section 01015 – Specific Project Requirements, all deliverables shall be provided in an electronic format using the specified document management system and in accordance with paragraph 1.05 of this Section.

END OF SECTION

SECTION 01329 – SAFETY PLAN

PART 1 - GENERAL

1.01 SUMMARY

A. This Section includes the development and maintenance of a Construction Safety Plan.

1.02 REFERENCES

A. National Fire Protection Association (NFPA):
    1. 70E - Standard for Electrical Safety in the Workplace.
B. Occupational Safety and Health Administration (OSHA).
C. Section 01300 Submittal Procedures.

1.03 CONSTRUCTION SAFETY PLAN

A. Detail the Methods and Procedures to comply with NFPA 70E, Federal, and Local Health and Safety Laws, Rules and Requirements for the duration of the Contract Times. Include reference to and comply with latest Owner safety policies. Include the following:
    1. Identification of the Certified or Licensed Safety Consultant (Safety Officer) who will prepare, initiate, maintain and supervise safety programs, and procedures.
    2. Procedures for providing workers with an awareness of safety and health hazards expected to be encountered over the course of construction.
    3. Safety equipment appropriate to the safety and health hazards expected to be encountered during construction including hydrogen sulfide (H2S), asbestos, and lead. Include warning devices, barricades, safety equipment in public right-of-way and protected areas, safety equipment used in multi-level structures, and personal protective equipment (PPE) as required by NFPA 70E.
    4. Methods for minimizing employees' exposure to safety and health hazards expected during construction including entrance to tanks, such as digesters, and confined spaces used in the operation of the treatment plant and demolition.
    5. Procedures for reporting safety or health hazards.
    6. Procedures to follow to correct a recognized safety and health hazard.
    7. Procedures for investigation of accidents, injuries, illnesses, and unusual events that have occurred at the construction site.
    8. Periodic and scheduled inspections of general work areas and specific workstations.
    9. Training for employees and workers at the jobsite.
    10. Methods of communication of safe working conditions, work practices and required personal protection equipment.
    11. Provision of a site-specific emergency action and evacuation plan during normal operations as well as when site access is blocked by trains.
B. Submit draft Safety Plan to Owner in accordance to Section 01300 Submittal Procedures for review prior to the Pre-Construction Meeting. The Safety Plan shall be a discussion topic on the agenda for the Pre-Construction Meeting. Following the Pre-Construction Meeting, Design-Builder shall submit final Safety Plan for Owner review within two weeks.
C. Design-Builder Assume assumes sole responsibility for every aspect of Health and Safety on the jobsite, including the health and safety of subcontractors, suppliers, and other persons on the jobsite:

1. Forward available information and reports to the Safety Consultant Officer who shall make the necessary recommendations concerning worker health and safety at the jobsite.
2. Employ additional health and safety measures specified by the Safety Consultant Officer, as necessary, for workers in accordance with OSHA guidelines.

D. Timely Transmit to Owner and Engineer copies of reports and other documents related to accidents or injuries encountered during construction in accordance with Section 01300 Submittal Procedures.

E. Smoking
1. There is no smoking allowed in buildings or within 50 feet of Digesters and NFPA classified areas and envelopes.
2. No smoking will be allowed in facilities once they are closed in.
3. No smoking will be permitted anywhere on the site following delivery of chemicals.
4. Smoking is only allowed in Owner designated areas.
5. Design-Builder shall provide signage identifying designated smoking areas, and when any changes to the designated areas are made.
6. Design-Builder will be responsible for cleaning up cigarette butts.

SECTION 01335 –DOCUMENT MANAGEMENT

PART 1 - GENERAL

1.01 SUMMARY

A. An internet-based coordination and document management systems (DMS), e-builder (Trimble) & B2G, will be used for the Project. This system will be used to manage project documentation among the City (and/or Designee) , Contractor (or Design-Builder) and Engineer of Record. The Contractor or Design-Builder shall utilize the document management system for all project related correspondence and documentation.

B. The DMS will be utilized to create, track and organize project documentation (City's Representative will provide the exceptions), including, but not limited to, the following:
   1. Schedules.
   2. Applications for Payment.
   3. Meeting minutes with action items.
   4. Project correspondence.
   5. Shop Drawing and Sample(s) Submittals.
   6. Transmittals.
   7. Change Management:
      (a) General Contractor Requests for Interpretation.
      (b) Proposal Requests.
      (c) Work Change Directives. (Storage only)
      (d) Change Orders.
   8. Reporting:
      (a) Certified Payroll Report. (B2G)
      (b) Subcontractors and Major Material Suppliers List. (B2G)
      (c) Daily Labor Force Reports. (B2G)
      (d) Daily Inspection Reports.
      (e) Photographs and Video.
      (f) Certificate of Achievement of Full Operation.
      (g) Contractor Affidavit for Final Payment.
      (h) Subcontractor Affidavit for Final Payment.
      (i) Punch Lists.
   9. Notifications:
      (a) Correction of Defective Work.
      (b) Notification of Non-Compliant Work.

1.02 RELATED SECTIONS

A. Section 00700 – General Conditions.
B. Section 01015 – Specific Project Requirements.
C. Section 01300 – Submittals.

1.03 COORDINATION MEETING

A. Prior to the pre-construction conference, the City will facilitate a meeting with the Contractor or Design-Builder to review requirements for project coordination, document control and use of the DMS. The meeting should be scheduled to allow

the Contractor or Design-Builder time to submit the initial project correspondence, other requirements and preliminary schedules in accordance with Section 00700-General Conditions.

B. At this meeting, the City will present the procedures to be used for document management for the Project.

PART 2 - PRODUCTS

END OF SECTION

SECTION 01340 - PROJECT BIM COORDINATION

PART 1 - GENERAL

1.01 SUMMARY OF WORK

A. This section covers Building Information Modeling (BIM) enabled projects.

1.02 Related Sections

A. 01000 – General Requirements
B. 01019 – Closeout Procedures
C. 01615 – Equipment Identification & Tagging
D. 01340.A - Attributes
E. Kansas City Water Services Department Design Standards – CAD Drawing Standards

1.03 CODES AND SECTIONS

A. Not Applicable

1.04 DEFINITIONS

A. General Definitions
    1. BIM – Building Information Model
    2. Design Phase – The overall design is broken into separate stages. Each phase is a certain level of development.
    3. LIDAR - This is an acronym for Light Detection and Ranging. This method measures distances using laser light and measuring the reflection with a sensor. This is also called 3-D Laser Scanning.
    4. Modeled Object – An equipment asset created in BIM. Modeled objects are tagged using a parent-child-grandchild data structure with CMMS tag level 6 is the parent, CMMS tag level 7 is the child, CMMS tag level 8 is the grandchild. The grandchild inherits data from the child and the child inherits data from the parent.
    5. Overlay – Placing an object over the surface of another of another object thus allowing the object to be visible on drawings or other deliverables by viewer.
    6. Point Cloud - A set of data points in space used for capturing existing conditions of any site.
    7. Relative File Path – a defined location relative to BIM's current directory
    8. Site Types
        a. Brownfield – Project locations with hazardous materials at in existing in-use facilities by City.
        b. Grayfield - Project locations with existing in-use facilities by City.
        c. Greenfield – Project locations with no in-use facilities by City.
    9. Standard Component – Any valve, pipe, duct, fitting, cable, cable tray, conduit, wiring, or structural member where aforementioned component is dimensionally defined in a Design Standard.
    10. State Plane Coordinate System – U.S. Coordinate system used by each U.S. state and has between one to six zones depending on size and shape.
B. Software Definitions

1. Software Packages
    a. Autodesk Construction Cloud – Cloud-based platform that shows the latest published Revit 3D models for design collaboration between Owner and Contractors.
    b. CMMS – Computerized Maintenance Management System used for operation and maintenance of facility assets. CITY's current CMMS is Hansen Infor™.
    c. Revit – Autodesk software used for Building design, Foundation design, Structural design, and MEP design.
2. CMMS
    a. CMMS Parameters – Fields within Autodesk Revit associated with identifying and describing an asset or equipment item. These fields allow for the creation of unique identifiers for each piece of equipment, and allowing for synching with CITY's CMMS. Refer to Section 013124.A – BIM Attributes.
    b. CMMS Synching – Process that integrates the BIM model with CMMS.
3. CMMS Facility Key – Unique identifier used in City's asset management system. The asset management system relies on this unique identifier to incorporate all information collected into the asset management system. This may hereinafter also be referred to as the Comp Key.
4. Dynamic – Any item, field, attribute, or other component which receives an active input from a source other than by a manual user.
5. Parameter – Fields with populated values in BIM modeling software. In Autodesk Revit, these are commonly referred to as family parameters.
6. Publish – The process of pushing any model changes into cloud-based BIM software for the purpose of coordination between interdisciplinary and inter-organizational teams
7. Static – Any item, field, attribute, or other component which requires manual edit to change its value.

1.05 BIM INFORMATION PROVIDED BY OWNER

A. Existing
    1. Existing survey information, GIS data, 2D drawing documents, and existing BIM models will be shared with BIM responsible person(s).
    2. Non-available information will be determined prior to commencing any site visits. If needed, non-available information will be collected while on site and incorporated into the BIM model. Site visits may also identify any additional information needed for completion of Work and needed to be included in the BIM model.
    3. CITY encourages the use of LIDAR for documenting conditions due to increased efficiency over other methods.
    4. CITY will provide CMMS Facility Key information for existing assets in CMMS.

B. Equipment and Component Specifications
    1. All final submittals from Suppliers shall be provided to DP for integration into the BIM model.
C. BIM Parameters

1.06 RECORD BIM DATA

A. General: Transmit published BIM and all related files for CITY's reference during normal working hours. Any construction-related needs will be deferred to construction drawings for interpretation by DP.
B. At the end of the project, Record BIM Data shall be incorporated to include but not limited to: 3D representation of Work, all data parameters completed and all linked information in relative file paths.
C. Data Parameters
    1. BIM and its data shall be conformed to construction records prior to BIM turnover.
    2. For BIM facility asset parameters, fill out all data parameters as defined in 013124.A – Attribute Standard including relative hyperlinks per the file structure for all information the DPs/Contractors have.
    3. Any hyperlink will direct the user to the designated file location.
    4. Transmittals required by DP must be included in the CITY's Record Submittal Zip File. All files stored in Windows 10 shall have tag metadata that includes CMMS Level 1 through CMMS Level 8 asset information.
    5. The folder containing the designated file locations will appear as shown in Figure 01.

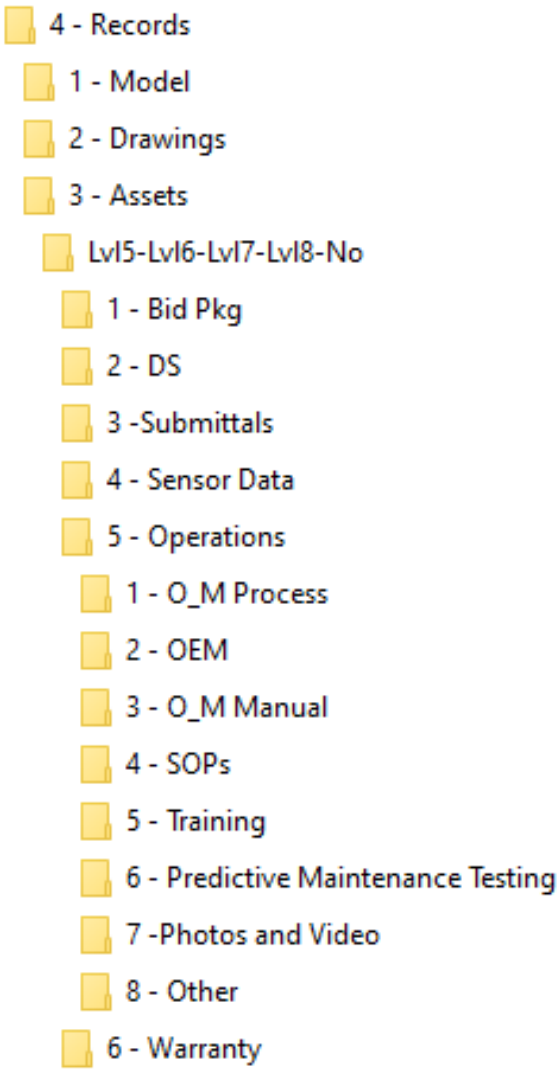

Figure 01: Record Submittal Zip File Structure

D. Submission
   1. BIM model must be cross-checked against field records and is free of conflicting data.
   2. Each BIM parameter with a link to a file shall be confirmed to work using relative file paths. Relative file paths will be used when during turnover of the Revit model and equipment documentation. Refer to CITY's Attribute Standard and CITY zip submittal.
   3. Naming of BIM files must be coordinated with CITY's representative prior to submission at Closeout. At CITY's discretion, the file names will change at request by CITY.
   4. Give particular attention to information on equipment components that cannot be readily identified in the field and recorded later.

E. For requirements regarding closeout procedures, refer to Section 01019.

SECTION 01352 – SELECTIVE ALTERATIONS AND DEMOLITION

PART 1 – GENERAL

1.01 SUMMARY

A. Section includes:
    1. Cutting or modifying existing or new work.
    2. Partial demolition of structures.

1.02 REFERENCES

A. American National Standards Institute (ANSI):
    1. A10.6 - Safety and Health Program Requirements for Demolition Operations.
B. International Concrete Repair Institute (ICRI):
    1. Guideline No. 310.2R - Selecting and Specifying Concrete Surface Preparation for Sealers, Coatings, Polymer Overlays, and Concrete Repair.
    2. Guideline No. 310.3R - Guide for the Preparation of Concrete Surfaces for Repair Using Hydro Demolition Methods.

1.03 RELATED SECTIONS

A. Section 00700 – General Conditions.
B. Section 00800 – Supplementary Conditions.
C. Section 01020 – Record Documents.
D. Section 01140 – Work Restrictions.
E. Section 01300 – Submittals.
F. Section 01329 – Safety Plan.
G. Section 01354 – Hazardous Material Procedures.
H. Section 01566 – Cleanup Operations.
I. Section 01580 – Project Signs.
J. Section 31 20 50 – Site Preparation and Earthwork.

1.04 DEFINITIONS

A. Chipping hammer: A hand-operated electrical or pneumatic demolition device for removal of hardened concrete or masonry materials having a weight of less than 15 pounds and an impact frequency of greater than 2,000 blows/minute.
B. Concrete breaker: A hand-operated electrical or pneumatic demolition device for removal of hardened concrete or masonry materials having a weight greater or impact frequency less than the limits defined for a chipping hammer.
C. Coring equipment: Non-impact rotary drill with diamond cutting edges.
D. Heavy abrasive blast: Cleaning procedure by which various abrasives materials, or steel shot, are forcibly propelled by high pressure against a surface to remove loose material and produce a concrete surface roughened to ICRI Surface Profile CSP-7, or higher, as specified in ICRI 301.3R.
E. Salvage materials: Materials removed from existing facility.

1.05 DESCRIPTION OF WORK

A. The work includes partial demolition, cutting, and modifying of existing facilities, utilities, and/or structures.
B. These facilities may be occupied and/or operational. Satisfactory completion of the work will require that the Contractor plan activities carefully to work around unavoidable obstacles and to maintain overall stability of structures and structural elements. It will further require restoration of existing facilities, utilities, and structures that are to remain in place and that are damaged by demolition or removal operations.

1.06 SUBMITTALS

A. General:
    1. Submit as specified in Section 01300 - Submittals.
B. Shop drawings include:
    1. Demolition Plan outlining the proposed sequence of events and procedures to be utilized for any demolition activities required as part of the Work. This plan shall include a plan for proper notification of Owner and other affected parties relative to the respective Work.
    2. The location of all embedded items shall be documented using diagrams and/or other media that clearly show dimensions and locations of existing structural elements, existing embedded items, and any new embedded items and their relationship to each other.
C. Submittals for information only:
    1. Permits and notices authorizing demolition.
    2. Certificates of severance of utility services.
    3. Permit for transport and disposal of debris.
D. Quality assurance submittals:
    1. Qualifications of non-destructive testing agency/agencies.
E. Project record documents.
F. Drawings and/or other media documenting locations of service lines and capped utilities.

1.07 QUALITY ASSURANCE

A. Qualifications:
    1. Assign relocation, removal, cutting, coring, and patching to trades and workers qualified to perform the Work in a manner that causes the least damage and that provides means of returning surfaces to an appearance at least equal to that of the surrounding areas unaffected by the Work.
    2. Non-destructive testing agencies shall have experience performing non-destructive testing for location of steel reinforcement in existing concrete under conditions that are similar to that required for this Work.

1.08 SEQUENCING

A. Perform Work in sequences and within times specified in Section 01140 - Work Restrictions.
B. If the facility or utility to be modified cannot be removed from service, perform the Work while the facility is in operation using procedures and equipment that do not jeopardize operation or materially reduce the efficiency of that facility.
C. Coordinate the Work with operation of the facility:

1. Do not begin alterations of designated portions of the Work until specific permission for activities in each area has been granted by Owner in writing.
2. Engineer will coordinate the planned procedure with facility manager.
3. Complete Work as quickly and with as little delay as possible.

D. Operational functions of the facility that are required to be performed to facilitate the Work will be performed by facility personnel only.
E. Owner will cooperate in every way practicable to assist in expediting the Work.
F. When necessary for the proper operation or maintenance of portions of the facility, reschedule operations so the Work will not conflict with required operations or maintenance.

1.09 REGULATORY REQUIREMENTS

A. Dispose of debris in accordance with governing regulatory agencies.
B. Comply with applicable air pollution control regulations.
C. Obtain permits for building demolition, transportation of debris to disposal site and dust control.

1.10 PREPARATION

A. Non-destructive evaluation of existing concrete and masonry:
    1. Prior to cutting, drilling, coring, and/or any other procedure that penetrates existing concrete [or masonry], retain and pay for the services of a qualified non-destructive testing agency to perform investigations to determine the location of existing steel reinforcement, plumbing, conduit, and/or other embedment's in the concrete.
    2. Submit documentation of the investigations to the Engineer for review and approval as specified in Section 01300 - Submittals before any work involving penetration of existing concrete is initiated.
B. Obtain permission from adjacent property owners, including railroads, when outriggers, swinging cranes, and other equipment may have to traverse or extend into adjacent property.

1.11 PROJECT CONDITIONS

A. Do not interfere with use of adjacent structures and elements of the facility not subject to the Work described in this Section. Maintain free and safe passage to and from such facilities or adequate barriers to prevent unsafe passage.
B. Provide, erect, and maintain barricades, lighting, guardrails, and protective devices as required to protect building occupants, general public, workers, and adjoining property:
    1. Do not close or obstruct roadways without permits.
    2. Conduct operations with minimum interference to public or private roadways.
C. Prevent movement, settlement, or collapse of structures adjacent services, sidewalks, driveways and trees:
    1. Provide and place bracing or shoring.
    2. Cease operations and notify Engineer immediately when safety of structures appears to be endangered. Take precautions to properly support structure. Do not resume operations until safety is restored.
    3. Assume liability for movement, settlement, or collapse.
    4. Promptly repair damage.
D. Provide and arrange for capping and plugging utility services. Disconnect and stub off.
    1. Notify affected utility company in advance and obtain approval before starting demolition.

2. Place markers to indicate location of disconnected services.

E. Unknown conditions:
    1. The drawings may not represent all conditions at the site and adjoining areas. Compare actual conditions with drawings before commencement of Work.
    2. Existing utilities and drainage systems below grade are located on the Drawings based on information from existing documents and from surface facilities such as manholes, valve boxes, area drains, and other surface fixtures.
    3. If existing active services encountered are not indicated or otherwise made known to the Contractor and interfere with the permanent facilities under construction, notify the Engineer in writing, requesting instructions on their disposition. Take immediate steps to ensure that the service provided is not interrupted, and do not proceed with the Work until written instructions are received from the Engineer.

PART 2 - PRODUCTS

2.01 SALVAGE MATERIALS

A. No materials shall be designated for salvage.

PART 3 - EXECUTION

3.01 EXAMINATIONS

A. Prior to beginning selective demolition operations, perform a thorough inspection of the facility and site, and report to the Engineer defects and structural damage to, or deterioration of existing construction to remain.
B. Examine areas affected by the Work and verify the following conditions prior to commencing demolition:
    1. Disconnection of utilities as required.
    2. Utilities serving occupied or active portions of surrounding facilities will not be disturbed, except as otherwise indicated.
C. If unsatisfactory conditions exist, notify the Engineer, and do not begin demolition operations until such conditions have been corrected.

3.02 PREPARATION

A. General:
    1. Review Section 01354 – Hazardous Material Procedures, before beginning selective alterations and demolition work.
B. Protection:
    1. Erect weatherproof closures to protect the interior of facilities and elements or equipment that are not designed for exposure to the weather. Provide temporary heat, cooling, and humidity control as necessary to prevent damage to existing and new construction. Maintain existing exiting paths and/or provide new paths in compliance with Building Code requirements.
    2. Erect and maintain dustproof partitions as required to prevent spread of dust, to other parts of building. Maintain negative pressure in the area where the Work is being performed to

prevent the accidental spread of dust and to minimize the spread of fumes related to the Work.

3. Upon completion of Work, remove weatherproof closures and dustproof partitions, and repair damaged surfaces to match adjacent surfaces.
4. Provide and maintain protective devices to prevent injury from falling objects.
5. Locate guardrails in stairwells and around open shafts to protect workers. Post clearly visible warning signs.
6. Cause as little inconvenience to adjacent building areas as possible.
7. Protect landscaping, benchmarks, and existing construction to remain from damage or displacement.
8. Carefully remove designated materials and equipment to be salvaged by Owner or reinstalled.
9. Store and protect materials and equipment to be reinstalled.

C. Layout:

1. The limits of selective demolition are indicated on the Drawings. Confine demolition operations within the limits indicated on the Drawings.
2. Lay out demolition and removal work at the site and coordinate with related Work for which demolition and removal is required. Clearly mark the extent of structural elements to be removed on the actual surfaces that will be removed.
3. Arrange for Engineer's inspection of the lay out extents.
4. Do not begin demolition/removal operations until the lay out markings have been reviewed by the Engineer.

3.03 DEMOLITION

A. General:

1. Perform demolition work in accordance with ANSI A10.6.
2. Demolish designated portions of structures and appurtenances in orderly and careful manner in accordance with the Selective Demolition Plan.
3. Conduct demolition and removal work in a manner that will minimize dust and flying particles.
    a. Use water or dust palliative when necessary to prevent airborne dust.
    b. Provide and maintain hoses and connections to water main or hydrant.
4. Demolish concrete and masonry in small sections. Perform demolition with small tools as much as possible. Blasting with explosive charges is not permitted.
5. Sawcut concrete to establish the edges of demolition, wherever possible.
    a. Do not use a concrete breaker within 6 inches of reinforcing or structural metals that are designated to remain.
    b. At edges that are not sawcut, remove the final 6 inches of material with a chipping hammer as defined herein. At surfaces where material is removed with a chipping hammer, follow with a heavy abrasive blast to remove all loose material and microcracking.
    c. Alternate techniques to remove concrete may be used if acceptable to the Engineer; however, techniques other than those deemed by ICRI Guideline No. 310.2R to provide a low risk of introducing microcracking will require a subsequent procedure to remove loose material.
    d. Provide final surface preparation for concrete repairs as specified in Division 3 specifications.

6. At locations indicated on the Drawings that the existing reinforcing is to be preserved, remove concrete using methods that do not damage the reinforcing. Use one of the following techniques:
    a. Hydro demolition techniques as outlined in ICRI Guideline No. 310.3R.
    b. Chipping hammer, as defined herein, followed by heavy abrasive blast to remove all loose material and microcracking at remaining surfaces impacted by the chipping hammer.
    c. Alternate methods may be used, only if acceptable to the Engineer.
    d. For all methods, provide a small, completed area for Engineer's review and acceptance. If the proposed method, in the opinion of the Engineer, damages the reinforcing, revise the removal method to remove the concrete with a less aggressive technique to protect the reinforcing.
7. Remove materials carefully, to the extent indicated and as required.
    a. Provide neat and orderly junctions between existing and new materials.
    b. Use methods that terminate surfaces in straight lines at natural points of division.
8. Do not remove anything beyond the limits of Work indicated without prior written authorization of the Engineer. If in doubt about whether to remove an item, obtain written authorization of the Engineer prior to proceeding.
9. Perform work to provide the least interference and most protection to existing facilities to remain.
10. Assume possession of demolished materials, unless otherwise indicated on the Drawings or specified.
    a. Remove demolished materials from site at least weekly and dispose of in accordance with Laws and Regulations.
11. Do not burn materials on site.

B. Sizing of openings in existing concrete or masonry:
1. Make openings large enough to permit final alignment of pipe and fittings without deflections, but without oversizing.
2. Allow adequate space for packing around pipes and conduit to ensure watertightness.
3. If the Engineer deems the opening to be insufficient in size to accomplish these criteria, remove additional material using the procedures outlined in this Section.

C. Cutting openings in existing concrete or masonry:
1. Do not allow saw cuts to extend beyond limits of openings.
2. Create openings by the following method or other means acceptable to the Engineer that prevents over-cutting of member at corners:
    a. Core-drill through slab or wall at corners, being careful not to damage materials beyond the area to be removed.
    b. Saw cut completely through the member, between the core holes at the corners.
    c. As an alternate to sawcutting through the member, score the edges of the opening with a saw to a 1-inch depth on both surfaces (when accessible).
        (1) Remove concrete or masonry to within 6 inches of material to remain with a concrete breaker.
        (2) Remove the remaining material with a chipping hammer.
    d. Remove the remaining material at the corners left by the core-drilling with a chipping hammer.

3. Prevent debris from falling into adjacent tanks or channels in service or from damaging existing equipment and other facilities.

D. Pump out buried tanks. Remove tanks and service piping from site.
E. Immediately upon discovery, remove and dispose of contaminated, vermin-infested, or dangerous materials using safe means that will not endanger health of workers and public.
F. Remove trees and shrubs within marked areas; clear undergrowth and dead plant material as specified in Section –31 20 50 – Site Preparation and Earthwork.
G. Backfill open pits and holes caused by demolition as specified in Section 31 20 50 – Site Preparation and Earthwork.
H. Rough grade areas affected by demolition.
I. Remove demolished materials, tools, and equipment upon completion of demolition.

3.04 RESTORATION

A. General:
    1. Repair damage caused by demolition to conditions equal to those that existed prior to beginning of demolition.
        a. Patch and replace portions of existing finished surfaces that are damaged, lifted, and discolored with matching material. Refinish patched portion surfaces in a manner which produces uniform color and texture to entire surface.
        b. When existing finish cannot be matched, refinish entire surface to nearest change of plane where angle of change exceeds 45 degrees.
    2. The cost of repairs shall be at the Contractor's expense, and no increase in the Contract Price.
    3. When new construction abuts or finishes flush with existing construction, make smooth transitions. Match finish of existing construction.
    4. Where partitions are removed, patch floors, walls, and ceilings with finish materials that match existing materials.
    5. Where removal of partitions results in adjacent spaces becoming one, rework floors, walls, and ceilings to provide smooth planes without breaks, steps, or bulkheads.
    6. Where changes of plane exceed 2 inches, request instructions for making transition.
    7. Trim and refinish existing doors as necessary to clear new floors.
    8. Match patched construction with adjacent construction in texture and appearance so that patch or transition is invisible at 5-foot distance.
    9. When finished surfaces are cut so that smooth transition is impossible, terminate existing surface in neat manner along straight line at natural line of division and provide appropriate trim.
B. Restore existing concrete reinforcement as follows:
    1. Where existing reinforcement is to be incorporated into the new Work, protect, clean, and extend into new concrete.
    2. Where existing reinforcement is not to be retained, cut off as follows:
        a. At the removal line where new concrete joins existing concrete, cut reinforcement flush with concrete surface.
        b. Where concrete surface at the removal line will become the finished surface, cut reinforcement 2 inches below the surface, paint ends with epoxy, and patch holes with dry pack mortar.

C. Restore areas affected by removal of existing equipment, equipment pads and bases, piping, supports, electrical panels, electric devices, and conduits such that little or no evidence of the previous installation remains:
    1. Fill areas in existing floors, walls, and ceilings from removed piping, conduit, and fasteners with non-shrink grout and finish smooth.
    2. Remove concrete bases for equipment and supports by:
        a. Saw cutting clean, straight lines with a depth equal to the concrete cover over reinforcement minus 1/2 inch below finished surface.
            (1) Do not cut existing reinforcement on floors.
        b. Chip concrete within scored lines and cut exposed reinforcing steel and anchor bolts.
        c. Patch with non-shrink grout to match adjacent grade and finish.
    3. Terminate abandoned piping and conduits with blind flanges, caps, or plugs.

3.05 FIELD QUALITY CONTROL

A. Do not proceed with demolition without Engineer's inspection of lay out.
B. Do not deviate from the submitted demolition plan without notifying the Engineer prior to Work.

End of Section

SECTION 01354 – HAZARDOUS MATERIAL PROCEDURES

PART 1 - GENERAL

1.01 SUMMARY

A. This Section includes procedures required when encountering hazardous materials, including asbestos and lead-based paint (LBP), at the Work site.

1.02 REFERENCES

A. Occupational Safety and Health Administration (OSHA) United States Code of Federal Regulations (CFR) including, but not limited to:

1.04 SUBMITTALS

A. Hazardous Materials Management Plan (HMMP):
    1. The HMMP will be submitted at least 10 days prior to the commencement of the Work and is the CONTRACTOR's comprehensive plan for the management of hazards encountered during the work, and should include:
        a. Information about the CONTRACTOR's designated Certified Industrial Hygienist (CIH) per Part 1.05 of this Section and SECTION 01565.
        b. Spill management procedures in the event of asbestos, lead or any other hazardous materials release.
        c. Intended methods of hazardous materials removal, containment, and disposal, including description of engineering controls, personal protective equipment (PPE), and compliance monitoring.
        d. Schedule and sequence of work for all hazardous materials work.
        e. A copy of the Site-Specific Hazard Communication Plan in accordance with 29 CFR 1910.1200.
        f. Copies of licenses, certifications, fit test records, medical surveillance records and notifications to handle and control hazardous materials, as applicable.
B. Submit laboratory reports, as applicable.
C. Refer to SECTION 01565 – ASBESTOS ABATEMENT for additional requirements.

1.05 DEFINITIONS

A. Asbestos-Containing Material (ACM): Mill tailings or any waste that contains commercial asbestos and is generated by a source subject to the provisions of this subpart. This term includes filters from control devices, friable asbestos waste material, and bags or other similar packaging contaminated with commercial asbestos. As applied to demolition and renovation operations, this term also includes regulated asbestos-containing material waste and materials contaminated with asbestos including disposable equipment and clothing.
B. Adequately Wet: Sufficiently mix or penetrate with liquid to prevent the release of particulates. If visible emissions are observed coming from asbestos-containing material (ACM), then that material has not been adequately wetted. However, the absence of visible emissions is not sufficient evidence of being adequately wetted.
C. Competent Person: A trained worker capable of identifying existing and predictable asbestos hazards, perform exposure assessment and monitoring, is qualified to train other workers, and has the authority to take immediate corrective action to eliminate a hazardous exposure.

D. Friable ACM (FACM): Any material containing more than 1 percent asbestos, that when dry, can be crumbled, pulverized, or reduced to powder by hand pressure.
E. Hazardous materials are those defined by 40 CFR 261 and State-specific codes.
F. Lead: As defined by 29 CFR 1926.62, lead means metallic lead, all inorganic lead compounds, and organic lead soaps. Excluded from this definition are all other organic lead compounds.
G. Non-friable ACM (NACM): Any material containing more than 1 percent asbestos, that when dry, cannot be crumbled, pulverized, or reduced to powder by hand pressure.
    1. Category I NACM: Asbestos-containing packings, gaskets, resilient floor covering, and asphalt roofing products containing more than 1 percent asbestos.
    2. Category II NACM: Any material, excluding Category I NACM, containing more than 1 percent asbestos that, when dry, cannot be crumbled, pulverized, or reduced to powder by hand pressure.
H. Regulated ACM (RACM): Any material that contains (a) FACM, (b) Category I non-NACM that has become friable, (c) Category I NACM that will be or has been subjected to sanding, grinding, cutting, or abrading, or (d) Category II NACM that has a high probability of becoming or has become crumbled, pulverized, or reduced to powder by the forces expected to act on the material over the course of demolition or renovation operations. Category II NACM that has a high probability of becoming or has become crumbled, pulverized, or reduced to powder in the course of work.

1.06 HAZARDOUS MATERIALS PROCEDURES

A. When hazardous materials are encountered that were identified by existing reports prepared for WSD:
    1. Prepare and initiate implementation of the HMMP, as detailed in Part 1.04 of this Section.
    2. Complete notifications to Federal, State and local agencies as required by applicable Laws and Regulations within the times stipulated by such Laws and Regulations.
    3. CONTRACTOR will designate a CIH, as required per Part 1.04 of this Section, to issue pertinent instructions and recommendations for protection of workers and other affected persons' health and safety.
    4. Identify and contact subcontractors and licensed personnel qualified to undertake storage, removal, transportation, disposal, and other remedial work required by, and in accordance with, applicable laws and regulations.
B. When hazardous materials are encountered that were not identified by existing reports prepared for WSD:
    1. Prepare and initiate implementation of the HMMP as detailed in Part 1.04 of this Section.
    2. Notify immediately OWNER, ENGINEER, and other affected parties.
    3. Complete notifications to Federal, State and local agencies as required by applicable Laws and Regulations within the times stipulated by such Laws and Regulations.
    4. CONTRACTOR will designate a CIH, as required per Part 1.04 of this Section, to issue pertinent instructions and recommendations for protection of workers and other affected persons' health and safety.
    5. Identify and contact subcontractors and licensed personnel qualified to undertake storage, removal, transportation, disposal, and other remedial work required by, and in accordance with, applicable laws and regulations.
C. Forward to OWNER copies of reports, permits, receipts, and other documentation related to remedial work.
D. CONTRACTOR will assume responsibility for worker health and safety, including health and safety of subcontractors and their workers.

1. Provide training to workers on recognition, reporting, and safety and health procedures required when hazardous materials are encountered, as relevant to the Work.

E. File requests for adjustments to Contract Times and Contract Price due to the finding of previously unidentified hazardous materials at the Work site in accordance with Contract Documents.
    1. CONTRACTOR and subcontractors will minimize delays by continuing performance of the Work in areas not affected by hazardous materials operations.

1.07 LEAD-BASED PAINT REMOVAL AND DISPOSAL

A. Includes existing paint on the interior and/or exterior surfaces, as outlined in the LBP Survey Report for WSD per SSPC specifications, which may contain lead in concentrations which will require implementation of hazardous material compliance procedures as legislated by CFR Title 29 and Title 40.

B. CONTRACTOR and/or its' subcontractors will collect samples of suspected LBP using the methods and frequencies prescribed by CFR Title 29 and Title 40 from the structures identified herein and have samples tested by a certified testing laboratory to determine lead content in samples.
    1. Collect a sufficient number of paint samples to provide adequate information regarding lead content in paint on the interior and/or exterior surfaces outlined in the LBP Survey Report for WSD per SSPC specifications.
    2. Ensure that samples contain the total thickness of the paint to the substrate, where removed.
    3. Ensure that each sample contains a sufficient quantity of paint to facilitate proper and adequate analyses by testing laboratory.
    4. Ensure that samples are adequately identified with location from which it was removed.

C. Laboratory testing will be completed in accordance with applicable testing standards by a National Lead Laboratory Accreditation Program (NLLAP)–certified laboratory.
    1. Submit 10 copies of complete laboratory analyses of paint samples.

D. Prior to beginning the Work associated the removal, containment, and disposal of LBP and associated debris, prepare and submit to the OWNER 10 copies of the HMMP, as required by Part 1.04 of this Section. The HMMP will detail the following:
    1. Listing of LBP removal equipment to be used.
    2. Outline of procedures to be used to remove LBP.
    3. Data and specifications describing chemical stripping materials to be used, if applicable.
    4. Data and specifications describing abrasive blast materials and grit size to be used, if applicable.
    5. Description of planned LBP removal, hazardous waste debris containment, and hazardous waste disposal methods.
    6. Safety plan, consisting of a written plan of action covering operational requirements for safe removal of LBP, safe handling and containment of waste and debris generated by the operation, and safe disposal of hazardous waste and non-hazardous waste materials, complying with the most stringent requirements of the following:
        a. Equipment and material manufacturer's safety sheets.
        b. 29 CFR 1910.1025.
        c. 29 CFR 1926.62.
    7. Certifications of personnel to perform work.
    8. Selection of an appropriately permitted disposal facility.

E. Carry out LBP removal, containment, and disposal work in accordance with SSPC guidelines.

F. Assume responsibility for the proper implementation of the LBP removal method selected. When abrasive blast cleaning is selected to remove LBP, comply with all applicable Federal, State, and local air quality, pollution, and environmental control regulations for blast cleaning. When chemical stripping is selected to remove the LBP, adhere to the chemical manufacturer's recommendations for the application of the product, the removal of the paint, and the containment of the debris.
G. LBP removal work shall be performed by a Contractor having prior experience in the removal method selected and shall provide at least 5 references of similar projects completed, 3 of which must have been completed within the past 12 months, documenting their experience.
H. Utilize a minimum of Class 3 containment and ventilation system, as described in SSPC-6, during LBP removal and containment procedures, as required for the conditions.
I. Do not leave spent abrasive blast material, chemical stripping material, or LBP debris uncontained on the project site overnight.
J. Test each container of paint debris, spent blast cleaning abrasive, chemical stripping debris, and other waste material generated by the operation to determine the waste material hazardous waste classification, as required by 40 CFR 261 and the selected disposal facility.
K. Assume responsibility for the disposal of LBP waste and associated waste generated by the removal of the LBP and the preparation of the surfaces for recoating. Dispose in accordance with applicable Federal, State, local, and selected disposal facility requirements and regulations.
L. Accurately complete the Uniform Hazardous Waste Manifest included at the end of SSPC-7. Indicate on the Manifest that the OWNER is the hazardous waste generator and obtain the OWNER's USEPA identification number for use in completing the Manifest.

1.08 ASBESTOS MATERIALS

A. It is the specific intent of these Contract Documents to exclude from the Work any and all new products or materials containing asbestos. No products containing asbestos shall be incorporated in the Work.
B. Refer to the list of reports prepared for WSD, referenced in Part 1.2 of this Section, identifying locations which may have ACM. The reports also designate the condition of the ACM in each location as either friable or non-friable.
C. Asbestos abatement shall be executed as outlined in SECTION 01565 – ASBESTOS ABATEMENT of these Contract Documents.

PART 2 - PRODUCTS

PART 3 – EXECUTION

3.01 ASBESTOS MATERIALS

A. Notifications:
    1. CONTRACTOR shall notify OSHA 24 hours prior to performing ACM removal operations.
    2. CONTRACTOR will provide written notification to USEPA Regional Asbestos NESHAP contact at least 20 working days prior to the start of the Work per SECTION 01565.
    3. CONTRACTOR shall notify MDNR at least 10 working days prior to the start of performing ACM removal operations.
    4. CONTRACTOR shall notify OWNER 3 working days in advance of commencing asbestos material removal operations.
B. Work area:

1. CONTRACTOR will establish a regulated work area, using at a minimum, construction warning tape to establish limits of work area for the asbestos material removal.
2. On-site stockpiling or storage of ACM designated for disposal shall not be allowed.

C. Safety:
1. CONTRACTOR's safety plan will be provided as part of the HMMP (Part 1.02) and will detail requirements, as outlined in 29 CFR 1910.1001, 40 CFR 1926.1101 and 40 CFR 1926.65.

D. Worker qualifications:
1. Refer to SECTION 01565 – ASBESTOS ABATEMENT of these Contract Documents for qualifications for personnel performing asbestos abatement work.

E. Legal disposal:
1. Refer to SECTION 01565 – ASBESTOS ABATEMENT for asbestos disposal requirements.

End of Section

SECTION 01400 - QUALITY CONTROL

PART 1 - GENERAL

1.1 SECTION INCLUDES

A. Quality assurance - control of installation.

B. Reference and standards.

1.2 RELATED SECTIONS

A. Section 01300 - Submittals: Submission of manufactures' instructions and certificates.

1.3 QUALITY ASSURANCE - CONTROL OF INSTALLATION

A. Monitor quality control over suppliers, manufacturers, products, services, site conditions, and workmanship, to produce Work of specified quality.

B. Comply with manufacturers' instructions, including each step in sequence.

C. Should manufacturers' instructions conflict with Contract Documents, request clarification from Engineer before proceeding.

D. Comply with specified standards as minimum quality for the Work except where more stringent tolerances, codes, or specified requirements indicate higher standards or more precise workmanship.

E. Perform Work by persons qualified to produce required and specified quality.

1.4 REFERENCES AND STANDARDS

A. For products or workmanship specified by association, trade, or other consensus standards, comply with requirements of the standard, except when more rigid requirements are specified or are required by applicable codes.

B. Conform to reference standard by date of issue current on date for receiving bids, except where a specific date is established by code.

C. Obtain copies of standards where required by product specification sections.

D. Neither the contractual relationships, duties, nor responsibilities of the parties in Contract nor those of the Engineer shall be altered from the Contract Documents by mention or inference otherwise in any reference document.

PART 2 - PRODUCTS

Not Used.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify that existing site conditions are acceptable for subsequent Work. Beginning new Work means acceptance of existing conditions.

B. Examine and verify specific conditions described in the applicable individual specification sections.

3.2 PREPARATION

A. Clean substrate surfaces prior to applying next material or substance.

B. Seal cracks or openings of substrate prior to applying next material or substance.

C. Apply manufacturer required or recommended substrate primer, sealer, or conditioner prior to applying any new material or substance in contact or bond.

End of Section.

SECTION 01410 - REGULATORY REQUIREMENTS

PART 1 GENERAL

1.01 SUMMARY

A. Section includes: Regulatory authorities and codes. Any costs associated with code compliance with the Kansas City, Missouri Codes Department or Platte County are the responsibility of the CONTRACTOR.

1.02 AUTHORITIES HAVING JURISDICTION

A. Building Department: City of Kansas City, Missouri.

B. Planning and Zoning, City of Kansas City, Missouri.

1.03 APPLICABLE CODES

A. International Code Council (ICC) – within Kansas City, Missouri.

1. Building code:
   a. International Building Code (IBC), 2018.
      1 With City of Kansas City, Missouri amendments
2. Electrical code:
   a. National Electrical Code, 2017.
      1 With City of Kansas City, Missouri Amendments
   b. National Fire Protection Association (NFPA), NFPA 70
      1 With City of Kansas City, Missouri amendments
3. Energy code:
   a. International Energy Conservation Code (IECC), 2021.
      1 With City of Kansas City, Missouri amendments
4. Fire code:
   a. International Fire Code (IFC), 2018.
5. Mechanical code:
   a. International Mechanical Code (IMC), 2018.

SECTION 01433 - MANUFACTUERS' FIELD SERVICES

PART 1 – GENERAL

1.01 SUMMARY

A. This Section includes procedural requirements including field services for testing, startup, and training for the City of Kansas City Missouri.
B. The Contractor or Design-Builder shall furnish all labor, materials, equipment, and incidentals as necessary to comply with these requirements.

1.02 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract; including General and Supplementary Conditions, all applicable Division 1 Sections, and all applicable Division Sections; apply to this Section.
B. Related Sections include the following:
    1. Divisions 02 through 46 Sections for specific requirements for any field services and startup instructions of applicable products in those Sections.
    2. Section 01300 – Submittals.
    3. Section 01664 – Training.
    4. Section 01757 – Commissioning.

1.03 DEFINITIONS

A. Work-day: One person's labor for 8 hours of work within the City and the Contractor or Design-Builder's working hours.
B. Systems Integrator: A contractor specializing in bringing together automation hardware and software subsystems into one system.

1.04 SUBMITTALS

A. Informational submittals:
    1. Training Schedule: Submit in accordance with requirements of this Specification not less than 30 days prior to start of equipment installation and revise as necessary for acceptance.
    2. Lesson plan: Submit, in accordance with requirements of this Specification, proposed lesson plan not less than 30 days prior to scheduled training and revise as necessary for acceptance. CONTRACTOR will submit plan for approval and for training credit by the Missouri Department of Natural Resources Operator Certification Program.

1.05 QUALIFICATIONS OF MANUFACTUERER'S REPRESENTATIVE

A. Authorized representative of the manufacturer, factory trained, and experienced in the technical applications, installation, operation, and maintenance of respective equipment, subsystems, or system, with full authority by the equipment manufacturer to issue the certifications required of the manufacturer. Additional qualifications may be specified in the individual specification section.
B. Representative subject to acceptance by the City's Representative. No substitute representatives will be allowed unless prior written approval by such has been given.

PART 2 - PRODUCTS (Not Used)

PART 3 – EXECUTION

3.01 FULFILLMENT OF SPECIFIED MINIMUM SERVICES

A. Furnish manufacturers' services, to meet requirements of this section and requirements of services described in individual technical specifications.
B. Comply with the requirements in Division 1 Section 01757– Commissioning and 01664-Training
C. Where time is necessary in excess of that stated in the Specifications for manufacturers' services, or when a minimum time is not specified, time required to perform specified services shall be considered incidental.
D. Contractor or Design-Builder shall schedule manufacturers' services to avoid conflict with other onsite testing in this project and other training of division personnel or manufacturers' onsite services.
E. Before scheduling services, determine the conditions necessary to allow successful testing have been met.
F. Only those days of service approved by the City's Representative will be credited to fulfill specified minimum services.
G. Contractor or Design-Builder shall coordinate manufacturer's field services with the systems integrator, so both are on-site during field services if desired by the City.
H. When specified in individual specification sections, manufacturer's onsite services shall include:

    1. Assistance during product (system, subsystem, or component) installation to include observation, guidance, instruction of Contractor or Design-Builder's assembly, erection, installation or application procedures.
    2. Inspection, checking, and adjustment as required for product (system, subsystem, or component) to function as warranted by manufacturer and necessary to furnish manufacturer's certificate of Proper Installation.
    3. Providing, on a daily basis, copies of manufacturers' representatives field notes and data to Owner.
    4. Revisiting the Site as required to correct problems and until installation and operation are acceptable to the Engineer of Record or City's Representative.
    5. Resolution of assembly or installation problems attributable to or associated with respective manufacturer's products and system.
    6. Assistance during functional and performance testing, commissioning, and system startup and evaluation.
    7. Training of Owner's personnel in the operation and maintenance of respective product as required.

3.02 MANUFACTURER'S CERTIFICATE OF COMPLIANCE

A. When so specified, a Manufacturer's Certificate of Compliance form, a copy of which is attached to this section, shall be completed in full, signed by an entity supplying the product, material, or service, and submitted prior to shipment of product or material or execution of the services.
B. City's Representative may permit use of certain materials or assemblies prior to sampling and testing if accompanied by accepted certification of compliance.

C. Such form shall certify proposed product, material, or service complies with that specified. Attach supporting reference data, affidavits, and certifications as appropriate.
D. May reflect recent or previous test results on material or product, if acceptable to the City's Representative.

3.03 MANUFACTURER'S CERTIFICATE OF PROPER INSTALLATION

A. When so specified, a copy of the Manufacturer's Certificate of Proper Installation form shall be completed and signed by equipment manufacturer's representative.
B. This form shall certify signing party is a duly authorized representative of the manufacturer, is empowered by the manufacturer to inspect, approve, and operate their equipment, and is authorized to make recommendations required to ensure equipment is complete and operational.

3.04 TRAINING

A. Refer to Section 01664– Training for training requirements.

3.05 SUPPLEMENTS

A. Supplements listed below, following "End of Section", are part of this Specification.
    1. Manufacturer's Certificate of Compliance Form.
    2. Manufacturer's Certificate of Proper Installation Form.

End of Section

MANUFACTURER'S CERTIFICATE OF COMPLIANCE FORM

SECTION 01500 – TEMPORARY FACILITIES

PART 1 - GENERAL

1.01 SUMMARY

A. This specification covers the requirements for temporary construction facilities required on all projects.

1.02 RELATED SECTIONS

A. Section 01000 – General Project Requirements.
B. Section 01300 – Submittals.

1.03 CODES AND STANDARDS

A. The publications listed below form a part of this specification to the extent referenced. The publications are referred to within the text by the basic designation only.
B. National Fire Protection Association:
   1. NFPA 10 - Standard for Portable Fire Extinguishers.
   2. NFPA 70 - National Electric Code.
   3. NFPA 241 - Standard for Safeguarding Construction, Alternation and Demolition Operations.

1.04 INFORMATION PROVIDED BY THE CITY

A. As provided in the Contract Documents.

1.05 SUBMITTALS

A. Submit as specified in Section 01300 – Submittals.

1.06 QUALITY ASSURANCE

A. The Contractor is responsible for the quality assurance and quality control of the Work.
B. Regulations – Comply with industry standards and applicable laws and regulations of authorities having jurisdiction, including but not limited to:
   1. Building Code requirements.
   2. Health and safety regulations.
   3. Utility company regulations.
   4. Police, Fire Department and rescue squad rules.
C. Standards:
   1. Comply with NFPA 10 and 241 and ANSI A10 Series standards “Temporary Electrical Facilities.”
   2. Comply with NEMA, NECA and UL standards and regulations for temporary electric service. Install service in compliance with NFPA 70.
D. Inspections – Arrange for authorities having jurisdiction to inspect and test each temporary utility before use. Obtain required certifications and permits.

PART 2 - PRODUCTS

Not used.

SECTION 01480 – WATER TIGHTNESS

PART 1 - GENERAL

1.01 SUMMARY

A. This Section includes hydrostatic leakage testing for concrete water-containing structures.

1.02 REFERENCES

A. Section 03 30 00 – Concrete
B. Section 31 20 50 – Site Preparation and Earthwork

1.03 DEFINITIONS

A. Damp spots: Surfaces where visible moisture can be picked up by a dry hand.
B. Containment structure, lined: Liquid-containing structure with barrier coating or membrane applied to the inside surfaces to prevent leaking of contents to the outside.
C. Containment structure, unlined: Liquid containing structure where only the concrete structure itself is used to prevent leaking of contents to the outside.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Coordination.
B. Pre-installation meetings.
C. Sequencing.
D. Scheduling.

1.05 SUBMITTALS

A. Shop drawings:
    1. Description and details of each evaporation/precipitation-measuring device anticipated for use during the test.
B. Tests and evaluation reports:
    1. Results of water leakage test for each structure and for each portion of a structure designated for testing.
C. Special procedure submittals:
    1. Testing plan for each structure, or portion thereof, required to be tested.
        a. Describe methods of obtaining water for testing and of releasing water for disposal, including provisions for dechlorination if required.
        b. Include plans showing locations where measurements will be made and locations of evaporation/precipitation-measuring device.
        c. Indicate plans for filling and draining structure(s).
        d. Include schedule showing duration of test for each structure or cell to be tested, date and time for start of each test, dates and times of observations and measurements during the test, dates and times for closeout of testing procedures, and date for submittal of final results.
    2. Proposed procedures and products for repair of leaks.

PART 2 - PRODUCTS (NOT USED)

PART 3 – EXECUTION

3.01 GENERAL

A. Test structures and portions of structures listed in the following paragraphs for water leakage.
    1. Unless otherwise specified, the Contractor shall:
        a. Obtain all required permits for discharging testing water.
        b. Provide dechlorination of such water if required by the permits.
        c. Prepare and fill the structures.
        d. Provide access and equipment required for testing and for recording test results.
        e. Take measurements and make observations required for testing.
    2. At all times during testing, the Engineer shall have access to observe measurements by others or to make independent measurements.
B. Test the following concrete structures for water leakage:
    1. Influent Pump Station Wet Well
    2. Headworks Screening Channels.
    3. Grit Basin.
    4. Grit Basin Effluent Channel.
    5. Splitter Box between Headworks and AGS basins
    6. AGS basins
    7. UV channels
    8. TWAS basins
    9. WAS basins
C. Required preparation for testing is designated in this Section. Waiver of, or failure to complete preparations shall not change the testing criteria or approval criteria for the areas tested.
D. Retest structures and portions of structures until the evaluation criteria are satisfied.

3.02 TEST WATER SOURCE AND DISPOSAL

A. Water used for the first filling of the tank will be furnished by Owner.
    1. Contractor shall obtain water for leakage testing from:
        a. Disinfected effluent between April 1 and October 31.
        b. Secondary effluent between November 1 and March 31.
B. In the event that retesting is required, Contractor shall bear the cost of refilling the tank for subsequent tests.
C. After leakage testing is complete, Contractor shall dispose of water by discharging to Primary Treatment.

3.03 PREPARATION

A. For each structure to be tested, prepare and submit a plan showing schedule and sequence of activities, method of filling, and methods of disposing of test water.
B. Sequencing requirements:
    1. Complete construction of concrete structure and cure concrete to obtain minimum specified 28-day compressive strength as specified in Section 03 30 00 - Concrete.

a. Do not begin tests until all portions of structure are complete and have reached their minimum specified 28-day compressive strength.
b. Do not begin tests until at least 14 days have passed since completion of the last concrete placement.

2. Complete tests before:
   a. Covering any surface of the structure with materials that might mask the location of leaks or obscure damp concrete surfaces. Such coverings include, but are not limited to basin bottom grout, masonry veneer, stucco, plaster, and other coatings.
   b. Installation of equipment, unless otherwise approved by the Engineer.
   c. Backfilling structures to elevations above the limits indicated in the following paragraphs.
3. Liners and coatings:
   a. Field-coated or installed liners and coatings shall be applied in strict conformance to manufacturer's standards.
   b. Install liners that are mechanically locked to the concrete surface during placement of plastic concrete and before leakage testing.
      (1) Examine liners for pinholes, tears, and partially fused splices, complete all required liner integrity testing, and make required repairs before commencing leakage testing.
   c. Unless otherwise specified, do not install surface-applied protective or decorative coatings and linings until leakage tests have been completed.

C. Weather requirements:
1. Tests on structures with tops open to the atmosphere shall not be scheduled for periods when the 10-day weather forecast indicates a substantial change in weather patterns.
2. Measurements of water surface levels in the structure shall not be scheduled for periods when the weather forecast indicates a difference of more than 35 degrees Fahrenheit between the ambient temperature readings at the times of initial and final measurements.
3. Tests shall not be scheduled for periods when the 10-day weather forecast indicates that the water surface may freeze before the test is complete.

D. Groundwater requirements:
1. Bring groundwater to a level not higher than 3 feet below the bottom of the structure and maintain at that level for the duration of the test.

E. Clean interior of structure:
1. Remove dirt, contaminants, and construction debris.
2. Flush floors and sumps to provide clean surfaces.
3. Remove standing water that would interfere with examination of surfaces, cracks, or joints.

F. Observe the structure, or portions of the structure being tested, for potential leak locations.
1. Give particular attention to cracks, open joints, voids, and honeycombed and repaired surfaces.
2. Visually observe openings, fitting, and pipe penetrations in the structure at both faces, if possible.
3. Repair potential leak locations in accordance with these Specifications and as approved by the Engineer.
4. Backfill excavations to the top of the structure foundation. Do not place backfill against water-bearing walls or over footings unless approved in advance by the Engineer.
   a. If requesting backfilling of walls before testing, include a description of methods that will be used to detect leakage in the backfilled areas.

b. Engineer's approval of backfilling before testing shall not relieve Contractor of the responsibility to conduct leakage tests, to satisfy the leakage acceptance criteria for the structure, or to repair leaking portions of the structure, including those portions below or behind the backfill.

5. See Drawings and Section 31 20 50 - Site Preparation and Earthwork for requirements to provide wall stability before backfilling.

G. Inlets to/outlets from the structure:
   1. Inlets to and outlets from the structure shall be watertight.
      a. Include valves, sluice, and/or slide gate valves and temporary bulkheads as required.
      b. Inlets and outlets not required to be operable may be temporarily sealed before testing the compartments to which they open.
      c. Secure inlets used to fill the structure for testing to ensure that no water is entering or leaving the structure once it has been filled to the test level.
   2. Adjustments to measured leakage at inlets and outlets based on manufacturers or Contractor's estimates will not be allowed.
      a. Adjustments to measured leakage may be permitted by the Engineer, and, at their discretion, only when the Contractor makes specific measurements of leakage at each individual inlet and outlet using methods approved by the Engineer.

3.04 HYDROSTATIC LEAKAGE TEST FOR OPEN OR COVERED CONTAINMENT STRUCTURES

A. Isolate sections of water-holding structures that can be isolated in actual operation. Fill and test sections for leakage separately.
   1. Fill structures and sections of structures scheduled for testing to the normal operating water level indicated on the Hydraulic Profile indicated on the Drawings.
B. Initial rate for filling of structures shall not exceed 8 feet in 24 hours.
C. HST-100 testing includes 2 parts, "Qualitative Testing," and "Quantitative Testing," as described in the following paragraphs:
   1. HST-100, Part 1 - Qualitative Testing:
      a. During the first 24 hours after structures are filled, examine exposed concrete surfaces for damp spots or flowing water.
         (1) Make observations in early morning, at midday, and in late afternoon.
         (2) Continue observations through the duration of the Quantitative Testing period.
         (3) Pay particular attention to conditions at joints, honeycombed areas, cracks, and repaired portions of the structure.
      b. Evaluation criteria:
         (1) The structure shall be considered to have failed these Qualitative Testing requirements if any of the following conditions are observed.
            (a) Water droplets or moist areas on an outside surface that could only have originated inside the structure.
            (b) Water is flowing or seeping from joints, cracks, or surfaces.
               (i) Exception: Dampness or wetness on top of a footing, in the absence of flowing water, shall not be considered as failure to meet this criterion.
            (c) Moisture can be transferred to a dry hand from the outside surfaces of the filled area.

c. Repairs and retesting:
    (1) Where damp spots or flowing water as described in the preceding paragraphs are observed, mark locations, provide repairs, and retest the structure as specified in subsequent paragraphs.

2. HST-100 - Part 2: Quantitative Testing:
    a. If approved by the Engineer, Quantitative Testing may begin before repairs are made to areas failing Part 1 of this test; however:
        (1) Adjustments to volume loss calculations of Quantitative Testing based on observed leakage will not be permitted.
        (2) All defects identified for repair during Qualitative Testing shall be repaired to the satisfaction of the Engineer before approval of the structure.
    b. Report the results of Quantitative Testing on "Leakage Test Report" included as Figure A at the end of this Section, or similar form prepared by the Contractor and containing at least the information included in Figure A.
    c. Unlined concrete structures:
        (1) Fill to the designated water surface elevation. Maintain that level for at least 72 hours before recording initial water levels for leakage test.
        (2) Duration of test:
            (a) Theoretical time required to lower the water surface in the structure by 3/8 inch when leakage is occurring at the maximum allowable rate specified in subsequent paragraphs of this Section.
            (b) The duration ("D") of the test in days is determined by the following equation:

$$D = \frac{.375\ inches}{0.005\ in/in/day\ \times H\ ft\ \times 12\ in/ft}$$

$$Where\ H = Maximum\ Liquid\ Depth$$

                (i) Round results upward to the next full 24-hour period (day).
                (ii) Minimum duration of test: 24 hours (1 day).
                (iii) Maximum duration of test: 120 hours (5 days).
    d. Lined concrete structures and secondary containment areas:
        (1) Fill to the designated water surface elevation. Recording of water levels for leakage tests may begin as soon as the designated water surface level is reached and the water surface is calm. 2) Duration of test: 72 hours (3 days).
    e. Measurements: Water level:
        (1) Record water levels at 24-hour intervals for the full duration of the test period.
        (2) Measure water levels at not less than 2 locations on opposite ends of the structure, and preferably at 4 locations spaced equally around the structure. Mark locations on the structure and take measurements at the same locations throughout the duration of the test.
        (3) Measure, to an accuracy of 1/16 inch, the vertical distance to the water surface from a fixed point on the structure above.
    f. Measurements: Temperatures:

(1) As part of the first and last sets of level measurements, record water temperature at a depth of 18 inches below the water surface. Measure temperature at the same locations where level measurements are taken.
(2) Record ambient temperature at the time of each water level measurement.

g. Measurements: Evaporation and precipitation:
(1) Measure evaporation and precipitation by floating pans inside the structures during testing.
(a) For uncovered structures, measure both evaporation and precipitation.
(b) For covered structures that are well ventilated, measure evaporation.
(2) Measure using specially constructed clear containers:
(a) Provide clear plastic, calibrated, open-top containers not less than 18 inches in diameter and 18-inches deep.
(b) Partially fill containers with water and float inside the structure. Make provisions to hold containers in place at each measurement location, but away from structure walls and items passing overhead, such as beams or pipes.
(c) Measure initial depth of water in each device. Measure changes in water level in each device at the same time measurements of the water level inside the structure are taken.

h. Restart of test:
(1) The Engineer may order a restart of the test when, in the Engineer's opinion, measurements have become unreliable due to unusual precipitation or other factors.
(2) If measurements or observed leakage during the testing period indicate that the allowable leakage requirements will be exceeded, the test may be terminated before completion of the full test period. Take appropriate actions to correct problems before restarting the test.

i. Calculations of leakage test results:
(1) For each section of the structure tested, use water surface level records to calculate average loss of volume per 24-hour interval.
(a) For each 24-hour interval during the test, calculate the average of all measured drops in water level around the structure.
(b) Use the average drop thus determined to calculate an average loss of volume for each 24-hour interval.
(2) Adjustments to leakage calculations:
(a) For uncovered basins, calculations shall be corrected for precipitation added to the structure.
(b) Calculations may be corrected for evaporation and water temperature.

j. Evaluation criteria:
(1) Unless otherwise specified, the average loss of volume during any 24-hour interval shall not exceed the limits shown in Table A.

Table A - Loss of Volume Criteria for Leakage Tests	
Structure Type	**Maximum Loss of Water Volume**

• Structure fully lined prior to leakage test. • Secondary containment areas.	No measurable loss over 72-hour test period.
• Structure with monolithically placed membrane floor slab.	0.0125 percent of volume per 24-hour period.
• Concrete paved canals, drying beds, lagoons, and similar structures.	0.100 percent of volume per 24-hour period.
• Other containment structures.	0.050 percent of volume per 24-hour period.

k. Repairs and retesting:
   (1) Structures and portions of structures that have satisfied the qualitative requirements of HST-100, but have failed to satisfy the quantitative requirements of HST-100 may be immediately retested for volume loss.
      (a) If the structure fails the second test for volume loss, the structure shall be drained, and the Contractor shall observe the interior for probable areas of leakage.
      (b) The structure shall not be retested until repairs to the probable areas of leakage are complete.

3.05 REPAIRS FOR RETESTING

A. Locations showing damp spots or flowing water:
   1. Mark locations of visible leaks and damp spots.
   2. Drain structures for repair.
   3. Repair defects causing damp spots and flowing water using methods specified in Section 03 30 00 - Concrete and approved by the Engineer.
      a. Repair both interior and exterior surfaces and make structures watertight.
      b. Submit proposed repair products and procedures for Engineer's review.
      c. Refill structures for retesting.
   4. Repeat filling, observations, and repairs until no leaks or damp spots appear.
B. Structures for which loss of water volume loss exceeds the limits specified after adjustments for evaporation, and precipitation:
   1. Determine cause of volume loss.
   2. Drain structures of water.
   3. Repair defects causing loss of water volume using methods specified in Section 03 30 00 - Concrete and approved by the Engineer.
      a. Submit proposed repair products and procedures for Engineer's review.
   4. Refill water-holding structures.
   5. Repeat testing and repairs until volume loss does not exceed specified limits.

PART 3 - EXECUTION

3.01 OFFICE

A. Stationary Office – If required in Section 01015 - Specific Project Requirements, the Contractor shall maintain a suitable stationery office at or near the Site during the performance of the Work.
B. The office shall serve as the headquarters of the Contractor's representative authorized to receive Contract Documents, instructions, other communication or articles associated with the Work.
C. Any communication given to the Contractor's representative or delivered to Contractor's office at the site of the Work shall be deemed to have been delivered to Contractor.
D. Copies of the Contract Documents shall be kept at the office and shall be available for use at all times.

3.02 FIELD OFFICE FOR RESIDENT PROJECT REPRESENTATIVE

A. See Section 01015 – Specific Project Requirements regarding the requirement of the Contractor to provide a field office for the Engineer's Resident Project Representative.

3.03 FIELD OFFICE FOR CITY

A. See Section 01015 – Specific Project Requirements regarding the requirement of the Contractor to provide a field office for a representative of the City.

3.04 TEMPORARY UTILITIES

A. Provide temporary utilities required for construction. Materials may be new or used, must be adequate for the required usage, not create unsafe conditions and not violate applicable codes and standards.
B. Power:
    1. All power for lighting, operations of the Contractor's plant/equipment or for any other use which may be required for proper completion of the Work shall be provided by the Contractor.
    2. Temporary heat and lighting shall be maintained until the Work is accepted.
C. Telephone/internet service:
    1. The Contractor shall make all necessary arrangements and pay all installation and monthly charges for telephone/internet service for the temporary office at the site and shall provide all required devices for such service.
D. Sanitary Facilities:
    1. The Contractor shall furnish temporary sanitary facilities at the site, as provided herein, for the needs of all construction workers and others performing work or furnishing services on the Project.
    2. Sanitary facilities shall be of reasonable capacity, properly maintained throughout the construction period and obscured from public view to the greatest practical extent. If toilets of the chemically treated type are used, at least one toilet will be furnished for every 20 persons. The Contractor shall enforce the use of such sanitary facilities by all personnel at the site.
    3. Ventilate the units to control odors and fumes and empty and clean them at least once a week or more often if required by the City. The doors shall be self-closing. Locate the facility behind the construction fence or out of the public view.

E. Water:
   1. The Contractor shall provide all potable water on site except for water used for leak-testing the water-holding basins constructed as part of the Work. Contractor shall be responsible for all permits, meters, and connection fees.

3.05 SECURITY

A. See Section 01000 – General Project Requirements – SECURITY regarding the requirements for security.

3.06 PARKING

A. See Section 01000 – General Project Requirements – PARKING regarding the requirements for parking.

END OF SECTION

SECTION 01565 - ASBESTOS ABATEMENT

PART 1 - GENERAL

1.01 SUMMARY

A. The Contractor shall provide the following:
    1. All labor, materials, and incidentals as necessary to comply with these requirements and to remove all ACM as specified.
    2. The equipment and safety provisions required for protecting workers while handling asbestos-containing material (ACM) except for respiratory protection.
    3. The disposal of Regulated Asbestos Containing Materials (RACM). Disposal includes packaging of RACM. Disposal may be accomplished either by land filling at an appropriately permitted facility or converting RACM to non-Asbestos waste.
    4. Obtaining permits, licenses, inspections, releases and similar documentation, as well as payments, statements and similar requirements known to the OWNER and associated with codes, regulations, and standards. Obtain all necessary permits for disposal of ACM at no additional cost to the OWNER.
B. The Contractor shall comply with specifications herein and adherence to work practices, procedures and requirements set forth in all applicable Federal, State and local regulation. Applicable codes, regulations and standards take precedence, when available.
C. The Contractor shall coordinate all activities with Kansas City Missouri Air Quality Division (Health Department) as necessary.

1.02 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and all applicable Division Sections, apply to this section.
B. Asbestos Abatement Related Documents: None

1.03 SUBMITTALS

A. Submit the following to the OWNER for review before starting work.
    1. Certified Statement: Submit certified statement to be notarized-signed by an officer of the abatement contracting firm stating which exposure measurements, medical surveillance, and worker training records are being kept in conformance with 29 CFR 1926.
    2. Copy of the CONTRACTOR's or subcontractors current Missouri State Registration for Asbestos Contractors issued by the Missouri Department of Natural Resources (MDNR).
    3. Copy of State and/or local license for waste transport subcontractor.
    4. Name and address of landfill where RACM are to be disposed. CONTRACTOR to include contact person and contact's telephone number.
    5. Chain of Custody Form and Form of Waste Manifest proposed for use.
    6. Sample of disposal bag and any added labels to be used.
    7. Material Safety Data Sheet: Submit Material Safety Data Sheets, or equivalent, in accordance with the Occupational Safety and Health Administration (OSHA) Hazard Communication Standard (29 CFR 1910.1200) for the following:
        a. Surfactants
        b. Encapsulants
        c. Solvents

8. Surfactant: Submit product data, use instructions and recommendations from manufacturer of surfactant intended for use. Include data substantiating that material complies with requirements.

B. On a weekly basis, submit copies of all waste manifests and disposal tickets to OWNER.

C. Waste Shipment Record: Maintain a waste shipment record as required by the National Emission Standards for Hazardous Air Pollutants (NESHAP) regulation which indicates the waste generator, transporter, and disposal site; and describes the nature, size, type of container, and form of asbestos waste. Submit to OWNER within 30 days of departure from building.

D. Submit for the OWNERs records, copies of permits, licenses, certifications, inspection reports, releases, jurisdictional settlements, notices, receipts for fee payments, judgments, and similar documents, correspondence and records established in conjunction with compliance to standards and regulations bearing upon performance of the Work including:
   1. State and Local Regulations: Submit copies of codes and regulations applicable to the Work.
   2. Submit notices required by Federal, State and local regulations together with proof of timely transmittal to agency requiring the notice.
   3. Submit copies of current valid permits required by state and local regulations.
   4. Submit copies of all Federal, State and local licenses and permits necessary to carry out the Work.

1.04 CODES, REGULATIONS AND STANDARDS

A. Except to the extent that more explicit or more stringent requirements are written directly into the Contract Documents, all applicable Federal, State and local codes and regulations have the same force and effect (and are made a part of the Contract Documents by reference) as if copied directly into the Contract Documents, or as if published copies are bound herewith.

B. The CONTRACTOR shall assume full responsibility and liability for the compliance with all applicable Federal, State and local regulations pertaining to work practices, hauling, disposal, and protection of workers, visitors to the site, and persons occupying areas adjacent to the site. The CONTRACTOR is responsible for providing medical examinations and maintaining medical records of personnel as required by the applicable Federal, State and local regulations. The CONTRACTOR shall hold the OWNER and ENGINEER harmless for failure to comply with any applicable work, hauling, disposal, safety, health or other regulation on the part of the CONTRACTOR, the CONTRACTOR's employees, or subcontractors.

C. Federal Requirements that govern asbestos abatement work, and transportation and disposal of asbestos waste materials include but are not limited to the following:
   1. OSHA United States Code of Federal Regulations (CFR) including, but not limited to:
      a. Title 29 – Labor:
         (1) 1910 – Occupational Safety and Health Standards
            (a) 1910.1001 – Asbestos
            (b) 1910.132 – General Requirements
            (c) 1910.134 – Respiratory Protection
            (d) 1910.145 – Specifications for Accident Prevention Signs and Tags
            (e) 1910.146 – Permit-Required Confined Spaces
         (2) 1926 – Safety and Health Regulations for Construction
            (a) Part 1926.1101 – Asbestos
            (b) Part 1926.103 – Respiratory Protection
            (c) Part 1926.95-107 – Personal Protective and Life Saving Equipment

(d) 1926.33 – Access to Employee Exposure and Medical Records
(e) 1926.59 – Hazard Communication
(f) 1926.20-35 – General Safety and Health Provisions

b. Title 49 – Transportation:
(1) Part 171 – General Information, Regulations, and Definitions
(2) Part 172 – Hazardous Materials Table, Special Provisions, hazardous Materials Communications, Emergency Response Information, Training Requirements, and Security Plans
(3) Part 171-180 – General Awareness and Training Requirements for Handlers, Loaders and Drivers, and Editorial and Technical Revisions

2. United States Environmental Protection Agency (USEPA) including, but not limited to:
a. Title 40 – Protection of Environment:
(1) Part 763, Subpart G – Asbestos Worker Protection
(2) Part 763, Subpart E – Asbestos Hazard Emergency Response Act (AHERA)
(3) Part 763, Subpart E, Appendix C – Asbestos Model Accreditation Plan (MAP)
(4) Part 61, Subpart A – National Emission Standards for Hazardous Air Pollutants, General Provisions
(5) Part 61, Subpart M – National Emission Standards for Hazardous Air Pollutants, National Emission Standard for Asbestos

3. State Requirements which govern asbestos abatement work or transportation and disposal of asbestos waste materials include, but are not limited to:
a. Missouri State Law − Chapter 643, Air Conservation
b. Missouri Code of State Regulations (CSR) − 10 CSR 10-6, Air Quality Standards, Definitions, Sampling and Reference Methods and Air Pollution Control Regulations for Entire State of Missouri.

4. Abide by all local requirements which govern asbestos abatement work or hauling and disposal of asbestos waste materials.

1.05 NOTICES

A. USEPA
1. Postmark or Deliver Written Notification as required by USEPA NESHAP Asbestos Regulations (40 CFR 61, Subpart M) to the regional Asbestos NESHAP Contact at least 20 working days prior to beginning any work on asbestos containing materials (ACM). Send notification to the following address with a copy to WSD Project Manager:

Air Quality Program, Health Department
Suite 3000, 2400 Troost
Kansas City, Missouri 64108
(816) 983-4301

2. Include the following information in the notification sent to the Air Quality Program:
    a. Indication whether the notification is the original or revised notification.
    b. Name, address, and telephone number of Owner or operator.
    c. Name, address, and telephone number of Contractor.
    d. Type of Operation (demolition or renovation).
    e. Description of the facility or affected part of the facility being demolished or renovated, including the size (square feet, number of floors), age, present and prior use of the facility.
    f. Estimate of the approximate amount of RACM to be removed from the facility in terms of linear feet of pipe, and square feet of surface area for other facility components. Also estimate the approximate amount of Category I and Category II non-friable ACM (NACM) in the affected part of the facility that will not be removed before demolition.
    g. For facilities in which the amount of friable asbestos materials is less than 260 linear feet on pipes and less than 160 square feet or 35 cubic feet if the length and width could not be measured. On other facility components, explain techniques of estimation.
    h. Location and street address (including building number or name and floor or room number, if appropriate), city, county, and state of the facility being demolished or renovated.
    i. Scheduled starting and completion dates of asbestos removal work (or any other activity, such as site preparation that would break up, dislodge, or similarly disturb asbestos material) in a demolition or renovation; planned renovation operations involving individual nonscheduled operations shall only include the beginning and ending dates of the report period as described in paragraph (a)(4)(iii) of 40 CFR 61.145.
    j. Scheduled starting and completion dates of demolition or renovation.
    k. Nature of planned demolition or renovation and method(s) to be used, including demolition or renovation techniques to be used and description of affected facility components.
    l. Procedures to be used to comply with the requirements of NESHAP Asbestos Regulations (40 CFR 61 Subpart M).
    m. Name and location of the waste disposal site where the asbestos containing waste material will be deposited.
    n. A certification that at least one person trained as required by paragraph (c)(8) of 40 CFR 61.145 will supervise the stripping and removal described by this notification.
3. For emergency renovations described in paragraph (a)(4)(iv) of 40 CFR 61.145, the date and hour that the emergency occurred, a description of the sudden, unexpected event, and an explanation of how the event caused an unsafe condition, would cause equipment damage, or an unreasonable financial burden.
    a. Description of procedures to be followed in the event that the unexpected RACM is found or Category II NACM becomes crumbled, pulverized, or reduced to powder.
    b. Name, address, and telephone number of the waste transporter.

1.06 STATE AND LOCAL AGENCIES

A. Send written notification as required by State and local regulations prior to beginning any work on ACM.

1.07 PERMITS

A. All ACM is to be transported by an entity maintaining a current "Industrial waste hauler permit" specifically for ACM, as required for transporting of waste ACM to a disposal site.
B. CONTRACTOR is responsible for obtaining any demolition, building, renovation or other permits, and for paying application fees, if any, where required by State or Local jurisdictions.

1.08 LICENSES

A. Licenses: Maintain current licenses as required by applicable Federal, State and/or local jurisdictions for the removal, transporting, disposal or other regulated activity relative to the Work in this contract.

1.09 POSTING AND FILING OF REGULATIONS

A. Post all notices required by applicable federal, state and local regulations. Maintain two (2) copies of applicable federal, state and local regulations and standard. Maintain one copy of each at job site and one copy on file in Contractor's office.

1.10 WORKER TRAINING

A. AHERA Accreditation: All workers are to be accredited Abatement Workers as required by the USEPA MAP Asbestos Abatement Worker Training (40 CFR Part 763, Subpart E, Appendix C).
B. State and Local License: All workers are to be trained, certified and accredited as required by State of Missouri.
C. Training - Class I: Complete in accordance with 29 CFR 1926.1101. Provide training for all workers who will perform Class I operations that is the equivalent in curriculum, training method and length to the USEPA MAP asbestos abatement worker training (40 CFR Part 763, Subpart E, Appendix C).
D. Training - Class II Intact (Non-Friable): Provide training for workers who will be performing Class II work involving only the removal and/or disturbance of one generic category of building material, such as roofing materials, flooring materials, siding materials or cement asbestos panels, which includes at a minimum, the specific work practices and engineering controls which specifically relate to that category. Provide a course that includes "hands-on" training and takes at least 8 hours. Provide training that includes the elements set forth in 29 CFR 1926.1101(k) and the Compliance Directive CPL 2-2.63.
E. Training - Class II Non-Intact (Friable): Provide training for workers who will be performing Class II work on materials that are friable or will become friable during the work that is the equivalent in curriculum, training method and length to the USEPA MAP asbestos abatement worker training (40 CFR Part 763, Subpart E, Appendix C).
F. Competent Person: Competent Person for work on removal of ACM must be trained as required by OSHA regulation 29 CFR 1926.1101(k)(9) and 1926.32(f); and as set forth in the Compliance Directive CPL 2-2.63 Appendix D page D-22 to D-23.

PART 2 - PRODUCTS

2.01 PROTECTIVE CLOTHING

A. General. Provide and require the use of protective clothing, to include coveralls or similar whole-body clothing, head coverings, gloves, and foot coverings for any employee exposed to airborne concentrations of asbestos that exceed the total weight average (TWA) and/or excursion limit prescribed by 29 CFR 1926.1101 or for which a required negative exposure assessment is not produced, and for any employee performing Class I operations which involve the removal of over 25 linear or 10 square feet of thermal system insulation (TSI) or surfacing ACM or presumed ACM.
B. Coveralls: Provide disposable full-body coveralls and disposable head covers. Contractor will require that they be worn by all workers in the Work Area. Provide a sufficient number for all required changes, for all workers in the Work Area.
C. Additional Protective Clothing: Provide each worker with the protective clothing as required by Federal, State and local regulations, including but is not limited to, hardhats, cold weather gear, gloves, boots and goggles.
D. Disposable coveralls, head covers, and footwear covers shall be provided by the Contractor for the Owner, Engineer and other authorized representatives who may inspect the job site as needed.

2.02 MATERIALS

A. Provide 6-millimeter (mil) thick leak-tight polyethylene disposal bags with three labels showing the following text. **Peel and stick type labels are prohibited.**
    1. First Label: Provide in accordance with 29 CFR 1910.1200(f) of OSHA's Hazard Communication standard:
    "DANGER CONTAINS ASBESTOS FIBERS AVOID CREATING DUST CANCER AND LUNG DISEASE HAZARD BREATHING AIRBORNE FIBERS IS HAZARDOUS TO YOUR HEALTH".
    2. Second Label: Provide in accordance with U. S. Department of Transportation regulation on hazardous waste marking. 49 CFR parts 171 and 172. Hazardous Substances
    "RQ-ASBESTOS WASTE CLASS 9 NA2212-PG III".
    3. Third Label: Provide the name of the waste generator (Owner's name), the location from which the waste was generated and the names and addresses of the transporter. This label must be durable, able to repel dirt and moisture (e.g., permanent marker). Label must be placed directly on disposal bag(s) in a legible format.
B. Polyethylene Sheet: Provide flame resistant polyethylene film that conforms to requirements set forth by the National Fire Protection Association Standard 701, Small Scale Fire Test for Flame-resistant Textiles and Films. Provide largest size possible to minimize seams, 6-mil thick, frosted or black as indicated.
C. Duct Tape: Provide duct tape in 2-inch or 3-inch widths as indicated, with an adhesive which is formulated to stick firmly to sheet polyethylene.
D. Spray Cement: Provide spray adhesive in aerosol cans which is specifically formulated to stick firmly to sheet polyethylene.
E. Fiberboard Drums: Provide heavy duty leak tight fiberboard drums with tight sealing locking metal tops.
F. Paper board Boxes: Provide heavy duty corrugated paper board boxes coated with plastic or wax to retard deterioration from moisture. Provide in sizes that will easily fit in disposal bags.

PART 3 – EXECUTION

3.01 GENERAL

A. Worker Protection
    1. Provide worker protection as required by the most stringent OSHA and/or USEPA standards applicable to the Work. The following procedures are the minimum standards to be adhered to regardless of asbestos fiber count in the Work Area.
    2. Each time the Work Area is entered remove all personal clothes in designated Changing Room provided by Contractor, and put on new disposable coverall, new head cover, and a clean respirator. Proceed through shower room to equipment room and put on work boots.
    3. Warning Signs: Near the Work Area a sign complying with requirements of the USEPA NESHAP regulation (40 CFR Part 61) shall be visible in a manner and location that a person can read the following:
    "DANGER ASBESTOS CANCER AND LUNG DISEASE HAZARD AUTHORIZED PERSONNEL ONLY RESPIRATORS AND PROTECTIVE CLOTHING ARE REQUIRED IN THIS AREA".
B. Transportation and Disposal of RACM
    1. All waste is to be transported by a waste transportation contractor or subcontractor with all required licenses from all state and local authorities with jurisdiction.
    2. Mix all liquid ACM waste with a blendable material so that it forms a blendable (non-liquid) form and have the concurrence of the landfill operator prior to disposal.
    3. Load all adequately wetted RACM in disposal bags or leak-tight containers. All materials are to be contained in one of the following:
        a. Two 6-mil disposal bags; or
        b. Two 6-mil disposal bags and a fiberboard drum; or
        c. Sealed steel drum with no bag.
    4. Protect interior of truck or dumpster with critical and primary barriers, as required by authorities having jurisdiction.
    5. Carefully load containerized waste in fully enclosed dumpsters, trucks or other appropriate vehicles for transport. Exercise care before and during transport, to ensure that no unauthorized persons have access to the material.
    6. Warning Signs: During loading and unloading mark dumpsters, receptacles and vehicles with a sign to comply with requirements of the USEPA NESHAP regulation (40 CFR Part 61), in a visible location that reads:
    "DANGER ASBESTOS DUST HAZARD CANCER AND LUNG DISEASE HAZARD AUTHORIZED PERSONNEL ONLY"
    7. Do not store containerized materials outside of the Work Area. Take containers from the Work Area directly to a sealed truck or dumpster.
    8. Do not transport disposal bagged materials on open trucks. Label drums with same warning labels as bags. Uncontaminated drums may be reused. Treat used drums that have been contaminated as RACM and dispose of in accordance with this specification.
    9. Advise the landfill operator or processor, at least ten days in advance of transport, of the quantity of ACM to be delivered.
    10. At disposal site unload containerized waste:

a. At a disposal site, sealed plastic bags may be carefully unloaded from the truck. If bags are broken or damaged, return to work site for rebagging. Clean entire truck and contents using procedures set forth under Project Decontamination.

11. Retain receipts from landfill or processor for amount of ACM disposed.
12. At completion of hauling and disposal of each load, submit copy of waste manifest, chain of custody form, and landfill receipt to Owner.

3.02 SEQUENCING

A. Isolate air intakes
    1. Shut down air handling units that draw in fresh air from any area within 30 feet of the Work Area. Seal all air intakes with 6-mil plastic sheeting.
    2. Provide horizontal or vertical extension to relocate the opening of air intakes outside or above the Work Area.
B. Install critical barriers over all openings into building or equipment within 30 feet of the Work Area. Do not cover building surfaces. Erect temporary screens of reinforced plastic sheeting as required to prevent wind carrying products of work to any entries of the building or other occupied portions of the site.
C. Do not sand, abrade or grind asbestos containing materials.
D. Airborne Fiber Levels: Maintain airborne fiber levels as set forth herein.
E. Use Manual methods which do not render asbestos containing materials "non-intact." These include the use of spud, spade, flat-blade or slicing tools, such as axes, mattocks, pry bars, spud bars, crow bars, shovels, flat-blade knives, and utility knifes, to slice, cut, strip-off, shear-under, or pry up the material.
F. Remove ACM in an intact state to the extent feasible.
G. Perform all removal work on non-intact ACM using wet methods, or that which will be rendered non-intact during removal, unless wet methods are not feasible or will create safety hazards.
    1. For removal of ACM in outside conditions, preform all removal work on non-intact asbestos containing materials when outside temperatures are warm enough that the ACM is above the phase change (glass) point. Carryout removal of ACM in a manner that will minimize pulverizing, breaking or abrading of involved materials.
    2. Wet surface with amended water. Use sufficient water to completely wet surface but not cause ponding or running of water. Cut into sections able to fit in disposal boxes as applicable. Use rotary blade to cut. Do not saw or use powered rippers. Lift sections and place in disposal boxes as applicable. Use a high-efficiency particulate air (HEPA) vacuum or wet sweep into sweep shovels to pick up debris as applicable. Bag and dispose of as specified herein.
    3. For insulation, wet insulation with amended water sufficiently to enable it to be removed in a crumbly damp mass. Remove by scraping with hoes. Dispose of insulation as a non-asbestos waste.
H. When removing with a power cutter:
    1. Continuously mist the blade of the cutting machine during use unless the competent person determines that misting substantially decreases worker safety.

2. Collect dust and debris resulting from the cutting operation:
    a. Aggregate Surface: Collect all dust resulting from the cutting operation with a HEPA dust collector or by HEPA vacuuming along cut line.
    b. Smooth Surface: Collect all dust resulting from the cutting operation with a HEPA dust collector, by HEPA vacuuming along cut line, or by gently sweeping and then carefully and completely wiping up the wetted dust and debris left along the cut line.
3. Immediately bag dust and debris resulting from the cutting operation or place in covered containers.

I. Intact ACM shall be removed from Work Area as soon as it is practical, but no later than the end of the work shift.

J. ACM that is non-intact shall be removed from the Work Area as soon as it is practical, but in any event no later than at the end of the work shift. Non-intact ACM remaining in the Work Area will be kept wet, and placed in an impermeable waste bag, or wrapped in plastic sheeting.

3.03 DECONTAMINATION PROCEDURES

A. Require all workers to adhere to the following personal decontamination procedures at a minimum whenever they leave the Work Area:
    1. Type B or C Supplied Air or Powered Air-Purifying Respirators (PAPR):
        a. When exiting area, remove disposable coveralls, disposable head covers, and disposable footwear covers or boots in the equipment room.
        b. Still wearing respirators, proceed to showers. Showering is mandatory. Care must be taken to follow reasonable procedures in removing the respirator to avoid asbestos fibers while showering. The following procedure is required at a minimum:
            (1) Thoroughly wet body including hair and face. If using a PAPR hold blower unit above head to keep canisters dry.
            (2) With respirator still in place thoroughly wash body, hair, respirator face piece, and all parts of the respirator except the blower unit and battery pack on a PAPR. Pay particular attention to seal between face and respirator and under straps.
            (3) Take a deep breath, hold it and/or exhale slowly, completely wet hair, face, and respirator. While still holding breath, remove respirator and hold it away from face before starting to breath.
            (4) Carefully wash face piece of respirator inside and out.
        c. If using PAPR, shut down in the following sequence:
            (1) Cap inlets to filter cartridges, and then turn off blower unit (this sequence will help keep debris which has collected on the inlet side of filter from dislodging and contaminating the outside of the unit). Thoroughly wash blower unit and hoses. Carefully wash battery pack with wet rag. Be extremely cautious of getting water in battery pack as this will short out and destroy battery.
            (2) Shower completely with soap and water.
            (3) Rinse thoroughly.
            (4) Rinse shower room walls and floor prior to exit.
            (5) Proceed from shower to Changing Room and change into street clothes or into new disposable work items.

B. Remote Shower: The procedures above are to be used if the decontamination facility is used as a remote shower. If a worker cannot gain direct access to the Equipment Room, require that they enter Decontamination Unit and proceed directly through Shower Room to Equipment Room. Decontamination procedure is then completed as required above.

C. Within Work Area:

1. Require that workers NOT eat, drink, smoke, chew tobacco or gum, or apply cosmetics in the Work Area. To eat, chew, drink or smoke, workers shall follow the procedure described above, and then dress in street clothes before entering the non-Work Areas of the building.

End of Section

SECTION 01566 – CLEANUP OPERATIONS

PART 1 - GENERAL

1.01 SUMMARY

A. The Contractor shall provide all material, labor and equipment necessary for cleanup operations. The Contractor shall maintain a neat and clean job site at all times.

1.02 RELATED SECTIONS

A. Section 00700 – General Conditions.
B. Section 01000 – General Project Requirements.
C. Section 01300 – Submittals.
D. Section 32 16 00 – Curbs, Gutters, Sidewalks, and Driveways.
E. Section 32 92 00.10 – Native Grasses.
F. Section 03 30 00 –Concrete.

1.03 CODES AND STANDARDS

A. Not used.

1.04 DEFINITIONS

A. Not used.

1.05 INFORMATION PROVIDED BY THE CITY

A. As provided in the Contract Documents.

1.06 SUBMITTALS

A. The Contractor shall submit as specified in Section 01300 – Submittals, if proposing alternate methods and facilities for concrete washout facilities. See paragraph 3.03.E. 3 in this Section.

PART 2 - PRODUCTS (NOT USED)

PART 3 - EXECUTION

3.01 SITE MAINTENANCE

A. Cleanup operations shall be conducted in accordance with Section 00700 General Conditions, Article 6 – Contractor's Responsibilities.
B. Adequate cleanup shall be a condition for the processing of the Contractor's monthly progress payment applications.
C. The Contractor shall, at all times, keep the premises from accumulations of excavated materials, waste materials and other debris resulting from the Work. Site maintenance shall include, but is not limited to, the following:
    1. The Contractor shall sweep streets daily to maintain the Site in a neat and clean condition.
    2. Provide adequate trash receptacles on the Site and promptly empty when filled.
    3. Conduct periodic cleanup of the Site to avoid hazards, interference with traffic or operations at the Site.
    4. Keep construction materials such as pipe, forms and scaffolding neatly stacked.

5. Conduct immediate cleanup to protect the Work by removing splattered concrete, asphalt, oil, paint, corrosive liquids and cleaning solutions from all surfaces (linear construction) including walls, floors and metal surfaces (vertical construction) before the surfaces are marred.
6. Volatile wastes shall be properly stored in covered metal containers and removed from the Site daily.
7. Wastes shall not be buried on the site or disposed of into storm drains, sanitary sewers, streams or waterways. All wastes shall be removed from the site and disposed of in a manner complying with all local permits, ordinances and anti-pollution laws.
8. Overloading of trucks is prohibited to prevent spillages on all access and haul routes. The Contractor shall provide periodic inspection of traffic areas to enforce the requirements of this Section.
9. The Contractor shall prevent all excess material from washing into stream beds, storm water facilities, streets, culverts, etc.

D. All excavated material not incorporated into the Work shall be removed and disposed of by the Contractor so that the site will be left in equal or better condition than its original state.
E. Any deficiency in the quantity of material for filling depressions caused by settlement shall be supplied by the Contractor.
F. The Contractor shall remove all mobilized equipment, surplus materials, debris and temporary facilities from the site. The construction site shall be left in its original condition or better condition than before the Work commenced.
G. In addition, as directed by the City, the Contractor may be required to obtain a City approved release form, signed by the property owners affected by the Work.

3.02 DUST CONTROL

A. The Contractor shall take all reasonable measures to prevent unnecessary dust. Earth surfaces subject to dusting shall be kept moist with water or by the approved application of an approved chemical suppressant. When practical, dusty materials in piles or in transit shall be covered to prevent blowing.
B. The Contractor shall make provisions so that buildings or operating facilities that may be adversely affected by dust shall be adequately protected from dust. Existing or new machinery, motors, instrument panels or similar equipment shall be protected by suitable dust screens. Proper ventilation shall be included with dust screens.
C. Contractor shall maintain and keep all streets clean throughout the Work period. The Contractor shall perform street sweeping on a daily basis to remove dust and debris from paved areas within the Work site.

3.03 CONCRETE WORK

A. See Section 32 16 00 –Curbs, Gutters, Sidewalks, and Driveways for additional requirements.
B. See Section 03 30 00 –Concrete for additional requirements.
C. Three (3) working days after the placement of concrete, the Contractor shall conduct cleanup operations related to the completed concrete work as follows:
    1. Removal of forms, backfilling of the form excavation and debris removal from streets, sidewalks and parkway areas shall be accomplished within three (3) working days after the concrete placement. The backfilled areas within one foot of new concrete shall not be compacted until the concrete has cured a minimum of five (5) days.

2. Five (5) working days after the concrete is placed, the Contractor shall complete all joint caulking, pavement restoration, seeding and sodding. If construction is being performed during periods other than designated seeding and sodding seasons, all locations without turf cover shall be completed within ten (10) working days after the beginning of the next seeding and sodding season. Refer to Section 32 92 00.10 – Native Grasses for additional requirements.
3. If cleanup, backfilling, sodding, joint caulking or pavement restoration is not accomplished within the above limits, all tear-out and installation operations shall cease until these items are finished. Proceeding without these items being completed is at the sole discretion of the City.
4. All excavated material shall be removed and disposed of by the Contractor so that the grounds will be left in equal or better condition than its original state. Any deficiency in the quantity of material for filling depressions caused by settlement shall be supplied by the Contractor.
5. Surplus materials, equipment, tools, temporary facilities and structures shall be removed by the Contractor; all debris shall be hauled away by the Contractor and the construction site shall be left in equal or better condition than its original state. Payment of completed items on the Schedule of Values shall be subject to the completion of the cleanup operations.
6. Tear-out and installation shall not begin if unfavorable conditions for concrete placement are forecast for the next day.
7. All cleanup operations, as stated above, shall be completed five (5) working days after concrete placement.

D. Concrete Washout Facilities:
1. The Contractor shall provide facilities for concrete washout to collect and retain all the concrete washout water and solids in leak proof containers.
2. Lined wash pits or washout boxes are acceptable.
3. Alternate methods for washout facilities may be considered by the City. The Contractor shall submit for review and approval, per Section 01300 – Submittals, the alternate methods and facilities to be used.
4. The location of washout facilities shall be indicated on the Construction Site Plan (See Section 01000 – General Project Requirements, paragraph CONSTRUCTION SITE PLAN).
5. Concrete washout facilities shall be inspected daily and after heavy rains to check for leaks, identify any plastic linings or sidewalls that have been damaged by construction activities and determine whether they have been filled to over 75 percent capacity.
6. When the washout container is filled to over 75 percent of its capacity, the wash-water shall be vacuumed out or allowed to evaporate to avoid overflows. When the remaining cementitious solids have hardened, they shall be removed from the Site.
7. Damages to the washout container shall be repaired promptly.
8. Before heavy rains, the washout container's liquid level shall be lowered or the container shall be covered to avoid an overflow during the rain storm.
9. Washout facilities shall be removed from the Site upon completion of the Work and the area restored as specified herein.

END OF SECTION

SECTION 01570 - TEMPORARY EROSION AND SEDIMENT CONTROL

PART 1 – GENERAL

1.01 SUMMARY

A. The Contractor shall provide erosion and sediment control measures for all areas within and adjacent to the Project site. The Contractor shall assume that the work is to be done under the City's General Operating Permit (Permit No: MOR100006). The Contractor does not need to make separate application to the Missouri Department of Natural Resources (MDNR).

B. Specific erosion and sediment control measures are specified in APWA 5100 and Standard Erosion and Sediment Control (ESC) Drawings. These measures shall be implemented in order to control erosion and water pollution.

C. No separate payment shall be made for Erosion and Sediment Control. The Contractor shall include in the lump sum total bid price: all labor, material and equipment necessary to comply with this Section and all other Work indicated in the Contract Documents.

1.02 DESCRIPTION

A. The Contractor shall install and maintain temporary erosion and sediment control devices prior to commencing construction operations and continue through the construction period until such time as seeding and sodding has been completed and turf is established on all graded areas.

B. The Contractor shall prepare and implement a Stormwater Pollution Prevention Plan (SWPPP) utilizing the latest version of the City's SWPPP template to develop the plan. The plan must include a narrative of the types and appropriate uses of Best Management Practices (BMPs) for erosion and sediment control and stormwater management. The requirements of the SWPPP must be as stringent as those described in the City's General Operating Permit (No: MOR100006) and 10 CSR 20-6.200. Additionally, the SWPPP must comply with the City of Kansas City's MS4 permit.

C. Failure to control erosion and water pollution will result in the Contractor being noncompliant. Any noncompliance constitutes grounds for the following enforcement actions. The Contractor shall have 24 hours after receiving a notice of noncompliance from the City's representative (i.e. Project Manager, Design Professional, Inspector/ Representative of the City) to correct the problem. If weather conditions prevent the correction of BMPs within 7 calendar days, the reasons for the delay must be documented (including pictures) and there must be a narrative explaining why the work cannot be accomplished within the 7 day time period. The documentation must be filed with the regular inspection reports. The Contractor shall correct the problem as soon as weather conditions allow. If the Contractor fails to correct the problem after the time prescribed, the City will hire a remediation expert to fix the problem. In such an event, the Contractor shall be liable to the City for the remediation costs plus a 10 percent mark-up of the total contract price. If the Contractor continues to be noncompliant, the Director (or an authorized agent thereof) may issue a stop work order and delay any payment until control measures are properly functioning and any damage has been mitigated. In such an event, any delay to the Project schedule will result in liquidated damages assessed against the Contractor.

1.03 RELATED SECTIONS

A. Section 01000 – General Project Requirements.

B. Section 01300 – Submittals.

C. Section 31 20 50 – Site Preparation and Earthwork.

D. Section 32 92 00.10 – Native Grasses.

1.05 QUALITY ASSURANCE

A. The Contractor is responsible for the quality assurance and quality control of the Work. The Work shall be performed by a contractor with a proven record of performance for similar erosion and sedimentation control work.

1.06 INFORMATION PROVIDED BY THE CITY

A. As provided in the Contract Documents.

1.07 CONTRACTOR SUBMITTALS

A. The Contractor shall submit to the City/Design Professional for review and approval, in accordance with Section 01300 – Submittals, all specifications and data covering the proposed materials to be used for erosion and sedimentation control work.

B. The Contractor shall submit the following to the City/Design Professional for review and approval prior to the preconstruction conference:

1. The Contractor shall prepare a Stormwater Pollution Prevention Plan (SWPPP) for Projects that disturb one or more acres of land or disturb less than one acre when part of a larger Project which will disturb one or more acres over the life of the Project.
2. The SWPPP shall meet the requirements of this Section, applicable references on the plans, the City's adopted Erosion and Sediment Control Specifications (ESCS), and all sections of the APWA-KCMO specifications that reference erosion control requirements. The Contractor shall develop, implement, and adhere to the erosion control and stormwater pollution prevention plan based upon the City's guidelines and requirements.
3. No work can begin until the SWPPP is approved by the City/Design Professional.
4. The Contractor shall update and maintain the SWPPP as necessary to develop ongoing site-specific control measures until final acceptance of the Project.

PART 2 – PRODUCTS

A. Unless otherwise specified, acceptable products for Inlet Protection include the following:

1. Gutter Buddy, Dandy Curb® or approved equal.

PART 3 – EXECUTION

3.01 SAFETY

A. Perform all work in accordance with applicable Occupational Safety and Health Administration (OSHA) standards.

3.02 PERFORMANCE

A. City Projects are covered by a general NPDES permit maintained by the Water Services Department's Storm Water Division. The Permit imposes a number of obligations including, but not limited to, the following:

1. New Projects must be reported to the MDNR 90 days before the Project starts.
2. Each site must have and follow a written Storm Water Pollution Prevention Plan (SWPPP). Each site must be inspected weekly and following each rain event, for compliance with the SWPPP. Written inspection reports must be kept.

3. All personnel on site must be briefed on the requirements of the SWPPP.
4. A copy of the SWPPP must be on site at all times.
5. All deficient items shall be promptly corrected. In no case shall the correction period exceed two calendar days.
6. Quarterly reports must be filed by the City with MDNR identifying and giving the status and percent complete of each Project.
7. MDNR must be notified if hazardous substances or contaminated soil are discovered on site.

B. The Contractor shall follow the approved SWPPP, as well as all erosion control measures included in the Contract Documents and implement other BMP measures as directed by the City/Design Professional.

C. The Contractor shall prevent erosion during his operations until vegetation is re-established. The Contractor shall prepare erosion control plans and submit in writing to the City/Design Professional any proposed modifications to the plans. The proposed modifications shall describe materials that will be used and the tasks that will be performed to control runoff on the site.

D. Erosion control devices shall be in place before land is disturbed.

E. All earthen structures shall be seeded or sodded. See Section 32 92 00.10 – Native Grasses for additional requirements.

F. Vegetation shall be established to provide adequate protection or develop other suitable means.

G. Sediment trapping devices shall be installed in the proper location prior to grading.

H. The Contractor shall establish perimeter sediment trapping measures that function properly.

I. The Contractor shall prevent sediment from leaving the site and/or from damaging adjacent property.

J. The Contractor shall prevent and or remove mud on public roads or at intersections with public roads that is related to the Project work being completed.

K. The Contractor shall provide a temporary construction entrance to reduce/eliminate the transport of mud from the construction site onto public right of ways.

L. The Contractor shall provide dust control measures for any graveled areas or exposed soil areas. See Section 01000 – General Project Requirements, paragraph DUST CONTROL for additional requirements.

M. The Contractor shall temporarily or permanently stabilize all areas with exposed soil. See Section 32 92 00 – Seeding and Sodding for additional requirements.

N. The Contractor shall adequately stabilize all finished cut and fill slopes.

O. All on-site drainage channels and outlets shall be adequately stabilized.

P. Route stream around work areas.

Q. Repair stream channel damages per the Contract Documents.

R. Provide stabilization or a temporary stream channel crossing where needed.

3.03 INSTALLATION

A. Methods, materials and maintenance shall be the sole responsibility of the Contractor. The Contractor and the City/Design Professional shall conduct weekly onsite inspections using the “Erosion and Sediment Control Checklist” provided by the Water Services Department. Remove any onsite pollutant sources (debris piles with petroleum cans, chemical containers, fueling trucks/tanks or other possible sources of pollution). Upon notification of a weather forecast with a reasonable likelihood of rain, or at the direction of the

City/Design Professional, the Contractor shall construct temporary berms and install erosion control fencing as necessary to control the potential eroded sediment and prevent it from leaving the construction area. If the Contractor's construction operations are complete to the point where seeding or sodding is the major item at hand before final acceptance can be made, and seeding or sodding is out-of-season or disallowed by the City/Design Professional, the Contractor shall construct one of the following erosion control measures:

1. Incorporate the use of erosion control fencing immediately downstream of vulnerable areas that are susceptible to the formation of small streams. Maintain the erosion control devices until seeding or sodding season returns. Upon return of the sodding season, the area shall be re-graded to the lines and grades established in the Contract Drawings and sodded at the direction of the City/Design Professional. See Section 32 92 00.10 – Native Grasses for additional requirements.
2. Terrace the ground with graded berms and incorporate the use of both temporary slope drains (See ESCS Section 10.03.4.3 and Section 31 20 50 – Site Preparation and Earthwork for additional requirements) and erosion control fencing (as specified in this Section). Maintain the erosion control devices until seeding or sodding season returns. Upon return of the seeding or sodding season, the area shall be re-graded to the lines and grades established in the Contract Drawings and seeded/sodded at the direction of the City/Design Professional. See Section 32 92 00 – Seeding and Sodding for additional requirements.
3. Fertilize, place seed or sod, and irrigate as directed by APWA-KCMO 2400. Maintain the erosion control devices until seeding or sodding season returns. Upon return of the seeding or sodding season the Contractor shall re-establish the grade and replace all dead seed or sod at the direction of the City/Design Professional. See Section 32 92 00 – Seeding and Sodding for additional requirements.

B. Silt fence shall be installed, inspected and maintained in accordance with APWA ESC–10.

C. Berms shall be constructed in accordance to APWA ESC–29:

1. Berms are required if the silt fence is not installed or properly maintained.
2. Inspection shall be frequent and repair or replacement shall be made promptly as needed.
3. Remove sediment deposits as necessary to provide adequate storage volume for the next rain.
4. The Contractor shall remove berms when they have served their usefulness.
5. Sediment trapped by this practice shall be uniformly distributed on the source area prior to seeding or sodding.

D. The Rock Check Dam shall be constructed, inspected and maintained in accordance to APWA ESC–15.

E. Inlet Protection. Work covered under this item consists of installing a Gutter Buddy, Dandy Curb® or equal inlet protection system for inlets and median barrier inlets without grates. The purpose is to keep silt, sediment and construction debris out of the storm system:

1. The inlet protection system shall be a sewn fabric unit enclosing a porous structure in the form of a cylindrical tube placed in front of and extending beyond the inlet opening on both sides.
2. Place inlet protection unit on the street with aggregate pouch near the inlet it will be installed to protect.
3. For oil and sediment, place absorbent in the sock tube.

4. Center the unit against curb or median inlet opening so that the curb side of the unit creates a seal with the curb or median barrier and inlet structure. There will be approximately twelve (12) inches of the inlet protection unit overhanging on each side of the opening. If the unit is not installed in this manner, it will not function properly.
5. The Contractor shall remove all accumulated sediment and debris from in front of the unit and from the street surface in the vicinity of every installed unit after each rain event or as directed by the City/Design Professional. Dispose of the unit at an appropriate recycling or solid waste facility when the unit is no longer being used.
6. Oil and sediment. Remove and replace absorbent when near saturation.

3.04 MAINTENANCE AND REPAIR

A. The Contractor is responsible for maintaining all erosion and sediment control measures until acceptance of the Project by the City.
B. Erosion control measures showing evidence of overtopping, breaks or erosion shall be repaired or replaced with suitable materials.
C. All storm sewer inlets shall be regularly maintained so that sediment will not enter the system.
D. Repair and clean-out all control measures that are not functioning properly.
E. Remove temporary measures that are no longer needed.
F. Seeded or sodded areas requiring maintenance (fertilizer, re-sodding, re-seeding or additional mulch and watering) shall be promptly addressed. See Section 32 92 00.10 – Native Grasses for additional requirements.

3.05 WARRANTY

A. Seeding and sodding work shall have taken root and established satisfactory coverage before acceptance by the City. The Contractor shall maintain as described in paragraph 3.04 above and shall guarantee seeding and sodding for one (1) year after acceptance. The Contractor shall scarify, re-seed or re-sod, fertilize and mulch (seeded areas) any barren area greater than 1 square foot. See Section 32 92 00.10 Native Grasses for requirements on early acceptance.

END OF SECTION

SECTION 01580 – PROJECT SIGNS

PART 1 - GENERAL

1.01 SUMMARY

A. Contractor shall provide all material, labor and equipment necessary for the fabrication, printing and installation of Project signs.

B. This section covers project sign requirements for all Kansas City, Missouri - Water Services Department projects. Project sign requirements include the following:

1. Project identification sign description.
2. Project sign installation.
3. Maintenance and removal of Project sign.
4. Printing of signs.
5. Installation of signs.

1.02 SPECIFICATION MODIFICATIONS

A. It is understood that throughout this section these Specifications may be modified by appropriate items in Section 01015 – Specific Project Requirements or as otherwise indicated on the Drawings.

1.03 RELATED SECTIONS

A. Section 01015 – Specific Project Requirements.

B. Section 01300 – Submittals.

C. Section 01581 – Public Communications.

1.04 INFORMATION PROVIDED BY THE CITY

A. City shall provide the graphic design templates of the Project sign in an electronic format to be used in the printing process.

1.05 SUBMITTALS

A. Submit as specified in Section 01300 – Submittals.

B. Shop Drawings (not used).

C. Product Data (not used).

D. Samples.

E. Other:

1. Project Sign Locations – submit for review and approval a map of the Project area of marked up Drawings showing the location and orientation of each project sign.
2. Submit for review and approval notifications to homeowners and business adjacent to the location of the Project signs.
3. Re-use of Placards – if the Contractor has salvaged placards from previous projects, they may be re-used if in good condition, there are no changes to the information included on the sign and approved by the City. Submit color photographs that accurately show the condition of each placard to be re-used for review and approval.

PART 2 - PRODUCTS

2.01 PRINTERS

A. A list of printing companies that have previous experience with printing signs for the City are included in Section 01015 – Specific Project Requirements.

2.02 FRAME

A. Metal frame and hardware shall be in conformance with Water Services standard detail D-20142 – Installation Detail for Project Signs (see Figure 3).

2.03 PLACARDS

A. Upper Placard Size – 6 feet wide by 4 feet tall.
B. Lower Placard Size – 6 feet wide by 1 foot tall.
C. Material – Coroplast® corrugated plastic sheeting or approved equal.
D. Sheeting Thickness – ½ inch.
E. Sheeting Color – white.
F. Print Method – direct to Coroplast® with outdoor UV laminate coating.

2.04 PLACARD CONTENT

A. Construction Phase Upper Placard – for each Project sign the Contractor shall provide an upper placard which will be displayed through construction. An example of the Construction Phase Upper Placard is shown in Figure 1.
B. Post-Construction Phase Upper Placard – for each Project sign the Contractor shall provide an upper placard which will be displayed post construction. An example of the Construction Phase Upper Placard is shown in Figure 2.
C. Lower Placard – for each Project sign, the Contractor shall provide a lower placard. Examples of the Lower Placard are shown in Figures 1 and 2.
D. The City will provide digital files for all placards and graphic images.

2.05 NUMBER OF SIGNS TO BE PROVIDED

A. The number of project signs to be provided is defined in Section 01015 – Specific Project Requirements. Each Project sign includes the following:
    1. One (1) Construction Phase Upper Placard to be displayed during construction.
    2. One (1) Post-Construction Phase Upper Placard to be displayed after completion of the Work.
    3. One (1) Lower Placard to be displayed during construction and post-construction.
    4. Cost associated with printing of placards.
B. Frame as shown in Water Services standard detail D-20142 – Installation Detail for Project Signs (see Figure 3).

PART 3 - EXECUTION

3.01 INSTALATION AND PLACEMENT OF SIGNS

A. Installation – Project signs shall be fabricated and installed in accordance with Water Services standard detail D-20142 – Installation Detail for Project Signs (see Figure 3).

B. Location – Project signs shall be located within the Site as defined by Section 00700 General Conditions. Project signs shall be erected in a conspicuous place but shall not interfere with the vision of pedestrian or vehicular traffic such as to create a hazard. Signs shall be located in the public right of way or in an easement acquired for the Project. Locations of the signs shall be coordinated with the City prior to installation and submitted accordance with paragraph 1.05 SUBMITTALS.
C. Notifications – the Contractor shall notify any homeowners or businesses adjacent to the location of the signs at least three (3) days prior to erecting signs.
D. Project sign(s) shall be erected not less than two (2) days before the start of construction activities. No construction activities are allowed until the Project signs are erected.
E. Project signs shall remain in place for the duration of the Project and shall be maintained in a true, plumb and neat condition.

3.02 REPLACEMENT OF UPPER PLACARDS

A. Upon completion of the Work and at the direction by the City, the Contactor shall remove the Construction Phase Upper Placard (Figure 1) on all Project signs and replace them with the Post-Construction Upper Placard (Figure 2).
B. The Lower Placards are to remain in place.

3.03 REMOVAL OF PROJECT SIGNS

A. All Project signs shall be maintained for thirty (30) calendar days after completion of the Work or as otherwise directed by the City.
B. Contractor shall remove all Project signs and restore the area disturbed by construction activities.
C. Project signs shall be removed from the Project areas and will become property of the Contractor.
D. The Contractor may dispose of Project signs or salvage and reuse them on future City projects. The City will assess the condition of the signs and determine the appropriateness of reuse.
E. Within three (3) days of the removal of signs, Contractor shall provide the City written notice that all Project signs have been removed from the Site.

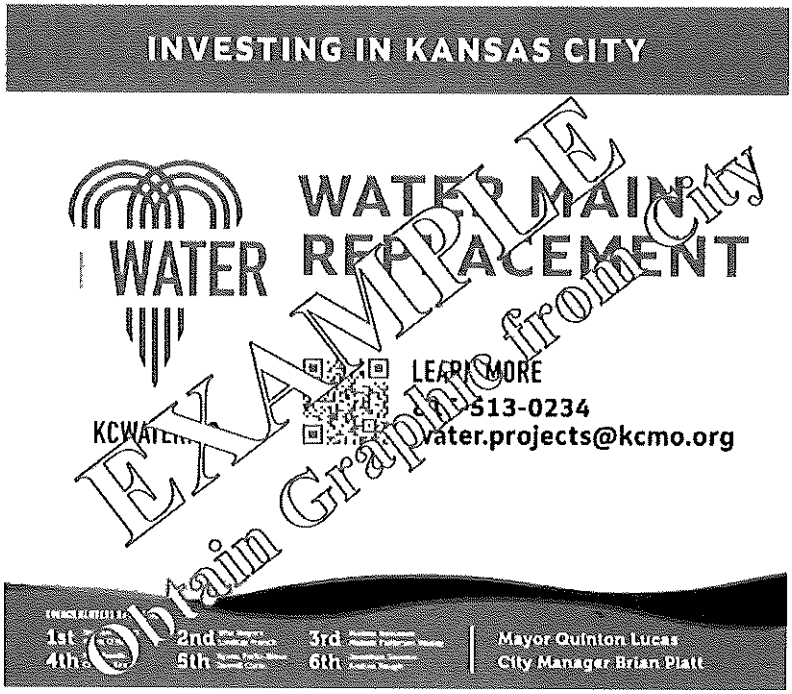

Figure 1: Construction phase upper and lower placard

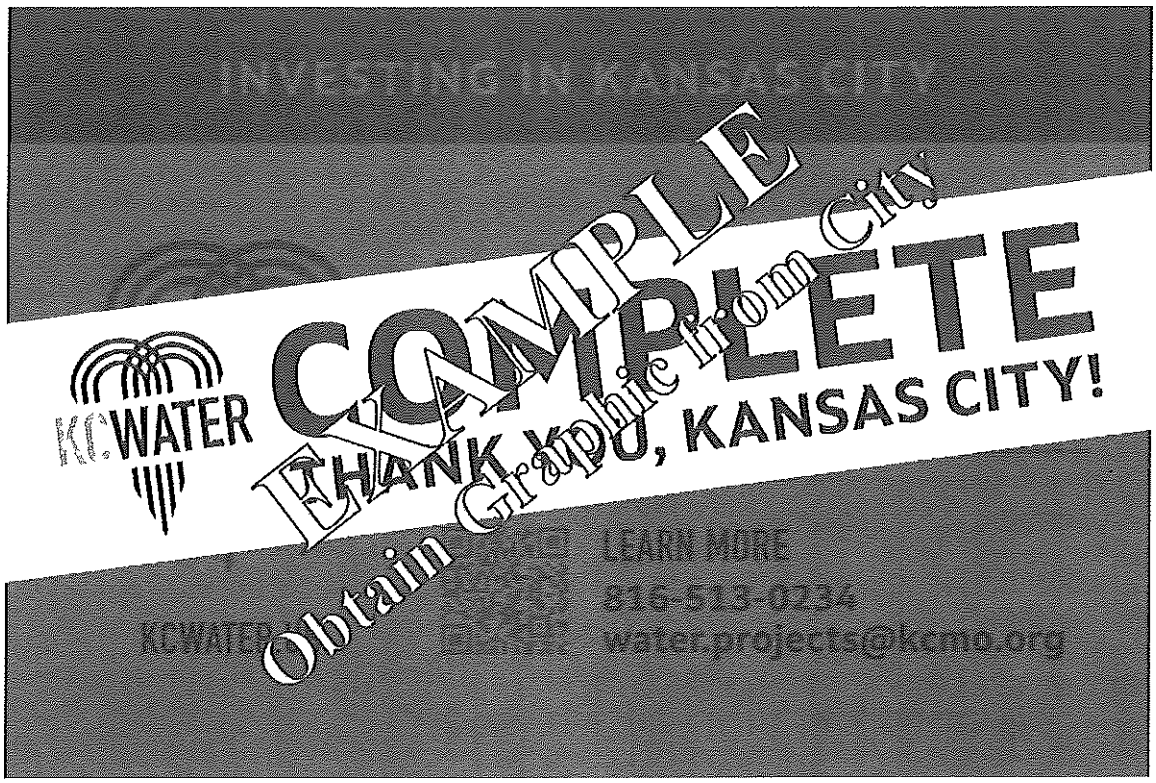

Figure 2 – Post Construction Placard

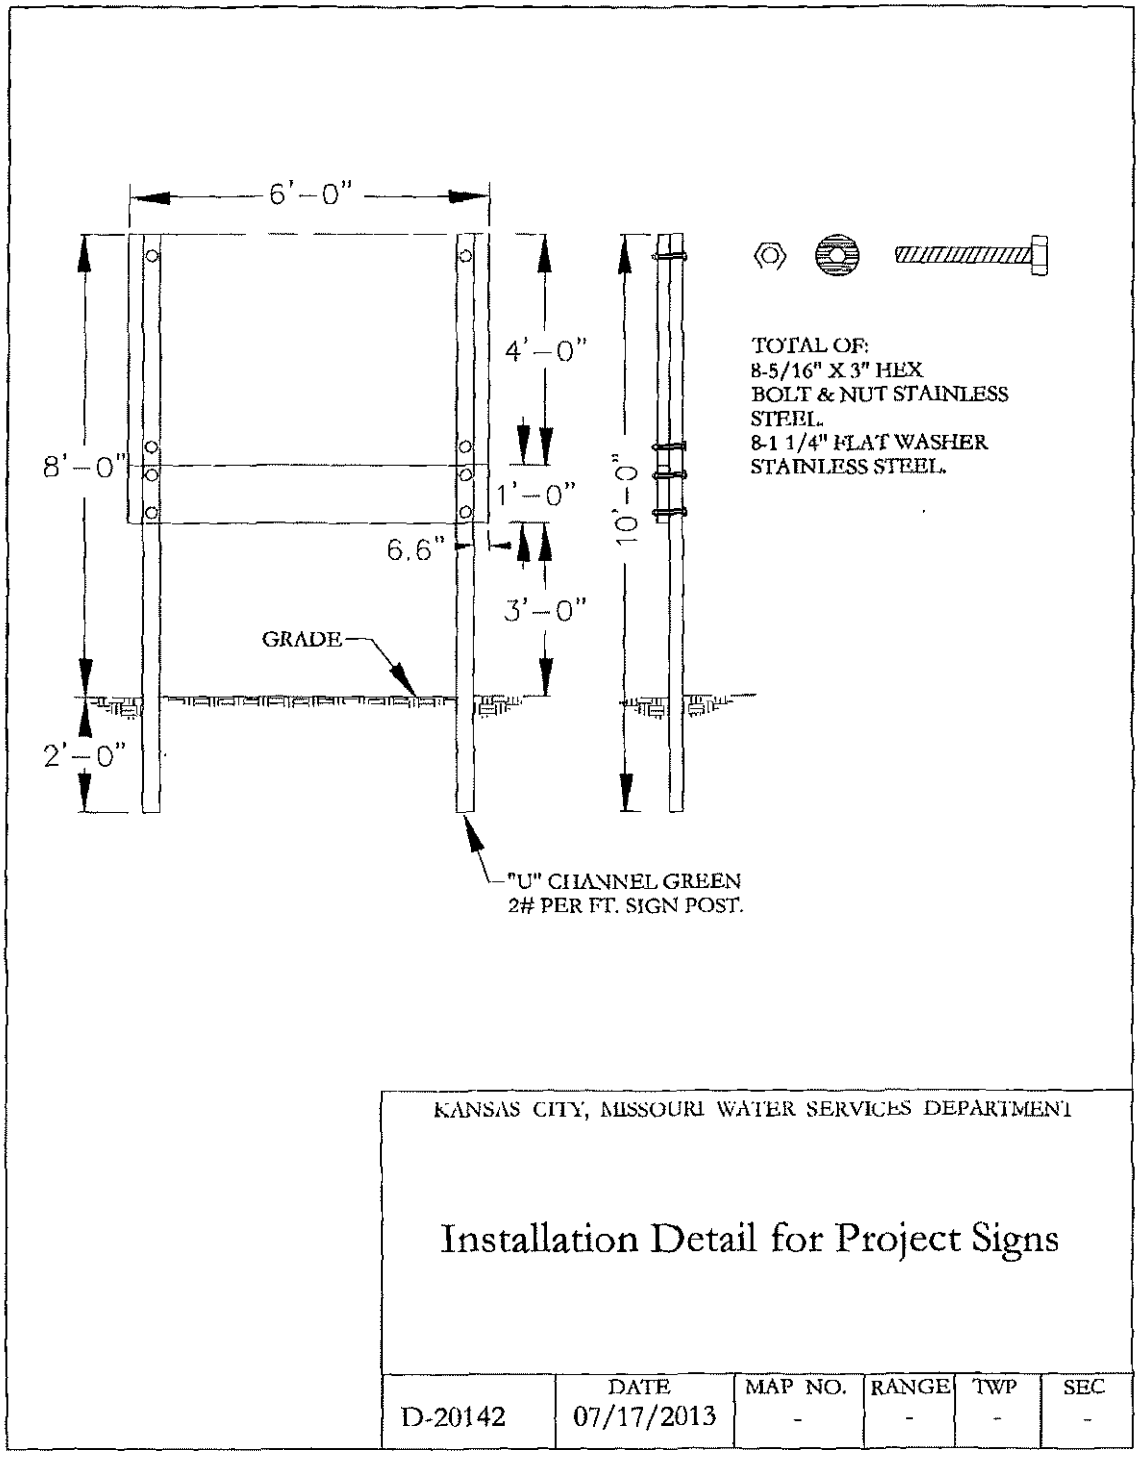

Figure 3 – Installation Detail for Project Signs

END OF SECTION

SECTION 01581 – PUBLIC COMMUNICATIONS

PART 1 - GENERAL

1.01 SUMMARY

A. This section covers communication procedures between the contractor and the public affected by construction activities.

B. Any time the contractor is acting on behalf of the City to perform work, the communications material between the contractor and the public shall adhere to these technical standards and is subject to review and approval by the City.

1.02 RELATED SECTIONS

A. Section 00700 – General Conditions:
   1. Article 6, paragraph 6.14 – Safety and Protection.

B. Section 01015 – Specific Project Requirements.

C. Section 01300 – Submittals.

1.03 DEFINITIONS

A. Affected Properties – homeowners, businesses, tenants or other entities whose everyday activities could be affected by the work.

1.04 INFORMATION PROVIDED BY THE CITY

A. The City will provide the contractor with an electronic file for mailing communications to affected property owners for the purpose of Project communications.

B. The City will provide the contractor with an electronic copy of approved communications templates to be distributed to affected properties.

1.05 SUBMITTALS

A. Submit as specified in Section 01300 – Submittals.

B. Notifications – Submit for review and approval all notification materials developed by the Contractor that are to be distributed to affected properties.

1.06 PUBLIC MEETINGS

A. Description – The contractor shall attend and participate in public meetings held for the project. The contractor's project manager shall attend and present project details. These details include, but are not limited to, the following:
   1. Project schedule.
   2. Project phasing.
   3. Disruptions to the neighborhood.
   4. Work hours.
   5. Temporary restoration efforts.
   6. Final restoration efforts.
   7. Field contact information.

B. The City will provide a location, date and time of the meeting and will facilitate the meeting.

C. See Section 01015 – Specific Project Requirements for additional meeting requirements.

1.07 DOOR HANGERS AND OTHER PRINTED COMMUNICATIONS

A. Description – Door hangers and other printed communications (fact sheets, post cards, signs, etc.) used throughout construction shall be distributed to inform homes and businesses of disruptions.

B. Templates – The City will provide templates for door hangers and other printed communications in an electronic format. See Figures 1 through 5 for an example door hanger.

C. Template Modification – The contractor may need to annotate the printed door hangers with project specific information. This effort may include describing the work and adding applicable date and time information for the benefit of the resident.

D. Review communications material – Review and approval of the communication materials by the City is required prior to the contractor's distribution of materials.

E. Printing and Reproduction – The contractor shall print door hangers, mailers and all other communication materials needed for the project.

F. Distribution List – The list of affected property owners will be provided by the City.

G. Mailing and Distribution – The contractor shall distribute the door hangers and other printed communications to the affected property owners. Door hangers are to be hand-delivered and not placed in the mailbox. All other printed communications will be delivered in a manner acceptable to the City.

H. Costs – All costs to develop, reproduce, deliver or mail notifications shall be included in the contractor's lump sum bid price.

1.08 NOTIFICATION OF UTILITIES

A. Notify utilities in accordance with Section 00700 – General Conditions, Article 6.

1.09 NOTICES TO PROPERTY OWNERS AND AUTHORITIES

A. As provided in Section 00700 - General Conditions, Article 6, the Contractor shall notify adjacent property owners and utilities when execution of the work may affect them.

B. Work Notice:
   1. General notice to affected property owners in advance of the work. Notice is required for any work within an easement. Notice shall be given for work within the City's right-of-way, outside of the street.
   2. Type of notification shall be a door hanger.

C. Denial of Access:
   1. Notice for when it is necessary to temporarily deny access to property, driveway, sidewalk or other facility.
   2. Type of notification shall be a door hanger.

D. Smoke Testing:
   1. Notice for when the Project involves smoke testing.
   2. Type of notification shall be a door hanger.

E. Utility Service Interruption:
   1. Notice for when any utility service connection must be interrupted.
   2. Type of notification shall be a door hanger.

F. Street Closures and Changes to Traffic Patterns:
   1. Notices to utilities and other concerned agencies prior to cutting or closing streets or other traffic areas or excavating near underground utilities or pole lines.
   2. Provide any additional notifications required by the traffic control permit.
   3. Type of notification will be written communication prepared and distributed by the Contractor.

G. Schedule – Notices shall be received by the affected properties no less than two (2) and no more than seven (7) calendar days prior to the work, denial of access, smoke testing, utility service interruption, street closures and changes to traffic patterns or other work that may require notification.

1.10 OTHER COMMUNICATIONS

A. See Section 01015 – Specific Project Requirements for additional communication requirements not specifically included herein or otherwise required by the Contract Documents.

PART 2 - PRODUCTS

Not used.

PART 3 - EXECUTION

Not used.

See example templates on pages 4-9.

END OF SECTION

SECTION 01600 – PRODUCT DELIVERY STORAGE AND HANDLING

PART 1 – GENERAL

1.01 SUMMARY

A. Section includes: Product requirements; product selection; product options and substitutions; quality assurance; shipping, delivery, handling, and storage; and instructions for spare parts, maintenance products, and special tools.

1.02 REFERENCES

A. American National Standards Institute (ANSI).
B. NSF International (NSF):
    1. 61 - Drinking Water System Components - Health Effects.
    2. 372 - Drinking Water System Components – Lead Content.

1.03 RELATED SECTIONS

A. Section 01019 – Closeout Procedures.
B. Section 01300 – Submittals.
C. Section 01630 – Substitution Request Form.
D. Section 01757 – Commissioning.
E. Section 01783 – Operation and Maintenance Data.
F. Section 01810 – Project Design Criteria.
G. Section 09 90 00 – Protective Coatings.

1.04 DEFINITIONS

A. Products: Inclusive of raw materials, finished goods, equipment, systems, and shop fabrications.
B. Special tools: Tools that have been specifically made for use on a product for assembly, disassembly, repair, or maintenance.

1.05 SUBMITTALS

A. As specified in Section 01300 - Submittals.
B. Calculations/certifications in accordance with NSF 61 and 372 for materials in contact with drinking water.

1.06 GENERAL REQUIREMENTS

A. Comply with Specifications and referenced standards as minimum requirements.
B. Provide products by same manufacturer when products are of similar nature, unless otherwise specified.
C. Provide like parts of duplicate units that are interchangeable.
D. Provide equipment that has not been in service prior to delivery, except as required by tests.
E. When necessary, modify manufacturer's standard product to conform to specified requirements or requirements indicated on the Drawings.

1.07 SUBSTITUTIONS

A. Formal substitution request procedure:

1. Submit a written formal substitution request to Engineer for each proposed substitution within 30 days of effective date of Contract.
2. Engineer will return initial opinion and request for additional information within 30 days.
3. Engineer will notify Contractor in writing of decision to accept or reject the substitution request within 30 days of receiving required information.

B. Formal substitution request contents:
    1. Provide Substitution Request Form as specified in Section 01630 - Substitution Request Form.
    2. Manufacturer's literature including:
        a. Manufacturer's name and address.
        b. Product name.
        c. Product description.
        d. Reference standards.
        e. Certified performance and test data.
        f. Operation and maintenance data.
    3. Samples, if applicable.
    4. Shop drawings, if applicable.
    5. Reference projects where the product has been successfully used:
        a. Name and address of project.
        b. Year of installation.
        c. Year placed in operation.
        d. Name of product installed.
        e. Point of contact: Name and phone number.
    6. Itemized comparison of the proposed substitution with product specified including a list of significant variations:
        a. Design features.
        b. Design dimensions.
        c. Installation requirements.
        d. Operations and maintenance requirements.
    7. Define impacts:
        a. Impacts to construction schedule.
        b. Impacts to other contracts.
        c. Impacts to other work or products.
        d. Impact to Contract Sum:
            (1) Do not include costs under separate contracts.
            (2) Do not include Engineer's costs for redesign or revision of Contract Documents.
            (3) Required license fees or royalties.
        e. Availability of maintenance services and sources of replacement materials.
    8. Contractor represents the following:
        a. Contractor shall pay associated costs for the Engineer to evaluate the substitution.
        b. Contractor bears the burden of proof of the equivalency of the proposed substitution.
        c. Proposed substitution does not change the design intent and will have equal performance to the specified product.
        d. Proposed substitution is equal or superior to the specified product.

e. Contractor will provide the warranties or bonds that would be provided on the specified product on the proposed substitution, unless Owner requires a Special Warranty.
f. Contractor will coordinate installation of accepted substitution into the Work and will be responsible for the costs to make changes as required to the Work.
g. Contractor waives rights to claim additional costs caused by proposed substitution which may subsequently become apparent.

C. Substitutions will not be considered for acceptance under the following conditions:
1. No formal substitution request is made.
2. The substitution is simply implied or indicated on shop drawings or product data submittals.
3. The formal substitution request is submitted by a subcontractor or supplier.

D. Substitution requests submitted after the deadline will not be considered unless the following evidence is submitted to the Engineer:
1. Proof that the specified product is unavailable for reasons beyond the control of the Contractor.
a. Reasons may include manufacturing discontinued, bankruptcy, labor strikes, or acts of God.
b. Contractor placed or attempted to place orders for the specified products within 10 days after the effective date of the Agreement.
c. The formal substitution request is submitted to Engineer within 10 days of the Contractor discovering the specified product cannot be obtained.

E. Engineer's decision on a substitution requests will be final and binding.
1. Approved substitutions will be incorporated into the Contract Documents with a Change Order.
2. Requests for time extensions and additional costs based on submission of, approval of, or rejection of substitutions will not be allowed.

PART 2 – PRODUCTS

2.01 GENERAL

A. Material requirements:
1. Materials: Provide corrosion resistance suitable for project conditions as specified in Section 01810 - Project Design Criteria.
2. Dissimilar metals: Separate contacting surfaces with dielectric material.

B. Edge grinding:
1. Sharp projections of cut or sheared edges of ferrous metals which are not to be welded shall be ground to a radius required to ensure satisfactory paint adherence.

2.02 PRODUCTS IN CONTACT WITH DRINKING WATER

A. Materials in contact with drinking waters: In accordance with NSF 61 and NSF 372.
1. Certification by an independent ANSI accredited third party, including, but not limited to, NSF International, as being lead free.

2.03 PRODUCT SELECTION

A. When products are specified by standard or specification designations of technical societies, organizations, or associations only, provide products that meet or exceed reference standard and Specifications.
B. When products are specified with names of manufacturers but no model numbers or catalog designations, provide:
    1. Products by one of named manufacturers that meet or exceed Specifications.
    2. Engineer deemed "or equal" evidenced by an approved shop drawing or other written communication.
C. When products are specified with names of manufacturers and model numbers or catalog designations, provide:
    1. Products with model numbers or catalog designations by one of named manufacturers.
    2. Engineer deemed "or equal" evidenced by an approved shop drawing or other written communication.
D. When products are specified with names of manufacturers, but with brand or trade names, model numbers, or catalog designations by one manufacturer only, provide:
    1. Products specified by brand or trade name, model number, or catalog designation.
    2. Products by one of named manufacturers proven, in accordance with requirements for an "or equal", to meet or exceed quality, appearance and performance of specified brand or trade name, model number, or catalog designation.
    3. Engineer deemed "or equal" evidenced by an approved shop drawing or other written communication.
E. When Products are specified with only one manufacturer followed by "or Equal," provide:
    1. Products meeting or exceeding Specifications by specified manufacturer.
    2. Engineer deemed "or equal" evidenced by an approved shop drawing or other written communication.

2.04 SHIPMENT

A. Mandatory requirements prior to shipment of equipment:
    1. Engineer approved shop drawings.
    2. Engineer approved Manufacturer’s Certificate of Source Testing as specified in Section 01757 - Commissioning, when required by specifications.
    3. Draft operations and maintenance manuals, as specified in Section 01783 - Operation and Maintenance Data, when required by specifications.
B. Prepare products for shipment by:
    1. Tagging or marking products to agree with delivery schedule or shop drawings.
    2. Including complete packing lists and bills of material with each shipment.
    3. Packaging products to facilitate handling and protection against damage during transit, handling, and storage.
    4. Securely attach special instructions for proper field handling, storage, and installation to each piece of equipment before packaging and shipment.
C. Transport products by methods that avoid product damage.
D. Deliver products in undamaged condition in manufacturer's unopened containers or packaging.

2.05 SPARE PARTS, MAINTENANCE PRODUCTS, AND SPECIAL TOOLS

A. Provide spare parts and maintenance products as required by Specifications.
B. Provide one set of special tools required to install or service the equipment.

C. Box, tag, and clearly mark items.
D. Contractor is responsible for spare parts, maintenance products, and special tools until acceptance by Owner.
E. Store spare parts, maintenance products, and special tools in enclosed, weatherproof, and lighted facility during the construction period.
    1. Protect parts subject to deterioration, such as ferrous metal items and electrical components with appropriate lubricants, desiccants, or hermetic sealing.
F. Provide spare parts and special tools inventory list, see Appendix A:
    1. Equipment tag number.
    2. Equipment manufacturer.
    3. Subassembly component, if appropriate.
    4. Quantity.
    5. Storage location.
G. Store large items individually:
    1. Weight: Greater than 50 pounds.
    2. Size: Greater than 24 inches wide by 18 inches high by 36 inches long.
    3. Clearly labeled:
        a. Equipment tag number.
        b. Equipment manufacturer.
        c. Subassembly component, if appropriate.
H. Store in spare parts box smaller items:
    1. Weight: Less than 50 pounds.
    2. Size: Less than 24 inches wide by 18 inches high by 36 inches long.
    3. Clearly labeled:
        a. Equipment tag number.
        b. Equipment manufacturer.
        c. Subassembly component, if appropriate.
I. Spare parts and special tools box:
    1. Wooden box:
        a. Size: 24 inches wide by 18 inches high by 36 inches long.
    2. Hinged wooden cover:
        a. Strap type hinges.
        b. Locking hasp.
        c. Spare parts inventory list taped to underside of cover.
    3. Coating: As specified in Section 09 90 00 - Protective Coatings.
    4. Clearly labeled:
        a. The words “Spare Parts and/or Special Tools”.
        b. Equipment tag number.
        c. Equipment manufacturer.

PART 3 – EXECUTION

3.01 DELIVERY AND HANDLING

A. Handle equipment in accordance with manufacturer's instructions.
B. Provide equipment and personnel to handle products by methods to prevent soiling or damage.
C. Upon delivery, promptly inspect shipments:

1. Verify compliance with Contract Documents, correct quantities, and undamaged condition of products.
2. Acceptance of shipment does not constitute final acceptance of equipment.
3. Contractor shall maintain a log of all materials brought onto the jobsite and keep all packing slips. This information shall be made available at Owner's request.

3.02 STORAGE AND PROTECTION

A. Immediately store and protect products and materials until installed in Work.
B. Store products with seals and legible labels intact.
C. Maintain products within temperature and humidity ranges required or recommended by manufacturer.
D. Protect painted surfaces against impact, abrasion, discoloration, and other damage.
    1. Repaint damaged painted surfaces.
E. Exterior storage of fabricated products:
    1. Place on aboveground supports that allow for drainage.
    2. Cover products subject to deterioration with impervious sheet covering.
    3. Provide ventilation to prevent condensation under covering.
F. Store moisture sensitive products in watertight enclosures.
G. Furnish covered, weather-protected storage structures providing a clean, dry, noncorrosive environment for mechanical equipment, valves, architectural items, electrical and instrumentation equipment and special equipment to be incorporated into this project.
    1. Storage of equipment shall be in strict accordance with the "instructions for storage" of each equipment supplier and manufacturer including connection of heaters, placing of storage lubricants in equipment, etc.
    2. The Contractor shall furnish a copy of the manufacturer's instructions for storage to the Engineer prior to storage of all equipment and materials.
    3. Pumps, motors, electrical equipment, and all equipment with antifriction or sleeve bearings shall be stored in weathertight structures maintained at a temperature above 60°F. Electrical equipment, controls, and insulation shall be protected against moisture and water damage. All space heaters furnished in equipment shall be connected and operated continuously.
H. Unless otherwise instructed by or required by the equipment manufacturer:
    1. Equipment having moving parts, such as gears, bearings, and seals, shall be stored fully lubricated with oil, grease, etc.
    2. Equipment having moving parts shall be rotated a minimum of twice a month to ensure proper lubrication and to avoid metal to metal "welding".
I. Store loose granular materials on solid surfaces in well-drained area.
    1. Prevent materials mixing with foreign matter.
    2. Provide access for inspection.
J. Payment will not be made for equipment and materials improperly stored or stored without providing Engineer with the manufacturer's instructions for storage.
K. Provide an Equipment Log including, as a minimum, the equipment identification, date stored, date of inspection/maintenance, date removed from storage, copy of manufacturer's recommended storage guidelines, description of inspection/maintenance activities performed, and signature of party performing inspection/maintenance.

3.03 PROTECTION AFTER INSTALLATION

A. Provide substantial coverings as necessary to protect installed products from damage from traffic and subsequent construction operations.
    1. Remove covering when no longer needed.
    2. Replace corroded, damaged, or deteriorated equipment and parts before acceptance of the project.
B. Update Equipment Log on a monthly basis with description of maintenance activities performed in accordance with the manufacturer's recommendation and industry standards and signature of party performing maintenance.
C. Upon installation of the equipment, Contractor shall, at the discretion of Engineer, start the equipment at one-half load for an adequate period of time to ensure that the equipment does not deteriorate from lack of use.
D. Unless otherwise instructed by or required by the equipment manufacturer, lubricants shall be changed upon completion of installation and as frequently as required thereafter during the period between installation and acceptance. New lubricants shall be put into the equipment by Contractor at the time of acceptance.

3.04 QUALITY ASSURANCE

A. Employ entities that meet or exceed specified qualifications to execute the Work.
B. Verify project conditions are satisfactory before executing subsequent portions of the Work.

3.05 COMMISSIONING

A. As specified in Section 01757 - Commissioning.

3.06 CLOSEOUT ACTIVITIES

A. Owner may request advanced delivery of spare parts, maintenance products, and special tools.
    1. Deduct the delivered items from the inventory list and provide transmittal documentation.
B. Immediately prior to the date of Substantial Completion, arrange to deliver spare parts, maintenance products, and special tools to Owner at a location on site chosen by the Owner.
    1. Provide itemized list of spare parts and special tools that matches the identification tag attached to each item.
    2. Owner and Engineer will review the inventory and the itemized list to confirm it is complete and in good condition prior to signing for acceptance.

3.07 ATTACHMENTS

A. Not Used

END OF SECTION

SECTION 01615 – EQUIPMENT IDENTIFICATION AND TAGGING

PART 1 - GENERAL

A. The following is a guide to the various types of tags used for KC Water (Wastewater Division) asset identification.

1.01 SUMMARY

B. This section describes tag structures KC Water uses to label an asset for different purposes. These tags include:
    1. CMMS tags (Asset IDs)
        a. These tags are used to identify assets in CITY's CMMS (Computerized Maintenance Management System.
        b. CMMS is primarily used for maintenance scheduling and financial tracking of assets.
        c. Not every asset will need an Asset ID, reference CITY's Tag Generator Spreadsheet for more details about which assets need this type of tag.
            (1) CMMS tags for all new assets will be created using the CITY's Tag Generator Spreadsheet.

    2. PLC Shortcuts
        a. Shortcuts are used in the OIT (Operator Interface Terminal)/HMI (Human Machine Interface) to establish a path from the HMI to the PLC.
        b. These tags are only used to identify/label PLCs.
        c. See CITY SCADA Standards for more details.

    3. P&ID Tags
        a. These tags are used to identify equipment and instruments on P&IDs (Process and Instrumentation Drawings).
        b. These tags are composed of a 3-5 digit equipment or instrument code followed by a 5 digit loop number.
        c. See CITY P&ID tagging standards for more details.

    4. PlantPax Tags
        a. PlantPax Tags are used in the PLC program as object names for all standard PlantPax objects.
        b. The tagging convention for these tags is based on ANSI/ISA Table 4.1 and also utilizes the loop numbers from the P&ID's
        c. See SCADA Standards for more details.

    5. NonPlantPax Tags
        a. NonPlantPax tags are used for objects that are not in the standard PlantPax library of objects. This might include objects that a vendor has created or possibly objects that a local integrator might need to create for specialty equipment that doesn't already have an object type in the standard PlantPax library.

    6. Other Tags/Names (See SCADA Standards for details)

a. HMI Application/Display Names.
b. OIT Application Names.
c. Thin/Thick Client Names.
d. ControlLogix PLC Program Filenames.

SUBSTITUTION REQUEST

Project Number 81000927

Project Title Todd Creek WWTP Expansion & Major Upgrades

To: _____ Authorization Number: _____
_____ From: _____
Re: _____ Date: _____
_____ Contract For: _____

Specification Title: _____
Section: _____ Page: _____ Article/Paragraph: _____

Proposed Substitution: _____
Manufacturer: _____ Address: _____ Phone No. _____
Trade Name: _____ Model No. _____
Installer: _____ Address: _____ Phone No. _____
History: ❑ New Product ❑ 2-5 years old ❑ 5-10 years old ❑ More than 10 years old
Differences between proposed substitution and specified product: _____
_____
_____

❑ Point-by-point comparative data attached – REQUIRED

Undersigned certifies:

- Proposed substitution has been fully investigated and determined to be equal or superior in all respects to specified product.
- Same warranty will be furnished for proposed substitution as for specified product.
- Same maintenance, service, and availability of replacement parts, as applicable, are available.
- Proposed substitution will not affect or delay Progress Schedule, except as stated below.
- Cost data as stated above is complete. Claims for additional costs related to accepted substitution which may subsequently become apparent are to be waived.
- Proposed substitution does not affect dimensions and functional clearances, except as stated below.
- Payment will be made for changes to building design, including architectural or engineering design, detailing, licenses, royalties, and construction costs caused by the requested substitution.
- Coordination, installation, and changes in the Work as necessary for accepted substitution will be completed in all respects.

Reason for not providing specified item: _____
_____
_____
_____

Similar Installation:
Project: _____ Design Professional: _____
Address: _____ Owner: _____
_____ Date Installed: _____
Proposed substitution affects other parts of Work: ❑ No ❑ Yes; explain _____
_____
_____

Savings to Owner for accepting substitution: _____
Proposed substitution changes Contract Time: ❑ No ❑ Yes; add/deduct _____ days.

Supporting Data Attached:
❑ Product Data ❑ Drawings ❑ Tests ❑ Reports ❑ Samples ❑ _____
Attachments: _____

Submitted by: _____
Signature: _____
Firm: _____
Address: _____

Telephone: _____ Fax: _____ E-Mail: _____

Additional Comments: ❑ Contractor ❑ Subcontractor ❑ Supplier ❑ Manufacturer ❑ DP ❑ _____

DESIGN PROFESSIONAL'S REVIEW AND ACTION

- ❑ Substitution approved – Make submittals in accordance with Specification Section 01300.
- ❑ Substitution approved as noted – Make submittals in accordance with Specification Section 01300.
- ❑ Substitution rejected – Use specified materials.
- ❑ Substitution Request received too late – Use specified materials.

Signed by: _____ Date: _____

Distribution:
- ❑ Owner
- ❑ Design Professional
- ❑ Contractor
- ❑ Consultant
- ❑ Construction Manager
- ❑ Other

SECTION 01664 - TRAINING

PART 1 – GENERAL

1.01 DESCRIPTION

A. This section contains requirements for training the Owner's personnel by the Manufacturer's Representative in the proper operation and maintenance of the equipment and systems installed under this contract and other training required to operate the Works.
B. Training outcomes: Owner's operations, maintenance, and engineering staff have the information needed to safely operate, maintain, and repair the equipment/systems provided in the Contract Documents.

1.02 RELATED SECTIONS

A. Section 01300 – Submittals.
B. Section 01757 – Commissioning.
C. Section 01783 – Operation and Maintenance Data.

1.03 QUALITY ASSURANCE

A. Where indicated in the Equipment Schedule and as required by the detailed specifications, the Manufacturer's Representative shall provide on-the-job training of the Owner's personnel. The training sessions shall be conducted by qualified, experienced, factory trained representatives of the various equipment manufacturers familiar with operation and maintenance manual information specified in Section 01783 Operation and Maintenance Data. Commissioning Manager may perform other training sessions as approved by the Owner's Representative.
B. Trainers shall be knowledgeable in the equipment/system for which they are training. Trainer's qualifications shall be submitted in a form provided by the Owner and specifically demonstrating operational knowledge of the specific systems and components and treatment facility classroom and field training experience.

1.04 SUBMITTALS

A. The following information shall be submitted to the Engineer and Owner in accordance with the provisions of the Submittal Procedures section (Section 01300).
B. Lesson plans for each training session to be conducted by the manufacturer's representatives. Lessons plans shall be submitted 45 days prior to the scheduled training. In addition, training manuals, handouts, visual aids, and other reference materials shall be included.
C. Subject of each training session, instructor (s) and qualifications of individuals conducting the training, and tentative date and time of each training session. Owner has the right to request instructor substitution that are not appropriately qualified.
D. Training schedule including respective manufacturer, estimated dates for installation completion and estimated training dates will be incorporated into the project schedule in the commissioning section consistent with direction provided by the Owner's affected facility or division.
E. Submit other audio-visual aids utilized during each training course.
F. Provide two electronic copies and 3 hard copies organized in notebooks of the training course material 7 days prior to training.

PART 2 – PRODUCTS

2.01 GENERAL

A. Where specified, the Contractor's or Design-Builder's Commissioning Manager shall conduct training sessions for the Owner's personnel to instruct staff on the proper operation, care, and maintenance of the equipment and systems installed under this contract.
B. Training shall take place at the site of the work and under the conditions specified in the following paragraphs. Approved operation and maintenance manuals shall be available at least 30 days prior to the date schedule for the individual training session. Furnish a copy of each complete training package, to include operation and maintenance data for distribution to each trainee.
C. Commissioning Manager shall meet with Engineer and Owner's designated training Manager to develop a list of personnel to be trained and to establish expected training outcomes and objectives 120 days prior to commissioning of equipment/system and schedule the training.
D. Commissioning Manager shall conduct commissioning progress meetings throughout construction to plan, scope, coordinate, schedule future activities and resolve issues at least monthly. This meeting may be part of the weekly progress meetings.

2.02 LOCATION

A. Training sessions shall take place at the site of the work or at the Water Services Department offices as determined by the Owner.

2.03 LESSON PLANS

A. Lesson plans shall contain an outline of the material to be presented along with a description of the visual aids to be utilized during the sessions. Each plan shall contain time allocation for each subject and time spent on each form of training.
B. Lesson plans shall contain the following minimum information:
    1. Title and objectives
    2. Recommended attendees (i.e. managers, engineers, operators, maintenance)
    3. Course description, outline of course content, and estimated class duration.
    4. Format (i.e. lecture, self-study, demonstration, hands-on)
    5. Instruction materials and equipment requirements.
    6. Resumes of instructors providing training.
    7. Provide performance-based learning objectives.
    8. State learning objectives in terms of what the trainees will be able to do at the end of the lesson.
    9. Define student conditions of performance and criteria utilizing learning objectives for evaluating instructional success.
    10. Provide necessary information for submission to MDNR for approval of training hours in compliance with certified operator regulations for certificate renewal.
    11. Correspondence that a submission to MDNR for training hours has been completed and approved.
    12. Provide maintenance instruction lessons plans to include mechanical, HVAC, instrumentation, and electrical aspects.
    13. Equipment operation:
        a. Describe equipment process function and system theory.

b. Describe equipment fundamental operating principles and dynamics.
c. Identify equipment mechanical, electrical, and electronic components and features.
d. Identify support equipment associated with the operation of subject equipment.
e. Detail the relationship of each piece of equipment or component to the subsystems, systems, and process.
f. Cite hazards associated with the operations, exposure to chemicals associated with the component, or the waste stream handled by the component.
g. Specify appropriate safety precautions, equipment, and procedures to eliminate, reduce, or overcome hazards.

14. Detailed component description:
    a. Define preventative maintenance (PM) inspection procedures required on equipment in operation and identify troubleshooting and potential issues as a result of the troubleshooting,
    b. Identify predictive maintenance PdM that may be applicable (infrared analyses, oil evaluation, vibration analyses) to the component or system.
    c. Identify preventive maintenance tasks and frequencies and provide in a table.
    d. Identify each component function and describe in detail.
    e. Where applicable, group relative components into subsystems.
    f. Identify and describe in detail equipment safety features, permissives and controls interlocks.
15. Define and provide training on recommended systematic troubleshooting procedures as they relate to specific craft problems and provide component specific troubleshooting checklists as they relate to specific craft problems.
16. One complete set of originals of the lesson plans, training manuals, handouts, visual aids and reference materials shall be the property of the Owner and shall be suitable bound for proper organization and easy reproduction. The Contractor shall furnish up to forty (40) copies of necessary training manuals, handouts, visual aids, and reference materials at least one week prior to each training session. Specific quantities will be identified during progress or other meetings.

2.04 FORMAT AND CONTENT

A. Each training session shall be comprised of time spent both in the classroom and at the specific location of the subject equipment or system.
B. Instructors shall apply adult education best practices, emphasizing learner participation and activity.
C. Training delivery may include problem solving, question/answer, hands-on instruction, practice, evaluation/feedback tools, and lecture.
D. Visual aids must support training objectives.
E. Delivery time should be less than 30 percent of class time.
F. Delivery time is a minimum of 1 hours and a maximum of 2 hours.
G. Longer training sessions requires Owner approval.
H. Refreshment and breaks within the Owner's customary schedule or as predetermined in advance of the training delivery.
I. Estimated maximum class size will vary for class and field training sessions. This will be determined in advanced. Commissioning Manager and Owner will develop a headcount one (1) week prior to the class so the instructor can provide the correct number of aids and know the correct number of repeated sessions.

J. Training Modules:
    1. Provide a training module for each equipment category.
    2. Divide each training module's instructional content into discrete lesson plans with a division between operations and maintenance training if directed by the Owner's Representative.
K. Training Aids:
    1. Instructors are to utilize P&ID's and are encouraged to use audio-visual devices, models, charts, etc. to increase the transfer of knowledge.
    2. Instructors shall provide such equipment (televisions, video recorder/player, computer, projectors, screens, easels, etc.), models, charts, etc. for each class.
    3. Instructor is responsible for confirming with Engineer and Owner in advance of each class that the classroom will be appropriate for the types of audiovisual equipment to be utilized.
L. Familiarization:
    1. Review catalog, parts lists, drawings, etc. which have been previously provided for the plan files and operation and maintenance manuals.
    2. Check out the installation of the specific equipment items.
    3. Demonstrate the unit and indicate how all parts of the specifications are met.
    4. Answer questions.
M. Safety:
    1. Using material previously provided, review safety references.
    2. Discuss proper precautions around equipment.
N. Operation:
    1. Using material previously provided, review reference literature.
    2. Explain all models of operation (including emergency).
    3. Check out Owner's personnel on proper use of the equipment.
O. Preventive Maintenance:
    1. Using material previously provided, review preventative maintenance (PM) lists including:
        a. Reference material.
        b. Daily, weekly, monthly, quarterly, semiannual, and annual jobs.
    2. Demonstrate procedures to perform PM jobs.
    3. Show Owner's personnel what to look for as indicators of equipment problems.
    4. Facilitate discussion with Owner's personnel as to which PMs to continue after the warranty period.
P. Corrective Maintenance:
    1. List potential problems including troubleshooting recovery from adverse operating conditions.
    2. Identify, describe, instruct and provide via the transmittal process any special tools required for maintenance.
    3. Describe Recommended measuring instruments and procedures and provide instruction on interpreting alignment measurements as appropriate.
    4. Describe recommended procedures to check/test equipment following a corrective maintenance (CM) repair.
    5. Open equipment and demonstrate procedures, where practical.
Q. Parts:
    1. Show how to use previously provided parts list and properly identify parts to be ordered.
    2. Define and check spare parts on hand and identify minimum inventory levels.
R. Local Representatives:

1. Where to order parts: Name, address, telephone.
2. Service problems:
    a. Who to call.
    b. How to get emergency help.

S. Original Equipment Manufacturer (OEM) Operation and Maintenance (O&M) Manuals:
1. Review any other material submitted.
2. Update material as required.

2.05 VIDEO RECORDING

A. The Contractor shall retain the services of a commercial videotaping service to record each training session. If trainer is required to read a script during videotaping, the trainer will have one video recorded session without personnel and the remaining sessions with personnel will not be taped. After taping, the material may be edited and supplemented with professionally produced graphics to provide a permanent record. The Contractor shall advise all manufacturers providing training sessions that the material may be videotaped and shall make available to the Owner's videotaping contractor such utility services and accommodations as may be required to facilitate the production of the video tape record. Video recording shall be integrated into electronic O&M by the Design-Builder or Contractor.
B. Include classroom and field instruction with question and answering periods.
C. Owner approval required for producer of video materials.
D. Digital recording shall become the property of the Owner.
E. Audio quality should not degrade during the recording of the field sessions due to background noise, space, distance, or other factors. Trainer will verify that audio quality after the first training session.
F. Trainer shall record the first training session and verify it presents accurately.
G. Video files shall be a file format and delivery medium as directed and approved by Owner.
H. Electronic copies of the other training material shall be tagged per Owner Standards to be provided by the Owner by the Contractor or Design-Builder
I. Provide 2 complete sets of video materials fully indexed and catalogued with printed labels sating session content and dates recorded or an indexed video file to each segment of the training.
J. Contractor shall provide a written release from all claims to the recorded training material produced.

2.06 ATTENDANCE

A. Trainer shall keep an attendance log of all attendees.
B. Trainer shall have the trainees each sign an attendance form at the beginning and end of the training session.
C. These records shall be provided to the appropriate Division Manager in which the training is being provided.

2.07 TRAINING SCHEDULE

A. Draft Training Schedule for the entire project shall be submitted after the first item requiring training arriving on the site. When approved, the training schedule shall be integrated into the project schedule.
B. List specified equipment and systems that require training services and show:
1. Respective manufacturer
2. Estimated dates for installation completion

3. Estimated training dates

C. Training is a prerequisite for putting equipment into operation. Staged or partial training may be approved by the Owner's Representative.
D. Allow for separate training sessions for maintenance staff and operations staff. Owner will notify the trainer if it is desired to have separate sessions for maintenance and operations staff or have combined sessions.
E. Allow for multiple session for Operations training:
    1. Provide a minimum of three training sessions to accommodate different shifts. One will be for each shift: day, evening, and night on at least two days, or as determined appropriate to meet the Owner's requirements.
    2. Adjust schedule to ensure training of appropriate personnel as deemed necessary by Owner, and to allow full participation by manufacturers' representatives. Adjust schedule for interruptions in operability of equipment,
    3. Coordinate with section 01320 "Construction Progress Documentation," and Section 01757, "Commissioning."
F. Contractor shall provide a draft training schedule 30 days after the notice to proceed.
G. Schedule Owner's staff training within the constraints of their workloads. Those who will participate in this training have existing full-time work assignments, and training is an additional assigned work task, therefore, scheduling is imperative. Owner staff work schedules are variable for operations staff, as treatment facilities are typically operated on an around- the-clock basis.
H. Training sessions will be finalized two weeks prior to the training.
I. Training sessions that are rescheduled after a finalized date will be rescheduled at least two weeks out.
J. Commissioning Manager is responsible for preparing agendas and meeting minutes.

PART 3 – EXECUTION

3.01 TRAINING

A. Training shall be conducted in conjunction with the operational testing and commissioning periods. Classes shall be scheduled such that classroom sessions are interspersed with the instruction in logical sequence. The Contractor shall arrange to have the training conducted on consecutive days if approved by the Owner's Representative. Concurrent classes shall not be allowed.
B. Instructors shall apply adult education best practices, emphasizing learner participation and activity.
C. Unless otherwise agreed by the Owner, classes shall be repeated twice for a morning session, afternoon session, and a night session in order to have all three operations shifts trained. Adjust training schedule to ensure training of appropriate personnel deemed necessary by Owner, and to allow full participation by manufactures' representatives. Adjust schedule for interruptions in operability of equipment. Coordinate training efforts with Section 01320 Construction Progress Documentation and Section 01757 Commissioning.
D. Approved operation and maintenance manuals for the special equipment shall be provided to the Owner prior to the start of the training. Videotaping shall take place concurrently with the training sessions.
E. Pre-startup Training shall be coordinated with Owner's operating personnel and Manufacturers' representatives, and with submission of Operation and Maintenance manuals in accordance with Section 01783 Operation and Maintenance Data. Pre-startup Training shall be completed at least 14 calendar days prior to beginning of system startup.

F. Post-startup Training, if required in specifications, shall be furnished and coordinated with Owner's operating personnel by the respective manufacturers' representatives.
G. Trainees will keep training materials and documentation after the session.
H. Operations and maintenance manuals as specified in technical sections:
    1. Provide a minimum of 2 copies of final Engineer-approved operations and maintenance manuals as specified in Section 01783 - O&M Manuals for use during the classroom instruction.
    2. Owner reserves the right to delay training for a particular equipment item if the operations and maintenance manuals for that equipment are incomplete, inaccurate, or otherwise not in a format or stage of development for use by the Owner's staff.
    3. No contract extensions or extra costs will be allowed for training delays due to operations and maintenance manual submittal delays.
I. Provide Supplemental documentation handouts to support instruction.
J. The following services shall be provided for each item of equipment or system. Additional services shall be provided when specifically required in individual specification sections.
    1. As a minimum, classroom training for operations personnel will include:
        a. Use of electronic media and drawings.
        b. Discussion of the equipment's specific location in the plant and operational overview.
        c. Purpose and plant function of the equipment.
        d. A working knowledge of the operating theory of the equipment.
        e. Start-up, shutdown, normal operation, emergency operating procedures, including discussion on system integration and electrical interlocks, if any.
        f. Identify and discuss safety items and procedures.
        g. Routine preventive maintenance, including specific details on lubrication and maintenance of corrosion protection of the equipment and ancillary components.
        h. Operator detection, without test instruments, of specific trouble symptoms.
        i. Required equipment exercise procedures and intervals.
        j. Routine disassembly and assembly of equipment if applicable (as judged by the Owner on a case-by-case basis) for purposes such as operator inspection of equipment.
    2. As a minimum, hands-on equipment training for operations personnel will include:
        a. Identify location of equipment and review the purpose.
        b. Identifying piping and flow options.
        c. Identifying valves and their purpose.
        d. Identifying instrumentation:
            (1) Location of primary element.
            (2) Location of instrument readout.
            (3) Discuss purpose, basic operation, and information interpretation.
        e. Discuss, demonstrate, and perform standard operating procedures and round checks.
        f. Discuss and perform the preventive maintenance activities.
        g. Discuss and perform startup and shutdown procedures including alternative strategies.
        h. Perform the required equipment exercise procedures.
        i. Perform routine disassembly and assembly of equipment if applicable.
        j. Identify and review safety items and perform safety procedures, if feasible.

3. Classroom equipment training for the maintenance and repair personnel will include:
    a. Theory of operation.
    b. Description and function of equipment.
    c. Startup and shutdown procedures.
    d. Normal and major repair procedures.
    e. Equipment inspection and troubleshooting procedures including the use of applicable instruments and the "pass" and "no pass" instrument readings.
    f. Routine and long-term calibration procedures.
    g. Safety procedures.
    h. Preventive maintenance such as lubrication, normal maintenance such as belts, seals, and bearing replacement; and up to major repairs such as replacement of major equipment part (s) with the use of special tools, bridge cranes, welding jigs, etc.
4. Hands-on Equipment training for maintenance and repair personnel shall include:
    a. Locate and identify equipment components.
    b. Review the equipment function and theory of operation.
    c. Review normal repair procedures including corrective maintenance.
    d. Perform startup and shutdown procedures.
    e. Review and perform safety procedures.
    f. Perform Owner approved practice maintenance and repair job(s), including mechanical and electrical adjustments, calibration, and troubleshooting equipment problems.
5. Distribute Training Evaluation Form following each training session.
    a. Training Evaluation Form is included in Section 01757 –Commissioning.
    b. Return completed Training Evaluation Forms to Owner's designated training coordinator immediately after session is completed.
    c. Revise training sessions judged "Unsatisfactory" by a majority of attendees.
    d. Conduct training sessions again until a satisfactory rating is achieved at no additional cost to Owner.
6. Post Training Session
    a. Training Course Material: Due 14 days after class completion.
    b. Video Recording tagged and other materials tagged.
    c. Class Attendance Sheet and trainee acknowledgment that they were trained and able to run the equipment.
    d. Training Agenda, Lesson Plan, presentation, handouts
    e. Other audio-visual aids utilized during each training course.
    f. Provide material for all sessions of the class in a single transmittal.
    g. Format: 2 electronic copies and 3 hard copies organized in notebooks.

K. Closeout Documentation
1. Provide Training Documentation including submission to MDNR for operator training credit. Trainer will be required to submit any additional information required by MDNR.
2. Provide training certification and records of training acceptance by MDNR.

End of Section

SECTION 01757 - COMMISSIONING

PART 1 – GENERAL

1.01 SUMMARY

A. This Section includes the requirements for each Commissioning phase of the Project equipment/system and/or facility.

1.02 DEFINITIONS

A. Clean Water Facility Testing – Testing performed using potable or other "clean" water source to demonstrate that certain equipment/systems meet the manufacturer's requirements and requirements for project performance. Clean Water Facility Testing includes testing diffusers and/or mixers in water-holding tanks prior to filling tanks with process water.
B. Commissioning - The process of planning, testing, and process start-up of the installation for compliance with contract requirements and demonstrating, through documented verification, that the project has successfully met the Contractual requirements. It includes training the Owner's staff to operate the facility.
C. Commissioning Phases - The work activities of facility commissioning are grouped into the phases defined in the table below.

Commissioning		
Planning Phase	**Testing and Training Phase**	**Process Start-Up Phase**
Owner Training Plan and Schedule	Source Testing	Process Start-up
Commissioning Schedule	Owner Training	Process Operational Period
Subsystem Testing Plan	Installation Testing	Instrumentation and Controls Fine-Tuning
	Functional Testing	
	Closeout Documentation	

D. Component - A basic building block of equipment, subsystems, and systems that requires installation or functional testing but does not have electrical connection or internal electronics. (Examples: filter effluent piping and manual isolation valves).
E. Device - A basic building block of equipment, subsystems, and systems that requires installation or functional testing and does have electrical connections or internal electronics. (Examples: filter level transmitter or water pump pressure transmitter).
F. Equipment - An assembly of component(s) and devices(s) that requires installation or functional testing. (Examples: Pump, motor, VFD, Ozone Generator, UV Disinfection System, etc.).
G. Facility - A grouping of process areas, systems, subsystems, equipment, components, and devices (Examples: treatment plant, pump station, etc.).
H. Functional Testing - Testing performed on a completed subsystem to demonstrate that equipment/system meets manufacturers' calibration and adjustment requirements and other requirements as specified. Functional testing

includes operating equipment/system manually in local, manually in remote (or remote manual), and automatically in remote (in remote auto).

I. Installation Testing - Testing to demonstrate that subsystem component (piping, power, networks, devices, etc.) is ready and meets the project requirements in advance of functional testing. Installation testing also includes manufacturers' certification of installation and other requirements as specified to prepare equipment/system for Functional Testing. Also referred to as Field Acceptance Testing.

J. Instrumentation and Controls Fine-Tuning - Improving the performance of the Instrumentation Process Control system by operating for an extended time period.

K. Manufacturer's Certificate of Source Testing - When applicable, the form is used during Source Testing for the manufacturer to confirm that the applicable source tests have been performed and results conform to the Contract Documents. The form is provided at the end of this Section.

L. Manufacturer's Certificate of Installation and Functionality Compliance - The form is used during Installation Testing and Functional Testing. It is submitted at the end of Functional Testing to confirm that the equipment/system is installed in conformance with the Contract Documents and that it meets the Functional Testing requirements defined in the Contract Documents. The form is provided at the end of this Section.

M. Process Area - A grouping of systems, subsystems, equipment, components, and devices that divide a facility into functional areas. (Examples: Filter Process Area or Chemical Area).

N. Process Operational Period - A period of time after completion of the process start-up set aside for final Operational Testing to verify facility performance meets the Contract Document requirements. This period may specifically limit other construction activities.

O. Process Start-up Phase - Operating the facility to verify performance meets the Contract Document requirements.

P. Process Start-Up - Activities conducted after the testing and training phase that are necessary to place systems or process areas into operational service.

Q. Product - A system, subsystem or component.

R. Subsystem - A building block of systems made up from a grouping of components, devices, and equipment that perform a definable function. (Examples: Filter No. 1 Backwash Subsystem, Sedimentation Basin No. 1 Hoseless Sludge Removal Subsystem). Owner will define these items in coordination with Contractor.

S. System - A grouping of subsystems, equipment, components, and devices that perform a definable function. (Examples: Filter No. 1, Sedimentation Basin). Owner will define these items in coordination with Contractor.

1.03 COMMISSIONING MANAGER

A. Designate and provide a COMMISSIONING MANAGER for this project.

B. Submit summary of the COMMISSIONING MANAGER's qualifications within 30 days of NTP:
   1. Include description of previous experience as a COMMISSIONING MANAGER on similar projects for the designated COMMISSIONING MANAGER with a list of references including phone numbers for review and Owner approval.

C. COMMISSIONING MANAGER responsibilities include the following:
   1. Lead efforts relating to Commissioning.
   2. Be thoroughly familiar with commissioning requirements in the Contract Documents.
   3. Be regularly engaged and experienced in all aspects of commissioning.
   4. Provide technical instruction for commissioning.
   5. Provide primary interface with Engineer and Owner for efforts relating to Commissioning of Project facilities.
   6. Coordinate training efforts.

D. COMMISSIONING MANAGER on-site:
   1. Testing and Training Phase: Full-time.

2. Process Start-up Phase: Full-time.

E. Designate and provide COMMISSIONING MANAGER assistants, as needed.

1.04 SERVICES OF MANUFACTURER'S REPRESENTATIVES

A. Qualification of manufacturer's representative as specified in the Contract Documents technical sections include the following:
    1. Authorized representative of the manufacturer, factory trained and experienced in the technical applications, installation, operation, and maintenance of respective equipment/system with full authority by the equipment/system manufacturer to issue the certifications required of the manufacturer.
    2. Competent, experienced technical representative of equipment/system manufacturer for assembly, installation, testing guidance, and training.
    3. Additional qualifications may be specified in the individual sections.
    4. Submit qualifications of the manufacturer's representative no later than 30 days in advance of required observations.
    5. Representative subject to approval by Owner and Engineer.
    6. No substitute representatives will be allowed until written approval by Owner and Engineer has been obtained.
B. Completion of manufacturer on-site services: Engineer to confirm that required on-site services have been completed.
C. Manufacturer is responsible for determining the time required to perform the specified services.
    1. Minimum times specified in the Contract Documents are estimates.
    2. No additional costs associated with performing the required services will be approved.
    3. Manufacturer required to schedule services in accordance with the Contractor's project schedule up to and including making multiple trips to project site when there are separate milestones associated with installation of each occurrence of manufacturer's equipment.
D. Manufacturer's on-site services as specified in the Contract Documents include the following:
    1. Assistance during Commissioning Phase and Process Start-Up Phase.
    2. Provide daily copies of manufacturer's representatives field notes and data to Engineer.
    3. Services as specified in Section 01433 - Manufacturer's Field Services.
    4. Other requirements as specified in the Contract Documents.

1.05 PLANNING PHASE

A. Overview of Planning Phase:
    1. Define approach and timing for Commissioning.
B. Owner training plan and schedule:
    1. Complete as specified in Section 01664.
C. Commissioning Schedule:
    1. Commissioning overview:
        a. Comply with Commissioning Roles and Responsibilities Matrix specified at the end of this Section.
    2. Submittal due date:
        a. Submit Commissioning Schedule not less than 60 calendar days prior to planned initial commissioning of each subsystem or system.
    3. Schedule requirements:

a. Schedule durations and float for commissioning activities to ensure Work does not fall behind schedule due to complications or delays during commissioning.
b. Gantt chart detailing the work to take place in the period between 90 calendar days prior to planned initial commissioning of equipment and systems, and prior to the date of Substantial Completion, together with supporting narrative.
c. Provide detailed schedule of commissioning activities including durations and sequencing requirements.
    (1) Identify the following activities:
        (a) Testing and Training Phase:
            (i) Source Testing.
            (ii) Owner Training.
            (iii) Installation Testing.
            (iv) Functional Testing.
            (v) Clean Water Facility Testing.
            (vi) Closeout Documentation.
        (b) Process Start-Up Phase:
            (i) Process Start-Up.
            (ii) Process Operational Period.
            (iii) Instrumentation and Controls Fine-Tuning.
d. Schedule manufacturer's services to avoid conflict with other on-site testing or other manufacturers' on-site services.
e. Verify that conditions necessary to allow successful testing have been met before scheduling services.

D. Subsystem testing plans:
1. Provide separate testing plans for each individual subsystem and system that include the following:
    a. Approach to testing including procedures, schedule, and recirculation requirements.
    b. Test objective: Demonstrate subsystem meets the design requirements as specified in the technical sections.
    c. Test descriptions, forms, temporary systems (pumps, piping, etc.), shutdown requirements for existing systems, test forms, test logs, witness forms, and checklists to be used to control and document the required tests.
    d. Test forms: Include, but not limited to, the following information:
        (1) Tag and name of equipment/system to be tested.
        (2) Test date.
        (3) Names of persons conducting the test.
        (4) Names of persons witnessing the test, where applicable.
        (5) Test data.
        (6) Applicable project requirements.
        (7) Check offs for each completed test or test step.
        (8) Place for signature of person conducting tests and for the witnessing person, as applicable.
    e. Define start-up sequencing of unit processes:
        (1) Include testing of alarms, interlocks, permissives, control circuits, capacities, speeds, flows, pressures, vibrations, sound levels, and other parameters.
        (2) Provide detailed test procedures setting forth step-by-step descriptions of the procedures for systematic testing of equipment/system.

(3) Demonstrate proper rotation, alignment, speed, flow, pressure, vibration, sound level, adjustments, and calibration.
(a) Perform initial checks in the presence of and with the assistance of the manufacturer's representative.
(4) Demonstrate proper operation of each control loop function including mechanical, electrical, alarms, local and remote controls, instrumentation, and other equipment/system functions.
(a) Generate signals with test equipment/system to simulate operating conditions in each control mode.

2. Engineer approval of test plan is required prior to performing test.
   a. Revise and update test plans based on review comments, actual progress, or to accommodate changes in the sequence of activities.
   b. Submit test reports for each phase of testing for each equipment/system.
   c. Engineer approval of preceding test reports is required prior to start of next test.
   d. Tests will be rescheduled if test plan is not approved by the required deadline.
      (1) Contractor is responsible for any resulting delay.
      (2) See Section 01300 for review periods
3. Contractor is responsible to reproduce and distribute final test procedures.
   a. Provide 3 copies for Engineer.
4. Tests may commence only after Engineer has received approved test plan copies.
5. Submittals:
   a. Submit test plans not less than 90 calendar days prior to planned installation testing of subsystem or system.
   b. Completed Manufacturer's Certificate of Installation and Functionality Compliance.
   c. Test procedures and forms: Provide signed-off copy of test forms and test reports upon completion of the test.
   d. Test reports:
      (1) Submit preliminary copies within 1 day after testing completion.
      (2) Submit final copies and report within 14 days after testing completion.

1.06 TESTING AND TRAINING PHASE

A. Overview of Testing and Training Phase:
   1. General:
      a. Include specified Source Testing, Owner Training, Installation Testing, Functional Testing, Clean Water Facility Testing, and Closeout Documentation required by this Section and the technical sections.
   2. Contractor responsibilities:
      a. Furnish labor, power, chemicals, tools, equipment, instruments, and services required for and incidental to completing commissioning activities in accordance with the approved Commissioning Plans.
      b. Prior to testing, verify equipment protective devices and safety devices have been installed, calibrated, and tested.
      c. Acceptable tests: Demonstrate the equipment/system performance meets the requirements stated in the Contract Documents.

(1) When the equipment/system fails to meet the specified requirements, perform additional, more detailed, testing to determine the cause, correct, repair, or replace the causative components and repeat the testing that revealed the deficiency.

B. Source testing:
   1. Also referred to as factory testing or factory acceptance testing (FAT).
   2. Test components, devices, and equipment/system for proper performance at point of manufacture or assembly as specified in the technical sections.
   3. Notify the Engineer in writing when the equipment/system is ready for source inspection and testing.
   4. Source Test Plan:
      a. As specified in this Section and other technical sections.
      b. Source testing requirements as specified in technical sections.
         (1) Non-witnessed: Provide Manufacturer's Certificate of Source Testing.
         (2) Witnessed: 1 Owner's representative and 1 Engineer's representative present during testing, unless otherwise specified, and provide Manufacturer's Certificate of Source Testing.
      c. Prepared by Contractor as a result of discussions and planning emerging from regularly conducted commissioning meetings for source tests as specified in the Contract Documents.
      d. Provide the following items for each Source Test:
         (1) Purpose and goals of the test.
         (2) Identification of each item of equipment/system, including system designation, location, tag number, control loop identifier, etc.
         (3) Description of the pass/fail criteria that will be used.
         (4) Listing of pertinent reference documents (Contract Documents and industry standards or sections applicable to the testing).
         (5) Complete description, including drawings or photographs, of test stands and/or test apparatus.
         (6) Credentials of test personnel.
         (7) Descriptions of test equipment to be used, product information, and all appropriate calibration records for the test equipment.
         (8) Test set-up procedures.
         (9) Detailed step-by-step test procedures.
            (a) The level of detail shall be sufficient for any witness with a rudimentary technical aptitude to be able to follow the steps and develop confidence that the tests were being performed as planned.
            (b) All steps are significant, and all steps shall be included in the procedures.
         (10) Sample data logs and data recording forms.
         (11) Sample computations or analyses with the results in the same format as the final report to demonstrate how data collected will be used to generate final results.
            (a) Complete disclosure of the calculation methodologies.
            (b) Include a sample for each type of computation required for the test and analysis of the results.
         (12) Detailed outline of the Source Test report.
         (13) Sample test reports.
      e. Submit Source Test Plan and forms as specified in the technical sections.
         (1) Submit a copy of the Source Test Plan at least 21 days before any scheduled test date.
         (2) Engineer approval of Source Test Plan required prior to beginning source testing.

(3) Schedule the testing after approval of the test procedures submittal.

f. Indicate the desired dates for source inspection and testing.

(1) Notify the Engineer of the scheduled tests a minimum of 15 days before the date of the test.

5. Test results:
   a. Prepare and submit test results with collected data attached.
6. Owner is responsible for costs associated with Owner's representatives and Engineer's representative witnessing initial Source Tests.
   a. If Source Test is not ready when the witnesses arrive or if the Source Test fails, the witnesses will return home with Contractor responsible for costs associated with the trip including costs described below. Contractor is responsible for rescheduling the Source Test and witnesses' costs associated with the second trip including costs described below.
      (1) On-site time: 1 day at the site plus travel time each direction, unless specified otherwise.
      (2) Transportation costs:
         (a) Travel 1 day on commercial airline to site including air flight costs.
         (b) Travel 1 day on commercial airline from site including air flight costs.
         (c) Mid-size rental car or taxi services from hotel to and from the test site plus fuel, tolls, and airport parking at the departing airport.
         (d) International travel: Per-diem rates as established by the US Department of State for the specific location and dates of travel. Travel expenses may include the direct cost of securing passports, visas, language interpreters, document translators, communications, and internet access.
      (3) Hotel costs at a facility with an American Automobile Association 3 diamond rating or better for single occupancy room per person per day.
      (4) Meal allowance of $61 per person per day.
      (5) On-site time: 1 day at the site, unless specified otherwise.
      (6) Only actual costs will be documented and billed.
   b. Fees incurred such as airline reservation change fees, loss of fare due to purchase of nonrefundable tickets, hotel cancellation/rebooking fees, and similar expenses incurred as a result of OSS-requested changes to the inspection schedule after the initial notification shall be borne by the Contractor.
   c. Contractor is responsible for witnesses' costs associated with retests including costs described above.
7. Contractor is responsible for providing fuel, chemicals, and other consumables needed for Source Testing.

C. Owner training:
   1. Provide training as specified in Section 01664.

D. Installation Testing:
   1. Perform subsystem testing according to approved Subsystem Testing Plans.
   2. Initiate the Manufacturer's Certificate of Proper Installation for all equipment.
      a. Manufacturer's Certificate of Proper Installation form is included in this Section.
      b. Manufacturer's Certificate of Proper Installation certifies the equipment meets the following requirements:
         (1) Has been properly installed, adjusted, aligned, and lubricated.
         (2) Is free of any stresses imposed by connecting piping or anchor bolts.
         (3) Is able to be operated as necessary for Functional Testing.

c. Form shall be submitted after completion of Functional Testing, as specified in this Section.

3. Coordinate Installation Testing with restrictions and requirements as specified in Section 01140 - Work Restrictions.
4. Perform coating holiday testing as specified in Section 09 96 00 - High- Performance Coatings.
5. Perform pressure and leakage testing as specified in individual component Sections.
6. Perform mechanical equipment Installation Testing: As in individual equipment sections.
    a. Remove rust preventatives and oils applied to protect equipment during construction.
    b. Flush lubrication systems and dispose of flushing oils.
        (1) Recharge lubrication system with lubricant recommended by manufacturer.
    c. Flush fuel system and provide fuel for testing and start-up.
    d. Install and adjust packing, mechanical seals, O-rings, and other seals. Replace defective seals.
    e. Remove temporary supports, bracing, or other foreign objects installed to prevent damage during shipment, storage, and erection.
    f. Check rotating machinery for correct direction of rotation and for freedom of moving parts before connecting driver.
    g. Perform cold alignment and hot alignment to manufacturer's tolerances.
    h. Adjust V-belt tension and variable pitch sheaves.
    i. Inspect hand and motorized valves for proper adjustment.
        (1) Tighten packing glands to ensure no leakage but permit valve stems to rotate without galling.
        (2) Verify valve seats are positioned for proper flow direction.
    j. Tighten leaking flanges or replace flange gasket.
        (1) Inspect screwed joints for leakage.
    k. Install gratings, safety chains, handrails, shaft guards, and sidewalks prior to operational testing.
7. Electrical devices and subsystems Installation Testing: Refer to Division 26 specifications for electrical system testing and settings requirements.
8. Instrumentation devices and subsystems Installation Testing
9. Heating, ventilating, and air conditioning systems Installation Testing:
    a. Perform testing of heating, ventilating, and air conditioning equipment, balancing of distribution systems, and adjusting of ductwork accessories.
    b. Test hydronic systems, if required by technical sections.

E. Functional Testing:
    1. Perform subsystem testing according to approved Subsystem Testing Plan.
    2. Notify the Engineer 5 days prior to when the Work is ready for Functional Testing.
        a. Perform testing in the presence of the Engineer.
    3. Determine Functional Testing durations with Owner’s input.
        a. Durations will vary depending on the availability of water for testing.
        b. Target minimum Functional Test duration: 8 hours.
            (1) Identify equipment/system that cannot be tested for a minimum of 8 hours as specified in technical sections.
    4. Perform Functional Testing as specified in technical sections.
        a. Perform Functional Testing in addition to the other tests specified in the technical sections.
        b. Perform Functional Testing to demonstrate that the component equipment functions as an entire system in accordance with the design requirements.

c. Perform Functional Testing to demonstrate that the unit process has operated in a manner necessary to demonstrate equipment/system functions manually in local, manually in remote (or remote manual), and automatically in remote (in remote auto).
    (1) Perform testing with Contractor-provided water, either from Platte4 or non-potable water from existing Todd Creek WWTP.
d. Repair or replace parts that operate improperly and retest.
e. Submit testing results as specified in the technical sections to the Owner and Engineer for approval of Functional Testing results.

5. Provide completed Manufacturer's Certificate of Installation and Functionality Compliance forms for all equipment.
    a. Manufacturer's Certificate of Installation and Functionality Compliance form is included in this Section.
    b. Manufacturer's Certificate of Installation and Functionality Compliance certifies the equipment/system meets the following requirements:
        (1) Is suitable for satisfactory full-time operation under full-load conditions.
        (2) Operates within the allowable limits for vibration and noise.
        (3) Electrical and instrumentation requirements:
            (a) Electrical equipment, instrumentation, and control panels are properly installed, calibrated, and functioning.
            (b) Electrical Installation Testing is complete, and test results have been approved by the Engineer.
                (i) Noted deficiencies have been corrected.
                (ii) Relays, circuit breakers, and other protective devices are set.
            (c) Control logic for start-up, shutdown, sequencing, interlocks, control, and emergency shutdown has been tested and is properly functioning.
            (d) Motor control is calibrated and tested.

F. Closeout documentation:
1. Submittals:
    a. Provide records generated during Commissioning Phase of Project.
        (1) Required documents include but are not limited to:
            (a) Training documentation.
            (b) Manufacturer's Certificate of Source Testing.
            (c) Manufacturer's Certificate of Installation and Functionality Compliance.
            (d) Daily logs of equipment/system testing identifying tests conducted and outcome.
            (e) Test forms and documentation.
            (f) Functional Testing results.
            (g) Logs of time spent by manufacturer's representatives performing services on the job site.
            (h) Equipment lubrication records.
            (i) Electrical phase, voltage, and amperage measurements.
            (j) Insulation resistance measurements.
            (k) Bearing temperature measurements.
        (2) Data sheets of control loop testing including testing and calibration of instrumentation devices and setpoints. Format: 2 electronic copies and 3 hard copies organized in notebooks.
        (3) Due date: Within 14 calendar days of Substantial Completion.

1.07 PROCESS START-UP PHASE

A. Overview of Process Start-Up Phase:
    1. Operating the facility to verify performance meets the Contract Document requirements.
B. Process Start-Up:
    1. Perform process start-up in the presence of the Engineer.
    2. Pre-start-up activities:
        a. Commissioning Documentation and Data Review.
        b. Start-Up Go/No-Go Decision Criteria.
        c. Building and Fire Inspection Compliance Check.
        d. Process Start-Up Sequence Review.
            (1) Submit a Process Start-Up plan for review by Engineer not less than 90 calendar days prior to planned commencement of process start- up activities.
        e. Description of Temporary Testing Arrangement, if applicable.
        f. Final Process Start-Up Forms and Documentations.
        g. Final Operational Testing Plan.
    3. Control loop tuning.
        a. Perform control loop tuning during system testing with water to the extent possible.
    4. Process area start-ups.
        a. Process start-up individual process areas comprised of multiple interdependent systems where possible and beneficial to reduce complexity and risk of complete facility testing.
        b. Process area test flows may be limited by upstream and downstream process constraints (i.e., tank and basin volumes) and/or localized recirculation capabilities.
    5. Facility-wide process start-up.
        a. Upon approved completion of pre-start-up activities, perform entire facility process start-up.
            (1) Complete control loop tuning during this phase of process start-up.
            (2) Continue process start-up operations until facility meets or exceeds the Contract requirements.
        b. Process control systems testing:
            (1) Test complete system instrumentation, controls and PLC, HMI, and LOI programming for the facility.
        c. HVAC systems start-up and testing:
            (1) Test complete HVAC system for the facility.
            (2) Follow procedure described in Section 23 05 93
        d. Ancillary systems start-up and testing:
            (1) Test complete security system, phone system, fire alarm system, etc. for the facility.
        e. Remaining equipment/system tests:
            (1) Conduct remaining specified equipment/system performance tests that could not be performed during the Testing and Training Phase due to inter-system and/or treatment process dependencies.

1.08 PROCESS OPERATIONAL PERIOD:

A. Prior to beginning the Process Operational Period:

    1. Conformance with treatment standards is required prior to Operational Testing, if applicable.

a. Biological processes require time to build up the necessary population of organisms to meet treatment standards, as specified in Section 01140 - Work Restrictions. Refer to Section 46 53 60 for additional requirements on biological process startup, commissioning, and monitoring.

2. Correct any outstanding punch list items prior to the Operational Testing.

B. Duration: 30 calendar days minimum, or as specified elsewhere.

C. Engineer will be present for key process startup and commissioning activities unless such presence is expressly waived in writing.

D. Prove facility conformance with Contract Document requirements.

E. Contractor to provide:

1. Specified start-up materials and operating supplies.

2. Necessary craft of labor assistance, in the event of an emergency equipment failure requiring immediate attention (emergency is defined as a failure of function which precludes the further operation of a critical segment of or the whole of the Work) with a response time of not more than 4 hours from the time of notification.

3. Manufacturer's authorized representative to supervise placing equipment/systems in operation and provide guidance during Operational Testing per applicable section.

4. Necessary manufacturer's representatives and operating supplies for retesting systems that fail to pass the initial Operational Testing due to deficiencies in products of workmanship at no additional cost to the Owner.

5. List of 24-hour "on-call" representative supervisory persons who will monitor the Operational Testing and serve as liaison for the Engineer and Owner.

F. Owner will provide:

1. Operations personnel for duration of test.

G. Prior to date of Substantial Completion of Installation, the Contractor's COMMISSIONING MANAGER shall oversee Process Operational Period.

1. Owner staff will operate the completed Project construction.

2. Entire system shall continuously meet performance requirements as described in the technical specifications and shall operate without fault, failure, or defect for a continuous period.

3. Individual equipment/system failures that are corrected within 24 hours and do not prevent the entire project from continuously satisfying the established operational requirements shall not require the consecutive day test to be restarted unless the failure recurs.

4. Restart the consecutive test period for any of the following conditions:

a. Any failure of the complete Project construction to meet operational requirements.

b. When malfunctions or deficiencies cause shutdown or partial operation of the facility, or results in failure of the complete Project construction to meet operational requirements.

c. Any individual equipment/system failure that meets any of the following conditions:

(1) Requires more than 24 hours to correct.

(2) Recurs within the 24-hour correction period requiring further correction.

d. Immediately correct defects in material, workmanship, or equipment/system which became evident during Operational Testing.

1.09 INSTRUMENTATION AND CONTROLS FINE-TUNING

A. After the Process Operational Period, test PCIS system for additional 60 days.

I hereby certify that the above-referenced equipment/system has been: (Check Applicable)

- ☐ Installed in accordance with manufacturer's recommendations.
- ☐ Inspected, checked, and adjusted.
- ☐ Serviced with proper initial lubricants.
- ☐ Electrical/instrumentation and mechanical connections meet quality and safety standards.
- ☐ All applicable safety equipment has been properly installed.
- ☐ Functionally tested.
- ☐ System has been performance tested and meets or exceeds specified performance requirements.

NOTES:
Attach test results with collected data and test report.

Attach written certification report prepared by and signed by the electrical and/or instrumentation subcontractor.

SECTION 01810 – PROJECT DESIGN CRITERIA

PART 1 - GENERAL

1.01 SUMMARY

A. Section includes:
    1. Criteria for use in selection of equipment and appurtenances specified in subsequent Sections of these Specifications, or on the Drawings.
    2. Criteria for design of tanks and other equipment fabricated off site and shipped to the Work site for installation.
    3. Criteria for use in design of anchors for connecting process, mechanical and electrical equipment, and appurtenances to supporting structures.
B. The criteria included in this Section are general criteria that apply throughout the Work unless more restrictive or more stringent criteria are indicated on the Drawings or in technical Specifications. See Drawings and Specifications for additional criteria relevant to specific locations, materials and equipment.

1.02 REFERENCES

A. American Society of Civil Engineers (ASCE):
    1. 1. 7-10 - Minimum Design Loads for Buildings and Other Structures (ASCE 7).
B. ASHRAE, Incorporated (ASHRAE).
C. International Code Council (ICC):
    1. International Plumbing Code (IPC).
D. Sheet Metal and Air Conditioning Contractor's National Association (SMACNA):
    1. Seismic Restraint Manual: Guidelines for Mechanical Systems, 4th edition.

1.03 SUBMITTALS

A. Design of supports and anchorage for structures:
    1. Shop drawings and calculations:
        a. Complete shop drawings and calculations.
        b. Calculations shall be signed and sealed by an engineer licensed in the State of Missouri.
    2. Seismic design calculations:
B. Where seismic design calculations are specified in this Specification, such requirements will be waived for structures or equipment determined to be in Seismic Design Categories A or B.
C. Wind design calculations: Where wind design calculations are specified in this Specification, such requirements will be waived for structures or equipment located inside other structures.

1.04 PROJECT DESIGN CRITERIA – SITE INFORMATION

A. Location:
    1. Address: 14001 Interurban Road, Kansas City, MO 64163
    2. Site coordinates (approximate): 39deg 20min 50sec N, 94deg 40min 10sec W
B. Elevation:

1. Operating elevation for equipment: Approximately 800 to 855 feet above mean sea level for Influent Pumping. Approximately 845 to 870 feet above mean sea level for remaining facilities.

1.05 PROJECT DESIGN CRITERIA – REGULATORY REQUIREMENTS

A. Code requirements of authorities having jurisdiction over the project are included in Section 01410 - Regulatory Requirements.

1.06 PROJECT DESIGN CRITERIA – OPERATING ENVIRONMENT

A. Equipment and materials for the Work shall be suitable for performance in a wastewater treatment plant environment, and under conditions specified in the following paragraphs.
    1. See technical specifications for each type of equipment for additional requirements.
B. Climate data for site:
    1. Energy Code Climate Zone: 4A (IECC 2021).
    2. Local data:
        a. Location: Kansas City, Missouri, Kansas City International Airport.
            (1) Data coordinates: Latitude 39.30 N; Longitude 94.71 W.
        b. Prevailing winds: 12 miles per hour.
        c. Temperatures - Outdoor: As specified in Table 1:

Table 1: Design Temperatures - Outdoor	
Condition	**Criteria**
Winter	2.4 degrees Fahrenheit dry-bulb at ASHRAE 99.6 percent.
Summer	92.7 degrees Fahrenheit dry-bulb / 76.1 degrees Fahrenheit mean coincident wet-bulb at ASHRAE 99.6 percent.

        d. Temperatures - Indoor: As specified in Table 2

Table 2: Design Temperatures - Indoor		
	Summer (degrees Fahrenheit)	**Winter (degrees Fahrenheit)**
Process and process equipment areas:		
• Unless otherwise noted.	10 degrees above ambient	55
• Blower and Pump Rooms.	104	55

• Corridors.	10 degrees above ambient	55
• Electrical, Control, and Mechanical (HVAC equipment) rooms.	85	55
Non-process areas:		
• Offices, conference rooms, vestibules, kitchen, restrooms. • Control room, wet analysis room. • PLC, instrument shop, instrument storage, electrical/com room.	75	70
• Admin storage.	80	65
• Mechanical (HVAC equipment) rooms.	85	55
• Conditioned Parts Storage Room.	75	70
• Maintenance shop.	104	55

3. Outdoor conditions - other:
    a. Humidity: 43.4 to 83.5 percent (NOAA 2002).
    b. Freeze-thaw conditions: 90-100 frost days per year.
4. Indoor conditions - other:
    a. Moisture conditions: As defined in individual equipment sections.

C. Rainfall design criteria:
1. Reference: 2015 IPC.
    a. 3.6 inches per hour (100-year, 1-hour storm).

1.07 PROJECT DESIGN CRITERIA - STRUCTURAL

A. GENERAL. Buildings, non-structural components and non-building structures shall be designed in accordance with this section. In the event of conflict with requirements in other sections, the more stringent criteria shall be followed.

B. DESIGN CRITERIA. Buildings, non-structural components including anchorage of such items, shall be designed in accordance with the following criteria in PART 3.

General Design Data:

Building code and references	IBC 2012, ASCE 7-10 "Minimum Design Loads for Buildings and Other Structures", AISC 360 "Specification for Structural Steel Buildings", AISC 341 "Seismic Provisions for Structural Steel Buildings"	
Site elevation, above mean sea level	734	ft
Design flood elevation, DFE	743.33	ft
(500 yr)		
Design groundwater elevation (Ref Geotechnical Soil Report)	717	ft

Wind Design Data:

Basic factored wind speed, V, Risk Category III	120	mph
Exposure category	C	
Importance factor (wind loads), I	N/A	
Building enclosure classification	Enclosed	

Snow Design Data:

Ground snow load, P_g	20	psf
Importance factor (snow loads), I	1.1	
Exposure factor (C_e)	0.9	
Thermal factor (C_t)	1.0	

Ice Design Data:

Nominal ice thickness, t	1.0	in
Concurrent wind speed, V_c	40	mph
Importance factor (ice loads – ice thickness), I_i	1.25	
Importance factor (ice loads – concurrent wind), I_w	1.0	

Seismic Design Data for Non-structural Components:

Design short period spectral response acceleration, S_{DS}	0.135g

Component importance factor, I_P	If/As indicated in the Non-Structural Components PART 3
Seismic Design Category	B

C. WIND ANCHORAGE. Equipment that is to be located outdoors shall have anchor bolts designed for the effects of wind forces, as determined in accordance with ASCE 7, Chapter 6. Shop drawings shall include full anchor bolt details and shall be sealed by a professional engineer licensed in the state of the project. Calculations shall be furnished when requested by Engineer.

D. SEISMIC DESIGN.

a. General. Structural systems shall provide continuous load paths, with adequate strength and stiffness to transfer all seismic forces from the point of application to the point of final resistance.

b. Pre-Engineered Buildings. As Per Architectural Drawings

c. Non-Structural Components. Non-structural components are architectural, mechanical, and electrical items that are permanently attached to and supported by a structure but are not part of the structural system, as indicated in Chapter 13 of ASCE 7, and in the Non-Structural Components Description PART 3.

The Non-Structural Components Description PART 3 identifies the components that require some level of seismic design. The requirements of this paragraph are applicable only to the items listed in the Non-Structural Components Description PART 3.

All components, and the anchorage of those components to the main structure, shall be shown on construction documents prepared and sealed by a registered design professional that is licensed in the state of the project. The construction documents shall be submitted in accordance with the Submittal Procedures section. Structural calculations shall be submitted when requested by Engineer.

Design of non-structural components shall be in accordance with all applicable provisions of ASCE 7, Chapter 13. Non-structural components shall have sufficient strength and ductility to resist the specified seismic effects, and shall meet all of the design, proportioning, detailing, inspection, and quality assurance provisions of the specified building code and other referenced codes.

Non-structural components shall be attached so that seismic forces are transferred to the structural system. Curbs that support roof-mounted equipment shall be designed to transfer forces from the equipment into the main structural roof members. All structural attachments shall be bolted,

welded, or otherwise positively fastened. Frictional resistance due to gravity shall not be considered in evaluating the required resistance to seismic forces.

When the Non-Structural Components Description PART 3 indicates that seismic design of any component is required, the component shall be designed to be operable during and following a design level seismic event without collapsing, breaking away from supports, creating an ignition hazard, or releasing any contents.

"W_p" shall include the total operating weight of the component or system, including, but not limited to, any insulation, fluids, and concentrated loads such as valves, condensate traps, and similar components.

Seismic effects that shall be analyzed in the design of piping systems include the dynamic effects of the piping system, contents, and supports. The interaction between piping systems and the supporting structures, including other mechanical and electrical equipment, shall also be considered. Where pipe supports are to be designed by Contractor, as required by the Pipe Supports section, both the piping and support systems shall be designed to meet the applicable requirements of ASCE 7, Chapter 13.

Non-Building Structures. Not used.

PART 2 - PRODUCTS

2.01 GENERAL

A. Equipment and materials for the project shall be suitable for the following conditions:
    1. Wastewater treatment plant conditions.
    2. Site, environmental and structural loading conditions as specified in this Section.
    3. Specific conditions listed in the relevant sections of the Contract Documents for the equipment and products under consideration.
B. Anchoring and fastening: See the following Sections for materials and installation requirements:
    1. Section 03 20 00 - Concrete Reinforcement.
    2. Section 04 20 00 - Unit Masonry.
    3. Division 5 – Metals.

PART 3 – EXECUTION

3.01 GENERAL

A. Design in accordance with the requirements of the building code as specified in Section 01410 - Regulatory Requirements and the references and project-specific design criteria listed in this Section.
B. In the event of conflicts between design criteria, the more restrictive or severe shall govern.

3.02 DESIGN OF SUPPORTS AND ANCHORAGE FOR EQUIPMENT AND TANKS

A. General:
    1. Anchor using anchor bolts, anchor rods, bolts, or welded studs.

2. Anchor bolts used to resist seismic loads and wind forces shall have a standard hex bolt head.
    a. Do not use anchor bolts fabricated from rod stock with an L or J shape.
    b. Do not use post-installed anchors (including concrete anchors, sleeve anchors, flush shells, chemical anchors, powder actuated fasteners, or other types of anchor) unless indicated on the Drawings or accepted in writing by the Engineer.
3. Anchor bolt and fastener calculations:
    a. Design for ductile failure (anchor bolt yield).
    b. Anchor bolts and fasteners embedded cast into plastic concrete or installed into cured concrete:
        (1) Design based on a minimum specified 28-day concrete compressive strength of 4,000 pounds per square inch (f'c = 4000 psi).

B. Seismic loads:
1. Do not use friction to resist sliding resulting from seismic forces. Resist such forces only by direct application of loads to fasteners as bearing, shear, tension, or compression force(s).
2. Do not use more than 60 percent of the weight of the mechanical and electrical equipment for designing anchors for resisting overturning due to seismic forces.
3. For tanks and equipment with varying weight based on the volume of material contained, design anchorage to accommodate both filled and empty conditions.
    a. Do not use more than 60 percent of the weight of the tank for resisting overturning due to seismic forces.

C. Wind loads:
1. Design load combinations shall be as specified in ASCE 7.
2. For tanks and equipment with varying weight based on volume of material contained, evaluate anchorage considering both filled and empty conditions.

End of Section

SECTION 01 43 39 - MOCKUPS

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Integrated exterior mockups.
   2. Preconstruction laboratory mockups.
   3. Room mockups.

B. Related Requirements:
   1. Section 01400 - Quality Control for quality assurance requirements for aesthetic and workmanship mockups specified in other Sections.

1.02 DEFINITIONS

A. Integrated Exterior Mockups: Mockups of the exterior envelope constructed on-site as freestanding temporary built elements, consisting of multiple products, assemblies, and subassemblies.

B. Preconstruction Laboratory Mockups: Integrated exterior mockups constructed at testing facility to verify performance characteristics.

C. Room Mockups: Mockups of typical interior spaces complete with wall, floor, and ceiling finishes; doors; windows; millwork; casework; specialties; furnishings and equipment; and lighting as indicated.

1.03 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.
   1. Meet with Owner, Architect, testing and inspecting agency representative, and installers of major systems whose Work is included in integrated exterior mockups.
   2. Review coordination of equipment and furnishings provided by the Owner for room mockups.
   3. Review locations and extent of mockups.
   4. Review testing procedures to be performed on mockups.
   5. Review and finalize schedule for mockups, and verify availability of materials, personnel, equipment, and facilities needed to complete mockups and maintain schedule for the Work.

1.04 ACTION SUBMITTALS

A. Shop Drawings: For integrated exterior mockups.
   1. Include plans, elevations, sections, and mounting details.
   2. Indicate manufacturer and model number of individual components, subassemblies, and assemblies.
   3. Include site location drawing indicating orientation of mockup.
   4. Revise and resubmit Shop Drawings to reflect approved modifications in details and component interfaces resulting from changes made during testing procedures.

B. Delegated Design Submittal: For temporary structural supports for mockups not attached to building structure, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.05 QUALITY ASSURANCE

A. Build mockups to do the following:
   1. Verify selections made under Sample submittals.

2. Demonstrate aesthetic effects.
3. Demonstrate the qualities of products and workmanship.
4. Demonstrate acceptable coordination between components and systems.
5. Perform preconstruction testing, such as window air- and water-leakage testing.

B. Fabrication: Before fabricating or installing portions of the Work requiring mockups, build mockups for each form of construction and finish required. Use materials and installation methods as required for the Work.
1. Build mockups of size indicated.
2. Build mockups in location indicated or, if not indicated, as directed by Architect.
3. Employ supervisory personnel who will oversee mockup construction. Employ workers who will be employed to perform same tasks during the construction at the Project.
4. Demonstrate the proposed range of aesthetic effects and workmanship.
5. Maintain mockups during construction in an undisturbed condition as a standard for judging the completed Work.
6. Demolish and remove mockups when directed unless otherwise indicated.

C. Notifications:
1. Notify Architect seven days in advance of the dates and times when mockups will be constructed.
2. Allow seven days for initial review and each re-review of each mockup.

D. Approval: Obtain Architect's approval of mockups before starting fabrication or construction of corresponding Work.
1. Unless otherwise indicated, approved mockups establish the standard by which the Work will be judged.
2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.

1.06 COORDINATION

A. Coordinate schedule for construction of mockups, so construction, testing, and review of mockups do not impact Project schedule.

PART 2 - PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer, as defined in Section 01400-Quality Control to design support structure for free-standing mockups.

2.02 INTEGRATED EXTERIOR MOCKUPS

A. Construct integrated exterior mockups according to approved mockup Shop Drawings. Construct mockups to demonstrate constructability, coordination of trades, and sequencing of Work; and to ensure materials, components, subassemblies, assemblies, and interfaces integrate into a system complying with indicated performance and aesthetic requirements.

B. Design and construct foundation and superstructure to support free-standing integrated exterior mockups.

C. Build integrated exterior mockups using installers and construction methods that will be used in completed construction.

D. Use specified products that have been approved by Architect. Coordinate installation of materials and products specified in individual Specification Sections that include Work included in integrated exterior mockups.

E. The Work of integrated exterior mockups includes, but is not limited to, the following:
1. Precast architectural concrete.

2. Air and weather barriers.
3. Thermal insulation.
4. Through-wall flashing.
5. Flashing and sheet metal trim.
6. Joint sealants.
7. Metal wall panels.
8. Aluminum-framed entrances and storefront.
9. Glazing.
10. Hollow core roof structure.
11. Roof insulation
12. Standing seam metal roof panels
13. Fiberglass sandwich panels
14. Metal soffit panels
15. Concrete faced panels

F. Photographic Documentation: Document construction of integrated exterior mockups with photographs in accordance with Section 01322-Photographic Documentation. Provide photographs showing details of interface of different materials and assemblies.
   1. Document testing procedures, including water leakage and other deficiencies. Photograph modifications to component interfaces intended to correct deficiencies.

G. Provide and document modifications to construction details and interfaces between components and systems required to properly sequence the Work, or to pass performance testing requirements. Obtain Architect's approval for modifications.

H. Retain approved mockups constructed in place. Incorporate fully into the Work.

PART 3 - EXECUTION (Not Used)

END OF SECTION 01 43 39

SECTION 01 43 39 - MOCKUPS

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Integrated exterior mockups.
   2. Preconstruction laboratory mockups.
   3. Room mockups.

B. Related Requirements:
   1. Section 01400 - Quality Control for quality assurance requirements for aesthetic and workmanship mockups specified in other Sections.

1.02 DEFINITIONS

A. Integrated Exterior Mockups: Mockups of the exterior envelope constructed on-site as freestanding temporary built elements, consisting of multiple products, assemblies, and subassemblies.

B. Preconstruction Laboratory Mockups: Integrated exterior mockups constructed at testing facility to verify performance characteristics.

C. Room Mockups: Mockups of typical interior spaces complete with wall, floor, and ceiling finishes; doors; windows; millwork; casework; specialties; furnishings and equipment; and lighting as indicated.

1.03 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.
   1. Meet with Owner, Architect, testing and inspecting agency representative, and installers of major systems whose Work is included in integrated exterior mockups.
   2. Review coordination of equipment and furnishings provided by the Owner for room mockups.
   3. Review locations and extent of mockups.
   4. Review testing procedures to be performed on mockups.
   5. Review and finalize schedule for mockups, and verify availability of materials, personnel, equipment, and facilities needed to complete mockups and maintain schedule for the Work.

1.04 ACTION SUBMITTALS

A. Shop Drawings: For integrated exterior mockups.
   1. Include plans, elevations, sections, and mounting details.
   2. Indicate manufacturer and model number of individual components, subassemblies, and assemblies.
   3. Include site location drawing indicating orientation of mockup.
   4. Revise and resubmit Shop Drawings to reflect approved modifications in details and component interfaces resulting from changes made during testing procedures.

B. Delegated Design Submittal: For temporary structural supports for mockups not attached to building structure, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.05 QUALITY ASSURANCE

A. Build mockups to do the following:
   1. Verify selections made under Sample submittals.

2. Demonstrate aesthetic effects.
3. Demonstrate the qualities of products and workmanship.
4. Demonstrate acceptable coordination between components and systems.
5. Perform preconstruction testing, such as window air- and water-leakage testing.

B. Fabrication: Before fabricating or installing portions of the Work requiring mockups, build mockups for each form of construction and finish required. Use materials and installation methods as required for the Work.
1. Build mockups of size indicated.
2. Build mockups in location indicated or, if not indicated, as directed by Architect.
3. Employ supervisory personnel who will oversee mockup construction. Employ workers who will be employed to perform same tasks during the construction at the Project.
4. Demonstrate the proposed range of aesthetic effects and workmanship.
5. Maintain mockups during construction in an undisturbed condition as a standard for judging the completed Work.
6. Demolish and remove mockups when directed unless otherwise indicated.

C. Notifications:
1. Notify Architect seven days in advance of the dates and times when mockups will be constructed.
2. Allow seven days for initial review and each re-review of each mockup.

D. Approval: Obtain Architect's approval of mockups before starting fabrication or construction of corresponding Work.
1. Unless otherwise indicated, approved mockups establish the standard by which the Work will be judged.
2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.

1.06 COORDINATION

A. Coordinate schedule for construction of mockups, so construction, testing, and review of mockups do not impact Project schedule.

PART 2 - PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer, as defined in Section 01400-Quality Control to design support structure for free-standing mockups.

2.02 INTEGRATED EXTERIOR MOCKUPS

A. Construct integrated exterior mockups according to approved mockup Shop Drawings. Construct mockups to demonstrate constructability, coordination of trades, and sequencing of Work; and to ensure materials, components, subassemblies, assemblies, and interfaces integrate into a system complying with indicated performance and aesthetic requirements.

B. Design and construct foundation and superstructure to support free-standing integrated exterior mockups.

C. Build integrated exterior mockups using installers and construction methods that will be used in completed construction.

D. Use specified products that have been approved by Architect. Coordinate installation of materials and products specified in individual Specification Sections that include Work included in integrated exterior mockups.

E. The Work of integrated exterior mockups includes, but is not limited to, the following:
1. Precast architectural concrete.

2. Air and weather barriers.
3. Thermal insulation.
4. Through-wall flashing.
5. Flashing and sheet metal trim.
6. Joint sealants.
7. Metal wall panels.
8. Aluminum-framed entrances and storefront.
9. Glazing.
10. Hollow core roof structure.
11. Roof insulation
12. Standing seam metal roof panels
13. Fiberglass sandwich panels
14. Metal soffit panels
15. Concrete faced panels

F. Photographic Documentation: Document construction of integrated exterior mockups with photographs in accordance with Section 01322-Photographic Documentation. Provide photographs showing details of interface of different materials and assemblies.
   1. Document testing procedures, including water leakage and other deficiencies. Photograph modifications to component interfaces intended to correct deficiencies.

G. Provide and document modifications to construction details and interfaces between components and systems required to properly sequence the Work, or to pass performance testing requirements. Obtain Architect's approval for modifications.

H. Retain approved mockups constructed in place. Incorporate fully into the Work.

PART 3 - EXECUTION (Not Used)

END OF SECTION 01 43 39

SECTION 02 41 00 - DEMOLITION

PART 1 - GENERAL

1.01 SUMMARY:

A. This Section includes the removal of existing construction to limits as indicated and specified herein. Demolition includes the complete or partial removal and disposal of materials of the following:
   1. Existing sludge holding basins.
   2. Fencing.
   3. Sidewalks.
   4. Roads.
   5. Bridges and box culverts.
   6. Piping, valves, manholes, vaults.
   7. Conduit, lights, electrical cable.
   8. Light switches, receptacles.
   9. Reinforced concrete panels, embankments, and ramps.
   10. Other items as indicated on Contract Drawings.

B. Related Work Specified Elsewhere:
   1. Site Preparation and Earthwork: SECTION 31 20 50.
   2. Clearing and Grubbing: SECTION 31 11 00.

1.02 REFERENCES:

1.03 SUBMITTALS:

A. Schedule of Demolition:
   1. Submit as specified in DIVISION 1.
   2. Submit proposed methods and operations of demolition for review prior to the start of Work. Include in the schedule the coordination for shutoff, capping, and continuation of utility services as required, together with details for dust, noise, and erosion control protection.
   3. Provide a detailed sequence of demolition and removal work to ensure the

uninterrupted progress of Owner's operations.

B. Submittals for Information Only:
   1. Permits and notices authorizing demolition.
   2. Certificates of severance of utility services.
   3. Permit for transport and disposal of debris.

C. Quality assurance submittals:
   1. Qualifications of non-destructive testing agencies.

D. The Contractor shall prepare a specific, detailed sludge holding basin closure plan. The closure plan should include, at a minimum, the following:
   1. Survey results of the sludge holding basins for existing levels of sludge and decant water.
   2. A characterization of the existing biosolids, including:
      a) General information about the basins and treatment plant.
      b) Operational status of the basins.
      c) Sampling plan proposal describing how and where representative biosolids samples will be collected must be provided, including a layout plan.
   3. Liquid disposal plan, including disposal location and schedule
   4. Solids disposal plan, including disposal location and schedule
   5. Mixing plan and test results for any sludge left in the lagoon
   6. Restoration plan

E. Project record documents.

F. Drawings and/or other media documenting locations of service lines and capped utilities.

1.04 QUALITY ASSURANCE:

A. Qualifications:
   1. Assign removal, cutting, and patching to trades and workers qualified to perform the Work in a manner that causes the least damage.

1.05 REGULATORY REQUIREMENTS:

A. Dispose of debris in accordance with governing regulatory agencies.

B. Comply with applicable air pollution control regulations.

C. Obtain permits for building demolition, transportation of debris to disposal site and dust control.

1.06 JOB CONDITIONS:

A. Do not interfere with use of adjacent structures and elements of the facility not subject to the Work described in this Section. Maintain free and safe passage to and from such facilities or adequate barriers to prevent unsafe passage.

B. Provide, erect, and maintain barricades, lighting, guardrails, and protective devices as required to protect building occupants, public, workers, and adjoining property:
   1. Conduct operations with minimum interference to public or private roadways.

C. Prevent movement, settlement, or collapse of structures adjacent services, driveways, and trees:
   1. Provide and place bracing or shoring.
   2. Cease operations and notify Engineer immediately when safety of structures appears to be endangered. Take precautions to properly support structure. Do not resume operations until safety is restored.
   3. Contractor shall assume liability for movement, settlement, or collapse and promptly

repair damage.

D. Provide and arrange for capping and plugging utility services. Disconnect and stub off.
   1. Notify affected utility company in advance and obtain approval before starting demolition.
   2. Place markers to indicate location of disconnected services.

E. Unknown conditions:
   1. The Contract Drawings may not represent all conditions at the Site and adjoining areas. Compare actual conditions with Contract Drawings before commencement of Work.
   2. Existing utilities and drainage systems below grade are located on the Contract Drawings based on record information from existing documents.
   3. If existing active services encountered are not indicated or otherwise made known to the Contractor and interfere with the permanent facilities under construction, notify the Engineer in writing, requesting instructions on their disposition. Take immediate steps to maintain service, and do not proceed with the Work until written instructions are received from the Engineer.

F. Owner may be continuously occupying areas immediately adjacent to areas of demolition. Conduct demolition Work in a manner that will minimize need for disruption of Owner's normal operations. Provide Owner a minimum of 72 hours' advance notice of demolition activities which will severely impact Owner's normal operations.

G. Condition of Structures to be Demolished:
   1. Owner assumes no responsibility for actual condition of structures to be demolished.

H. Explosives: The use of explosives will not be permitted.

I. Promptly repair damages caused to adjacent facilities by demolition operations at no cost to Owner.

J. Utility Services:
   1. Maintain existing utilities indicated to remain; keep in service and protect against damage during demolition operations.
   2. Do not interrupt existing utilities serving occupied or used facilities, except when authorized in writing by Engineer, Owner, or authorities having jurisdiction. Provide temporary services during interruptions to existing utilities.
   3. Contractor shall shut off utilities serving each structure. Disconnecting and sealing indicated utilities before starting demolition operations shall be done by Contractor.

PART 2 - PRODUCTS - Not Applicable.

PART 3 - EXECUTION

3.01 INSPECTION:

A. Prior to commencement of demolition Work, inspect areas in which demolition will be performed. Photograph existing conditions of structures, surfaces, Equipment, or surrounding properties which could be misconstrued as damage resulting from demolition operations. Submit to Owner prior to starting Work.

3.02 PREPARATION:

A. Locate, identify, stub off, and disconnect utility services that are indicated to remain:
   1. Provide bypass connections as necessary to maintain continuity of service to occupied areas of Site. Provide minimum of 72 hours' advance notice to Owner if

shutdown of service is necessary during changeover.

B. Layout:
   1. The limits of demolition are indicated on the Contract Drawings. Confine demolition operations within the limits indicated on the Contract Drawings.
   2. Lay out demolition and removal work at the Site and coordinate with related Work for which demolition and removal is required. Clearly mark the extent of structural elements to be removed on the actual surfaces that will be removed.
   3. Arrange for Engineer's inspection of the lay out extents.
   4. Do not begin demolition/removal operations until the lay out markings have been reviewed by the Engineer.

3.03 DEMOLITION:

A. Perform demolition in a systematic manner in accordance with ANSI A10.6. Use such methods as required to complete demolition indicated on Contract Drawings in accordance with demolition schedule and governing regulations:
   1. Demolish concrete and masonry in small sections. Cut concrete and masonry at junctures with construction to remain using power-driven masonry saw or hand tools; do not use power-driven impact tools.
   2. Provide services for effective air and water pollution controls as required by local authorities having jurisdiction.
   3. Demolish and remove foundation walls to a depth as indicated on the Contract Drawings. Demolish and remove below-grade wood or metal construction. Break up below-grade concrete slabs and remove where indicated.
   4. Completely fill below-grade areas and voids resulting from demolition. Provide fill consisting of approved earth, gravel, or sand; free of trash and debris, frost and frozen materials, stones over 6 inches in diameter, roots, or other organic matter. Use satisfactory soil materials and place as specified in SECTION 31 20 50 – Site Preparation and Earthwork.
   5. Demolition of Roads or Paved Areas: Break up and remove construction including surface, base, and subbase unless otherwise indicated to remain.
   6. Fences: Remove fence construction including fabric, posts, other components, and any below-grade construction such as concrete.

B. Pollution Controls:
   1. Use water sprinkling, temporary enclosures, and other suitable methods to limit the amount of dust and dirt rising and scattering in the air to the lowest practical level. Comply with governing regulations pertaining to environmental protection.
   2. Do not use water when it may create hazardous or objectionable conditions such as ice, flooding, and pollution.
   3. Clean adjacent structures and area of dust, dirt, and debris caused by demolition operations.

C. If unanticipated mechanical, electrical, or structural elements which conflict with intended function or design are encountered, investigate and measure both nature and extent of the conflict. Submit report to Owner and Engineer in written, accurate detail. Pending receipt of directive from Engineer, rearrange demolition schedule as necessary to continue overall job progress without delay.
   1. Do not remove anything beyond the limits of Work indicated without prior written authorization of the Engineer. If in doubt about whether to remove an item, obtain

written authorization of the Engineer prior to proceeding.

D. Rough grade areas affected by demolition as shown on the Contract Drawings.

3.04 LEAD BASED PAINT:

A. A number of paint coatings at the existing Todd Creek Wastewater Treatment Plant contain lead. When conducting demolition work that disturbs paint containing lead, follow U.S. Environmental Protection Agency (EPA) Regulations, OSHA Lead Regulations 29 CFR 1926.62 for construction or 1910.1025 for General Industry.

B. Contractor shall use lead-trained personnel, develop a lead compliance program, and allow no visible emissions into the environment for demolition activities.

C. Loose lead-containing paint chips and materials contaminated with loose lead-containing paint chips shall be collected for hazardous waste determination. Toxicity characteristic leaching procedure (TCLP) testing must be performed on the material to determine if the waste is hazardous.

1. If the waste is hazardous, the waste will be required to be containerized and disposed of as hazardous waste.

3.05 ASBESTOS CONTAINING MATERIALS (ACM):

A. Asbestos containing materials were surveyed within the Administration Building at the existing Todd Creek Wastewater Treatment Plant.

B. Approximately 80 square feet of black laboratory countertop within the administration building was identified as Category II non-friable ACM.

C. Approximately 1,500 square feet of drywall/joint compound system within the administration building was found to contain less than 1% asbestos.

D. These materials shall be removed prior to building demolition using manual methods that prevent them from being rendered friable.

E. Removal activities shall be conducted by a Missouri-licensed asbestos abatement contractor.

F. Non-friable removal is not regulated by the Kansas City, Missouri department of air quality; however, removal activities must comply with OSHA asbestos regulations 29 CFR 1926.1101.

3.06 MERCURY:

A. Contractor shall assume all fluorescent light tubes and metal-halide lamps to be mercury-containing, even at low concentrations.

3.07 POLYCHLORINATED BIPHENYLS (PCBs):

A. According to the EPA, suspect materials, including transformers and lighting ballasts (unless they are electronic), must be considered positive for PCBs unless the product is clearly marked with a label stating, “NO PCBs.”

B. Light ballasts were observed during the design survey as fluorescent ballasts which are not expected to contain PCBs; however, there is a possibility that light ballasts containing PCBs may be present that were not visually observed.

1. Contractor shall perform pre-demolition survey to verify that no materials to be demolished contain PCBs.

3.08 DISPOSAL OF DEMOLITION MATERIALS:

A. Remove debris, rubbish, and other materials resulting from demolition operations.

B. If hazardous materials are encountered during demolition operations, comply with

applicable regulations, laws, and ordinances concerning removal, handling, and protection against exposure or environmental pollution.

C. Burning of removed materials from demolished structures will not be permitted on Site.

D. Transport materials removed from demolished structures and dispose of off Site.

3.09 DISPOSAL OF LEAD BASED PAINT MATERIALS:

A. Building materials with intact lead paint may be eligible for disposal at a recycling facility, or a construction and demolition (C&D) or municipal solid waste (MSW) facility pending landfill notification and pre-approval by the facility accepting the lead-containing waste.

B. Contractor is required to obtain all approvals and manage all disposal.

3.10 DISPOSAL OF ASBESTOS CONTAINING MATERIALS (ACM):

A. While not regulated, non-friable ACM that is not rendered friable during abatement or demolition activities and materials containing less than 1% asbestos must be properly disposed in an approved landfill in accordance with solid waste laws. The disposal facility shall be contacted prior to disposal for information on packaging and delivery requirements.

3.11 DISPOSAL OF MERCURY:

A. Contractor shall handle mercury-containing products carefully, without breaking, and pack and dispose of the lamps as universal waste per regulations set forth in 40 CFR.273.

B. Contractor shall have a mercury spill kit with trained personnel available in the event that a mercury-containing product breaks.

3.12 DISPOSAL OF POLYCHLORINATED BIPHENYLS (PCBs):

A. During removal of light fixtures, Contractor shall check the label on each lighting ballast. If the ballast was manufactured prior to 1979 and is not labeled as “non-PCB”, it should be segregated from the non-PCB electronic ballasts and sent to a reputable recycler for disposal as PCB-containing waste.

3.13 DISPOSAL OF SOLIDS FROM EXISTING PROCESS BASINS:

A. All residuals from the existing process basins and the sludge holding basins shall be removed by Owner prior to structure demolition.

3.14 SLUDGE HOLDING BASINS CLOSURE:

A. Contractor shall be responsible for sludge holding basin closure, including preparation of a closure plan for the existing Todd Creek Wastewater Treatment Plant sludge holding basins and obtaining approval of this plan from the Missouri Department of Natural Resources (MDNR). Contractor’s sludge holding basin closure plan shall be provided to the Owner a minimum of thirty (30) days prior to initiating demolition work.

B. The closure plan shall be prepared in accordance with the MDNR Standard Condition Part III and the Wastewater Treatment Plant Closure PUB2568.

1. The closure plan will include a characterization of the biosolids, including:
   a. General information about the basins and treatment plant.
   b. Operational status of the basins.
   c. Sampling plan proposal describing how and where representative biosolids samples will be collected including a layout plan.
2. Owner will be responsible for dewatering and removal of sludge in basins prior to demolition. However, at no additional cost to Owner, Contractor shall remove and dispose of any remaining water and sludge from the basins according to procedures

described in this Section.

C. Contractor shall complete necessary sampling and documentation for sludge land application according to Standard Condition Part III and/or 40 CFR 503.
   1. Fecal coliform testing shall be completed to show compliance with Class B biosolids limitations. Fecal coliform must be less than two million colony forming units or two million most probable number to meet Class B biosolids requirements.
   2. All fecal samples must be presented as geometric mean per gram.
   3. Sludge not meeting the Class B requirements or PAN loading limits, shall be sent to a landfill.
   4. The allowable nitrogen loading that may be left in the lagoon shall be based on the plant available nitrogen (PAN) loading. The allowable PAN for a grass cover crop is 300 pounds/acre.
   5. Alternatively, site-specific application rates may be included in the closure plan for department consideration. PAN can be determined as noted in MDNR's Standard Condition Part III.
   6. Contractor shall provide additional soil as required to meet these requirements.
D. The sludge holding basin area shall be graded in accordance with the Contract Drawings and seeded to obtain ≥70% vegetative density over 100% of the site, to avoid ponding of storm water and provide adequate surface water drainage without creating erosion.

3.15 CLEANUP AND REPAIR:

A. Upon completion of demolition Work, remove tools, equipment, and demolished materials from site. Remove protections and leave interior areas broom clean.
B. Repair demolition performed more than that required. Return structures and surfaces that will remain to condition existing prior to commencement of demolition Work. Repair adjacent construction or surfaces soiled or damaged by demolition Work.

3.16 RESTORATION:

A. General:
   1. Repair damage caused by demolition to conditions equal to those that existed prior to beginning of demolition.
B. The cost of repairs shall be at the Contractor's expense, and no increase in the Contract Price.
C. Restore areas affected by removal of existing equipment, equipment pads and bases, piping, supports, electrical panels, electric devices, and conduits such that little or no evidence of the previous installation remains:
D. Remove concrete bases for equipment and supports by:
   1. Sawcutting clean, straight lines with a depth equal to the concrete cover over reinforcement minus 1/2-inch below finished surface.
E. Chip concrete within scored lines and cut exposed reinforcing steel and anchor bolts.
F. Terminate abandoned piping and conduits with blind flanges, caps, or plugs.

END OF SECTION 02 41 00

DIVISION 03 - CONCRETE

SECTION 03 10 00 – CONCRETE FORMWORK

PART 1 - GENERAL

1.01 RELATED DOCUMENTS:

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY:

A. This Section includes formwork for cast-in-place concrete.

1.03 RELATED REQUIREMENTS:

A. Section 03 20 00 – Concrete Reinforcement.
B. Section 03 30 00 – Concrete.

1.04 REFERENCE STANDARDS:

A. Applicable Standards:
   1. American Concrete Institute (ACI):
      a. ACI 117 - Specifications for Tolerances for Concrete Construction and Materials.
      b. ACI 301- Specifications for Structural Concrete.
      c. ACI 318 - Building Code Requirements for Reinforced Concrete.
      d. ACI 347R - Guide to Formwork for Concrete.
      e. ACI 350 - Code Requirements for Environmental Engineering Concrete Structures.
      f. ACI 350.5 - Specifications for Environmental Concrete Structures.
   2. ASTM International (ASTM):
      a. ASTM C31/C31M REV A– Standard Practice for Making and Curing Concrete Test Specimens in the Field.
      b. ASTM C39/C39M - Standard Test Method for Compressive Strength of Cylindrical Concrete Specimens.
      c. ASTM C1077 - Standard Practice for Laboratories Testing Concrete and Concrete Aggregates for Use in Construction and Criteria for Laboratory Evaluation.

1.05 SUBMITTALS:

A. Include, but not limited to, the following:
   1. Type of form ties, waterstop device and patching detail for water containing structures. If more than one type of form tie is proposed, indicate the proposed locations for each.

PART 2 - PRODUCTS

2.01 MATERIALS FOR FACING:

A. Where concrete will be exposed to view after construction:
   1. Use exterior grade plywood at least 5/8 inch thick or steel forms capable of producing a smooth, uniform appearance.
   2. Do not use form-facing materials with raised grain, torn surfaces, worn edges, dents, or other defects that will impair the texture of concrete surfaces.
B. Where concrete will not be exposed to view after construction:
   1. Exterior grade plywood at least 5/8 inch thick.
   2. Steel.
   3. Wood fiberboard.

4. Dressed lumber free of loose knots.

C. Treat forms with commercially available form releasing agents that will not bond with, stain, or adversely affect concrete surfaces. Agents shall not impair subsequent treatment of concrete surfaces depending upon bond or adhesion, nor shall it impede the wetting of surfaces to be cured with water or curing compounds. Form releasing agents shall be VOC compliant with a maximum VOC content of 3.8 lbs./gal. (450 g/L), or less where area restrictions are more stringent.

D. Clean forms of sawdust, dust, dirt, and other foreign materials.

2.02 FORM TIES:

A. Break back, coil, or screw type, except where otherwise specified.

B. Use water-seal coil type in walls below grade and in walls of water bearing structures. Removable through-wall tapered ties shall not be used.

C. Coil type shall leave conical depression in concrete.

D. Space as required against pressure of fresh concrete.

E. The portion of the form tie remaining in place shall provide for a clearance of two times the minimum dimension of the tie, but not less than 3/4 inch, from the formed surface.

2.03 CHAMFER STRIPS:

A. Chamfer: 3/4 inch except where otherwise indicated.

B. Place in all forms to provide chamfer where concrete will have exposed projecting corners.

PART 3 - EXECUTION

3.01 FORM CONSTRUCTION:

A. Conform to ACI 301, 318, and 347R. Shop Drawings for formwork, shoring, and reshoring are not required to be submitted for approval.

B. Adequately brace, stiffen, and support forms to prevent perceptible deflection or settlement, and to hold plumb, level, and true to line.

C. Construct and maintain forms to the tolerances given in ACI 117.

D. Construct sufficiently tight to prevent mortar leakage.

E. Avoid offsets between adjacent forms and construct so that shores, braces, and stiffening members are in line with those below.

F. Space studs and stringers as required to support facing against concrete pressure, but not more than 12 inches for 5/8-inch plywood or 16 inches for 3/4-inch plywood. Maximum deflection of facing materials reflected on concrete surfaces exposed to view shall be 1/240 of the span between structural members of the formwork.

G. Use wales, strongbacks, shores, and bracing as required.

H. Form all necessary openings or chases for piping, ductwork, and similar items where indicated or as required for the Work.

I. Construct forms to be removable in sections without marring concrete surface.

J. Surface of forms shall provide a smooth, dense, plane surface to finished concrete where exposed to view.

K. Contractor shall be responsible for structural adequacy, design, engineering, and construction of the formwork.

L. Stay-in-place metal forms shall not be used.

3.02 TIME-IN-PLACE FOR FORMS:

A. It is the responsibility of Contractor to consider all applicable factors and leave the formwork in place until it is safe to remove them.

B. All removal shall be performed in a manner which will prevent damage to the concrete and ensure the complete safety of the structure.

C. Where forms support more than one element, the forms shall not be removed until the form removal criteria are met by all supported elements.

D. Evidence that concrete has gained sufficient strength to permit removal of forms shall be determined by tests on control cylinders. All control cylinders shall be stored in the structure or as near the structure as possible, so they receive the same curing conditions and protection methods as given those portions of the structure they represent. Control cylinders shall be removed from the molds at an age of no more than 24 hours. All control cylinders shall be prepared and tested in accordance with ASTM C31/C31M REV A and ASTM C39/C39M at the expense of Contractor by an independent laboratory that complies with ASTM C1077. Control cylinders shall be tested within 4 hours after removal from the Site.

E. Forms shall not be removed unless the minimum time or minimum compressive strength requirements below are met.

1. Formwork Not Supporting Weight of Concrete:
    a. Formwork for walls, columns, sides of beams, gravity structures, slabs-on-ground and other vertical type formwork not supporting the weight of concrete shall remain in place 24-hours minimum after concrete placement is completed.
2. Formwork Supporting Weight of Concrete:
    a. Formwork supporting weight of concrete and shoring shall not be removed until structural members have acquired sufficient strength to safely support their own weight and any construction or other superimposed loads to which the supported concrete may be subjected. As a minimum, no forms or shoring shall be loosened or removed until control concrete test cylinders indicate the concrete has attained the following compressive strengths for the respective structural members:

Structural Member	Percent of Design Compressive Strength
Unshored slab and beam forms or forms which can be removed without disturbing shores	70
Slab or beam shoring	85

END OF SECTION 03 10 00

SECTION 03 15 50 – VAPOR RETARDER

PART 1 - GENERAL

1.01 RELATED DOCUMENTS:

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and DIVISION 01 Specification Sections, apply to this Section.

1.02 SUMMARY:

A. This Section includes vapor retarder under concrete slabs on grade.

1.03 RELATED WORK SPECIFIED ELSEWHERE:

A. Section 03 30 00 - Concrete.

1.04 REFERENCE STANDARDS:

A. Applicable Standards:
   1. American Concrete Institute (ACI):
      a. 302.1R- Guide to Concrete Floor and Slab Construction
      b. 302.2R - Guide for Slabs that Receive Moisture-Sensitive Flooring Materials
   2. American Society for Testing and Materials (ASTM):
      a. E96/E96M - Test Methods for Water Vapor Transmission of Materials.
      b. E154/E154M- Test Methods for Water Vapor Retarders Used in Contact with Earth Under Concrete Slabs, on Walls, or as Ground Cover.
      c. E1643- Standard Practice for Selection, Design, Installation, and Inspection of Water Vapor Retarders Used in Contact with Earth or Granular Fill Under Concrete Slabs
      d. E1745 - Plastic Water Vapor Retarders Used in Contact with Soil or Granular Fill Under Concrete Slabs.

1.05 SUBMITTALS:

A. Submit as specified in DIVISION 01.
B. Include, but not limited to, the following:
   1. Product specification and data.
   2. Installation instructions.

PART 2 - PRODUCTS

2.01 VAPOR RETARDER:

A. Flexible, preformed sheet membrane material conforming to ASTM E1745, Class A or B having a minimum thickness of 10 mils.
B. Use under concrete slabs as follows:
   1. Admin Building
   2. Headworks Building
   3. UV Disinfection Building
   4. Solids Handling Building
   5. Blower Building
   6. Influent Pump Station Electrical Building

PART 3 - EXECUTION

3.01 INSTALLATION:

A. Install in accordance with ASTM E1643 and the following.
B. Remove sharp edges, projecting materials, and roughness which might penetrate vapor retarder.
C. Level and tamp or roll granular base.
D. Place vapor retarder sheeting with the longest dimension parallel with the direction of the concrete pour.
E. Lap vapor retarder over footing or seal to foundation wall, or both, and seal around penetrations such as utilities and columns to create a monolithic membrane between the surface of the slab and moisture sources below the slab and at the slab perimeter.
F. Lap joints 6 inches, or as instructed by the manufacturer, and seal with the manufacturer's recommended adhesive or pressure sensitive tape, or both.
G. Take precaution to protect vapor retarder from damage during installation of reinforcing steel and utilities and during placement of concrete.
H. Use only concrete brick type reinforcing bar supports, or provide 6-inch by 6-inch protective pads of asphaltic hardboard or other material recommended by the vapor retarder manufacturer to protect the vapor retarder from puncture.
I. Do not drive stakes through the vapor retarder.
J. Repair vapor retarder damaged during placement of reinforcing or concrete as instructed by manufacturer.

END OF SECTION 03 15 50

SECTION 03 20 00 – CONCRETE REINFORCEMENT

PART 1 - GENERAL

1.01 RELATED DOCUMENTS:

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and DIVISION 01 Specification Sections, apply to this Section.

1.02 SUMMARY:

A. This Section includes steel reinforcement bars, ties, welded wire fabric, bolsters, chair supports, and accessories.

1.03 RELATED WORK SPECIFIED ELSEWHERE:

A. Section 03 10 00 - Concrete Formwork.
B. Section 03 30 00 - Concrete.

1.04 REFERENCE STANDARDS:

A. Applicable Standards:
   1. American Society for Testing and Materials (ASTM):
      a. A615/A615M- Deformed and Plain Carbon Steel Bars for Concrete Reinforcement.
      b. A706/A706M- Low-Alloy Steel Deformed and Plain Bars for Concrete Reinforcement.
      c. A1064/A1064M– Carbon-Steel Wire and Welded Wire Reinforcement, Plain and Deformed, for Concrete
   2. American Concrete Institute (ACI):
      a. 301- Specifications for Structural Concrete.
      b. SP 66 - Detailing Manual.
      c. 318- Building Code Requirements for Structural Concrete.
      d. 117 - Specifications for Tolerances for Concrete Construction and Materials.
   3. American Welding Society (AWS):
      a. A5.5 - Low Alloy Steel Electrodes for Shielded Metal Arc Welding.
      b. B2.1 - Welding Procedure and Performance Qualification.
      c. D1.4- Structural Welding Code Reinforcing Steel.
   4. Concrete Reinforcing Steel Institute (CRSI):
      a. Manual of Standard Practice.

1.05 SUBMITTALS:

A. Submit as specified in DIVISION 01.
B. Include, but not limited to, the following:
   1. Complete bar schedule, bar details, and erection drawings to conform to ACI SP 66.
   2. Drawing with each type of bent bar marked with identification mark. Straight bars shall have mark number or be identified by size and length.
   3. Erection drawings shall be clear, easily legible, and to a minimum scale of:
      a. 1/4 inch = 1 foot (1:50).
      b. 1/8 inch = 1 foot (1:100) if bars in each face are shown in separate views.
   4. Size and location of all openings.
   5. Concrete protective cover.
   6. Grade of steel.
   7. Lap splice lengths.

1.06 DELIVERY, STORAGE, AND HANDLING:

A. Store steel reinforcement blocked up off the ground and in orderly stacks.
B. Store only bars with the same identifying label in the same stack.

1.07 TESTING:

A. Perform at the mill for each heat.
B. Submit certified test results upon request.

PART 2 - PRODUCTS

2.01 REINFORCEMENT BARS, TIES, AND STIRRUPS:

A. Materials:
   1. Conform to ASTM A615, Grade 60, except as otherwise specified.
   2. Cold-drawn wire for spiral column ties shall conform to ASTM A1064.
   3. Reinforcement indicated or specified to be welded shall conform to ASTM A706.
B. Fabrication of Bars:
   1. Fabricate with cold bends conforming to the recommended dimensions shown in ACI 318.
   2. Fabricate bars according to the tolerances given in ACI 117.
   3. Field fabrication will be allowed only if Contractor has equipment to properly fabricate steel.
   4. Attach metal or plastic tags with identifying mark or length corresponding to mark number or length on Drawing. Straight bars shall have mark number or size and length. Bent bars shall have mark number.
   5. Contractor may, at his option, continue steel reinforcement through openings in walls and slabs, then field-cut the opening so that there will be the required concrete cover between ends of bars and edge of opening.

2.02 WELDED WIRE REINFORCEMENT:

A. Conform to ASTM 1064.
B. Wire sizes W1.4 and smaller shall be galvanized.
C. Provide mats only. Rolled fabric is not acceptable.

2.03 BOLSTERS, CHAIRS, AND ACCESSORIES:

A. Conform to ACI SP 66 and the CRSI Manual of Standard Practice.
B. Provide all spacers, bolsters, chairs, ties, and other devices necessary to properly space, place, support, and fasten steel reinforcement in place during the concrete placement.
C. Metal accessories shall be galvanized or plastic-coated where legs will be exposed in finished concrete surfaces.
D. Do not use rocks, broken bricks, wood blocks, or concrete fragments for support of steel reinforcement.

2.04 PRECAST CONCRETE BLOCK BAR SUPPORTS:

A. May be used only for bar supports in slabs on ground.
B. Conform to ACI SP-66 and the CRSI Manual of Standard Practice.
C. Each block shall have a minimum of 9 square inches (5800 square millimeters) of bearing area. Space as required by the particular condition of weight, bearing surface, and rigidity of the steel reinforcement.

PART 3 - EXECUTION

3.01 PLACEMENT OF STEEL REINFORCEMENT:

A. Place all steel reinforcement before concrete is cast in accordance with approved erection drawings, ACI 117, ACI 318, and the CRSI Manual of Standard Practice.
B. Remove oil, mill scale, pitting, mud, loose rust, ice, and other materials that would reduce bond from bars before placing.
C. Tie securely with 16 gage (1.6 mm) or larger annealed iron wire.
D. Place to maintain concrete cover to conform to ACI 117 and ACI 318, unless otherwise indicated.
E. Splice steel where indicated. Splices shall be in full contact and shall conform to ACI 318.
    1. Unless otherwise indicated, lap splices shall be Class B as defined by ACI 318.
    2. Splice steel using Cadweld Series T-splices where indicated or approved.
        a. Provide a manufacturer's representative to give on site instructions to all welders who will perform the splices in the field.
        b. Contractor shall have the manufacturer's representative instruct, observe, and approve in writing those persons doing the welding.
        c. Contractor shall arrange for the manufacturer's representative to return at the request of the Engineer.
    3. Lenton Mechanical Splices:
        a. Lenton mechanical splices shall be used where indicated or approved.
        b. The Lenton mechanical splices shall develop in tension and compression at least 125% of the yield strength (Fy) of the bar spliced.
        c. Lenton mechanical splices shall be positive locking, taper threaded type coupler.
    4. Splices in members indicated as "tension tie members" shall be made with Cadweld Series T-splices or Lenton mechanical splices in accordance with ACI 318.
    5. Any additional Contractor-proposed splice shall be submitted for acceptance of location and splice length.
F. Lap welded wire reinforcement in accordance with ACI 318, but not less than the length of one mesh plus 2 inches (50 mm).
G. Connection of reinforcement bars to steel shapes or plate shall be with a Cadweld Series B-splice.
H. Do not bend bars embedded in hardened or partially hardened concrete without approval from Engineer. If bending is permitted, conform to procedures of ACI 301 unless otherwise prescribed by the governing building code.
I. Do not weld reinforcing bars unless specifically indicated. Where welding is indicated, provide bars conforming to ASTM A706/A706M and comply with AWS D1.4.

END OF SECTION 03 20 00

SECTION 03 30 00 – CONCRETE

PART 1 - GENERAL

1.01 RELATED DOCUMENTS:

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY:

A. This Section includes concrete and related items.

1.03 RELATED REQUIREMENTS:

A. Section 03 10 00 - Concrete Formwork.
B. Section 03 15 50 - Vapor Retarder.
C. Section 03 20 00 - Concrete Reinforcement.
D. Section 05 05 19 - Post-Installed Concrete Anchors
E. Section 05 12 00 - Steel.
F. Section 09 90 00 - Protective Coatings.

1.04 REFERENCE STANDARDS:

A. Comply with the provisions of the following codes, specifications, and standards, except as otherwise indicated.
B. Publication Dates: Comply with standards in effect as of date of the Contract Documents unless otherwise indicated.
    1. American Concrete Institute (ACI):
        a. 211.1 - Standard Practice for Selecting Proportions for Normal, Heavyweight, and Mass Concrete.
        b. 301 - Specifications for Structural Concrete.
        c. 302.1R - Guide for Concrete Floor and Slab Construction.
        d. 304R - Guide for Measuring, Mixing, Transporting, and Placing Concrete.
        e. 305.1 – Specification for Hot Weather Concreting
        f. 306R - Committee Report on Cold Weather Concreting.
        g. 306.1 – Standard Specification for Cold Weather Concreting
        h. 308.1 - Standard Specification for Curing Concrete.
        i. 309R - Guide for Consolidation of Concrete.
        j. 318 - Building Code Requirements for Structural Concrete.
        k. 350 - Environmental Engineering Structures.
        l. 350.1 - Tightness Testing of Environmental Concrete Structures.
        m. 350.5 - Specifications for Environmental Concrete Structures
    2. ASTM International (ASTM):
        a. B370 - Copper Sheet and Strip for Building Construction.
        b. C31/C31M - Practice for Making and Curing Concrete Test Specimens in the Field.
        c. C33 - Concrete Aggregates.
        d. C39 - Test Method for Compressive Strength of Cylindrical Concrete Specimens.
        e. C40 - Test Method for Organic Impurities in Fine Aggregates for Concrete.
        f. C42 - Test Method for Obtaining and Testing Drilled Cores and Sawed Beams of Concrete.
        g. C88 - Test Method for Soundness of Aggregates by Use of Sodium Sulfate or Magnesium Sulfate.

h. C114 - Test Methods for Chemical Analysis of Hydraulic Cement.
i. C117 - Test Method for Material Finer than 75µ (No. 200) Sieve in Mineral Aggregates by Washing.
j. C136 - Test Method for Sieve Analysis of Fine and Coarse Aggregates.
k. C142 - Test Method for Clay Lumps and Friable Particles in Aggregates.
l. C143 - Test Method for Slump of Hydraulic Cement Concrete.
m. C150 - Portland Cement.
n. C172 - Practice for Sampling Freshly Mixed Concrete.
o. C192/C192M - Practice for Making and Curing Concrete Test Specimens in the Laboratory.
p. C231 - Test Method for Air Content of Freshly Mixed Concrete by the Pressure Method.
q. C233 - Test Methods for Air-Entraining Admixtures for Concrete.
r. C260 - Air-Entraining Admixtures for Concrete.
s. C289 - Test Method for Potential Alkali-Silica Reactivity of Aggregates (Chemical Method).
t. C309 - Liquid Membrane-Forming Compounds for Curing Concrete.
u. C430 - Test Method for Fineness of Hydraulic Cement by the 45µ (No. 325) Sieve.
v. C494 - Chemical Admixtures for Concrete.
w. C566 - Test Method for Total Evaporable Moisture Content of Aggregate by Drying.
x. C595/C595M - Blended Hydraulic Cements.
y. C618 - Coal Fly Ash and Raw or Calcined Natural Pozzolan for Use in Concrete.
z. C881 - Epoxy-Resin-Base Bonding Systems for Concrete.
aa. C1012 - Standard Test Method for Length Change of Hydraulic-Cement Mortars Exposed to a Sulfate Solution
bb. C1107 - Packaged Dry, Hydraulic Cement Grout (Nonshrink).
cc. C1193 - Guide for Use of Joint Sealants.
dd. C1218 - Standard Test Method for Water-Soluble Chloride in Mortar and Concrete.
ee. C1260 - Standard Test Method for Potential Alkali Reactivity of Aggregates (Mortar-Bar Method)
ff. C1293 - Standard Test Method for Determination of Length Change of Concrete Due to Alkali-Silica Reaction
gg. C1315 - Liquid Membrane-Forming Compounds Having Special Properties for Curing and Sealing Concrete.
hh. C1567 - Standard Test Method for Determining the Potential Alkali-Silica Reactivity of Combinations of Cementitious Materials and Aggregate (Accelerated Mortar-Bar Method)
ii. C1602 – Standard Specification for Mixing Water Used in the Production of Hydraulic Cement Concrete.
jj. C1778 - Standard Guide for Reducing the Risk of Deleterious Alkali-Aggregate Reaction in Concrete
kk. D1751 - Preformed Expansion Joint Filler for Concrete Paving and Structural Construction. (Nonextruding and Resilient Bituminous Types).
ll. D1752 - Preformed Sponge Rubber, Cork and Recycled PVC Expansion Joint Fillers for Concrete Paving and Structural Construction.

3. Concrete Plant Manufacturers Bureau (CPMB):
   a. 100 - Concrete Plant Standards.

b. 102 - Recommended Guide Specifications for Batching Equipment and Control Systems in Concrete Batch Plants.

4. Plant Mixer Manufacturers Division (PMMD):
   a. 100 - Concrete Plant Mixer Standards.
5. Federal Specification (FS):
   a. SS-S-200 - Sealants, Joint: Two-Component, Jet-Blast-Resistant, Cold-Applied, for Portland Cement Concrete Pavement.
   b. TT-S-227 - Sealing Compound: Elastomeric Type, Multi-Component (for Calking, Sealing, and Glazing in Buildings and Other Structures).
6. National Bureau of Standards (NBS) Specifications for Scales.
7. Truck Mixer Manufacturers Bureau (TMMB):
   a. Truck Mixer, Agitator and Front Discharge Concrete Carrier Standards.

1.05 SUBMITTALS:

A. Submit as specified in Division 01.

B. Include, but not limited to, product data and Shop Drawings of the following:
   1. Nonshrink grouts.
   2. Admixtures.
   3. Bonding agents.
   4. Curing agents.
   5. Floor hardeners, sealers, and coloring compounds
   6. Expansion joint materials.
   7. Formwork spray agents.
   8. Joint sealants.
   9. Waterstops.
   10. Construction joint layout plan.
   11. Concrete pour sequence plan.

C. Mill Certificates:
   1. Submit to Engineer a minimum of one copy for each cement shipment.

D. Concrete Mix Design:
   1. Submit the following test data for each mix design for approval prior to placing concrete. Resubmit for any change in each mix design
      a. Concrete:
         (1) Fine and coarse aggregate, water, and cement sources.
         (2) Mix proportions, slump, and air content.
         (3) Data on 30 consecutive satisfactory compressive strength tests and standard deviation calculations, laboratory trail batch strength curves.
            (a) Strength tests shall include any Type D admixtures used in final mix design.
         (4) Dry shrinkage test results
      b. Cement:
         (1) Mill certificate.
         (2) ASTM C430.
      c. Fine Aggregate:
         (1) ASTM C33.
         (2) ASTM C40.
         (3) ASTM C88.
         (4) ASTM C117.
         (5) ASTM C136.

(6) ASTM C142.
(7) Fineness modulus.
(8) ASTM C1260 or approved service records.

d. Coarse Aggregate:
(1) ASTM C33.
(2) ASTM C88.
(3) ASTM C136.
(4) ASTM C142.
(5) ASTM C1260 or approved service records.

E. Construction Joint layout
1. Dimensioned drawings showing location of all wall and slab construction joints.

1.06 QUALITY ASSURANCE:

A. Field Testing: Shall be performed by an ACI Concrete Field-Testing Technician Grade 1.
1. Reference Section 3.09 for concrete testing requirements.

B. Submit qualification records of field testing technicians prior to placing concrete.

PART 2 - PRODUCTS

2.01 CONCRETE:

A. Materials:
1. Cementitious Material: Use the following cementitious materials, of the same type, brand, and source, throughout Project:
a. Portland cement shall conform to ASTM C595 Type IL. Supplement with the following:
(1) 15 to 25% Fly ash may be used as the pozzolan. Fly ash shall conform to ASTM C618, Class F.
(2) Ground Granulated Blast-Furnace Slag: ASTM C989, Grade 100 or 120. Content shall not exceed 50% of total cementitious content.
b. The maximum amount retained on the No. 325 sieve shall be 10% as determined in accordance with ASTM C430.
c. The maximum amount of alkalis ($NA_2O + 0.658\ K_2O$) shall be 0.60% determined in accordance with ASTM C114.
d. Use one brand of cement throughout the Project unless otherwise approved by Engineer.
2. Fine Aggregate:
a. Conform to ASTM C33.
b. Fineness modulus shall be between 2.3 and 3.1.
c. Approved service record of 3 years with a history indicating that the fine aggregate is not chemically reactive.
d. For a new fine aggregate source, or when 3 years' approved service records are not available, or when the service records are unacceptable; the aggregate shall be evaluated for potential reactivity. Aggregate must be considered innocuous in accordance with petrographic examination by ASTM C295 or when tested in accordance ASTM C1260.
e. Fine aggregate considered deleterious or potentially deleterious shall not be used without approval.
f. Maintain fine aggregate free of ice and frozen lumps.
3. Coarse Aggregate:

a. Conform to ASTM C33.
(1) Limits for deleterious substances and physical property requirements shall conform to Table 4 and applicable class designation 5S, 5M, or 1N.
b. Approved service record of 3 years with a history indicating that the coarse aggregate is not chemically reactive.
c. For a new coarse-aggregate source, when 3 years' approved service records are not available, or when the service records are unacceptable; the aggregate shall be evaluated for potential reactivity. Aggregate must be considered innocuous in accordance with petrographic examination by ASTM C295 or when tested in accordance with ASTM C1260.
d. Coarse aggregate considered deleterious or potentially deleterious shall not be used without approval.
e. Maintain coarse aggregate free of ice and frozen lumps.
f. Grading Requirements:
(1) Size No. 57, from 1-inch to No. 4 sieve for all concrete unless otherwise specified.
(2) From 3/8-inch to No. 4 sieve for topping concrete.

4. Mixing Water:
a. Only potable water will be acceptable.
5. Admixtures:
a. Water-Reducing Type:
(1) Conform to ASTM C494, Type A, D, F, and G.
(2) Conform to manufacturer's recommendations for use.
(3) Technical assistance of the manufacturer's field representative shall be furnished upon request.
b. Air-Entraining Type:
(1) Conform to ASTM C260.
(2) Conform to manufacturer's recommendations for use.
(3) Technical assistance of the manufacturer's field representative shall be furnished upon request.
c. Color: For electrical duct banks only, use a red dye additive mixed into the concrete.
d. Admixtures shall not contain any chloride ions.
e. Storage: Admixtures shall be stored in such a manner as to avoid contamination, evaporation, freezing, temperature changes, settling, or any damage which would adversely affect their characteristics.

B. Laboratory Testing of Materials for Use in Concrete:
1. An approved independent testing laboratory shall be selected and paid by Contractor to perform all required laboratory tests of materials proposed for use in the production of concrete and to determine mix proportions when laboratory trial batches are required.

C. Concrete Qualities Required:
1. Minimum 28-day compressive strength:
a. Structural concrete for liquid-holding structures: 4,500 psi.
b. Structural concrete for all construction unless otherwise indicated: 4,000 psi.
c. Roof Topping: 4,000 psi
d. Electrical Duct Banks: 4,000 psi
e. Pavements, Curbs, Gutters, Sidewalks, and drainage pavements: 4,000 psi.
f. Concrete Fill: 2,000 psi.

g. Compressive-strength determinations shall be made from 4-inch diameter by 8-inch long or 6-inch diameter by 12-inch long concrete cylinders tested in accordance with ASTM C39.

2. Concrete Slump:
   a. All concrete unless otherwise indicated: 2 to 4 inches prior to the addition of water reducing admixtures.
   b. Roof Topping: 4 to 6 inches.
   c. Electrical Duct Banks: 4 to 6 inches.
   d. Slump of concrete shall not exceed 8 inches including the effects of all water reducing admixtures.
   e. Slump of concrete shall be tested in accordance with ASTM C143. If the contractor wishes to use a mix with a slump outside the range listed above, the written approval from the engineer of record is required prior to mix design submittal.
3. Air Content:
   a. Structural concrete and all concrete unless otherwise indicated: 6% ±1.5%.
   b. Interior concrete slabs receiving vehicular or pedestrian traffic: 3% maximum.
   c. Roof Topping: 6% ±1.5%.
   d. Pavements, Curbs, Gutters, Sidewalks, and drainage pavements: 6% ±1.5%.
   e. Testing shall be in accordance with ASTM C231.
4. Water-Cement Ratio:
   a. In addition to the aforementioned requirements, water-cement ratios shall be limited as follows:
      (1) Water and Chemical Containing Elements: 0.40
      (2) All other elements: 0.45
5. Dry shrinkage shall not exceed 0.040 percent when tested in accordance with ASTM C157 for concrete used in liquid and chemical retaining structures.
6. Chloride Ion Content:
   a. Maximum water-soluble chloride ion content, in percent by weight of cement:
      (1) 0.10 for all concrete unless otherwise specified.
   b. Testing shall be in accordance with ASTM C1218.

D. Mix Proportions:
1. Concrete shall be homogeneous, readily placeable, uniformly workable, and finishable; proportioned to conform to ACI 211.1.
   a. Mix proportions for all concrete, unless otherwise specified, shall be selected preferably on the basis of field experience; but in the case where sufficient or suitable strength test data is not available, concrete shall be proportioned on the basis of laboratory trial mix design.
   b. Field experience using test results within the preceding year, with the materials and plant to be employed may be the basis of mix proportioning, provided that not less than 30 consecutive satisfactory compressive strength tests on concrete using the proposed materials with a similar mix are available. A compressive strength test is defined as the average 28-day compressive strength of two 6-inch by 12-inch or three 4-inch by 8-inch companion cylinders made conforming to ASTM C172 and ASTM C31 and tested conforming to ASTM C39
      (1) The standard deviation of compressive strength tests shall be computed as a basis for design of the mix. The design average compressive strength shall exceed the specified strength by at least:
         (a) 400 psi if standard deviation is less than 300 psi
         (b) 550 psi if standard deviation is 300 to 400 psi.

(c) 700 psi if standard deviation is 400 to 500 psi.
(d) 900 psi if standard deviation is 500 to 600 psi.
(e) 1,200 psi if standard deviation is greater than 600 psi.

c. Laboratory Trial Batch: When laboratory trial batches are used as a basis for determining mix proportions, all such Work shall be performed by the laboratory as specified in PART 2, Paragraph 2.01.B. - Laboratory Testing of Materials for Use in Concrete, this Section.
(1) Laboratory trial batches shall be used to establish a water-cement ratio, compression-strength curve, with at least three points, each representing the strength of a separate trial batch. At least one point shall be above and one below the strength required. Each point on the curve shall represent the average of at least three cylinders tested at 28 days or an earlier age when approved by Engineer. The slump and air content shall be at the maximum limits specified in PART 2, Paragraph 2.01.C. - Concrete Qualities Required, this Section.
(2) A point on the water-cement ratio, compressive-strength curve shall be selected that will provide an average compressive strength at least 1,200 psi greater than the specified minimum strength.
(3) Laboratory trial batches shall be used to determine the drying shrinkage of concrete trial mixes. A drying shrinkage test shall be conducted for every mix design proposed for the project. Drying shrinkage tests shall be conducted including all admixtures required in proposed mix designs. Three test specimens shall be prepared for each drying shrinkage test. Test specimens (4 inch by 4 inch by 11 inch prisms) shall be molded, cured, dried, and measured in accordance with ASTM C157 except with modifications listed below.
(a) After 7 days in the lime saturated water the specimen shall be removed and measured to determine the base length for drying shrinkage calculations. This point shall be considered day zero for time measurement. Specimens shall be immediately placed in a humidity-controlled room maintained at 73° F, ±3°F and 50 percent, ±4 percent relative humidity for the remainder of the test (21 days after day zero measurement). Final length measurement shall be conducted at 28 days after the addition of water to the cement during the mixing operations.

2. Mix proportions for roof or floor topping course:
a. Max Aggregate size 3/8-inch.
b. Minimum 28-day Compressive Strength: 4000 psi.
c. Maximum water cement ratio: .42
d. Maximum concrete slump of 4 inches.

E. Mixing and Delivery:
1. Conform to ACI 304R.
a. Ready-mixed concrete shall be produced and delivered conforming to ASTM C94 as applicable.
2. Cement temperature, when added to mix, shall not exceed 170ºF (77ºC).
3. Adjust the amount of mix water to compensate for the moisture content of the aggregates.
4. Concrete Plant:
a. Conform to "Concrete Plant Mixer Standards" of the Plant Mixer Manufacturers Division, Concrete Plant Manufacturers Bureau, and "Concrete Plant Standards" of the Concrete Plant Manufacturers Bureau.

b. Water added to concrete having a slump below the specified minimum shall be at Contractor's risk. If the water added produces a slump greater than the specified maximum, the concrete will be rejected. If water is added, the concrete shall be remixed for a minimum of 25 revolutions. Water shall not be added after the truck mixer has begun to discharge concrete.

c. Contractor shall furnish Owner with a concrete delivery ticket for each load of concrete. The ticket shall have the following information recorded:
   (1) Serial number of tickets.
   (2) Time batched.
   (3) Time arrived on jobsite.
   (4) Specified compressive strength of concrete at 28 days.
   (5) Amount of concrete (by volume).
   (6) Batch weights of all cementitious materials, aggregates, admixtures, and water.
   (7) Mix number.
   (8) Amount of water with-held (by volume).
   (9) Amount of all water added at jobsite by Contractor.
   (10) Name of ready-mix batch plant.
   (11) Date.
   (12) Truck number.
   (13) Name of purchaser.

5. Plant and truck mixer uniformity shall be tested according to ASTM C94. Frequency of tests shall be as specified in PART 3, this Section.

2.02 GROUT:

A. Grout for Dry Packing:
   1. Volume: 1 part Portland cement to 2 parts sand.
   2. Required for setting handrail posts, for setting equipment recommended by the manufacturer to be set with nonshrinking grout, and in other places indicated.
   3. Grout shall be nonmetallic and conform to ASTM C1107.
   4. Prepare and place conforming to manufacturer's printed instructions.
   5. For equipment bases, the concrete surfaces shall be grit blasted or roughened with a chipping hammer prior to grouting. The foundation plates shall be cleaned of any grease, oil, paint, primers, or epoxy coatings.

B. Grout for tie-hole patching:
   1. Dayton Superior 1107 Advantage Grout.
   2. Euclid Chemical, Speed Plug.
   3. W.R Meadows, Meadow-Plug.
   4. Engineer approved equal.

C. Grout for Bonding:
   1. Proportion (by weight): 1 part cement to 1-1/2 parts sand.
   2. Keep water to a minimum.

2.03 BONDING AGENT:

A. Provide moisture-insensitive, epoxy-resin bonding agent conforming to ASTM C881, Type V.

2.04 CONCRETE ACCESSORIES:

A. PVC Waterstops:
   1. Serrated virgin polyvinyl chloride equal to one of the following:

a. CJ-17: 9" Base Seal Waterstop
   (1) Sika Greenstreak Style 771
   (2) Vinylex Style BS9532
   (3) Engineer approved equal.
b. CJ-1, CJ-6, CJ-8 or CJ-10: 4" ribbed with center bulb
   (1) Sika Greenstreak Style 702
   (2) Vinylex Style RB4316
   (3) Engineer approved equal.

2. Provide factory fabricated waterstop corner transitions and intersections leaving only straight butt joint splices for the field.
3. Use for all locations unless otherwise specified.

B. Plastic Waterstops:
1. Non-swelling, Mastic/Asphaltic Waterstop:
   a. Greenstreak, Inc. - Lockstop.
   b. Henry Company - Synko-Flex (SF302).
2. Provide all accessories as recommended by the manufacturer including, but not limited to, primers, adhesives, and sealants to ensure watertight construction. Install per manufacturer's written instructions and recommendations.

C. Expansion Joints:
1. Expansion Joint Filler: Premolded cork of thickness indicated and conforming to ASTM D1752, Type III, self-expanding cork. Unless indicated to be asphalt-impregnated fiber.
2. Expansion Joint Filler: Preformed asphalt-impregnated fiber of thickness indicated and conforming to ASTM D1751. Use where indicated.
3. Bond Breaker: Polyethylene tape or other plastic tape as recommended by sealant manufacturer.
4. Sealant Backer Rod: Provide closed cell backer rod or other backing material as recommended by sealant manufacturer.
5. Joint Sealants:
   a. Multi-component sealant as follows:
      (1) Joint Sealant - General Use:
         (a) BASF Building Systems: Sonneborn Sonolastic NP 2 (vertical use) and Sonolastic SL 2 (horizontal use).
         (b) Epoxy Systems Products Company: Product #11.
         (c) Euclid Chemical Company: Eucolastic II.
         (d) Pecora Corporation: NR-200, Dynatred.
      (2) Joint Sealant - Wastewater Treatment and Storage Facilities:
         (a) BASF Building Systems: Sonneborn Polysulfide Sealant.
         (b) Pecora Corporation: Synthacalc GC2+.
         (c) Sika Corporation: Sikaflex-2c NS.

D. Preformed Contraction Joints: Zip Joint T-shaped plastic strip as manufactured by BoMetals, Inc., Powder Springs, Georgia. Depth of preformed construction joint shall exceed 1/4 of the slab thickness.

2.05 CURING AGENT:

A. Apply to all concrete surfaces unless otherwise indicated or specified.
B. Curing agent shall conform as follows:
1. ASTM C309, Type 1: Use where concrete surface is not exposed to direct sunlight after placement and for conditions where hot concreting does not apply.

2. ASTM C309, Type 1-D: Use where slabs are exposed to direct sunlight for a period of seven days minimum after placement. Curing and sealing agent with fugitive dye shall be readily distinguishable upon the concrete surface for at least four hours after application but shall be inconspicuous within seven days after application.
3. ASTM C309, Type 2: Use as specified in PART 3, Article 3.05 - Hot Weather Concreting, this Section.

C. Curing compound used on floors to be sealed, painted, tiled, topped, dampproofed, waterproofed, or covered with resilient floor covering shall be guaranteed not to interfere with application of sealer, paint, tile mortar, or tile adhesive after a 28-day curing period.

2.06 CONCRETE FLOOR CURING AND SEALING AGENT:

A. Apply to all interior concrete floor surfaces subject to vehicle or pedestrian traffic (not for liquid retaining basin slabs).
B. Curing and sealing agent shall conform as follows:
1. ASTM C1315, Type I, Class A: Use where slabs are not exposed to direct sunlight after placement and for conditions where hot concreting does not apply.
2. ASTM C1315, Type II, Class A: Use as specified in PART 3, Article 3.05 - Hot Weather Concreting, this Section.
C. Apply as soon as possible and in conformance with manufacturer's written instructions.

2.07 CONCRETE FLOOR HARDENER:

A. Apply to all interior concrete floors.
B. Liquid floor hardener shall be one of the following:
1. Tamms Industries - Clearseal WB300.
2. L&M Construction Chemicals, Inc. - Chem Hard.
3. ChemRex, Inc. - Sonneborn Sonosil.
4. Euclid Chemical Company - Euco Diamond Hard.
C. Apply as soon as possible and in conformance to manufacturer's recommendations.

PART 3 - EXECUTION

3.01 PREPARATION FOR CONCRETE PLACEMENT:

A. Openings Through Concrete: Provide openings through concrete as indicated and for the proper installation of all equipment, piping, wiring, ductwork, and similar items, installed under this Contract. Form all openings prior to placement of concrete unless noted otherwise.
B. Installation of Embedded Items:
1. Provide for accurate installation of embedded items installed under this Contract.
2. Securely fix floor drains in place to prevent flotation while placing concrete. Uniformly and accurately slope finish floor slab toward the drains.
3. Embedded items shall be as indicated or specified, or as selected by Contractor and approved by Engineer.
4. During cold weather, protect pipe sleeves, shear pockets, and blockouts from moisture which may freeze, expand, and crack the sleeve, pocket or blockout and concrete structure.
5. Grease or tape anchor bolt threads to protect from concrete splatter.
C. Installation of Joints:
1. Construction Joints:
a. Location:

(1) Locate joints, which are not indicated or specified, in conformance with ACI 318.
(2) Unless noted otherwise, construction joints shall be spaced no more than 25'-0" apart in vertical walls only. Flatwork or slabs may be placed in sections with a maximum area of 3000 square ft and a maximum aspect ratio of 1:1.5 (width:length).
(3) Obtain Engineer's approval of joints located by Contractor prior to preparation of reinforcing steel drawings.

b. Preparation and Installation:
(1) Clean and break laitance or other foreign material from bonding surface.
(2) Tighten forms remaining in place (where applicable) to prevent seepage between forms and hardened concrete.
(3) Provide waterstops as indicated or specified and as required in any new construction joint requested by Contractor.

c. Waterstops:
(1) Install in all construction joints where indicated.
(2) Install conforming to manufacturer's printed instructions. All joints and splices of PVC waterstop shall be 100% fused. Use thermostatically controlled splicing iron as recommended by manufacturer.

2. Expansion Joints:
a. Install filler, backer rod and sealant in strict conformance with manufacturer's written instructions.
b. Reinforcing steel shall not extend through expansion joints unless indicated otherwise.
c. Attach rigid joint filler to the face of the joint prior to placing adjacent concrete. The filler shall occupy the entire width of the joint.
d. Install sealant backer rod for sealant except where indicated to be omitted. Install bond breaker where indicated.
e. Clean joints surfaces immediately before application of sealant.
f. Install joint sealants to conform to ASTM C1193. Tool sealants to provide smooth, uniform bead with a slightly concave surface, eliminate air pockets, and ensure sealant contact and adhesion with sides of joint.
g. Protect joints from moisture and ice during freezing.

3. Contraction Joints: As specified in this PART 3, Article 3.03 - Finishing, this Section.

D. Cutting and Bonding to Existing Concrete:
1. Cutting Existing Concrete:
a. Use methods and equipment that will avoid damage to adjacent parts of the structure from heavy blows or vibration.
b. Cut existing concrete with power concrete saw where possible to prevent spalling and chipping and to form neat, straight edge.
c. Remove all loose or cracked concrete resulting from cutting existing concrete, leaving only sound, undamaged concrete adjacent to new Work.
d. Leave access opening edges with a neat, true grout surface to the opening size indicated.
e. Cut reinforcing steel with sufficient length remaining (approximately 38 bar diameters) for bending and lapping into new construction.

2. Bonding to Existing Concrete:
a. Roughen concrete to 1/4-inch (6-mm) amplitude by use of a pneumatic chipping hammer or other approved means.

b. Thoroughly clean the concrete surface and apply the bonding agent in accordance with manufacturer's written instructions.

3.02 PLACING OF CONCRETE:

A. Conventional Placing:

1. General Requirements:
   a. Conform to ACI 304R.
   b. Bonding surfaces, including reinforcement, shall be clean, free of laitance and foreign materials.
   c. Place concrete on properly prepared and unfrozen subgrade and only in dewatered excavation and forms.
   d. Use forms for all concrete except where otherwise indicated or specified.
   e. Do not place concrete that has partially hardened or has been contaminated by foreign materials.
   f. Prevent mud or foreign materials from entering the concrete or forms during placement operations.
2. Conveying:
   a. Convey concrete from the mixer and deposit in place by methods which will prevent the segregation or loss of materials.
   b. Equipment for chuting, pumping, and pneumatically conveying concrete shall be of such size and design as to provide a practically continuous flow of concrete at the delivery end.
   c. Aluminum conveying equipment shall not be used.
3. Depositing:
   a. Place concrete in continuous horizontal lifts not to exceed 2 feet, and place concrete against bulkheads and keyways at vertical joints.
   b. Maximum free drop of concrete and grout for bonding shall be 5 feet, in walls 10 inches or less in thickness, with 1-foot additional drop allowed for each inch of wall thickness over 10 inches, with a maximum drop of 10 feet.
   c. When vapor barrier is used, keep lapped joints closed and take precautions to avoid puncturing the barrier.
4. Consolidation of Concrete:
   a. Consolidate concrete in conformance with ACI 309R. Characteristics and application of concrete vibrators shall be as set forth in Table 5.1.5.
   b. Provide an adequate number of vibrators of sufficient capacity to keep up with the maximum rate of concrete placement. Keep on hand adequate standby equipment in good operating condition.
   c. Vibrate concrete only until the concrete is thoroughly consolidated and the voids filled, as evidenced by the leveled appearance of the concrete at the exposed surface and the embedment of the surface aggregate.
   d. Insert internal vibrators vertically to the full depth of the layer being placed and into the previous layer. Do not drag vibrators through the concrete. Insert and withdraw vibrator slowly with the vibrator running continuously so that no hole will be left in the concrete. Do not flow concrete from one location to another by use of a vibrator.
   e. Consolidate concrete layer to full depth when using a surface vibrator. Use thinner layers or a more powerful vibrator if necessary to achieve complete consolidation.
   f. Use form vibrators only where sections are too thin or where sections are inaccessible for internal vibrators.

5. Time Requirements:
   a. Place concrete at a sufficient rate to assure that lifts below have not taken initial set before fresh concrete is deposited.
   b. Place concrete within 45 minutes after mixing. This period may be extended to 1 hour and 30 minutes provided that the combined air temperature, relative humidity, and wind velocity are such that the plasticity of the fresh concrete is satisfactory for placement and consolidation, and that the specified mixing water is not exceeded. Concrete which has partially set shall not be retempered but shall be discarded.

B. Placing Concrete at Joints:
1. Take precautions to ensure tight, well-bonded construction joints with no air pockets or voids.
2. Take special precautions to avoid bending or displacing waterstop while placing concrete around it.
3. Delay construction at a joint a minimum of 16 hours where placement is continued past joint, except where otherwise indicated.

3.03 FINISHING:

A. Unformed Surfaces:
1. Screed Finish:
   a. Use as first stage for all concrete finishes.
   b. Use as final finish on surfaces that will be covered by additional concrete, grout placement, or mortar setting bed except as otherwise specified.
   c. Immediately after screeding, use a wood float, darby, or bullfloat to eliminate high and low spots and to embed large aggregate. This shall be done in a manner to produce even, uniform surfaces so that surface irregularities do not exceed 3/8 inch in 10 feet when used as final finish.
2. Floated Finish:
   a. Use as second stage of broomed, troweled, or magnesium-troweled finish.
   b. Use as final finish on all areas to receive built-up roofing.
   c. Float with mechanical float. Hand floating will be permitted only in areas inaccessible to mechanical float.
   d. On surfaces not to receive troweled finish, finish with wood or cork float after mechanical floating to a true uniform surface so that surface irregularities do not exceed 1/8 inch in 10 feet, except at floor drains.
3. Broomed Finish:
   a. Use as final finish on all outdoor slabs including pavements, sidewalks, loading docks, and equipment pads.
   b. After floated finish, draw a stiff bristle broom across the surface making uniform corrugations, perpendicular to the direction of traffic, not more than 1/16 inch deep.
4. Troweled Finish (Steel Trowel Finish):
   a. Use as final finish on inside floors and on all other unformed surfaces not otherwise indicated or specified.
   b. Trowel with mechanical steel trowel to obtain a smooth, dense finish. Hand steel trowel shall be used in areas not accessible by mechanical trowel. The final troweling shall be done after the concrete has become hard enough so that no mortar adheres to the edge of trowel and a ringing sound is produced as the trowel passes over the surface.

c. Do not trowel before surface water has evaporated or has been removed with a squeegee.
d. Finish to a true uniform surface so that surface irregularities do not exceed 1/8 inch in 10 feet, except at floor drains.
e. Do not add sand or cement to the floor surface.

5. Contraction Joints:
   a. Locate as indicated.
   b. Maintain true alignment with straightedge.
   c. Joints shall be grooved except where sawed joints are indicated.
      (1) Slab on grade joints shall be sawed.
   d. Grooved (Tooled) Joints:
      (1) Perform during the finishing process.
      (2) Width of groove shall not exceed 1/4 inch (6 mm).
      (3) Depth of groove shall be at least 1 inch (25 mm).
   e. Sawed Joints:
      (1) Cut joints with power blade as soon as concrete surface is firm enough to resist tearing or damage by the blade and before random shrinkage cracks can occur. (Usually required 4 to 12 hours after finishing.)
      (2) Make joints approximately 1/8 inch (3 mm) wide with depth equal to 1/4 the slab thickness unless otherwise indicated.
      (3) Seal where indicated with the same type sealant specified for expansion joint sealant.
6. Floor Flatness and Levelness:
   a. Applicable for steel and magnesium troweled finish floors, and other floors as indicated or specified.
   b. Finish to a true uniform surface so that surface irregularities do not exceed 1/8 inch in 10 feet, except at floor drains.

B. Formed Surfaces:
1. Repair surface defects as specified in PART 3, Paragraph 3.03.C. - Repair of Defective Surfaces, this Section.
2. Burlap (Rubbed) Finish:
   a. Apply burlap surface treatment to the following formed surfaces:
      (1) Concrete exposed to public view.
      (2) Concrete that is to be painted.
   b. Remove forms as soon as permitted in accordance with Section 03 10 00.
   c. Wet and fill all voids using mortar with the same sand-cement ratio as original concrete. Blend with white cement to match concrete color.
   d. Strike off all excess mortar flush with the surface using a burlap or canvas cloth with a circular motion.
   e. Remove all rough spots and rub with cloth to leave a surface of uniform texture and appearance.
   f. Finish shall result in a coating of mortar that will fill all small voids and air holes, leaving a smooth surface.
   g. Cure as specified in this PART 3, Article 3.04 - Curing, this Section.

C. Repair of Defective Surfaces:
1. Defined as any concrete surface showing misalignment, rock pockets, poor joints, holes from ties, voids, honeycomb, or any other defective area at time of form removal.
2. Repairing:
   a. Repair as soon as forms have been removed.

b. Chip surface back to minimum depth of 1/2 inch, chip edges perpendicular to surface, prewet depression and brush with neat cement immediately before patching.
c. Patch surfaces using stiff mortar with same sand-cement ratio as original concrete and with minimum water for placing. Blend with white cement to match concrete color.
d. Compact mortar into depressions so that after curing, hole is filled and mortar is flush with surface. Use hammer and ramming rod for compacting the holes.
e. Moist-cure for 3 days or use curing compound.
f. Engineer shall be notified of areas containing defects or where reinforcing steel is exposed, prior to determination of repair method.

3.04 CURING:

A. Cure concrete by one of the following methods in accordance with ACI 308.1:
1. Leaving in forms for a minimum of 7 days when the temperature is at least 50°F. When temperatures are below, follow requirements of cold weather concreting.
2. When absorbent wood forms are used, keep formwork wet until removed.
3. Use of saturated bats, soaker hoses, or sprinkler for a minimum of 7 days. Keep concrete continuously wet.
4. Using polyethylene sheets applied in full contact with surfaces.
5. Using liquid membrane forming compound:
a. Formed Surfaces: Apply (2) coats on all surfaces immediately after removal of forms. Apply the second coat in a direction perpendicular to the first coat.
b. Unformed Surfaces: Apply (2) coats after the concrete has been finished and is hardened sufficiently to walk on. Apply second coat in a direction perpendicular to the first coat.
6. Curing of concrete during hot or cold weather shall conform to PART 3 - Hot Weather Concreting and Cold Weather Concreting, this Section.

3.05 HOT WEATHER CONCRETING:

A. Work shall conform to all requirements of ACI Specification 305.1, Specification for Hot Weather Concreting, except as modified by these contract documents.
B. Follow the requirements of ACI 305.1 if any of the following conditions occur:
1. When the temperature is 90ºF or above.
2. When the temperature is likely to rise above 90ºF within the 24-hour period after concrete placement.
3. When there is any combination of high air temperature, low relative humidity, and wind velocity which would impair either concrete strength or quality.
C. Fresh concrete shall have a maximum temperature of 95ºF at time of discharge.
D. Dampen subgrade and forms with cool water immediately prior to placement of concrete.
E. Protect freshly placed concrete immediately after placement so that the rate of evaporation as determined by ACI 305.1 Equations 3.1.3 does not exceed 0.2 pound per square foot per hour.
F. Protect concrete with suitable insulation if rapidly decreasing nighttime temperatures occur, which would cause thermal shock to concrete placed during warm daytime temperatures.
G. Protect the concrete with temporary wet covering during any appreciable delay between placement and finishing.
H. Begin curing unformed surfaces immediately after finishing and continue for 24 hours. Curing shall consist of application and maintenance of water-saturated material to all exposed

surfaces; horizontal, vertical, and otherwise. After the 24-hour interval, continue curing using one of the following methods:

1. Moist curing for 6 days.
2. Application of one coat of curing compound as specified.
3. Application and maintenance of curing paper or heat-reflecting plastic sheets for 6 more days.

I. Strip forms and apply curing compound as specified. Do not allow concrete surfaces to dry prior to application of curing compound.

3.06 COLD WEATHER CONCRETING:

A. Work shall conform to all requirements of ACI 306.1, Standard Specification for Cold Weather Concreting, except as modified by the requirements of these Contract Documents.
   1. Modification to Section 3.2.2: Temperature shall be measured twice per day until protection may be terminated
   2. Modification to Section 3.4.5: Refer to Section 03 10 00 to determine when forms may be removed.

B. Follow the requirements of ACI 306.1 if any of the following conditions apply:
   1. When the temperature is 40ºF or is likely to fall below 40ºF during the 24-hour period after concrete placement.

C. Minimum temperature for concrete as mixed shall be as indicated in Table 3.2.1 of ACI 306.1. Maximum temperature for concrete as mixed shall be 20ºF greater than the corresponding minimum temperature, unless a higher temperature is required by an accepted curing method.

D. Place and maintain concrete so that its temperature is never less than the temperature indicated in Table 3.2.1 of ACI 306.1. Maintain the required temperature for the time duration indicated on Tables 5.1 and 7.1 of ACI 306R.

E. Monitor temperature of concrete in place at corners or edges of formwork as applicable.

F. Air Heaters:
   1. Do not expose concrete to carbon monoxide or carbon dioxide fumes from heaters or engines.
   2. Salamanders will not be permitted.
   3. Heaters shall be indirect fired heaters which use a heat exchanger to avoid direct contact with combustion air or portable hydronic heaters.
   4. Personnel shall be present at all times to maintain safe, continuous operation of heating system.

G. Control temperature and humidity of protected concrete so that excessive drying of concrete surfaces does not occur.

H. Calcium chloride will not be permitted as a concrete accelerator or to thaw frozen subgrade prior to concrete placement.

I. The maximum allowable temperature drop during the first 24-hour period after protection is discontinued shall be as indicated on line 1 of Table 5.1 of ACI 306R.

J. Cure the concrete in accordance with Chapter 10 of ACI 306R.

3.07 LOW-STRENGTH CONCRETE:

A. Low-Strength Concrete:
   1. Defined as either:
      a. Concrete whose average, of any sets of three consecutive 28-day compressive strength tests, is below the required 28-day strength.

b. Concrete whose individual 28-day strength test (average of two 6-inch by 12-inch cylinders or three 4-inch by 8-inch cylinders) is more than 500 psi below the required 28-day strength.

2. Should concrete meet either definition of low-strength concrete as a minimum, the Contractor shall take the following steps:
   a. Increase the cement content. The increase shall be based on a statistical evaluation of the strength data, the design water-cement ratio, compressive-strength curve, and acceptable mix-design literature as follows:
      (1) If sufficient concrete has been furnished to accumulate 30 tests, these should be used to establish a new target average strength in accordance with ACI 318, Section 5.3.
      (2) If less than 30 tests have been made, the new target average strength should be at least as great as the average strength used in the initial selection of the mix proportions. Increase the target average strength based on a statistical evaluation of the available strength data, the design water-cement ratio, compressive-strength curve, and acceptable mix-design literature. If the statistical average equals or exceeds the initial mix-design level, a further increase in the average level is required.
   b. Remove and replace with acceptable concrete when the quality and location of the low-strength concrete is such that Engineer considers the strength or durability of the structure is impaired and so orders.
3. Low-strength concrete shall be considered defective Work as defined in General Conditions.

B. Potentially Low-Strength Concrete: Defined as concrete whose 7-day test (average of two 6-inch by 12-inch cylinders or three 4-inch by 8-inch cylinders) is less than 70% of the specified minimum 28-day compressive strength.

C. Construction delays caused by low-strength or potentially low-strength concrete shall not relieve Contractor from responsibility for late completion even though extensions of time may be granted.

3.08 MISCELLANEOUS CONCRETE ITEMS:

A. Concrete Seal Slab (Mud Slab):
1. Apply to the ground surface immediately beneath all "on-grade" slabs and footings where indicated or specified.
2. Seal slab shall consist of a concrete slab of the thickness indicated but not less than 2 inches.
3. Accurately screed so that the top of the seal slab will not be higher than the bottom elevation of structural slabs or footings to be placed thereon.
4. Do not place seal slab until after all excavating in the area have been completed and all drain lines, conduits, and other items under the area are completed and properly backfilled and compacted.

B. Equipment Bases:
1. Construct equipment bases, pads, and foundations as indicated or, when not indicated, conforming to equipment manufacturer's requirements.
2. Reinforce conforming to typical detail unless otherwise indicated.
3. Equipment bases shall include concrete, reinforcing steel, form work as required, and anchor bolts. Place grout for equipment installed under this Contract.
4. Finish top area of bases between anchor bolts and forms with a troweled finish.

3.09 TESTING:

A. Field Testing of Concrete Plant and Mixing Trucks:
   1. The concrete plant shall be inspected and tested to ensure conformance with ACI 304R and the "Concrete Plant Standards of the Concrete Plant Manufacturers Bureau." The scales shall be calibrated at the initial setup and at 3-month intervals thereafter.
   2. Mixing trucks shall be inspected and tested to ensure conformance with ACI 304R and "Truck Mixer and Agitator Standards of the Truck Mixer Manufacturers Bureau" of the National Ready-Mix Concrete Association. Tests shall be done at initial setup and every 3 months thereafter.
   3. Submit test reports when requested.

B. Construction Testing Service
   1. Owner shall select an independent material testing service for field testing. The material testing service shall furnish test equipment, test cylinder molds, and certified personnel to perform all required field tests, make the required concrete test cylinders, and deliver test cylinders to the testing laboratory. The prescribed tests shall be made in the presence of or with the concurrence of the Owner.
   2. Contractor shall schedule and coordinate with the independent testing service.
   3. Field testing shall be paid for by the contractor using the Inspection and Testing Allowance.
   4. If additional compressive strength tests are desired by the contractor to obtain additional data points for scheduling purposes the contractor shall pay for the additional tests.

C. Field Testing of Concrete and Making of Concrete Test Cylinders:
   1. Field testing personnel shall be on Site throughout placement of concrete.
   2. Concrete sampling for tests and cylinder making shall be done conforming to ASTM C172. Samples shall be taken at random and at the point of truck discharge.
   3. Perform the following tests:
      a. Prepare test cylinders conforming to ASTM C31, with not less than one set of cylinders from each day's placement for each 100 cubic yards or fraction thereof.
         (1) A set of cylinders is defined as the following for different cylinder sizes:
            (a) 6-inch by 12-inch: 4 cylinders
            (b) 4-inch by 8-inch: 5 cylinders
      b. Slump test conforming to ASTM C143. Perform tests on the first batch produced each day, for every 50 cubic yards or fraction thereafter, and with every set of test cylinders. Additional tests shall be run when directed by Engineer.
      c. Air content test conforming to ASTM C231. Perform for first batch of day and with each set of test cylinders.
      d. The batch of concrete being tested for slump or air content shall not be placed until acceptable results are obtained.
      e. Discard concrete used for slump and air tests.
      f. Perform concrete and air temperature tests for first batch of day and with each set of test cylinders. Additional readings shall be taken when directed by Engineer.
      g. Any batch of concrete with slump or air content not in conformance with Specifications shall be rejected.
      h. Furnish slump, air content, and temperature test results to the testing laboratory for inclusion in the cylinder test reports.

D. Laboratory Testing Concrete During Construction:
   1. Laboratory will cure and test concrete cylinders conforming to ASTM C192 and C39, testing 1 cylinder at 7 days of age, [two, three (for 4-inch cylinders)]at 28 days of age and one hold cylinder.

2. Contractor shall have the right to observe all phases of concrete cylinder curing and testing. Should Contractor observe any deviations from the prescribed testing procedures that he considers detrimental to concrete strength test results, he shall immediately notify Owner in writing.
3. Contractor shall make arrangements with the testing laboratory to receive copies of test reports. The cost of providing a maximum of two copies of each report to the Contractor will be paid by Owner.
4. Should the test results indicate low strength concrete as defined in PART 3, Article 3.07 - Low-Strength Concrete, this Section, Contractor shall take immediate corrective action.
5. Should the statistical data indicate an excessive margin of safety, the concrete mix may be modified subject to Engineer's approval.
6. Should the material tests taken during construction indicate nonconformance with the Specifications, Contractor shall take immediate corrective action.

E. Water Leakage Tests:
1. Refer to specification 01480 Water Tightness.

3.10 REPAIR, REPLACEMENT, AND FIELD MODIFICATIONS:

A. Embedded items and concrete that are misplaced or damaged during construction shall not be repaired, replaced, or field-modified without approval of Engineer.

END OF SECTION 03 30 00

SECTION 03 41 00 – PRECAST STRUCTURAL CONCRETE

PART 1 - GENERAL

1.01 RELATED DOCUMENTS:

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and DIVISION 01 Specification Sections, apply to this Section.

1.02 SUMMARY:

A. This section covers precast, prestressed structural concrete construction, delegated design, manufacture, transportation, erection, and other related items such as anchorage, bearing pads, storage, and protection of precast concrete.

B. Precast includes:

1. Precast structural concrete.
2. Precast structural concrete with thin-brick facings.
3. Precast structural concrete with commercial architectural finish.

1.03 RELATED REQUIREMENTS:

A. DIVISION 03, Section - Cast-in-Place Concrete for concrete topping.
B. DIVISION 04, Section - Unit Masonry and Exterior Stone Cladding.
C. DIVISION 05, Section - Structural Steel Framing, Metal Fabrication, and Anchorage.
D. DIVISION 07, Section - Water Repellants, Sheet Metal Flashing and Trim, Penetration Firestopping and Joint Sealants.

1.04 REFERENCE STANDARDS:

A. Publication Dates: Comply with standards in effect as of date of the Contract Documents unless otherwise indicated. For international projects reference applicable metric code as required.

B. ACI International:

1. ACI 301 - Specifications for Structural Concrete.
2. ACI 318 - Building Code Requirements for Structural Concrete.
3. ACI 423.7 - Specification for Unbonded Single-Strand Tendon Materials.

C. ACI International/The Masonry Society.

1. ACI 216.1/TMS 0216 - Code Requirements for Determining Fire Resistance of Concrete and Masonry Construction Assemblies.

D. American Association of State Highway and Transportation Officials:

1. AASHTO M 251 - Specification for Plain and Laminated Elastomeric Bridge Bearings.

E. American Welding Society:

1. AWS C5.4 - Recommended Practices for Stud Welding.
2. AWS D1.1/D1.1M - Structural Welding Code - Steel.
3. AWS D1.4/D1.4M - Structural Welding Code - Reinforcing Steel.

F. ASTM International (ASTM):

1. ASTM A27 - Specification for Steel Castings, Carbon, for General Application.
2. ASTM A36 - Specification for Carbon Structural Steel.
3. ASTM A47 - Specification for Ferritic Malleable Iron Castings.
4. ASTM A108 - Specification for Steel Bar, Carbon and Alloy, Cold-Finished.
5. ASTM A123- Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.
6. ASTM A153- Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware.
7. ASTM A184 - Specification for Fabricated Deformed Steel Bar Mats for Concrete Reinforcement.

8. ASTM A276 - Specification for Stainless Steel Bars and Shapes.
9. ASTM A283 - Specification for Low and Intermediate Tensile Strength Carbon Steel Plates.
10. ASTM A307 - Specification for Carbon Steel Bolts and Studs, 60,000 PSI Tensile Strength.
11. ASTM A325- Specification for Structural Bolts, Steel, Heat Treated, 120/105 ksi Minimum Tensile Strength.
12. ASTM A416 - Specification for Steel Strand, Uncoated Seven-Wire for Prestressed Concrete.
13. ASTM A490 - Specification for Structural Bolts, Alloy Steel, Heat Treated, 150 ksi Minimum Tensile Strength.
14. ASTM A496 - Specification for Steel Wire, Deformed, for Concrete Reinforcement.
15. ASTM A500 - Specification for Cold-Formed Welded and Seamless Carbon Steel Structural Tubing in Rounds and Shapes.
16. ASTM A563 - Specification for Carbon and Alloy Steel Nuts.
17. ASTM A572 - Specification for High-Strength Low-Alloy Columbium-Vanadium Structural Steel.
18. ASTM A615 - Specification for Deformed and Plain Billet-Steel Bars for Concrete Reinforcement.
19. ASTM A666 - Specification for Annealed or Cold-Worked Austenitic Stainless Steel Sheet, Strip, Plate, and Flat Bar.
20. ASTM A675 - Specification for Steel Bars, Carbon, Hot-Wrought, Special Quality, Mechanical Properties.
21. ASTM A706 - Specification for Low-Alloy Steel Deformed and Plain Bars for Concrete Reinforcement.
22. ASTM A722 - Specification for Uncoated High-Strength Steel Bars for Prestressing Concrete.
23. ASTM A767 - Specification for Zinc-Coated (Galvanized) Steel Bars for Concrete Reinforcement.
24. ASTM A775 - Specification for Epoxy-Coated Reinforcing Steel Bars.
25. ASTM A780 - Practice for Repair of Damaged and Uncoated Areas of Hot-Dip Galvanized Coatings.
26. ASTM A884 - Specification for Epoxy-Coated Steel Wire and Welded Wire Reinforcement.
27. ASTM A886 - Specification for Steel Strand, Indented, Seven-Wire Stress-Relieved for Prestressed Concrete.
28. ASTM A934 - Specification for Epoxy-Coated Prefabricated Steel Reinforcing Bars.
29. ASTM A1064 - Specification for Carbon-Steel Wire and Welded Wire Reinforcement, Plain and Deformed, for Concrete.
30. ASTM B633 - Specification for Electrodeposited Coatings of Zinc on Iron and Steel.
31. ASTM C33 - Specification for Concrete Aggregates.
32. ASTM C42 - Test Method for Obtaining and Testing Drilled Cores and Sawed Beams of Concrete Products.
33. ASTM C67 - Test Methods for Sampling and Testing Brick and Structural Clay Tile.
34. ASTM C144 - Specification for Aggregate for Masonry Mortar.
35. ASTM C150 - Specification for Portland Cement.
36. ASTM C260 - Specification for Air-Entraining Admixtures for Concrete.
37. ASTM C330 - Specification for Lightweight Aggregates for Structural Concrete.
38. ASTM C404 - Specification for Aggregates for Masonry Grout.

39. ASTM C494 - Specification for Chemical Admixtures for Concrete.
40. ASTM C567 - Test Method for Determining Density of Structural Lightweight Concrete.
41. ASTM C578- Specification for Rigid, Cellular Polystyrene Thermal Insulation.
42. ASTM C591 - Specification for Unfaced Preformed Rigid Cellular Polyisocyanurate Thermal Insulation.
43. ASTM C595 - Specification for Blended Hydraulic Cements.
44. ASTM C618 - Specification for Coal Fly Ash and Raw or Calcined Natural Pozzolan for Use as a Mineral Admixture in Concrete.
45. ASTM C642 - Test Method for Density, Absorption, and Voids in Hardened Concrete.
46. ASTM C881 - Specification for Epoxy-Resin-Base Bonding Systems for Concrete.
47. ASTM C920 - Specification for Elastomeric Joint Sealants.
48. ASTM C979 - Specification for Pigments for Integrally Colored Concrete.
49. ASTM C989 - Specification for Ground Granulated Blast-Furnace Slag for Use in Concrete and Mortars.
50. ASTM C1017 - Specification for Chemical Admixtures for Use in Producing Flowing Concrete.
51. ASTM C1077 - Practice for Laboratories Testing Concrete and Concrete Aggregates for Use in Construction and Criteria for Laboratory Evaluation.
52. ASTM C1107 - Specification for Packaged Dry, Hydraulic-Cement Grout (Nonshrink).
53. ASTM C1218- Test Method for Water-Soluble Chloride in Mortar and Concrete.
54. ASTM C1240 - Specification for Use of Silica Fume for Use as a Mineral Admixture in Hydraulic-Cement Concrete, Mortar, and Grout.
55. ASTM C1354 - Test Method for Strength of Individual Stone Anchorages in Dimension Stone.
56. ASTM C1582 - Specification for Admixtures to Inhibit Chloride-Induced Corrosion of Reinforcing Steel in Concrete.
57. ASTM C1610 - Test Method for Static Segregation of Self-Consolidating Concrete Using Column Technique.
58. ASTM C1611 - Test Method for Slump Flow of Self-Consolidating Concrete.
59. ASTM C1621 - Test Method for Passing Ability of Self-Consolidating Concrete by J-Ring.
60. ASTM C1712 - Test Method for Rapid Assessment of Static Segregation Resistance of Self-Consolidating Concrete Using Penetration Test.
61. ASTM D412 - Test Methods for Vulcanized Rubber and Thermoplastic Elastomers - Tension.
62. ASTM D2240- Test Method for Rubber Property-Durometer Hardness.
63. ASTM D4397- Specification for Polyethylene Sheeting for Construction, Industrial, and Agricultural Applications.
64. ASTM E165 - Test Method for Liquid Penetrant Examination.
65. ASTM E329 - Specification for Agencies Engaged in the Testing and/or Inspection of Materials Used in Construction.
66. ASTM E488 - Test Methods for Strength of Anchors in Concrete Elements.
67. ASTM E709 - Guide for Magnetic Particle Examination.
68. ASTM E1444 - Practice for Magnetic Particle Testing.
69. ASTM F436 - Specification for Hardened Steel Washers.
70. ASTM F593 - Specification for Stainless Steel Bolts, Hex Cap Screws, and Studs.
71. ASTM F844 - Specification for Washers, Steel, Plain (Flat), Unhardened for General Use.

72. ASTM F1852 - Specification for Twist-Off Type Tension Control Structural Bolt/Nut/Washer Assemblies, Steel, Heat Treated, 120/105 ksi Minimum Tensile Strength.
73. ASTM F3125 – Standard Specification for High Strength Structural Bolts, Steel and Alloy Steel, Heat Treated, 120 ksi and 150 ksi Minimum Tensile Strength

G. Master Painters Institute:
1. MPI#79-2004 - Alkyd Anti-Corrosive Metal Primer.

H. Military Specification and Standards:
1. MIL-C-882E - Cloth, Duck, Cotton or Cotton-Polyester Blend, Synthetic Rubber, Impregnated, and Laminated, Oil Resistant.

I. Precast/Prestressed Concrete Institute:
1. PCI MNL 116 - Manual for Quality Control for Plants and Production of Structural Precast Concrete Products.
2. PCI MNL 117 - Manual for Quality Control for Plants and Production of Architectural Precast Concrete Products.
3. PCI MNL 120 - PCI Design Handbook - Precast and Prestressed Concrete.
4. PCI MNL 124 - Design for Fire Resistance of Precast Prestressed Concrete.
5. PCI MNL 127 - PCI Erector's Manual - Standards and Guidelines for the Erection of Precast Concrete Products.
6. PCI MNL 135 - Tolerance Manual for Precast and Prestressed Concrete Construction.
7. PCI TR-6 - Interim Guidelines for the Use of Self-Consolidating Concrete in Precast/Prestressed Concrete Institute Member Plants.
8. Architectural Precast Concrete - Color and Texture Selection Guide.

J. Research Council on Structural Connections:
1. RCSC Specification for Structural Joints Using ASTM High-Strength Bolts.

K. SSPC - The Society for Protective Coatings:
1. SSPC-PA 1 - Paint Application Specification No. 1 - Shop, Field, and Maintenance Painting of Steel.
2. SSPC-Paint 25 - Paint Specification No. 25 - Zinc Oxide, Alkyd, Linseed Oil Primer for Use Over Hand Cleaned Steel Type I and Type II.
3. SSPC-SP 3 - Surface Preparation Specification No. 3 - Power Tool Cleaning.

1.05 DEFINITIONS:

A. Design Reference Sample: Sample of approved precast structural concrete color, finish, and texture, preapproved by Engineer.

B. Professional Engineer: A professional engineer who is legally qualified to practice in jurisdiction where Project is located and who is experienced in providing engineering services of the kind indicated.

C. Engineering services are defined as those performed for installations that are similar to those indicated for this Project in material, design, and extent.

1.06 PERFORMANCE REQUIREMENTS:

A. Delegated Design: Design precast structural concrete, including comprehensive engineering analysis by a qualified professional engineer, licensed in the state of Missouri, using performance requirements and design criteria indicated.

B. Design of units and embedments shall be performed by structural analysis in accordance with ACI 318 or PCI MNL-210.

C. Structural analysis shall include evaluations of the effects of connections, holes, discontinuities, concentrated loads, and joints.

D. Design, furnish, and install all necessary temporary bracing and connections required for erection.
E. Structural Performance: Precast structural concrete units shall be designed for the load conditions and spans indicated, and any additional loads imposed by openings, work of other trades, concrete topping indicated, and all loading and restraining conditions from fabrication, handling, and erection. Connections shall withstand design loads indicated within limits and under conditions indicated.
F. Structural Performance: Provide precast structural concrete units and connections capable of withstanding the design loads within limits and under conditions indicated on the Contract Drawings.
    1. Design precast structural concrete framing system and connections to maintain clearances at openings, to allow for fabrication and construction tolerances, to accommodate live-load deflection, shrinkage and creep of primary building structure, and other building movements. Maintain precast structural concrete deflections within limits of ACI 318.
        a. Thermal Movements: Allow for in-plane thermal movements resulting from annual ambient temperature changes of 120ºF.
    2. Design precast concrete units and connections to maintain clearances at openings, to allow for fabrication and construction tolerances, to accommodate live-load deflection, shrinkage and creep of primary building structure, and other building movements as follows:
        a. Upward and downward movement of 1/2 inch minimum.
        b. Coordinate openings with the manufacture of the component.

1.07 SUBMITTALS:
A. Product Data: For each type of product indicated.
B. Design Mixtures: For each precast concrete mixture. Include compressive strength and water-absorption tests.
C. Shop Drawings: Include member locations, plans, elevations, dimensions, shapes and sections, openings, support conditions, and types of reinforcement, including special reinforcement. Detail fabrication and installation of precast structural concrete units, including connections at member ends and to adjoining construction.
    1. Indicate joints, reveals, drips, chamfers, and extent and location of each surface finish.
    2. Indicate separate face and backup mixture locations and thicknesses.
    3. Indicate type, size, and length of welded connections by AWS standard symbols.
    4. Detail loose and cast-in hardware, lifting and erection inserts, connections, and joints.
    5. Indicate locations, tolerances, and details of anchorage devices to be embedded in or attached to structure or other construction.
    6. Include and locate openings larger than by 6 inches. Where additional structural support is required, include header design.
    7. Indicate location of each precast structural concrete unit by same identification mark placed on panel.
    8. Indicate relationship of precast structural concrete units to adjacent materials.
    9. Indicate locations, dimensions, and details of thin-brick units, including corner units and special shapes, and joint treatment.
    10. Indicate locations, dimensions, and details of stone facings, anchors, and joint widths.
    11. Indicate estimated camber for precast floor slabs with concrete toppings.
    12. Indicate shim sizes and grouting sequence.
D. Permissible Design Deviations:

1. Design deviations, supported by complete design calculations and drawings, shall be submitted for approval with explicit description of desired deviation included.
2. Design deviations shall provide an installation equivalent to the basic intent without incurring additional cost to the owner.
3. Design deviations shall not adversely affect the appearance, durability, or strength of units when modifying details or materials and maintain the general design concept.

E. Product Design Criteria:
1. Loadings for Design:
   a. Initial handling and erection stresses.
   b. International Building Code (IBC) 2018 loads.
   c. All dead and live loads as specified on the Contract Drawings.
   d. All other loads specified for member, where applicable.
2. Design criteria shall state all applicable standards, codes, and specifications for which precast sections are to be designed.
3. Submit calculations sealed by a qualified professional engineer licensed in the state of Missouri.

F. Samples:
1. For each type of finish indicated on exposed surfaces of precast structural concrete units with architectural finish, in sets of three, illustrating full range of finish, color, and texture variations expected; approximately 12 by 12 by 2 inches.
   a. Where other faces of precast concrete unit are exposed, include Samples illustrating workmanship, color, and texture of backup concrete as well as facing concrete.
2. Samples for each brick unit required, showing full range of color and texture expected. Include Samples showing color and texture of joint treatment.
   a. Grout Samples for Initial Selection: Color charts consisting of actual sections of grout showing manufacturer's full range of colors.
   b. Grout Samples for Verification: Showing color and texture of joint treatment.

G. Delegated-Design Submittal: For precast structural concrete indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer, licensed in the state of Missouri responsible for their preparation.
1. Show precast structural concrete unit types, connections, types of reinforcement, including special reinforcement, and concrete cover on reinforcement. Indicate location, type, magnitude, and direction of loads imposed on the building structural frame from precast structural concrete.
2. Engineers review is only for the limited purpose of:
   a. Verifying that performance and design criteria in the Contract were used.
   b. Checking for compliance with the engineers design concept.

H. Qualification Data: For Installer and fabricator.

I. Welding certificates.

J. Material Certificates: For the following, from manufacturer:
1. Cementitious materials.
2. Reinforcing materials and prestressing tendons.
3. Admixtures.
4. Bearing pads.
5. Insulation.
6. Structural-steel shapes and hollow structural sections.
7. Thin-brick units and accessories.

K. Material Test Reports: For aggregates, by a qualified testing agency.

L. Preconstruction test reports.
M. Source quality-control reports.
N. Field quality-control and special inspection reports.

1.08 QUALITY ASSURANCE:

A. Fabricator Qualifications: A firm that assumes responsibility for engineering precast structural concrete units to comply with performance requirements. Responsibility includes preparation of Shop Drawings and comprehensive engineering analysis by a qualified professional engineer.
   1. Participates in PCI's Plant Certification program at time of bidding and is designated a PCI-certified plant as follows:
      a. Group A, Category A1 – Architectural Cladding and Load Bearing Units or A-B by the new PCI Architectural Standards.
      b. Group C, Category C2 - Prestressed Hollowcore and Repetitively Produced Products.
      c. Group C, Category C3A - Prestressed Straight Strand Structural Members.
      d. Group C, Category C4 - Prestressed Deflected-Strand Structural Members.
B. Installer Qualifications: A precast concrete erector qualified at time of bidding, as evidenced by PCI's Certificate of Compliance, to erect Category S2 - Complex Structural Systems.
C. Testing Agency Qualifications: Qualified according to ASTM C1077 and ASTM E329 for testing indicated.
D. Design Standards: Comply with ACI 318 and design recommendations in PCI MNL 120 applicable to types of precast structural concrete units indicated.
E. Quality-Control Standard: For manufacturing procedures and testing requirements, quality-control recommendations, and dimensional tolerances for types of units required, comply with PCI MNL 116.
F. Fire-Resistance Calculations: Where indicated, provide precast structural concrete units whose fire resistance meets the prescriptive requirements of authorities having jurisdiction or has been calculated according to ACI 216.1/TMS 0216 and is acceptable to authorities having jurisdiction.
G. Sample Panels: After sample approval and before fabricating precast structural concrete units with architectural finish and thin-brick facing, produce a minimum of two sample panels approximately 8 sq. ft. in area for review by Engineer. Incorporate full-scale details of architectural features, finishes, textures, and transitions in sample panels.
   1. Locate panels where indicated or, if not indicated, as directed by Engineer.
   2. Damage part of an exposed-face surface for each finish, color, and texture, and demonstrate adequacy of repair techniques proposed for repair of surface blemishes.
   3. After approval of repair technique, maintain one sample panel at fabricator's plant and one at Project Site in an undisturbed condition as a standard for judging the completed Work.
   4. Demolish and remove sample panels when directed.
H. Mockups: After sample panel approval but before production of precast structural concrete units with architectural finish and thin-brick facing, construct full-sized mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.
   1. Build mockup as indicated on Drawings including sealants and precast structural concrete units with an architectural finish complete with anchors, connections, flashings, and joint fillers.

2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Engineer specifically approves such deviations in writing.

I. Preinstallation Conference: Conduct conference at Project Site.

1.09 DELIVERY, STORAGE, AND HANDLING:

A. Support units during shipment on nonstaining shock-absorbing material in same position as during storage.

B. Store units with adequate bracing and protect units to prevent contact with soil, to prevent staining, and to prevent cracking, distortion, warping or other physical damage.
1. Store units with dunnage across full width of each bearing point unless otherwise indicated.
2. Place adequate dunnage of even thickness between each unit.
3. Place stored units so identification marks are clearly visible, and units can be inspected.

C. Handle and transport units in a position consistent with their shape and design in order to avoid excessive stresses that would cause cracking or damage.

D. Lift and support units only at designated points shown on Shop Drawings.

1.10 COORDINATION:

A. Furnish loose connection hardware and anchorage items to be embedded in or attached to other construction before starting that Work. Provide locations, setting diagrams, templates, instructions, and directions, as required, for installation.

PART 2 - PRODUCTS

2.01 MOLD MATERIALS:

A. Molds: Rigid, dimensionally stable, non-absorptive material, warp and buckle free, that will provide continuous and true precast concrete surfaces within fabrication tolerances indicated; nonreactive with concrete and suitable for producing required finishes.
1. Mold-Release Agent: Commercially produced liquid-release agent that will not bond with, stain or adversely affect precast concrete surfaces and will not impair subsequent surface or joint treatments of precast concrete.

B. Form Liners: Units of face design, texture, arrangement, and configuration to match those used for precast concrete design reference sample. Furnish with manufacturer's recommended liquid-release agent that will not bond with, stain, or adversely affect precast concrete surfaces and will not impair subsequent surface or joint treatments of precast concrete.

2.02 REINFORCING MATERIALS:

A. Reinforcing Bars: ASTM A615, Grade 60, deformed.

B. Steel Bar Mats: ASTM A184, fabricated from ASTM A615, Grade 60, deformed bars, assembled with clips.

C. Plain-Steel Welded Wire Reinforcement: ASTM A1064, flat sheet.

D. Supports: Suspend reinforcement from back of mold or use bolsters, chairs, spacers, and other devices for spacing, supporting, and fastening reinforcing bars and welded wire reinforcement in place according to PCI MNL 116.

2.03 PRESTRESSING TENDONS:

A. Pretensioning Strand: ASTM A416, Grade 250 or Grade 270, uncoated, 7-wire.

2.04 CONCRETE MATERIALS:

A. Portland Cement: ASTM C150, Type I or Type III, gray, unless otherwise indicated.
   1. For surfaces exposed to view in finished structure, mix gray with white cement, of same type, brand, and mill source.

B. Blended Hydraulic Cement: ASTM C595, Type IS, Portland blast-furnace slag, Type IP, Portland-pozzolan, Type I (PM), pozzolan-modified Portland, Type I (SM), slag-modified Portland cement.

C. Supplementary Cementitious Materials [at Precaster's option]:
   1. Fly Ash: ASTM C618, Class C or F, with maximum loss on ignition of 3%.
   2. Metakaolin Admixture: ASTM C618, Class N.
   3. Silica Fume Admixture: ASTM C1240, with optional chemical and physical requirement.
   4. Ground Granulated Blast-Furnace Slag: ASTM C989, Grade 100 or 120.

D. Normal-Weight Aggregates: ASTM C33.
   1. Face-Mixture-Coarse Aggregates: Selected, hard, and durable; free of material that reacts with cement or causes staining; to match selected finish sample.
      a. Gradation: To match design reference sample.
   2. Face-Mixture-Fine Aggregates: Selected, natural or manufactured sand of same material as coarse aggregate unless otherwise approved by Engineer.

E. Coloring Admixture: ASTM C979, synthetic or natural mineral-oxide pigments or colored water-reducing admixtures, temperature stable, and nonfading.

F. Water: Potable; free from deleterious material that may affect color stability, setting, or strength of concrete and complying with chemical limits of PCI MNL 116.

G. Air-Entraining Admixture: ASTM C260, certified by manufacturer to be compatible with other required admixtures.

H. Chemical Admixtures: Certified by manufacturer to be compatible with other admixtures and to not contain calcium chloride, or more than 0.15% chloride ions or other salts by weight of admixture.
   1. Water-Reducing Admixtures: ASTM C494, Type A.
   2. Retarding Admixture: ASTM C494, Type B.
   3. Water-Reducing and Retarding Admixture: ASTM C494, Type D.
   4. Water-Reducing and Accelerating Admixture: ASTM C494, Type E.
   5. High-Range, Water-Reducing Admixture: ASTM C494, Type F.
   6. High-Range, Water-Reducing and Retarding Admixture: ASTM C494, Type G.
   7. Plasticizing Admixture: ASTM C1017, Type I.
   8. Plasticizing and Retarding Admixture: ASTM C1017, Type II.
   9. Corrosion-Inhibiting Admixture: ASTM C1582.

2.05 STEEL CONNECTION MATERIALS:

A. Carbon-Steel Shapes and Plates: ASTM A36.

B. Carbon-Steel-Headed Studs: ASTM A108, Grade 1010 through 1020, cold finished, AWS D1.1, Type A or B, with arc shields and with minimum mechanical properties of PCI MNL 116.

C. Carbon-Steel Plate: ASTM A283, Grade C.

D. Malleable-Iron Castings: ASTM A47, Grade 32510 or Grade 35028.

E. Carbon-Steel Castings: ASTM A27, Grade 60-30 (Grade 415-205).

F. High-Strength, Low-Alloy Structural Steel: ASTM A572.

G. Carbon-Steel Hollow Structural Sections: ASTM A500, Grade B.

H. Wrought Carbon-Steel Bars: ASTM A675, Grade 65 (Grade 450).

I. Deformed-Steel Wire or Bar Anchors: ASTM A496 or ASTM A706, Grade 60 (Grade 420).

J. Carbon-Steel Bolts and Studs: ASTM A307, Grade A; carbon-steel, hex-head bolts, and studs; carbon-steel nuts, ASTM A563; and flat, unhardened steel washers, ASTM F844.
K. Zinc-Coated Finish: For exterior steel items and items indicated for galvanizing, apply zinc coating by hot-dip process according to ASTM A123 or ASTM A153.
   1. For steel shapes, plates, and hollow sections to be galvanized, limit silicon content of steel to less than 0.03% or to between 0.15% and 0.25%, or limit sum of silicon and 2.5 times phosphorous content to 0.09%.
   2. Galvanizing Repair Paint: ASTM A780.
L. Shop-Primed Finish: Prepare surfaces of nongalvanized-steel items, except those surfaces to be embedded in concrete, according to requirements in SSPC-SP 3, and shop apply lead- and chromate-free, rust-inhibitive primer, complying with performance requirements in MPI#79 according to SSPC-PA 1.
M. Welding Electrodes: Comply with AWS standards.

2.06 STAINLESS-STEEL CONNECTION MATERIALS:
A. Stainless-Steel Plate: ASTM A666, Type 304, of grade suitable for application.
B. Stainless-Steel Bolts and Studs: ASTM F593, Alloy 304 or 316, hex-head bolts, and studs; stainless-steel nuts; and flat, stainless-steel washers. Lubricate threaded parts of stainless-steel bolts with an antiseize thread lubricant during assembly.
C. Stainless-Steel-Headed Studs: ASTM A276, with minimum mechanical properties of PCI MNL 116.

2.07 BEARING PADS:
A. Provide one of the following bearing pads for precast structural concrete units as recommended by precast fabricator for application:
   1. Elastomeric Pads: AASHTO M 251, plain, vulcanized, 100% polychloroprene (neoprene) elastomer, molded to size or cut from a molded sheet, Type A durometer hardness of 50 to 70, ASTM D2240; minimum tensile strength 2,250 psi, ASTM D412.
   2. Random-Oriented, Fiber-Reinforced Elastomeric Pads: Preformed, randomly oriented synthetic fibers set in elastomer. Type A durometer hardness of 70 to 90, ASTM D2240; capable of supporting a compressive stress of 3,000 psi with no cracking, splitting, or delaminating in the internal portions of pad. Test one specimen for every 200 pads used in Project.
   3. Cotton-Duck-Fabric-Reinforced Elastomeric Pads: Preformed, horizontally layered cotton-duck fabric bonded to an elastomer; Type A durometer hardness of 80 to 100, ASTM D2240; complying with MIL-C-882E.
   4. Frictionless Pads: PTFE, glass-fiber reinforced, bonded to stainless- or mild-steel plate, or random-oriented-fiber-reinforced elastomeric pads, of type required for in-service stress.
   5. High-Density Plastic: Multimonomer, nonleaching, plastic strip.

2.08 ACCESSORIES:
A. Precast Accessories: Provide clips, hangers, high-density plastic or steel shims, and other accessories required to install structural precast concrete units.

2.09 GROUT MATERIALS:
A. Sand-Cement Grout: Portland cement as specified in Section 2.04 and clean, natural sand, ASTM C144 or ASTM C404. Mix at ratio of 1 part cement to 2-1/2 to 3 parts sand, by volume, with minimum water required for placement and hydration. Water-soluble chloride ion content

shall be less than 0.06% by weight of cement when tested according to ASTM C1218/C1218M.

2.10 THIN BRICK AND ACCESSORIES:

A. Thin Brick: Thickness not less than 1/2 inch or more than 1 inch , and as follows:
   1. Dimensional Tolerances: +0 inch or -1/16 inch for any dimension 8 inches or less, and +0 inch or -3/32 inch for any dimension greater than 8 inches.
   2. Out-of-Square Tolerance: ±1/16 inch.
   3. Warpage Tolerance: +0 inch or -1/16 inch.
   4. Variation of Shape from Specified Angle: ±1 degree.
   5. Modulus of Rupture: Not less than 250 psi when tested according to ASTM C67.
   6. Tensile Bond Strength: Not less than 150 psi when tested before and after freeze-thaw test according to ASTM E488 as modified. Adhere a steel plate with a welded rod on a single thin-brick face with epoxy for each test.
   7. 24-Hour Cold-Water Absorption: Not more than 6% when tested according to ASTM C67.
   8. Freeze-Thaw Resistance: No detectable disintegration or separation after 300 freezing-and-thawing cycles when tested according to ASTM C666, Method B.
   9. Efflorescence: Tested according to ASTM C67 and rated "not effloresced."
   10. Back Surface Texture: Scored, combed, wire roughened, ribbed, keybacked, or dovetailed.

B. Special Shapes: Include corners, edge corners, and end edge corners.

C. Face Size: 2-1/4 inches high by 7-5/8 inches long

D. Face Color and Texture: Match Architect's samples

E. Pointing Grout: Packaged, polymer-modified, sanded grout complying with ANSI A118.7 and as follows:
   1. Polymer Type: Acrylic resin in dry, redispersible form, packaged with other dry ingredients or liquid-latex form for adding packaged dry-grout mix.
   2. Colors: As selected by Engineer from manufacturer's full range.

2.11 INSULATED FLAT-WALL PANEL ACCESSORIES:

A. Polyisocyanurate Board Insulation: ASTM C591, Type I, 1.8 lbs./cu. ft. unfaced, with thickness of 4 inches.

B. Wythe Connectors: Glass-fiber-reinforced vinyl-ester connectors, Epoxy-coated carbon-fiber grid or Fiberglass trusses manufactured to connect wythes of precast concrete panels.

2.12 CONCRETE MIXTURES:

A. Prepare design mixtures for each type of precast concrete required.
   1. Limit use of fly ash to 20% replacement of Portland cement by weight and granulated blast-furnace slag to 20% of Portland cement by weight; metakaolin and silica fume to 10% of Portland cement by weight.

B. Design mixtures may be prepared by a qualified independent testing agency or by qualified precast plant personnel at precast structural concrete fabricator's option.

C. Limit water-soluble chloride ions to maximum percentage by weight of cement permitted by ACI 318 (ACI 318M) or PCI MNL 116 when tested according to ASTM C1218/C1218M.

D. Normal-Weight Concrete Mixtures: Proportion face and backup mixtures or full-depth mixtures, at fabricator's option by either laboratory trial batch or field test data methods, or both, according to ACI 301, with materials to be used on Project, to provide normal-weight concrete with the following properties:

1. Minimum Compressive Strength (28 Days): 5,000 psi.
2. Maximum Water-Cementitious Materials Ratio: 0.45.

E. Water Absorption: For structural precast concrete with an architectural finish, limit to 6% by weight or 14% by volume, tested according to ASTM C642, except for boiling requirement.

F. Add air-entraining admixture at manufacturer's prescribed rate to result in concrete at point of placement having an air content complying with PCI MNL 116.

G. When included in design mixtures, add other admixtures to concrete mixtures according to manufacturer's written instructions.

H. Concrete Mix Adjustments: Concrete mix design adjustments may be proposed if characteristics of materials, Project conditions, weather, test results, or other circumstances warrant.

2.13 MOLD FABRICATION:

A. Molds: Accurately construct molds, mortar tight, of sufficient strength to withstand pressures due to concrete-placement operations and temperature changes and for prestressing and detensioning operations. Coat contact surfaces of molds with release agent before reinforcement is placed. Avoid contamination of reinforcement and prestressing tendons by release agent.

1. Place form liners accurately to provide finished surface texture indicated. Provide solid backing and supports to maintain stability of liners during concrete placement. Coat form liner with form-release agent.

B. Maintain molds to provide completed precast structural concrete units of shapes, lines, and dimensions indicated, within fabrication tolerances specified.

1. Form joints are not permitted on faces of structural precast concrete with an architectural finish that is exposed to view in the finished work.
2. Edge and Corner Treatment: Uniformly chamfered.

2.14 THIN-BRICK FACINGS:

A. Place form-liner templates accurately to provide grid for thin-brick facings. Provide solid backing and supports to maintain stability of liners while placing thin bricks and during concrete placement.

B. Securely place thin-brick units face down into form-liner pockets and place concrete backing mixture.

C. Clean faces and joints of brick facing.

2.15 FABRICATION:

A. Cast-in Anchors, Inserts, Plates, Angles, and Other Anchorage Hardware: Fabricate anchorage hardware with sufficient anchorage and embedment to comply with design requirements. Accurately position for attachment of loose hardware, and secure in place during precasting operations. Locate anchorage hardware where it does not affect position of main reinforcement or concrete placement.

1. Weld-headed studs and deformed bar anchors used for anchorage according to AWS D1.1 and AWS C5.4.

B. Furnish loose hardware items including steel plates, clip angles, seat angles, anchors, dowels, cramps, hangers, and other hardware shapes for securing precast structural concrete units to supporting and adjacent construction.

C. Cast-in reglets, slots, holes, and other accessories in precast structural concrete units as indicated on the Contract Drawings.

D. Cast-in openings larger than 6 inches in any dimension. Contractor shall not drill or cut openings or prestressing strand without Engineer and Manufacturers approval.
E. Cast-in items need by other trades such as conduit and electrical boxes as shown on drawings.
F. Reinforcement: Comply with recommendations in PCI MNL 116 for fabricating, placing, and supporting reinforcement.
    1. Clean reinforcement of loose rust and mill scale, earth, and other materials that reduce or destroy the bond with concrete. When damage to epoxy-coated reinforcement exceeds limits specified in ASTM A775, repair with patching material compatible with coating material and epoxy coat bar ends after cutting.
    2. Accurately position, support, and secure reinforcement against displacement during concrete-placement and consolidation operations. Completely conceal support devices to prevent exposure on finished surfaces.
    3. Place reinforcing steel and prestressing strand to maintain at least 3/4-inch minimum concrete cover. Increase cover requirements for reinforcing steel to 11/2 inches when units are exposed to corrosive environment or severe exposure conditions. Arrange, space, and securely tie bars and bar supports to hold reinforcement in position while placing concrete. Direct wire tie ends away from finished, exposed concrete surfaces.
    4. Install welded wire reinforcement in lengths as long as practicable. Lap adjoining pieces at least one full mesh spacing and wire tie laps, where required by design. Offset laps of adjoining widths to prevent continuous laps in either direction.
G. Reinforce precast structural concrete units to resist handling, transportation, and erection stresses and specified in-place loads.
H. Prestress tendons for precast structural concrete units by either pretensioning or post-tensioning methods. Comply with PCI MNL 116.
    1. Delay detensioning or post-tensioning of precast, prestressed structural concrete units until concrete has reached its indicated minimum design release compressive strength as established by test cylinders cured under same conditions as concrete.
    2. Detension pretensioned tendons either by gradually releasing tensioning jacks or by heat cutting tendons, using a sequence and pattern to prevent shock or unbalanced loading.
    3. If concrete has been heat cured, detension while concrete is still warm and moist to avoid dimensional changes that may cause cracking or undesirable stresses.
    4. Protect strand ends and anchorages with bituminous, zinc-rich, or epoxy paint to avoid corrosion and possible rust spots.
    5. Protect strand ends and anchorages with a minimum of 1-inch thick, nonmetallic, nonshrink, grout mortar and sack rub surface. Coat or spray the inside surfaces of pocket with bonding agent before installing grout.
I. Comply with requirements in PCI MNL 116 and in this Section for measuring, mixing, transporting, and placing concrete. After concrete batching, no additional water may be added.
J. Place concrete in a continuous operation to prevent seams or planes of weakness from forming in precast concrete units.
K. Thoroughly consolidate placed concrete by vibration without dislocating or damaging reinforcement and built-in items, and minimize pour lines, honeycombing, or entrapped air on surfaces. Use equipment and procedures complying with PCI MNL 116.
    1. Place self-consolidating concrete without vibration according to PCI TR-6. Ensure adequate bond between face and backup concrete, if used.
L. Comply with PCI MNL 116 procedures for hot- and cold-weather concrete placement.
M. Identify pickup points of precast structural concrete units and orientation in structure with permanent markings, complying with markings indicated on Shop Drawings. Imprint or

permanently mark casting date on each precast structural concrete unit on a surface that will not show in finished structure.

N. Cure concrete, according to requirements in PCI MNL 116, by moisture retention without heat or by accelerated heat curing using low-pressure live steam or radiant heat and moisture. Cure units until compressive strength is high enough to ensure that stripping does not have an effect on performance or appearance of final product.

O. Discard and replace precast structural concrete units that do not comply with requirements, including structural, manufacturing tolerance, and appearance, unless repairs meet requirements in PCI MNL 116 and meet Engineer's approval.

2.16 CASTING INSULATED WALL PANELS:

A. Cast, screed, and consolidate wythe supported by mold.

B. Place insulation boards abutting edges and ends of adjacent boards. Insert wythe connectors through insulation and consolidate concrete around connectors according to connector manufacturer's written instructions.

C. Ensure bottom wythe and insulation layer are not disturbed after bottom wythe reaches initial set.

D. Cast, screed, and consolidate top wythe to meet required finish.

E. Maintain temperature below 150ºF in bottom concrete wythe.

2.17 FABRICATION TOLERANCES:

A. Fabricate precast structural concrete units to shapes, lines, and dimensions indicated so each finished unit complies with PCI MNL 116 product dimension tolerances as well as position tolerances for cast-in items.

B. Thin-Brick-Faced Precast Structural Concrete Units: Restrict the following misalignments to 2% of number of bricks in a unit:

1. Alignment of Mortar Joints:
   a. Jog in Alignment: 1/8 inch.
   b. Alignment with Panel Centerline: ±1/8 inch.
2. Variation in Width of Exposed Mortar Joints: ±1/8 inch.
3. Tipping of Individual Bricks from the Panel Plane of Exposed Brick Surface: +1/16 inch; -1/4 inch less than or equal to depth of form-liner joint.
4. Exposed Thin-Brick Surface Parallel to Primary Control Surface of Panel: +1/4 inch; -1/8 inch.
5. Individual Thin-Brick Step in Face from Panel Plane of Exposed Thin-Brick Surface: +1/16 inch; -1/4 inch less than or equal to depth of form-liner joint.

2.18 COMMERCIAL FINISHES:

A. Grade B Finish: Fill air pockets and holes larger than 1/4 inch in diameter with sand-cement paste matching color of adjacent surfaces. Fill air holes greater than 1/8 inch in width that occur more than once per 2 sq. in. Grind smooth form offsets or fins larger than 1/8 inch. Repair surface blemishes due to holes or dents in molds. Discoloration at form joints is permitted.

B. Grade A Finish: Repair surface blemishes and fill air holes with the exception of air holes 1/16 inch in width or smaller, and form marks where the surface deviation is less than 1/16 inch. Float apply a neat cement-paste coating to exposed surfaces. Rub dried paste coat with burlap to remove loose particles. Discoloration at form joints is permitted. Grind smooth all form joints.

C. Smooth, steel trowel finish unformed surfaces. Consolidate concrete, bring to proper level with straightedge, float, and trowel to a smooth, uniform finish.
D. Apply roughened surface finish according to ACI 318 to precast concrete units that will receive concrete topping after installation.

2.19 COMMERCIAL ARCHITECTURAL FINISHES:

A. Manufacture member faces free of joint marks, grain, and other obvious defects with corners, including false joints, uniform, straight, and sharp. Finish exposed-face surfaces of precast concrete units to match approved mockups and as follows:
   1. Textured-Surface Finish: Impart by form liners or inserts.
   2. Abrasive-Blast Finish: Use abrasive grit, equipment, application techniques, and cleaning procedures to expose aggregate and surrounding matrix surfaces.
   3. Acid-Etched Finish: Use acid and hot-water solution, equipment, application techniques, and cleaning procedures to expose aggregate and surrounding matrix surfaces. Protect hardware, connections, and insulation from acid attach.
   4. Sand-Embedment Finish: Use selected stones placed in a sand bed in bottom of mold, with sand removed after curing.
   5. Thin-Brick Facing: See "Thin-Brick Facings" Article.

2.20 SOURCE QUALITY CONTROL:

A. Testing: Test and inspect precast structural concrete according to PCI MNL 116 requirements.
   1. Test and inspect self-consolidating concrete according to PCI TR-6, ASTM C1610, ASTM C1611, ASTM C1621, and ASTM C1712.
B. Strength of precast structural concrete units will be considered deficient if units fail to comply with ACI 318 requirements for concrete strength.
C. If there is evidence that strength of precast concrete units may be deficient or may not comply with ACI 318 requirements, employ a qualified testing agency to obtain, prepare, and test cores drilled from hardened concrete to determine compressive strength according to ASTM C42.
   1. A minimum of three representative cores shall be taken from units of suspect strength, from locations directed by Engineer.
   2. Test cores in an air-dry condition or, if units will be wet under service conditions, test cores after immersion in water in a wet condition.
   3. Strength of concrete for each series of three cores will be considered satisfactory if average compressive strength is equal to at least 85% of 28-day design compressive strength and no single core is less than 75% of 28-day design compressive strength.
   4. Report test results in writing on same day that tests are performed, with copies to Engineer, Contractor, and precast concrete fabricator. Test reports shall include the following:
      a. Project identification name and number.
      b. Date when tests were performed.
      c. Name of precast concrete fabricator.
      d. Name of concrete testing agency.
      e. Identification letter, name, and type of precast concrete unit(s) represented by core tests; design compressive strength; type of break; compressive strength at breaks, corrected for length-diameter ratio; and direction of applied load to core in relation to horizontal plane of concrete as placed.
D. Patching: If core test results are satisfactory and precast structural concrete units comply with requirements, clean, and dampen core holes and solidly fill with same precast concrete mixture that has no coarse aggregate, and finish to match adjacent precast concrete surfaces.

E. Defective Units: Discard and replace precast structural concrete units that do not comply with requirements, including strength, manufacturing tolerances, and color and texture range. Chipped, spalled, or cracked units may be repaired, subject to Engineer's approval. Engineer reserves the right to reject precast units that do not match approved samples, sample panels, and mockups. Replace unacceptable units with precast concrete units that comply with requirements.

PART 3 - EXECUTION

3.01 EXAMINATION:

A. Examine supporting structural frame or foundation and conditions for compliance with requirements for installation tolerances, true and level bearing surfaces, and other conditions affecting performance of the Work.
B. Proceed with installation only after unsatisfactory conditions have been corrected.
C. Do not install precast concrete units until supporting cast-in-place concrete has attained minimum allowable design compressive strength or until supporting steel or other structure is adequate to receive loads from precast concrete units.

3.02 INSTALLATION:

A. Install clips, hangers, bearing pads, and other accessories required for connecting precast structural concrete units to supporting members and backup materials.
B. Erect precast structural concrete level, plumb, and square within specified allowable tolerances. Provide temporary structural framing, supports, and bracing as required to maintain position, stability, and alignment of units until permanent connections are complete.
    1. Install temporary steel or plastic spacing shims or bearing pads as precast structural concrete units are being erected. Tack weld steel shims to each other to prevent shims from separating.
    2. Maintain horizontal and vertical joint alignment and uniform joint width as erection progresses.
    3. Remove projecting lifting devices and use plastic patch caps or sand-cement grout to fill voids within recessed lifting devices flush with surface of adjacent precast surfaces when recess is exposed.
C. Connect precast structural concrete units in position by bolting, welding, grouting, or as otherwise indicated on Shop Drawings. Remove temporary shims, wedges, and spacers as soon as practical after connecting and grouting are completed.
    1. Do not permit connections to disrupt continuity of roof flashing.
D. Field cutting of precast units is not permitted without approval of the Engineer.
E. Fasteners: Do not use drilled or powder-actuated fasteners for attaching accessory items to precast, prestressed concrete units.
F. Welding: Comply with applicable requirements in AWS D1.1 and AWS D1.4 for welding, welding electrodes, appearance, quality of welds, and methods used in correcting welding work.
    1. Protect precast structural concrete units and bearing pads from damage by field welding or cutting operations, and provide noncombustible shields as required.
    2. Clean weld-affected steel surfaces with chipping hammer followed by brushing, and apply a minimum 4.0-mil thick coat of galvanized repair paint to galvanized surfaces according to ASTM A780.
    3. Visually inspect and remove, reweld, or repair incomplete and defective welds.

G. At bolted connections, use lock washers, tack welding, or other approved means to prevent loosening of nuts after final adjustment.
   1. Where slotted connections are used, verify bolt position and tightness. For sliding connections, properly secure bolt but allow bolt to move within connection slot.
   2. For pretensioned and slip critical connections, use one of the following methods to assure proper bolt pretension:
      a. Turn-of-Nut: According to RCSC "Specification for Structural Joints Using High-Strength Bolts."
      b. Calibrated Wrench: According to RCSC "Specification for Structural Joints Using High-Strength Bolts."
      c. Twist-off Tension Control Bolt: ASTM F1852.
      d. Direct-Tension Control Bolt: ASTM F1852.

H. Grouting or Dry-Packing Connections and Joints: Grout connections and joints and open spaces at keyways, connections, and joints where required or indicated on Shop Drawings. Retain flowable grout in place until hard enough to support itself. Alternatively, pack spaces with stiff dry-pack grout material, tamping until voids are completely filled.
   1. Place grout to finish smooth, level, and plumb with adjacent concrete surfaces.
   2. Fill joints completely without seepage to other surfaces.
   3. Trowel top of grout joints on roofs smooth and uniform. Finish transitions between different surface levels not steeper than 1 to 12.
   4. Place grout end cap or dam in voids at ends of hollow-core slabs.
   5. Promptly remove grout material from exposed surfaces before it affects finishes or hardens.
   6. Keep grouted joints damp for not less than 24 hours after initial set.

3.03 ERECTION TOLERANCES:

A. Erect precast structural concrete units level, plumb, square, and in alignment without exceeding the noncumulative erection tolerances of PCI MNL 135.

B. Minimize variations between adjacent slab members by jacking, loading, or other method recommended by fabricator and approved by Engineer.

3.04 FIELD QUALITY CONTROL:

A. Special Inspections: Owner will engage a qualified special inspector to perform the following special inspections:
   1. Erection of precast structural concrete members.

B. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.

C. Visually inspect field welds and test according to ASTM E165 or to ASTM E709 and ASTM E1444. High-strength bolted connections will be subject to inspections.

D. Testing agency shall report test results promptly and in writing to Contractor and Engineer.

E. Repair or remove and replace work where tests and inspections indicate that it does not comply with specified requirements.

F. Additional testing and inspecting, at Contractor's expense, shall be performed to determine compliance of replaced or additional work with specified requirements.

G. Prepare test and inspection reports.

3.05 REPAIRS:

A. Repair precast structural concrete units if permitted by Engineer.
   1. Repairs may be permitted if structural adequacy, serviceability, durability, and appearance of units have not been impaired.

B. Mix patching materials and repair units so cured patches blend with color, texture, and uniformity of adjacent exposed surfaces and show no apparent line of demarcation between original and repaired work, when viewed in typical daylight illumination from a distance of 20 feet.
C. Prepare and repair damaged galvanized coatings with galvanizing repair paint according to ASTM A780.
D. Remove and replace damaged precast structural concrete units that cannot be repaired or when repairs do not comply with requirements as determined by Engineer.

3.06 CLEANING:

A. Clean mortar, plaster, fireproofing, weld slag, and other deleterious material from concrete surfaces and adjacent materials immediately.
B. Clean exposed surfaces of precast concrete units after erection and completion of joint treatment to remove weld marks, other markings, dirt, and stains.
    1. Perform cleaning procedures, if necessary, according to precast concrete fabricator's written recommendations. Protect other work from staining or damage due to cleaning operations.
    2. Do not use cleaning materials or processes that could change the appearance of exposed concrete finishes or damage adjacent materials.

END OF SECTION 03 41 00

SECTION 03 52 16 – LOW DENSITY CELLULAR CONCRETE FILL

PART 1 - GENERAL

1.01 SUMMARY:

A. Section includes non-pervious, Low Density Cellular Concrete Fill (LDCCF). Provide LDCCF at the locations shown on the drawings, and as specified herein.

B. Related Work Specified Elsewhere:

1. Concrete: SECTION 03 30 00.

1.02 REFERENCES:

A. American Concrete Institute:

1. ACI 301-2005 - Specification for Structural Concrete.
2. ACI 523-2006 – Guide for Cast-in-Place Low-Density Cellular Concrete.

B. ASTM International:

1. ASTM C138-12 - Test Method for Density (Unit Weight), Yield, and Air Content (Gravimetric) of Concrete.
2. ASTM C150-12 - Specification for Portland Cement.
3. ASTM C172-10 - Practice for Sampling Freshly Mixed Concrete.
4. ASTM C332-09 - Specification for Lightweight Aggregates for Insulating Concrete.
5. ASTM C494-13 – Specification for Chemical Admixtures for Concrete.
6. ASTM C495-12 - Test Method for Compressive Strength of Lightweight Insulating Concrete.
7. ASTM C513-11 – Test Method for Obtaining and Testing Specimens of Hardened Lightweight Insulating Concrete for Compressive Strength.
8. ASTM C595-13 – Specification for Blended Hydraulic Cements.
9. ASTM C618-12 - Specification for Coal Fly Ash and Raw or Calcined Natural Pozzolan for Use in Concrete.
10. ASTM C796-12 – Test Method for Foaming Agents for Use in Producing Cellular Concrete Using Preformed Foam.
11. ASTM C869-11 - Specification for Foaming Agents Used in Making Preformed Foam for Cellular Concrete.
12. ASTM C1157-11 – Performance Specification for Hydraulic Cement.
13. ASTM C1240-12 – Specification for Silica Fume Used in Cementitious Mixtures.

1.03 SUBMITTALS:

A. With their bid, the prime contractor shall list the product and qualified foam producer of the LDCCF and shall not employ any product or producer without the prior approval of the engineer.

B. Design mix for LDCCF.

C. Product Certificates: For the following, from manufacturer:

1. Cementitious materials.
2. Foaming agents.
3. Admixtures.

1.04 QUALITY ASSURANCE:

A. The subcontractor shall have a record of experience and quality of work placing LDCCF that is satisfactory to the engineer.

B. The subcontractor shall be capable of developing a mix design, batching, mixing, handling and placing LDCCF.

C. The subcontractor shall be regularly engaged in the production and placement of LDCCF.

D. The subcontractor shall have satisfactorily completed during the last three (3) years at least five (5) similar projects.
E. Use skilled workmen who are experienced and familiar with the requirements and the methods for proper performance of this work.
F. The specialized batching, mixing and placing equipment shall be approved by the foam manufacturer of the LDCCF. Transit mixers are not acceptable for these applications.

1.05 PROJECT CONDITIONS:
A. Do not place LDCCF unless ambient temperature is at least 32ºF (0ºC) and rising.
B. The area to be filled shall not have any standing water in it prior to placement of LDCCF.

PART 2 - PRODUCTS

2.01 MATERIALS:
A. Cementitious Material: Portland cement should meet the requirements of ASTM C150, ASTM C595 or C1157. Pozzolans and other cementitious materials may be used
B. Foaming Agent: ASTM C869 and ASTM C796.
C. Water: Clean, potable.

2.02 DESIGN MIXTURES:
A. Prepare design mixtures for LDCCF by laboratory trial batch method or by field-test data method. For trial batch method, use a qualified independent testing agency for preparing and reporting proposed mixture designs.
1. Limit use of fly ash to not exceed 25 % of portland cement by weight.
B. Limit water-soluble chloride ions to the maximum percentage by weight of cement or cementitious material permitted by ACI 301.

2.03 LOW DENSITY CELLULAR CONCRETE:
A. Produce cellular lightweight insulating concrete with the following minimum physical properties using cementitious materials, air-producing liquid-foaming agents, and the minimum amount of water necessary to produce a workable mix.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. Celcore Incorporated.
b. Cellular Concrete LLC, Mearlcrete Division.
c. Elastizell Corporation of America.
d. Geofill Cellular Concrete
2. As-Cast Unit Weight: Maximum 50 lb/ft^3 at point of placement, when tested according to ASTM C138.
3. Compressive Strength: Minimum 80 lb/in^2, when tested according to ASTM C495.

PART 3 - EXECUTION

3.01 MIXING AND PLACING:
A. Mix and place LDCCF according to foam manufacturer's written instructions, using equipment and procedures approved by foam manufacturer.
B. Avoid excessive handling of the LDCCF.
C. Place LDCCF in lifts to not exceed 3 feet 0 inches in depth.
D. The final surface finish shall be within 0.2 feet of the plan elevation.

E. The LDCCF shall not be vibrated or disturbed. Vehicles, equipment, backfill or other loadings on the fill material shall not be permitted until the material has attained a compressive strength of at least 20 lb/in^2.

3.02 FIELD QUALITY CONTROL:

A. Testing Agency: Owner will engage a qualified independent testing and inspecting agency to sample materials, perform field tests and inspections, and prepare test reports.
B. During Placement of initial batches, check density and adjust the mix as required to obtain the specified cast density at the point of placement.
C. Contractor shall record and measure wet cast densities at the point of placement hourly.
D. A minimum of four (4) 3”x6” cylinders shall be molded for each 250 cubic yards placed
E. Testing samples of LDCCF obtained according to ASTM C172, except as modified by ASTM C495, shall be performed according to the following requirements:
    1. Determine as-cast unit weight during each hour of placement, according to ASTM C138.
    2. Determine oven-dry unit weight and compressive strength according to ASTM C495. Make a set of at least four (4) 3”x6” cylinders for each day's placement, but not less than one set of cylinders for each 250 cubic yards placed. Two (2) cylinders may be tested at any age after 3 days for compressive strength. At least two (2) cylinders shall be tested at 28 days for compressive strength.

3.03 DEFECTIVE WORK:

A. Remove and replace LDCCF that fails to comply with requirements.

END OF SECTION 03 52 16

DIVISION 04 - MASONRY

SECTION 04 20 00 - UNIT MASONRY

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Concrete masonry units.
   2. Lintels.
   3. Mortar and grout materials.
   4. Reinforcement.
   5. Accessories.
   6. Mortar and grout mixes.

1.02 DEFINITIONS

A. CMU(s): Concrete masonry unit(s).
B. Reinforced Masonry: Masonry containing reinforcing steel in grouted cells.

1.03 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.04 ACTION SUBMITTALS

A. Product Data: For each type of product.
B. Shop Drawings: For the following:
   1. Masonry Units: Indicate sizes, profiles, coursing, and locations of special shapes.
   2. Reinforcing Steel: Indicate bending, lap lengths, and placement of unit masonry reinforcing bars. Comply with ACI 315R. Indicate elevations of reinforced walls.

1.05 INFORMATIONAL SUBMITTALS

A. List of Materials Used in Constructing Mockups: List generic product names together with manufacturers, manufacturers' product names, model numbers, lot numbers, batch numbers, source of supply, and other information as required to identify materials used. Include mix proportions for mortar and grout and source of aggregates.
   1. Submittal is for information only. Receipt of list does not constitute approval of deviations from the Contract Documents unless such deviations are specifically brought to the attention of Architect and approved in writing.
B. Material Certificates: For each type of the following:
   1. Masonry units.
      a. Include data on material properties.
      b. For masonry units used in structural masonry, include data and calculations establishing average net-area compressive strength of units.
   2. Cementitious materials. Include name of manufacturer, brand name, and type.
   3. Mortar admixtures.
   4. Preblended, dry mortar mixes. Include description of type and proportions of ingredients.
   5. Grout mixes. Include description of type and proportions of ingredients.
   6. Reinforcing bars.
   7. Joint reinforcement.
C. Qualification Statements: For testing agency.
D. Mix Designs: For each type of mortar and grout. Include description of type and proportions of ingredients.

1. Include test reports for mortar mixes required to comply with property specification. Test in accordance with ASTM C109/C109M for compressive strength, ASTM C1506 for water retention, and ASTM C91/C91M for air content.
2. Include test reports, in accordance with ASTM C1019, for grout mixes required to comply with compressive strength requirement.

E. Statement of Compressive Strength of Masonry: For each combination of masonry unit type and mortar type, provide statement of average net-area compressive strength of masonry units, mortar type, and resulting net-area compressive strength of masonry determined in accordance with TMS 602.

F. Cold-Weather and Hot-Weather Procedures: Detailed description of methods, materials, and equipment to be used to comply with requirements.

1.06 QUALITY ASSURANCE

A. Qualifications:
1. Installers: All masonry flashing installers must complete the International Masonry Institute Flashing Upgrade training course.
2. Testing Agency Qualifications: Qualified in accordance with ASTM C1093 for testing indicated.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Store masonry units on elevated platforms in a dry location. If units are not stored in an enclosed location, cover tops and sides of stacks with waterproof sheeting, securely tied. If units become wet, do not install until they are dry.

B. Store cementitious materials on elevated platforms, under cover, and in a dry location. Do not use cementitious materials that have become damp.

C. Store aggregates where grading and other required characteristics can be maintained and contamination avoided.

D. Deliver preblended, dry mortar mix in moisture-resistant containers. Store preblended, dry mortar mix in delivery containers on elevated platforms in a dry location or in covered weatherproof dispensing silos.

E. Store masonry accessories, including metal items, to prevent corrosion and accumulation of dirt and oil.

1.08 FIELD CONDITIONS

A. Protection of Masonry: During construction, cover tops of walls, projections, and sills with waterproof sheeting at end of each day's work. Cover partially completed masonry when construction is not in progress.
1. Extend cover a minimum of 24 inches (610 mm) down both sides of walls, and hold cover securely in place.

B. Do not apply uniform floor or roof loads for at least 12 hours and concentrated loads for at least three days after building masonry walls or columns.

C. Stain Prevention: Prevent grout, mortar, and soil from staining the face of masonry to be left exposed or painted. Immediately remove grout, mortar, and soil that come in contact with such masonry.
1. Protect base of walls from rain-splashed mud and from mortar splatter by spreading coverings on ground and over wall surface.
2. Protect sills, ledges, and projections from mortar droppings.
3. Protect surfaces of window and door frames, as well as similar products with painted and integral finishes, from mortar droppings.
4. Turn scaffold boards near the wall on edge at the end of each day to prevent rain from splashing mortar and dirt onto completed masonry.

D. Cold-Weather Requirements: Do not use frozen materials or materials mixed or coated with ice or frost. Do not build on frozen substrates. Remove and replace unit masonry damaged by frost or by freezing conditions. Comply with cold-weather construction requirements contained in TMS 602.
   1. Cold-Weather Cleaning: Use liquid cleaning methods only when air temperature is 40 deg F (4 deg C) and higher and will remain so until masonry has dried, but not less than seven days after completing cleaning.

E. Hot-Weather Requirements: Comply with hot-weather construction requirements contained in TMS 602.

PART 2 - PRODUCTS

2.01 SOURCE LIMITATIONS

A. Obtain exposed masonry units cementitious mortar components and mortar aggregate from single source producer or manufacturer.

B. For exposed masonry units and cementitious mortar components, obtain each color and grade from single source with resources to provide materials of consistent quality in appearance and physical properties.

2.02 PERFORMANCE REQUIREMENTS

A. Provide structural unit masonry that develops indicated net-area compressive strengths at 28 days.
   1. Determine net-area compressive strength of masonry from average net-area compressive strengths of masonry units and mortar types (unit-strength method) in accordance with TMS 602.
   2. Determine net-area compressive strength of masonry by testing masonry prisms in accordance with ASTM C1314.

2.03 UNIT MASONRY, GENERAL

A. Masonry Standard: Comply with TMS 602, except as modified by requirements in the Contract Documents.

B. Defective Units: Referenced masonry unit standards may allow a certain percentage of units to contain chips, cracks, or other defects exceeding limits stated. Do not use units where such defects are exposed in the completed Work and will be within 20 ft. (6 m) vertically and horizontally of a walking surface.

2.04 CONCRETE MASONRY UNITS

A. Shapes: Provide shapes indicated and as follows, with exposed surfaces matching exposed faces of adjacent units unless otherwise indicated.
   1. Provide special shapes for lintels, corners, jambs, sashes, movement joints, headers, bonding, and other special conditions.
   2. Provide bullnose units for outside corners unless otherwise indicated.

B. CMUs: ASTM C90, normal weight.
   1. Size (Width): Manufactured to dimensions 3/8 inch (10 mm) less than nominal dimensions.

2.05 LINTELS

A. Solid Concrete Masonry Lintels: ASTM C1623, matching CMUs in color, texture, and density classification; and with reinforcing bars indicated. Provide lintels with net-area compressive strength of not less than that of CMUs.

B. Concrete Lintels: Precast or formed-in-place concrete lintels complying with requirements in Division 3 "Concrete Reinforcment," and with reinforcing bars indicated.
C. Masonry Lintels: Prefabricated or built-in-place masonry lintels made from bond beam CMUs matching adjacent CMUs in color, texture, and density classification, with reinforcing bars placed as indicated and filled with coarse grout. Cure precast lintels before handling and installing. Temporarily support built-in-place lintels until cured.

2.06 MORTAR AND GROUT MATERIALS

A. Portland Cement: ASTM C150/C150M, Type I or II, except Type III may be used for cold-weather construction. Provide natural color or white cement as required to produce mortar color indicated.
   1. Alkali content will not be more than 0.1 percent when tested in accordance with ASTM C114.
B. Hydrated Lime: ASTM C207, Type S.
C. Mortar Cement: ASTM C1329/C1329M.
   1. Manufacturers: Subject to compliance with requirements, provide products by the following:
      a. Lafarge North America Inc.
D. Preblended Dry Mortar Mix: Packaged blend made from portland cement and hydrated lime or mortar cement, sand, and admixtures and complying with ASTM C1714/C1714M.
   1. Preblended Dry Portland Cement Mortar Mix:
      a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
         1) Amerimix is a trademark of Bonsal American, an Oldcastle company.
         2) Sakrete; CRH Americas, Oldcastle APG.
E. Aggregate for Mortar: ASTM C144.
   1. For mortar that is exposed to view, use washed aggregate consisting of natural sand or crushed stone.
   2. For joints less than 1/4 inch (6.4 mm) thick, use aggregate graded with 100 percent passing the No. 16 (1.18-mm) sieve.
   3. White-Mortar Aggregates: Natural white sand or crushed white stone.
   4. Colored-Mortar Aggregates: Natural sand or crushed stone of color necessary to produce required mortar color.
F. Aggregate for Grout: ASTM C404.
G. Cold-Weather Admixture: Nonchloride, noncorrosive, accelerating admixture complying with ASTM C494/C494M, Type C, and recommended by manufacturer for use in masonry mortar of composition indicated.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Euclid Chemical Company (The); an RPM company.
      b. GCP Applied Technologies Inc.
H. Water: Potable.

2.07 REINFORCEMENT

A. Uncoated-Steel Reinforcing Bars: ASTM A615/A615M or ASTM A996/A996M, Grade 60 (Grade 420).
B. Reinforcing Bar Positioners: Wire units designed to fit into mortar bed joints spanning masonry unit cells and to hold reinforcing bars in center of cells. Units are formed from 0.148-inch (3.77-mm) steel wire, hot-dip galvanized after fabrication. Provide units designed for number of bars indicated.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Heckmann Building Products, Inc.
   b. Hohmann & Barnard, Inc.
   c. Wire-Bond.

C. Masonry-Joint Reinforcement, General: ASTM A951/A951M.
1. Interior Walls: Hot-dip galvanized carbon steel.
2. Wire Size for Side Rods: 0.148-inch (3.77-mm) diameter.
3. Wire Size for Cross Rods: 0.148-inch (3.77-mm) diameter.
4. Spacing of Cross Rods, Tabs, and Cross Ties: Not more than 16 inches (406 mm) o.c.
5. Provide in lengths of not less than 10 ft. (3 m), with prefabricated corner and tee units.

D. Masonry-Joint Reinforcement for Single-Wythe Masonry: Ladder type with single pair of side rods.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Hohmann & Barnard, Inc.
   b. Wire-Bond.

2.08 ACCESSORIES

A. Compressible Filler: Premolded filler strips complying with ASTM D1056, Grade 2A1; compressible up to 35 percent; of width and thickness indicated; formulated from neoprene urethane or PVC.

B. Preformed Control-Joint Gaskets: Made from styrene-butadiene-rubber compound, complying with ASTM D2000, Designation M2AA-805 or PVC, complying with ASTM D2287, Type PVC-65406 and designed to fit standard sash block and to maintain lateral stability in masonry wall; size and configuration as indicated.

C. Bond-Breaker Strips: Asphalt-saturated felt complying with ASTM D226/D226M, Type I (No. 15 asphalt felt).

2.09 MORTAR AND GROUT MIXES

A. General: Do not use admixtures, including pigments, air-entraining agents, accelerators, retarders, water-repellent agents, antifreeze compounds, or other admixtures unless otherwise indicated.
1. Do not use calcium chloride in mortar or grout.
2. Use portland cement-lime or mortar cement mortar unless otherwise indicated.
3. For reinforced masonry, use portland cement-lime or mortar cement mortar.
4. Add cold-weather admixture (if used) at same rate for all mortar that will be exposed to view, regardless of weather conditions, to ensure that mortar color is consistent.

B. Preblended, Dry Mortar Mix: Furnish dry mortar ingredients in form of a preblended mix. Measure quantities by weight to ensure accurate proportions, and thoroughly blend ingredients before delivering to Project site.

C. Mortar for Unit Masonry: Comply with ASTM C270, Proportion Specification. Provide the following types of mortar for applications stated unless another type is indicated or needed to provide required compressive strength of masonry.
1. For masonry below grade or in contact with earth, use Type M.
2. For reinforced masonry, use Type N.
3. For mortar parge coats, use Type S or Type N.
4. For exterior, above-grade, load-bearing, nonload-bearing walls, and parapet walls; for interior load-bearing walls; for interior nonload-bearing partitions; and for other applications where another type is not indicated, use Type N.

D. Grout for Unit Masonry: Comply with ASTM C476.

1. Use grout of type indicated or, if not otherwise indicated, of type (fine or coarse) that will comply with TMS 602 for dimensions of grout spaces and pour height.
2. Proportion grout in accordance with ASTM C476, Table 1 or paragraph 4.2.1.2 for specified 28-day compressive strength indicated, but not less than 2000 psi (14 MPa).
3. Provide grout with a slump of 8 to 11 inches (203 to 279 mm) as measured in accordance with ASTM C143/C143M.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
   1. For the record, prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.
   2. Verify that foundations are within tolerances specified.
   3. Verify that reinforcing dowels are properly placed.
   4. Verify that substrates are free of substances that impair mortar bond.
B. Before installation, examine rough-in and built-in construction for piping systems to verify actual locations of piping connections.
C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION, GENERAL

A. Thickness: Build cavity and composite walls and other masonry construction to full thickness shown. Build single-wythe walls to actual widths of masonry units, using units of widths indicated.
B. Build chases and recesses to accommodate items specified in this and other Sections.
C. Leave openings for equipment to be installed before completing masonry. After installing equipment, complete masonry to match construction immediately adjacent to opening.
D. Use full-size units without cutting if possible. If cutting is required to provide a continuous pattern or to fit adjoining construction, cut units with motor-driven saws; provide clean, sharp, unchipped edges. Allow units to dry before laying unless wetting of units is specified. Install cut units with cut surfaces and, where possible, cut edges concealed.
E. Select and arrange units for exposed unit masonry to produce a uniform blend of colors and textures. Mix units from several pallets or cubes as they are placed.
F. Matching Existing Masonry: Match coursing, bonding, color, and texture of existing masonry.

3.03 TOLERANCES

A. Dimensions and Locations of Elements:
   1. For dimensions in cross section or elevation, do not vary by more than plus 1/2 inch (13 mm) or minus 1/4 inch (6.4 mm).
   2. For location of elements in plan, do not vary from that indicated by more than plus or minus 1/2 inch (13 mm).
   3. For location of elements in elevation, do not vary from that indicated by more than plus or minus 1/4 inch (6.4 mm) in a story height or 1/2 inch (13 mm) total.
B. Lines and Levels:
   1. For bed joints and top surfaces of bearing walls, do not vary from level by more than 1/4 inch in 10 ft. (6.4 mm in 3 m), or 1/2-inch (13-mm) maximum.
   2. For conspicuous horizontal lines, such as lintels, sills, parapets, and reveals, do not vary from level by more than 1/8 inch in 10 ft. (3.2 mm in 3 m), 1/4 inch in 20 ft. (6.4 mm in 6 m), or 1/2-inch (13-mm) maximum.

3. For vertical lines and surfaces, do not vary from plumb by more than 1/4 inch in 10 ft. (6.4 mm in 3 m), 3/8 inch in 20 ft. (10 mm in 6 m), or 1/2-inch (13-mm) maximum.
4. For conspicuous vertical lines, such as external corners, door jambs, reveals, and expansion and control joints, do not vary from plumb by more than 1/8 inch in 10 ft. (3.2 mm in 3 m), 1/4 inch in 20 ft. (6.4 mm in 6 m), or 1/2-inch (13-mm) maximum.
5. For lines and surfaces, do not vary from straight by more than 1/4 inch in 10 ft. (6.4 mm in 3 m), 3/8 inch in 20 ft. (10 mm in 6 m), or 1/2-inch (13-mm) maximum.
6. For vertical alignment of exposed head joints, do not vary from plumb by more than 1/4 inch in 10 ft. (6.4 mm in 3 m), or 1/2-inch (13-mm) maximum.

C. Joints:
1. For bed joints, do not vary from thickness indicated by more than plus or minus 1/8 inch (3.2 mm), with a maximum thickness limited to 1/2 inch (13 mm).
2. For exposed bed joints, do not vary from bed-joint thickness of adjacent courses by more than 1/8 inch (3.2 mm).
3. For head and collar joints, do not vary from thickness indicated by more than plus 3/8 inch (10 mm) or minus 1/4 inch (6.4 mm).
4. For exposed head joints, do not vary from thickness indicated by more than plus or minus 1/8 inch (3.2 mm).
5. For exposed bed joints and head joints of stacked bond, do not vary from a straight line by more than 1/16 inch (1.6 mm) from one masonry unit to the next.

3.04 LAYING MASONRY WALLS

A. Lay out walls in advance for accurate spacing of surface bond patterns with uniform joint thicknesses and for accurate location of openings, movement-type joints, returns, and offsets. Avoid using less-than-half-size units, particularly at corners, jambs, and, where possible, at other locations.

B. Bond Pattern for Exposed Masonry: Unless otherwise indicated, lay exposed masonry in running bond; do not use units with less-than-nominal 4-inch (102-mm) horizontal face dimensions at corners or jambs.

C. Stopping and Resuming Work: Stop work by stepping back units in each course from those in course below; do not tooth. When resuming work, clean masonry surfaces that are to receive mortar, remove loose masonry units and mortar, and wet units if required before laying fresh masonry.

D. Built-in Work: As construction progresses, build in items specified in this and other Sections. Fill in solidly with masonry around built-in items.

E. Where built-in items are to be embedded in cores of hollow masonry units, place a layer of metal lath, wire mesh, or plastic mesh in the joint below, and rod mortar or grout into core.

F. Fill cores in hollow CMUs with grout 24 inches (610 mm) under bearing plates, beams, lintels, posts, and similar items unless otherwise indicated.

G. Build nonload-bearing interior partitions full height of story to underside of solid floor or roof structure above unless otherwise indicated.
1. Install compressible filler in joint between top of partition and underside of structure above.
2. Fasten partition top anchors to structure above and build into top of partition. Grout cells of CMUs solidly around plastic tubes of anchors, and push tubes down into grout to provide 1/2-inch (13-mm) clearance between end of anchor rod and end of tube. Space anchors 48 inches (1219 mm) o.c. unless otherwise indicated.
3. At fire-rated partitions, treat joint between top of partition and underside of structure above to comply with Section 07 84 43 "Joint Firestopping."

3.05 MORTAR BEDDING AND JOINTING

A. Lay CMUs as follows:
   1. Bed face shells in mortar and make head joints of depth equal to bed joints.
   2. Bed webs in mortar in all courses of piers, columns, and pilasters.
   3. Bed webs in mortar in grouted masonry, including starting course on footings.
   4. Fully bed entire units, including areas under cells, at starting course on footings where cells are not grouted.
   5. Fully bed units and fill cells with mortar at anchors and ties as needed to fully embed anchors and ties in mortar.

B. Lay solid masonry units with completely filled bed and head joints; butter ends with sufficient mortar to fill head joints and shove into place. Do not deeply furrow bed joints or slush head joints.

C. Tool exposed joints slightly concave when thumbprint hard, using a jointer larger than joint thickness unless otherwise indicated.

3.06 MASONRY-JOINT REINFORCEMENT

A. General: Install entire length of longitudinal side rods in mortar with a minimum cover of 5/8 inch (16 mm) on exterior side of walls, 1/2 inch (13 mm) elsewhere. Lap reinforcement a minimum of 6 inches (152 mm).
   1. Space reinforcement not more than 16 inches (406 mm) o.c.
   2. Space reinforcement not more than 8 inches (203 mm) o.c. in foundation walls and parapet walls.
   3. Provide reinforcement not more than 8 inches (203 mm) above and below wall openings and extending 12 inches (305 mm) beyond openings in addition to continuous reinforcement.

B. Interrupt joint reinforcement at control and expansion joints unless otherwise indicated.

C. Provide continuity at wall intersections by using prefabricated T-shaped units.

D. Provide continuity at corners by using prefabricated L-shaped units.

E. Cut and bend reinforcing units as directed by manufacturer for continuity at returns, offsets, column fireproofing, pipe enclosures, and other special conditions.

3.07 ANCHORING MASONRY TO STRUCTURAL STEEL AND CONCRETE

A. Anchor masonry to structural steel and concrete, where masonry abuts or faces structural steel or concrete, to comply with the following:
   1. Provide an open space not less than 1/2 inch (13 mm) wide between masonry and structural steel or concrete unless otherwise indicated. Keep open space free of mortar and other rigid materials.
   2. Anchor masonry with anchors embedded in masonry joints and attached to structure.
   3. Space anchors as indicated, but not more than 24 inches (610 mm) o.c. vertically and 36 inches (914 mm) o.c. horizontally.

3.08 CONTROL AND EXPANSION JOINTS

A. General: Install control- and expansion-joint materials in unit masonry as masonry progresses. Do not allow materials to span control and expansion joints without provision to allow for in-plane wall or partition movement.

B. Form control joints in concrete masonry using one of the following methods:
   1. Fit bond-breaker strips into hollow contour in ends of CMUs on one side of control joint. Fill resultant core with grout and rake out joints in exposed faces for application of sealant.
   2. Install preformed control-joint gaskets designed to fit standard sash block.

3. Install temporary foam-plastic filler in head joints and remove filler when unit masonry is complete for application of sealant.

3.09 LINTELS

A. Install steel lintels where indicated.
B. Provide concrete lintels where indicated and where openings of more than 24 inches (610 mm) for block-size units are indicated without structural steel or other supporting lintels.
C. Provide minimum bearing of 8 inches (203 mm) at each jamb unless otherwise indicated.

3.10 REINFORCED UNIT MASONRY

A. Temporary Formwork and Shores: Construct formwork and shores as needed to support reinforced masonry elements during construction.
   1. Construct formwork to provide shape, line, and dimensions of completed masonry as indicated. Make forms sufficiently tight to prevent leakage of mortar and grout. Brace, tie, and support forms to maintain position and shape during construction and curing of reinforced masonry.
   2. Do not remove forms and shores until reinforced masonry members have hardened sufficiently to carry their own weight and that of other loads that may be placed on them during construction.
B. Placing Reinforcement: Comply with requirements in TMS 602.
C. Grouting: Do not place grout until entire height of masonry to be grouted has attained enough strength to resist grout pressure.
   1. Comply with requirements in TMS 602 for cleanouts and for grout placement, including minimum grout space and maximum pour height.
   2. Limit height of vertical grout pours to not more than 60 inches (1524 mm).

3.11 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections. Allow inspectors access to scaffolding and work areas as needed to perform tests and inspections. Retesting of materials that fail to comply with specified requirements will be at Contractor's expense.
B. Inspections: Special inspections in accordance with Level 3 in TMS 402.
   1. Begin masonry construction only after inspectors have verified proportions of site-prepared mortar.
   2. Place grout only after inspectors have verified compliance of grout spaces and of grades, sizes, and locations of reinforcement.
   3. Place grout only after inspectors have verified proportions of site-prepared grout.
C. Testing Frequency: One set of tests for each 5000 sq. ft. (464 sq. m) of wall area or portion thereof.
D. Concrete Masonry Unit Test: For each type of unit provided, in accordance with ASTM C140/C140M for compressive strength.
E. Mortar Aggregate Ratio Test (Proportion Specification): For each mix provided, in accordance with ASTM C780.
F. Grout Test (Compressive Strength): For each mix provided, in accordance with ASTM C1019.

3.12 REPAIRING, POINTING, AND CLEANING

A. Remove and replace masonry units that are loose, chipped, broken, stained, or otherwise damaged or that do not match adjoining units. Install new units to match adjoining units; install in fresh mortar, pointed to eliminate evidence of replacement.
B. Pointing: During the tooling of joints, enlarge voids and holes, except weep holes, and completely fill with mortar. Point up joints, including corners, openings, and adjacent

construction, to provide a neat, uniform appearance. Prepare joints for sealant application, where indicated.

C. In-Progress Cleaning: Clean unit masonry as work progresses by dry brushing to remove mortar fins and smears before tooling joints.

D. Final Cleaning: After mortar is thoroughly set and cured, clean exposed masonry as follows:
   1. Remove large mortar particles by hand with wooden paddles and nonmetallic scrape hoes or chisels.
   2. Test cleaning methods on sample wall panel; leave one-half of panel uncleaned for comparison purposes. Obtain Architect's approval of sample cleaning before proceeding with cleaning of masonry.
   3. Wet wall surfaces with water before applying cleaners; remove cleaners promptly by rinsing surfaces thoroughly with clear water.
   4. Clean concrete masonry by applicable cleaning methods indicated in NCMA TEK 8-4A.

3.13 MASONRY WASTE DISPOSAL

A. Salvageable Materials: Unless otherwise indicated, excess masonry materials are Contractor's property. At completion of unit masonry work, remove from Project site.

B. Waste Disposal as Fill Material: Dispose of clean masonry waste, including excess or soil-contaminated sand, waste mortar, and broken masonry units, by crushing and mixing with fill material as fill is placed.
   1. Crush masonry waste to less than 4 inches (102 mm) in each dimension.
   2. Mix masonry waste with at least two parts of specified fill material for each part of masonry waste. Fill material is specified in Division 31"Earthwork."
   3. Do not dispose of masonry waste as fill within 18 inches (457 mm) of finished grade.

C. Masonry Waste Recycling: Return broken CMUs not used as fill to manufacturer for recycling.

D. Excess Masonry Waste: Remove excess clean masonry waste that cannot be used as fill, as described above or recycled, and other masonry waste, and legally dispose of off Owner's property.

END OF SECTION 04 20 00

DIVISION 05 - METALS

SECTION 05 05 19 – POST INSTALLED ANCHORS

PART 1 - GENERAL

1.01 RELATED DOCUMENTS:

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY:

A. This section includes post installed adhesive anchors, mechanical anchors and epoxy anchorage of rebar in hardened concrete.

1.03 RELATED WORK SPECIFIED ELSEWHERE:

1. Section 03 20 00 - Concrete Reinforcement
2. Section 03 30 00 - Concrete
3. Section 05 12 00 - Steel
4. Division 22 Hangers and Supports Section.
5. Division 23 Hangers and Supports Section.
6. Division 26 Hangers and Supports Section.

1.04 REFERENCE STANDARDS:

A. Publication Dates: Comply with standards in effect as of date of the Contract Documents unless otherwise indicated.
   1. International Building Code (IBC).
   2. American Concrete Institute (ACI):
      a. 318 – Building Code Requirements for Reinforced Concrete.
      b. 355.2 – Qualification of Post-Installed Mechanical Anchors in Concrete.
      c. 355.4 – Qualification of Post-Installed Adhesive Anchors in Concrete
   3. International Code Council Evaluation Service (ICC-ES)
      a. AC01 – Acceptance Criteria for Expansion Anchors in Masonry Elements
      b. AC58 – Acceptance Criteria for Adhesive Anchors in Masonry Elements
      c. AC60 - Acceptance Criteria for Anchors in Unreinforced Masonry Elements
      d. AC193 – Acceptance Criteria for Mechanical Anchors in Concrete Elements
      e. AC308 – Acceptance Criteria for Post-Installed Adhesive Anchors in Concrete Elements
   4. International Association of Plumbing and Mechanical Officials (IAPMO)

1.05 SUBMITTALS:

A. Submit as specified in DIVISION 1.
B. Include but not limited to, the following:
   1. Product specification data with recommended design values and physical characteristics for epoxy dowels, expansion and undercut anchors.
   2. Quality Assurance Submittals:
      a. Test Reports: Certified test reports showing compliance with specified performance characteristics and physical properties.
      b. Certificates:
         (1) ICC ES Evaluation Reports.
   3. Manufacturer’s installation instructions.

4. Installer Qualifications & Procedures: Submit installer qualifications as stated in Section 1.06.B. Submit a letter of procedure stating method of drilling, the product proposed for use, the complete installation procedure, manufacturer training date, and a list of the personnel to be trained on anchor installation.

C. Closeout Submittals: Submit the following:
1. Record Documents: Project record documents for installed materials in accordance with Division 1 Closeout Submittals Section.

1.06 QUALITY ASSURANCE

A. Installer Qualifications:
1. All personnel installing adhesive anchors shall be ACI adhesive anchor certified.

B. Installer Training: Conduct a thorough training with the manufacturer or the manufacturer's representative for the installer on the project. Training to consist of a review of the complete installation process for drilled-in anchors, to include but not limited to:
1. hole drilling procedure
2. hole preparation & cleaning technique
3. adhesive injection technique & dispenser training / maintenance
4. rebar dowel preparation and installation
5. proof loading/torquing

C. Certifications: Unless otherwise authorized by the Engineer, anchors shall have one of the following certifications:
1. ICC ES Evaluation Report indicating conformance with current applicable ICC ES Acceptance Criteria.
2. IAPMO UES Evaluation Report indicating conformance with current applicable acceptance criteria.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Deliver products to job site in manufacturer's clearly labeled unopened packaging, complete with installation instructions.

B. Protect and handle materials in accordance with manufacturer's recommendations to prevent damage or deterioration.

PART 2 - PRODUCTS:

2.01 MATERIALS

A. Fasteners and Anchors:
1. Bolts and Studs: ASTM A307; ASTM A449 where "high strength" is indicated on the Drawings.
2. Carbon and Alloy Steel Nuts: ASTM A563.
3. Carbon Steel Washers: ASTM F436.
4. Carbon Steel Threaded Rod: ASTM A36; or ASTM A193 Grade B7; or ISO 898 Class 5.8.
5. Wedge Anchors: ASTM A510; or ASTM A108.
6. Stainless Steel Bolts, Hex Cap Screws, and Studs: ASTM F593.
7. Stainless Steel Nuts: ASTM F594.
8. Zinc Plating: ASTM B633.
9. Hot-Dip Galvanizing: ASTM A153.
10. Reinforcing Dowels: ASTM A615

2.02 MECHANICAL ANCHORS

A. Mechanical anchors shall meet the qualification criteria of ACI 355.2, ICC-ES AC01 (masonry) or AC193 (concrete).

B. Use of mechanical anchors in permanently submerged conditions shall not be permitted.

C. Unless otherwise indicated on the Drawings, provide stainless steel anchors. Stainless steel anchors shall be AISI Type 304 stainless steel provided with stainless steel nuts and washers of matching alloy group and minimum proof stress equal to or greater than the specified minimum full-size tensile strength of the externally threaded fastener. Stainless steel nuts shall conform to ASTM F594 unless otherwise specified. Avoid installing stainless steel anchors in contact with galvanically dissimilar metals.

D. The type of anchors shall be as follows:

1. Wedge type, torque-controlled, with impact section to prevent thread damage complete with required nuts and washers.
   a. Life safety applications (Including but not limited to handrail and direct tension hangers)
      (1) Simpson Strong Tie – Strong Bolt 2
      (2) Hilti Kwik Bolt TZ
      (3) DeWalt – Power-Stud SD2
   b. Low risk to life safety (small pipe stands, Unistrut, etc.)
      (1) Simpson Strong Tie – Wedge All
      (2) Hilti Kwik Bolt 3
      (3) DeWalt – Power-Stud SD1
2. Screw Anchors: screw type. Pre-drilling of the hole requires a standard ANSI drill bit with the same diameter as the anchor and installing the anchor will be done with an impact wrench. Provide anchors with a diameter and anchor length marking on the head. Type and size as indicated on Drawings.
   a. Hilti Kwik-HUS-EZ
   b. Simpson Titen HD
3. Heavy Duty Undercut Anchors: Bearing type. Installed anchor shall have a minimum tension bearing area in the concrete, measured as the horizontal projection of the bearing surface, not less than two times the net tensile area of the anchor bolt. The installed anchor shall exhibit a form fit between the bearing elements and the undercut in the concrete. Type and size as indicated on Drawings.
   a. Simpson Strong Tie – Torq-Cut
   b. Hilti HDA Undercut Anchor
   c. DeWalt – Atomic+ Undercut
   d. Use only where specifically called for on drawings

2.03 ADHESIVE ANCHORS

A. Adhesive anchors shall meet the qualification criteria of ACI 355.4, ICC-ES A58 (masonry) or A308 (concrete).

B. Adhesive anchors shall not be installed in concrete less than 21 days of age.

C. Unless otherwise indicated on the Drawings, provide stainless steel anchors. Stainless steel anchors shall be AISI Type 304 stainless steel provided with stainless steel nuts and washers of matching alloy group and minimum proof stress equal to or greater than the specified minimum full-size tensile strength of the externally threaded fastener. All nuts shall conform to ASTM F594 unless otherwise specified. Avoid installing stainless steel anchors in contact with galvanically dissimilar metals.

D. Reinforcing dowels shall be A615 Grade 60.
E. The type of anchors shall be as follows:
    1. Epoxy Anchors – Life safety applications (Fall protection).
        a. Simpson Strong Tie – SET 3G
        b. Hilti – HIT-RE500 V3
        c. Hilti – HIT-HY200 V3
        d. DeWalt– PE1000+
        e. Adhesives Technology – Ultrabond HS-1CC
    2. Adhesive Anchors: (Used for non-vibrating equipment anchorage and other non-life safety attachments)
        a. Simpson Strong Tie – AT-XP
        b. Hilti – HIT-HY200 V3
        c. DeWalt– AC200+
        d. Adhesives Technology – Ultrabond EXP-3CC
    3. Epoxy Rebar Dowels:
        a. Simpson Strong Tie – SET 3G
        b. Hilti HIT-RE500 V3
        c. Adhesives Technology – Ultrabond HS-1CC
    4. Anchorage to Masonry, ICC-ES AC58 & AC60:
        a. Hilti HIT-HY270
            (1) Provide Hilti HIT-SC mesh sleeve when anchoring to hollow masonry.

PART 3 - EXECUTION

3.01 INSTALLATION

A. Drilled-In Anchors:
    1. Drill holes with rotary impact hammer drills using carbide-tipped bits, hollow drill bit system, or core drills using diamond core bits. Drill bits shall be of diameters as specified by the anchor manufacturer. Unless otherwise shown on the Drawings, all holes shall be drilled perpendicular to the concrete surface.
        a. Cored Holes: Where anchors are permitted to be installed in cored holes, use core bits with matched tolerances as specified by the manufacturer. Properly clean cored hole per manufacturer's instructions.
        b. Embedded Items: Identify position of reinforcing steel and other embedded items prior to drilling holes for anchors. Exercise care in coring or drilling to avoid damaging existing reinforcing or embedded items. Take precautions as necessary to avoid damaging prestressing tendons, electrical and telecommunications conduit, and gas lines.
            (1) Notify the Engineer prior to abandoning and relocating anchor holes if reinforcing steel or other embedded items are encountered during drilling and the specified embedment depth has not been met.
        c. Base Material Strength: Unless otherwise specified, do not drill holes in concrete or masonry until concrete, mortar, or grout has achieved full design strength.
    2. Perform anchor installation in accordance with manufacturer instructions.
    3. Wedge Anchors, Heavy-Duty Sleeve Anchors, and Undercut Anchors: Protect threads from damage during anchor installation. Heavy-duty sleeve anchors shall be installed with sleeve fully engaged in part to be fastened. Set anchors to manufacturer's recommended torque, using a torque wrench. Following attainment of 10% of the

specified torque, 100% of the specified torque shall be reached within 7 or fewer complete turns of the nut. If the specified torque is not achieved within the required number of turns, the anchor shall be removed and replaced unless otherwise directed by the Engineer.

4. Cartridge Injection Adhesive Anchors: Clean all holes per manufacturer instructions to remove loose material and drilling dust prior to installation of adhesive. Inject adhesive into holes proceeding from the bottom of the hole and progressing toward the surface in such a manner as to avoid introduction of air pockets in the adhesive. Follow manufacturer recommendations to ensure proper mixing of adhesive components. Sufficient adhesive shall be injected in the hole to ensure that the annular gap is filled to the surface. Remove excess adhesive from the surface. Shim anchors with suitable device to center the anchor in the hole. Do not disturb or load anchors before manufacturer specified cure time has elapsed.
5. Observe manufacturer recommendations with respect to installation temperatures for cartridge injection adhesive anchors and capsule anchors.

3.02 REPAIR OF DEFECTIVE WORK

A. Remove and replace misplaced or malfunctioning anchors. Fill empty anchor holes and patch failed anchor locations with high-strength non-shrink, nonmetallic grout. Anchors that fail to meet proof load or installation torque requirements shall be regarded as malfunctioning.

END OF SECTION 05 05 19

SECTION 05 12 00 – STEEL

PART 1 - GENERAL

1.01 RELATED DOCUMENTS:

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY:

A. This Section includes fabrication and erection of the structural steel and other steel or metal items as defined in AISC Manual, Code of Standard Practice.

1.03 RELATED REQUIREMENTS:

A. Division 3 Concrete.
B. Section 05 05 19 – Post-Installed Anchors.
C. Section 09 90 00 - Protective Coatings.

1.04 REFERENCE STANDARDS:

A. American Institute of Steel Construction (AISC):
   1. Steel Construction Manual.
   2. 303 - Code of Standard Practice for Steel Buildings and Bridges.
B. American Welding Society (AWS):
   1. A4.3 - Standard Methods for Determination of the Diffusible Hydrogen Content of Martensitic, Bainitic, and Ferritic Steel Weld Metal Produced by Arc Welding.
   2. A5.1 - Specification for Carbon Steel Electrodes for Shielded Metal Arc Welding.
   3. A5.4 - Specification for Stainless-Steel Electrodes for Shielded Metal Arc Welding.
   4. A5.5 - Specification for Low-Alloy Steel Electrodes for Shielded Metal Arc Welding.
   5. B4.0 - Standard Methods for Mechanical Testing of Welds.
   6. B5.1 - Specification for the Qualification of Welding Inspectors.
   7. C4.1 - Oxygen Cutting Surface Roughness Gauge and Chart for Criteria Describing Oxygen Cut Surfaces.
   8. C5.4 - Recommended Practices for Stud Welding.
   9. D1.1 - Structural Welding Code - Steel.
   10. D1.6 - Structural Welding Code - Stainless Steel.
   11. QC1 - Standard for AWS Certification of Welding Inspectors.
C. ASTM International:
   1. A1 - Carbon Steel Tee Rails.
   2. A6 - Standard Specification for General Requirements for Rolled Structural Steel Bars, Plates, Shapes, and Sheet Piling.
   3. A36 - Carbon Structural Steel.
   4. A53 - Pipe, Steel, Black and Hot-Dipped, Zinc-Coated Welded and Seamless.
   5. A106 - Seamless Carbon Steel Pipe for High-Temperature Service.
   6. A108 - Steel Bar, Carbon and Alloy, Cold-Finished.
   7. A123 - Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.
   8. A143 - Safeguarding Against Embrittlement of Hot-Dip Galvanized Structural Steel Products and Procedure for Detecting Embrittlement.
   9. A153 - Zinc Coating (Hot-Dip) on Iron and Steel Hardware - AASHTO No.: M232.
   10. A167 - Stainless and Heat-Resisting Chromium-Nickel Steel Plate, Sheet, and Strip.
   11. A193 - Alloy-Steel and Stainless-Steel Bolting Materials for High Temperature or High Pressure Service and Other Special Purpose Applications.

12. A240 - Chromium and Chromium-Nickel Stainless-Steel Plate, Sheet, and Strip for Pressure Vessels and for General Applications.
13. A264 - Stainless Chromium-Nickel Steel-Clad Plate.
14. A307 - Carbon Steel Bolts and Studs, 60,000 psi Tensile Strength.
15. A312 - Seamless, Welded, and Heavily Cold Worked Austenitic Stainless-Steel Pipes.
16. A384 - Safeguarding Against Warpage and Distortion During Hot-Dip Galvanizing of Steel Assemblies.
17. A385 - Providing High-Quality Zinc Coatings (Hot-Dip)
18. A449 - Hex Cap Screws, Bolts and Studs, Steel, Heat Treated, 120/105/90 ksi Minimum Tensile Strength, General Use.
19. A500 - Cold-Formed Welded and Seamless Carbon Steel Structural Tubing in Rounds and Shapes.
20. A563 - Carbon and Alloy Steel Nuts.
21. A572 - High-Strength Low-Alloy Columbium-Vanadium Structural Steel.
22. A588 - High-Strength Low-Alloy Structural Steel, up to 50 ksi [345 MPa] Minimum Yield Point, with Atmospheric Corrosion Resistance - AASHTO No.: M222.
23. A673 - Sampling Procedure for Impact Testing of Structural Steel.
24. A780 - Repair of Damaged and Uncoated Areas of Hot-Dip Galvanized Coatings.
25. A786 - Hot-Rolled Carbon Low-Alloy, High-Strength Low-Alloy, and Alloy Steel Floor Plates.
26. A992 - Structural Steel Shapes.
27. A1011/A1011M - Steel, Sheet and Strip, Hot-Rolled, Carbon, Structural, High- Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, and Ultra-High Strength.
28. B695 - Coatings of Zinc Mechanically Deposited on Iron and Steel.
29. C1107 - Packaged, Dry Hydraulic Cement Grout (Nonshrink).
30. F436 - Hardened Steel Washers.
31. F593 - Stainless-Steel Bolts, Hex Cap Screws, and Studs.
32. F594 - Stainless-Steel Nuts.
33. F959 - Compressible-Washer-Type Direct Tension Indicator for Use with Structural Fasteners.
34. F1554 - Anchor Bolts, Steel, 36-, 55-, and 105-ksi Yield Strength.
35. F2329 - Zinc Coating, Hot-Dip, Requirements for Application to Carbon and Alloy Steel Bolts, Screws, Washers, Nuts, and Special Threaded Fasteners.
36. F3125 - Standard Specification for High Strength Structural Bolts, Steel and Alloy Steel, Heat Treated, 120 ksi (830 MPa) and 150 ksi (1040 MPa) Minimum Tensile Strength, Inch and Metric Dimensions

D. The National Association of Architectural Metal Manufacturers (NAAMM):
   1. MBG 531 - Metal Bar Grating Manual.
   2. MBG 532 - Heavy Duty Metal Bar Grating Manual.
   3. MBG 533 - Welding Specifications for Fabrication of Steel, Aluminum and Stainless-Steel Bar Grating.

E. Research Council on Structural Connections (RCSC):
   1. Specification for Structural Joints Using High-Strength Bolts.

F. Society for Protective Coatings (SSPC) Surface Preparation Specifications:
   1. SP1 - Solvent Cleaning.
   2. SP3 - Power Tool Cleaning.
   3. SP5 - White Metal Blast Cleaning.
   4. SP6 - Commercial Blast Cleaning.

5. SP10 - Near-White Blast Cleaning.
6. SP11 - Power Tool Cleaning to Bare Metal.

G. Occupational Safety and Health Administration (OSHA) - All applicable OSHA regulations, including, but not limited to 29 CFR Part 1910 and Part 1926 Subpart R - Steel Erection.

1.05 SUBMITTALS:

A. Submit as specified in Division 01.

B. Includes, but not limited to, the following:

1. Fabrication and erection drawings for all Work. A reproduction of Engineer-prepared Contract Drawings may be used for erection drawings such as to indicate information on erection or to identify detail drawing references. Where the drawings are revised to show this additional information, Engineer's title block and professional seal shall be removed from the drawing. These erection drawings shall be revised for subsequent Engineer revisions to the Contract Drawings.
2. Fabrication and erection drawings shall be grouped in sets or sequences and shall be identified separately for each building, structure, or area.
3. In the event that drawing revisions are necessary, fabrication and erection drawings shall be clearly clouded showing all changes from the previous revision.
4. All necessary information for the fabrication, including connection material specifications and sizes as well as filler metal for welds, of the component part of the structure, presented on drawings to conform to recognized standard practice, AISC Manual and AWS Code.
5. Drawings indicating stud shear connector spacing regardless of whether connectors are shop-applied or field-applied.
6. Drawings showing each piece including anchor bolts marked for identification to correspond to erection drawings.
7. Proposed method and location for erection piece mark numbering.
8. Manufacturer's literature on products including, but not limited to, grating, stair treads, stair nosings, stud shear connectors, grout, concrete anchors, and protective coatings.
9. AWS Certified Welding Inspector Certificates.
10. Welder qualification records.
11. Qualified welding procedure specifications and procedure qualification test results if welding processes differ from those prequalified by AWS.

C. High-Strength Connection Bolt and Nut Manufacturer's Inspections Certificate:

1. Certify that bolts, nuts, and washers furnished comply with all of the requirements of these Specifications, and shall provide complete manufacturer's mill test reports (Manufacturer's Inspections Certificate).
2. Certificate numbers shall appear on the product containers and correspond to the identification numbers on the mill test reports.
3. Manufacturer's symbol and grade markings shall appear on all bolts and nuts.

1.06 QUALITY ASSURANCE:

A. Fabricator Qualifications: Fabricator shall participate in the AISC Certification Program and be designated an AISC Certified Plant, Category BU (formerly known as Category STD).

B. Erector Qualifications: Erector shall participate in the AISC Certification Program and be designated an AISC Certified Erector, Category (ACSE) (CSE).

C. Each piece of mill material shall be legibly marked with the heat number, size of section, length, and mill identification marks in accordance with ASTM A6 plus the fabrication mill

order number. Alternate material tracking procedures may be used when approved by Engineer.

D. For material other than ASTM A36/A36M, the appropriate specification number, grade, heat number and fabrication mill order number shall be transferred to the remnant.

E. Mill material with specified minimum yield strength higher than 36 ksi shall be marked with the color designated in ASTM A6/A6M. Alternate material tracking procedures may be used if approved by the purchaser.

F. Welder Qualifications:
   1. Welders shall be previously qualified by passing the tests prescribed in the AWS D1.1 or by passing such other tests as Engineer may accept. Welders of stainless steel shall be previously qualified in accordance with AWS D1.6.
   2. Welders shall have been tested within the past 12 months, and their qualification shall be considered as remaining in effect unless the welder is not engaged in a given process of welding for a period exceeding 6 months.

G. Inspection: Material or workmanship may be subject to inspection in the shop and field. Engineer shall have unrestricted entry to fabrication facilities and erection site at all times while work is being performed.

1.07 DELIVERY, STORAGE, AND HANDLING:

A. Handle and store all steel and appurtenances as specified in Division 01.

B. Deliver steel in the order needed for erection as follows:
   1. Loose base plates.
   2. Steel embedded in concrete.
   3. Erection bolts.
   4. First tier columns and framing for all its levels (including stairs, ladders, and guardrail).
   5. Columns and framing for remaining tiers in order.

C. Railcars and/or trucks shall be loaded and cribbed so they can be readily unloaded.

D. All steel and its coatings shall be protected from damage caused by handling, storage, and shipping.

E. All materials and documentation shall be inspected immediately upon receipt at the erection site to determine that all items in the bill of material have been supplied, to assure that all documentation has been received, and to check for any damage.

F. Store all steel and appurtenances blocked-up off the ground and in orderly stacks.

G. Protect all items with shop applied protective coatings from corrosion. Store in an environment and manner consistent with type of coating.

PART 2 - PRODUCTS

2.01 BASIC MATERIALS:

A. Steel: Conform to the following unless otherwise indicated or specified.
   1. Wide flange (WF) shapes and tees cut from WF: ASTM A992 (50 ksi yield strength) or ASTM A572, Grade 50.
   2. M shapes, S shapes, HP (bearing piles), channels, and angles: ASTM A36 or ASTM A572, Grade 50, unless noted otherwise.
   3. Structural plates and bars: ASTM A36 or ASTM A572 Grade 50, unless noted otherwise.

B. Corrosion-Resistant Steel: Conform to ASTM A588, Grade 50.

C. Rail Steel: Conform to No. 1 rail, ASTM A1 of the weight indicated or specified.

D. Stainless or Heat-Resisting Chromium-Nickel Steel: Conform to ASTM A167 and A240.

E. Connection Bolts, Nuts, Washers, and Compressible Washer-Type, Direct Tension Indicators:
   1. Conform to ASTM A3125 Grade A325, Type 1, unless otherwise indicated or specified.
   2. Be galvanized when connecting galvanized steel.
   3. Conform to A3125, Type 3, for use with A588, Grade 50.
   4. Compressible Washer-Type, Direct-Tension Indicators:
      a. ASTM F959 Type 325 for use with A325 bolts.
      b. ASTM F959 Type 490 for use with A490 bolts.
      c. Galvanized for use with galvanized bolts.
   5. Nuts: Heavy Hex conforming to ASTM A563 Grade DH.
   6. Flat and beveled washers: Conform to ASTM F436.

F. Anchor Bolts:
   1. Conform to ASTM F1554, Grade 36, unless otherwise indicated to be stainless steel or high strength.
   2. Machine Bolts: Conform to ASTM F1554, Grade 36.
   3. Stainless Steel: Conform to ASTM F593, Type 304, with nuts conforming to ASTM F594. Sleeves shall conform to ASTM A312.
   4. High Strength: Conform to ASTM A449 with nuts conforming to ASTM A563.
   5. Washers:
      a. For ASTM F1554 and A449 Bolts: Conform to F436.
      b. For Stainless-Steel Bolts: Conform to ASTM A167, Type 304, and dimensional tolerances of F436.
   6. Galvanize all anchor bolts, nuts, and washers except stainless steel.

G. Pipe for Structural Uses: Conform to ASTM A53, Type E or S, Grade B, or ASTM A106, Grade B.

H. Square and Rectangular Tubing Hollow Structural Sections (HSS): Conform to ASTM A500, Grade C.

I. Round Hollow Structural Sections (HSS): Conform to ASTM A500, Grade B.

J. Grating:
   1. Main Bars: Conform to ASTM A1011, Commercial Steel (Type B).
   2. Cross Bars: Same as main bars.

K. Shear Stud Connectors: Manufacture from cold-finished carbon steel conforming to ASTM A108, Grade 1015 or 1020.

L. Checkered Plate: Conform to ASTM A786 with A36 material and with deformations of the 4-way type.

M. Threaded Rods: Conform to ASTM A36.

N. Welding:
   1. For ASTM A36 steel, use E70 electrodes for shielded metal arc welding, F7 series electrodes for submerged arc welding, E70T series electrodes for flux-cored arc welding, and ER70S series electrodes for gas metal arc welding. Select "matching" electrodes in accordance with Table 3.1 AWS D1.1.
   2. For ASTM A588 steel, use E70 low-hydrogen electrodes for shielded metal arc welding, F7 series electrodes for submerged arc welding, E70T series electrodes for flux-cored arc welding, and ER70S series electrodes for gas metal arc welding. Select "matching" electrodes in accordance with Tables 3.1 and 3.3, AWS D1.1.
   3. For ASTM A572, Grade 50 steel or ASTM A992 steel, use E70 low-hydrogen electrodes for shielded metal arc welding, F7 series electrodes for submerged arc welding, E70T series electrodes for flux-cored arc welding, and ER70S series electrodes for gas metal arc welding. Select "matching" electrodes in accordance with Table 3.1, AWS D1.1.

4. For ASTM A167 or ASTM A312 stainless steel, use shielded metal arc welding, gas metal arc welding, gas tungsten arc welding, or flux-cored arc welding. Select "matching" electrodes in accordance with Table 3.3 of AWS D1.6.

O. Galvanizing:
1. Conform to ASTM A123.
2. Nuts, bolts, and washers shall be hot-dip galvanized to conform to ASTM F2329 or mechanically galvanized to conform to ASTM B695.
3. All holes required for bolts and attachment of other elements shall be drilled prior to galvanizing.

2.02 STEEL FABRICATION:

A. Fabricate all steel to conform to AISC Code of Standard Practice for Structural Steel Buildings and Bridges, AISC 360, and applicable portions of OSHA 29 CFR Part 1910 and Part 1926.

B. Permissible variations for sweep, camber, length, and cross section of all steel members shall conform to ASTM A6, AISC Manual, Part 1 and AISC Code of Standard Practice unless indicated otherwise.

C. Field-measure existing steel and structures where necessary to ensure fabrication fit-up of new steel.

D. All pieces shall be clearly marked with a permanent identifying erection mark number. Method and location of marking shall be approved by Engineer. Erection markings for galvanized steel shall be mechanically stamped on steel tags with 1/8-inch minimum thickness. Tags shall be bent to provide clearance for galvanizing between the member and the tag, except at the tag ends. Tag ends shall be welded to the member.

E. Fabricator shall mark all shear connector locations (if field-applied) for composite beams by means of center punch and paint circle or other approved means so that field layout of shear connectors is not required. Do not paint shear connector contact surface.

F. Provide grout holes in base plates having the least dimension greater than 24 inches. Holes shall be as close to center as practicable and minimum of 2 inches in diameter.

G. Shop Milling:
1. Perform at the base of columns and at the top of column base plates, except that rolled-steel bearing plates of 4-inch thickness or less may be straightened by pressing.
2. Perform on butted ends for bolted or partial penetration-welded column splices. Shop milling is not required for welded column splices with full penetration welds.
3. Perform at ends of columns which butt against a plate.

H. Welding:
1. All welding shall be shielded metal arc, submerged arc, or flux-cored arc, or gas metal arc. For gas metal arc welding, the short-circuiting mode of filler metal transfer is not permitted. Other welding processes may be used provided they are qualified by applicable tests as prescribed in the AWS D1.1 (AWS D1.6 for stainless steel) and approved by Engineer prior to use. For the use of any other welding process, submit a qualified welding procedure specification and the procedure qualification test results. Welding processes shall be approved for use only after receipt of specific written approval from the Engineer.
2. Conform to AWS Code and AISC Manual.
3. Perform fabrication welding inspection in accordance with AWS D1.1. (AWS D1.6 for stainless steel). This welding inspection shall be performed by AWS Certified Welding Inspector(s) (CWI). All such Certified Welding Inspectors shall be qualified and certified in accordance with the provisions of AWS QC1. Only individuals so qualified shall be authorized to perform fabrication/erection or verification inspection of the

welding performed under the provisions of AWS D1.1 (AWS D1.6 for stainless steel) and these Contract Documents. Certifications verifying the qualifications of welding inspectors shall be submitted prior to commencement of structural welding operations or prior to welding inspection performed by an individual welding inspector. Defective welds shall be corrected.

I. Shop Connections:
   1. Weld or bolt except when otherwise indicated or specified.
   2. Shop portions of connections may be welded equivalent to any bolted connection specified if Engineer concurs.
   3. Welded connections shall be as indicated or in accordance with acceptable alternative designs:
      a. Welds of connection angles to beam webs shall conform to AISC Manual, Part 10, Table 10-2 with particular regard for minimum web thickness. Provide longer connection angles or reinforce web as required.
      b. All butt-joint groove welds shall be complete penetration welds unless otherwise indicated and shall conform to the applicable standards in AISC Manual, Part 8, with special emphasis on maintaining root opening. Accomplish this for single-bevel, butt-joint welds by using backup plates or by chipping out and welding on the opposite side.
      c. Prepare weld bevels with a mechanically guided cutting torch or by grinding.
      d. Remove all run-out tabs.
   4. Bolted connections shall conform to AISC Manual, Parts 9 and 10.
      a. All bolted connections shall be made with Bearing Type connections using 3/4-inch bolts, nuts, and washers unless otherwise indicated or specified.
      b. Bearing Type Connections: Capacity of beam connections shall have a minimum capacity of that specified in AISC Manual, Part 10, Table 10.1 for "Standard Holes" in bearing type connections (thread condition N) with the number of bolt rows indicated. A minimum of one hardened washer shall be supplied with each bolt.
      c. Use the minimum number of rows of bolts for beam connections so that bottom row is at or below the centerline of the beam.
      d. Bolts to be installed in the shop shall be tightened in accordance with the provisions for field connections in PART 3.

J. Provisions for Field Connections:
   1. Provide with bolted connections unless otherwise indicated or specified. The number of rows and number of bolts indicated on the Drawings or stated in the Specifications is the minimum number of rows or bolts. Provide additional bolts or connection devices, if necessary, to comply with OSHA regulation 29 CFR 1926, Subpart R - Steel Erection.
   2. Provide for field welding only when so indicated or where approved by Engineer.
   3. Provide all members to be field-welded with bolted erection connections adequate to resist erection stresses prior to field welding.

K. Comply with OSHA 29 CFR 1926, Subpart R - Steel Erection.

2.03 COLUMN BASE AND EQUIPMENT ANCHOR BOLTS:

A. Furnish for all columns and equipment furnished and installed under this Contract, (and as required to install all equipment furnished by others for installation under this Contract unless otherwise indicated).

2.04 EDGE ANGLES, PLATES, AND LINTELS:

A. Furnish around and over openings as indicated.

B. Keep plates and edge angles flush at intersections and fillet-weld to give a neat appearance at the exposed intersecting surfaces.
C. Provide lintel length of opening width +1 foot 4 inches unless otherwise indicated.
D. Properly align, level, and plumb edge angles and plates before concrete is placed.

2.05 STEEL FLOOR GRATING:

A. One-piece, resistance-welded, carbon-steel construction without notching of bearing or cross bars before welding and conforming to NAAMM MBG 531 or 532.
B. Main Bearing Bars:
   1. Thickness: 3/16 inch or; 3/8 inch for grating specifically noted on drawings as "Heavy Duty".
   2. Depth: As indicated on drawings.
   3. Spacing: Not more than 1-3/16 inches on center or; 1-3/8 inches on center for "Heavy Duty" grating.
   4. Configuration of top surface of main bars unless otherwise indicated:
      a. Exterior - Exposed to Weather: Serrated.
      b. Interior - Not Exposed to Weather: Plain.
C. Cross Bars:
   1. Spacing: 4 inches o.c.
   2. One of the following shapes and minimum sizes:
      a. Hexagon: 5/16-inch diameter of inscribed circle or; 7/16 inch for "Heavy Duty" grating.
      b. Rectangular: 1/2 inch by 3/16 inch or; 5/8 inch by 1/4 inch for "Heavy Duty" grating.
      c. Square: 1/4 inch with spiral twist or; 1/2 inch for "Heavy Duty" grating.
      d. Round: 3/8-inch diameter or, 1/2 inch for "Heavy Duty" grating.
D. Fabrication:
   1. Fabrication shall conform to NAAMM MBG 531 or; MBG 532 for "Heavy Duty" grating, and MBG 533.
   2. Crossbars shall match crossbars of adjacent sections to form a continuous pattern of straight lines.
   3. Provide all openings in grating indicated and as required for installation of all piping, wiring, and equipment installed under this Contract.
   4. Band all openings 4 inches and larger with a metal bar same size as main bearing bar and extend 4 inches above top of grating. Band bars shall be same depth as bearing bars. Weld to each bearing bar with a 3/16-inch fillet weld 3/4 inch long. Tack weld to all crossbars.
   5. Trim-band all locations as follows:
      a. Open end of grating at head of a ladder.
      b. Manway opening.
      c. Hinged sections.
      d. Grating panels with four crossbars or less.
      e. Other locations as indicated.
E. Shop Finish:
   1. Hot-dip galvanize after fabrication except where otherwise indicated.
F. Grating shall be manufactured by one of the following:
   1. Tru-Weld Grating, Inc., Wexford, Pennsylvania.
   2. Amico-Klemp Corporation, Chicago, Illinois.
   3. IKG-Borden, Clark, New Jersey.

4. Approved equal.

G. Provisions for Grating Connections:
   1. Provide sufficient quantity of grating connecting devices to provide two fasteners at each support +10% extra fasteners.
   2. Clip-type connections using mechanical beam clamps:
      a. Hilti X MGR Grating Fastening System.
      b. Grating Fasteners, Inc. G-Clips.
      c. Lindapter North America Grate-Fast.
   3. Grating Hatches, Locks, Lift Handles and other Custom Fabrications:
      a. Ohio Gratings, Inc.
      b. Grating Systems, Inc.
      c. Engineer-approved equal.
   4. Finish of grating fasteners shall match finish of grating.

2.06 STAIRS:

A. General Construction:
   1. Stringer sizes indicated are minimum acceptable size.
   2. Cross-brace stringers to provide lateral stability where the horizontal run exceeds 12 feet.
   3. Provide struts and hangers where indicated or as otherwise required for proper support.

B. Treads:
   1. Open-riser type with grating conforming to PART 2 - Steel Floor Grating, this Section, and of the same type as specified herein, with main bars 1 inch by 3/16 inch unless indicated otherwise.
   2. Treads damaged during construction shall be replaced immediately.
   3. Nosings for grating stair treads shall be:
      a. Standard checkered-plate nosing. Coating shall be same as specified for stair treads. Attach to treads by welding.
      b. As indicted on Drawings.
   4. Bolt tread to each stringer with a minimum of two 3/8-inch bolts.

C. Grating Landings:
   1. Landings shall be of grating conforming to PART 2 - Steel Floor Grating, this Section.

2.07 CHECKERED PLATE:

A. Plate shall be of thickness indicated with surface deformations of the 4-way type.
B. Fasten in place with screws spaced at 18 inches with a minimum of one at each corner of each piece or as otherwise indicated.
C. Screws shall be 1/4-inch countersunk stainless steel.

2.08 STUD SHEAR CONNECTORS:

A. General:
   1. Conform to specification for Stud Shear Connectors in AISC Manual, Part 16.
   2. Number, size, and spacing shall be as indicated.

B. Stud Shear-Connector Welding:
   1. Conform to AWS C5.4 for stud welding and recommendations of the connector manufacturer. Fillet welding of studs is not approved.
   2. Stud shear connectors shall be shop- or field-welded at Contractor's option. Studs that obstruct walking surfaces of beams or joists shall be field welded. Conform to the requirements of 29 CFR 1926, Subpart R - Steel Erection.

3. Stud welding, equipment, and power requirements for stud welding shall conform to manufacturer's recommendations.
4. Clean stud shear-connector weld area of scale, rust, oil, paint, and any other foreign substance that would inhibit sound welds.
5. All welding ferrules for stud shear-connectors shall be removed from studs and deck prior to placement of concrete.

C. Inspection:
1. Workmanship of the stud shear-connector welding will be verified as follows:
a. Studs shall be at least 1/8 inch shorter after welding.
b. Studs shall have a 360-degree weld fillet at base with no undercut.
c. Any stud having a questionable weld will be subjected to a bend test by bending the stud away from its axis until failure occurs but not exceeding 30 degrees. Failure should occur in the stud, not in the weld. Replace studs that do not bend 30 degrees without failure or otherwise do not meet these Specifications.

2.09 CONCRETE ANCHORS:

A. Furnish and install manually expanded and adhesive anchor types as specified in Section 05 05 19.
B. Furnish sizes indicated and install to conform to manufacturer's printed instructions.
C. Concrete anchors that are not specifically indicated to be high strength steel or stainless steel shall be carbon steel with surface plating or galvanizing in accordance with manufacturer's standard.
D. Anchors indicated to be high strength steel anchors shall be surface plated or galvanized in accordance with manufacturer's standard.
E. Anchors indicated to be stainless steel shall be manufactured from 300 series stainless steel per the manufacturer's standard unless specifically indicated to conform to Type 304, 316.
F. Installed adhesive anchors shall not be disturbed or loaded until the anchor has been in place longer than the manufacturer's cure time for the adhesive.

2.10 SHOP-PROTECTIVE COATING:

A. Prepare surface and apply primer (first coat) as specified in Section 09 90 00.
B. Apply primer in shop to all steel including connections, except for the following surfaces:
1. Where encased in concrete.
2. Covered with gunite.
3. Within 3 inches adjacent to field welds.
4. On faying surfaces of bolted connections when using alkyd primer.
5. Top flange and anchors on composite beams.

2.11 GALVANIZING:

A. General:
1. Galvanize all steel (including structural steel members, grating, floor plate, and fasteners) after fabrication.
2. Do not galvanize ASTM A490 bolts or crane rails.
3. Conform to ASTM A123 for structural shapes and plates.
4. Nuts, bolts, and washers shall be hot-dip galvanized to conform to ASTM F2329 or mechanically galvanized to conform to ASTM B695.

B. Fabrication:
1. Safeguard against embrittlement in accordance with ASTM A143.
2. Safeguard against warping and distortion in accordance with ASTM A384.

3. Fabrication details shall be in accordance with ASTM A385 to allow for the creation of high quality zinc coatings.
4. Cutting, drilling, and welding shall be performed before galvanizing.
5. Weld slag shall be removed before galvanizing.
6. Edges of tightly contacting surfaces shall be seal welded using minimum 1/8-inch fillet welds.
7. Vent holes shall be provided for piping or tubular assemblies (including guardrail and handrail) as required by ASTM A385.
8. Potential issues which could cause a problem in galvanizing shall be brought to the Engineer's attention prior to galvanizing.

C. Galvanizing of Steel Hardware:
1. Nuts shall be tapped oversize in accordance with ASTM A563.
2. Nut threads shall be re-tapped after hot-dip galvanizing to provide proper fit.
3. Direct tension indicators shall be mechanically galvanized by the manufacturer in accordance with Class 50 of ASTM B695.

D. Repair:
1. Any damage to galvanizing shall be repaired in accordance with ASTM A780.
2. Before repair of damaged galvanized coating, exposed substrate metal shall be cleaned to bright metal and free of all visual rust, oil, or grease. Any nonadhering galvanizing shall be removed to the extent that the surrounding galvanizing is integral and adherent.
3. If surface defects exceed 2% of a member's area, the defects shall be repaired by redipping the member in the zinc bath.
4. Cold repair using an organic zinc rich coating shall be permitted if the following conditions exist:
   a. Total damaged area is less than 1% of the total coated area of the member being repaired.
   b. No single repair is greater than 2 square inches (1300 mm^2).
   c. No single repair is greater than 12 inches (300 mm) long.
5. For cold repair:
   a. Repair areas in accordance with ASTM A780, Method A2.
   b. Apply organic zinc-rich primer containing a minimum of 93% zinc in dry film by weight. Apply in multiple coats (allowing proper recoat time) to achieve 8-mil dry film thickness.
   c. Color shall approximately match the color of galvanizing.
   d. Cold galvanizing compound shall be one of the following:
      (1) Crown North American Professional Products Co. Inc. - Cold galvanizing compound.
      (2) Sentry Chemical Company - Galvonic.
      (3) Subox, Division of Carboline - Galvanox Type II.
      (4) ZRC Worldwide - Cold Galvanizing Compound.
6. Hot repairs shall be made in the shop if any of the following conditions exist:
   a. Total damaged area is greater than 1% but less than 2% of the total coated area of the member being repaired.
   b. Any single repair is at least 2 square inches (1300 mm^2) in area.
   c. Any single repair is 12 inches (300 mm) long or more.
7. Hot repair shall be made using zinc alloy rod or powder manufactured for the repair of galvanized steel.
8. Flux, heavy ash, or heavy dross inclusions shall be removed by brushing, grinding, or filing as required.

9. Galvanized steel which has been rejected shall be stripped, regalvanized, and submitted again for inspection.
10. Correction of excessive warpage that exceeds ASTM A6/A6M criteria shall be performed by press straightening if possible.
11. The application of localized heating to straighten shall be approved by Engineer.
12. If galvanized tension control bolts are used, all bare steel surfaces (i.e., bolt ends) shall be repair galvanized in accordance with this Section.

PART 3 - EXECUTION

3.01 PREPARATION:

A. Field-check location and elevation of column anchor bolts and footings before erecting structural steel columns.
B. Field-measure existing steel for plumbness and elevation at connecting points.
C. Submit the method and sequence of erection for acceptance.
D. Assure that all preassemblies not specifically indicated on Contract Drawings to be preassembled before lifting shall maintain structural integrity during lifting.

3.02 STEEL ERECTION:

A. Erect all steel to conform to AISC specifications, codes, and standards or any local, state or federal codes which may exceed such requirements. Comply with applicable OSHA regulations including 29 CFR 1926, Subpart R - Steel Erection.
B. Protect existing structure from weather when connecting steel to existing structure.
C. Protect steel and anchor bolt sleeves from entrapped water that can cause damage from freezing or corrosion.
D. Column Base Plates:
    1. Prior to setting base plates, clean out sleeves of all foreign material and liquid. Clean bearing surface on foundation and bottom of base plate.
    2. Grout under base plates with a flowable nonshrink grout, taking special care not to disturb their grade and alignment.
    3. Flowable nonshrink grout shall conform to ASTM C1107.
    4. Cut off exposed edges of the grout at 45 degrees along the edges of the base plates after grout has acquired its initial set.
    5. In hot or cold weather conform to manufacturer's recommendations for temperature control for grouting operations.
E. Erection Bracing:
    1. Provide all necessary erection bracing and be responsible for structural adequacy, design, engineering, and construction of erection bracing.
    2. Provide all necessary temporary struts, ties, cables, temporary flooring, planking, and scaffolding in connection with the erection of the structural steel or support of erection machinery.
    3. Place as required to maintain proper position against loads from erection equipment, construction material, and wind.
    4. Leave bracing in place until sufficient steel connections, concrete slabs, exterior walls, and roof decks are in place to ensure stability of the structure.
F. Connections:
    1. Unless otherwise indicated, connections shall be bolted bearing type.
    2. Tighten high-strength bolts to correct bolt tension in accordance with AISC Manual, Part 16, "Specification for Structural Joints Using High-Strength Bolts."

a. Bearing Type Connections: Tighten all bolts to the pretensioned condition, except that beam-to-beam connections in floor framing which do not connect to any bracing members may be tightened to the snug-tightened condition:
b. Furnish the inspecting wrench and one man to assist the Engineer when inspections are performed.
c. Provide Skidmore-Wilhelm Bolt-Tension calibrator or approved equal for adjusting inspection wrench in accordance with "Specification for Structural Joints Using High-Strength Bolts", Section 9.
d. Three bolt, nut, and washer assemblies from each lot supplied shall be tested in a tension measuring device at the jobsite at the beginning of the bolting start-up to demonstrate that the bolts and nuts, when used together, can develop tension not less than that provided in "Specification for Structural Joints Using High-Strength Bolts", Table 8.1 for the size and grade. The bolt tension shall be developed by tightening the nut.
e. The job-inspecting torque shall be determined in accordance with "Specification for Structural Joints Using High-Strength Bolts", Section 8.
f. The minimum number of bolts inspected and any required retightening shall be per "Specification for Structural Joints Using High-Strength Bolts", Section 9.
g. Comply with OSHA regulation 29 CFR 1926, Subpart R - Steel Erection.

3. Compressible Washer-Type, Direct-Tension Indicators:
   a. The use of compressible washer-type, direct-tension indicators is an acceptable alternative to the requirements of PART 3, Paragraph 2.F. - Connections, this Section, in determining specified minimum bolt tension.
   b. Direct-tension indicators shall be manufactured by one of the following:
      (1) Turnasure, L.L.C., Langhorne, Pennsylvania.
      (2) Applied Bolting Technology Products, Inc.
      (3) Approved equal.
   c. Manufacture, install, and store in accordance with manufacturer's written instructions and ASTM F959.
   d. Provide Skidmore-Wilhelm Bolt Tension Calibrator or approved equal to allow Engineer random verification that the direct-tension indicators provide proper bolt tension.
4. Where required for connection fit-up, bolt holes may be adjusted in one of the following manners (flame cutting or flame enlargement of holes is not allowed):
   a. Reamed to AISC allowable maximum size for oversized holes.
   b. Holes may be filled with weld metal, ground smooth, and field-drilled.
   c. Other Engineer-approved method.
5. Welded Connections:
   a. Make welded connections as indicated and leave all erection bolts in place after completion of welding unless otherwise indicated.
   b. Reinforce connections when members requiring fillet welds are not in contact.
   c. Use backup bars or spacer bars on all butt welds where root opening exceeds 3/16-inch.
   d. Remove all run-out tabs.

G. Welding and Welders:
1. The requirements for erection welding and welders shall be the same as specified for basic materials and for steel fabrication.
2. All welds shall be stamped with a mark identifying the welder. Remove welders from Work after two defective welds.

3. Perform erection-welding inspection in accordance with AWS D1.1. (AWS D1.6 for stainless steel.) This welding inspection shall be performed by AWS Certified Welding Inspector(s) (CWI). All such Certified Welding Inspectors shall be qualified and certified in accordance with the provisions of AWS QC1. Only individuals so qualified shall perform fabrication/erection or verification inspection of the welding performed under the provisions of AWS D1.1 Code (AWS D1.6 for stainless steel) and these Contract Documents. Certifications verifying the qualifications of welding inspectors shall be submitted prior to commencement of structural welding operations or prior to welding inspection performed by an individual welding inspector. Defective welds shall be corrected.

H. Protect pipe sleeves, other anchorage members, and concrete bases from deleterious materials at all times, and from water which may cause ice damage during freezing weather.

I. Grating:
   1. Grating installation shall conform to NAAMM MBG 531 or MBG 532 and as specified herein.
   2. Space fasteners as required to overcome irregularities and maintain grating contact with supports. Minimum anchorage of each panel shall be two fasteners at each support.
   3. Install grating fasteners per manufacturer's printed instructions.
   4. All grating shall be removable unless otherwise indicated.

J. Stud Shear Connectors: The requirements for field-installed stud shear connectors shall be the same as specified for shop-installed connectors.

K. Concrete Anchors:
   1. Install anchors to conform to manufacturer's printed instructions.
   2. The hole tolerances, drill bits, and anchor installation torque shall be as per manufacturer's printed recommendations.

3.03 FIELD-PROTECTIVE COATINGS:

A. Surface preparation, priming, and finish coating are specified in Section 09 90 00.

3.04 REPAIR OF GALVANIZED SURFACES:

A. Repair all damaged galvanized surfaces in accordance with the "Galvanizing" paragraph in PART 2, this Section.

END OF SECTION 05 12 00

SECTION 05 45 00 - ALUMINUM

PART 1 - GENERAL

1.01 RELATED DOCUMENTS:

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and DIVISION 01 Specification Sections, apply to this Section.

1.02 SUMMARY:

A. This Section includes the following aluminum-fabricated items:
   1. Structural shapes and plate.
   2. Pipe handrail and guardrails.
   3. Grating and treads.
   4. Tread plates.
   5. Ladders.
   6. Nuts and bolts.

1.03 RELATED WORK SPECIFIED ELSEWHERE:

A. Section 05 12 00 - Steel Grating and Floor Plates.
B. Section 08 34 83 - Floor Access Doors.

1.04 REFERENCE STANDARDS:

A. Applicable Standards:
   1. Aluminum Association (AA):
      a. Aluminum Design Manual.
   2. American National Standards Institute (ANSI):
      a. A14.3 - Fixed Ladders - Safety Requirements.
   3. ASTM International (ASTM):
      a. A167 - Stainless and Heat-Resisting Chromium-Nickel Steel Plate, Sheet, and Strip.
      b. B209 - Aluminum and Aluminum Alloy Sheet and Plate.
      c. B221(B211) - Aluminum and Aluminum Alloy Extruded Bars, Rods, Wire, Shapes and Tubes.
      d. B308 - Aluminum Alloy 6061 T6 Standard Structural Profiles.
      e. B429 - Aluminum-Alloy Extruded Structural Pipe and Tube.
      f. B632 - Aluminum-Alloy Rolled Tread Plate.
      g. F436 - Hardened Steel Washers.
      h. F467 - Nonferrous Nuts for General Use.
      i. F468 - Nonferrous Bolts, Hex Cap Screws, and Studs for General Use.
      j. F593 - Stainless-Steel Bolts, Hex Cap Screws, and Studs.
      k. F594 - Stainless-Steel Nuts.
   4. American Welding Society (AWS):
      a. D1.2 - Structural Welding Code - Aluminum.

1.05 DEFINITIONS:

A. Handrails: A single pipe supported on a guardrail or brackets from a wall, as on a stairway or ramp, to furnish persons with a handhold in case of tripping.
B. Guardrails and railings: A vertical barrier erected along exposed edges of a floor opening, wall opening, ramp, platform, runway, or stairway to prevent falls of persons. The top member of a guardrail serves as a handrail. The terms handrails, guardrails, and railings may be used interchangeably.

C. Toeboards: A vertical barrier at floor level erected along exposed edges of a floor opening, wall opening, platform, runway, or ramp to prevent falls of materials.

1.06 SUBMITTALS:

A. Submit as specified in DIVISION 01.
B. Include, but not limited to, the following:
   1. Specifications.
   2. Fabrication and erection drawings including sizes, connections, anchorage, size and type of fasteners, and accessories.
   3. Catalog cuts.
   4. Structural computations and metal properties.
   5. Material samples.
   6. Manufacturer's assembly and installation instructions.
   7. Manufacturer's maintenance manual.

1.07 QUALITY ASSURANCE:

A. Guardrails and handrails shall be the product of a company normally engaged in the manufacture of pipe railings.
B. Inspection: Material and workmanship will be subject to inspection in the shop and field.
C. Welder Qualifications:
   1. Welders shall be previously qualified by passing the tests prescribed in the AWS D1.2 Qualification Section and the AA Qualification Standard for Structural Welding of Aluminum, or by passing such other tests as Engineer may accept.
   2. Welders shall have been tested within the past 12 months, and their qualification will be considered as remaining in effect unless the welder has not engaged in a given process of welding for a period exceeding 6 months.
   3. Submit two certified copies of the qualification records as evidence of qualification to the above mentioned codes.

1.08 DELIVERY, STORAGE, AND HANDLING:

A. Protect aluminum Work from abuse, staining, or damage during shipment, storage, erection, and installation.
B. Store in a manner to prevent warping of materials.
C. Materials shall be properly packaged to prevent scratching and denting during shipment, storage, and erection. Maintain protective wrapping until Project is completed.

1.09 DESIGN REQUIREMENTS:

A. Guardrails, handrails, and ladders shall be designed and fabricated in strict compliance with the requirements of the IBC 2018.

PART 2 - PRODUCTS

2.01 GENERAL REQUIREMENTS:

A. Fabricate all aluminum to conform to AA specifications, codes, and standards.
B. Standard tolerances of all aluminum members shall conform to AA Aluminum Design Manual.
C. Fabricate all materials free of blemishes, tool marks, burrs, and other defects.
D. Shop-fabricate insofar as possible.
E. Welding:
   1. Conform to AA Aluminum Design Manual, and AWS D1.2.

2. All welding shall be performed using inert gas, shielded arc, or resistance welding processes. Welding processes that require welding flux shall not be used.
3. All welding shall be accomplished using filler Alloy 4043.
4. Contractor shall perform fabrication inspection of welds in accordance with AWS D1.2 to determine the acceptability of welds. Inspection shall be performed by an AWS Certified Welding Inspector qualified in accordance with AWS Standard for Qualification and Certification of Welding Inspectors.
5. Joints found to be defective shall be repaired by rewelding.

2.02 STRUCTURAL SHAPES AND PLATE:

A. Conform to ASTM B209 and ASTM B308.
B. Conform to AA Aluminum Standards and Data.
C. Shall be aluminum Alloy 6061 T6 unless otherwise specified.

2.03 NUTS AND BOLTS:

A. Bolts, nuts, and washers shall be AISI Type 304 stainless steel.
B. Bolts shall conform to ASTM F593.
C. Nuts shall conform to ASTM F594.
D. Washers shall conform to ASTM A167 with dimensional tolerances of ASTM F436.

2.04 HANDRAILS AND GUARDRAILS:

A. Acceptable Products/Manufacturers:
   1. Peak to Peak Engineered Railings, Wheat Ridge, CO.
   2. "TUFrail" by Thompson Fabricating, Birmingham, AL.
   3. "Interna-Rail" by The Wagner Companies, Milwaukee, WI.
   4. "Wesrail II" by Moultrie Manufacturing Co., Moultrie, GA.
B. Rails and Posts:
   1. Conform to ASTM B221 or B429.
   2. 1-1/2 inch nominal diameter (1.9 inch o.d.), aluminum Alloy 6105-T5 with clear anodized finish Aluminum Association designation M32-C22-A41 (215-R1). Pipe schedule shall be as required by design but shall be not less than Schedule 40.
   3. Provide linear expansion joints a maximum of 40 ft.-0 inches o.c.
C. Fittings and Accessories:
   1. Floor flanges where indicated.
   2. Wall brackets with 3-inch minimum clearance between handrail and finish wall surface and as indicated for ladder rails.
   3. Fasteners and anchors of stainless steel and of type as required by substrate.
D. Toeboard (Kick Plate):
   1. Toeboard shall conform to OSHA standards. Toeboard shall be a minimum of 4 inches high and shall be an extrusion that attaches to the posts with clamps that will allow for expansion and contraction between posts. Toeboards shall be set 1/4 inch above the walking surface. Toeboards shall be provided on all guardrails where shown on Drawings. Toeboards shall be shipped in stock lengths for field installation.

2.05 LADDERS:

A. Aluminum ladder shall be "TUFLadder" as manufactured by Thompson Fabricating (Birmingham, AL), or approved equal.
B. Rungs shall be designed to provide a non-slip, "Power grip" surface with a 1-inch wide striated top surface and a semi-circular bottom. The straight sides and semi-circular bottom shall have

striations at approximately 5/16-inch centers for enhanced gripping. Rungs shall be an aluminum extrusion, Alloy 6063-T6, of sufficient section modulus and moment of inertia to withstand design loads.

C. Side rails shall be 1-1/2-inches Schedule 40 aluminum pipe, Alloy 6105-T5, 6063-T6, or 6061-T6. Pipe shall conform to ASTM B429 or B221.

D. Design and fabricate ladder to meet requirements of OSHA, ANSI A14.3, and applicable building codes.

E. Finish: Pipe for side rails shall have same finish as handrail if ladder is located at an opening in the handrail. Rungs, cage, and brackets shall be "mill" finish.

F. Every ladderway floor opening or platform shall be guarded by standard railing with standard toeboard on all exposed sides (except at the entrance to the opening), with passage through railing provided with a self-closing swinging gate. Self-closing gates shall be as manufactured by FabEnCo, Inc., Houston, TX or approved equal. All hardware shall be stainless steel.
   1. Two-rail systems - Model A82-24.
   2. Three-rail systems - Model XL82-24.

G. Provide “L1E” ladder extension post by Halliday or engineer approved equal at top of interior ladder at hatch location.

H. Ladder Fall Arrest System: For ladders taller than 24 feet, provide an aluminum, rail-type personal fall arrest system in compliance with OSHA requirements.

2.06 GRATINGS AND TREADS:

A. Grating:
   1. Conform to ASTM B221, aluminum Alloy 6061 or Alloy 6063, mill finish.
   2. Main Bars: 3/16 inch thick (unless otherwise noted) and spaced not more than 1-3/16 inches o.c. Depth as indicated on drawings, dovetail slotted to receive cross bars.
   3. Cross Bars: Of depth as required by main bars, spaced not more than 4 inches o.c. Top surface shall be flush with top of main bars.
   4. Configuration of top surface of main bars unless otherwise indicated.
      a. Exterior - Exposed to Weather: Serrated or Striated.
      b. Interior - Not Exposed to Weather: Plain or Striated.
   5. Provide with aluminum "saddle clip"-type fasteners and stainless steel bolts.

B. Treads:
   1. Manufacturer's standard rectangular, with corrugated nosing, aluminum Alloy 6061 T6 or 6063-T6.
   2. Main Bars: Depth as indicated on drawings by 3/16 inch thickness, spaced not more than 1-3/16 inch o.c.
   3. Crossbars: Spaced not more than 4 inches o.c.
   4. Top Surface of Grating Tread: Serrated or Striated.
   5. Provide with stainless-steel hardware.

C. Fabrication:
   1. Main bars shall be vertical within a tolerance of 0.10-inch per inch of depth.
   2. Longitudinal bow (before fastening to supports) shall be less than 1/200 of the length.
   3. Transverse bow before fastening to supports shall be less than 3/8 inch in 3 feet.
   4. Crossbars shall not deviate from a straight line perpendicular to the main bars by more than 3/16-inch in 3 feet.
   5. Crossbars shall match crossbars of adjacent sections to form a continuous pattern of straight lines.
   6. Panel width and length tolerances shall be +1/4 inch.

7. Provide all openings in grating indicated and as required for installation of all piping, wiring, and equipment installed under this Contract.
8. Band all openings 4 inches and larger with a bar same size as main bearing bar. Weld to each bearing bar with a 3/16-inch fillet weld, 3/4 inch long. Tack weld to all crossbars.
9. Trim band all locations as follows:
    a. Open end of grating at head of a ladder.
    b. Grating edges that are not perpendicular or parallel to the main bars.
    c. Grating panels with four crossbars or less.
    d. Other locations as indicated.

D. Manufacturer:
1. Gratings and treads shall be as manufactured by one of the following:
    a. Alabama Meals Industries Corporation, Birmingham, AL.
    b. Barnett Bates Corporation, Joliet, IL.
    c. Ohio Grating, Canton, OH.
    d. Grating Pacific, Los Alamitos, CA
    e. IKG Industries, Aberdeen, NJ.

2.07 TREAD PLATES:

A. Conform to ASTM B632, Alloy 6061-T6, mill finish.
B. Thickness as indicated with surface deformations of the 4 way type.
C. Fasten in place with 1/4-inch countersunk stainless steel screws spaced 24 inches o.c. with a minimum of one screw located at each corner of a panel.

PART 3 - EXECUTION

3.01 GENERAL:

A. Conform to applicable standards of AA.
B. Protect aluminum at contact with other metals, grout, and concrete by a heavy brush coat of alkali-resistant bituminous coating, or a nonporous tape or gasket. Coating is not required for aluminum in contact with stainless-steel bolts. Apply bituminous coating at 15-mil minimum dry film thickness and which shall be one of the following:
1. Carboline - Bitumastic No. 50.
2. Tnemec - H.B. Tnemecol 46-465.

3.02 INSTALLATION:

A. Aluminum Handrail and Guardrail:
1. Space posts a maximum of 6 ft.-0 inches o.c. except where otherwise indicated.
2. Install posts as indicated on fabrication drawings.
3. Install toeboards (kick plates) and anchor to each post with clamps and bolts. Allow ¼-inch space between bottom of toeboard and top of floor surface.
4. Install handrail to walls with brackets spaced not greater than 6 ft.-0 inches o.c., except where otherwise indicated.
    a. Use anchors as indicated on fabrication drawings.
5. Protect aluminum after cleaning with a clear methacrylate lacquer coating.

B. Grating and Treads:
1. Space fasteners as required to overcome irregularities and maintain grating contact with supports. Minimum anchorage of each panel will be two fasteners at each end and one fastener at each intermediate support.
2. Unless indicated as fixed, fasten grating with clips using stainless-steel bolts.

3. Bolt stair treads to stringers with a minimum of two 3/8-inch stainless-steel bolts at each end of tread.
4. All grating shall be removable unless otherwise indicated.

C. Ladders: Install as indicated. Ladder shall be securely fastened to wall or substrate.
D. Tread Plates: Install as indicated and as specified in PART 2, this Section.

3.03 CLEANING:

A. Clean all aluminum surfaces after installation free of smudges, stains, or other deleterious substances.

END OF SECTION 05 45 00

DIVISION 06 – WOOD AND PLASTICS

SECTION 06 10 00 - ROUGH CARPENTRY

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Wood products.
   2. Wood-preservative-treated lumber.
   3. Fire-retardant-treated lumber.
   4. Miscellaneous lumber.
   5. Plywood backing panels.

1.02 DEFINITIONS

A. Boards or Strips: Lumber of less than 2 inches nominal (38 mm actual) size in least dimension.
B. Dimension Lumber: Lumber of 2 inches nominal (38 mm actual) size or greater but less than 5 inches nominal (114 mm actual) size in least dimension.
C. Exposed Framing: Framing not concealed by other construction.
D. Lumber grading agencies, and abbreviations used to reference them, include the following:
   1. NeLMA: Northeastern Lumber Manufacturers' Association.
   2. NLGA: National Lumber Grades Authority.
   3. SPIB: The Southern Pine Inspection Bureau.
   4. WCLIB: West Coast Lumber Inspection Bureau.
   5. WWPA: Western Wood Products Association.

1.03 ACTION SUBMITTALS

A. Product Data: For each type of process and factory-fabricated product. Indicate component materials and dimensions and include construction and application details.
   1. Include data for wood-preservative treatment from chemical treatment manufacturer and certification by treating plant that treated materials comply with requirements. Indicate type of preservative used and net amount of preservative retained.
   2. Include data for fire-retardant treatment from chemical treatment manufacturer and certification by treating plant that treated materials comply with requirements. Include physical properties of treated materials based on testing by a qualified independent testing agency.
   3. For fire-retardant treatments, include physical properties of treated lumber both before and after exposure to elevated temperatures, based on testing by a qualified independent testing agency in accordance with ASTM D5664.
   4. For products receiving a waterborne treatment, include statement that moisture content of treated materials was reduced to levels specified before shipment to Project site.

1.04 INFORMATIONAL SUBMITTALS

A. Material Certificates:
   1. For dimension lumber specified to comply with minimum allowable unit stresses. Indicate species and grade selected for each use and design values approved by the ALSC Board of Review.
   2. For preservative-treated wood products. Indicate type of preservative used and net amount of preservative retained.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Stack wood products flat with spacers beneath and between each bundle to provide air circulation. Protect wood products from weather by covering with waterproof sheeting, securely anchored. Provide for air circulation around stacks and under coverings.

PART 2 - PRODUCTS

2.01 WOOD PRODUCTS

A. Lumber: Comply with DOC PS 20 and applicable rules of grading agencies indicated. If no grading agency is indicated, comply with the applicable rules of any rules-writing agency certified by the ALSC Board of Review. Grade lumber by an agency certified by the ALSC Board of Review to inspect and grade lumber under the rules indicated.
   1. Factory mark each piece of lumber with grade stamp of grading agency.
   2. For exposed lumber indicated to receive a stained or natural finish, mark grade stamp on end or back of each piece or omit grade stamp and provide certificates of grade compliance issued by grading agency.
   3. Where nominal sizes are indicated, provide actual sizes required by DOC PS 20 for moisture content specified. Where actual sizes are indicated, they are minimum dressed sizes for dry wood products.
   4. Dress lumber, S4S, unless otherwise indicated.

B. Maximum Moisture Content:
   1. Boards: 15 percent.
   2. Dimension Lumber: 15 percent for 2-inch nominal (38-mm actual) thickness or less; 19 percent for more than 2-inch nominal (38-mm actual) thickness unless otherwise indicated.

2.02 WOOD-PRESERVATIVE-TREATED LUMBER

A. Preservative Treatment by Pressure Process: AWPA U1, Use categories as follows:
   1. UC1: Interior construction not in contact with ground or subject to moisture. Include the following items:
      a. Wood sills, sleepers, blocking, furring, and similar concealed members in contact with masonry or concrete.
      b. Wood framing and furring attached directly to the interior of below-grade exterior masonry or concrete walls.
      c. Wood floor plates that are installed over concrete slabs-on-grade.
      d. Wood furniture.
      e. Wood millwork.
   2. UC2: Interior construction not in contact with ground but may be subject to moisture. Include the following items:
      a. Wood sills, sleepers, blocking, furring, and similar concealed members in contact with masonry or concrete.
      b. Wood framing and furring attached directly to the interior of below-grade exterior masonry or concrete walls.
      c. Wood floor plates that are installed over concrete slabs-on-grade.
      d. Wood millwork.
      e. Wood flooring.
   3. UC3A (Commodity Specification A): Coated sawn products in exterior construction not in contact with ground but exposed to all weather cycles including intermittent wetting. Include the following items:

a. Wood cants, nailers, curbs, equipment support bases, blocking, stripping, and similar members in connection with roofing, flashing, vapor barriers, and waterproofing.
b. Wood framing members that are less than 18 inches (460 mm) above the ground in crawlspaces or unexcavated areas.

4. UC3A (All Other Commodity Specifications): Coated products excluding sawn products in exterior construction not in contact with ground, exposed to all weather cycles but protected from liquid water. Include the following items:
   a. Wood cants, nailers, curbs, equipment support bases, blocking, stripping, and similar members in connection with roofing, flashing, vapor barriers, and waterproofing.
   b. Wood framing members that are less than 18 inches (460 mm) above the ground in crawlspaces or unexcavated areas.
   c. Wood sheathing.
5. UC3B (Commodity Specification A): Uncoated sawn products in exterior construction not in contact with ground, exposed to all weather cycles including intermittent wetting but with sufficient air circulation for wood to dry. Excludes sawn products not in contact with ground but with ground contact-type hazards. Include the following items:
   a. Wood cants, nailers, curbs, equipment support bases, blocking, stripping, and similar members in connection with roofing, flashing, vapor barriers, and waterproofing.
   b. Wood framing members that are less than 18 inches (460 mm) above the ground in crawlspaces or unexcavated areas.
6. UC3B (All Other Commodity Specifications): Uncoated products excluding sawn products in exterior construction not in contact with ground, exposed to all weather cycles including prolonged wetting. Include the following items:
   a. Wood cants, nailers, curbs, equipment support bases, blocking, stripping, and similar members in connection with roofing, flashing, vapor barriers, and waterproofing.
   b. Wood framing members that are less than 18 inches (460 mm) above the ground in crawlspaces or unexcavated areas.
7. Preservative Chemicals: Acceptable to authorities having jurisdiction and containing no arsenic or chromium. Do not use inorganic boron (SBX) for sill plates.
8. For exposed items indicated to receive a stained or natural finish, chemical formulations are not to require incising, contain colorants, bleed through, or otherwise adversely affect finishes.
9. After treatment, redry boards and dimension lumber to 19 percent maximum moisture content.

B. Kiln-dry lumber after treatment to a maximum moisture content of 19 percent. Do not use material that is warped or that does not comply with requirements for untreated material.

C. Mark lumber with treatment quality mark of an inspection agency approved by the ALSC Board of Review.

D. Application: Treat items indicated on Drawings, and the following:
   1. Wood cants, nailers, curbs, equipment support bases, blocking, stripping, and similar members in connection with roofing, flashing, vapor barriers, and waterproofing.
   2. Wood sills, sleepers, blocking, and similar concealed members in contact with masonry or concrete.

2.03 FIRE-RETARDANT-TREATED LUMBER

A. General: Interior lumber to be fire-retardant-treated materials, materials are to comply with requirements in this article, that are acceptable to authorities having jurisdiction, and with fire-test-response characteristics specified as determined by testing identical products per test method indicated by a qualified testing agency.

B. Fire-Retardant-Treated Lumber and Plywood by Pressure Process: Products with a flame-spread index of 25 or less when tested in accordance with ASTM E84, and with no evidence of significant progressive combustion when the test is extended an additional 20 minutes, and with the flame front not extending more than 10.5 feet (3.2 m) beyond the centerline of the burners at any time during the test.
   1. Treatment is not to promote corrosion of metal fasteners.
   2. Exterior Type: Treated materials are to comply with requirements specified above for fire-retardant-treated lumber and plywood by pressure process after being subjected to accelerated weathering in accordance with ASTM D2898. Use for exterior locations and where indicated.

C. Kiln-dry lumber after treatment to maximum moisture content of 19 percent. Kiln-dry plywood after treatment to maximum moisture content of 15 percent.

D. Identify fire-retardant-treated wood with appropriate classification marking of qualified testing agency and other information required by authorities having jurisdiction.

E. Application: Treat all rough carpentry unless otherwise indicated.

2.04 MISCELLANEOUS LUMBER

A. Provide fire-retardant miscellaneous lumber indicated and lumber for support or attachment of other construction, including the following:
   1. Blocking.
   2. Nailers.
   3. Furring.
   4. Grounds.
   5. Utility shelving.

B. Dimension Lumber Items: Construction or No. 2 grade lumber of any species.

C. Utility Shelving: Lumber with 15 percent maximum moisture content of any of the following species and grades:
   1. Eastern white pine, Idaho white, lodgepole, ponderosa, or sugar pine; Premium or No. 2 Common (Sterling) grade; NeLMA, NLGA, WCLIB, or WWPA.
   2. Mixed southern pine or southern pine; No. 1 grade; SPIB.
   3. Hem-fir or hem-fir (north); Select Merchantable or No. 1 Common grade; NLGA, WCLIB, or WWPA.
   4. Spruce-pine-fir (south) or spruce-pine-fir; Select Merchantable or No. 1 Common grade; NeLMA, NLGA, WCLIB, or WWPA.

D. Concealed Boards: 15 percent maximum moisture content and any of the following species and grades:
   1. Mixed southern pine or southern pine; No. 2 grade; SPIB.
   2. Hem-fir or hem-fir (north); Construction or No. 2 Common grade; NLGA, WCLIB, or WWPA.
   3. Spruce-pine-fir (south) or spruce-pine-fir; Construction or No. 2 Common grade; NeLMA, NLGA, WCLIB, or WWPA.

E. For furring strips for installing plywood or hardboard paneling, select boards with no knots capable of producing bent-over nails and damage to paneling.

2.05 PLYWOOD BACKING PANELS

A. Equipment Backing Panels: Plywood, DOC PS 1, Exterior, C-C Plugged, fire-retardant treated, in thickness indicated or, if not indicated, not less than 3/4-inch (19-mm) nominal thickness.

2.06 FASTENERS

A. General: Fasteners are to be of size and type indicated and comply with requirements specified in this article for material and manufacture. Provide nails or screws, in sufficient length, to penetrate not less than 1-1/2 inches (38 mm) into wood substrate.
   1. Where rough carpentry is exposed to weather, in ground contact, pressure-preservative treated, or in area of high relative humidity, provide fasteners of Type 304 stainless steel.
B. Nails, Brads, and Staples: ASTM F1667.
C. Power-Driven Fasteners: Fastener systems with an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC70.
D. Post-Installed Anchors: Fastener systems with an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC01 ICC-ES AC58 ICC-ES AC193 or ICC-ES AC308 as appropriate for the substrate.

2.07 MISCELLANEOUS MATERIALS

A. Flexible Flashing: Composite, self-adhesive, flashing product consisting of a pliable, butyl rubber or rubberized-asphalt compound, bonded to a high-density polyethylene film, aluminum foil, or spunbonded polyolefin to produce an overall thickness of not less than 0.025 inch (0.6 mm).
B. Water-Repellent Preservative: NWWDA-tested and -accepted formulation containing 3-iodo-2-propynyl butyl carbamate, combined with an insecticide containing chloropyrifos as its active ingredient.

PART 3 - EXECUTION

3.01 INSTALLATION

A. Framing Standard: Comply with AF&PA's WCD 1, "Details for Conventional Wood Frame Construction," unless otherwise indicated.
B. Set work to required levels and lines, with members plumb, true to line, cut, and fitted. Fit rough carpentry accurately to other construction. Locatenailers, blocking, and similar supports to comply with requirements for attaching other construction.
C. Install plywood backing panels by fastening to studs; coordinate locations with utilities requiring backing panels. Install fire-retardant-treated plywood backing panels with classification marking of testing agency exposed to view.
D. Install metal framing anchors to comply with manufacturer's written instructions. Install fasteners through each fastener hole.
E. Provide blocking and framing as indicated and as required to support facing materials, fixtures, specialty items, and trim.
   1. Provide metal clips for fastening gypsum board or lath at corners and intersections where framing or blocking does not provide a surface for fastening edges of panels. Space clips not more than 16 inches (406 mm) o.c.
F. Sort and select lumber so that natural characteristics do not interfere with installation or with fastening other materials to lumber. Do not use materials with defects that interfere with function of member or pieces that are too small to use with minimum number of joints or optimum joint arrangement.
G. Comply with AWPA M4 for applying field treatment to cut surfaces of preservative-treated lumber.
   1. Use inorganic boron for items that are continuously protected from liquid water.

2. Use copper naphthenate for items not continuously protected from liquid water.

H. Where wood-preservative-treated lumber is installed adjacent to metal decking, install continuous flexible flashing separator between wood and metal decking.

I. Securely attach rough carpentry work to substrate by anchoring and fastening as indicated, complying with the following:
   1. Table 2304.10.1, "Fastening Schedule," in ICC's International Building Code (IBC).
   2. Table R602.3(1), "Fastener Schedule for Structural Members," and Table R602.3(2), "Alternate Attachments," in ICC's International Residential Code for One- and Two-Family Dwellings.

J. Securely attach roofing nailers to substrates by anchoring and fastening to withstand bending, shear, or other stresses imparted by Project wind loads and fastener-resistance loads as designed in accordance with ASCE/SEI 7.

K. Use steel common nails unless otherwise indicated. Select fasteners of size that will not fully penetrate members where opposite side will be exposed to view or will receive finish materials. Make tight connections between members. Install fasteners without splitting wood. Drive nails snug but do not countersink nail heads unless otherwise indicated.

3.02 INSTALLATION OF WOOD BLOCKING AND NAILERS

A. Install where indicated and where required for attaching other work. Form to shapes indicated and cut as required for true line and level of attached work. Coordinate locations with other work involved.

B. Attach wood blocking to substrates to support applied loading. Recess bolts and nuts flush with surfaces unless otherwise indicated.

END OF SECTION 06 10 00

SECTION 06 41 16 - PLASTIC-LAMINATE-CLAD ARCHITECTURAL CABINETS

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Plastic-laminate-clad architectural cabinets.
   2. Cabinet hardware and accessories.
   3. Miscellaneous materials.

B. Related Requirements:
   1. Section 06 10 00 "Rough Carpentry" for wood furring, blocking, shims, and hanging strips required for installing cabinets that are concealed within other construction before cabinet installation.

1.02 COORDINATION

A. Coordinate sizes and locations of framing, blocking, furring, reinforcements, and other related units of Work specified in other Sections to support loads imposed by installed and fully loaded cabinets.

1.03 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.04 ACTION SUBMITTALS

A. Product Data:
   1. Plastic-laminate-clad architectural cabinets.
   2. Cabinet hardware and accessories.
   3. Miscellaneous materials.

B. Product Data Submittals: For each product.
   1. Include data for fire-retardant treatment from chemical-treatment manufacturer and certification by treating plant that treated materials comply with requirements.

C. Shop Drawings:
   1. Include plans, elevations, sections, and attachment details.
   2. Show large-scale details.
   3. Show locations and sizes of furring, blocking, and hanging strips, including concealed blocking and reinforcement specified in other Sections.
   4. Show locations and sizes of cutouts and holes for items installed in plastic-laminate architectural cabinets.

D. Samples for Verification: For the following:
   1. Plastic Laminates: 8 by 10 inches (200 by 250 mm) for each type, color, pattern, and surface finish required.
      a. Provide one sample applied to core material with specified edge material applied to one edge.
   2. Thermally Fused Laminate (TFL) Panels: 8 by 10 inches (200 by 250 mm), for each color, pattern, and surface finish.
   3. Exposed Cabinet Hardware and Accessories: One full-size unit for each type and finish.

1.05 INFORMATIONAL SUBMITTALS

A. Qualification Data: For manufacturer and Installer.

B. Evaluation Reports: For fire-retardant-treated materials, from ICC-ES.

1.06 QUALITY ASSURANCE

A. Manufacturer's Qualifications: Employs skilled workers who custom fabricate products similar to those required for this Project and whose products have a record of successful in-service performance.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Do not deliver cabinets until painting and similar finish operations that might damage architectural cabinets have been completed in installation areas. Store cabinets in installation areas or in areas where environmental conditions comply with requirements specified in "Field Conditions" Article.

1.08 FIELD CONDITIONS

A. Environmental Limitations with Humidity Control: Do not deliver or install cabinets until building is enclosed, wet-work is complete, and HVAC system is operating and maintaining temperature between 60 and 90 deg F (16 and 32 deg C) and relative humidity between 25 and 55 percent during the remainder of the construction period.

B. Field Measurements: Where cabinets are indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication, and indicate measurements on Shop Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.

1. Locate concealed framing, blocking, and reinforcements that support cabinets by field measurements before being enclosed/concealed by construction and indicate measurements on Shop Drawings.

C. Established Dimensions: Where cabinets are indicated to fit to other construction, establish dimensions for areas where cabinets are to fit. Provide allowance for trimming at site, and coordinate construction to ensure that actual dimensions correspond to established dimensions.

PART 2 - PRODUCTS

2.01 PLASTIC-LAMINATE-CLAD ARCHITECTURAL CABINETS

A. Quality Standard: Unless otherwise indicated, comply with the Architectural Woodwork Standards for grades of cabinets indicated for construction, finishes, installation, and other requirements.

1. The Contract Documents contain requirements that are more stringent than the referenced quality standard. Comply with requirements of Contract Documents in addition to those of the referenced quality standard.

B. Architectural Woodwork Standards Grade: Custom.

C. Type of Construction: Frameless.

D. Door and Drawer-Front Style: Flush overlay.

E. High-Pressure Decorative Laminate: ISO 4586-3, grades as indicated or if not indicated, as required by quality standard.

F. Exposed Surfaces:

1. Plastic-Laminate Grade: HGS.
2. Edges: PVC edge banding, 3.0 mm thick, matching laminate in color, pattern, and finish.
3. Pattern Direction: As indicated.

G. Semiexposed Surfaces:

1. Surfaces Other Than Drawer Bodies: Thermally fused laminate panels.
   a. Edges of Thermally Fused Laminate Panel Shelves: PVC or polyester edge banding.

b. For semiexposed backs of panels with exposed plastic-laminate surfaces, provide surface of high-pressure decorative laminate, ISO 4586-3, grade to match exposed surface.

2. Drawer Sides and Backs: Thermally fused laminate panels with PVC or polyester edge banding.
3. Drawer Bottoms: Thermally fused laminate panels.

H. Concealed Backs of Panels with Exposed Plastic-Laminate Surfaces: High-pressure decorative laminate, ISO 4583-3, grade to match exposed surface.

I. Drawer Construction: Fabricate with exposed fronts fastened to subfront with mounting screws from interior of body.

J. Colors, Patterns, and Finishes: Provide materials and products that result in colors and textures of exposed laminate surfaces complying with the following requirements:
1. As indicated by laminate manufacturer's designations.

2.02 WOOD MATERIALS

A. Wood Products: Provide materials that comply with requirements of referenced quality standard for each type of architectural cabinet and quality grade specified unless otherwise indicated.
1. Wood Moisture Content: 5 to 10 percent.

B. Composite Wood Products: Provide materials that comply with requirements of referenced quality standard for each type of architectural cabinet and quality grade specified unless otherwise indicated.
1. Medium-Density Fiberboard (MDF): ANSI A208.2, Grade 130.
2. Particleboard (Medium Density): ANSI A208.1, Grade M-2-Exterior Glue.
3. Thermally Fused Laminate (TFL) Panels: Particleboard or MDF finished with thermally fused, melamine-impregnated decorative paper and complying with requirements of ISO 4586.

2.03 FIRE-RETARDANT-TREATED MATERIALS

A. Fire-Retardant-Treated Materials, General: Where fire-retardant-treated materials are indicated, use materials that are acceptable to authorities having jurisdiction and with fire-test-response characteristics specified as determined by testing identical products in accordance with test method indicated by a qualified testing agency.
1. Use treated materials that comply with requirements of referenced quality standard. Do not use materials that are warped, discolored, or otherwise defective.
2. Use fire-retardant-treatment formulations that do not bleed through or otherwise adversely affect finishes. Do not use colorants to distinguish treated materials from untreated materials.
3. Identify fire-retardant-treated materials with appropriate classification marking of qualified testing agency in the form of removable paper label or imprint on surfaces that will be concealed from view after installation.

B. Fire-Retardant-Treated Lumber and Plywood: Products with a flame-spread index of 25 or less when tested in accordance with ASTM E84, with no evidence of significant progressive combustion when the test is extended an additional 20 minutes, and with the flame front not extending more than 10.5 feet (3.2 m) beyond the centerline of the burners at any time during the test.
1. Kiln-dry lumber and plywood after treatment to a maximum moisture content of 19 and 15 percent, respectively.

2.04 CABINET HARDWARE AND ACCESSORIES

A. Cabinet Hardware: Provide cabinet hardware and accessory materials associated with architectural cabinets.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Hettich America L.P.
   b. Julius Blum & Co., Inc.
   c. Knape & Vogt Manufacturing Company.

B. Butt Hinges: 2-3/4-inch (70-mm), five-knuckle steel hinges made from 0.095-inch- (2.4-mm-) thick metal, and as follows:
   1. Semiconcealed Hinges for Overlay Doors: ANSI/BHMA A156.9, B01521.

C. Back-Mounted Pulls: ANSI/BHMA A156.9, B02011.

D. Wire Pulls: Back mounted, solid metal, 4 inches (100 mm) long, 5/16 inch (8 mm) in diameter.

E. Shelf Rests: ANSI/BHMA A156.9, B04013; metal.

F. Drawer Slides: ANSI/BHMA A156.9.
   1. Heavy-Duty (Grade 1HD-100 and Grade 1HD-200): Undermount.
      a. Type: Full extension.
      b. Material: Zinc-plated ball bearing slides.
      c. Motion Feature: Self-closing mechanism.
   2. General-purpose drawers more than 3 inches (75 mm) high, but not more than 6 inches (150 mm) high and not more than 24 inches (600 mm) wide, provide 100 lb (45 kg) load capacity.

G. Door Locks: ANSI/BHMA A156.11, E07121.

H. Drawer Locks: ANSI/BHMA A156.11, E07041.

I. Door and Drawer Silencers: ANSI/BHMA A156.16, L03011.

J. Grommets for Cable Passage: 2-inch (51-mm) OD, molded-plastic grommets and matching plastic caps with slot for wire passage.
   1. Color: Black.

K. Exposed Hardware Finishes: For exposed hardware, provide finish that complies with ANSI/BHMA A156.18 for ANSI/BHMA finish number indicated.
   1. Satin Stainless Steel: ANSI/BHMA 630.

L. For concealed hardware, provide manufacturer's standard finish that complies with product class requirements in ANSI/BHMA A156.9.

2.05 MISCELLANEOUS MATERIALS

A. Furring, Blocking, Shims, and Hanging Strips: Fire-retardant-treated softwood lumber, kiln-dried to less than 15 percent moisture content.

B. Anchors: Select material, type, size, and finish required for each substrate for secure anchorage. Provide metal expansion sleeves or expansion bolts for post-installed anchors. Use nonferrous-metal or hot-dip galvanized anchors and inserts at inside face of exterior walls and at floors.

C. Adhesive for Bonding Plastic Laminate: Type I, waterproof type as selected by fabricator to comply with requirements.
   1. Adhesive for Bonding Edges: Hot-melt adhesive or adhesive specified above for faces.

2.06 FABRICATION

A. Fabricate architectural cabinets to dimensions, profiles, and details indicated.

B. Complete fabrication, including assembly and hardware application, to maximum extent possible before shipment to Project site. Disassemble components only as necessary for shipment and installation. Where necessary for fitting at site, provide ample allowance for scribing, trimming, and fitting.
   1. Notify Architect seven days in advance of the dates and times architectural cabinet fabrication will be complete.
   2. Trial fit assemblies at manufacturer's shop that cannot be shipped completely assembled. Install dowels, screws, bolted connectors, and other fastening devices that can be

removed after trial fitting. Verify that various parts fit as intended and check measurements of assemblies against field measurements before disassembling for shipment.

C. Shop-cut openings to maximum extent possible to receive hardware, appliances, electrical work, and similar items. Locate openings accurately and use templates or roughing-in diagrams to produce accurately sized and shaped openings. Sand edges of cutouts to remove splinters and burrs.

PART 3 - EXECUTION

3.01 PREPARATION

A. Before installation, condition cabinets to humidity conditions in installation areas for not less than 72 hours.

3.02 INSTALLATION

A. Architectural Woodwork Standards Grade: Install cabinets to comply with quality standard grade of item to be installed.

B. Assemble cabinets and complete fabrication at Project site to extent that it was not completed in the shop.

C. Anchor cabinets to anchors or blocking built in or directly attached to substrates. Secure with wafer-head cabinet installation screws.

D. Install cabinets level, plumb, and true in line to a tolerance of 1/8 inch in 96 inches (3 mm in 2400 mm) using concealed shims.

1. Scribe and cut cabinets to fit adjoining work, refinish cut surfaces, and repair damaged finish at cuts.
2. Install cabinets without distortion so doors and drawers fit openings and are accurately aligned. Adjust hardware to center doors and drawers in openings and to provide unencumbered operation. Complete installation of hardware and accessory items as indicated.
3. Fasten wall cabinets through back, near top and bottom, and at ends not more than 16 inches (400 mm) o.c. with No. 10 wafer-head screws sized for not less than 1-1/2-inch (38-mm) penetration into wood framing, blocking, or hanging strips or No. 10 wafer-head sheet metal screws through metal backing or metal framing behind wall finish.

3.03 ADJUSTING AND CLEANING

A. Repair damaged and defective cabinets, where possible, to eliminate functional and visual defects. Where not possible to repair, replace architectural cabinets. Adjust joinery for uniform appearance.

B. Clean, lubricate, and adjust hardware.

C. Clean cabinets on exposed and semi-exposed surfaces.

END OF SECTION 06 41 16

SECTION 06 85 81 – FIBER REINFORCED PLASTIC COVERS

PART 1 - GENERAL

1.01 SUMMARY:

A. This Section defines the design requirements for the Fiber Reinforced Plastic (FRP) Covers as described in the contract drawings and documents for two (2) Thickened Sludge Holding Tanks.

1.02 RELATED DOCUMENTS:

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Procurement Documents, apply to this Section.

1.03 RELATED REQUIREMENTS:

A. Related Sections include but are not necessarily limited to:
   1. Procurement documents.
   2. Division 5 – Metals
   3. Section 09 90 00 – Protective Coatings

1.04 REFERENCES:

A. Applicable Codes and Standards: Design, fabricate, assemble, and test Equipment and Materials so that upon installation in accordance with the manufacturer's recommended procedures for this application, the Equipment will conform to the requirements of the Federal Occupational Safety and Health Standards and the applicable provisions of:
   1. ASTM International (ASTM):
      a. ASTM A240 – Standard Specification for Chromium and Chromium-Nickel Stainless Steel Plate, Sheet, and Strip for Pressure Vessels and for General Applications.
      b. ASTM A276 – Standard Specification for Stainless Steel Bars and Shapes for Use in Boilers and Other Pressure Vessels.
      c. ASTM C864 – Standard Specifications for Performed Gasket and Sealing Material.
      d. ASTM D638 – Standard Test Method for Tensile Properties of Plastics
      e. ASTM D790 – Standard Test Method for Flexural Properties of Plastics
      f. ASTM D695 – Standard Test Method for Compressive Strength of Plastics
      g. ASTM D2584 – Test Method for Ignition Loss of Coved Reinforced Resins.
      h. ASTM E84 – Standard Test Method for Surface Burning Characteristics of Plastics
      i. ASTM F594 – Standard Specification for Stainless Steel Bolts, Hex Cap Screws, and Studs.
   2. American Society of Civil Engineers (ASCE):
      a. 7, Minimum Design Loads for Buildings and Other Structures.
   3. International Code Council (ICC):
      a. International Building Code, 2018 (IBC 2018)

1.05 SUBMITTALS:

A. Submit as specified in DIVISION 1.

B. Drawings describing the completed structure and all its components shall be submitted complete with materials of construction and typical details and accompanied by a Certificate of Design.

B. Certifications:
   1. Complete set of design drawings and calculations providing a complete design of all members and connections, including concrete anchor design, signed by a Professional

Engineer registered in the State where the project is located. Calculations are submitted for record purposes only but will be checked for compliance with contract documents.

C. Design calculations verifying conformance to deflection limits shall be submitted. Deflection calculations are required for structural members as well as walking surface.
D. Shop drawings shall specify all materials. The size, number, and location of the following shall be indicated: handles, fasteners, structural members, connections, attachments, openings, and other items not listed that are a necessary component of a complete installation.
E. Shop drawings shall provide erection procedures and directions.
F. Provisions for special openings, removable sections, access panels with hinges, seals for inlet/outlet ports or vents, or other areas as noted on the drawings shall be provided and detailed by the manufacturer on the shop drawings.
G. Product Data: Manufacturer's data sheets on each product to be used including:
    1. Calculations, design data, and test reports as applicable indicating compliance with requirements.
    2. Storage and handling instructions.
    3. Installation instructions.
    4. Drawings including layouts, product description, connection and framing details, fastener types and spacing.
    5. Miscellaneous certifications.

1.06 QUALITY ASSURANCE:

A. Tank cover manufacturer shall have completed U.S projects of similar type as required in this scope and shall submit statement that states the location and description of the installations.
B. Contractor shall verify all field dimensions for development of manufacturer's drawings.
C. Contractor shall review and confirm in writing approval of manufacturer's drawings.
D. Engineer for FRP covers: Professional Engineer licensed in the State the project is located in.

1.07 PROJECT CONDITIONS

A. Provide all required anchors for attaching the cover system to existing concrete structure. Anchors shall be Type 316 stainless steel. Size determined by manufacturer.

1.08 WARRANTY:

A. Manufacturer shall warrant the equipment to be free from defects in material and workmanship for a period of 1 year from the date of equipment acceptance.

PART 2 - PRODUCTS

2.01 DESCRIPTION

A. The FRP cover system shall be a flat, removable, walk-on type. It shall consist of a series of FRP panels with an integral bi-directiona1 slip resistant surface, and a supporting structure consisting of FRP structural components with stainless steel connection hardware. The surface of the covers shall be flat without any protruding items that may cause a tripping hazard. The extents of the FRP covers are as indicated on the drawings.
B. The FRP covers shall not weigh more than 100 pounds to allow for removal. Provide integral lifting handles at each end of all panels. Each panel must be removable without needing to remove more than the two adjacent panels. Hold-down extrusions longer than the width of the panel is prohibited.

C. Raised surfaces without the use of texturing to achieve slip resistance is not acceptable. The use of checkered plate, paint, tape, sandblasting, or other applied systems to achieve the slip resistant surface is prohibited.
D. The FRP covers shall be sloped to prevent ponding which may result in over-stressing the FRP covers. The slope of the FRP covers shall match the slope of the Thickened Sludge Tank walls as indicated in the drawings.
E. Provide hinged inspection hatches as described in Section 2.04(J). Refer to the drawings for hatch locations. Provide additional framing members, as required, to adequately support FRP cover at hatch locations.
F. The cover surface paneling shall be designed as an air and watertight system under the specified loading conditions.
G. The cover shall be outfitted for six (6) Odor Control system nozzles. Each nozzle will be attached by way of 10" diameter opening. Final opening size and installation of nozzles to the FRP cover shall be coordinated with Odor Control Manufacturer. Refer to the drawings for nozzle locations.
H. Provide all necessary cover panels, structural supports, inspection hatches, gaskets, flashing and trim, hardware, anchors and fasteners and other items necessary for a complete FRP cover system. Refer to drawings for specified locations for inspection hatches and openings. All materials and appurtenances shall be furnished by the same supplier.

2.02 ACCEPTABLE MANUFACTURES:

A. The flat cover shall be as manufactured by:
1. Enduro Composites
2. Nefco
3. Engineer Approved Equal

2.03 DESIGN LOADS:

A. The FRP cover system shall be designed to sustain the loads specified herein. Design loads shall be in accordance with IBC 2018 and ASCE 7.
1. Risk Category III.
2. Dead Load: The dead load shall be defined as the weight of the structure and all material permanently attached to and supported by the structure.
3. Live Load:
a. Uniform Live Load: 60 psf.
b. Concentrated Load: 300 lbs on a 12-inch by 12-inch area, applied to produce the maximum load effect on structural elements under consideration, not to be considered to act concurrently with the specified uniform live load.
4. Snow Loads:
a. Ground Snow Load, p_g: 20 psf.
b. Snow Exposure Factor, C_e: 0.9.
c. Thermal Factor, C_t: 1.2.
d. Unbalanced and snow drift loads considered, as appropriate.
5. Wind Loads:
a. Ultimate Design Wind Speed, V: 120 mph.
b. Nominal Design Wind Speed, V_{asd}: 93 mph.
c. Wind Exposure: C.
d. Internal Pressure Coefficient: +/- 0.18.
6. Seismic Loads:
a. Mapped Spectral Response Acceleration Parameters:

(1) Short-Period Mapped Spectral Acceleration, S_S: 0.091g.
(2) 1-Second Period Mapped Spectral Acceleration, S_1: 0.067g.

b. Site Class: D.
c. Design Spectral Acceleration Parameters:
(1) Short-Period Design Spectral Acceleration, S_{DS}: 0.097g.
(2) 1-Second Period Design Spectral Acceleration, S_{D1}: 0.106g.
d. Seismic Design Category: B.

7. Load Combinations: Comply with IBC 2018 and ASCE 7.
8. Deflections: Comply with IBC 2018.
9. Temperature: The load combinations listed above shall be considered for a temperature change of 100 degrees F below the installation temperature and 100 degrees F above the installation temperature and for a material temperature range of 40 degrees F below zero to 160 degrees F above zero.
10. Maximum weight of any individual removable or operable section: 100 lbs.

2.04 MATERIALS:

A. Resin systems shall be premium grade vinyl ester or polyester resin with corrosion resistance to hydrogen sulfide rich environment and with flame spreading rating of 25 or less per ASTM E84.
1. Covers shall be designed specifically for installation over Thickened Sludge Storage Tanks and capable of withstanding corrosion, pitting and degradation.

B. All splice joints shall be interlocked and gasketed.

C. Resin system shall be formulated to provide protection against ultra-violet degradation.

D. FRP structural components including cover panels, beams, and framing shall be manufactured by pultrusion process. Contact molded, hand-laid up or filament wound fiberglass materials are not acceptable as structural components.

E. FRP Cover:
1. Glass fiber reinforcements shall be 50% (min) of the material weight.
2. Materials shall exhibit these physical properties (at a minimum):

a.	Tensile Strength	64,000 psi	ASTM D 638
b.	Flexural Strength	61,000 psi	ASTM D 790
c.	Flexural Modulus	1.8×10^6	ASTM D 790
d.	Barcol Hardness	45	ASTM D2583
e.	Notched Izod (ft-lb/in)	25	ASTM D 256
f.	Water Absorption	.20% max	ASTM D 570
g.	Thermal Expansion (in/°F)	7.0×10^{-6}	ASTM D696

h. Procedure used in determining the above properties shall be in accordance with the ASTM standards using the method designated above. Test coupons shall be prepared in accordance with the appropriate ASTM test method.

3. Cover panels shall be sealed at side-laps with EPDM gasket. Side-lap gaskets shall be factory installed and oriented vertically, so they are compressed when the locking channel is placed into position.
4. Top-of-tank cover panels shall have factory applied, non-skid, and UV resistant surface.
5. Dissimilar materials shall be separated from each other using approved gaskets or coatings.
6. All components shall be treated with UV inhibitors.

F. Structural Framing

1. FRP and/or stainless steel structural components shall be attached to the inner tank wall to support the cover system. Maximum frame depth of 24 inches below bottom of FRP panels.
2. FRP support structure or components shall be Vinyl Ester. If Fire Retardant (FR) is required, flame spread rating of 25 or less per ASTM E84 test shall be a minimum.
3. Metal structure or components shall be stainless steel and comply with the following:
   a. Plate, sheet, strips: ASTM A240, Type 316.
   b. Bars and shapes: ASTM A276, Type 316.
   c. Use of FRP for connection elements is not be allowed.
4. Support framing shall be sized, spaced, and arranged such that each panel will accommodate the design load criteria in this specification, independently of any other panel. Provide additional supporting elements at openings and penetrations as required.

G. Flashing
1. Flashing shall be FRP or Stainless Steel.

C. Fasteners
1. Provide all required fasteners for equipment furnished. Fasteners shall comply with the following:
   a. Stainless steel bolts: ASTM F593, Type 316 with matching nuts and washers.
   b. Size determined by manufacturer.

H. Anchors
1. Provide all required anchors for attaching the cover system to the concrete structure. See Specification Section 05 05 19.
2. Anchors shall be Type 316 stainless steel. Size determined by manufacturer.

I. Inspection Hatches:
1. Hatch opening dimensions: See drawings.
2. Inspection hatches shall be hinged, raised or flat, with one-leaf hatch door and fabricated from pultruded fiberglass components.
3. Inspection hatches and supporting framing shall fit inside a single deck panel so individual deck panels with hatches can be removed without affecting adjacent panels.
4. Underside of raised hatch lids shall be sealed with factory installed neoprene bulb gasket. Perimeter hatch curb shall be sealed to decking surface with adhesive sealant.
5. Underside of flat hatch lids shall be sealed with factory installed Flat gasket. Perimeter hatch curb shall be sealed to decking surface with adhesive sealant.
6. Hatch lids shall have factory applied non-skid, UV resistant surface with plastic or stainless-steel lift handles.
7. Hatch openings shall be factory cut in cover deck panels by manufacturer.

J. Gaskets and Sealants
1. All panel side laps, and perimeter conditions shall have gaskets.
2. Adhesive sealant shall be applied by contractor at various locations as required by manufacturer for odor containment.

PART 3 - EXECUTION

3.01 MATERIAL HANDLING

A. At time of delivery, all materials shall be inspected for shipping damage. Freight company and manufacturer shall be notified immediately of any damage or quantity shortages.
1. Contractor shall protect FRP materials from cuts, scratches, gouges, abrasions, and impacts. When lifting FRP materials, spreader bars shall be used (not wire slings unless

materials are fully protected). FRP components shall not be dragged across one another unless separated by a non-scratching spacer.

3.02 INSTALLATION:

A. All work shall be executed by skilled mechanics with a supervisor experienced in the erection of FRP flat panel covers. The covers shall be erected in proper alignment as shown in the manufacturer's drawings.
B. Before placing and attaching components, erector must confirm alignment and location of bearing plates, surfaces, brackets, saddles, etc. All bearing surfaces must be clean and free of debris.
C. Before placing secondary framing members or deck, erector must check the alignment and location of supports.
D. Erection shall proceed according to sequence shown on the approved drawings.
E. Position FRP tank cover beams in locations, as shown on the manufacturer's drawings. Field modifications (cuts, copes, holes, etc.) other than work shown on the drawings are not allowed without the manufacturer's written consent.
F. Anchor FRP beams and adjust tank cover components into final position with proper bearing and alignment at joints, laps, and supports before fastening. Refer to the manufacturer's installation instructions for proper fastener selection, fastener location, driving techniques, and pertinent information for fastening equipment.
G. Starting at end shown on the manufacturer's drawings, position and place cover deck panels in locations as shown. Field modifications (cuts, copes, holes, etc.) other than work shown on the drawings are not allowed without the manufacturer's written consent.
H. Fasten or anchor FRP cover deck panels into location as shown on the drawings.
I. Place and attach flashing as shown on the drawings.

3.03 PERFORMANCE TESTING:

A. Materials shall comply with Federal and Local laws or ordinances, applicable codes, standards, regulations, and/or regulatory agency requirements.
B. Air Leakage
    1. Air leakage rate shall not exceed 0.2 CFM/SF at negative pressure of 0.2 inches of water column for a 5-minute duration per Air Leakage Test in accordance with Procedural Standards for Adjusting and Balancing of Environmental Systems.
    2. Testing shall be conducted by independent test agency certified by Associated Air Balance Council (AABC) or National Environmental Balancing Bureau (NEBB).

END OF SECTION 06 85 81

DIVISION 07 - THERMAL AND MOISTURE PROTECTION

SECTION 07 16 00 - BITUMINOUS DAMPPROOFING

PART 1 - GENERAL

1.01 RELATED DOCUMENTS:

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and DIVISION 01 Specification Sections, apply to this Section.

1.02 SUMMARY:

A. This Section includes the following:
   1. Coal Tar-Epoxy dampproofing for all below grade exterior walls except those containing potable water. Refer to structural drawings.

1.03 SUBMITTALS:

A. Submit as specified in DIVISION 01.
B. Product data for type of product specified, including data substantiating that materials comply with requirements for dampproofing material specified. Include recommended method of application, recommended primer, number of coats, coverage or thickness, and recommended protection course.
   1. Certification by dampproofing manufacturer that products supplied comply with local regulations controlling use of volatile organic compounds (VOCs).

1.04 QUALITY ASSURANCE:

A. Installer Qualifications: Engage an experienced Installer who has complete bituminous dampproofing similar in material, design, and extent to that indicated for this Project and with a record of successful in-service performance.
B. Single-Source Responsibility: Obtain primary dampproofing materials and primers from one source and by a single manufacturer. Provide secondary materials only as recommended by manufacturer of primary materials.

1.05 PROJECT CONDITIONS

A. Substrate: Proceed with dampproofing only after substrate construction and penetrating work have been completed.
B. Weather Limitations: Proceed with dampproofing only when existing and forecasted weather conditions will permit work to be performed according to manufacturer's recommendations and warranty requirements.
C. Ventilation: Provide adequate ventilation during application of dampproofing in enclosed spaces. Maintain ventilation until dampproofing has thoroughly cured.

1.06 DELIVERY, STORAGE, AND HANDLING:

A. Deliver materials in sealed containers or cartons bearing the manufacturer's label.
B. Protect materials to keep clean, dry, and within manufacturer's temperature limitations.

1.07 WARRANTY

A. The Manufacturer shall warrant that all material shall be free from defects caused by faulty material or workmanship for a minimum period of one (1) year from the date of Substantial Completion, unless otherwise specified.
B. Warranties shall comply with the requirements of Section 01 78 36.

PART 2 - PRODUCTS

2.01 MANUFACTURERS:

A. Manufacturers: Subject to compliance with requirements, provide products of one of the following:
   1. Coal Tar-Epoxy Dampproofing:
      a. Tnemec Tneme-Tar Hi Build Series 46H-413; 16-20 mils DFT.
      b. Or engineer approved equal

2.02 BITUMINOUS DAMPPROOFING:

A. General: Provide products recommended by manufacturer for designated application and suitable for service intended.

B. Cold-Applied, Coal Tar-Epoxy Dampproofing: Roll or spray applied heavy-duty water-resistant epoxy coating made with pitch for protection of concrete from severe chemical fumes and corrosive vapors. Coating shall be suitable for buried or immersion conditions.

PART 3 - EXECUTION

3.01 PREPARATION:

A. Clean substrate of projections and substances detrimental to Work; comply with recommendations of prime materials manufacturer. Remove oil, grease form release agents, laitance, loose materials, and slick surfaces.

B. Install cant strips and similar accessories as recommended by prime materials manufacturer even though not indicated.

C. Fill voids, seal joints, and apply bond breakers, if any, as recommended by prime materials manufactuer, with particular attention at construction joints.

D. Install separate flashings and corner protection stripping, as recommended by prime materials manufacturer, to precede application of dampproofing. Comply with manufacturer's recommendations. Pay particular attention to requirements at building expansion joints, if any.

E. Surface prep per manufacturer recommendations: including abrasive blasting all surfaces per SSPC-SP13/NACE 6; ICRI CSP 2-4 Surface Preparation of Concrete.

F. Prime substrate as recommended by prime materials manufacturer.

G. Protection of Other Work: Do not allow liquid and mastic compounds to enter and clog drains and conductors. Prevent spillage and migration onto other surfaes of work by masking or otherwise protecting adjoining work.

3.02 INSTALLATION, GENERAL:

A. Comply with manufacturer's recommendations except where more stringent requirements are indicated or specified and where Project conditions require extra precautions to ensure satisfactory performance of work.

B. Apply vertical dampproofing down walls from finished-grade line to top of footing, extend over top of footing, and down a minimum of 6 inches (150 mm) over outside face of footing. Extend 12 inches (300 mm) onto intersecting walls and footings, but do not extend onto surfaces exposed to view when the Project is completed.

3.03 PROTECTION AND CLEANING:

A. Protect exterior, below-grade dampproofing membrane from damage until backfill is completed. Remove overspray and spilled materials from surfaces not intended to receive dampproofing.

END OF SECTION 07 16 00

SECTION 07 42 93 - SOFFIT PANELS

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Metal soffit panels.

B. Related Requirements:
   1. Section 07 41 13.16 "Standing-Seam Metal Roof Panels" for standing-seam metal roof panels.

1.02 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.03 ACTION SUBMITTALS

A. Product Data:
   1. Metal soffit panels.

B. Product Data Submittals:
   1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each type of panel and accessory.

C. Sustainable Design Submittals:

D. Shop Drawings:
   1. Include fabrication and installation layouts of metal panels; details of edge conditions, joints, panel profiles, corners, anchorages, attachment system, trim, flashings, closures, and accessories; and special details.
   2. Accessories: Include details of flashing, trim, and anchorage systems, at a scale of not less than 1-1/2 inches per 12 inches (1:10).

E. Samples for Initial Selection: For each type of metal panel indicated with factory-applied color finishes.

1.04 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer.

B. Product Test Reports: For each product, tests performed by a qualified testing agency.

C. Sample Warranties: For special warranties.

1.05 CLOSEOUT SUBMITTALS

A. Maintenance Data: For metal panels to include in maintenance manuals.

1.06 QUALITY ASSURANCE

A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.

B. UL-Certified, Portable Roll-Forming Equipment: UL-certified, portable roll-forming equipment capable of producing metal panels warranted by manufacturer to be the same as factory-formed products. Maintain UL certification of portable roll-forming equipment for duration of work.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Deliver components, metal panels, and other manufactured items so as not to be damaged or deformed. Package metal panels for protection during transportation and handling.

B. Unload, store, and erect metal panels in a manner to prevent bending, warping, twisting, and surface damage.

C. Stack metal panels horizontally on platforms or pallets, covered with suitable weathertight and ventilated covering. Store metal panels to ensure dryness, with positive slope for drainage of water. Do not store metal panels in contact with other materials that might cause staining, denting, or other surface damage.
D. Retain strippable protective covering on metal panels during installation.
E. Copper Panels: Wear gloves when handling to prevent fingerprints and soiling of surface.

1.08 FIELD CONDITIONS
A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit assembly of metal panels to be performed according to manufacturers' written instructions and warranty requirements.

1.09 COORDINATION
A. Coordinate metal panel installation with rain drainage work, flashing, trim, construction of walls, and other adjoining work to provide a leakproof, secure, and noncorrosive installation.

1.10 WARRANTY
A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of metal panel systems that fail in materials or workmanship within specified warranty period.
1. Failures include, but are not limited to, the following:
a. Structural failures including rupturing, cracking, or puncturing.
b. Deterioration of metals and other materials beyond normal weathering.
2. Warranty Period: Two years from date of Substantial Completion.
B. Special Warranty on Panel Finishes: Manufacturer's standard form in which manufacturer agrees to repair finish or replace metal panels that show evidence of deterioration of factory-applied finishes within specified warranty period.
1. Exposed Panel Finish: Deterioration includes, but is not limited to, the following:
a. Color fading more than 5 Delta E units when tested according to ASTM D2244.
b. Chalking in excess of a No. 8 rating when tested according to ASTM D4214.
c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.
2. Finish Warranty Period: 20 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.01 PERFORMANCE REQUIREMENTS
A. Structural Performance: Provide metal panel systems capable of withstanding the effects of the following loads, based on testing according to ASTM E1592:
1. Wind Loads: As indicated on Drawings.
2. Other Design Loads: As indicated on Drawings.
3. Deflection Limits: For wind loads, no greater than 1/240 of the span.
B. Air Infiltration: Air leakage of not more than 0.06 cfm/sq. ft. (0.3 L/s per sq. m) when tested according to ASTM E283 at the following test-pressure difference:
1. Test-Pressure Difference: 1.57 lbf/sq. ft. (75 Pa).
C. Water Penetration under Static Pressure: No water penetration when tested according to ASTM E331 at the following test-pressure difference:
1. Test-Pressure Difference: 2.86 lbf/sq. ft. (137 Pa).
D. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes by preventing buckling, opening of joints, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.

1. Temperature Change (Range): 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.

2.02 METAL SOFFIT PANELS

A. Provide metal soffit panels designed to be installed by lapping and interconnecting side edges of adjacent panels and mechanically attaching through panel to supports using concealed fasteners in side laps. Include accessories required for weathertight installation.

B. Flush-Profile Metal Soffit Panels: Solid panels formed with vertical panel edges and a flat pan between panel edges; with flush joint between panels.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Berridge Manufacturing Company.
   b. CENTRIA, a Nucor Brand.
   c. PAC-CLAD; Petersen Aluminum Corporation; a Carlisle company.
2. Material: Same material, finish, and color as metal roof panels.
3. Aluminum Sheet: Coil-coated sheet, ASTM B209 (ASTM B209M), alloy as standard with manufacturer, with temper as required to suit forming operations and structural performance required.
   a. Thickness: 0.032 inch (0.81 mm).
   b. Surface: Smooth, flat finish.
   c. Exterior Finish: Two-coat fluoropolymer.
   d. Color: As selected by Architect from manufacturer's full range.
4. Panel Coverage: 12 inches (305 mm).
5. Panel Height: 1.0 inch (25 mm).

2.03 MISCELLANEOUS MATERIALS

A. Miscellaneous Metal Subframing and Furring: ASTM C645, cold-formed, metallic-coated steel sheet, ASTM A653/A653M, G90 (Z275) hot-dip galvanized coating designation or ASTM A792/A792M, Class AZ50 (Class AZM150) aluminum-zinc-alloy coating designation unless otherwise indicated. Provide manufacturer's standard sections as required for support and alignment of metal panel system.

B. Panel Accessories: Provide components required for a complete, weathertight panel system including trim, clips, flashings, sealants, gaskets, fillers, closure strips, and similar items. Match material and finish of metal panels unless otherwise indicated.

1. Closure Strips: Closed-cell, expanded, cellular, rubber or crosslinked, polyolefin-foam or closed-cell laminated polyethylene; minimum 1-inch- (25-mm-) thick, flexible closure strips; cut or premolded to match metal panel profile. Provide closure strips where indicated or necessary to ensure weathertight construction.

C. Flashing and Trim: Provide flashing and trim formed from same material as metal panels as required to seal against weather and to provide finished appearance. Finish flashing and trim with same finish system as adjacent metal panels.

D. Panel Sealants: Provide sealant types recommended by manufacturer that are compatible with panel materials, are nonstaining, and do not damage panel finish.

1. Sealant Tape: Pressure-sensitive, 100 percent solids, gray polyisobutylene compound sealant tape with release-paper backing. Provide permanently elastic, nonsag, nontoxic, nonstaining tape 1/2 inch (13 mm) wide and 1/8 inch (3 mm) thick.
2. Joint Sealant: ASTM C920; elastomeric polyurethane or silicone sealant; of type, grade, class, and use classifications required to seal joints in metal panels and remain weathertight; and as recommended in writing by metal panel manufacturer.
3. Butyl-Rubber-Based, Solvent-Release Sealant: ASTM C1311.

2.04 FABRICATION

A. Fabricate and finish metal panels and accessories at the factory, by manufacturer's standard procedures and processes, as necessary to fulfill indicated performance requirements demonstrated by laboratory testing. Comply with indicated profiles and with dimensional and structural requirements.

B. On-Site Fabrication: Subject to compliance with requirements of this Section, metal panels may be fabricated on-site using UL-certified, portable roll-forming equipment if panels are of same profile and warranted by manufacturer to be equal to factory-formed panels. Fabricate according to equipment manufacturer's written instructions and to comply with details shown.

C. Sheet Metal Flashing and Trim: Fabricate flashing and trim to comply with manufacturer's recommendations and recommendations in SMACNA's "Architectural Sheet Metal Manual" that apply to design, dimensions, metal, and other characteristics of item indicated.

1. Seams for Aluminum: Fabricate nonmoving seams with flat-lock seams. Form seams and seal with epoxy seam sealer. Rivet joints for additional strength.
2. Sealed Joints: Form nonexpansion, but movable, joints in metal to accommodate sealant and to comply with SMACNA standards.
3. Conceal fasteners and expansion provisions where possible. Exposed fasteners are not allowed on faces of accessories exposed to view.
4. Fabricate cleats and attachment devices from same material as accessory being anchored or from compatible, noncorrosive metal recommended in writing by metal panel manufacturer.
    a. Size: As recommended by SMACNA's "Architectural Sheet Metal Manual" or metal soffit panel manufacturer for application but not less than thickness of metal being secured.

2.05 FINISHES

A. Protect mechanical and painted finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

B. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

C. Aluminum Panels and Accessories:

1. Two-Coat Fluoropolymer: AAMA 2605. Fluoropolymer finish containing not less than 70 percent polyvinylidene fluoride (PVDF) resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, metal panel supports, and other conditions affecting performance of the Work.

1. Examine framing to verify that girts, angles, channels, studs, and other structural panel support members and anchorage have been installed within alignment tolerances required by metal panel manufacturer.
2. Examine sheathing to verify that sheathing joints are supported by framing or blocking and that installation is within flatness tolerances required by metal panel manufacturer.

B. Examine roughing-in for components and systems penetrating metal panels to verify actual locations of penetrations relative to seam locations of metal panels before installation.
C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Miscellaneous Supports: Install sub-framing, furring, and other miscellaneous panel support members and anchorages according to ASTM C754 and metal panel manufacturer's written recommendations.
   1. Soffit Framing: Wire tie furring channels to supports.

3.03 INSTALLATION OF METAL SOFFIT PANELS

A. Install metal panels according to manufacturer's written instructions in orientation, sizes, and locations indicated. Install panels perpendicular to supports unless otherwise indicated. Anchor metal panels and other components of the Work securely in place, with provisions for thermal and structural movement.
   1. Shim or otherwise plumb substrates receiving metal panels.
   2. Flash and seal metal panels at perimeter of all openings. Fasten with self-tapping screws. Do not begin installation until air- or water-resistive barriers and flashings that will be concealed by metal panels are installed.
   3. Install screw fasteners in predrilled holes.
   4. Locate and space fastenings in uniform vertical and horizontal alignment.
   5. Install flashing and trim as metal panel work proceeds.
   6. Locate panel splices over, but not attached to, structural supports. Stagger panel splices and end laps to avoid a four-panel lap splice condition.
   7. Provide weathertight escutcheons for pipe- and conduit-penetrating panels.
B. Fasteners:
   1. Aluminum Panels: Use aluminum or stainless steel fasteners for surfaces exposed to the exterior; use aluminum or galvanized-steel fasteners for surfaces exposed to the interior.
C. Metal Protection: Where dissimilar metals contact each other or corrosive substrates, protect against galvanic action as recommended in writing by metal panel manufacturer.
D. Lap-Seam Metal Panels: Fasten metal panels to supports with fasteners at each lapped joint at location and spacing recommended by manufacturer.
   1. Apply panels and associated items true to line for neat and weathertight enclosure.
   2. Provide metal-backed washers under heads of exposed fasteners bearing on weather side of metal panels.
   3. Locate and space exposed fasteners in uniform vertical and horizontal alignment. Use proper tools to obtain controlled uniform compression for positive seal without rupture of washer.
   4. Install screw fasteners with power tools having controlled torque adjusted to compress washer tightly without damage to washer, screw threads, or panels. Install screws in predrilled holes.
E. Watertight Installation:
   1. Apply a continuous ribbon of sealant or tape to seal lapped joints of metal panels, using sealant or tape as recommend by manufacturer on side laps of nesting-type panels and elsewhere as needed to make panels watertight.
   2. Provide sealant or tape between panels and protruding equipment, vents, and accessories.
   3. At panel splices, nest panels with minimum 6-inch (152-mm) end lap, sealed with sealant and fastened together by interlocking clamping plates.
F. Accessory Installation: Install accessories with positive anchorage to building and weathertight mounting, and provide for thermal expansion. Coordinate installation with flashings and other components.

1. Install components required for a complete metal panel system including trim, corners, seam covers, flashings, sealants, gaskets, fillers, closure strips, and similar items. Provide types indicated by metal panel manufacturer; or, if not indicated, provide types recommended by metal panel manufacturer.

G. Flashing and Trim: Comply with performance requirements, manufacturer's written installation instructions, and SMACNA's "Architectural Sheet Metal Manual." Provide concealed fasteners where possible, and set units true to line and level as indicated. Install work with laps, joints, and seams that are permanently watertight.

1. Install exposed flashing and trim that is without buckling, and tool marks, and that is true to line and levels indicated, with exposed edges folded back to form hems. Install sheet metal flashing and trim to fit substrates and to achieve waterproof performance.
2. Expansion Provisions: Provide for thermal expansion of exposed flashing and trim. Space movement joints at a maximum of 10 feet (3 m) with no joints allowed within 24 inches (610 mm) of corner or intersection. Where lapped expansion provisions cannot be used or would not be waterproof, form expansion joints of intermeshing hooked flanges, not less than 1 inch (25 mm) deep, filled with mastic sealant (concealed within joints).

3.04 CLEANING AND PROTECTION

A. Remove temporary protective coverings and strippable films, if any, as metal panels are installed unless otherwise indicated in manufacturer's written installation instructions. On completion of metal panel installation, clean finished surfaces as recommended by metal panel manufacturer. Maintain in a clean condition during construction.

B. After metal panel installation, clear weep holes and drainage channels of obstructions, dirt, and sealant.

C. Replace metal panels that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

END OF SECTION 07 42 93

SECTION 07 41 13.16 - STANDING-SEAM METAL ROOF PANELS

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes: Standing-seam metal roof panels.

B. Related Requirements:

1. Section 07 42 93 "Soffit Panels" for metal panels used in horizontal soffit applications.
2. Section 07 72 53 "Snow Guards" for prefabricated devices designed to hold snow on the roof surface, allowing it to melt and drain off slowly.

1.02 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1. Meet with Owner, Architect, Owner's insurer if applicable, metal panel Installer, metal panel manufacturer's representative, structural-support Installer, and installers whose work interfaces with or affects metal panels, including installers of roof accessories and roof-mounted equipment.
2. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
3. Review methods and procedures related to metal panel installation, including manufacturer's written instructions.
4. Examine support conditions for compliance with requirements, including alignment between and attachment to structural members.
5. Review structural loading limitations of deck during and after roofing.
6. Review flashings, special details, drainage, penetrations, equipment curbs, and condition of other construction that affect metal panels.
7. Review governing regulations and requirements for insurance, certificates, and tests and inspections if applicable.
8. Review temporary protection requirements for metal panel systems during and after installation.
9. Review procedures for repair of metal panels damaged after installation.
10. Document proceedings, including corrective measures and actions required, and furnish copy of record to each participant.

1.03 ACTION SUBMITTALS

A. Product Data: For standing-seam metal roof panels. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each type of panel and accessory.

B. Sustainable Design Submittals:

C. Shop Drawings:

1. Include fabrication and installation layouts of metal panels; details of edge conditions, joints, panel profiles, corners, anchorages, attachment system, trim, flashings, closures, and accessories; and special details.
2. Accessories: Include details of the flashing, trim, and anchorage systems, at a scale of not less than 1-1/2 inches per 12 inches (1:10).

D. Samples for Initial Selection: For each type of metal panel indicated with factory-applied color finishes.

1. Include similar Samples of trim and accessories involving color selection.

E. Samples for Verification: For each type of exposed finish required, prepared on Samples of size indicated below.

1. Metal Panels: 12 inches (305 mm) long by actual panel width. Include clips, fasteners, closures, and other metal panel accessories.

1.04 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer.
B. Product Test Reports: For standing-seam metal roof panels, for tests performed by a qualified testing agency.
C. Field quality-control reports.
D. Sample Warranties: For special warranties.

1.05 CLOSEOUT SUBMITTALS

A. Maintenance Data: For metal panels to include in maintenance manuals.

1.06 QUALITY ASSURANCE

A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.
B. UL-Certified, Portable Roll-Forming Equipment: UL-certified, portable roll-forming equipment capable of producing metal panels warranted by manufacturer to be the same as factory-formed products. Maintain UL certification of portable roll-forming equipment for duration of work.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Deliver components, metal panels, and other manufactured items so as not to be damaged or deformed. Package metal panels for protection during transportation and handling.
B. Unload, store, and erect metal panels in a manner to prevent bending, warping, twisting, and surface damage.
C. Stack metal panels horizontally on platforms or pallets, covered with suitable weathertight and ventilated covering. Store metal panels to ensure dryness, with positive slope for drainage of water. Do not store metal panels in contact with other materials that might cause staining, denting, or other surface damage.
D. Retain strippable protective covering on metal panels during installation.
E. Copper Panels: Wear gloves when handling to prevent fingerprints and soiling of surface.

1.08 FIELD CONDITIONS

A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit assembly of metal panels to be performed according to manufacturers' written instructions and warranty requirements.

1.09 COORDINATION

A. Coordinate sizes and locations of roof curbs, equipment supports, and roof penetrations with actual equipment provided.
B. Coordinate metal panel installation with rain drainage work, flashing, trim, construction of soffits, and other adjoining work to provide a leakproof, secure, and noncorrosive installation.

1.010 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of metal panel systems that fail in materials or workmanship within specified warranty period.
1. Failures include, but are not limited to, the following:
a. Structural failures including rupturing, cracking, or puncturing.
b. Deterioration of metals and other materials beyond normal weathering.
2. Warranty Period: Two years from date of Substantial Completion.

B. Special Warranty on Panel Finishes: Manufacturer's standard form in which manufacturer agrees to repair finish or replace metal panels that show evidence of deterioration of factory-applied finishes within specified warranty period.
   1. Exposed Panel Finish: Deterioration includes, but is not limited to, the following:
      a. Color fading more than 5 Delta E units when tested according to ASTM D2244.
      b. Chalking in excess of a No. 8 rating when tested according to ASTM D4214.
      c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.
   2. Finish Warranty Period: 20 years from date of Substantial Completion.

C. Special Weathertightness Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace standing-seam metal roof panel assemblies that fail to remain weathertight, including leaks, within specified warranty period.
   1. Warranty Period: 20 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

A. Energy Performance:
   1. Provide roof panels according to one of the following when tested according to CRRC-1:
      a. Three-year, aged solar reflectance of not less than 0.55 and emissivity of not less than 0.75.
      b. Three-year, aged Solar Reflectance Index of not less than 64 when calculated in accordance with ASTM E1980.

B. Structural Performance: Provide metal panel systems capable of withstanding the effects of the following loads, based on testing according to ASTM E1592:
   1. Wind Loads: As indicated on Drawings.
   2. Other Design Loads: As indicated on Drawings.
   3. Deflection Limits: For wind loads, no greater than 1/240 of the span.

C. Air Infiltration: Air leakage of not more than 0.06 cfm/sq. ft. (0.3 L/s per sq. m) when tested according to ASTM E1680 at the following test-pressure difference:
   1. Test-Pressure Difference: 6.24 lbf/sq. ft. (300 Pa).

D. Water Penetration under Static Pressure: No water penetration when tested according to ASTM E1646 at the following test-pressure difference:
   1. Test-Pressure Difference: 6.24 lbf/sq. ft. (300 Pa).

E. Wind-Uplift Resistance: Provide metal roof panel assemblies that comply with UL 580 for wind-uplift-resistance class indicated.
   1. Uplift Rating: UL 90.

F. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes by preventing buckling, opening of joints, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
   1. Temperature Change (Range): 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.

2.02 STANDING-SEAM METAL ROOF PANELS

A. Provide factory-formed metal roof panels designed to be installed by lapping and interconnecting raised side edges of adjacent panels with joint type indicated and mechanically attaching panels to supports using concealed clips in side laps. Include clips, cleats, pressure plates, and accessories required for weathertight installation.
   1. Aluminum Panel Systems: Unless more stringent requirements are indicated, comply with ASTM E1637.

B. Vertical-Rib, Seamed-Joint, Standing-Seam Metal Roof Panels: Formed with vertical ribs at panel edges and a flat pan between ribs; designed for sequential installation by mechanically attaching panels to supports using concealed clips located under one side of panels, engaging opposite edge of adjacent panels, and mechanically seaming panels together.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. ATAS International, Inc.
   b. Berridge Manufacturing Company.
   c. Drexel Metals.
   d. PAC-CLAD; Petersen Aluminum Corporation; a Carlisle company.
2. Aluminum Sheet: Coil-coated sheet, ASTM B209 (ASTM B209M), alloy as standard with manufacturer, with temper as required to suit forming operations and structural performance required.
   a. Thickness: 0.032 inch (0.81 mm).
   b. Surface: Smooth, flat finish.
   c. Exterior Finish: Two-coat fluoropolymer.
   d. Color: As indicated by manufacturer's designations.
3. Clips: Two-piece floating to accommodate thermal movement.
   a. 0.0250-inch- (0.635-mm-) clip and 0.0625-inch- (1.587-mm-) base thick, stainless-steel sheet.
4. Joint Type: Single folded.
5. Panel Coverage: 16 inches (406 mm).
6. Panel Height: 2.0 inches (51 mm).

2.03 ROOF INSULATION

A. Insulation over Solid Deck:
1. Composite Polyisocyanurate Board Insulation: ASTM C1289, with factory-applied facing board on one major surface, as indicated below by type, and felt or glass-fiber mat facer on the other surface.
   a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      1) Atlas Polyiso Roof and Wall Insulation
      2) Carlisle Syntec Systems
      3) CertainTeed; SAINT-GOBAIN
      4) GAF
      5) Hunter Panels; a Carlisle company
      6) Insulfoam; a Carlisle Company
      7) Johns Manville; a Berkshire Hathaway company
   b. Facer: Type V oriented strand board facer, 7/16 inch thick.
   c. Size: 48 by 48 inches or 48 by 96 inches.
   d. Thickness: To achieve R-49.

2.04 UNDERLAYMENT

A. Self-Adhering, High-Temperature Underlayment: Provide self-adhering, cold-applied, sheet underlayment, a minimum of 30 mils (0.76 mm) thick, consisting of slip-resistant, polyethylene-film top surface laminated to a layer of butyl or SBS-modified asphalt adhesive, with release-paper backing. Provide primer when recommended by underlayment manufacturer.
1. Thermal Stability: Stable after testing at 240 deg F (116 deg C); ASTM D1970.
2. Low-Temperature Flexibility: Passes after testing at minus 20 deg F (29 deg C); ASTM D1970.

3. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Carlisle WIP Products; a brand of Carlisle Construction Materials.
   b. Henry Company.
   c. Owens Corning.

2.05 MISCELLANEOUS MATERIALS

A. Miscellaneous Metal Sub-framing and Furring: ASTM C645; cold-formed, metallic-coated steel sheet, ASTM A653/A653M, G90 (Z275) hot-dip galvanized coating designation or ASTM A792/A792M, Class AZ50 (Class AZM150) coating designation unless otherwise indicated. Provide manufacturer's standard sections as required for support and alignment of metal panel system.

B. Panel Accessories: Provide components required for a complete, weathertight panel system including trim, copings, fasciae, mullions, sills, corner units, clips, flashings, sealants, gaskets, fillers, closure strips, and similar items. Match material and finish of metal panels unless otherwise indicated.
   1. Closures: Provide closures at eaves and ridges, fabricated of same metal as metal panels.
   2. Backing Plates: Provide metal backing plates at panel end splices, fabricated from material recommended by manufacturer.
   3. Closure Strips: Closed-cell, expanded, cellular, rubber or crosslinked, polyolefin-foam or closed-cell laminated polyethylene; minimum 1-inch- (25-mm-) thick, flexible closure strips; cut or pre-molded to match metal panel profile. Provide closure strips where indicated or necessary to ensure weathertight construction.

C. Flashing and Trim: Provide flashing and trim formed from same material as metal panels as required to seal against weather and to provide finished appearance. Locations include, but are not limited to, eaves, rakes, corners, bases, framed openings, ridges, fasciae, and fillers. Finish flashing and trim with same finish system as adjacent metal panels.

D. Gutters: Formed from same material as roof panels, complete with end pieces, outlet tubes, and other special pieces as required. Fabricate in minimum 96-inch- (2400-mm-) long sections, of size and metal thickness according to SMACNA's "Architectural Sheet Metal Manual." Furnish gutter supports spaced a maximum of 36 inches (914 mm) o.c., fabricated from same metal as gutters. Provide wire ball strainers of compatible metal at outlets. Finish gutters to match roof fascia and rake trim.

E. Downspouts: Formed from same material as roof panels. Fabricate in 10-foot- (3-m-) long sections, complete with formed elbows and offsets, of size and metal thickness according to SMACNA's "Architectural Sheet Metal Manual." Finish downspouts to match gutters.

F. Roof Curbs: Fabricated from same material as roof panels, 0.048-inch (1.2-mm) nominal thickness; with bottom of skirt profiled to match roof panel profiles and with welded top box and integral full-length cricket. Fabricate curb sub-framing of 0.060-inch- (1.52-mm-) nominal thickness, angle-, C-, or Z-shaped steel sheet. Fabricate curb and sub-framing to withstand indicated loads of size and height indicated. Finish roof curbs to match metal roof panels.
   1. Insulate roof curb with 1-inch- (25-mm-) thick, rigid insulation.

G. Panel Fasteners: Self-tapping screws designed to withstand design loads.

H. Panel Sealants: Provide sealant type recommended by manufacturer that are compatible with panel materials, are nonstaining, and do not damage panel finish.
   1. Sealant Tape: Pressure-sensitive, 100 percent solids, gray polyisobutylene compound sealant tape with release-paper backing. Provide permanently elastic, nonsag, nontoxic, nonstaining tape 1/2 inch (13 mm) wide and 1/8 inch (3 mm) thick.
   2. Joint Sealant: ASTM C920; elastomeric polyurethane or silicone sealant; of type, grade, class, and use classifications required to seal joints in metal panels and remain weathertight; and as recommended in writing by metal panel manufacturer.

3. Butyl-Rubber-Based, Solvent-Release Sealant: ASTM C1311.

2.06 FABRICATION

A. Fabricate and finish metal panels and accessories at the factory, by manufacturer's standard procedures and processes, as necessary to fulfill indicated performance requirements demonstrated by laboratory testing. Comply with indicated profiles and with dimensional and structural requirements.

B. On-Site Fabrication: Subject to compliance with requirements of this Section, metal panels may be fabricated on-site using UL-certified, portable roll-forming equipment if panels are of same profile and warranted by manufacturer to be equal to factory-formed panels. Fabricate according to equipment manufacturer's written instructions and to comply with details shown.

C. Provide panel profile, including major ribs and intermediate stiffening ribs, if any, for full length of panel.

D. Sheet Metal Flashing and Trim: Fabricate flashing and trim to comply with manufacturer's recommendations and recommendations in SMACNA's "Architectural Sheet Metal Manual" that apply to design, dimensions, metal, and other characteristics of item indicated.

1. Form exposed sheet metal accessories that are without excessive oil canning, buckling, and tool marks and that are true to line and levels indicated, with exposed edges folded back to form hems.
2. Seams for Aluminum: Fabricate nonmoving seams with flat-lock seams. Form seams and seal with epoxy seam sealer. Rivet joints for additional strength.
3. Seams for Other Than Aluminum: Fabricate nonmoving seams in accessories with flat-lock seams. Tin edges to be seamed, form seams, and solder.
4. Sealed Joints: Form non-expansion, but movable, joints in metal to accommodate sealant and to comply with SMACNA standards.
5. Conceal fasteners and expansion provisions where possible. Exposed fasteners are not allowed on faces of accessories exposed to view.
6. Fabricate cleats and attachment devices from same material as accessory being anchored or from compatible, noncorrosive metal recommended in writing by metal panel manufacturer.
    a. Size: As recommended by SMACNA's "Architectural Sheet Metal Manual" or metal panel manufacturer for application, but not less than thickness of metal being secured.

2.07 FINISHES

A. Protect mechanical and painted finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

B. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in same piece are unacceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

C. Aluminum Panels and Accessories:

1. Two-Coat Fluoropolymer: AAMA 2605. Fluoropolymer finish containing not less than 70 percent polyvinylidene fluoride (PVDF) resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, metal panel supports, and other conditions affecting performance of the Work.
   1. Examine solid roof sheathing to verify that sheathing joints are supported by framing or blocking and that installation is within flatness tolerances required by metal roof panel manufacturer.
      a. Verify that air- or water-resistive barriers have been installed over sheathing or backing substrate to prevent air infiltration or water penetration.

B. Examine roughing-in for components and systems penetrating metal panels to verify actual locations of penetrations relative to seam locations of metal panels before installation.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Miscellaneous Supports: Install subframing, furring, and other miscellaneous panel support members and anchorages according to ASTM C754 and metal panel manufacturer's written recommendations.

3.03 INSTALLATION OF UNDERLAYMENT

A. Insulation and Cover Board: Install adhesive applied ridged insulation and cover board per section 07 54 23 “THERMOPLASTIC-POLYOLEFIN (TPO) ROOFING.”

B. Self-Adhering Sheet Underlayment: Apply primer if required by manufacturer. Comply with temperature restrictions of underlayment manufacturer for installation. Apply at locations indicated below, wrinkle free, in shingle fashion to shed water, and with end laps of not less than 6 inches (152 mm) staggered 24 inches (610 mm) between courses. Overlap side edges not less than 3-1/2 inches (90 mm). Roll laps with roller. Cover underlayment within 14 days.
   1. Apply over the entire roof surface.

C. Flashings: Install flashings to cover underlayment to comply with requirements specified in Section 07 62 00 "Sheet Metal Flashing and Trim."

3.04 INSTALLATION OF STANDING-SEAM METAL ROOF PANELS

A. Install metal panels according to manufacturer's written instructions in orientation, sizes, and locations indicated. Install panels perpendicular to supports unless otherwise indicated. Anchor metal panels and other components of the Work securely in place, with provisions for thermal and structural movement.
   1. Shim or otherwise plumb substrates receiving metal panels.
   2. Flash and seal metal panels at perimeter of all openings. Fasten with self-tapping screws. Do not begin installation until air- or water-resistive barriers and flashings that will be concealed by metal panels are installed.
   3. Install screw fasteners in predrilled holes.
   4. Locate and space fastenings in uniform vertical and horizontal alignment.
   5. Install flashing and trim as metal panel work proceeds.
   6. Locate panel splices over, but not attached to, structural supports. Stagger panel splices and end laps to avoid a four-panel lap splice condition.
   7. Align bottoms of metal panels and fasten with blind rivets, bolts, or self-tapping screws. Fasten flashings and trim around openings and similar elements with self-tapping screws.
   8. Provide weathertight escutcheons for pipe- and conduit-penetrating panels.

B. Fasteners:

1. Aluminum Panels: Use aluminum or stainless-steel fasteners for surfaces exposed to the exterior; use aluminum or galvanized-steel fasteners for surfaces exposed to the interior.

C. Anchor Clips: Anchor metal roof panels and other components of the Work securely in place, using manufacturer's approved fasteners according to manufacturers' written instructions.

D. Metal Protection: Where dissimilar metals contact each other or corrosive substrates, protect against galvanic action as recommended in writing by metal panel manufacturer.

E. Standing-Seam Metal Roof Panel Installation: Fasten metal roof panels to supports with concealed clips at each standing-seam joint at location, spacing, and with fasteners recommended in writing by manufacturer.
1. Install clips to supports with self-tapping fasteners.
2. Install pressure plates at locations indicated in manufacturer's written installation instructions.
3. Seamed Joint: Crimp standing seams with manufacturer-approved, motorized seamer tool so clip, metal roof panel, and factory-applied sealant are completely engaged.

F. Accessory Installation: Install accessories with positive anchorage to building and weathertight mounting and provide for thermal expansion. Coordinate installation with flashings and other components.
1. Install components required for a complete metal panel system including trim, copings, corners, seam covers, flashings, sealants, gaskets, fillers, closure strips, and similar items. Provide types indicated by metal roof panel manufacturers; or, if not indicated, types recommended by metal roof panel manufacturer.

G. Flashing and Trim: Comply with performance requirements, manufacturer's written installation instructions, and SMACNA's "Architectural Sheet Metal Manual." Provide concealed fasteners where possible, and set units true to line and level as indicated. Install work with laps, joints, and seams that will be permanently watertight and weather resistant.
1. Install exposed flashing and trim that is without buckling and tool marks, and that is true to line and levels indicated, with exposed edges folded back to form hems. Install sheet metal flashing and trim to fit substrates and achieve waterproof and weather-resistant performance.
2. Expansion Provisions: Provide for thermal expansion of exposed flashing and trim. Space movement joints at a maximum of 10 feet (3 m) with no joints allowed within 24 inches (610 mm) of corner or intersection. Where lapped expansion provisions cannot be used or would not be sufficiently weather resistant and waterproof, form expansion joints of intermeshing hooked flanges, not less than 1 inch (25 mm) deep, filled with mastic sealant (concealed within joints).

H. Gutters: Join sections with riveted and soldered or lapped and sealed joints. Attach gutters to eave with gutter hangers spaced not more than 36 inches (914 mm) o.c. using manufacturer's standard fasteners. Provide end closures and seal watertight with sealant. Provide for thermal expansion.

I. Downspouts: Join sections with telescoping joints. Provide fasteners designed to hold downspouts securely 1 inch (25 mm) away from walls; locate fasteners at top and bottom and at approximately 60 inches (1524 mm) o.c. in between.
1. Provide elbows at base of downspouts to direct water away from building.

J. Roof Curbs: Install flashing around bases where they meet metal roof panels.

K. Pipe Flashing: Form flashing around pipe penetration and metal roof panels. Fasten and seal to metal roof panels as recommended by manufacturer.

3.05 ERECTION TOLERANCES

A. Installation Tolerances: Shim and align metal panel units within installed tolerance of 1/4 inch in 20 feet (6 mm in 6 m) on slope and location lines as indicated and within 1/8-inch (3-mm) offset of adjoining faces and of alignment of matching profiles.

3.06 FIELD QUALITY CONTROL

A. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect metal roof panel installation, including accessories. Report results in writing.

B. Remove and replace applications of metal roof panels where tests and inspections indicate that they do not comply with specified requirements.

C. Additional tests and inspections, at Contractor's expense, are performed to determine compliance of replaced or additional work with specified requirements.

D. Prepare test and inspection reports.

3.07 CLEANING AND PROTECTION

A. Remove temporary protective coverings and strippable films, if any, as metal panels are installed, unless otherwise indicated in manufacturer's written installation instructions. On completion of metal panel installation, clean finished surfaces as recommended by metal panel manufacturer. Maintain in a clean condition during construction.

B. Replace metal panels that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

END OF SECTION 07 41 13.16

SECTION 07 44 00 – CONCRETE FACED PANELS

PART 1 - GENERAL

1.01 SUMMARY:

A. Section Includes:
   1. Concrete faced insulated perimeter wall panels.

1.02 REFERENCES:

A. ASTM International (ASTM):
   1. C518 - Standard Test Method for Steady State Heat Flux Measurements and Thermal Transmission Properties by Means of the Heat Flow Meter Apparatus.
   2. C947 - Standard Test Method for Flexural Properties of Thin-Section Glass-Fiber-Reinforced Concrete (Using Simple Beam With Third-Point Loading).
   3. C578 - Standard Specification for Rigid, Cellular Polystyrene Thermal Insulation.
   4. D696 - Standard Test Method for Coefficient of Linear Thermal Expansion of Plastics Between 30 176C and 30 176C With a Vitreous Silica Dilatometer.
   5. D1037 - Standard Test Methods for Evaluating Properties of Wood-Base Fiber and Particle Panel Materials.
   6. D1621 - Standard Test Method for Compressive Properties of Rigid Cellular Plastics.
   7. D2394 - Standard Test Methods for Simulated Service Testing of Wood and Wood Base Finish Flooring.
   8. D4716 - Standard Test Method for Determining the (In plane) Flow Rate per Unit Width and Hydraulic Transmissivity of a Geosynthetic Using a Constant Head.
   9. E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.
   10. E96/E96M - Standard Test Methods for Water Vapor Transmission of Materials.

1.03 SUBMITTALS:

A. Action Submittals:
   1. Product Data: Manufacturer's data sheets on each product to be used, including:
      a. Preparation instructions and recommendations.
      b. Storage and handling requirements and recommendations.
      c. Installation methods.
   2. Samples:
      a. Color chips representing manufacturer's full range of available colors and patterns.
      b. After color selection submit samples of each color and patterns.

1.04 QUALITY ASSURANCE:

A. Manufacturer: Provides design, engineering, fabrication, and testing of required components and assemblies for complete system.
B. Mockup: Provide mockup for evaluation of surface preparation techniques and application workmanship.

1.05 DELIVERY, STORAGE, AND HANDLING:

A. Protect materials from exposure to harmful weather conditions and at temperature and humidity conditions recommended by manufacturer.
B. Store panels flat.
C. Do not drop panels.

1.06 SITE CONDITIONS:

A. Substrate and ambient air temperature in accordance with manufacturer's requirements.

1.07 WARRANTY:

A. Manufacturer’s standard year warranty against defects in materials and workmanship.

PART 2 - PRODUCTS

2.01 MANUFACTURER:

A. Contract Documents are based on products by T. Clear Corporation
B. Approved Equal.

2.02 MATERIALS:

A. Concrete Faced Insulated Perimeter Wall Panels:
    1. Source: WallGUARD Concrete Faced Insulated Perimeter Wall Panels by T. Clear Corporation.
    2. Construction:
        a. Extruded polystyrene board, ASTM C578, Type IV, rigid, closed cell, with integral high-density skin, with integral 5/16 inch thick latex-modified concrete facing.
        b. Board Size: 2 x 4 feet x 3-5/16 inches thick.
        c. Edges: Tongue-and-groove sides, square ends.
        d. thermal resistance: Long term aged R-value of 5 per inch, tested to ASTM C518.
        e. Foam compressive strength: Minimum 35 PSI, tested to ASTM D1621.
        f. Compressive strength: Minimum 40 PSI, tested to ASTM D 1621.
        g. Water absorption: Maximum 0.7 percent by volume, tested ASTM D2842.
        h. Water vapor permeance: 0.8, tested to ASTM E96/E96M.
        i. Coefficient of lineal thermal Expansion: 3.5 x 10-5 inches per inch x degree F, tested to ASTM D696.
    3. Accessories:
        a. Metal cap flashing: 24 gage galvanized steel J-channel; 2-1/4 inches wide, 4 inch long leg and 2-1/4 inch short leg; prefinished, color to be selected.
        b. Clips and fasteners: Corrosion-resistant, sized to suit application; as supplied by insulation manufacturer.
        c. Reference specification 07 62 00 and drawings for perimeter flashing.

PART 3 - EXECUTION

3.01 INSTALLATION – GENERAL:

A. Install in accordance with manufacturer's instructions.
B. To be installed on the underside of concrete floor slab as indicated on drawings.

3.02 INSTALLATION – CONCRETE FACED INSULATED PERIMETER WALL PANELS:

A. Surfaces to Receive Panels: Flat, sound, clean, and free from irregularities and or jagged surfaces.
B. Lay out panels to maximize board sizes. Do not use boards less than 6 inches wide.
C. Install panels in orientation to maximize full sheets.
D. Install fastening clips and cap flashings.
E. Fill all gaps ½” or more around penetrations.

3.03 PROTECTION:

A. Protect installed products from damage during construction.

END OF SECTION 07 44 00

SECTION 07 54 23 - THERMOPLASTIC-POLYOLEFIN (TPO) ROOFING

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Thermoplastic polyolefin (TPO) roofing system.
   2. Accessory roofing materials.
   3. Vapor retarder.
   4. Roof insulation.
   5. Insulation accessories and cover board.
   6. Walkways.

B. Related Requirements:
   1. Section 06 10 00 "Rough Carpentry" for wood nailers, curbs, and blocking.
   2. Section 07 62 00 "Sheet Metal Flashing and Trim" for metal roof flashings and counterflashings.
   3. Section 07 71 00 "Roof Specialties" for manufactured copings.
   4. Section 07 92 00 "Joint Sealants" for joint sealants, joint fillers, and joint preparation.

1.02 DEFINITIONS

A. Roofing Terminology: Definitions in ASTM D1079 and glossary in NRCA's "The NRCA Roofing Manual: Membrane Roof Systems" apply to Work of this Section.

1.03 PREINSTALLATION MEETINGS

A. Preinstallation Roofing Conference: Conduct conference at Project site.
   1. Meet with Owner, Architect, Owner's insurer if applicable, testing and inspecting agency representative, roofing Installer, roofing system manufacturer's representative, deck Installer, air barrier Installer, and installers whose work interfaces with or affects roofing, including installers of roof accessories and roof-mounted equipment.
   2. Review methods and procedures related to roofing installation, including manufacturer's written instructions.
   3. Review and finalize construction schedule, and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
   4. Examine deck substrate conditions and finishes for compliance with requirements, including flatness and fastening.
   5. Review structural loading limitations of roof deck during and after roofing.
   6. Review base flashings, special roofing details, roof drainage, roof penetrations, equipment curbs, and condition of other construction that affects roofing system.
   7. Review governing regulations and requirements for insurance and certificates if applicable.
   8. Review temporary protection requirements for roofing system during and after installation.
   9. Review roof observation and repair procedures after roofing installation.

1.04 ACTION SUBMITTALS

A. Product Data:
   1. Thermoplastic polyolefin (TPO) roofing system.
   2. Accessory roofing materials.
   3. Vapor retarder.
   4. Roof insulation.

5. Insulation accessories and cover board.
6. Walkways.

B. Shop Drawings: Include roof plans, sections, details, and attachments to other work, including the following:
1. Layout and thickness of insulation.
2. Base flashings and membrane termination details.
3. Flashing details at penetrations.
4. Tapered insulation layout, thickness, and slopes.
5. Roof plan showing orientation of steel roof deck and orientation of roof membrane, fastening spacings, and patterns for mechanically fastened roofing system.
6. Insulation fastening patterns for corner, perimeter, and field-of-roof locations.

C. Samples for Verification: For the following products:
1. Roof membrane and flashings, of color required.
2. Walkway pads or rolls, of color required.

D. Wind Uplift Resistance Submittal: For roofing system, indicating compliance with wind uplift performance requirements.

1.05 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer manufacturer and testing agency.

B. Manufacturer Certificates:
1. Performance Requirement Certificate: Signed by roof membrane manufacturer, certifying that roofing system complies with requirements specified in "Performance Requirements" Article.
a. Submit evidence of compliance with performance requirements.
2. Special Warranty Certificate: Signed by roof membrane manufacturer, certifying that all materials supplied under this Section are acceptable for special warranty.

C. Product Test Reports: For roof membrane and insulation, for tests performed by a qualified testing agency, indicating compliance with specified requirements.

D. Evaluation Reports: For components of roofing system, from ICC-ES.

E. Field Test Reports:
1. Concrete internal relative humidity test reports.

F. Field quality-control reports.

G. Sample Warranties: For manufacturer's special warranties.

1.06 CLOSEOUT SUBMITTALS

A. Maintenance Data: For roofing system to include in maintenance manuals.

1.07 QUALITY ASSURANCE

A. Manufacturer Qualifications: A qualified manufacturer that is UL listed or listed in SPRI's Directory of Roof Assemblies for roofing system identical to that used for this Project.

B. Installer Qualifications: A qualified firm that is approved, authorized, or licensed by roofing system manufacturer to install manufacturer's product and that is eligible to receive manufacturer's special warranty.

1.08 DELIVERY, STORAGE, AND HANDLING

A. Deliver roofing materials to Project site in original containers with seals unbroken and labeled with manufacturer's name, product brand name and type, date of manufacture, approval or listing agency markings, and directions for storing and mixing with other components.

B. Store liquid materials in their original undamaged containers in a clean, dry, protected location and within the temperature range required by roofing system manufacturer. Protect stored liquid material from direct sunlight.

1. Discard and legally dispose of liquid material that cannot be applied within its stated shelf life.

C. Protect roof insulation materials from physical damage and from deterioration by sunlight, moisture, soiling, and other sources. Store in a dry location. Comply with insulation manufacturer's written instructions for handling, storing, and protecting during installation.

D. Handle and store roofing materials, and place equipment in a manner to avoid permanent deflection of deck.

1.09 FIELD CONDITIONS

A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit roofing system to be installed according to manufacturer's written instructions and warranty requirements.

1.10 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of roofing system that fail in materials or workmanship within specified warranty period.
1. Special warranty includes roof membrane, base flashings, roof insulation, cover boards,] vapor retarder, and other components of roofing system.
2. Warranty Period: 30 years from date of Substantial Completion.

B. Special Project Warranty: Submit roofing Installer's warranty, on warranty form at end of this Section, signed by Installer, covering the Work of this Section, including all components of roofing system such as roof membrane, base flashing, roof insulation, cover boards,] vapor retarders, and walkway products, for the following warranty period:
1. Warranty Period: Two years from date of Substantial Completion.

PART 2 - PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

A. General Performance: Installed roofing system and flashings to withstand specified uplift pressures, thermally induced movement, and exposure to weather without failure due to defective manufacture, fabrication, installation, or other defects in construction. Roof system and flashings to remain watertight.
1. Accelerated Weathering: Roof to withstand 2000 hours of exposure when tested according to ASTM G152, ASTM G154, or ASTM G155.
2. Impact Resistance: Roof membrane to resist impact damage when tested according to ASTM D3746, ASTM D4272, or the "Resistance to Foot Traffic Test" in FM Approvals 4470.

B. Material Compatibility: Roofing materials to be compatible with one another and adjacent materials under conditions of service and application required, as demonstrated by roof membrane manufacturer based on testing and field experience.

C. Wind Uplift Resistance: Design roofing system to resist the following wind uplift pressures when tested according to FM Approvals 4474, UL 580, or UL 1897:
1. As indicated on drawings.

D. SPRI's Directory of Roof Assemblies Listing: Roof membrane, base flashings, and component materials comply with requirements in FM Approvals 4450 or FM Approvals 4470 as part of a roofing system, and are listed in SPRI's Directory of Roof Assemblies for roof assembly identical for that specified for this Project.
1. Wind Uplift Load Capacity: 120 psf.

E. Energy Star Listing: Roofing system to be listed on the DOE's Energy Star "Roof Products Qualified Product List" for low-slope roof products.

F. Energy Performance: Roofing system to have an initial solar reflectance of not less than 0.70 and an emissivity of not less than 0.75 when tested in accordance with ANSI/CRRC S100.
G. Exterior Fire-Test Exposure: ASTM E108 or UL 790, Class A; for application and roof slopes indicated; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
H. Fire-Resistance Ratings: Comply with fire-resistance-rated assembly designs indicated. Identify products with appropriate markings of applicable testing agency.

2.02 THERMOPLASTIC POLYOLEFIN (TPO) ROOFING SYSTEM

A. TPO Sheet: ASTM D6878/D6878M, Fleece backed, internally fabric- or scrim-reinforced, TPO sheet.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. Carlisle Syntec Systems.
b. Firestone Building Products.
c. Johns Manville; a Berkshire Hathaway company.
2. Source Limitations: Obtain components for roofing system from roof membrane manufacturer.
3. Thickness: 135 mils (3.4 mm), nominal.
4. Exposed Face Color: White.

2.03 ACCESSORY ROOFING MATERIALS

A. General: Accessory materials recommended by roofing system manufacturer for intended use and compatible with other roofing components.
1. Adhesive and Sealants: Comply with VOC limits of authorities having jurisdiction.
B. Sheet Flashing: Manufacturer's standard unreinforced TPO sheet flashing, 55 mils (1.4 mm) thick, minimum, of same color as TPO sheet.
C. Prefabricated Pipe Flashings: As recommended by roof membrane manufacturer.
D. Bonding Adhesive: Manufacturer's standard.
E. Metal Termination Bars: Manufacturer's standard, predrilled stainless steel or aluminum bars, approximately 1 by 1/8 inch (25 by 3 mm) thick; with anchors.
F. Metal Battens: Manufacturer's standard, aluminum-zinc-alloy-coated or zinc-coated steel sheet, approximately 1 inch wide by 0.05 inch thick (25 mm wide by 1.3 mm thick), prepunched.
G. Fasteners: Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FM Approvals 4470, designed for fastening roofing components to substrate, and acceptable to roofing system manufacturer.
H. Miscellaneous Accessories: Provide pourable sealers, preformed cone and vent sheet flashings, preformed inside and outside corner sheet flashings, T-joint covers, lap sealants, termination reglets, and other accessories.

2.04 VAPOR RETARDER

A. Laminated Sheet Vapor Retarder: Two-layer, fire-retardant polyethylene laminate, reinforced with cord grid.
1. Permeance Rating: Not more than 0.062 perm (3.556 ng/Pa x s x sq. m) when tested in accordance with ASTM E96/E96M.
2. Flame-Spread Index: Not more than 5 when tested in accordance with ASTM E84.
3. Smoke-Developed Index: Not more than 35 when tested in accordance with ASTM E84.
4. Tape: Pressure-sensitive tape of type recommended by vapor retarder manufacturer for sealing joints and penetrations in vapor retarder.

2.05 ROOF INSULATION

A. General: Preformed roof insulation boards manufactured or approved by TPO roof membrane manufacturer.

B. Polyisocyanurate Board Insulation: ASTM C1289, Type II, Class 1, Grade 2, felt or glass-fiber mat facer on both major surfaces.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Atlas Polyiso Roof and Wall Insulation.
   b. Carlisle Syntec Systems.
   c. Hunter Panels; a Carlisle company.
   d. Johns Manville; a Berkshire Hathaway company.
2. Compressive Strength: 20 psi (138 kPa).
3. Size: 48 by 48 inches (1219 by 1219 mm) or 48 by 96 inches (1219 by 2438 mm).
4. Thickness:
   a. Base Layer: 1-1/2 inches (38 mm).
   b. Upper Layer(s): To achieve R-49.

C. Tapered Insulation: Provide factory-tapered insulation boards.

1. Material: Match roof insulation.
2. Minimum Thickness: 1/4 inch (6.35 mm).
3. Slope:
   a. Roof Field: 1/4 inch per foot (1:48) unless otherwise indicated on Drawings.
   b. Saddles and Crickets: 1/2 inch per foot (1:24) unless otherwise indicated on Drawings.

D. Insulation Accessories

1. General: Roof insulation accessories recommended by insulation manufacturer for intended use and compatibility with other roofing system components.
2. Fasteners: Factory-coated steel fasteners with metal or plastic plates complying with corrosion-resistance provisions in FM Approvals 4470, designed for fastening roof insulation and cover boards to substrate, and acceptable to roofing system manufacturer.
3. Induction-Welding Plates: Minimum 3-inch (76-mm) diameter with recessed center, 0.034-inch (0.86-mm) thick, aluminum-zinc-alloy-coated steel plates, factory-coated with adhesive formulated for roof membrane, with corresponding corrosion-resistant fasteners.

2.06 COVER BOARD

A. General: Cover board as recommended in writing by roofing membrane manufacturer for intended use and compatible with other roofing system components.

B. Glass-Mat Gypsum Cover Board: ASTM C1177/C1177M, water-resistant gypsum board.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. CertainTeed; SAINT-GOBAIN
   b. Georgia-Pacific Gypsum LLC
   c. Gold Bond Building Products, LLC provided by National Gypsum Company
   d. USG Corporation
2. Thickness: 1/2 inch.
3. Surface Finish: Fiberglass facer.

2.07 WALKWAYS

A. Flexible Walkways: Factory-formed, nonporous, heavy-duty, slip-resisting, surface-textured walkway pads or rolls, approximately 3/16 inch (5 mm) thick and acceptable to roofing system manufacturer.

1. Size: Approximately 36 by 60 inches (914 by 1524 mm).

2. Color: Contrasting with roof membrane.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements and other conditions affecting performance of the Work.
   1. Verify that roof openings and penetrations are in place, curbs are set and braced, and roof-drain bodies are securely clamped in place.
   2. Verify that wood blocking, curbs, and nailers are securely anchored to roof deck at penetrations and terminations and that nailers match thicknesses of insulation.
   3. Verify that joints in precast concrete roof decks have been grouted flush with top of concrete.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Clean substrate of dust, debris, moisture, and other substances detrimental to roofing system installation according to roofing system manufacturer's written instructions. Remove sharp projections.

B. Prevent materials from entering and clogging roof drains and conductors and from spilling or migrating onto surfaces of other construction. Remove roof-drain plugs when no work is taking place or when rain is forecast.

3.03 INSTALLATION OF ROOFING, GENERAL

A. Install roofing system according to roofing system manufacturer's written instructions, SPRI's Directory of Roof Assemblies listed roof assembly requirements, and FM Global Property Loss Prevention Data Sheet 1-29.

B. Complete terminations and base flashings and provide temporary seals to prevent water from entering completed sections of roofing system at end of workday or when rain is forecast. Remove and discard temporary seals before beginning Work on adjoining roofing.

3.04 INSTALLATION OF INSULATION

A. Coordinate installing roofing system components so insulation is not exposed to precipitation or left exposed at end of workday.

B. Comply with roofing system and roof insulation manufacturer's written instructions for installing roof insulation.

C. Installation Over Concrete Decks:
   1. Install base layer of insulation with joints staggered not less than 24 inches (610 mm) in adjacent rows.
      a. Trim insulation neatly to fit around penetrations and projections, and to fit tight to intersecting sloping roof decks.
      b. Make joints between adjacent insulation boards not more than 1/4 inch (6 mm) in width.
      c. At internal roof drains, slope insulation to create a square drain sump with each side equal to the diameter of the drain bowl plus 24 inches (610 mm).
         1) Trim insulation so that water flow is unrestricted.
      d. Fill gaps exceeding 1/4 inch (6 mm) with insulation.
      e. Cut and fit insulation within 1/4 inch (6 mm) of nailers, projections, and penetrations.

f. Adhere base layer of insulation to vapor retarder according to SPRI's Directory of Roof Assemblies listed roof assembly requirements for specified Wind Uplift Load Capacity and FM Global Property Loss Prevention Data Sheet 1-29, as follows:
   1) Set insulation in ribbons of bead-applied insulation adhesive, firmly pressing and maintaining insulation in place.

2. Install upper layers of insulation and tapered insulation with joints of each layer offset not less than 12 inches (305 mm) from previous layer of insulation.
   a. Staggered end joints within each layer not less than 24 inches (305 mm) in adjacent rows.
   b. Trim insulation neatly to fit around penetrations and projections, and to fit tight to intersecting sloping roof decks.
   c. Make joints between adjacent insulation boards not more than 1/4 inch (6 mm) in width.
   d. At internal roof drains, slope insulation to create a square drain sump with each side equal to the diameter of the drain bowl plus 24 inches (610 mm).
      1) Trim insulation so that water flow is unrestricted.
   e. Fill gaps exceeding 1/4 inch (6 mm) with insulation.
   f. Cut and fit insulation within 1/4 inch (6 mm) of nailers, projections, and penetrations.
   g. Adhere each layer of insulation to substrate using adhesive according to SPRI's Directory of Roof Assemblies listed roof assembly requirements for specified Wind Uplift Load Capacity and FM Global Property Loss Prevention Data Sheet 1-29, as follows:
      1) Set each layer of insulation in ribbons of bead-applied insulation adhesive, firmly pressing and maintaining insulation in place.

3.05 INSTALLATION OF COVER BOARDS

A. Install cover boards over insulation with long joints in continuous straight lines with end joints staggered between rows. Offset joints of insulation below a minimum of 6 inches (150 mm) in each direction.
   1. Trim cover board neatly to fit around penetrations and projections, and to fit tight to intersecting sloping roof decks.
   2. At internal roof drains, conform to slope of drain sump.
      a. Trim cover board so that water flow is unrestricted.
   3. Cut and fit cover board tight to nailers, projections, and penetrations.
   4. Adhere cover board to substrate using adhesive according to SPRI's Directory of Roof Assemblies listed roof assembly requirements for specified Wind Uplift Load Capacity and FM Global Property Loss Prevention Data Sheet 1-29, as follows:
      a. Set cover board in ribbons of bead-applied insulation adhesive, firmly pressing and maintaining insulation in place.

3.06 INSTALLATION OF ADHERED ROOF MEMBRANE

A. Adhere roof membrane over area to receive roofing according to roofing system manufacturer's written instructions.
B. Unroll roof membrane and allow to relax before installing.
C. Start installation of roofing in presence of roofing system manufacturer's technical personnel.
D. Accurately align roof membrane, and maintain uniform side and end laps of minimum dimensions required by manufacturer. Stagger end laps.
E. Bonding Adhesive: Apply to substrate and underside of roof membrane at rate required by manufacturer, and allow to partially dry before installing roof membrane. Do not apply to splice area of roof membrane.

F. In addition to adhering, mechanically fasten roof membrane securely at terminations, penetrations, and perimeter of roofing.
G. Apply roof membrane with side laps shingled with slope of roof deck where possible.
H. Seams: Clean seam areas, overlap roof membrane, and hot-air weld side and end laps of roof membrane and sheet flashings, to ensure a watertight seam installation.
   1. Test lap edges with probe to verify seam weld continuity. Apply lap sealant to seal cut edges of roof membrane and sheet flashings.
   2. Verify field strength of seams a minimum of twice daily, and repair seam sample areas.
   3. Repair tears, voids, and lapped seams in roof membrane that do not comply with requirements.
I. Spread sealant bed over deck-drain flange at roof drains, and securely seal roof membrane in place with clamping ring.

3.07 INSTALLATION OF BASE FLASHING
A. Install sheet flashings and preformed flashing accessories, and adhere to substrates according to roofing system manufacturer's written instructions.
B. Apply bonding adhesive to substrate and underside of sheet flashing at required rate, and allow to partially dry. Do not apply to seam area of flashing.
C. Flash penetrations and field-formed inside and outside corners with cured or uncured sheet flashing.
D. Clean seam areas, overlap, and firmly roll sheet flashings into the adhesive. Hot-air weld side and end laps to ensure a watertight seam installation.
E. Terminate and seal top of sheet flashings and mechanically anchor to substrate through termination bars.

3.08 INSTALLATION OF WALKWAYS
A. Flexible Walkways:
   1. Install flexible walkways at the following locations:
      a. Retain one or more subparagraphs below. Revise to suit Project.
      b. Perimeter of each rooftop unit.
      c. Between each rooftop unit location, creating a continuous path connecting rooftop unit locations.
      d. Between each roof hatch and each rooftop unit location or path connecting rooftop unit locations.
      e. Top and bottom of each roof access ladder.
      f. Between each roof access ladder and each rooftop unit location or path connecting rooftop unit locations.
      g. Locations indicated on Drawings.
      h. As required by roof membrane manufacturer's warranty requirements.
   2. Provide 6-inch (76-mm) clearance between adjoining pads.
   3. Heat weld to substrate or adhere walkway products to substrate with compatible adhesive according to roofing system manufacturer's written instructions.

3.09 FIELD QUALITY CONTROL
A. Testing Agency: Engage a qualified testing agency to perform tests and to inspect substrate conditions, surface preparation, roof membrane application, sheet flashings, protection, and drainage components, and to furnish reports to Architect.
B. Perform the following tests:
   1. Flood Testing: Flood test each roof area for leaks, according to recommendations in ASTM D5957, after completing roofing and flashing but before overlying construction is

placed. Install temporary containment assemblies, plug or dam drains, and flood with potable water.

a. Perform tests before overlying construction is placed.
b. Flood to an average depth of 2-1/2 inches (65 mm) with a minimum depth of 1 inch (25 mm) and not exceeding a depth of 4 inches (100 mm). Maintain 2 inches (50 mm) of clearance from top of base flashing.
c. Flood each area for 24 hours.
d. After flood testing, repair leaks, repeat flood tests, and make further repairs until roofing and flashing installations are watertight.
    1) Cost of retesting is Contractor's responsibility.
e. Testing agency to prepare survey report indicating locations of initial leaks, if any, and final survey report.

2. Infrared Thermography: Testing agency surveys entire roof area using infrared color thermography according to ASTM C1153.
    a. Perform tests before overlying construction is placed.
    b. After infrared scan, locate specific areas of leaks by electrical capacitance/impedance testing or nuclear hydrogen detection tests.
    c. After testing, repair leaks, repeat tests, and make further repairs until roofing and flashing installations are watertight.
        1) Cost of retesting is Contractor's responsibility.
    d. Testing agency to prepare survey report of initial scan indicating locations of entrapped moisture, if any.
3. Nuclear Hydrogen Detection Testing: Testing agency surveys entire roof area for entrapped water within roof assembly according to ANSI/SPRI/RCI NT-1.
    a. Perform tests before overlying construction is placed.
    b. After testing, repair leaks, repeat tests, and make further repairs until roofing and flashing installations are watertight.
        1) Cost of retesting is Contractor's responsibility.
    c. Testing agency to prepare survey report indicating locations of entrapped moisture, if any.

C. Final Roof Inspection: Arrange for roofing system manufacturer's technical personnel to inspect roofing installation on completion, in presence of Architect, and to prepare inspection report.
D. Repair or remove and replace components of roofing system where inspections indicate that they do not comply with specified requirements.
E. Additional testing and inspecting, at Contractor's expense, will be performed to determine if replaced or additional work complies with specified requirements.

3.10 PROTECTING AND CLEANING

A. Protect roofing system from damage and wear during remainder of construction period. When remaining construction does not affect or endanger roofing system, inspect roofing system for deterioration and damage, describing its nature and extent in a written report, with copies to Architect and Owner.
B. Correct deficiencies in or remove roofing system that does not comply with requirements, repair substrates, and repair or reinstall roofing system to a condition free of damage and deterioration at time of Substantial Completion and according to warranty requirements.
C. Clean overspray and spillage from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

3.11 ROOFING INSTALLER'S WARRANTY

A. WHEREAS _____ of _____, herein called the "Roofing Installer," has performed roofing and associated work ("work") on the following project:

1. Owner: Kansas City Water Services Department.
2. Owner Address: 4800 East 63rd Street, Kansas City. MO 64130.
3. Building Name/Type: Todd Creek Wastewater Treatment Plant.
4. Building Address: _____..
5. Area of Work: All low slopped roofs.
6. Acceptance Date: _____.
7. Warranty Period: 30 years and 2 years workmanship.
8. Expiration Date: _____.

B. AND WHEREAS Roofing Installer has contracted (either directly with Owner or indirectly as a subcontractor) to warrant said work against leaks and faulty or defective materials and workmanship for designated Warranty Period,

C. NOW THEREFORE Roofing Installer hereby warrants, subject to terms and conditions herein set forth, that during Warranty Period Roofing Installer will, at Roofing Installer's own cost and expense, make or cause to be made such repairs to or replacements of said work as are necessary to correct faulty and defective work and as are necessary to maintain said work in a watertight condition.

D. This Warranty is made subject to the following terms and conditions:

1. Specifically excluded from this Warranty are damages to work and other parts of the building, and to building contents, caused by:

    a. lightning;
    b. peak gust wind speed exceeding 120 mph (54 m/sec);
    c. fire;
    d. failure of roofing system substrate, including cracking, settlement, excessive deflection, deterioration, and decomposition;
    e. faulty construction of parapet walls, copings, chimneys, skylights, vents, equipment supports, and other edge conditions and penetrations of the work;
    f. vapor condensation on bottom of roofing; and
    g. activity on roofing by others, including construction contractors, maintenance personnel, other persons, and animals, whether authorized or unauthorized by Owner.

2. When work has been damaged by any of foregoing causes, Warranty shall be null and void until such damage has been repaired by Roofing Installer and until cost and expense thereof have been paid by Owner or by another responsible party so designated.
3. Roofing Installer is responsible for damage to work covered by this Warranty but is not liable for consequential damages to building or building contents resulting from leaks or faults or defects of work.
4. During Warranty Period, if Owner allows alteration of work by anyone other than Roofing Installer, including cutting, patching, and maintenance in connection with penetrations, attachment of other work, and positioning of anything on roof, this

Warranty shall become null and void on date of said alterations, but only to the extent said alterations affect work covered by this Warranty. If Owner engages Roofing Installer to perform said alterations, Warranty shall not become null and void unless Roofing Installer, before starting said work, shall have notified Owner in writing, showing reasonable cause for claim, that said alterations would likely damage or deteriorate work, thereby reasonably justifying a limitation or termination of this Warranty.

5. During Warranty Period, if original use of roof is changed and it becomes used for, but was not originally specified for, a promenade, work deck, spray-cooled surface, flooded basin, or other use or service more severe than originally specified, this Warranty shall become null and void on date of said change, but only to the extent said change affects work covered by this Warranty.
6. Owner shall promptly notify Roofing Installer of observed, known, or suspected leaks, defects, or deterioration and shall afford reasonable opportunity for Roofing Installer to inspect work and to examine evidence of such leaks, defects, or deterioration.
7. This Warranty is recognized to be the only warranty of Roofing Installer on said work and shall not operate to restrict or cut off Owner from other remedies and resources lawfully available to Owner in cases of roofing failure. Specifically, this Warranty shall not operate to relieve Roofing Installer of responsibility for performance of original work according to requirements of the Contract Documents, regardless of whether Contract was a contract directly with Owner or a subcontract with Owner's General Contractor.

E. IN WITNESS THEREOF, this instrument has been duly executed this _____ day of _____, _____.

1. Authorized Signature: _____.
2. Name: _____.
3. Title: _____.

END OF SECTION 07 54 23

SECTION 07 62 00 - SHEET METAL FLASHING AND TRIM

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Wall sheet metal fabrications.
   2. Miscellaneous sheet metal fabrications.

B. Related Requirements:
   1. Section 06 10 00 "Rough Carpentry" for wood nailers, curbs, and blocking.
   2. Section 07 71 00 "Roof Specialties" for manufactured copings, roof-edge specialties, roof-edge drainage systems, reglets, and counterflashings.

1.02 COORDINATION

A. Coordinate sheet metal flashing and trim layout and seams with sizes and locations of penetrations to be flashed, and joints and seams in adjacent materials.

B. Coordinate sheet metal flashing and trim installation with adjoining roofing and wall materials, joints, and seams to provide leakproof, secure, and noncorrosive installation.

1.03 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.
   1. Review construction schedule. Verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
   2. Review special roof details, roof drainage, roof-penetration flashing, equipment curbs, and condition of other construction that affect sheet metal flashing and trim.
   3. Review requirements for insurance and certificates if applicable.
   4. Review sheet metal flashing observation and repair procedures after flashing installation.

1.04 ACTION SUBMITTALS

A. Product Data:
   1. Wall sheet metal fabrications.
   2. Miscellaneous sheet metal fabrications.

B. Product Data Submittals:
   1. Underlayment materials.
   2. Elastomeric sealant.
   3. Butyl sealant.
   4. Epoxy seam sealer.

C. Sustainable Design Submittals:

D. Shop Drawings: For sheet metal flashing and trim.
   1. Include plans, elevations, sections, and attachment details.
   2. Detail fabrication and installation layouts, expansion-joint locations, and keyed details. Distinguish between shop- and field-assembled Work.
   3. Include identification of material, thickness, weight, and finish for each item and location in Project.
   4. Include details for forming, including profiles, shapes, seams, and dimensions.
   5. Include details for joining, supporting, and securing, including layout and spacing of fasteners, cleats, clips, and other attachments. Include pattern of seams.
   6. Include details of termination points and assemblies.
   7. Include details of expansion joints and expansion-joint covers, including showing direction of expansion and contraction from fixed points.

8. Include details of roof-penetration flashing.
9. Include details of edge conditions, including eaves, ridges, valleys, rakes, crickets, flashings, and counterflashings.
10. Include details of special conditions.
11. Include details of connections to adjoining work.

E. Samples for Initial Selection: For each type of sheet metal and accessory indicated with factory-applied finishes.

1.05 INFORMATIONAL SUBMITTALS

A. Qualification Data: For fabricator.
B. Sample Warranty: For special warranty.

1.06 CLOSEOUT SUBMITTALS

A. Maintenance Data: For sheet metal flashing and trim, and its accessories, to include in maintenance manuals.
B. Special warranty.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Do not store sheet metal flashing and trim materials in contact with other materials that might cause staining, denting, or other surface damage.
   1. Store sheet metal flashing and trim materials away from uncured concrete and masonry.
   2. Protect stored sheet metal flashing and trim from contact with water.
B. Protect strippable protective covering on sheet metal flashing and trim from exposure to sunlight and high humidity, except to extent necessary for period of sheet metal flashing and trim installation.

1.08 WARRANTY

A. Special Warranty on Finishes: Manufacturer agrees to repair finish or replace sheet metal flashing and trim that shows evidence of deterioration of factory-applied finishes within specified warranty period.
   1. Exposed Panel Finish: Deterioration includes, but is not limited to, the following:
      a. Color fading more than 5 Delta E units when tested in accordance with ASTM D2244.
      b. Chalking in excess of a No. 8 rating when tested in accordance with ASTM D4214.
      c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.
   2. Finish Warranty Period: 20 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

A. Sheet metal flashing and trim assemblies, including cleats, anchors, and fasteners, are to withstand wind loads, structural movement, thermally induced movement, and exposure to weather without failure due to defective manufacture, fabrication, installation, or other defects in construction. Completed sheet metal flashing and trim are not to rattle, leak, or loosen, and are to remain watertight.
B. Sheet Metal Standard for Flashing and Trim: Comply with SMACNA's "Architectural Sheet Metal Manual" requirements for dimensions and profiles shown unless more stringent requirements are indicated.
C. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes to prevent buckling, opening of joints, overstressing of components, failure of joint

sealants, failure of connections, and other detrimental effects. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.

1. Temperature Change: 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.

2.02 SHEET METALS

A. Protect mechanical and other finishes on exposed surfaces from damage by applying strippable, temporary protective film before shipping.

B. Aluminum Sheet: ASTM B209 (ASTM B209M), alloy as standard with manufacturer for finish required, with temper as required to suit forming operations and performance required; with smooth, flat surface.

1. Exposed Coil-Coated Finish:
   a. Two-Coat Fluoropolymer: AAMA 2605. Fluoropolymer finish containing not less than 70 percent polyvinylidene fluoride (PVDF) resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
2. Color: As selected by Architect from manufacturer's full range.
3. Concealed Finish: Pretreat with manufacturer's standard white or light-colored acrylic or polyester backer finish, consisting of prime coat and wash coat with minimum total dry film thickness of 0.5 mil (0.013 mm).

C. Stainless Steel Sheet: ASTM A240/A240M, Type 304, dead soft, fully annealed; with smooth, flat surface.

1. Finish: ASTM A480/A480M, No. 4 (polished directional satin).
   a. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
   b. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.
      1) Run grain of directional finishes with long dimension of each piece.
      2) When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.

2.03 MISCELLANEOUS MATERIALS

A. Provide materials and types of fasteners, protective coatings, sealants, and other miscellaneous items as required for complete sheet metal flashing and trim installation and as recommended by manufacturer of primary sheet metal unless otherwise indicated.

B. Fasteners: Wood screws, annular threaded nails, self-tapping screws, self-locking rivets and bolts, and other suitable fasteners designed to withstand design loads and recommended by manufacturer of primary sheet metal.

1. General: Blind fasteners or self-drilling screws, gasketed, with hex-washer head.
   a. Blind Fasteners: High-strength aluminum or stainless steel rivets suitable for metal being fastened.
2. Fasteners for Aluminum Sheet: Aluminum or Series 300 stainless steel.

C. Sealant Tape: Pressure-sensitive, 100 percent solids, polyisobutylene compound sealant tape with release-paper backing. Provide permanently elastic, nonsag, nontoxic, nonstaining tape 1/2 inch (13 mm) wide and 1/8 inch (3 mm) thick.

D. Elastomeric Sealant: ASTM C920, elastomeric silicone polymer sealant; of type, grade, class, and use classifications required to seal joints in sheet metal flashing and trim and remain watertight.

E. Butyl Sealant: ASTM C1311, single-component, solvent-release butyl rubber sealant; polyisobutylene plasticized; heavy bodied for hooked-type expansion joints with limited movement.

F. Reglets: Units of type, material, and profile required, formed to provide secure interlocking of separate reglet and counterflashing pieces, and compatible with flashing indicated with factory-mitered and -welded corners and junctions and with interlocking counterflashing on exterior face, of same metal as reglet.
   1. Manufacturers: Subject to compliance with requirements, provide products by the following:
      a. Fry Reglet Corporation.
   2. Source Limitations: Obtain reglets from single source from single manufacturer.
   3. Material: Stainless steel, 0.0188 inch (0.477 mm) thick.
   4. Concrete Type: Provide temporary closure tape to keep reglet free of concrete materials, special fasteners for attaching reglet to concrete forms, and guides to ensure alignment of reglet section ends.
   5. Accessories:
      a. Flexible-Flashing Retainer: Provide resilient plastic or rubber accessory to secure flexible flashing in reglet where clearance does not permit use of standard metal counterflashing or where Drawings show reglet without metal counterflashing.
      b. Counterflashing Wind-Restraint Clips: Provide clips to be installed before counterflashing to prevent wind uplift of counterflashing's lower edge.
   6. Finish: Mill.

2.04 FABRICATION, GENERAL

A. Custom fabricate sheet metal flashing and trim to comply with details indicated and recommendations in cited sheet metal standard that apply to design, dimensions, geometry, metal thickness, and other characteristics of item required.
   1. Fabricate sheet metal flashing and trim in shop to greatest extent possible.
   2. Fabricate sheet metal flashing and trim in thickness or weight needed to comply with performance requirements, but not less than that specified for each application and metal.
   3. Verify shapes and dimensions of surfaces to be covered and obtain field measurements for accurate fit before shop fabrication.
   4. Form sheet metal flashing and trim to fit substrates without excessive oil-canning, buckling, and tool marks; true to line, levels, and slopes; and with exposed edges folded back to form hems.
   5. Conceal fasteners and expansion provisions where possible. Do not use exposed fasteners on faces exposed to view.

B. Fabrication Tolerances:
   1. Fabricate sheet metal flashing and trim that is capable of installation to a tolerance of 1/4 inch in 20 feet (6 mm in 6 m) on slope and location lines indicated on Drawings and within 1/8-inch (3-mm) offset of adjoining faces and of alignment of matching profiles.
   2. Fabricate sheet metal flashing and trim that is capable of installation to tolerances specified.

C. Expansion Provisions: Form metal for thermal expansion of exposed flashing and trim.
   1. Form expansion joints of intermeshing hooked flanges, not less than 1 inch (25 mm) deep, filled with butyl sealant concealed within joints.

D. Sealant Joints: Where movable, nonexpansion-type joints are required, form metal in accordance with cited sheet metal standard to provide for proper installation of elastomeric sealant.

E. Seams:
   1. Seams for Aluminum: Fabricate nonmoving seams with flat-lock seams. Form seams and seal with epoxy seam sealer.

F. Do not use graphite pencils to mark metal surfaces.

2.05 WALL SHEET METAL FABRICATIONS

A. Apron, Step, Cricket, and Backer Flashing: Fabricate from the following materials:
   1. Aluminum: 0.032 inch (0.81 mm) thick.

2.06 MISCELLANEOUS SHEET METAL FABRICATIONS

A. Equipment Support Flashing: Fabricate from the following materials:
   1. Stainless Steel: 0.0188 inch (0.477 mm) thick.
B. Overhead-Piping Safety Pans: Fabricate from the following materials:
   1. Stainless Steel: 0.0250 inch (0.635 mm) thick.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine substrates, areas, and conditions, with installer present, for compliance with requirements for installation tolerances, substrate, and other conditions affecting performance of the Work.
   1. Verify compliance with requirements for installation tolerances of substrates.
   2. Verify that substrate is sound, dry, smooth, clean, sloped for drainage, and securely anchored.
   3. Verify that air- or water-resistant barriers have been installed over sheathing or backing substrate to prevent air infiltration or water penetration.
B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION, GENERAL

A. Install sheet metal flashing and trim to comply with details indicated and recommendations of cited sheet metal standard that apply to installation characteristics required unless otherwise indicated on Drawings.
   1. Install fasteners, protective coatings, separators, sealants, and other miscellaneous items as required to complete sheet metal flashing and trim system.
   2. Install sheet metal flashing and trim true to line, levels, and slopes. Provide uniform, neat seams with minimum exposure of sealant.
   3. Anchor sheet metal flashing and trim and other components of the Work securely in place, with provisions for thermal and structural movement.
   4. Install sheet metal flashing and trim to fit substrates and to result in watertight performance.
   5. Install continuous cleats with fasteners spaced not more than 12 inches (300 mm) o.c.
   6. Space individual cleats not more than 12 inches (300 mm) apart. Attach each cleat with at least two fasteners. Bend tabs over fasteners.
   7. Install exposed sheet metal flashing and trim with limited oil-canning, and free of buckling and tool marks.
   8. Do not field cut sheet metal flashing and trim by torch.
   9. Do not use graphite pencils to mark metal surfaces.
B. Metal Protection: Where dissimilar metals contact each other, or where metal contacts pressure-treated wood or other corrosive substrates, protect against galvanic action or corrosion by painting contact surfaces with bituminous coating or by other permanent separation as recommended by sheet metal manufacturer or cited sheet metal standard.
   1. Coat concealed side of stainless steel sheet metal flashing and trim with bituminous coating where flashing and trim contact wood, ferrous metal, or cementitious construction.
   2. Underlayment: Where installing sheet metal flashing and trim directly on cementitious or wood substrates, install underlayment and cover with slip sheet.

C. Expansion Provisions: Provide for thermal expansion of exposed flashing and trim.
   1. Space movement joints at maximum of 10 feet (3 m) with no joints within 24 inches (600 mm) of corner or intersection.
   2. Form expansion joints of intermeshing hooked flanges, not less than 1 inch (25 mm) deep, filled with sealant concealed within joints.
   3. Use lapped expansion joints only where indicated on Drawings.

D. Fasteners: Use fastener sizes that penetrate substrate not less than recommended by fastener manufacturer to achieve maximum pull-out resistance.

E. Conceal fasteners and expansion provisions where possible in exposed work and locate to minimize possibility of leakage. Cover and seal fasteners and anchors as required for a tight installation.

F. Seal joints as required for watertight construction.
   1. Use sealant-filled joints unless otherwise indicated.
      a. Embed hooked flanges of joint members not less than 1 inch (25 mm) into sealant.
      b. Form joints to completely conceal sealant.
      c. When ambient temperature at time of installation is between 40 and 70 deg F (4 and 21 deg C), set joint members for 50 percent movement each way.
      d. Adjust setting proportionately for installation at higher ambient temperatures.
         1) Do not install sealant-type joints at temperatures below 40 deg F (4 deg C).
   2. Prepare joints and apply sealants to comply with requirements in Section 07 92 00 "Joint Sealants."

3.03 INSTALLATION OF WALL FLASHINGS

A. Install sheet metal wall flashing to intercept and exclude penetrating moisture in accordance with cited sheet metal standard unless otherwise indicated. Coordinate installation of wall flashing with installation of wall-opening components such as windows, doors, and louvers.

B. Install sheet metal flashing and trim to comply with performance requirements and cited sheet metal standard.
   1. Provide concealed fasteners where possible, and set units true to line, levels, and slopes.
   2. Install work with laps, joints, and seams that are permanently watertight and weather resistant.

C. Reglets: Installation of reglets is specified in Division 3 "Concrete." Division 4 "Unit Masonry."

3.04 INSTALLATION OF MISCELLANEOUS FLASHING

A. Equipment Support Flashing:
   1. Coordinate installation of equipment support flashing with installation of roofing and equipment.
   2. Weld or seal flashing with elastomeric sealant to equipment support member.

B. Overhead-Piping Safety Pans:
   1. Suspend pans from structure above, independent of other overhead items such as equipment, piping, and conduit, unless otherwise indicated on Drawings.
   2. Pipe and install drain line to plumbing waste or drainage system.

3.05 INSTALLATION TOLERANCES

A. Installation Tolerances: Shim and align sheet metal flashing and trim within installed tolerance of 1/4 inch in 20 feet (6 mm in 6 m) on slope and location lines indicated on Drawings and within 1/8-inch (3-mm) offset of adjoining faces and of alignment of matching profiles.

3.06 CLEANING

A. Clean exposed metal surfaces of substances that interfere with uniform oxidation and weathering.

B. Clean off excess sealants.

3.07 PROTECTION

A. Remove temporary protective coverings and strippable films as sheet metal flashing and trim are installed unless otherwise indicated in manufacturer's written installation instructions.
B. On completion of sheet metal flashing and trim installation, remove unused materials and clean finished surfaces as recommended in writing by sheet metal flashing and trim manufacturer.
C. Maintain sheet metal flashing and trim in clean condition during construction.
D. Replace sheet metal flashing and trim that have been damaged or that have deteriorated beyond successful repair by finish touchup or similar minor repair procedures, as determined by Architect.

END OF SECTION 07 62 00

SECTION 07 71 00 - ROOF SPECIALTIES

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Copings.
   2. Roof-edge specialties.
   3. Roof-edge drainage systems.
   4. Reglets and counterflashings.
   5. Downspout splash pads.

B. Related Requirements:
   1. Division 5 "Steel" for downspout guards and downspout boots.
   2. Section 06 10 00 "Rough Carpentry" for wood nailers, curbs, and blocking.
   3. Section 07 41 13.16 "Standing-Seam Metal Roof Panels" for roof-edge drainage-system components provided by metal-roof-panel manufacturer.
   4. Section 07 62 00 "Sheet Metal Flashing and Trim" for custom- and site-fabricated sheet metal flashing and trim.
   5. Section 07 72 53 "Snow Guards" for manufactured snow guard devices.
   6. Section 07 92 00 "Joint Sealants" for field-applied sealants between roof specialties and adjacent materials.
   7. Division 22 "Heating, Ventilation and Air Conditioning" for set-on-type curbs, equipment supports, and vents.

C. Preinstallation Conference: Conduct conference at Project site.
   1. Meet with Owner, Architect, Owner's insurer if applicable, roofing-system testing and inspecting agency representative, roofing Installer, roofing-system manufacturer's representative, Installer, structural-support Installer, and installers whose work interfaces with or affects roof specialties, including installers of roofing materials and accessories.
   2. Examine substrate conditions for compliance with requirements, including flatness and attachment to structural members.
   3. Review special roof details, roof drainage, and condition of other construction that will affect roof specialties.

1.02 ACTION SUBMITTALS

A. Product Data:
   1. Copings.
   2. Roof-edge specialties.
   3. Roof-edge drainage systems.
   4. Reglets and counterflashings.

B. Product Data Submittals: For each product.
   1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.

C. Sustainable Design Submittals:

D. Shop Drawings: For roof specialties.
   1. Include plans, elevations, expansion-joint locations, keyed details, and attachments to other work. Distinguish between plant- and field-assembled work.
   2. Include details for expansion and contraction; locations of expansion joints, including direction of expansion and contraction.
   3. Indicate profile and pattern of seams and layout of fasteners, cleats, clips, and other attachments.

4. Detail termination points and assemblies, including fixed points.
5. Include details of special conditions.

E. Samples for Initial Selection: For each type of roof specialty indicated with factory-applied color finishes.

1.03 INFORMATIONAL SUBMITTALS

A. Qualification Data: For manufacturer.
B. Product Certificates: For each type of roof specialty.
C. Product Test Reports: For copings, for tests performed by a qualified testing agency.
D. Sample Warranty: For manufacturer's special warranty.

1.04 CLOSEOUT SUBMITTALS

A. Maintenance Data: For roofing specialties to include in maintenance manuals.

1.05 QUALITY ASSURANCE

A. Manufacturer Qualifications: A qualified manufacturer offering products meeting requirements that are SPRI ES-1 tested to specified design pressure.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Do not store roof specialties in contact with other materials that might cause staining, denting, or other surface damage. Store roof specialties away from uncured concrete and masonry.
B. Protect strippable protective covering on roof specialties from exposure to sunlight and high humidity, except to extent necessary for the period of roof-specialty installation.

1.07 FIELD CONDITIONS

A. Field Measurements: Verify profiles and tolerances of roof-specialty substrates by field measurements before fabrication, and indicate measurements on Shop Drawings.
B. Coordination: Coordinate roof specialties with flashing, trim, and construction of parapets, roof deck, roof and wall panels, and other adjoining work to provide a leakproof, secure, and noncorrosive installation.

1.08 WARRANTY

A. Roofing-System Warranty: Roof specialties are included in warranty provisions in Section 074113.16 "Standing-Seam Metal Roof Panels" and 075423 “Thermoplastic-Polyolefin (TPO) Roofing.”
B. Special Warranty on Painted Finishes: Manufacturer agrees to repair finish or replace roof specialties that show evidence of deterioration of factory-applied finishes within specified warranty period.
    1. Fluoropolymer Finish: Deterioration includes, but is not limited to, the following:
        a. Color fading more than 5 Delta E units when tested in accordance with ASTM D2244.
        b. Chalking in excess of a No. 8 rating when tested in accordance with ASTM D4214.
        c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.
    2. Finish Warranty Period: 20 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.01 SOURCE LIMITATIONS

A. Obtain roof specialties approved by manufacturer providing roofing-system warranty specified in Section 074113.16 "Standing-Seam Metal Roof Panels" and 075423 “Thermoplastic-Polyolefin (TPO) Roofing.”.

2.02 PERFORMANCE REQUIREMENTS

A. General Performance: Roof specialties to withstand exposure to weather and resist thermally induced movement without failure, rattling, leaking, or fastener disengagement due to defective manufacture, fabrication, installation, or other defects in construction.

B. SPRI Wind Design Standard: Manufacture and install copings and roof-edge specialties tested in accordance with SPRI ES-1 and capable of resisting the following design pressures:
   1. Design Pressure: As indicated on Drawings.

C. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes to prevent buckling, opening of joints, hole elongation, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Provide clips that resist rotation and avoid shear stress as a result of thermal movements. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
   1. Temperature Change (Range): 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.

2.03 COPINGS

A. Metal Copings: Manufactured coping system consisting of metal coping cap in section lengths not exceeding 12 feet (3.6 m), concealed anchorage; with corner units, end cap units, and concealed splice plates with finish matching coping caps.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. ATAS International, Inc.
      b. Berridge Manufacturing Company.
      c. Drexel Metals.
      d. PAC-CLAD; Petersen Aluminum Corporation; a Carlisle company.
   2. Formed Aluminum Sheet Coping Caps: Aluminum sheet, thickness as required to meet performance requirements.
      a. Surface: Smooth, flat finish.
      b. Finish: Two-coat fluoropolymer.
      c. Color: As selected by Architect from manufacturer's full range.
   3. Corners: Factory mitered and continuously welded.
   4. Coping-Cap Attachment Method: Snap-on or face leg hooked to continuous cleat with back leg fastener exposed, fabricated from coping-cap material.
      a. Snap-on Coping Anchor Plates: Concealed, galvanized-steel sheet, 12 inches (300 mm) wide, with integral cleats.
      b. Face-Leg Cleats: Concealed, continuous galvanized-steel sheet.

2.04 ROOF-EDGE SPECIALTIES

A. Roof-Edge Fascia: Manufactured, two-piece, roof-edge fascia consisting of snap-on metal fascia cover in section lengths not exceeding 12 feet (3.6 m) and a continuous metal receiver with integral drip-edge cleat to engage fascia cover and secure single-ply roof membrane. Provide matching corner units.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:
   a. ATAS International, Inc.
   b. Drexel Metals.
2. Formed Aluminum Sheet Fascia Covers: Aluminum sheet, 0.050 inch (1.27 mm) thick.
   a. Surface: Smooth, flat finish.
   b. Finish: Two-coat fluoropolymer.
   c. Color: As selected by Architect from manufacturer's full range.
3. Corners: Factory mitered and continuously welded.
4. Splice Plates: Concealed, of same material, finish, and shape as fascia cover.
5. Receiver: Aluminum sheet, 0.050 inch (1.27 mm) thick or Extruded aluminum, 0.080 inch (2.03 mm) thick.

2.05 ROOF-EDGE DRAINAGE SYSTEMS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:
   1. ATAS International, Inc.
   2. Drexel Metals.

B. Gutters: Manufactured in uniform section lengths not exceeding 12 feet (3.6 m), with matching corner units, ends, outlet tubes, and other accessories. Elevate back edge at least 1 inch (25 mm) above front edge. Furnish flat-stock gutter straps, gutter brackets, expansion joints, and expansion-joint covers fabricated from same metal as gutters.
   1. Aluminum Sheet: 0.050 inch (1.27 mm) thick.
   2. Gutter Profile: Style A in accordance with SMACNA's "Architectural Sheet Metal Manual."
   3. Corners: Factory mitered and continuously welded.
   4. Gutter Supports: Straps with finish matching the gutters.
   5. Gutter Accessories: Wire ball downspout strainer.

C. Downspouts: Plain rectangular complete with mitered elbows, manufactured from the following exposed metal. Furnish with metal hangers, from same material as downspouts, and anchors.
   1. Formed Aluminum: 0.050 inch (1.27 mm) thick.

D. Parapet Scuppers: Manufactured with closure flange trim to exterior, 4-inch- (100-mm-) wide wall flanges to interior, and base extending 4 inches (100 mm) beyond cant or tapered strip into field of roof.
   1. Formed Aluminum: 0.050 inch (1.27 mm) thick.

E. Conductor Heads: Manufactured conductor heads, each with flanged back and stiffened top edge, and of dimensions and shape indicated, complete with outlet tube that nests into upper end of downspout, exterior flange trim,.
   1. Formed Aluminum: 0.050 inch (1.27 mm) thick.

F. Aluminum Finish: Two-coat fluoropolymer.
   1. Color: As selected by Architect from manufacturer's full range.

2.06 REGLETS AND COUNTERFLASHINGS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:
   1. ATAS International, Inc.
   2. Berridge Manufacturing Company.
   3. Drexel Metals.
   4. Fry Reglet Corporation.

B. Reglets: Manufactured units formed to provide secure interlocking of separate reglet and counterflashing pieces, from the following exposed metal:
   1. Formed Aluminum: 0.050 inch (1.27 mm) thick.
   2. Corners: Factory mitered and continuously welded.
   3. Surface-Mounted Type: Provide reglets with slotted holes for fastening to substrate, with neoprene or other suitable weatherproofing washers, and with channel for sealant at top edge.
   4. Concrete Type, Embedded: Provide temporary closure tape to keep reglet free of concrete materials, special fasteners for attaching reglet to concrete forms, and guides to ensure alignment of reglet section ends.

C. Counterflashings: Manufactured units of heights to overlap top edges of base flashings by 4 inches (100 mm) and in lengths not exceeding 12 feet (3.6 m) designed to snap into reglets and compress against base flashings with joints lapped, from the following exposed metal:
   1. Formed Aluminum: 0.032 inch (0.81 mm) thick.

D. Accessories:
   1. Flexible-Flashing Retainer: Provide resilient plastic or rubber accessory to secure flexible flashing in reglet where clearance does not permit use of standard metal counterflashing or where reglet is provided separate from metal counterflashing.
   2. Counterflashing Wind-Restraint Clips: Provide clips to be installed before counterflashing to prevent wind uplift of counterflashing lower edge.

E. Aluminum Finish: Two-coat fluoropolymer.
   1. Color: As selected by Architect from manufacturer's full range.

2.07 MATERIALS

A. Aluminum Sheet: ASTM B209 (ASTM B209M), alloy as standard with manufacturer for finish required, with temper to suit forming operations and performance required.

B. Stainless Steel Sheet: ASTM A240/A240M or ASTM A666, Type 304.

2.08 UNDERLAYMENT MATERIALS

A. Self-Adhering, High-Temperature Sheet: Minimum 30 to 40 mils (0.76 to 1.0 mm) thick, consisting of slip-resisting polyethylene-film top surface laminated to layer of butyl or SBS-modified asphalt adhesive, with release-paper backing; cold applied. Provide primer when recommended by underlayment manufacturer.
   1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:
      a. ATAS International, Inc.
      b. Carlisle WIP Products; a brand of Carlisle Construction Materials.
      c. Henry Company.
      d. Owens Corning.
   2. Thermal Stability: ASTM D1970/D1970M; stable after testing at 240 deg F (116 deg C).
   3. Low-Temperature Flexibility: ASTM D1970/D1970M; passes after testing at minus 20 deg F (29 deg C).

B. Felt: ASTM D226/D226M, Type II (No. 30), asphalt-saturated organic felt, nonperforated.

2.09 MISCELLANEOUS MATERIALS

A. Splash Pads: Precast concrete type; minimum 3,000 psi (21 MPa) at 28 days, with minimum 5 percent air entrainment. Provide at all downspouts,

B. Fasteners: Manufacturer's recommended fasteners, suitable for application and designed to meet performance requirements. Furnish the following unless otherwise indicated:

1. Exposed Penetrating Fasteners: Gasketed screws with hex washer heads matching color of sheet metal.
2. Fasteners for Aluminum: Aluminum or Series 300 stainless steel.
3. Fasteners for Stainless Steel Sheet: Series 300 stainless steel.
4. Fasteners for Zinc-Coated (Galvanized) Steel Sheet: Series 300 stainless steel or hot-dip zinc-coated steel in accordance with ASTM A153/A153M or ASTM F2329.

C. Elastomeric Sealant: ASTM C920, elastomeric silicone polymer sealant of type, grade, class, and use classifications required by roofing-specialty manufacturer for each application.

D. Butyl Sealant: ASTM C1311, single-component, solvent-release butyl rubber sealant; polyisobutylene plasticized; heavy bodied for hooked-type joints with limited movement.

E. Bituminous Coating: Cold-applied asphalt emulsion complying with ASTM D1187/D1187M.

F. Asphalt Roofing Cement: ASTM D4586, asbestos free, of consistency required for application.

2.10 FINISHES

A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

B. Protect mechanical and painted finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

C. Appearance of Finished Work: Noticeable variations in same piece are unacceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

D. Coil-Coated Aluminum Sheet Finishes:

1. High-Performance Organic Finish: Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
    a. Two-Coat Fluoropolymer: AAMA 2605. Fluoropolymer finish containing not less than 70 percent polyvinylidene fluoride (PVDF) resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
    b. Concealed Surface Finish: Apply pretreatment and manufacturer's standard acrylic or polyester backer finish consisting of prime coat and wash coat with a minimum total dry film thickness of 0.5 mil (0.013 mm).

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, to verify actual locations, dimensions, and other conditions affecting performance of the Work.

B. Examine walls, roof edges, and parapets for suitable conditions for roof specialties.

C. Verify that substrate is sound, dry, smooth, clean, sloped for drainage where applicable, and securely anchored.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION OF UNDERLAYMENT

A. Self-Adhering Sheet Underlayment: Apply primer if required by manufacturer. Comply with temperature restrictions of underlayment manufacturer for installation. Apply wrinkle free, in shingle fashion to shed water, and with end laps of not less than 6 inches (152 mm) staggered 24 inches (610 mm) between courses. Overlap side edges not less than 3-1/2 inches (90 mm). Roll laps with roller. Cover underlayment within 14 days.

1. Apply continuously under copings roof-edge specialties and reglets and counterflashings.
2. Coordinate application of self-adhering sheet underlayment under roof specialties with requirements for continuity with adjacent air barrier materials.

3.03 INSTALLATION, GENERAL

A. Install roof specialties in accordance with manufacturer's written instructions. Anchor roof specialties securely in place, with provisions for thermal and structural movement. Use fasteners, solder, protective coatings, separators, underlayments, sealants, and other miscellaneous items as required to complete roof-specialty systems.
   1. Install roof specialties level, plumb, true to line and elevation; with limited oil-canning and without warping, jogs in alignment, buckling, or tool marks.
   2. Provide uniform, neat seams with minimum exposure of solder and sealant.
   3. Install roof specialties to fit substrates and to result in weathertight performance. Verify shapes and dimensions of surfaces to be covered before manufacture.
   4. Torch cutting of roof specialties is not permitted.
   5. Do not use graphite pencils to mark metal surfaces.

B. Metal Protection: Protect metals against galvanic action by separating dissimilar metals from contact with each other or with corrosive substrates by painting contact surfaces with bituminous coating or by other permanent separation as recommended by manufacturer.
   1. Coat concealed side of uncoated aluminum roof specialties with bituminous coating where in contact with wood, ferrous metal, or cementitious construction.
   2. Bed flanges in thick coat of asphalt roofing cement where required by manufacturers of roof specialties for waterproof performance.

C. Expansion Provisions: Allow for thermal expansion of exposed roof specialties.
   1. Space movement joints at a maximum of 12 feet (3.6 m) with no joints within 18 inches (450 mm) of corners or intersections unless otherwise indicated on Drawings.
   2. When ambient temperature at time of installation is between 40 and 70 deg F (4 and 21 deg C), set joint members for 50 percent movement each way. Adjust setting proportionately for installation at higher ambient temperatures.

D. Fastener Sizes: Use fasteners of sizes that penetrate substrate not less than recommended by fastener manufacturer to achieve maximum pull-out resistance.

E. Seal concealed joints with butyl sealant as required by roofing-specialty manufacturer.

F. Seal joints as required for weathertight construction. Place sealant to be completely concealed in joint. Do not install sealants at temperatures below 40 deg F (4 deg C).

3.04 INSTALLATION OF COPINGS

A. Install cleats, anchor plates, and other anchoring and attachment accessories and devices with concealed fasteners.

B. Anchor copings with manufacturer's required devices, fasteners, and fastener spacing to meet performance requirements.
   1. Interlock face and back leg drip edges of snap-on coping cap into cleated anchor plates anchored to substrate at manufacturer's required spacing that meets performance requirements.

3.05 INSTALLATION OF ROOF-EDGE SPECIALTIES

A. Install cleats, cants, and other anchoring and attachment accessories and devices with concealed fasteners.

B. Anchor roof edgings with manufacturer's required devices, fasteners, and fastener spacing to meet performance requirements.

3.06 INSTALLATION OF ROOF-EDGE DRAINAGE SYSTEMS

A. Install components to produce a complete roof-edge drainage system in accordance with manufacturer's written instructions. Coordinate installation of roof perimeter flashing with installation of roof-edge drainage system.

B. Gutters: Join and seal gutter lengths. Allow for thermal expansion. Attach gutters to firmly anchored gutter supports spaced not more than 24 inches (610 mm) apart. Attach ends with rivets and seal with sealant to make watertight. Slope to downspouts.
   1. Install gutter with expansion joints at locations indicated but not exceeding 50 feet (15.2 m) apart. Install expansion-joint caps.

C. Downspouts: Join sections with manufacturer's standard telescoping joints. Provide hangers with fasteners designed to hold downspouts securely to walls and 1 inch (25 mm) away from walls; locate fasteners at top and bottom and at approximately 60 inches (1500 mm) o.c.
   1. Provide elbows at base of downspouts at grade to direct water away from building.

D. Splash Pans: Install where downspouts discharge on low-slope roofs. Set in elastomeric sealant.

E. Parapet Scuppers: Install scuppers through parapet where indicated. Continuously support scupper, set to correct elevation, and seal flanges to interior wall face, over cants or tapered edge strips, and under roofing membrane.
   1. Loosely lock front edge of scupper with conductor head.

F. Conductor Heads: Anchor securely to wall with elevation of conductor top edge 1 inch (25 mm) below scupper discharge.

3.07 INSTALLATION OF REGLETS AND COUNTERFLASHINGS

A. Coordinate installation of reglets and counterflashings with installation of base flashings.

B. Embedded Reglets: See Division 3 "Concrete" for installation of reglets.

C. Surface-Mounted Reglets: Install reglets to receive flashings where flashing without embedded reglets is indicated on Drawings. Install at height so that inserted counterflashings overlap 4 inches (100 mm) over top edge of base flashings.

D. Counterflashings: Insert counterflashings into reglets or other indicated receivers; ensure that counterflashings overlap 4 inches (100 mm) over top edge of base flashings. Lap counterflashing joints a minimum of 4 inches (100 mm) and bed with butyl sealant. Fit counterflashings tightly to base flashings.

3.08 CLEANING AND PROTECTION

A. Clean and neutralize flux materials. Clean off excess solder and sealants.

B. Remove temporary protective coverings and strippable films as roof specialties are installed. On completion of installation, clean finished surfaces, including removing unused fasteners, metal filings, pop rivet stems, and pieces of flashing. Maintain roof specialties in a clean condition during construction.

C. Replace roof specialties that have been damaged or that cannot be successfully repaired by finish touchup or similar minor repair procedures.

END OF SECTION 07 71 00

SECTION 07 72 53 - SNOW GUARDS

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Rail-type, seam-mounted snow guards.

1.02 ACTION SUBMITTALS

A. Product Data: Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.
   1. Rail-type, seam-mounted snow guards.
B. Shop Drawings: Include roof plans showing layouts and attachment details of snow guards.
   1. Include details of rail-type snow guards.
C. Samples:
   1. Rail-Type Snow Guards: Bracket, 12-inch- (300-mm-) long rail, and installation hardware.
D. Delegated Design Submittals: For snow guards, include analysis reports signed and sealed by the qualified professional engineer responsible for their preparation.
   1. Include calculation of number and location of snow guards.

1.03 INFORMATIONAL SUBMITTALS

A. Qualification Data: For professional engineer's experience with providing delegated design engineering services of the kind indicated, including documentation that the engineer is licensed in the jurisdiction in which the Project is located.
B. Product Test Reports: For each type of snow guard, for tests performed by a qualified testing agency, indicating load at failure of attachment to roof system identical to roof system used on this Project.

1.04 FIELD CONDITIONS

A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit adhesive-mounted snow guards to be installed, and adhesive cured, according to adhesive manufacturer's written instructions.

PART 2 - PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer, as defined in Division 1 "Quality Control," to design snow guards, including attachment to roofing material and roof deck, as applicable for attachment method, based on the following:
   1. Roof snow load.
   2. Snow drifting
   3. Roof slope.
   4. Roof type.
   5. Roof dimensions.
   6. Roofing substrate type and thickness.
   7. Snow guard type.
   8. Snow guard fastening method and strength.
   9. Snow guard spacing.
   10. Coefficient of Friction Between Snow and Roof Surface: 0.

11. Factor of Safety: 2.

B. Performance Requirements: Provide snow guards that withstand exposure to weather and resist thermally induced movement without failure, rattling, or fastener disengagement due to defective manufacture, fabrication, installation, or other defects in construction.
   1. Temperature Change: 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.

C. Structural Performance: Snow guards to withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated.
   1. Snow Loads: As indicated on Drawings.

2.02 RAIL-TYPE SNOW GUARDS

A. Rail-Type, Seam-Mounted Snow Guards:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Alpine SnowGuards.
      b. PMC Industries, Inc.
      c. S-5! Metal Roof Innovations, Ltd.
   2. Description: Snow guard rails fabricated from metal pipes, bars, or extrusions, anchored to brackets and equipped with one rail.
   3. Brackets and Baseplate: ASTM B209 (ASTM B209M) aluminum; mill finished or ASTM A240/A240M, Type 304 stainless steel; mill.
   4. Bars: ASTM B221 (ASTM B221M) aluminum; mill finish or ASTM A240/A240M, Type 304 stainless steel; mill finish.
      a. Profile: Round.
   5. Seam Clamps: ASTM B221 (ASTM B221M) aluminum extrusion or ASTM B85/B85M aluminum casting with stainless steel set screws incorporating round nonpenetrating point; designed for use with applicable roofing system to which clamp is attached.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine substrates and conditions, with Installer present, for compliance with requirements for installation tolerances, snow guard attachment, and other conditions affecting performance of the Work.
   1. Verify compatibility with and suitability of substrates, including compatibility with existing finishes or primers.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Prime substrates according to snow guard manufacturer's written instructions.

3.03 INSTALLATION

A. Install snow guards according to manufacturer's written instructions.
   1. Space rows as recommended by manufacturer.

B. Attachment for Standing-Seam Metal Roofing:
   1. Do not use fasteners that will penetrate metal roofing or fastening methods that void metal roofing finish warranty.
   2. Rail-Type, Seam-Mounted Snow Guards:
      a. Install brackets to vertical ribs in straight rows.
      b. Secure with stainless steel set screws, incorporating round nonpenetrating point, on same side of standing seam.

c. Torque set screw in accordance with manufacturer's written instructions.
d. Install cross members to brackets.

END OF SECTION 07 72 53

SECTION 07 84 13 - PENETRATION FIRESTOPPING

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes: Penetration firestopping systems.

B. Related Requirements:

1. Section 07 84 43 "Joint Firestopping" for joints in or between fire-resistance-rated construction, at exterior curtain-wall/floor intersections, and in smoke barriers.

1.02 ACTION SUBMITTALS

A. Product Data: Penetration firestopping systems.

B. Sustainable Design Submittals:

C. Product Schedule: For each penetration firestopping system. Include location, illustration of firestopping system, and design designation of qualified testing and inspecting agency.

1. Engineering Judgments: Where Project conditions require modification to a qualified testing and inspecting agency's illustration for a particular penetration firestopping system, submit illustration, with modifications marked, approved by penetration firestopping system manufacturer's fire-protection engineer as an engineering judgment or equivalent fire-resistance-rated assembly developed in accordance with current International Firestop Council (IFC) guidelines. Obtain approval of authorities having jurisdiction prior to submittal.

1.03 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer.

B. Listed System Designs: For each penetration firestopping system, for tests performed by a qualified testing agency.

1.04 CLOSEOUT SUBMITTALS

A. Installer Certificates: From Installer indicating that penetration firestopping systems have been installed in compliance with requirements and manufacturer's written instructions.

1.05 QUALITY ASSURANCE

A. Installer Qualifications: A firm that has been approved by FM Approvals according to FM Approvals 4991, "Approval Standard for Firestop Contractors," or been evaluated by UL and found to comply with its "Qualified Firestop Contractor Program Requirements."

1.06 PROJECT CONDITIONS

A. Environmental Limitations: Do not install penetration firestopping system when ambient or substrate temperatures are outside limits permitted by penetration firestopping system manufacturers or when substrates are wet because of rain, frost, condensation, or other causes.

B. Install and cure penetration firestopping materials per manufacturer's written instructions using natural means of ventilations or, where this is inadequate, forced-air circulation.

1.07 COORDINATION

A. Coordinate construction of openings and penetrating items to ensure that penetration firestopping systems can be installed according to specified firestopping system design.

B. Coordinate sizing of sleeves, openings, core-drilled holes, or cut openings to accommodate penetration firestopping systems.

PART 2 - PRODUCTS

2.01 SOURCE LIMITATIONS

A. Obtain penetration firestop systems for each type of opening indicated from single manufacturer.

2.02 PERFORMANCE REQUIREMENTS

A. Fire-Test-Response Characteristics:
   1. Perform penetration firestopping system tests by a qualified testing agency acceptable to authorities having jurisdiction.
   2. Test in accordance with testing standards referenced in "Penetration Firestopping Systems" Article. Provide rated systems complying with the following requirements:
      a. Penetration firestop systems installed with products bearing the classification marking of a qualified product certification agency in accordance with listed system designs published by a qualified testing agency.
         1) UL in its online directory "Product iQ."
         2) Intertek Group in its "Directory of Building Products."
         3) FM Approvals in its "Approval Guide."

2.03 PENETRATION FIRESTOPPING SYSTEMS

A. Penetration Firestopping Systems: Systems that resist spread of fire, passage of smoke and other gases, and maintain original fire-resistance rating of construction penetrated. Penetration firestopping systems are to be compatible with one another, with the substrates forming openings, and with penetrating items if any.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. 3M Building and Construction.
      b. Hilti, Inc.
      c. Tremco Incorporated.

B. Penetrations in Fire-Resistance-Rated Walls: Penetration firestopping systems with ratings determined in accordance with ASTM E814 or UL 1479.
   1. F-Rating: Not less than the fire-resistance rating of the wall penetrated.
   2. Membrane Penetrations: Install recessed fixtures such that the required fire resistance will not be reduced.

C. Penetrations in Horizontal Assemblies: Penetration firestopping systems with ratings determined in accordance with ASTM E814 or UL 1479.
   1. F-Rating: At least one hour, but not less than the fire-resistance rating of the floor penetrated.
   2. T-Rating: At least one hour, but not less than the fire-resistance rating of the floor. The following floor penetrations do not require a T-rating:
      a. Those within the cavity of a wall.
      b. Floor, tub, or shower drains within a concealed space.
      c. 4-inch (200-mm) or smaller metal conduit penetrating directly into metal-enclosed electrical switchgear.
   3. W-Rating: Provide penetration firestopping systems with a Class 1 W-rating in accordance with UL 1479.

D. Exposed Penetration Firestopping Systems: Flame-spread and smoke-developed indexes of less than 25 and 450, respectively, in accordance with ASTM E84.

E. Accessories: Provide components for each penetration firestopping system that are needed to install fill materials and to maintain ratings required. Use only those components specified by

penetration firestopping system manufacturer and approved by qualified testing and inspecting agency for conditions indicated.

1. Permanent forming/damming/backing materials.
2. Substrate primers.
3. Collars.
4. Steel sleeves.

2.04 FILL MATERIALS

A. Cast-in-Place Firestop Devices: Factory-assembled devices for use in cast-in-place concrete floors and consisting of an outer sleeve lined with an intumescent strip, a flange attached to one end of the sleeve for fastening to concrete formwork, and a neoprene gasket.

B. Firestop Devices: Factory-assembled collars formed from galvanized steel and lined with intumescent material sized to fit specific diameter of penetrant.

C. Silicone Foams: Multicomponent, silicone-based liquid elastomers that, when mixed, expand and cure in place to produce a flexible, nonshrinking foam.

D. Silicone Sealants: Single-component, silicone-based, neutral-curing elastomeric sealants.

E. Fire-Rated Cable Sleeve Kits: Complete kits designed for new or existing cable penetrations through walls to accept standard accessories.

F. Fire-Rated Cable Pathways: Single or gangable device modules composed of a steel raceway with integral intumescent material and requiring no additional action in the form of plugs, twisting closure, putty, pillows, sealant, or otherwise to achieve fire and air-leakage ratings.

G. Wall-Opening Protective Materials: Intumescent, non-curing putty pads or self-adhesive inserts for protection of electrical switch and receptacle boxes.

H. Fire-Rated HVAC Retaining Angles: Steel angle system with integral intumescent firestop gasket for use around rectangular steel HVAC ducts without fire dampers.

I. Firestop Plugs: Flexible, re-enterable, intumescent, foam-rubber plug for use in blank round openings and cable sleeves.

J. Fire-Rated Cable Grommet: Molded two-piece grommet made of plenum-grade polymer and foam inner core for sealing small cable penetrations in gypsum walls up to 1/2 inch (13 mm) in diameter.

K. Endothermic Wrap: Flexible, insulating, fire-resistant, endothermic wrap for protecting membrane penetrations of utility boxes, critical electrical circuits, communications lines.

2.05 MIXING

A. Penetration Firestopping Materials: For those products requiring mixing before application, comply with penetration firestopping system manufacturer's written instructions for accurate proportioning of materials, water (if required), type of mixing equipment, selection of mixer speeds, mixing containers, mixing time, and other items or procedures needed to produce products of uniform quality with optimum performance characteristics for application indicated.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine substrates and conditions, with Installer present, for compliance with requirements for opening configurations, penetrating items, substrates, and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Surface Cleaning: Before installing penetration firestopping systems, clean out openings immediately to comply with manufacturer's written instructions and with the following requirements:
   1. Remove from surfaces of opening substrates and from penetrating items foreign materials that could interfere with adhesion of penetration firestopping materials.
   2. Clean opening substrates and penetrating items to produce clean, sound surfaces capable of developing optimum bond with penetration firestopping materials. Remove loose particles remaining from cleaning operation.
   3. Remove laitance and form-release agents from concrete.

B. Prime substrates where recommended in writing by manufacturer using that manufacturer's recommended products and methods. Confine primers to areas of bond; do not allow spillage and migration onto exposed surfaces.

3.03 INSTALLATION OF PENETRATION FIRESTOPPING SYSTEMS

A. General: Install penetration firestopping systems to comply with manufacturer's written installation instructions and published drawings for products and applications.

B. Install forming materials and other accessories of types required to support fill materials during their application and in the position needed to produce cross-sectional shapes and depths required to achieve fire ratings.
   1. After installing fill materials and allowing them to fully cure, remove combustible forming materials and other accessories not forming permanent components of firestopping.

C. Install fill materials by proven techniques to produce the following results:
   1. Fill voids and cavities formed by openings, forming materials, accessories and penetrating items to achieve required fire-resistance ratings.
   2. Apply materials so they contact and adhere to substrates formed by openings and penetrating items.
   3. For fill materials that will remain exposed after completing the Work, finish to produce smooth, uniform surfaces that are flush with adjoining finishes.

3.04 IDENTIFICATION

A. Penetration Identification: Identify each penetration firestopping system with legible metal or plastic labels. Attach labels permanently to surfaces adjacent to and within 6 inches (150 mm) of penetration firestopping system edge so labels are visible to anyone seeking to remove penetrating items or firestopping systems. Use mechanical fasteners or self-adhering-type labels with adhesives capable of permanently bonding labels to surfaces on which labels are placed. Include the following information on labels:
   1. The words "Warning - Penetration Firestopping - Do Not Disturb. Notify Building Management of Any Damage."
   2. Contractor's name, address, and phone number.
   3. Designation of applicable testing and inspecting agency.
   4. Date of installation.
   5. Manufacturer's name.
   6. Installer's name.

3.05 FIELD QUALITY CONTROL

A. Engage a qualified testing agency to perform tests and inspections according to ASTM E2174.

B. Where deficiencies are found or penetration firestopping system is damaged or removed because of testing, repair or replace penetration firestopping system to comply with requirements.

C. Proceed with enclosing penetration firestopping systems with other construction activities only after inspection reports are issued and installations comply with requirements.

3.06 CLEANING AND PROTECTION

A. Clean off excess fill materials adjacent to openings as the Work progresses by methods and with cleaning materials that are approved in writing by penetration firestopping system manufacturers and that do not damage materials in which openings occur.

B. Provide final protection and maintain conditions during and after installation that ensure that penetration firestopping systems are without damage or deterioration at time of Substantial Completion. If, despite such protection, damage or deterioration occurs, immediately cut out and remove damaged or deteriorated penetration firestopping material and install new materials to produce systems complying with specified requirements.

END OF SECTION 07 84 13

SECTION 07 84 43 - JOINT FIRESTOPPING

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Joints in or between fire-resistance-rated construction.

B. Related Requirements:
   1. Section 07 84 13 "Penetration Firestopping" for penetrations in fire-resistance-rated walls, horizontal assemblies, and smoke barriers.

1.02 ACTION SUBMITTALS

A. Product Data:
   1. Joints in or between fire-resistance-rated construction.

B. Sustainable Design Submittals:

C. Product Schedule: For each joint firestopping system. Include location, illustration of firestopping system, and design designation of qualified testing agency.
   1. Engineering Judgments: Where Project conditions require modification to a qualified testing agency's illustration for a particular joint firestopping system condition, submit illustration, with modifications marked, approved by joint firestopping system manufacturer's fire-protection engineer as an engineering judgment or equivalent fire-resistance-rated assembly developed in accordance with current International Firestop Council (IFC) guidelines.

1.03 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer.

B. Listed System Designs: For each joint firestopping system, for tests performed by a qualified testing agency.

1.04 CLOSEOUT SUBMITTALS

A. Installer Certificates: From Installer indicating that joint firestopping systems have been installed in compliance with requirements and manufacturer's written instructions.

1.05 QUALITY ASSURANCE

A. Installer Qualifications: A firm that has been approved by FM Approvals according to FM Approvals 4991, "Approval of Firestop Contractors," or been evaluated by UL and found to comply with UL's "Qualified Firestop Contractor Program Requirements."

1.06 PROJECT CONDITIONS

A. Environmental Limitations: Do not install joint firestopping systems when ambient or substrate temperatures are outside limits permitted by joint firestopping system manufacturers or when substrates are wet due to rain, frost, condensation, or other causes.

B. Install and cure joint firestopping systems per manufacturer's written instructions using natural means of ventilation or, where this is inadequate, forced-air circulation.

1.07 COORDINATION

A. Coordinate construction of joints to ensure that joint firestopping systems can be installed according to specified firestopping system design.

B. Coordinate sizing of joints to accommodate joint firestopping systems.

PART 2 - PRODUCTS

2.01 SOURCE LIMITATIONS

A. Obtain joint firestop systems for each type of joint opening indicated from single manufacturer.

2.02 PERFORMANCE REQUIREMENTS

A. Fire-Test-Response Characteristics:
   1. Perform joint firestopping system tests by a qualified testing agency acceptable to authorities having jurisdiction.
   2. Test per testing standards referenced in "Joint Firestopping Systems" Article. Provide rated systems complying with the following requirements:
      a. Joint firestop systems installed with products bearing the classification marking of a qualified product certification agency in accordance with Listed System Designs published by a qualified testing agency.
         1) UL in its online directory "Product iQ."
         2) Intertek Group in its "Directory of Building Products."

2.03 JOINT FIRESTOPPING SYSTEMS

A. Joint Firestopping Systems: Systems that resist spread of fire, passage of smoke and other gases, and maintain original fire-resistance rating of assemblies in or between which joint firestopping systems are installed. Joint firestopping systems must accommodate building movements without impairing their ability to resist the passage of fire and hot gases.
   1. Joint firestopping systems that are compatible with one another, with the substrates forming openings, and with penetrating items, if any.
   2. Provide products that, upon curing, do not re-emulsify, dissolve, leach, breakdown, or otherwise deteriorate over time from exposure to atmospheric moisture, sweating pipes, ponding water or other forms of moisture.
   3. Provide firestop products that do not contain ethylene glycol.

B. Joints in or between Fire-Resistance-Rated Construction: Provide joint firestopping systems with ratings determined per ASTM E1966 or UL 2079.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. 3M Building and Construction.
      b. Hilti, Inc.
      c. Tremco Incorporated.
   2. Fire-Resistance Rating: Equal to or exceeding the fire-resistance rating of the wall, floor, or roof in or between which it is installed.

C. Exposed Joint Firestopping Systems: Flame-spread and smoke-developed indexes of less than 25 and 450, respectively, as determined per ASTM E84.

2.04 ACCESSORIES

A. Provide components of joint firestopping systems, including primers and forming materials, that are needed to install elastomeric fill materials and to maintain ratings required. Use only components specified by joint firestopping system manufacturer and approved by the qualified testing agency for conditions indicated.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine substrates and conditions, with Installer present, for compliance with requirements for joint configurations, substrates, and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Surface Cleaning: Before installing joint firestopping systems, clean joints immediately to comply with fire-resistive joint system manufacturer's written instructions and the following requirements:
   1. Remove from surfaces of joint substrates foreign materials that could interfere with adhesion of elastomeric fill materials or compromise fire-resistive rating.
   2. Clean joint substrates to produce clean, sound surfaces capable of developing optimum bond with elastomeric fill materials. Remove loose particles remaining from cleaning operation.
   3. Remove laitance and form-release agents from concrete.

B. Prime substrates where recommended in writing by joint firestopping system manufacturer using that manufacturer's recommended products and methods. Confine primers to areas of bond; do not allow spillage and migration onto exposed surfaces.

C. Apply a suitable bond-breaker to prevent three-sided adhesion in applications where this condition occurs, such as the intersection of a gypsum wall to floor or roof assembly where the joint is backed by a steel ceiling runner or track.

3.03 INSTALLATION

A. General: Install joint firestopping systems to comply with manufacturer's written installation instructions and published drawings for products and applications indicated.

B. Install forming materials and other accessories of types required to support elastomeric fill materials during their application and in position needed to produce cross-sectional shapes and depths required to achieve fire ratings indicated.
   1. After installing elastomeric fill materials and allowing them to fully cure, remove combustible forming materials and other accessories not indicated as permanent components of fire-resistive joint system.

C. Install elastomeric fill materials for joint firestopping systems by proven techniques to produce the following results:
   1. Elastomeric fill voids and cavities formed by joints and forming materials as required to achieve fire-resistance ratings indicated.
   2. Apply elastomeric fill materials so they contact and adhere to substrates formed by joints.
   3. For elastomeric fill materials that will remain exposed after completing the Work, finish to produce smooth, uniform surfaces that are flush with adjoining finishes.

3.04 IDENTIFICATION

A. Joint Identification: Identify joint firestopping systems with legible metal or plastic labels. Attach labels permanently to surfaces adjacent to and within 6 inches (150 mm) of joint edge so labels are visible to anyone seeking to remove or joint firestopping system. Use mechanical fasteners or self-adhering-type labels with adhesives capable of permanently bonding labels to surfaces on which labels are placed. Include the following information on labels:
   1. The words "Warning - Joint Firestopping - Do Not Disturb. Notify Building Management of Any Damage."
   2. Contractor's name, address, and phone number.
   3. Designation of applicable testing agency.
   4. Date of installation.
   5. Manufacturer's name.
   6. Installer's name.

3.05 FIELD QUALITY CONTROL

A. Engage a qualified testing agency to perform tests and inspections in accordance with ASTM E2393.

B. Where deficiencies are found or joint firestopping systems are damaged or removed due to testing, repair or replace joint firestopping systems so they comply with requirements.

C. Proceed with enclosing joint firestopping systems with other construction only after inspection reports are issued and installations comply with requirements.

3.06 CLEANING AND PROTECTION

A. Clean off excess elastomeric fill materials adjacent to joints as the Work progresses by methods and with cleaning materials that are approved in writing by joint firestopping system manufacturers and that do not damage materials in which joints occur.

B. Provide final protection and maintain conditions during and after installation that ensure joint firestopping systems are without damage or deterioration at time of Substantial Completion. If damage or deterioration occurs despite such protection, cut out and remove damaged or deteriorated joint firestopping systems immediately and install new materials to produce joint firestopping systems complying with specified requirements.

3.07 JOINT FIRESTOPPING SYSTEM SCHEDULE

A. Where UL-classified systems are indicated, they refer to system numbers in UL's online directory "Product iQ" under product Category XHBN.

B. Where Intertek Group-listed systems are indicated, they refer to design numbers in Intertek Group's "Directory of Building Products" under product category Firestop Systems.

C. Wall-to-Wall, Joint Firestopping Systems: .
   1. UL-Classified Systems: WW-D- 0000-0999.
   2. Assembly Rating: 1 hour.
   3. Nominal Joint Width: As indicated.
   4. Movement Capabilities: Class I - 50 percent compression or extension.

D. Floor-to-Wall, Joint Firestopping Systems: .
   1. UL-Classified Systems: FW- S- 0000-0999.
   2. Assembly Rating: 1 hour.
   3. Nominal Joint Width: As indicated.

E. Head-of-Wall, Fire-Resistive Joint Firestopping Systems: .
   1. UL-Classified Systems: HW-D- 0000-0999.
   2. Intertek Group-Listed Systems: .
   3. Assembly Rating: 1 hour.
   4. Nominal Joint Width: As indicated.
   5. Movement Capabilities: Class I - 50 percent compression or extension.

END OF SECTION 07 84 43

SECTION 07 92 00 - JOINT SEALANTS

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Silicone joint sealants.
   2. Urethane joint sealants.
   3. Mildew-resistant joint sealants.
   4. Butyl joint sealants.
   5. Latex joint sealants.

B. Related Requirements:
   1. Section 07 92 19 "Acoustical Joint Sealants" for sealing joints in sound-rated construction.
   2. Division 32 for sealing joints in paved roads, parking lots, walkways, and curbing.

1.02 ACTION SUBMITTALS

A. Product Data:
   1. Silicone joint sealants.
   2. Urethane joint sealants.
   3. Mildew-resistant joint sealants.
   4. Butyl joint sealants.
   5. Latex joint sealants.

B. Samples for Initial Selection: Manufacturer's standard color charts consisting of strips of cured sealants showing the full range of colors available for each product exposed to view.

C. Joint-Sealant Schedule: Include the following information:
   1. Joint-sealant application, joint location, and designation.
   2. Joint-sealant manufacturer and product name.
   3. Joint-sealant formulation.
   4. Joint-sealant color.

1.03 INFORMATIONAL SUBMITTALS

A. Preconstruction Field-Adhesion-Test Reports: Indicate which sealants and joint preparation methods resulted in optimum adhesion to joint substrates based on testing specified in "Preconstruction Testing" Article.

B. Field Quality-Control Reports: For field-adhesion-test reports, for each sealant application tested.

C. Sample warranties.

1.04 CLOSEOUT SUBMITTALS

A. Manufacturers' special warranties.

B. Installer's special warranties.

1.05 QUALITY ASSURANCE

A. Installer Qualifications: Authorized representative who is trained and approved by manufacturer.

B. Testing Agency Qualifications: Qualified in accordance with ASTM C1021 to conduct the testing indicated.

1.06 PRECONSTRUCTION TESTING

A. Preconstruction Field-Adhesion Testing: Before installing sealants, field test their adhesion to Project joint substrates as follows:
   1. Locate test joints where indicated on Project or, if not indicated, as directed by Architect.
   2. Conduct field tests for each kind of sealant and joint substrate.
   3. Notify Architect seven days in advance of dates and times when test joints will be erected.
   4. Test Method: Test joint sealants in accordance with Method A, Tail Procedure, in ASTM C1521.
      a. For joints with dissimilar substrates, verify adhesion to each substrate separately; extend cut along one side, verifying adhesion to opposite side. Repeat procedure for opposite side.
   5. Report whether sealant failed to adhere to joint substrates or tore cohesively. Include data on pull distance used to test each kind of product and joint substrate. For sealants that fail adhesively, retest until satisfactory adhesion is obtained.
   6. Evaluation of Preconstruction Field-Adhesion-Test Results: Sealants not evidencing adhesive failure from testing, in absence of other indications of noncompliance with requirements, will be considered satisfactory. Do not use sealants that fail to adhere to joint substrates during testing.

1.07 FIELD CONDITIONS

A. Do not proceed with installation of joint sealants under the following conditions:
   1. When ambient and substrate temperature conditions are outside limits permitted by joint-sealant manufacturer or are below 40 deg F (5 deg C).
   2. When joint substrates are wet.
   3. Where joint widths are less than those allowed by joint-sealant manufacturer for applications indicated.
   4. Where contaminants capable of interfering with adhesion have not yet been removed from joint substrates.

1.08 WARRANTY

A. Special Installer's Warranty: Installer agrees to repair or replace joint sealants that do not comply with performance and other requirements specified in this Section within specified warranty period.
   1. Warranty Period: Two years from date of Substantial Completion.

B. Special Manufacturer's Warranty: Manufacturer agrees to furnish joint sealants to repair or replace those joint sealants that do not comply with performance and other requirements specified in this Section within specified warranty period.
   1. Warranty Period: Five years from date of Substantial Completion.

C. Special warranties specified in this article exclude deterioration or failure of joint sealants from the following:
   1. Movement of the structure caused by stresses on the sealant exceeding sealant manufacturer's written specifications for sealant elongation and compression.
   2. Disintegration of joint substrates from causes exceeding design specifications.
   3. Mechanical damage caused by individuals, tools, or other outside agents.
   4. Changes in sealant appearance caused by accumulation of dirt or other atmospheric contaminants.

PART 2 - PRODUCTS

2.01 SOURCE LIMITATIONS

A. Obtain joint sealants from single manufacturer for each sealant type.

2.02 JOINT SEALANTS, GENERAL

A. Compatibility: Provide joint sealants, backings, and other related materials that are compatible with one another and with joint substrates under conditions of service and application, as demonstrated by joint-sealant manufacturer, based on testing and field experience.

B. Colors of Exposed Joint Sealants: As selected by Architect from manufacturer's full range.

2.03 SILICONE JOINT SEALANTS

A. Silicone, S, NS, 25, NT: Single-component, nonsag, plus 25 percent and minus 25 percent movement capability, nontraffic-use, neutral-curing silicone joint sealant; ASTM C920, Type S, Grade NS, Class 25, Use NT.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. GE Construction Sealants; Momentive Performance Materials Inc.
   b. Pecora Corporation.
   c. Sika Corporation - Building Components.
   d. The Dow Chemical Company.

2.04 URETHANE JOINT SEALANTS

A. Urethane, M, NS, 50, NT: Multicomponent, nonsag, plus 50 percent and minus 50 percent movement capability nontraffic-use, urethane joint sealant; ASTM C920, Type M, Grade NS, Class 50, Use NT.

1. Manufacturers: Subject to compliance with requirements, provide products by the following:
   a. Pecora Corporation.

2.05 MILDEW-RESISTANT JOINT SEALANTS

A. Mildew-Resistant Joint Sealants: Formulated for prolonged exposure to humidity with fungicide to prevent mold and mildew growth.

B. Silicone, Mildew Resistant, Acid Curing, S, NS, 25, NT: Mildew-resistant, single-component, nonsag, plus 25 percent and minus 25 percent movement capability, nontraffic-use, acid-curing silicone joint sealant; ASTM C920, Type S, Grade NS, Class 25, Use NT.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. GE Construction Sealants; Momentive Performance Materials Inc.
   b. Pecora Corporation.
   c. Sika Corporation - Building Components.
   d. The Dow Chemical Company.
   e. Tremco Incorporated.

2.06 BUTYL JOINT SEALANTS

A. Butyl-Rubber-Based Joint Sealants: ASTM C1311.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Pecora Corporation.
   b. Sika Corporation - Building Components.

2.07 LATEX JOINT SEALANTS

A. Acrylic Latex: Acrylic latex or siliconized acrylic latex, ASTM C834, Type OP, Grade NF.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Pecora Corporation.
      b. Tremco Incorporated.

2.08 JOINT-SEALANT BACKING

A. Sealant Backing Material, General: Nonstaining; compatible with joint substrates, sealants, primers, and other joint fillers; and approved for applications indicated by sealant manufacturer based on field experience and laboratory testing.

B. Cylindrical Sealant Backings: ASTM C1330, Type C (closed-cell material with a surface skin), Type O (open-cell material), Type B (bicellular material with a surface skin), or any of the preceding types, as approved in writing by joint-sealant manufacturer for joint application indicated, and of size and density to control sealant depth and otherwise contribute to producing optimum sealant performance.

C. Bond-Breaker Tape: Polyethylene tape or other plastic tape recommended by sealant manufacturer for preventing sealant from adhering to rigid, inflexible joint-filler materials or joint surfaces at back of joint. Provide self-adhesive tape where applicable.

2.09 MISCELLANEOUS MATERIALS

A. Primer: Material recommended by joint-sealant manufacturer where required for adhesion of sealant to joint substrates indicated, as determined from preconstruction joint-sealant-substrate tests and field tests.

B. Cleaners for Nonporous Surfaces: Chemical cleaners acceptable to manufacturers of sealants and sealant backing materials, free of oily residues or other substances capable of staining or harming joint substrates and adjacent nonporous surfaces in any way, and formulated to promote optimum adhesion of sealants to joint substrates.

C. Masking Tape: Nonstaining, nonabsorbent material compatible with joint sealants and surfaces adjacent to joints.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine joints indicated to receive joint sealants, with Installer present, for compliance with requirements for joint configuration, installation tolerances, and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Surface Cleaning of Joints: Clean out joints immediately before installing joint sealants to comply with joint-sealant manufacturer's written instructions and the following requirements:
   1. Remove all foreign material from joint substrates that could interfere with adhesion of joint sealant, including dust, paints (except for permanent, protective coatings tested and approved for sealant adhesion and compatibility by sealant manufacturer), old joint sealants, oil, grease, waterproofing, water repellents, water, surface dirt, and frost.
   2. Clean porous joint substrate surfaces by brushing, grinding, mechanical abrading, or a combination of these methods to produce a clean, sound substrate capable of developing optimum bond with joint sealants. Remove loose particles remaining after cleaning operations above by vacuuming or blowing out joints with oil-free compressed air. Porous joint substrates include the following:

a. Concrete.
b. Masonry.

3. Remove laitance and form-release agents from concrete.
4. Clean nonporous joint substrate surfaces with chemical cleaners or other means that do not stain, harm substrates, or leave residues capable of interfering with adhesion of joint sealants. Nonporous joint substrates include the following:
   a. Metal.
   b. Glass.
   c. Porcelain enamel.

B. Joint Priming: Prime joint substrates where recommended by joint-sealant manufacturer or as indicated by preconstruction joint-sealant-substrate tests or prior experience. Apply primer to comply with joint-sealant manufacturer's written instructions. Confine primers to areas of joint-sealant bond; do not allow spillage or migration onto adjoining surfaces.

C. Masking Tape: Use masking tape where required to prevent contact of sealant or primer with adjoining surfaces that otherwise would be permanently stained or damaged by such contact or by cleaning methods required to remove sealant smears. Remove tape immediately after tooling without disturbing joint seal.

3.03 INSTALLATION OF JOINT SEALANTS

A. General: Comply with joint-sealant manufacturer's written installation instructions for products and applications indicated, unless more stringent requirements apply.

B. Sealant Installation Standard: Comply with recommendations in ASTM C1193 for use of joint sealants as applicable to materials, applications, and conditions indicated.

C. Install sealant backings of type indicated to support sealants during application and at position required to produce cross-sectional shapes and depths of installed sealants relative to joint widths that allow optimum sealant movement capability.
   1. Do not leave gaps between ends of sealant backings.
   2. Do not stretch, twist, puncture, or tear sealant backings.
   3. Remove absorbent sealant backings that have become wet before sealant application, and replace them with dry materials.

D. Install bond-breaker tape behind sealants where sealant backings are not used between sealants and backs of joints.

E. Install sealants using proven techniques that comply with the following and at the same time backings are installed:
   1. Place sealants so they directly contact and fully wet joint substrates.
   2. Completely fill recesses in each joint configuration.
   3. Produce uniform, cross-sectional shapes and depths relative to joint widths that allow optimum sealant movement capability.

F. Tooling of Nonsag Sealants: Immediately after sealant application and before skinning or curing begins, tool sealants in accordance with requirements specified in subparagraphs below to form smooth, uniform beads of configuration indicated; to eliminate air pockets; and to ensure contact and adhesion of sealant with sides of joint.
   1. Remove excess sealant from surfaces adjacent to joints.
   2. Use tooling agents that are approved in writing by sealant manufacturer and that do not discolor sealants or adjacent surfaces.
   3. Provide concave joint profile in accordance with Figure 8A in ASTM C1193 unless otherwise indicated.
   4. Provide flush joint profile at locations indicated on Drawings in accordance with Figure 8B in ASTM C1193.
   5. Provide recessed joint configuration of recess depth and at locations indicated on Drawings in accordance with Figure 8C in ASTM C1193.

a. Use masking tape to protect surfaces adjacent to recessed tooled joints.

3.04 FIELD QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

B. Tests and Inspections:

1. Field-Adhesion Testing: Field test joint-sealant adhesion to joint substrates as follows:
   a. Extent of Testing: Test completed and cured sealant joints as follows:
      1) Perform 10 tests for the first 1000 ft. (300 m) of joint length for each kind of sealant and joint substrate.
      2) Perform one test for each 1000 ft. (300 m) of joint length thereafter or one test per each floor per elevation.
   b. Test Method: Test joint sealants in accordance with Method A, Tail Procedure, in ASTM C1521.
      1) For joints with dissimilar substrates, verify adhesion to each substrate separately; extend cut along one side, verifying adhesion to opposite side. Repeat procedure for opposite side.
   c. Inspect tested joints and report on the following:
      1) Whether sealants filled joint cavities and are free of voids.
      2) Whether sealant dimensions and configurations comply with specified requirements.
      3) Whether sealants in joints connected to pulled-out portion failed to adhere to joint substrates or tore cohesively. Include data on pull distance used to test each kind of product and joint substrate. Compare these results to determine if adhesion complies with sealant manufacturer's field-adhesion hand-pull test criteria.
   d. Record test results in a field-adhesion-test log. Include dates when sealants were installed, names of persons who installed sealants, test dates, test locations, whether joints were primed, adhesion results and percent elongations, sealant material, sealant configuration, and sealant dimensions.
   e. Repair sealants pulled from test area by applying new sealants following same procedures used originally to seal joints. Ensure that original sealant surfaces are clean and that new sealant contacts original sealant.
2. Evaluation of Field-Adhesion-Test Results: Sealants not evidencing adhesive failure from testing or noncompliance with other indicated requirements will be considered satisfactory. Remove sealants that fail to adhere to joint substrates during testing or to comply with other requirements. Retest failed applications until test results prove sealants comply with indicated requirements.

C. Prepare test and inspection reports.

3.05 CLEANING

A. Clean off excess sealant or sealant smears adjacent to joints as the Work progresses by methods and with cleaning materials approved in writing by manufacturers of joint sealants and of products in which joints occur.

3.06 PROTECTION

A. Protect joint sealants during and after curing period from contact with contaminating substances and from damage resulting from construction operations or other causes so sealants are without deterioration or damage at time of Substantial Completion. If, despite such protection, damage or deterioration occurs, cut out, remove, and repair damaged or deteriorated joint sealants immediately so installations with repaired areas are indistinguishable from original work.

END OF SECTION 07 92 00

SECTION 07 92 19 - ACOUSTICAL JOINT SEALANTS

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Acoustical joint sealants.

B. Related Requirements:
   1. Section 07 92 00 "Joint Sealants" for elastomeric, latex, and butyl-rubber-based joint sealants for nonacoustical applications.

1.02 ACTION SUBMITTALS

A. Product Data:
   1. Acoustical joint sealants.

B. Samples for Initial Selection: Manufacturer's color charts consisting of strips of cured sealants, showing full range of available colors for each product exposed to view.

C. Acoustical Joint-Sealant Schedule: Include the following information:
   1. Joint-sealant application, joint location, and designation.
   2. Joint-sealant manufacturer and product name.
   3. Joint-sealant formulation.
   4. Joint-sealant color.

D. Sustainable Design Submittals:

1.03 INFORMATIONAL SUBMITTALS

A. Test and Evaluation Reports:
   1. Product Test Reports: For each type of acoustical joint sealant, for tests performed by manufacturer and witnessed by a qualified testing agency.

B. Sample warranties.

1.04 CLOSEOUT SUBMITTALS

A. Warranty Documentation:
   1. Manufacturers' special warranties.
   2. Installer's special warranties.

1.05 WARRANTY

A. Installer's Special Warranty: Installer agrees to repair or replace acoustical joint sealants that do not comply with performance and other requirements specified in this Section within specified warranty period.
   1. Warranty Period: Two years from date of Substantial Completion.

PART 2 - PRODUCTS

2.01 ACOUSTICAL JOINT SEALANTS

A. Acoustical joint-sealant products that effectively reduce airborne sound transmission through perimeter joints and openings in building construction, as demonstrated by testing representative assemblies in accordance with ASTM E90.

B. Acoustical Sealant for Exposed and Concealed Joints: Manufacturer's standard nonsag, paintable, nonstaining latex acoustical sealant complying with ASTM C834.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. DAP Products Inc.
b. Hilti, Inc.
c. OSI Sealants; Henkel Corporation.
d. Pecora Corporation.

2. Colors of Exposed Acoustical Joint Sealants: As selected by Architect from manufacturer's full range of colors.

C. Acoustical Sealant for Concealed Joints: Manufacturer's standard nonsag, nondrying, nonhardening, nonskinning, nonstaining, gunnable, synthetic-rubber acoustical sealant.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. OSI Sealants; Henkel Corporation.
b. Pecora Corporation.
c. Tremco Incorporated.
d. USG Corporation.

2.02 MISCELLANEOUS MATERIALS

A. Primer: Material recommended by acoustical joint-sealant manufacturer where required for adhesion of sealant to joint substrates.

B. Cleaners for Nonporous Surfaces: Chemical cleaners acceptable to manufacturers of sealants and sealant backing materials, free of oily residues or other substances capable of staining or harming joint substrates and adjacent nonporous surfaces in any way, and formulated to promote optimum adhesion of sealants to joint substrates.

C. Masking Tape: Nonstaining, nonabsorbent material compatible with joint sealants and surfaces adjacent to joints.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine joints indicated to receive acoustical joint sealants, with Installer present, for compliance with requirements for joint configuration, installation tolerances, and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Surface Cleaning of Joints: Clean out joints immediately before installing acoustical joint sealants to comply with joint-sealant manufacturer's written instructions.

B. Joint Priming: Prime joint substrates where recommended by acoustical joint-sealant manufacturer. Apply primer to comply with joint-sealant manufacturer's written instructions. Confine primers to areas of joint-sealant bond; do not allow spillage or migration onto adjoining surfaces.

C. Masking Tape: Use masking tape where required to prevent contact of sealant or primer with adjoining surfaces that otherwise would be permanently stained or damaged by such contact or by cleaning methods required to remove sealant smears. Remove tape immediately after tooling without disturbing joint seal.

3.03 INSTALLATION OF ACOUSTICAL JOINT SEALANTS

A. Comply with acoustical joint-sealant manufacturer's written installation instructions unless more stringent requirements apply.

B. Acoustical Ceiling Areas: Apply acoustical joint sealant at perimeter edge moldings of acoustical ceiling areas in a continuous ribbon concealed on back of vertical legs of moldings before they are installed.

3.04 CLEANING

A. Clean off excess sealant or sealant smears adjacent to joints as the Work progresses by methods and with cleaning materials approved in writing by manufacturers of acoustical joint sealants and of products in which joints occur.

3.05 PROTECTION

A. Protect acoustical joint sealants during and after curing period from contact with contaminating substances and from damage resulting from construction operations or other causes so sealants are without deterioration or damage at time of Substantial Completion. If, despite such protection, damage or deterioration occurs, cut out, remove, and repair damaged or deteriorated acoustical joint sealants immediately so installations with repaired areas are indistinguishable from original work.

END OF SECTION 07 92 19

SECTION 08 16 13 - FIBERGLASS DOORS AND FRAMES

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Fiberglass Reinforced Plastic (FRP) Doors.
   2. Fiberglass Resin Transfer Molded Door Frames

B. Related Requirements:
   1. Section 08 71 00 "Door Hardware" for hardware related to “Fiberglass Doors and Frames.”
   2. Section 08 80 00 “Glazing” for insulating glazing installed in “Fiberglass Doors and Frames.”

1.02 COORDINATION

A. Coordinate anchorage installation for hollow-metal frames. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors. Deliver such items to Project site in time for installation.

B. Coordinate requirements for installation of door hardware, electrified door hardware, and access control and security systems.

1.03 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.04 ACTION SUBMITTALS

A. Product Data:
   1. Interior fiberglass doors and frames.
   2. Exterior fiberglass doors and frames.

B. Product Data Submittals: For each product.
   1. Include construction details, material descriptions, core descriptions, and finishes.

C. Shop Drawings: Include the following:
   1. Elevations of each door type.
   2. Details of doors, including vertical- and horizontal-edge details and metal thicknesses.
   3. Frame details for each frame type, including dimensioned profiles and metal thicknesses.
   4. Locations of reinforcement and preparations for hardware.
   5. Details of each different wall opening condition.
   6. Details of electrical raceway and preparation for electrified hardware, access control systems, and security systems.
   7. Details of anchorages, joints, field splices, and connections.
   8. Details of accessories.
   9. Details of moldings, removable stops, and glazing.

D. Samples for Initial Selection: Manufacturer's standard color sheets, showing full range of available colors for each type of fiberglass doors and frames.

E. Samples for Verification:
   1. Finishes: For each type of exposed finish required, prepared on Samples of not less than 3 by 5 inches.

1.05 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For fiberglass doors and frames.

B. Warranty Documentation:

1. Manufacturers' special warranties.

1.06 QUALITY ASSURANCE

A. Referenced Standards
   1. American Society for Testing and Materials (ASTM)
   2. Society of Automotive Engineers (SAE)
   3. International Building Code, Plastics (Chapter 26)
   4. UL Standards for Safety UL10B / UL10C, UBC 7-2
   5. ANSI A250.4 1,000,000 cycle test.

B. Manufacturer Qualifications: A company specialized in the manufacture of fiberglass reinforced plastic (FRP) doors and frames as specified herein with a record of successful in-service performance for the applications as required for this project.

C. Installer Qualifications: An experienced installer who has completed fiberglass door and frame installations similar in material, design, and extent to those indicated and whose work has resulted in construction with a record of successful in-service performance.

D. Source limitations: Obtain fiberglass reinforced plastic doors and resin transfer molded fiberglass frames through one source fabricated from a single manufacturer, including fire rated fiberglass frames. This ensures complete uniformity of physical properties and consistency in the resin chemistry tailored for this application.
   1. Hardware and accessories for all FRP doors as specified in Section 08 71 00 provided and installed by the fiberglass door and frame manufacturer.
   2. Glass for windows in doors is furnished and installed by door and frame manufacturer in accordance with related section, Division 8, Glazing.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Each door and frame to be delivered individually crated for protection from damage in cardboard containers, clearly marked with project information, door location, specific reference number as shown on drawings, and shipping information. Each crate contains the fasteners necessary for installation as well as complete installation instructions.
   1. Doors are stored in the original container on edge, out of inclement weather for protection against the elements.
   2. Handle doors pursuant to the manufacturer’s recommendations as posted on the outside of crate.

B. Handling and storage of the doors and frames after receipt is the responsibility/liability of the customer. It is recommended that the doors be stored indoors in a vertical position, clear of the floor, with blocking between the doors to permit air circulation between the doors and prevent damage to the door faces. Rain/water or condensation must not be allowed to collect or lay between stored doors. Do not wrap in plastic sheeting as it will promote condensation formation within. Permanent discoloration can result

1.08 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace fiberglass doors and frames that fail(s) in materials or workmanship within specified warranty period.
   1. Failures include, but are not limited to, delamination and failure due to corrosion.
   2. Warranty Period: Lifetime from date of Substantial Completion.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Chem-Pruf Door Co., Ltd.
2. Cline Doors, Inc.
3. Corrim Company
4. Special-Lite
5. Tiger Door.

2.02 SOURCE LIMITATIONS

A. Obtain fiberglass doors and frames from single source from single manufacturer.

2.03 PERFORMANCE REQUIREMENTS

A. Pultruded structural shapes for stiles; rails, frames, and astragals to exhibit the following minimum longitudinal coupon properties (per ASTM):
   1. Tensile strength (D638) 30,000 psi
   2. Comprehensive strength (D695) 30,000 psi
   3. Flexural strength (D790) 30,000 psi
   4. Flexural modulus (D790) 1,600,000 psi
   5. Shear strength (D2846) 4,500 psi
   6. Impact, notched (D256) 25 ft-lb/in
   7. Barcol hardness (D2853) 50

B. Core material to exhibit the following minimum coupon properties (per ASTM):
   1. Shear strength, longitudinal direction (C273) 68.2 psi
   2. Shear strength, transverse direction (C273) 25.8 psi
   3. Shear modulus, longitudinal direction (C273) 6940 psi
   4. Shear modulus, transverse direction (C273) 1878 psi Shear elongation, longitudinal direction (C393 short beam) 1.79%
   5. Shear elongation, longitudinal direction (C393 short beam) 1.79%
   6. Shear elongation, transverse direction (C393 short beam) 2.72%
   7. Maximum facing stress, longitudinal direction (C393 short beam) 735 psi
   8. Maximum facing stress, transverse direction (C393 short beam) 289 psi
   9. Maximum core shear stress, longitudinal direction (C393 short beam) 63.8 psi
   10. Maximum core shear stress, transverse direction (C393 short beam) 24.9 psi
   11. Modulus of elasticity (EI) per 1" width, longitudinal direction (C393 short beam) 4.92E+04 psi
   12. Modulus of elasticity (EI) per 1" width, transverse direction (C393 short beam) 1.97E+04 psi
   13. Maximum facing stress, longitudinal direction (C393 long beam) 9011 psi
   14. Maximum facing stress, transverse direction (C393 long beam) 4727 psi
   15. Maximum core shear stress, longitudinal direction (C393 long beam) 48.3 psi
   16. Maximum core shear stress, transverse direction (C393 long beam) 23.5psi
   17. Modulus of elasticity (EI) per 1" width, longitudinal direction (C393 long beam) 1.14E+05 psi
   18. Modulus of elasticity (EI) per 1" width, transverse direction (C393 long beam) 7.23E+05 psi
   19. Stiffness "D", longitudinal direction (C393 long beam) 379,270 psi
   20. Stiffness "D", longitudinal direction (C393 long beam) 260,608 psi
   21. Compressive strength (C365) 53 psi
   22. Compressive modulus (C365) 2110 psi
   23. Density (C271) 2.42 lb/ft

C. Adhesive to exhibit the following minimum coupon properties (per SAE)
   1. Tensile Strength (D882-83A modified) minimum 2000 psi
   2. 8-day 25º C at 100% humidity Cross Peel (SAE J1553) minimum 330 psi

3. 7-day immersion in seawater Cross Peel (SAE J1553) minimum 330 psi
4. 30-day immersion in saltwater Cross Peel (SAE J1553) minimum 330 psi
5. 72-hour immersion in gasoline Cross Peel (SAE J1553) minimum 330 psi
6. 72-hour immersion in 20% sulfuric acid Cross Peel (SAE J1553) minimum 300 psi CI.

D. ANSI A250.4 1,000,000 cycle test
1. 4’ x 8’ door (up to a full lite) and frame successfully tested in excess of 1,000,000 cycles with no failure of any of the design features of the door or frame.

2.04 FIBERGLASS REINFORCED POLYESTER DOORS

A. Heavy Duty Fiberglass Reinforced Polyester Doors.
1. Design: FRP doors to be of seamless press-molded construction. Laminated FRP face sheets applied while wet and uncured to an internal door stile and rail subframe/core assembly and then press-molded under heat and pressure. The composite door panel must be integrally fused over its entire surface area, not just adhesive-bonded at perimeter stiles and rails. Doors to remain under pressure during curing for flat, warp-free surfaces.
2. Stiles & Rails: A high-modulus pultruded FRP square or rectangular tube subframe is to be provided within the door. Tubes are to be mitered and joined internally at the corners with solid polymer blocks to yield a one-piece unit that does not require any secondary external sealing. Provide a tubular midrail across width of door at lock height, and additional horizontal rails where specific design conditions dictate. Doors incorporate molded-in FRP edge strips, chemically bonded to the subframe stiles, for machining of hardware mortises so as not to cut or otherwise compromise the integrity of the pultruded stiles, nor allow moisture to penetrate the core of the door. Chemically weld connections. No mechanical fasteners are allowed. The use or inclusion of aluminum, steel, gypsum or wood into stile and rail construction is not permitted.
3. Core: Polyurethane foam, minimum 6 pcf density to be completely enclosed within the stile and rail subframe. Use of balsa wood is not permitted.
4. Internal Reinforcement: High-modulous pultruded tubular FRP, high-density polymer compression blocks, or plastic compression blocking at all hardware locations, and corner locations. Do not use wood blocking, steel or aluminum reinforcing plates, ribs or fittings. A minimum of 900 lbs of pullout strength is required for each factory supplied hinge screw.
5. Faces: Door facings to utilize a chemical resistant thermosetting polyester resin system with fiber reinforcing layers. Furnish door faces as shown on the drawings and in the door elevations. Use chopped strand mat layers to provide bond integrity between gelcoat, laminated facings and the internal door structure. Structural reinforcement in the form of a knitted multi-layer material with layers of uni-directional glass fiber oriented in both the vertical and horizontal directions for high stiffness, impact resistance and resistance to warping. Gelcoat surface integrally molded to be 25/30 mils thick (wet) ultra-violet light stabilized marine grade NPG-isophthalic polyester gelcoat.

B. Finish: The exposed FRP door faces have a 3-4 mils (wet) factory applied two-part aliphatic polyurethane fully cured coating of industrial urethane. Coating has a minimum hardness of H to 2H. Finish is slightly textured semi-gloss to minimize the visual effects of wear and tear.

C. Lites and Louvers: Provisions for lites and louvers are to be made during manufacture and No field cutting of FRP doors. Cutouts are to be totally enclosed by pultruded FRP stiles and rails incorporated into the door structure. Lite and louver cutouts that expose core material are not acceptable.
1. Lites: Glass per job specification to be factory furnished, glazed, and installed. Glazing thickness is 1” insulating. Centered glazing is installed between 45-degree pultruded FRP glazing stops and vinyl foam tape with concealed compression retainers for glazing. No exposed fasteners or exposed silicone will be allowed for securing glazing. Stainless

steel screws may be allowed for other glazing thicknesses. All glazing stop material is pultrued FRP with a minimum fiberglass content of 50%. Metal, pvc, or vinyl "Glass Kit" type lites are not acceptable for non-fire rated openings.

a. Refer to section 08 08 00 "GLAZING" for insulating glazing types.

2. Louvers: Fiberglass inverted V blade privacy or flat blade louvers to be factory furnished and installed. All louvers and louver trim is manufactured exclusively from putruded FRP profiles with a minimum fiberglass content of 50%. All louvers are coated to match the door in color and sheen. Inverted V blade is 3/32" minimum thickness, flat blade louver is 3/16" minimum thickness. Adhesives for louver assembly to meet or exceed all requirements in section 2.5.1 Mechanical Properties and test performance. Metal, PVC, vinyl or other non-fiberglass louvers are not acceptable for non-fire rated openings.

2.05 FIBERGLASS REINFORCED POLYESTER FRAMES:

A. Heavy Duty Fiberglass Reinforced Polyester Frames s.

1. Design: FRP Door frames furnished under this specification to utilize a high-modulus pultruded structural FRP shape. The frame section is standard double rabbeted 5-3/4" deep x 2" face, 3/16" thick, with integral 5/8" doorstop, to match typical hollow metal configurations. Additional jamb profiles and widths are available.
2. Corner Joints: Frame jambs and header are joined at corners via miter connections with hidden FRP angle clips and associated fasteners. Post and beam corners will not be acceptable.
3. Hardware Reinforcements: FRP reinforcing is chemically welded to door frame material at required locations. Minimum screw pullout strength of 1100 lb per #12 x 1-1/4" sheet metal screw is required. Mechanically fastened reinforcements are not permitted.
4. Anchors:
   a. BOLT-IN: Provide manufacturer's required number of 3/8" diameter x 4" long flat head stainless steel sleeve anchors for masonry openings, 3/8" diameter x 4" machine screw with nut and washers for structural steel openings, #14 x 4" stainless steel flat head sheet metal screws for wood or steel stud openings. Include extra anchors for additional frame height in two-foot increments above 8'-0". Provide single bolt anchor at center of all headers over four feet in nominal width. Stainless Steel fasteners furnished by the manufacturer.
   b. GROUT-IN: Provide manufacturer's required number of wire or strap type masonry anchors for installation into block wall. Fill frame cavity with grout.

B. Finish: Frames have a 3-4 mils (wet) factory applied two-part aliphatic polyurethane fully cured coating of industrial urethane. Industrial urethane chemical coating color topcoat, to match the color and sheen of the doors, for superior weatherability. Gelcoat may not be sprayed onto the frame as a secondary coating.

2.06 ACCESSORIES

A. Astragals: Pairs of doors to be furnished with an astragal from the manufacturer made of same pultruded FRP material as door stile, rail and edge as required. Astragal is located on the meeting stile edge of each inactive leaf of double door pairs. Astragal is installed to cover meeting stile gap to effect seal and security.

B. Transoms: Transoms are identical to the doors in finish, construction, materials, thickness and reinforcement.

C. Fasteners: Fasteners for hardware are type 304 CRSS (18-8 series corrosion resistant stainless steel) with no exception. No carbon steel or aluminum components are to be used.

2.07 FABRICATION OF FIBERGLASS DOORS AND FRAMES

A. Factory fabricate fiberglass doors and frames.

B. Hardware
   1. Doors are factory mortised and drilled for mortise template butt hinges, with #12 x 3" long stainless-steel screws for hinge attachment. Provide 161 cylindrical lock bore, rim deadbolt, ANSI 86 mortise lock edge prep and pocket, or flushbolt cutouts as required.
   2. Frames are factory machined and drilled for all hardware requiring mortises, with #12 x 1-1/4" long stainless-steel screws for hinge attachment.
   3. Hardware is furnished as listed in section 08 70 00 coordinated and installed by experienced mechanics.
   4. Supplier will furnish manufacturer's standard templates and installation instructions preparation instructions prior to door and frame factory-initiated manufacture.

2.08 GENERAL FINISH REQUIREMENTS
A. Protect finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

2.09 FINISHES
A. Gelcoat may not be sprayed onto the frame as a secondary coating.

PART 3 - EXECUTION

3.01 EXAMINATION
A. Examine openings for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
B. Examine roughing-in for low-voltage and electrical to verify actual locations of connections before installation.
C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION
A. Remove shipping spreaders installed at factory.

3.03 INSTALLATION OF FIBERGLASS DOORS AND FRAMES
A. Install door opening assemblies in accordance with shop drawings and manufacturer's printed installation instructions, using installation methods and materials specified in installation instructions.
B. Field alteration of doors or frames to accommodate field conditions is strictly prohibited.
C. Site tolerances: Maintain plumb and level tolerance specified in manufacturer's printed installation instructions.

3.04 ADJUSTING
A. Adjust doors in accordance with the door manufacturer's instructions to swing open and shut without binding remaining in place at any angle without moving by gravitational influence.
B. Adjust door hardware to operate correctly in accordance with hardware manufacturer's maintenance instructions.

3.05 CLEANING
A. Clean exposed surfaces of FRP doors and frames with a mild, non-abrasive cleaner and water.

3.06 PROTECTION
A. Protect door opening assemblies and door hardware from damage by subsequent construction activities until final inspection.

END OF SECTION 08 16 13

SECTION 08 31 13 - ACCESS DOORS AND FRAMES

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Access doors and frames.

B. Related Requirements:
   1. Section 07 72 00 "Roof Accessories" for roof hatches.
   2. Section 23 33 00 "Air Duct Accessories" for heating and air-conditioning duct access doors.

1.02 ACTION SUBMITTALS

A. Product Data: For each type of product.
   1. Include construction details material descriptions, dimensions of individual components and profiles, and finishes.

B. Samples: For each type of access door and frame and for each finish specified, complete assembly minimum 6 by 6 inches (150 by 150 mm) in size.

C. Product Schedule: For access doors and frames. Use same designations indicated on Drawings.

1.03 CLOSEOUT SUBMITTALS

A. Record Documents: For fire-rated doors, list of applicable room name and number in which access door is located.

PART 2 - PRODUCTS

2.01 ACCESS DOORS AND FRAMES

A. Flush Access Doors with Exposed Flanges:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. ACUDOR Products, Inc.
      b. Babcock-Davis.
      c. Cendrex Inc.
      d. MIFAB, Inc.
      e. Williams Bros. Corporation of America (The).
   2. Description: Face of door flush with frame, with exposed flange and concealed hinge.
   3. Optional Features: Stainless Steel Piano hinges and Masonry anchors.
   4. Locations: Wall.
   5. Door Size: as indicated or as required.
   6. Stainless Steel Sheet for Door: Nominal 0.062 inch (1.59 mm), 16 gage, ASTM A480/A480M No. 4 finish.
   7. Frame Material: Same material, thickness, and finish as door.
   8. Latch and Lock: Corrosion resistant cam latch, screwdriver.

B. Interior Flush GFRG Access Doors with Concealed Flanges:
   1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:
      a. ACUDOR Products, Inc.
      b. Babcock-Davis.
      c. Cendrex Inc.

d. MIFAB, Inc.
e. Williams Bros. Corporation of America (The).

2. Description: Face of concealed-hinge door flush with frame, with concealed flange for gypsum board installation.
3. Locations: Ceiling.
4. Door Size: as indicated or as required.
5. Door Type Corrosion Resistant Concealed-hinge, square corner.
6. Door and Frame Material: Unpainted glass-fiber-reinforced gypsum, with frames reinforced for hardware and fastenings.
7. Latch and Lock: Corrosion resistant cam latch, screwdriver operated.

2.02 MATERIALS

A. Stainless Steel Plate, Sheet, and Strip: ASTM A240/A240M or ASTM A666, Type 316. Remove tool and die marks and stretch lines, or blend into finish.
B. Stainless Steel Flat Bars: ASTM A666, Type 316. Remove tool and die marks and stretch lines, or blend into finish.
C. Aluminum Extrusions: ASTM B221 (ASTM B221M), Alloy 6063.
D. Aluminum Sheet: ASTM B209 (ASTM B209M), alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated.
E. Frame Anchors: Same material as door face.

2.03 FABRICATION

A. General: Provide access door and frame assemblies manufactured as integral units ready for installation.
B. Metal Surfaces: For metal surfaces exposed to view in the completed Work, provide materials with smooth, flat surfaces without blemishes. Do not use materials with exposed pitting, seam marks, roller marks, rolled trade names, or roughness.
C. Doors and Frames: Grind exposed welds smooth and flush with adjacent surfaces. Furnish mounting holes, attachment devices and fasteners of type required to secure access doors to types of supports indicated.
   1. For concealed flanges with drywall bead, provide edge trim for gypsum panels securely attached to perimeter of frames.
D. Aluminum: After fabrication, apply manufacturer's standard protective coating on aluminum that will come in contact with concrete.

2.04 FINISHES

A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.
C. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
D. Painted Finishes: Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.
   1. Factory Primed: Apply manufacturer's standard, lead- and chromate-free, universal primer immediately after surface preparation and pretreatment.
E. Stainless Steel Finishes:
   1. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
   2. Polished Finish: ASTM A480/A480M No. 4 finish. Grind and polish surfaces to produce uniform finish, free of cross scratches.

a. Run grain of directional finishes with long dimension of each piece.
b. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.

PART 3 - EXECUTION

3.01 EXAMINATION
A. Examine substrates for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION
A. Comply with manufacturer's written instructions for installing access doors and frames.

3.03 ADJUSTING
A. Adjust doors and hardware, after installation, for proper operation.

END OF SECTION 08 31 13

SECTION 08 33 23 - OVERHEAD COILING DOORS

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Insulated service doors.

B. Related Requirements:
   1. Section 05 12 00 "Steel" for miscellaneous steel supports, door-opening framing, corner guards, and bollards.

1.02 ACTION SUBMITTALS

A. Product Data: For each type and size of overhead coiling door and accessory.
   1. Include construction details, material descriptions, dimensions of individual components, profiles for slats, and finishes.
   2. Include rated capacities, operating characteristics, electrical characteristics, and furnished accessories.

B. Shop Drawings: For each installation and for special components not dimensioned or detailed in manufacturer's product data.
   1. Include plans, elevations, sections, and mounting details.
   2. Include details of equipment assemblies, and indicate dimensions, required clearances, method of field assembly, components, and location and size of each field connection.
   3. Include points of attachment and their corresponding static and dynamic loads imposed on structure.
   4. For exterior components, include details of provisions for assembly expansion and contraction and for excluding and draining moisture to the exterior.
   5. Show locations of controls, locking devices, and other accessories.
   6. Include diagrams for power, signal, and control wiring.

C. Samples for Initial Selection: Manufacturer's finish charts showing full range of colors and textures available for units with factory-applied finishes.
   1. Include similar Samples of accessories involving color selection.

D. Samples for Verification: For each type of exposed finish on the following components, in manufacturer's standard sizes:
   1. Curtain slats.
   2. Bottom bar with sensor edge.
   3. Guides.
   4. Brackets.
   5. Hood.
   6. Locking device(s).
   7. Include similar Samples of accessories involving color selection.

1.03 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer.

B. Sample Warranty: For special warranty.

1.04 CLOSEOUT SUBMITTALS

A. Special warranty.

B. Maintenance Data: For overhead coiling doors to include in maintenance manuals.

1.05 QUALITY ASSURANCE

A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer for both installation and maintenance of units required for this Project.
   1. Maintenance Proximity: Not more than two hours' normal travel time from Installer's place of business to Project site.

1.06 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of doors that fail in materials or workmanship within specified warranty period.
   1. Warranty Period: Two years from date of Substantial Completion.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Source Limitations: Obtain overhead coiling doors from single source from single manufacturer.
   1. Obtain operators and controls from overhead coiling-door manufacturer.

2.02 PERFORMANCE REQUIREMENTS

A. Structural Performance, Exterior Doors: Capable of withstanding the following design wind loads:
   1. Design Wind Load: As indicated on Drawings.
   2. Deflection Limits: Design overhead coiling doors to withstand design wind load without evidencing permanent deformation or disengagement of door components.
   3. Operability under Wind Load: Design overhead coiling doors to remain operable under design wind load, acting inward and outward.

2.03 DOOR ASSEMBLY

A. Insulated Service Door: Overhead coiling door formed with curtain of interlocking metal slats.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Cookson; a CornellCookson company.
      b. Cornell; a CornellCookson company.
      c. Overhead Door Corporation.
      d. Wayne Dalton; a division of Overhead Door Corporation.

B. Operation Cycles: Door components and operators capable of operating for not less than 100,000. One operation cycle is complete when a door is opened from the closed position to the fully open position and returned to the closed position.
   1. Include tamperproof cycle counter.

C. Air Infiltration: Maximum rate of 1.0 cfm/sq. ft. (5.1 L/s per sq. m) at 15 and 25 mph (24.1 and 40.2 km/h) when tested according to ASTM E283 or DASMA 105.

D. Insulated Door Curtain R-Value: 7.7 deg F x h x sq. ft./Btu (1.356 K x sq. m/W).

E. Insulated Door Assembly U-Factor: 0.13 Btu/deg F x h x sq. ft. (0.738 W/K x sq. m).

F. Door Curtain Material: Stainless steel.

G. Door Curtain Slats: Flat profile slats of 3-1/4-inch (83-mm) center-to-center height.
   1. Fenestrated Slats: Approximately 3- by 5/8-inch (76- by 16-mm) openings spaced approximately 1-1/2 inches (38 mm) apart and beginning 12 inches (305 mm) from jamb guides.
   2. Insulated-Slat Interior Facing: Metal.
   3. Gasket Seal. Manufacturer's standard continuous gaskets between slats.

H. Bottom Bar: Two angles, each not less than 1-1/2 by 1-1/2 by 1/8 inch (38 by 38 by 3 mm) thick; fabricated from stainless steel extrusions and finished to match door.
I. Curtain Jamb Guides: Stainless steel with exposed finish matching curtain slats.
J. Hood: Match curtain material and finish.
   1. Shape: Round.
   2. Mounting: Face of wall.
K. Locking Devices: Equip door with locking device assembly.
   1. Locking Device Assembly: Corrosion resistant single-jamb side locking bars, operable from inside with thumbturn.
L. Manual Door Operator: Push-up operation or Chain-hoist operator depending on height of door.
M. Electric Door Operator:
   1. Usage Classification: Heavy duty, 25 or more cycles per hour and more than 90 cycles per day.
   2. Operator Location: Wall.
   3. Safety: Listed according to UL 325 by a qualified testing agency for commercial or industrial use; moving parts of operator enclosed or guarded if exposed and mounted at 8 ft. (2.44 m) or lower.
   4. Motor Exposure: Exterior, wet, and humid. Provide Explosion proof operator at Class I listed locations.
   5. Motor Electrical Characteristics:
      a. Horsepower: 1 hp.
      b. Voltage: 208 V ac, single phase, 60 Hz .
   6. Emergency Manual Operation: Chain type.
   7. Obstruction-Detection Device: Automatic electric sensor edge on bottom bar.
      a. Sensor Edge Bulb Color: Black.
   8. Control Station(s): Interior mounted.
N. Curtain Accessories: Equip door with weatherseals.
O. Door Finish:
   1. Stainless Steel Finish: ASTM A480/A480M No. 4 (polished directional satin).
   2. Interior Curtain-Slat Facing: Match finish of exterior curtain-slat face.

2.04 MATERIALS, GENERAL

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.05 DOOR CURTAIN MATERIALS AND CONSTRUCTION

A. Door Curtains: Fabricate overhead coiling-door curtain of interlocking metal slats, designed to withstand wind loading indicated, in a continuous length for width of door without splices. Unless otherwise indicated, provide slats of thickness and mechanical properties recommended by door manufacturer for performance, size, and type of door indicated, and as follows:
   1. Stainless Steel Door Curtain Slats: ASTM A240/A240M or ASTM A666, Type 304; sheet thickness of 0.025 inch (0.64 mm); and as required.
   2. Vision-Panel Glazing: Manufacturer's standard clear glazing, fabricated from transparent acrylic sheet or fire-protection-rated glass as required for type of door; set in glazing channel secured to curtain slats.
   3. Insulation: Fill slats for insulated doors with manufacturer's standard thermal insulation complying with maximum flame-spread and smoke-developed indexes of 75 and 450, respectively, according to ASTM E84 or UL 723. Enclose insulation completely within slat faces.
   4. Metal Interior Curtain-Slat Facing: Match metal of exterior curtain-slat face.

B. Curtain Jamb Guides: Manufacturer's standard angles or channels and angles of same material and finish as curtain slats, with sufficient depth and strength to retain curtain, to allow curtain to operate smoothly, and to withstand loading. Slot bolt holes for guide adjustment. Provide removable stops on guides to prevent overtravel of curtain.

2.06 HOODS

A. General: Form sheet metal hood to entirely enclose coiled curtain and operating mechanism at opening head. Contour to fit end brackets to which hood is attached. Roll and reinforce top and bottom edges for stiffness. Form closed ends for surface-mounted hoods and fascia for any portion of between-jamb mounting that projects beyond wall face. Equip hood with intermediate support brackets as required to prevent sagging.
   1. Stainless Steel: 0.025-inch- (0.64-mm-) thick, stainless-steel sheet, Type 304, complying with ASTM A240/A240M or ASTM A666.

B. Removable Metal Soffit: Formed or extruded from same metal and with same finish as curtain.

2.07 LOCKING DEVICES

A. Slide Bolt: Fabricate with side-locking bolts to engage through slots in tracks for locking by padlock, located on both left and right jamb sides, operable from coil side.

B. Safety Interlock Switch: Equip power-operated doors with safety interlock switch to disengage power supply when door is locked.

2.08 CURTAIN ACCESSORIES

A. Weatherseals for Exterior Doors: Equip each exterior door with weather-stripping gaskets fitted to entire exterior perimeter of door for a weather-resistant installation unless otherwise indicated.
   1. At door head, use 1/8-inch- (3-mm-) thick, replaceable, continuous-sheet baffle secured to inside of hood or field-installed on the header.
   2. At door jambs, use replaceable, adjustable, continuous, flexible, 1/8-inch- (3-mm-) thick seals of flexible vinyl, rubber, or neoprene.

2.09 COUNTERBALANCE MECHANISM

A. General: Counterbalance doors by means of manufacturer's standard mechanism with an adjustable-tension, steel helical torsion spring mounted around a steel shaft and contained in a spring barrel connected to top of curtain with barrel rings. Use grease-sealed bearings or self-lubricating graphite bearings for rotating members.

B. Counterbalance Barrel: Fabricate spring barrel of manufacturer's standard hot-formed, structural-quality, seamless carbon-steel pipe, of sufficient diameter and wall thickness to support rolled-up curtain without distortion of slats and to limit barrel deflection to not more than 0.03 in./ft. (2.5 mm/m) of span under full load.

C. Counterbalance Spring: One or more oil-tempered, heat-treated steel helical torsion springs. Size springs to counterbalance weight of curtain, with uniform adjustment accessible from outside barrel. Secure ends of springs to barrel and shaft with cast-steel barrel plugs.

D. Torsion Rod for Counterbalance Shaft: Fabricate of manufacturer's standard cold-rolled steel, sized to hold fixed spring ends and carry torsional load.

E. Brackets: Manufacturer's standard mounting brackets of either cast iron or cold-rolled steel plate.

2.10 MANUAL DOOR OPERATORS

A. General: Equip door with manual door operator by door manufacturer.

B. Chain-Hoist Operator: Consisting of endless steel hand chain, chain-pocket wheel and guard, and gear-reduction unit with a maximum 25-lbf (111-N) force for door operation. Provide stainless-steel hand chain with chain holder secured to operator guide.

2.11 ELECTRIC DOOR OPERATORS

A. General: Electric door operator assembly of size and capacity recommended and provided by door manufacturer for door and operation-cycles requirement specified, with electric motor and factory-prewired motor controls, starter, gear-reduction unit, solenoid-operated brake, clutch, control stations, control devices, integral gearing for locking door, and accessories required for proper operation.
   1. Comply with NFPA 70.
   2. Control equipment complying with NEMA ICS 1, NEMA ICS 2, and NEMA ICS 6, with NFPA 70 Class 2 control circuit, maximum 24-V ac or dc.
   3. Provide Explosion proof operator at Class I Division 1 listed locations.

B. Usage Classification: Electric operator and components capable of operating for not less than number of cycles per hour indicated for each door.

C. Door Operator Location(s): Operator location indicated for each door.
   1. Wall Mounted: Operator is mounted to the inside front wall on the left or right side of door and connected to door drive shaft with drive chain and sprockets. Side room is required for this type of mounting. Wall-mounted operator can also be mounted above or below shaft; if above shaft, headroom is required.

D. Motors: Reversible-type motor with controller (disconnect switch) for motor exposure indicated for each door assembly.
   1. Electrical Characteristics: Minimum as indicated for each door assembly. If not indicated, large enough to start, accelerate, and operate door in either direction from any position, at a speed not less than 8 in./sec. (203 mm/s) and not more than 12 in./sec. (305 mm/s), without exceeding nameplate ratings or service factor.
   2. Operating Controls, Controllers, Disconnect Switches, Wiring Devices, and Wiring: Manufacturer's standard unless otherwise indicated.
   3. Coordinate wiring requirements and electrical characteristics of motors and other electrical devices with building electrical system and each location where installed.

E. Limit Switches: Equip each motorized door with adjustable switches interlocked with motor controls and set to automatically stop door at fully opened and fully closed positions.

F. Obstruction-Detection Devices: External entrapment protection consisting of indicated automatic safety sensor capable of protecting full width of door opening. For non-fire-rated doors, activation of device immediately stops and reverses downward door travel.
   1. Electric Sensor Edge: Automatic safety sensor edge, located within astragal or weather stripping mounted to bottom bar. Contact with sensor activates device. Connect to control circuit using manufacturer's standard take-up reel or self-coiling cable.
      a. Self-Monitoring Type: Four-wire-configured device designed to interface with door operator control circuit to detect damage to or disconnection of sensor edge.

G. Control Station: Three-button control station in fixed location with momentary-contact push-button controls labeled "Open" and "Stop" and sustained- or constant-pressure push-button control labeled "Close."
   1. Interior-Mounted Units: Full-guarded, surface-mounted, heavy-duty type, with general-purpose NEMA ICS 6, Type 1 enclosure.
   2. Exterior-Mounted Units: Full-guarded, standard-duty, surface-mounted, weatherproof type, NEMA ICS 6, Type 4 enclosure, key operated.
   3. Provide Explosion proof at Class I Division 1 listed locations.

H. Emergency Manual Operation: Equip each electrically powered door with capability for emergency manual operation. Design manual mechanism so required force for door operation does not exceed 25 lbf (111 N).

I. Emergency Operation Disconnect Device: Equip operator with hand-operated disconnect mechanism for automatically engaging manual operator and releasing brake for emergency manual operation while disconnecting motor without affecting timing of limit switch. Mount mechanism so it is accessible from floor level. Include interlock device to automatically prevent motor from operating when emergency operator is engaged.

J. Motor Removal: Design operator so motor may be removed without disturbing limit-switch adjustment and without affecting emergency manual operation.

2.12 GENERAL FINISH REQUIREMENTS

A. Comply with NAAMM/NOMMA 500 for recommendations for applying and designating finishes.

B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.13 STAINLESS STEEL FINISHES

A. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.

B. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.

1. Run grain of directional finishes with long dimension of each piece.
2. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.
3. Directional Satin Finish: ASTM A480/A480M No. 4.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine substrates areas and conditions, with Installer present, for compliance with requirements for substrate construction and other conditions affecting performance of the Work.

B. Examine locations of electrical connections.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION, GENERAL

A. Install overhead coiling doors and operating equipment complete with necessary hardware, anchors, inserts, hangers, and equipment supports; according to manufacturer's written instructions and as specified.

B. Install overhead coiling doors, hoods, controls, and operators at the mounting locations indicated for each door.

C. Accessibility: Install overhead coiling doors, switches, and controls along accessible routes in compliance with the accessibility standard.

D. Power-Operated Doors: Install according to UL 325.

3.03 STARTUP SERVICE

A. Engage a factory-authorized service representative to perform startup service.

1. Complete installation and startup checks according to manufacturer's written instructions.
2. After electrical circuitry has been energized, operate doors to confirm proper motor rotation and door performance.
3. Test and adjust controls and safety devices. Replace damaged and malfunctioning controls and equipment.

3.04 ADJUSTING

A. Adjust hardware and moving parts to function smoothly so that doors operate easily, free of warp, twist, or distortion.
   1. Adjust exterior doors and components to be weather resistant.

B. Lubricate bearings and sliding parts as recommended by manufacturer.

C. Adjust seals to provide tight fit around entire perimeter.

3.05 MAINTENANCE SERVICE

A. Initial Maintenance Service: Beginning at Substantial Completion, maintenance service includes 12 months' full maintenance by skilled employees of coiling-door Installer. Include quarterly preventive maintenance, repair or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper door operation. Parts and supplies are to be manufacturer's authorized replacement parts and supplies.
   1. Include 24-hour-per-day, seven-day-per-week, emergency callback service.

3.06 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain overhead coiling doors.

END OF SECTION 08 33 23

SECTION 08 34 83 – FLOOR ACCESS DOORS

PART 1 - GENERAL

1.01 RELATED DOCUMENTS:

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY:

A. Section includes aluminum and stainless steel floor access doors.

1.03 REFERENCE STANDARDS:

A. Publication Dates: Comply with standards in effect as of date of the Contract Documents unless otherwise indicated.

B. ASTM International:

1. ASTM A 666 - Specification for Annealed or Cold-Worked Austenitic Stainless Steel Sheet, Strip, Plate, and Flat Bar.
2. ASTM A 793 – Standard Specification for Rolled Floor Plate, Stainless Steel.
3. ASTM A 879/A 879M - Specification for Steel Sheet, Zinc Coated by the Electrolytic Process for Applications Requiring Designation of the Coating Mass on Each Surface.
4. ASTM A 1008/A 1008M - Specifications for Steel, Sheet, Cold-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, Solution Hardened, and Bake Hardenable.
5. ASTM B 209 - Specification for Aluminum and Aluminum-Alloy Sheet and Plate.
6. ASTM B 221 - Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes.
7. ASTM B 632 – Standard Specification for Aluminum-Alloy Rolled Tread Plate.
8. ASTM F 2329 - Specification for Zinc Coating, Hot-Dip, Requirements for Application to Carbon and Alloy Steel Bolts, Screws, Washers, Nuts, and Special Threaded Fasteners.

C. National Association of Architectural Metal Manufacturers (NAAMM):

1. Metal Finishes Manual for Architectural and Metal Products.

D. Occupational Safety and Health Administration (OSHA):

1. 29 CFR 1910.28 – Duty to have Fall Protection and Falling Object Protection.

1.04 SUBMITTALS:

A. Product Data: Submit manufacturer's product data for each type of product.

1. Include construction details, materials, individual components, profiles, and finishes.

PART 2 - PRODUCTS

2.01 MANUFACTURERS:

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but not limited to, the following:

1. Acudor Products, Inc.
2. Babcock-Davis.
3. The BILCO Company.
4. Dur-Red Products.
5. Halliday Products, Inc.
6. Karp Associates, Ltd.
7. Milcore; Commercial Products Group of Hart & Cooley, Inc.
8. Nystrom, Inc.

9. U.S.F. Fabrications.

2.02 PERFORMANCE CRITERA:

A. Loading Criteria:
   1. 300-psf live load for all Floor Access Doors where doors are subjected to pedestrian traffic only.
   2. AASHTO H20 for all Floor Access Doors where doors are subjected to vehicular traffic.
B. All floor access doors over areas where potable water will be present shall be gasketed to be flood/watertight.

2.03 MATERIALS:

A. Rolled-Stainless Steel Floor Plate: ASTM A793, manufacturer's standard finish.
B. Stainless Steel Sheet, Strip, Plate, and Flat Bars: ASTM A666. Remove tool and die marks and stretch lines, or blend into finish.
C. Aluminum Extrusions: ASTM B221, Alloy 6063-T6.
D. Aluminum-Alloy Rolled Tread Plate: ASTM B632. Alloy 6061-T6.
E. Aluminum Sheet: ASTM B209, manufacturer required alloy and temper for type of use and finish indicated.
F. Frame Anchors: Type 316 stainless steel.

2.04 ALUMINUM FLOOR ACCESS DOORS:

A. Gutter Channel Frame Aluminum Floor Access Door:
   1. Frame: Mill finish aluminum, gutter profile, with integral drainage coupling and perimeter gasket.
   2. Door: Single or double leaf; 1/4"-inch thick diamond pattern mill-finish aluminum plate.
   3. Size: As indicated on drawings.
   4. Hardware:
      a. Material and Finish: Type 316 stainless steel, including latch and lifting mechanism assemblies, hold open arms, and brackets, hinges, pins, and fasteners.
      b. Hinges: Heavy-duty butt hinges with stainless pins.
      c. Operating Mechanism: Adjustable counterbalancing springs, heavy-duty hold-open arm that automatically locks door open at 90 degrees, release handle with vinyl grip that allows for one-handed closure, and recessed lift handle.
      d. Latch: Stainless steel slam latch.
      e. Lock: Recessed padlock hatch.

2.05 STAINLESS STEEL FLOOR ACCESS DOORS:

A. Gutter Channel Frame Stainless Steel Floor Access Door:
   1. Frame: Type 316 stainless steel, gutter profile, with integral drainage coupling and perimeter gasket.
   2. Door: Single or Double leaf; 1/4" thick, diamond pattern, Type 316 stainless steel plate.
   3. Size: As indicated on drawings.
   4. Latch: Stainless steel slam latch.
   5. Lock: Recessed padlock hatch.
   6. Hardware:
      a. Material and Finish: Type 316 stainless steel, including latch and lifting mechanism assemblies, hold-open arms, and brackets, hinges, pins, and fasteners.
      b. Hinges: Heavy-duty butt hinges with stainless steel pins.

c. Operating mechanism: Adjustable counterbalancing springs, heavy-duty hold-open arm that automatically locks door open at 90 degrees, release handle with vinyl grip that allows for one-handed closure, and recessed lift handle.
d. Latch: Stainless steel slam latch.
e. Lock: Recessed padlock hasp.

2.06 FABRICATION:

A. Provide floor access doors manufactured as integral units ready for installation.
B. For metal surfaces exposed to view in the completed Work, provide materials with smooth, flat surfaces without blemishes. Do not use materials with exposed pitting, seam marks, roller marks, rolled trade names, or roughness.
C. Grind exposed welds smooth and flush with adjacent surfaces. Furnish attachment devices, and fasteners of type required to secure floor access doors to types of supports indicated.
D. Latching Mechanism: Furnish number required to hold doors in flush, smooth plane when closed.
E. Install fall protection grating as required in Article 2.08 FALL PROTECTION GRATING, this section.

2.07 FINISHES:

A. Comply with NAAMM's "Meal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.
B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable temporary protective covering before shipping.
C. Appearance of Finished Work: Noticeable variations in the same piece are not acceptable.
D. Stainless Steel: Bright, cold-rolled, unpolished ASTM A480 No. 2B finish.

2.08 FALL PROTECTION GRATING:

A. Furnish and install fall protection grating system on all floor access doors during fabrication.
B. Grating: Panels shall be of aluminum construction in the alloy and temper standard of the manufacturer, complying with 29 CFR 1910.23
C. Color: High-visibility safety yellow.
D. Hold Open System: Type 316 hold open device that locks grating open at 90 degrees.

PART 3 - EXECUTION

3.01 EXAMINATION:

A. Examine substrates and openings for compliance with requirements for installation tolerances and other conditions affecting performance. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION:

A. Install floor access doors in accordance with the manufacturer's written instructions and approved submittals. Locate units level, plumb, and in proper alignment with adjacent work.
B. Aluminum: For aluminum floor access doors installed in concrete, apply an alkali-resistant bituminous coating, 15-mil minimum dry film thickness.
   1. Carboline – Bitumastic No. 50.
   2. Tnemec – H.B. Tnemecol 46-465.

3.03 ADJUSTING:

A. Adjust doors and hardware as required for proper operation.

END OF SECTION 08 34 83

SECTION 08 41 13 - ALUMINUM-FRAMED ENTRANCES AND STOREFRONTS

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Aluminum-framed storefront systems.
   2. Aluminum-framed entrance door systems.
   3. Aluminum-framed window systems.

B. Related Requirements:
   1. Division 1 "Mockups" for preconstruction wall mockup.

1.02 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.03 ACTION SUBMITTALS

A. Product Data: For each type of product.
   1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.

B. Sustainable Design Submittals:

C. Shop Drawings: For aluminum-framed entrances and storefronts. Include plans, elevations, sections, full-size details, and attachments to other work.
   1. Include details of provisions for assembly expansion and contraction and for draining moisture occurring within the assembly to the exterior.
   2. Include full-size isometric details of each type of vertical-to-horizontal intersection of aluminum-framed entrances and storefronts, showing the following:
      a. Joinery, including concealed welds.
      b. Anchorage.
      c. Expansion provisions.
      d. Glazing.
      e. Flashing and drainage.
   3. Show connection to and continuity with adjacent thermal, weather, air, and vapor barriers.
   4. Include point-to-point wiring diagrams showing the following:
      a. Power requirements for each electrically operated door hardware.
      b. Location and types of switches, signal device, conduit sizes, and number and size of wires.

D. Samples for Verification: For each type of exposed finish required, in manufacturer's standard sizes.

E. Entrance Door Hardware Schedule: Prepared by or under supervision of supplier, detailing fabrication and assembly of entrance door hardware, as well as procedures and diagrams. Coordinate final entrance door hardware schedule with doors, frames, and related work to ensure proper size, thickness, hand, function, and finish of entrance door hardware.

1.04 INFORMATIONAL SUBMITTALS

A. Certificates:
   1. Energy Performance Certificates: For aluminum-framed entrances and storefronts, accessories, and components, from manufacturer.
      a. Basis for Certification: NFRC-certified energy performance values for each aluminum-framed entrance and storefront.

B. Test and Evaluation Reports:
   1. Product Test Reports: For aluminum-framed entrances and storefronts, for tests performed by manufacturer and witnessed by a qualified testing agency.
C. Source Quality-Control Submittals:
   1. Source quality-control reports.
D. Quality-Control Program: Developed specifically for Project, including fabrication and installation, in accordance with recommendations in ASTM C1401. Include periodic quality-control reports.
E. Qualification Statements:
   1. For Installer and field testing agency.
F. Sample warranties.

1.05 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For aluminum-framed entrances and storefronts.

1.06 QUALITY ASSURANCE

A. Qualifications:
   1. Installers: An entity that employs installers and supervisors who are trained and approved by manufacturer and that employs a qualified glazing contractor for this Project who is certified under the North American Contractor Certification Program (NACC) for Architectural Glass & Metal (AG&M) contractors and that employs glazing technicians certified under the Architectural Glass and Metal Technician (AGMT) certification program.
   2. Testing Agency: Qualified in accordance with ASTM E699 for testing indicated and acceptable to Owner and Architect.
B. Product Options: Information on Drawings and in Specifications establishes requirements for aesthetic effects and performance characteristics of assemblies. Aesthetic effects are indicated by dimensions, arrangements, alignment, and profiles of components and assemblies as they relate to sightlines, to one another, and to adjoining construction.
   1. Do not change intended aesthetic effects, as judged solely by Architect, except with Architect's approval. If changes are proposed, submit comprehensive explanatory data to Architect for review.

1.07 WARRANTY

A. Special Warranty: Installer agrees to repair or replace components of aluminum-framed entrances and storefronts that do not comply with requirements or that fail in materials or workmanship within specified warranty period.
   1. Failures include, but are not limited to, the following:
      a. Structural failures, including, but not limited to, excessive deflection.
      b. Noise or vibration created by wind and thermal and structural movements.
      c. Deterioration of metals and other materials beyond normal weathering.
      d. Water penetration through fixed glazing and framing areas.
      e. Failure of operating components.
   2. Warranty Period: 10 years from date of Substantial Completion.
B. Special Finish Warranty, Anodized Finishes: Standard form in which manufacturer agrees to repair finishes or replace aluminum that shows evidence of deterioration of anodized finishes within specified warranty period.
   1. Deterioration includes, but is not limited to, the following:
      a. Color fading more than 5 Delta E units when tested in accordance with ASTM D 2244.

b. Chalking in excess of a No. 8 rating when tested in accordance with ASTM D 4214.
c. Cracking, peeling, or chipping.

2. Warranty Period: 10 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Source Limitations: Obtain all components of aluminum-framed entrance and storefront system, including framing and accessories, from a single manufacturer.

2.02 PERFORMANCE REQUIREMENTS

A. General Performance: Comply with performance requirements specified, as determined by testing of aluminum-framed entrances and storefronts representing those indicated for this Project without failure due to defective manufacture, fabrication, installation, or other defects in construction.
1. Aluminum-framed entrances and storefronts shall withstand movements of supporting structure, including, but not limited to, twist, column shortening, long-term creep, and deflection from uniformly distributed and concentrated live loads.
2. Failure also includes the following:
a. Thermal stresses transferring to building structure.
b. Glass breakage.
c. Noise or vibration created by wind and thermal and structural movements.
d. Loosening or weakening of fasteners, attachments, and other components.
e. Failure of operating units.

B. Structural Loads:
1. Wind Loads: As indicated on Drawings.
2. Other Design Loads: As indicated on Drawings.

C. Deflection of Framing Members Supporting Glass: At design wind load, as follows:
1. Deflection Normal to Wall Plane: Limited to 1/175 of clear span for spans of up to 13 feet 6 inches and to 1/240 of clear span plus 1/4 inch for spans greater than 13 feet 6 inches.
2. Deflection Parallel to Glazing Plane: Limited to amount not exceeding that which reduces glazing bite to less than 75 percent of design dimension and that which reduces edge clearance between framing members and glazing or other fixed components to less than 1/8 inch.
3. Cantilever Deflection: Limited to 2L/175 at unsupported cantilevers.

D. Structural: Test in accordance with ASTM E330/E330M as follows:
1. When tested at positive and negative wind-load design pressures, storefront assemblies, including entrance doors, do not evidence deflection exceeding specified limits.
2. When tested at 150 percent of positive and negative wind-load design pressures, storefront assemblies, including entrance doors and anchorage, do not evidence material failures, structural distress, or permanent deformation of main framing members exceeding 0.2 percent of span.
3. Test Durations: As required by design wind velocity, but not less than 10 seconds.

E. Water Penetration under Static Pressure: Test in accordance with ASTM E331 as follows:
1. No evidence of water penetration through fixed glazing and framing areas, including entrance doors, when tested in accordance with a minimum static-air-pressure differential of 20 percent of positive wind-load design pressure, but not less than 6.24 lbf/sq. ft.

F. Water Penetration under Dynamic Pressure: Test in accordance with AAMA 501.1 as follows:

1. No evidence of water penetration through fixed glazing and framing areas when tested at dynamic pressure equal to 20 percent of positive wind-load design pressure, but not less than 6.24 lbf/sq. ft.
2. Maximum Water Leakage: No uncontrolled water penetrating assemblies or water appearing on assemblies' normally exposed interior surfaces from sources other than condensation. Water leakage does not include water controlled by flashing and gutters, or water that is drained to exterior.

G. Energy Performance: Certified and labeled by manufacturer for energy performance as follows:
1. Thermal Transmittance (U-factor):
   a. Fixed Glazing and Framing Areas: U-factor for the system of not more than 0.36 Btu/sq. ft. x h x deg F determined in accordance with NFRC 100.
   b. Entrance Doors: U-factor of not more than 0.36 Btu/sq. ft. x h x deg F determined in accordance with NFRC 100.
2. Solar Heat-Gain Coefficient (SHGC):
   a. Fixed Glazing and Framing Areas: SHGC for the system of not more than 0.35 as determined in accordance with NFRC 200.
   b. Entrance Doors: SHGC of not more than 0..36 as determined in accordance with NFRC 200.
3. Air Leakage:
   a. Fixed Glazing and Framing Areas: Air leakage for the system of not more than 0.06 cfm/sq. ft. at a static-air-pressure differential of 1.57 lbf/sq. ft. when tested in accordance with ASTM E283.
   b. Entrance Doors: Air leakage of not more than 1.0 cfm/sq. ft. at a static-air-pressure differential of 1.57 lbf/sq. ft..
4. Condensation Resistance Factor (CRF):
   a. Fixed Glazing and Framing Areas: CRF for the system of not less than 55 as determined in accordance with AAMA 1503.
   b. Entrance Doors: CRF of not less than 63 as determined in accordance with AAMA 1503.

H. Thermal Movements: Allow for thermal movements resulting from ambient and surface temperature changes.
1. Temperature Change: 120 deg F, ambient; 180 deg F, material surfaces.
2. Thermal Cycling: No buckling; stress on glass; sealant failure; excess stress on framing, anchors, and fasteners; or reduction of performance when tested in accordance with AAMA 501.5.
   a. High Exterior Ambient-Air Temperature: That which produces an exterior metal-surface temperature of 180 deg F.
   b. Low Exterior Ambient-Air Temperature: 0 deg F.
   c. Interior Ambient-Air Temperature: 75 deg F.

2.03 STOREFRONT SYSTEMS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. EFCO Corporation.
2. Kawneer Company, Inc.; Arconic Corporation.
3. OldCastle BuildingEnvelope (OBE).
4. Tubelite Inc.

B. Framing Members: Manufacturer's extruded- or formed-aluminum framing members of thickness required and reinforced as required to support imposed loads.
1. Exterior Framing Construction: Thermally broken.

2. Interior Vestibule Framing Construction: Nonthermal.
3. Glazing System: Retained mechanically with gaskets on four sides.
4. Glazing Plane: Front.
5. Finish: Clear anodic finish**.**
6. Fabrication Method: Field-fabricated stick system.
7. Aluminum: Alloy and temper recommended by manufacturer for type of use and finish indicated.
8. Steel Reinforcement: As required by manufacturer.

C. Backer Plates: Manufacturer's standard, continuous backer plates for framing members, if not integral, where framing abuts adjacent construction.

D. Brackets and Reinforcements: Manufacturer's standard high-strength aluminum with nonstaining, nonferrous shims for aligning system components.

2.04 ENTRANCE DOOR SYSTEMS

A. Entrance Doors: Manufacturer's standard glazed entrance doors for manual-swing or automatic operation.
1. Door Construction: 1-3/4-inch overall thickness, with minimum 0.125-inch-thick, extruded-aluminum tubular rail and stile members. Mechanically fasten corners with reinforcing brackets that are deeply penetrated and fillet welded or that incorporate concealed tie rods.
a. Thermal Construction: High-performance plastic connectors separate aluminum members exposed to the exterior from members exposed to the interior.
2. Door Design: As indicated.
3. Glazing Stops and Gaskets: Beveled, snap-on, extruded-aluminum stops and preformed gaskets.
a. Provide nonremovable glazing stops on outside of door.
4. Finish: Match adjacent storefront framing finish.

2.05 ENTRANCE DOOR HARDWARE

A. Entrance Door Hardware: Hardware not specified in this Section is specified in Section 08 71 00 "Door Hardware."

B. General: Provide entrance door hardware and entrance door hardware sets indicated in "Entrance Door Hardware Sets" Article for each entrance door, to comply with requirements in this Section.
1. Entrance Door Hardware Sets: Provide quantity, item, size, finish or color indicated, and products complying with BHMA standard referenced.
2. Sequence of Operation: Provide electrified door hardware function, sequence of operation, and interface with other building control systems indicated.
3. Opening-Force Requirements:
a. Egress Doors: Not more than 15 lbf to release the latch and not more than 30 lbf to set the door in motion and not more than 15 lbf to open the door to its minimum required width.
b. Accessible Interior Doors: Not more than 5 lbf to fully open door.

C. Continuous-Gear Hinges: BHMA A156.26.

D. Mortise Auxiliary Locks: BHMA A156.5, Grade 1.

E. Panic Exit Devices: BHMA A156.3, Grade 1, listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for panic protection, based on testing in accordance with UL 305.

F. Cylinders:
1. As specified in Section 08 71 00 "Door Hardware."

G. Strikes: Provide strike with black-plastic dust box for each latch or lock bolt; fabricated for aluminum framing.
H. Operating Trim: BHMA A156.6.
I. Closers: BHMA A156.4, Grade 1, with accessories required for a complete installation, sized as required by door size, exposure to weather, and anticipated frequency of use; adjustable to comply with field conditions and requirements for opening force.
J. Weather Stripping: Manufacturer's standard replaceable components.
   1. Compression Type: Made of ASTM D2000 molded neoprene or ASTM D2287 molded PVC.
   2. Sliding Type: AAMA 701/702, made of wool, polypropylene, or nylon woven pile with nylon-fabric or aluminum-strip backing.
K. Weather Sweeps: Manufacturer's standard exterior-door bottom sweep with concealed fasteners on mounting strip.
L. Thresholds: BHMA A156.21 raised thresholds beveled with a slope of not more than 1:2, with maximum height of 1/2 inch.

2.06 GLAZING

A. Glazing: Comply with Section 08 80 00 "Glazing."
B. Glazing Gaskets: Manufacturer's standard sealed-corner pressure-glazing system of black, resilient elastomeric glazing gaskets, setting blocks, and shims or spacers.

2.07 MATERIALS

A. Sheet and Plate: ASTM B209.
B. Extruded Bars, Rods, Profiles, and Tubes: ASTM B221.
C. Structural Profiles: ASTM B308/B308M.
D. Steel Reinforcement:
   1. Structural Shapes, Plates, and Bars: ASTM A36/A36M.
   2. Cold-Rolled Sheet and Strip: ASTM A1008/A1008M.
   3. Hot-Rolled Sheet and Strip: ASTM A1011/A1011M.
E. Steel Reinforcement Primer: Manufacturer's standard zinc-rich, corrosion-resistant primer complying with SSPC-PS Guide No. 12.00; applied immediately after surface preparation and pretreatment. Select surface preparation methods in accordance with recommendations in SSPC-SP COM, and prepare surfaces in accordance with applicable SSPC standard.

2.08 ACCESSORIES

A. Fasteners and Accessories: Manufacturer's standard corrosion-resistant, nonstaining, nonbleeding fasteners and accessories compatible with adjacent materials.
   1. Use self-locking devices where fasteners are subject to loosening or turning out from thermal and structural movements, wind loads, or vibration.
   2. Reinforce members as required to receive fastener threads.
B. Anchors: Three-way adjustable anchors with minimum adjustment of 1 inch that accommodate fabrication and installation tolerances in material and finish compatible with adjoining materials and recommended by manufacturer.
   1. Concrete and Masonry Inserts: Hot-dip galvanized cast-iron, malleable-iron, or steel inserts complying with ASTM A123/A123M or ASTM A153/A153M requirements.
C. Concealed Flashing: Manufacturer's standard corrosion-resistant, nonstaining, nonbleeding flashing compatible with adjacent materials.
D. Bituminous Paint: Cold-applied asphalt-mastic paint containing no asbestos, formulated for 30-mil thickness per coat.
E. Rigid PVC filler.

2.09 FABRICATION

A. Form or extrude aluminum shapes before finishing.

B. Weld in concealed locations to greatest extent possible to minimize distortion or discoloration of finish. Remove weld spatter and welding oxides from exposed surfaces by descaling or grinding.

C. Fabricate components that, when assembled, have the following characteristics:
   1. Profiles that are sharp, straight, and free of defects or deformations.
   2. Accurately fitted joints with ends coped or mitered.
   3. Physical and thermal isolation of glazing from framing members.
   4. Accommodations for thermal and mechanical movements of glazing and framing to maintain required glazing edge clearances.
   5. Provisions for field replacement of glazing from.
   6. Fasteners, anchors, and connection devices that are concealed from view to greatest extent possible.

D. Mechanically Glazed Framing Members: Fabricate for flush glazing without projecting stops.

E. Storefront Framing: Fabricate components for assembly using shear-block system or screw-spline system.

F. Entrance Door Frames: Reinforce as required to support loads imposed by door operation and for installing entrance door hardware.

G. At interior and exterior doors, provide compression weather stripping at fixed stops.

H. Entrance Doors: Reinforce doors as required for installing entrance door hardware.
   1. At pairs of exterior doors, provide sliding-type weather stripping retained in adjustable strip and mortised into door edge.
   2. At exterior doors, provide weather sweeps applied to door bottoms.

I. Entrance Door Hardware Installation: Factory install entrance door hardware to the greatest extent possible. Cut, drill, and tap for factory-installed entrance door hardware before applying finishes.

J. After fabrication, clearly mark components to identify their locations in Project in accordance with Shop Drawings.

2.010 ALUMINUM FINISHES

A. Clear Anodic Finish: AAMA 611, AA-M12C22A41, Class I, 0.018 mm or thicker.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine areas, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION, GENERAL

A. Comply with manufacturer's written instructions.

B. Do not install damaged components.

C. Fit joints to produce hairline joints free of burrs and distortion.

D. Rigidly secure nonmovement joints.

E. Install anchors with separators and isolators to prevent metal corrosion and electrolytic deterioration and to prevent impeding movement of moving joints.

F. Seal perimeter and other joints watertight unless otherwise indicated.

G. Metal Protection:

1. Where aluminum is in contact with dissimilar metals, protect against galvanic action by painting contact surfaces with materials recommended by manufacturer for this purpose or by installing nonconductive spacers.
2. Where aluminum is in contact with concrete or masonry, protect against corrosion by painting contact surfaces with bituminous paint.

H. Set continuous sill members and flashing in full sealant bed, as specified in Section 07 92 00 "Joint Sealants," to produce weathertight installation.

I. Install joint filler behind sealant as recommended by sealant manufacturer.

J. Install components plumb and true in alignment with established lines and grades.

3.03 INSTALLATION OF GLAZING

A. Install glazing as specified in Section 08 80 00 "Glazing."

3.04 INSTALLATION OF WEATHERSEAL SEALANT

A. Install weatherseal sealant to completely fill cavity, in accordance with sealant manufacturer's written instructions, to produce weatherproof joints.

3.05 INSTALLATION OF ALUMINUM-FRAMED ENTRANCE DOORS

A. Install entrance doors to produce smooth operation and tight fit at contact points.
1. Exterior Doors: Install to produce weathertight enclosure and tight fit at weather stripping.
2. Field-Installed Entrance Door Hardware: Install surface-mounted entrance door hardware in accordance with entrance door hardware manufacturers' written instructions using concealed fasteners to greatest extent possible.

3.06 ERECTION TOLERANCES

A. Install aluminum-framed entrances and storefronts to comply with the following maximum tolerances:
1. Plumb: 1/8 inch in 10 feet; 1/4 inch in 40 feet.
2. Level: 1/8 inch in 20 feet; 1/4 inch in 40 feet.
3. Alignment:
   a. Where surfaces abut in line or are separated by reveal or protruding element up to 1/2 inch wide, limit offset from true alignment to 1/16 inch.
   b. Where surfaces are separated by reveal or protruding element from 1/2 to 1 inch wide, limit offset from true alignment to 1/8 inch.
   c. Where surfaces are separated by reveal or protruding element of 1 inch wide or more, limit offset from true alignment to 1/4 inch.
4. Location: Limit variation from plane to 1/8 inch in 12 feet; 1/2 inch over total length.

3.07 FIELD QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

B. Tests and Inspections: Perform the following tests on [representative areas of aluminum-framed entrances and storefronts] [mockups].
1. Water-Spray Test: Before installation of interior finishes has begun, areas designated by Architect shall be tested in accordance with AAMA 501.2 and shall not evidence water penetration.
   a. Perform a minimum of three tests in areas as directed by Architect.
2. Air Leakage: ASTM E783 at 1.5 times the rate specified for laboratory testing in "Performance Requirements" Article but not more than 0.09 cfm/sq. ft. at a static-air-pressure differential of 1.57 lbf/sq. ft..
   a. Perform a minimum of three tests in areas as directed by Architect.

3. Water Penetration: ASTM E1105 at a minimum uniform and cyclic static-air-pressure differential of 0.67 times the static-air-pressure differential specified for laboratory testing in "Performance Requirements" Article, but not less than 6.24 lbf/sq. ft., and shall not evidence water penetration.

C. Aluminum-framed entrances and storefronts will be considered defective if they do not pass tests and inspections.

D. Prepare test and inspection reports.

3.08 MAINTENANCE SERVICE

A. Entrance Door Hardware Maintenance:

1. Maintenance Tools and Instructions: Furnish a complete set of specialized tools and maintenance instructions as needed for Owner's continued adjustment, maintenance, and removal and replacement of entrance door hardware.
2. Initial Maintenance Service: Beginning at Substantial Completion, provide six months' full maintenance by skilled employees of entrance door hardware Installer. Include quarterly preventive maintenance, repair or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper entrance door hardware operation at rated speed and capacity. Use parts and supplies that are the same as those used in the manufacture and installation of original equipment.

END OF SECTION 08 41 13

SECTION 08 45 23 - FIBERGLASS-SANDWICH-PANEL ASSEMBLIES

PART 1 - GENERAL

1.01 SUMMARY

A. Section includes aluminum-framed assemblies incorporating fiberglass-sandwich panels as follows:
   1. Wall assemblies.
   2. Roof assemblies.
   3. Skylight assemblies.

1.02 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.03 ACTION SUBMITTALS

A. Product Data: For each type of product.
   1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for aluminum components of panel assemblies.
B. Sustainable Design Submittals:
C. Shop Drawings: For panel assemblies.
   1. Include plans, elevations, sections, details, and attachments to other work.
   2. Include details of provisions for assembly expansion and contraction and for draining moisture within the assembly to the exterior.
D. Samples: In manufacturer's standard size.
   1. For each type of fiberglass-sandwich panel.
   2. For each type of exposed finish for framing members.
E. Delegated Design Submittals: For panel assemblies indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.04 INFORMATIONAL SUBMITTALS

A. Qualification Data: For qualified installer and manufacturer and testing agency.
B. Product Test Reports: For each fiberglass-sandwich-panel assembly, for tests performed by a qualified testing agency.
C. Evaluation Reports: For fiberglass-sandwich-panel assemblies from ICC-ES.
D. Field quality-control reports.
E. Sample Warranties: For special warranties.

1.05 CLOSEOUT SUBMITTALS

A. Maintenance Data: For panel assemblies to include in maintenance manuals.

1.06 QUALITY ASSURANCE

A. Manufacturer Qualifications: For fiberglass-sandwich panels, a qualified manufacturer whose facilities, processes, and products are monitored by an independent, accredited quality-control agency for compliance with applicable requirements in ICC-ES AC04 or ICC-ES AC177.
   1. Panel system must be listed by an ANSI accredited Evaluation Service, which requires quality control inspections and fire, structural, and water infiltration testing of sandwich panel systems by an accredited agency.
B. Installer Qualifications: An authorized representative who is trained and approved by manufacturer.

1.07 WARRANTY

A. Manufacturer's Warranty: Manufacturer agrees to repair or replace components of panel assemblies that fail in materials or workmanship within specified warranty period.
   1. Failures include, but are not limited to, the following:
      a. Structural failures including, but not limited to, excessive deflection.
      b. Deterioration of metals, metal finishes, and other materials beyond normal weathering.
      c. Water leakage.
   2. Warranty Period: Five years from date of Substantial Completion.

B. Manufacturer's Special Warranty: Manufacturer agrees to repair or replace fiberglass-sandwich panels that exhibit defects in materials or workmanship within specified warranty period.
   1. Defects include, but are not limited to, the following:
      a. Fiberbloom.
      b. Delamination of coating, if any, from exterior face sheet.
      c. Color change exceeding requirements.
      d. Delamination of panel face sheets from panel cores.
   2. Warranty Period: 10 years from date of Substantial Completion.

C. Special Aluminum-Finish Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components on which finishes fail within specified warranty period. Warranty does not include normal weathering.
   1. Failures include, but are not limited to, checking, crazing, peeling, chalking, and fading of finishes.
   2. Warranty Period: 10 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer, as defined in Division 1 fop quality requirements, to design fiberglass-sandwich-panel assemblies.

B. Structural Loads: As indicated on Drawings.

C. Deflection Limits:
   1. Vertical Panel Assemblies: Limited to 1/60 of clear span for each assembly component.

D. Structural-Test Performance: Provide panel assemblies tested in accordance with ASTM E330, as follows:
   1. When tested at positive and negative wind-load design pressures, assemblies do not show evidence of deflection exceeding specified limits.
   2. When tested at 150 percent of positive and negative wind-load design pressures, assemblies, including anchorage, do not show evidence of material failures, structural distress, and permanent deformation of main framing members exceeding 0.2 percent of span.
   3. Test Durations: As required by design wind velocity, but not less than 10 seconds.

E. Windborne-Debris Impact Resistance: Passes ASTM E1886 missile-impact and cyclic-pressure tests in accordance with ASTM E1996 for Wind Zone 4 for basic protection.
   1. Large-Missile Test: For glazing located within 30 feet of grade.
   2. Small-Missile Test: For glazing located between 30 feet and 60 feet above grade.

F. Water Penetration under Static Pressure: Provide panel assemblies that do not evidence water penetration through fixed glazing and framing areas when tested in accordance with ASTM E331 at a minimum static-air-pressure difference of 20 percent of positive wind-load design pressure, but not less than 6.24 lbf/sq. ft..

G. Water Penetration under Dynamic Pressure: Provide panel assemblies that do not evidence water leakage through fixed glazing and framing areas when tested in accordance with

AAMA 501.1 under dynamic pressure equal to 20 percent of positive wind-load design pressure, but not less than 6.24 lbf/sq. ft..

1. Maximum Water Leakage: No uncontrolled water penetrating aluminum-framed systems or water appearing on systems' normally exposed interior surfaces from sources other than condensation. Water leakage does not include water that is controlled by flashing and gutters and drained to the exterior, or water that cannot damage adjacent materials or finishes.

H. Thermal Movements: Allow for thermal movements from ambient- and surface-temperature changes. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.

1. Temperature Change (Range): 110 deg F, ambient; 150 deg F, material surfaces.

I. Energy Performance: Provide panel assemblies with performance properties specified, as indicated in manufacturer's published test data, based on procedures indicated below:

1. Thermal Transmittance (U-Factor): Fixed glazing and framing areas to have U-factor of not more than 0.29 Btu/sq. ft. x h x deg F as determined in accordance with NFRC 100.
2. Solar Heat Gain Coefficient (SHGC): Fixed glazing and framing areas to have a SHGC of no greater than 0.36 as determined in accordance with NFRC 200.
3. Air Infiltration: Maximum air leakage through fixed glazing and framing areas of 0.30 cfm/sq. ft. of fixed wall area as determined in accordance with ASTM E283 at a minimum static-air-pressure differential of 1.57 lbf/sq. ft.

2.02 FIBERGLASS-SANDWICH-PANEL ASSEMBLIES

A. Fiberglass-Sandwich-Panel Assemblies: Translucent assemblies that are supported by aluminum framing and glazed with fiberglass-sandwich panels.

1. Manufacturers: Subject to compliance with requirements, provide products by the following:
   a. Kalwall Corporation.

2.03 FIBERGLASS-SANDWICH PANELS

A. Fiberglass-Sandwich Panels: Uniformly colored, translucent, thermoset, fiberglass-reinforced-polymer face sheets bonded to both sides of a grid core.

1. Core Insulation: Fill panel cores with aerogel.

B. Panel Thickness: 2-3/4 inches.

C. Grid Core: Mechanically interlocked, extruded-aluminum I-beams, with a minimum flange width of 7/16 inch.

1. Extruded Aluminum: ASTM B221, in alloy and temper recommended in writing by manufacturer.
2. I-Beam Construction: Thermally broken, extruded aluminum.
3. Grid Pattern: As selected from manufacturer’s full range.

D. Exterior Face Sheet:

1. Thickness: 0.070 inch.
2. Color: As selected by Architect from manufacturer's full range.
3. Protective Weathering Surface: Manufacturer's standard.

E. Interior Face Sheet:

1. Thickness: 0.045 inch.
2. Color: As selected by Architect from manufacturer's full range.

F. Fiberglass-Sandwich-Panel Adhesive: Manufacturer's standard for permanent adhesion of facings to cores.

G. Panel Strength:

1. Maximum Panel Deflection: 3-1/2 inches when a 4-by-12-foot panel is tested in accordance with ASTM E72 at 34 lbf/sq. ft., with a maximum 0.090-inch set deflection after five minutes.
2. Panel Support Strength: Capable of supporting, without failure, a 300-lbf concentrated load when applied to a 3-inch-diameter disk in accordance with ASTM E661.

H. Panel Performance:
1. Self-Ignition Temperature: 650 deg F or more in accordance with ASTM D1929.
2. Smoke-Developed Index: 450 or less in accordance with ASTM E84, or 75 or less in accordance with ASTM D2843.
3. Combustibility Classification: Class CC1 based on testing in accordance with ASTM D635.
4. Interior Finish Classification: Class A based on testing in accordance with ASTM E84.
5. Color Change: Not more than 3.0 units Delta E, when measured in accordance with ASTM D2244, after outdoor weathering compliant with procedures in ASTM D1435.
   a. Outdoor Weathering Conditions: Sixty months in southern Florida.
6. Impact Resistance: No fracture or tear at impact of 60 ft. x lbf by a 3-1/4-inch-diameter, 5-lb freefalling ball in accordance with UL 972 test procedure.
7. Haze Factor: Greater than 90 percent when tested in accordance with ASTM D1003.

2.04 ALUMINUM FRAMING SYSTEMS

A. Components: Manufacturer's standard extruded-aluminum members of thickness required and reinforced as required to support imposed loads.
1. Construction: Thermally broken, extruded aluminum.

B. Aluminum: Alloy and temper recommended in writing by manufacturer for type of use and finish indicated.
1. Sheet and Plate: ASTM B209.
2. Extruded Bars, Rods, Profiles, and Tubes: ASTM B221.
3. Extruded Structural Pipe and Tubes: ASTM B429/B429M.
4. Structural Profiles: ASTM B308/B308M.

C. Brackets and Reinforcements: Manufacturer's standard high-strength aluminum with nonstaining, nonferrous shims for aligning skylight components.

D. Fasteners and Accessories: Manufacturer's standard, corrosion-resistant, nonstaining, and nonbleeding fasteners and accessories; compatible with adjacent materials.
1. At closures, retaining caps, or battens, use ASTM A193/A193M, 300 series stainless steel screws.
2. Use self-locking devices where fasteners are subject to loosening or turning out from thermal and structural movements, wind loads, or vibration.
3. At movement joints, use slip-joint linings, spacers, and sleeves of material and type recommended in writing by manufacturer.

E. Anchor Bolts: ASTM A307, Grade A, galvanized steel.

F. Concealed Flashing: Corrosion-resistant, nonstaining, nonbleeding flashing compatible with adjacent materials.

G. Exposed Flashing and Closures: Aluminum sheet not less than 0.050 inch thick, finished to match framing.

H. Galvanized steel lifting eyebolts. Providing multiple aluminum clip angles as lifting attachment points does not meet the design intent and is not acceptable. Anchor bolts shall be accessed from the outside by removing the perimeter flashing.

I. Framing Gaskets: Manufacturer's standard.

J. Frame-System Sealants: As recommended in writing by manufacturer.

K. Corrosion-Resistant Coating: Cold-applied asphalt mastic, compounded for 15-mil dry film thickness per coat. Provide inert-type noncorrosive compound free of asbestos fibers, sulfur components, and other deleterious impurities.

2.05 FABRICATION

A. Frame System Fabrication:
   1. Fabricate components that, when assembled, have the following characteristics:
      a. Profiles that are sharp, straight, and free of defects or deformations.
      b. Accurately fitted joints with ends coped or mitered.
      c. Internal guttering systems or other means to drain water passing through joints, and moisture migrating within assembly to exterior.
   2. Fabricate sill closures with weep holes and for installation as continuous component.
   3. Reinforce components as required to receive fastener threads.

B. Panel Fabrication: Factory assemble and seal panels.
   1. Laminate face sheets to grid core under a controlled process using heat and pressure to produce straight adhesive bonding lines that cover width of core members and that have sharp edges.
      a. White spots indicating lack of bond at intersections of grid-core members are limited in number to four for every 40 sq. ft. of panel and limited in diameter to 3/64 inch.
   2. Fabricate with grid pattern that is symmetrical about centerlines of each panel.
   3. Fabricate panel to allow condensation within panel to escape.
   4. Reinforce panel corners.

2.06 ALUMINUM FINISHES

A. Clear Anodic Finish: AAMA 611, AA-M12C22A41, Class I, 0.018 mm or thicker.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine areas and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 DELIVERY, STORAGE AND HANDLING

A. Deliver panel system, components, and materials in manufacturer’s standard protective packaging.

B. Store panels on the long edge; several inches above the ground, blocked and under cover in accordance with manufacturer’s storage and handling instructions.

3.03 INSTALLATION

A. General: Comply with manufacturer's written instructions.
   1. Do not install damaged components.
   2. Fit joints between aluminum components with hairline joints free of burrs and distortion.
   3. Rigidly secure nonmovement joints.
   4. Install anchors with separators and isolators to prevent metal corrosion, electrolytic deterioration, and immobilization of moving joints.
   5. Seal joints watertight unless otherwise indicated.

B. Metal Protection: Where aluminum components will contact dissimilar materials, protect against galvanic action by painting contact surfaces with corrosion-resistant coating or by installing nonconductive spacers as recommended in writing by manufacturer for this purpose.

C. Install components plumb and true in alignment with established lines and elevations.
D. Skylight Assemblies: Install continuous aluminum sill closures with weatherproof expansion joints and locked and sealed corners. Locate weep holes at rafters. Install components to drain water passing through joints and moisture migrating within assembly to exterior.
E. Erection Tolerances: Install panel assemblies to comply with the following maximum tolerances:
    1. Alignment: Limit offset from true alignment to 1/32 inch where surfaces abut in line, edge to edge, at corners, or where a reveal or protruding element separates aligned surfaces by less than 3 inches; otherwise, limit offset to 1/8 inch.
    2. Location and Plane: Limit variation from true location and plane to 1/8 inch in 12 feet, but no greater than 1/2 inch over total length.

3.04 FIELD QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.
    1. Water-Spray Test: Before installation of interior finishes has begun, panel assemblies to be tested in accordance with AAMA 501.2 and not show evidence of water penetration.
    2. Water Penetration under Static Pressure: Before installation of interior finishes has begun, areas to be tested in accordance with ASTM E1105.
        a. Test Procedures: Test under uniform and cyclic static-air pressure.
        b. Water Penetration: None.
B. Repair or remove work where test results and inspections indicate that it does not comply with specified requirements.
C. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.
D. Prepare test and inspection reports.

3.05 CLEANING

A. Clean the panel system, interior and exterior, immediately after installation.
B. Refer to manufacturer's written recommendations.

END OF SECTION 08 45 23

SECTION 08 71 00 - DOOR HARDWARE

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Mechanical door hardware for the following:
      a. Swinging doors.
   2. Cylinders for door hardware specified in other Sections.
   3. Electrified door hardware.

B. Related Requirements:
   1. Section 08 31 13 "Access Doors and Frames" for access door hardware.
   2. Section 08 33 23 "Overhead Coiling Doors" for door hardware provided as part of overhead coiling door assemblies.
   3. Section 08 41 13 "Aluminum-Framed Entrances and Storefronts" for entrance door hardware, except cylinders.
   4. Division 28 for detection devices installed at door openings and provided as part of an intrusion-detection system.
   5. Division 28 for connections to building fire-alarm system.

1.02 COORDINATION

A. Installation Templates: Distribute for doors, frames, and other work specified to be factory prepared. Check Shop Drawings of other work to confirm that adequate provisions are made for locating and installing door hardware to comply with indicated requirements.

B. Security: Coordinate installation of door hardware, keying, and access control with Owner's security consultant.

C. Electrical System Roughing-In: Coordinate layout and installation of electrified door hardware with connections to power supplies and building safety and security systems.

D. Existing Openings: Where hardware components are scheduled for application to existing construction or where modifications to existing door hardware are required, field verify existing conditions and coordinate installation of door hardware to suit opening conditions and to provide proper door operation.

1.03 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.
   1. Conference participants shall include Installer's Architectural Hardware Consultant and Owner's security consultant.

B. Keying Conference: Conduct conference at Project site.
   1. Conference participants shall include Installer's Architectural Hardware Consultant and Owner's security consultant.
   2. Incorporate conference decisions into keying schedule after reviewing door hardware keying system including, but not limited to, the following:

a. Flow of traffic and degree of security required.
b. Preliminary key system schematic diagram.
c. Requirements for key control system.
d. Requirements for access control.
e. Address for delivery of keys.

1.04 ACTION SUBMITTALS

A. Product Data: For each type of product.
1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.

B. Shop Drawings: For electrified door hardware.
1. Include diagrams for power, signal, and control wiring.
2. Include details of interface of electrified door hardware and building safety and security systems.

C. Door Hardware Schedule: Prepared by or under the supervision of Installer's Architectural Hardware Consultant. Coordinate door hardware schedule with doors, frames, and related work to ensure proper size, thickness, hand, function, and finish of door hardware.
1. Submittal Sequence: Submit door hardware schedule concurrent with submissions of Product Data, Samples, and Shop Drawings. Coordinate submission of door hardware schedule with scheduling requirements of other work to facilitate the fabrication of other work that is critical in Project construction schedule.
2. Format: Use same scheduling sequence and format and use same door numbers as in door hardware schedule in the Contract Documents.
3. Content: Include the following information:
a. Identification number, location, hand, fire rating, size, and material of each door and frame.
b. Locations of each door hardware set, cross-referenced to Drawings on floor plans and to door and frame schedule.
c. Complete designations, including name and manufacturer, type, style, function, size, quantity, function, and finish of each door hardware product.
d. Fastenings and other installation information.
e. Explanation of abbreviations, symbols, and designations contained in door hardware schedule.
f. Mounting locations for door hardware.
g. List of related door devices specified in other Sections for each door and frame.

D. Keying Schedule: Prepared by or under the supervision of Installer's Architectural Hardware Consultant, detailing Owner's final keying instructions for locks. Include schematic keying diagram and index each key set to unique door designations that are coordinated with the Contract Documents.

1.05 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer and Architectural Hardware Consultant.

B. Product Certificates: For each type of electrified door hardware.
1. Certify that door hardware for use on each type and size of labeled fire-rated doors complies with listed fire-rated door assemblies.

C. Product Test Reports: For compliance with accessibility requirements, for tests performed by manufacturer and witnessed by a qualified testing agency, for door hardware on doors located in accessible routes.

D. Field quality-control reports.

E. Sample Warranty: For special warranty.

1.06 CLOSEOUT SUBMITTALS

A. Maintenance Data: For each type of door hardware to include in maintenance manuals.

B. Schedules: Final door hardware and keying schedule.

1.07 QUALITY ASSURANCE

A. Installer Qualifications: Supplier of products and an employer of workers trained and approved by product manufacturers and of an Architectural Hardware Consultant who is available during the course of the Work to consult Contractor, Architect, and Owner about door hardware and keying.
   1. Warehousing Facilities: In Project's vicinity.
   2. Scheduling Responsibility: Preparation of door hardware and keying schedule.
   3. Engineering Responsibility: Preparation of data for electrified door hardware, including Shop Drawings, based on testing and engineering analysis of manufacturer's standard units in assemblies similar to those indicated for this Project.

B. Architectural Hardware Consultant Qualifications: A person who is experienced in providing consulting services for door hardware installations that are comparable in material, design, and extent to that indicated for this Project and who is currently certified by DHI as an Architectural Openings Consultant (AOC).

1.08 DELIVERY, STORAGE, AND HANDLING

A. Inventory door hardware on receipt and provide secure lock-up for door hardware delivered to Project site.

B. Tag each item or package separately with identification coordinated with the final door hardware schedule, and include installation instructions, templates, and necessary fasteners with each item or package.

C. Owner will purchase, take delivery and install cores and keying.

1.09 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of door hardware that fail in materials or workmanship within specified warranty period.
   1. Failures include, but are not limited to, the following:
      a. Structural failures including excessive deflection, cracking, or breakage.
      b. Faulty operation of doors and door hardware.
      c. Deterioration of metals, metal finishes, and other materials beyond normal weathering and use.

2. Warranty Period: Three years from date of Substantial Completion unless otherwise indicated below:
   a. Exit Devices: Two years from date of Substantial Completion.
   b. Manual Closers: 10 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Source Limitations: Obtain each type of door hardware from single manufacturer.
1. Provide electrified door hardware from same manufacturer as mechanical door hardware unless otherwise indicated. Manufacturers that perform electrical modifications and that are listed by a testing and inspecting agency acceptable to authorities having jurisdiction are acceptable.

2.02 PERFORMANCE REQUIREMENTS

A. Fire-Rated Door Assemblies: Where fire-rated doors are indicated, provide door hardware complying with NFPA 80 that is listed and labeled by a qualified testing agency, for fire-protection ratings indicated, based on testing at positive pressure in accordance with NFPA 252 or UL 10C.

B. Smoke- and Draft-Control Door Assemblies: Where smoke- and draft-control door assemblies are required, provide door hardware that complies with requirements of assemblies tested in accordance with UL 1784 and installed in compliance with NFPA 105.
1. Air Leakage Rate: Maximum air leakage of 0.3 cfm/sq. ft. (3 cu. m per minute/sq. m) at the tested pressure differential of 0.3-inch wg (75 Pa) of water.

C. Electrified Door Hardware: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

D. Means of Egress Doors: Latches do not require more than 15 lbf (67 N) to release the latch. Locks do not require use of a key, tool, or special knowledge for operation.

E. Accessibility Requirements: For door hardware on doors in an accessible route, comply with ICC A117.1.
1. Provide operating devices that do not require tight grasping, pinching, or twisting of the wrist and that operate with a force of not more than 5 lbf (22.2 N).
2. Comply with the following maximum opening-force requirements:
   a. Interior, Non-Fire-Rated Hinged Doors: 5 lbf (22.2 N) applied perpendicular to door.
   b. Fire Doors: Minimum opening force allowable by authorities having jurisdiction.
3. Bevel raised thresholds with a slope of not more than 1:2. Provide thresholds not more than 1/2 inch (13 mm) high.
4. Adjust door closer sweep periods so that, from an open position of 90 degrees, the door will take at least 5 seconds to move to a position of 12 degrees from the latch.
5. Adjust spring hinges so that, from an open position of 70 degrees, the door will take at least 1.5 seconds to move to the closed position.

2.03 HINGES

A. Hinges: BHMA A156.1. Provide template-produced hinges.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. Hager Companies.
b. McKinney Products Company; ASSA ABLOY Accessories and Door Controls Group, Inc.; ASSA ABLOY.
c. STANLEY; dormakaba USA, Inc.

2.04 CONTINUOUS HINGES

A. Continuous Hinges: BHMA A156.26; minimum 0.120-inch- (3.0-mm-) thick, hinge leaves with minimum overall width of 4 inches (102 mm); fabricated to full height of door and frame and to template screw locations; with components finished after milling and drilling are complete.

B. Continuous, Gear-Type Hinges: Extruded-aluminum, pinless, geared hinge leaves joined by a continuous extruded-aluminum channel cap; with concealed, self-lubricating thrust bearings.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. Hager Companies.
b. McKinney Products Company; ASSA ABLOY Accessories and Door Controls Group, Inc.; ASSA ABLOY.
c. STANLEY; dormakaba USA, Inc.

2.05 MECHANICAL LOCKS AND LATCHES

A. Lock Functions: As indicated in door hardware schedule.

B. Lock Throw: Comply with testing requirements for length of bolts required for labeled fire doors, and as follows:
1. Bored Locks: Minimum 1/2-inch (13-mm) latchbolt throw.
2. Mortise Locks: Minimum 3/4-inch (19-mm) latchbolt throw.
3. Deadbolts: Minimum 1.25-inch (32-mm) bolt throw.

C. Lock Backset: 2-3/4 inches (70 mm) unless otherwise indicated.

D. Lock Trim:
1. Description: As indicated.
2. Levers: Cast.
3. Escutcheons (Roses): Wrought.
4. Dummy Trim: Match lever lock trim and escutcheons.

E. Strikes: Provide manufacturer's standard strike for each lock bolt or latchbolt complying with requirements indicated for applicable lock or latch and with strike box and curved lip extended to protect frame; finished to match lock or latch.
1. Flat-Lip Strikes: For locks with three-piece antifriction latchbolts, as recommended by manufacturer.
2. Aluminum-Frame Strike Box: Manufacturer's special strike box fabricated for aluminum framing.
3. Rabbet Front and Strike: Provide on locksets for rabbeted meeting stiles.

F. Bored Locks: BHMA A156.2; Grade 1; Series 4000.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. Schlage Commercial Locks, an Allegion plc company.

2.06 EXIT DEVICES AND AUXILIARY ITEMS

A. Exit Devices and Auxiliary Items: BHMA A156.3.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. Precision Hardware, Inc.; dormakaba Group.
b. SARGENT Manufacturing Company; ASSA ABLOY.
c. Von Duprin, an Allegion plc company.

2.07 LOCK CYLINDERS

A. Standard Lock Cylinders: BHMA A156.5; Grade 1 permanent cores; face finished to match lockset.
1. Core Type: Interchangeable.
2. Manufacture: BEST Access Solutions, Inc.; dormakaba USA Inc.

B. Construction Cores: Provide construction cores that are replaceable by permanent cores. Provide 10 construction master keys.

2.08 KEYING

A. Keying System: Factory registered, provided and keyed by owner.

2.09 OPERATING TRIM

A. Operating Trim: BHMA A156.6; stainless steel unless otherwise indicated.
1. Manufacturers: Subject to compliance with requirements, provide products by the following:
a. Hager Companies.

2.10 SURFACE CLOSERS

A. Surface Closers: BHMA A156.4; rack-and-pinion hydraulic type with adjustable sweep and latch speeds controlled by key-operated valves and forged-steel main arm. Comply with manufacturer's written instructions for size of door closers depending on size of door, exposure to weather, and anticipated frequency of use. Provide factory-sized closers, adjustable to meet field conditions and requirements for opening force.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. LCN an Allegion plc company.
b. SARGENT Manufacturing Company; ASSA ABLOY.

2.11 CONCEALED CLOSERS

A. Concealed Closers: BHMA A156.4; rack-and-pinion hydraulic type with adjustable sweep and latch speeds controlled by key-operated valves. Comply with manufacturer's written instructions

for size of door closers depending on size of door, exposure to weather, and anticipated frequency of use. Provide factory-sized closers, adjustable to meet field conditions and requirements for opening force.

2.12 MECHANICAL STOPS AND HOLDERS

A. Wall- and Floor-Mounted Stops: BHMA A156.16.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Hager Companies.
      b. Ives Hardware, an Allegion plc company.
      c. Rockwood Manufacturing Company; ASSA ABLOY Accessories and Door Controls Group, Inc.; ASSA ABLOY.

2.13 DOOR GASKETING

A. Door Gasketing: BHMA A156.22; with resilient or flexible seal strips that are easily replaceable and readily available from stocks maintained by manufacturer.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Hager Companies.
      b. National Guard Products, Inc.
      c. Pemko Manufacturing Company Inc.; ASSA ABLOY Accessories and Door Controls Group, Inc.; ASSA ABLOY.
      d. Sealeze.

B. Maximum Air Leakage: When tested in accordance with ASTM E283 with tested pressure differential of 0.3-inch wg (75 Pa), as follows:
   1. Smoke-Rated Gasketing: 0.3 cfm/sq. ft. (3 cu. m per minute/sq. m) of door opening.
   2. Gasketing on Single Doors: 0.3 cfm/sq. ft. (3 cu. m per minute/sq. m) of door opening.
   3. Gasketing on Double Doors: 0.50 cfm per ft. (0.000774 cu. m/s per m) of door opening.

2.14 THRESHOLDS

A. Thresholds: BHMA A156.21; fabricated to full width of opening indicated.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Hager Companies.
      b. National Guard Products, Inc.
      c. Pemko Manufacturing Company Inc.; ASSA ABLOY Accessories and Door Controls Group, Inc.; ASSA ABLOY.
      d. Sealeze.

2.15 METAL PROTECTIVE TRIM UNITS

A. Metal Protective Trim Units: BHMA A156.6; fabricated from minimum 0.050-inch- (1.3-mm-) thick stainless steel; with manufacturer's standard machine or self-tapping screw fasteners.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Hager Companies.
      b. Ives Hardware, an Allegion plc company.

c. Rockwood Manufacturing Company; ASSA ABLOY Accessories and Door Controls Group, Inc.; ASSA ABLOY.
d. Trimco.

2.16 FABRICATION

A. Manufacturer's Nameplate: Do not provide products that have manufacturer's name or trade name displayed in a visible location except in conjunction with required fire-rating labels and as otherwise approved by Architect.
1. Manufacturer's identification is permitted on rim of lock cylinders only.

B. Base Metals: Produce door hardware units of base metal indicated, fabricated by forming method indicated, using manufacturer's standard metal alloy, composition, temper, and hardness. Furnish metals of a quality equal to or greater than that of specified door hardware units and BHMA A156.18.

C. Fasteners: Provide door hardware manufactured to comply with published templates prepared for machine, wood, and sheet metal screws. Provide screws that comply with commercially recognized industry standards for application intended, except aluminum fasteners are not permitted. Provide Phillips flat-head screws with finished heads to match surface of door hardware unless otherwise indicated.
1. Concealed Fasteners: For door hardware units that are exposed when door is closed, except for units already specified with concealed fasteners. Do not use through bolts for installation where bolt head or nut on opposite face is exposed unless it is the only means of securely attaching the door hardware. Where through bolts are used on hollow door and frame construction, provide sleeves for each through bolt.
2. Fire-Rated Applications:
   a. Wood or Machine Screws: For the following:
      1) Hinges mortised to doors or frames.
      2) Strike plates to frames.
      3) Closers to doors and frames.
   b. Steel Through Bolts: For the following unless door blocking is provided:
      1) Surface hinges to doors.
      2) Closers to doors and frames.
      3) Surface-mounted exit devices.
3. Spacers or Sex Bolts: For through bolting of hollow-metal doors.
4. Gasketing Fasteners: Provide noncorrosive fasteners for exterior applications and elsewhere as indicated.

2.17 FINISHES

A. Provide finishes complying with BHMA A156.18 as indicated in door hardware schedule.

B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

C. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in the same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine doors and frames, with Installer present, for compliance with requirements for installation tolerances, labeled fire-rated door assembly construction, wall and floor construction, and other conditions affecting performance of the Work.

B. Examine roughing-in for electrical power systems to verify actual locations of wiring connections before electrified door hardware installation.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Doors and Frames: For surface-applied door hardware, drill and tap doors and frames in accordance with ANSI/SDI A250.6.

3.03 INSTALLATION

A. Mounting Heights: Mount door hardware units at heights to comply with the following unless otherwise indicated or required to comply with governing regulations.
   1. Standard Doors and Frames: ANSI/SDI A250.8.
   2. Custom Doors and Frames: HMMA 831.

B. Install each door hardware item to comply with manufacturer's written instructions. Where cutting and fitting are required to install door hardware onto or into surfaces that are later to be painted or finished in another way, coordinate removal, storage, and reinstallation of surface protective trim units with finishing work. Do not install surface-mounted items until finishes have been completed on substrates involved.
   1. Set units level, plumb, and true to line and location. Adjust and reinforce attachment substrates as necessary for proper installation and operation.
   2. Drill and countersink units that are not factory prepared for anchorage fasteners. Space fasteners and anchors according to industry standards.

C. Hinges: Install types and in quantities indicated in door hardware schedule, but not fewer than the number recommended by manufacturer for application indicated or one hinge for every 30 inches (750 mm) of door height, whichever is more stringent, unless other equivalent means of support for door, such as spring hinges or pivots, are provided.

D. Intermediate Offset Pivots: Where offset pivots are indicated, provide intermediate offset pivots in quantities indicated in door hardware schedule, but not fewer than one intermediate offset pivot per door and one additional intermediate offset pivot for every 30 inches (750 mm) of door height greater than 90 inches (2286 mm).

E. Lock Cylinders: Install construction cores to secure building and areas during construction period.

F. Boxed Power Supplies: Locate power supplies as indicated or, if not indicated, above accessible ceilings or in equipment room. Verify location with Architect.

1. Configuration: Provide least number of power supplies required to adequately serve doors with electrified door hardware.

G. Thresholds: Set thresholds for exterior doors and other doors indicated in full bed of sealant complying with requirements specified in Section 07 92 00 "Joint Sealants."

H. Stops: Provide wall or other type stops are indicated in door hardware schedule. Do not mount floor stops where they will impede traffic.

I. Perimeter Gasketing: Apply to head and jamb, forming seal between door and frame.
1. Do not notch perimeter gasketing to install other surface-applied hardware.

J. Meeting Stile Gasketing: Fasten to meeting stiles, forming seal when doors are closed.

K. Door Bottoms: Apply to bottom of door, forming seal with threshold when door is closed.

3.04 ADJUSTING

A. Initial Adjustment: Adjust and check each operating item of door hardware and each door to ensure proper operation or function of every unit. Replace units that cannot be adjusted to operate as intended. Adjust door control devices to compensate for final operation of heating and ventilating equipment and to comply with referenced accessibility requirements.
1. Door Closers: Adjust sweep period to comply with accessibility requirements and requirements of authorities having jurisdiction.
2. Spring Hinges: Adjust to achieve positive latching when door is allowed to close freely from an open position of 70 degrees and so that closing time complies with accessibility requirements of authorities having jurisdiction.
3. Electric Strikes: Adjust horizontal and vertical alignment of keeper to properly engage lock bolt.

B. Occupancy Adjustment: Approximately six months after date of Substantial Completion, Installer's Architectural Hardware Consultant shall examine and readjust each item of door hardware, including adjusting operating forces, as necessary to ensure function of doors, door hardware, and electrified door hardware.

3.05 CLEANING AND PROTECTION

A. Clean adjacent surfaces soiled by door hardware installation.

B. Clean operating items as necessary to restore proper function and finish.

C. Provide final protection and maintain conditions that ensure that door hardware is without damage or deterioration at time of Substantial Completion.

3.06 MAINTENANCE SERVICE

A. Maintenance Tools and Instructions: Furnish a complete set of specialized tools and maintenance instructions for Owner's continued adjustment, maintenance, and removal and replacement of door hardware.

B. Maintenance Service: Beginning at Substantial Completion, maintenance service shall include 12 months' full maintenance by skilled employees of door hardware Installer. Include quarterly preventive maintenance, repair or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper door and door hardware operation. Parts and supplies shall be manufacturer's authorized replacement parts and supplies.

3.07 DEMONSTRATION

A. Engage Installer to train Owner's maintenance personnel to adjust, operate, and maintain door hardware.

3.08 DOOR HARDWARE SCHEDULE

A. Hardware Set 1 - Exterior Card Reader Single Storefront: Each door to have the following:

#	Type	Description	Model	Finish	Manuf.
1**	Exit Device	Rim - Latch Retraction	QEL XP98 L-NL	630	Von Duprin
*	Hinge	Continuous Gear Hinge			
*	Closer	Concealed Overhead ADA			
*	Gasket	Manufacturer’s Standard			
*	Door Bottom	Manufacturer’s Standard			
*	Sill	ADA Threshold			
	Power Supply and cable harnesses				

B. Hardware Set 2 - Exterior Card Reader Single FRP: Each door to have the following:

#	Type	Description	Model	Finish	Manuf.
1	Hinge	Continuous Hinge	661HD WT EPT	628	Hager
1**	Exit Device	Rim - Latch Retraction	QEL XP98 L-NL	630	Von Duprin
1	Closer	Parallel Arm	4040XP-3077SCNS	689	LCN
1 set	Gasket	Perimeter	881S N	MF	Hager
1	Sill	Saddle Threshold	412S	MF	Hager
1	Door Bottom	Heavy Duty Automatic	747S N	MF	Hager
1	Protection Plate	Armor	220S	630	Hager
	Power Supply and cable harnesses				

C. Hardware Set 3 - Exterior Card Reader Double FRP & Exterior Double FRP Removable Transom: Each door to have the following:

#	Type	Description	Model	Finish	Manuf.
2	Hinge	Continuous Gear Hinge	12-600XHD EPT	628	Hager
1**	Exit Device	Rim - Latch Retraction	QEL XP98 L-NL	630	Von Duprin
1	Exit Device	Rim – Exit Only	XP98 EO	630	Von Duprin
2	Closer	Parallel Arm	4040XP-3077SCNS	689	LCN
1**	Mullion	Keyed Removable	KR 5654-XP	628	Von Duprin
2 sets	Gasket	Perimeter	881S N	MF	Hager
1	Gasket	Mullion Seal	710S	BK	Hager
2	Sill	Saddle Threshold	412S	MF	Hager
2	Door Bottom	Heavy Duty Automatic	747S N	MF	Hager

2	Protection Plate	Armor	220S	630	Hager
*	Power Supply and cable harnesses				

D. Hardware Set 4 - Interior Card Reader Electrical Room: Each door to have the following:

#	Type	Description	Model	Finish	Manuf.
1	Hinge	Continuous Gear Hinge	12-600XHD EPT	628	Hager
1**	Exit Device	Rim - Latch Retraction	QEL XP98 L-NL	630	Von Duprin
1	Closer	Parallel Arm	4040XP-3077SCNS	689	LCN
1 set	Gasket	Perimeter	881S N	MF	Hager
1	Sill	Saddle Threshold	412S	MF	Hager
1	Protection Plate	Armor	220S	630	Hager
*	Power Supply and cable harnesses				

E. Hardware Set 5 - Interior Stair: Each door to have the following:

#	Type	Description	Model	Finish	Manuf.
1	Hinge	Continuous Gear Hinge	12-600XHD	628	Hager
1**	Exit Device	Rim	XP98-F L	630	Von Duprin
1	Closer	Parallel Arm	4040XP-3077SCNS	689	LCN
1 set	Gasket	Perimeter	881S N	MF	Hager
1	Protection Plate	Armor	220S	630	Hager

F. Hardware Set 6 - Interior Storage / Janitor / Mechanical: Each door to have the following:

#	Type	Description	Model	Finish	Manuf.
3	Hinge	Ball-Bearing w/ SS Pin	BB1199	630	Hager
1**	Latch set	Classroom Function	ND70PD RHO	626	Schlage
1	Protection Plate	Kick	190S	630	Hager

G. Hardware Set 7 - Interior Restroom: Each door to have the following:

#	Type	Description	Model	Finish	Manuf.
3	Hinge	Ball-Bearing w/ SS Pin	BB1199	630	Hager
1**	Latch set	Privacy Lock	ND40S RHO	626	Best
1	Protection Plate	Kick	190S	630	Hager

H. Hardware Set 8 - Interior Single Office / Control / Laboratory / Conference / Break: Each door to have the following:

#	Type	Description	Model	Finish	Manuf.
3	Hinge	Ball-Bearing w/ SS Pin	BB1199	630	Hager
1**	Latch set	Office Function	ND50PD RHO	626	Schlage
1	Protection Plate	Kick	190S	630	Hager

I. Hardware Set 9 - Interior Single Locker: Each door to have the following:

#	Type	Description	Model	Finish	Manuf.
3	Hinge	Ball-Bearing w/ SS Pin	BB1199	630	Hager
1**	Latch set	Corridor Function	ND73PD RHO	626	Schlage
1	Closer	Parallel Arm	4040XP-3077	689	LCN

1	Protection Plate	Kick	190S	630	Hager

J. Hardware Set 10 - Interior Single Storefront: Each door to have the following:

#	Type	Description	Model	Finish	Manuf.
1**	Exit Device	Rim - Latch Retraction	XP98 L	630	Von Duprin
*	Hinge	Continuous Gear Hinge			
*	Closer	Concealed Overhead ADA			
*	Gasket	Manufacturer's Standard			
*	Sill	ADA Threshold			

A. Hardware Set 11 - Exterior Card Reader Single FRP Class 1 Div 2: Each door to have the following:

#	Type	Description	Model	Finish	Manuf.
1	Hinge	Continuous Hinge	661HD WT EPT	628	Hager
1**	Exit Device	Rim - Latch Retraction	PN XP98 L-NL	630	Von Duprin
1	Closer	Parallel Arm	4040XP-3077SCNS	689	LCN
1 set	Gasket	Perimeter	881S N	MF	Hager
1	Sill	Saddle Threshold	412S	MF	Hager
1	Door Bottom	Heavy Duty Automatic	747S N	MF	Hager
1	Protection Plate	Armor	220S	630	Hager
1	Request to exit	Class 1 REX	Falcon EX XL	N/A	BEA
1	Pneumatic Controls	Place in electrical room	7982	N/A	LCN
	Power Supply, tubing, cabling and cable harnesses				

* Hardware by Door Manufacturer
**All cylinders are FSIC and work with owner's Best keyway system.

END OF SECTION 08 71 00

SECTION 08 80 00 - GLAZING

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Glass products.
   2. Insulating glass.
   3. Glazing sealants.
   4. Glazing tapes.
   5. Miscellaneous glazing materials.

1.02 DEFINITIONS

A. Glass Manufacturers: Firms that produce primary glass, fabricated glass, or both, as defined in referenced glazing publications.
B. Glass Thicknesses: Indicated by thickness designations in millimeters in accordance with ASTM C1036.
C. IBC: International Building Code.
D. Interspace: Space between lites of an insulating-glass unit.

1.03 COORDINATION

A. Coordinate glazing channel dimensions to provide necessary bite on glass, minimum edge and face clearances, and adequate sealant thicknesses, with reasonable tolerances to achieve proper safety margins for glazing retention under each design load case, load case combination, and service condition.

1.04 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.
   1. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
   2. Review temporary protection requirements for glazing during and after installation.

1.05 ACTION SUBMITTALS

A. Product Data: For each type of product.
B. Sustainable Design Submittals:
C. Glass Samples: For each type of glass product other than clear monolithic vision glass; 12 inches square.
D. Glazing Accessory Samples: For sealants and colored spacers, in 12-inch lengths. Install sealant Samples between two strips of material representative in color of adjoining framing system.
E. Glazing Schedule: List glass types and thicknesses for each size opening and location. Use same designations indicated on Drawings.

1.06 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer manufacturers of fabricated glass units.
B. Product Certificates: For glass.
C. Product Test Reports: For fabricated glass and glazing sealants, for tests performed by a qualified testing agency.
   1. For glazing sealants, provide test reports based on testing current sealant formulations within previous 36-month period.
D. Preconstruction adhesion and compatibility test report.

E. Sample Warranties: For special warranties.

1.07 QUALITY ASSURANCE

A. Fabricated-Glass Manufacturer Qualifications: A qualified manufacturer of fabricated glass units who is approved and certified by primary glass manufacturer.

B. Installer Qualifications: A qualified glazing contractor for this Project who is certified under the North American Contractor Certification Program (NACC) for Architectural Glass & Metal (AG&M) contractors and who employs glazing technicians certified under the Architectural Glass and Metal Technician (AGMT) certification program.

C. Glass Testing Agency Qualifications: A qualified independent testing agency accredited according to the NFRC CAP 1 Certification Agency Program.

D. Sealant Testing Agency Qualifications: An independent testing agency qualified according to ASTM C1021 to conduct the testing indicated.

1.08 DELIVERY, STORAGE, AND HANDLING

A. Protect glazing materials in accordance with manufacturer's written instructions. Prevent damage to glass and glazing materials from condensation, temperature changes, direct exposure to sun, or other causes.

B. Comply with insulating-glass manufacturer's written instructions for venting and sealing units to avoid hermetic seal ruptures due to altitude change.

1.09 FIELD CONDITIONS

A. Environmental Limitations: Do not proceed with glazing when ambient and substrate temperature conditions are outside limits permitted by glazing material manufacturers and when glazing channel substrates are wet from rain, frost, condensation, or other causes.

1. Do not install glazing sealants when ambient and substrate temperature conditions are outside limits permitted by sealant manufacturer or are below 40 deg F.

1.10 WARRANTY

A. Manufacturer's Special Warranty for Coated-Glass Products: Manufacturer agrees to replace coated-glass units that deteriorate within specified warranty period. Deterioration of coated glass is defined as defects developed from normal use that are not attributed to glass breakage or to maintaining and cleaning coated glass contrary to manufacturer's written instructions. Defects include peeling, cracking, and other indications of deterioration in coating.

1. Warranty Period: 10 years from date of Substantial Completion.

B. Manufacturer's Special Warranty for Insulating Glass: Manufacturer agrees to replace insulating-glass units that deteriorate within specified warranty period. Deterioration of insulating glass is defined as failure of hermetic seal under normal use that is not attributed to glass breakage or to maintaining and cleaning insulating glass contrary to manufacturer's written instructions. Evidence of failure is obstruction of vision by dust, moisture, or film on interior surfaces of glass.

1. Warranty Period: 10 years from date of Substantial Completion.

C. Manufacturer's Special Warranty for Heat-Soaked Tempered Glass: Manufacturer agrees to replace heat-soaked tempered glass units that spontaneously break due to nickel sulfide (NiS) inclusions at a rate exceeding 0.3 percent (3/1000) within specified warranty period. Coverage for any other cause is excluded.

1. Warranty Period: 10 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Source Limitations for Glass: Obtain tinted and coated glass from single source from single manufacturer.

B. Source Limitations for Glazing Accessories: For each product and installation method, obtain from single source from single manufacturer.

2.02 PERFORMANCE REQUIREMENTS

A. General: Installed glazing systems shall withstand normal thermal movement and wind and impact loads (where applicable) without failure, including loss or glass breakage attributable to defective manufacture, fabrication, or installation; failure of sealants or gaskets to remain watertight and airtight; deterioration of glazing materials; or other defects in construction.

B. Structural Performance: Glazing shall withstand the following design loads within limits and under conditions indicated determined in accordance with the IBC and ASTM E1300:
   1. Design Wind Pressures: As indicated on Drawings.
   2. Maximum Lateral Deflection: For glass supported on all four edges, limit center-of-glass deflection at design wind pressure to not more than 1/50 times the short-side length or 1 inch, whichever is less.
   3. Thermal Loads: Design glazing to resist thermal stress breakage induced by differential temperature conditions and limited air circulation within individual glass lites and insulated glazing units.

C. Windborne-Debris-Impact Resistance: Exterior glazing shall pass ASTM E1886 missile-impact and cyclic-pressure tests in accordance with ASTM E1996 for Wind Zone 4 for basic protection.
   1. Large-Missile Test: For glazing located within 30 feet of grade.

D. Safety Glazing: Where safety glazing is indicated, provide glazing that complies with 16 CFR 1201, Category II.

E. Thermal and Optical Performance Properties: Provide glass with performance properties specified, as indicated in manufacturer's published test data, based on procedures indicated below:
   1. For monolithic-glass lites, properties are based on units with lites 6 mm thick.
   2. For insulating-glass units, properties are based on units of thickness indicated for overall unit and for each lite.
   3. U-Factors: Center-of-glazing values, in accordance with NFRC 100 and based on most current non-beta version of LBL's WINDOW computer program, expressed as Btu/sq. ft. x h x deg F.
   4. SHGC and Visible Transmittance: Center-of-glazing values, in accordance with NFRC 200 and based on most current non-beta version of LBL's WINDOW computer program.
   5. Visible Reflectance: Center-of-glazing values, in accordance with NFRC 300.

2.03 GLASS PRODUCTS, GENERAL

A. Glazing Publications: Comply with published recommendations of glass product manufacturers and organizations below unless more stringent requirements are indicated. See these publications for glazing terms not otherwise defined in this Section or in referenced standards.
   1. NGA Publications: "Glazing Manual."
   2. IGMA Publication for Insulating Glass: SIGMA TM-3000, "North American Glazing Guidelines for Sealed Insulating Glass Units for Commercial and Residential Use."

B. Safety Glazing Labeling: Where safety glazing is indicated, permanently mark glazing with certification label of the SGCC. Label shall indicate manufacturer's name, type of glass, thickness, and safety glazing standard with which glass complies.
C. Insulating-Glass Certification Program: Permanently marked either on spacers or on at least one component lite of units with appropriate certification label of the IGCC.
D. Thickness: Where glass thickness is indicated, it is a minimum. Provide glass that complies with performance requirements and is not less than thickness indicated.
   1. Minimum Glass Thickness for Exterior Lites: 6 mm.
E. Strength: Where annealed float glass is indicated, provide annealed float glass, heat-strengthened float glass, or fully tempered float glass as needed to comply with "Performance Requirements" Article. Where heat-strengthened float glass is indicated, provide heat-strengthened float glass or fully tempered float glass as needed to comply with "Performance Requirements" Article. Where fully tempered float glass is indicated, provide fully tempered float glass.

2.04 GLASS PRODUCTS
A. Clear Annealed Float Glass: ASTM C1036, Type I, Class 1 (clear), Quality-Q3.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. AGC Glass Company North America, Inc.
      b. Cardinal Glass Industries, Inc.
      c. Guardian Glass LLC.
      d. Pilkington North America; NSG Group.
      e. Saint-Gobain Glass Corp.
      f. Vitro Architectural Glass.
B. Tinted Annealed Float Glass: ASTM C1036, Type I, Class 2 (tinted), Quality-Q3.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. AGC Glass Company North America, Inc.
      b. Pilkington North America; NSG Group.
      c. Saint-Gobain Glass Corp.
      d. Vitro Architectural Glass.
C. Fully Tempered Float Glass: ASTM C1048, Kind FT (fully tempered), Condition A (uncoated) unless otherwise indicated, Type I, Class 1 (clear) or Class 2 (tinted) as indicated, Quality-Q3.
   1. Fabrication Process: By horizontal (roller-hearth) process with roll-wave distortion parallel to bottom edge of glass as installed unless otherwise indicated.
D. Heat-Strengthened Float Glass: ASTM C1048, Kind HS (heat strengthened), Type I, Condition A (uncoated) unless otherwise indicated, Type I, Class 1 (clear) or Class 2 (tinted) as indicated, Quality-Q3.
   1. Fabrication Process: By horizontal (roller-hearth) process with roll-wave distortion parallel to bottom edge of glass as installed unless otherwise indicated.
E. Reflective- and Low-E-Coated Vision Glass: ASTM C1376.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Cardinal Glass Industries, Inc.
      b. Guardian Glass LLC.
      c. Pilkington North America; NSG Group.
      d. Saint-Gobain Glass Corp.
      e. Vitro Architectural Glass.

2.05 INSULATING GLASS

A. Insulating-Glass Units: Factory-assembled units consisting of sealed lites of glass separated by a dehydrated interspace, qualified in accordance with ASTM E2190.
   1. Sealing System: Dual seal, with manufacturer's standard primary and secondary sealants.
   2. Perimeter Spacer: Manufacturer's standard spacer material and construction.
      a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
         1) Saint-Gobain Glass Corp.
         2) Technoform Glass Insulation North America.
         3) Thermix; a brand of Ensinger USA.
   3. Desiccant: Molecular sieve or silica gel, or a blend of both.

2.06 MISCELLANEOUS GLAZING MATERIALS

A. General: Provide products of material, size, and shape complying with referenced glazing standard, recommended in writing by manufacturers of glass and other glazing materials for application indicated, and with a proven record of compatibility with surfaces contacted in installation.
B. Cleaners, Primers, and Sealers: Types recommended by sealant or gasket manufacturer.
C. Setting Blocks:
   1. Silicone with Shore A durometer hardness of 85, plus or minus 5.
   2. Type recommended in writing by sealant or glass manufacturer.
D. Spacers:
   1. Neoprene blocks or continuous extrusions of hardness required by glass manufacturer to maintain glass lites in place for installation indicated.
   2. Type recommended in writing by sealant or glass manufacturer.
E. Edge Blocks:
   1. Silicone with Shore A durometer hardness per manufacturer's written instructions.
   2. Type recommended in writing by sealant or glass manufacturer.
F. Cylindrical Glazing Sealant Backing: ASTM C1330, Type O (open-cell material), of size and density to control glazing sealant depth and otherwise produce optimum glazing sealant performance.

2.07 FABRICATION OF GLAZING UNITS

A. Fabricate glazing units in sizes required to fit openings indicated for Project, with edge and face clearances, edge and surface conditions, and bite complying with written instructions of product manufacturer and referenced glazing publications, to comply with system performance requirements.
   1. Allow for thermal movements from ambient and surface temperature changes acting on glass framing members and glazing components.
      a. Temperature Change: 120 deg F, ambient; 180 deg F, material surfaces.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine framing, glazing channels, and stops, with Installer present, for compliance with the following:
   1. Manufacturing and installation tolerances, including those for size, squareness, and offsets at corners.
   2. Presence and functioning of weep systems.
   3. Minimum required face and edge clearances.
   4. Effective sealing between joints of glass-framing members.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Clean glazing channels and other framing members receiving glass immediately before glazing. Remove coatings not firmly bonded to substrates.

B. Examine glazing units to locate exterior and interior surfaces. Label or mark units as needed so that exterior and interior surfaces are readily identifiable. Do not use materials that leave visible marks in the completed Work.

3.03 GLAZING, GENERAL

A. Comply with combined written instructions of manufacturers of glass, sealants, gaskets, and other glazing materials, unless more stringent requirements are indicated, including those in referenced glazing publications.

B. Protect glass edges from damage during handling and installation. Remove damaged glass from Project site and legally dispose of off Project site. Damaged glass includes glass with edge damage or other imperfections that, when installed, could weaken glass, impair performance, or impair appearance.

C. Apply primers to joint surfaces where required for adhesion of sealants, as determined by preconstruction testing.

D. Install setting blocks in sill rabbets, sized and located to comply with referenced glazing publications, unless otherwise required by glass manufacturer. Set blocks in thin course of compatible sealant suitable for heel bead.

E. Do not exceed edge pressures stipulated by glass manufacturers for installing glass lites.

F. Provide spacers for glass lites where length plus width is larger than 50 inches.

1. Locate spacers directly opposite each other on both inside and outside faces of glass. Install correct size and spacing to preserve required face clearances, unless gaskets and glazing tapes are used that have demonstrated ability to maintain required face clearances and to comply with system performance requirements.
2. Provide 1/8-inch-minimum bite of spacers on glass and use thickness equal to sealant width. With glazing tape, use thickness slightly less than final compressed thickness of tape.

G. Provide edge blocking where indicated or needed to prevent glass lites from moving sideways in glazing channel, as recommended in writing by glass manufacturer and in accordance with requirements in referenced glazing publications.

H. Set glass lites in each series with uniform pattern, draw, bow, and similar characteristics.

I. Set glass lites with proper orientation so that coatings face exterior or interior as specified.

J. Where wedge-shaped gaskets are driven into one side of channel to pressurize sealant or gasket on opposite side, provide adequate anchorage so gasket cannot walk out when installation is subjected to movement.

K. Square cut wedge-shaped gaskets at corners and install gaskets in a manner recommended by gasket manufacturer to prevent corners from pulling away; seal corner joints and butt joints with sealant recommended in writing by gasket manufacturer.

3.04 GASKET GLAZING (DRY)

A. Cut compression gaskets to lengths recommended by gasket manufacturer to fit openings exactly, with allowance for stretch during installation.

B. Insert soft compression gasket between glass and frame or fixed stop so it is securely in place with joints miter cut and bonded together at corners.

C. Installation with Drive-in Wedge Gaskets: Center glass lites in openings on setting blocks, and press firmly against soft compression gasket by inserting dense compression gaskets formed and installed to lock in place against faces of removable stops. Start gasket applications at corners

and work toward centers of openings. Compress gaskets to produce a weathertight seal without developing bending stresses in glass. Seal gasket joints with sealant recommended in writing by gasket manufacturer.

D. Installation with Pressure-Glazing Stops: Center glass lites in openings on setting blocks, and press firmly against soft compression gasket. Install dense compression gaskets and pressure-glazing stops, applying pressure uniformly to compression gaskets. Compress gaskets to produce a weathertight seal without developing bending stresses in glass. Seal gasket joints with sealant recommended in writing by gasket manufacturer.

E. Install gaskets so they protrude past face of glazing stops.

3.05 CLEANING AND PROTECTION

A. Immediately after installation, remove nonpermanent labels and clean surfaces.

B. Protect glass from contact with contaminating substances resulting from construction operations. Examine glass surfaces adjacent to or below exterior concrete and other masonry surfaces at frequent intervals during construction, but not less than once a month, for buildup of dirt, scum, alkaline deposits, or stains.

1. If, despite such protection, contaminating substances do contact with glass, remove substances immediately as recommended in writing by glass manufacturer. Remove and replace glass that cannot be cleaned without damage to coatings.

C. Remove and replace glass that is damaged during construction period.

D. Wash glass on both exposed surfaces not more than four days before date scheduled for inspections that establish date of Substantial Completion. Wash glass as recommended in writing by glass manufacturer.

3.06 MONOLITHIC GLASS SCHEDULE

A. Clear Glass Type: Annealed float glass.

1. Minimum Thickness: 6 mm.

B. Clear Glass Type: Fully tempered float glass.

1. Minimum Thickness: 6 mm.
2. Safety glazing required.

3.07 INSULATING GLASS SCHEDULE

A. Low-E-Coated, Tinted Insulating Glass Type:

1. Basis-of-Design Product: Guardian Glass SuperNeutral 68 CrystalBlue.
2. Overall Unit Thickness: 1 inch.
3. Minimum Thickness of Each Glass Lite: 6 mm.
4. Outdoor Lite: Tinted Annealed (Fully tempered where required) float glass.
5. Tint Color: Blue.
6. Interspace Content: Argon.
7. Indoor Lite: Clear Annealed (Fully tempered where required) float glass.
8. Low-E Coating: Sputtered on second surface.
9. U-Factor: 0.29 maximum.
10. Light to Solar Gain: 1.51 minimum.
11. Visible Light Transmittance: 44 percent minimum.
12. SGHC: 0.29 maximum.
13. Safety glazing where required.

END OF SECTION 08 80 00

SECTION 09 22 16 - NON-STRUCTURAL METAL FRAMING

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Non-load-bearing steel framing systems for interior partitions.
   2. Suspension systems for interior ceilings and soffits.
   3. Grid suspension systems for gypsum board ceilings.

1.02 ACTION SUBMITTALS

A. Product Data: For each type of product.
B. Sustainable Design Submittals:

1.03 INFORMATIONAL SUBMITTALS

A. Product Certificates: For each type of code-compliance certification for studs and tracks.
B. Evaluation Reports: For firestop tracks post-installed anchors and power-actuated fasteners, from ICC-ES or other qualified testing agency acceptable to authorities having jurisdiction.

1.04 QUALITY ASSURANCE

A. Code-Compliance Certification of Studs and Tracks: Provide documentation that framing members are certified according to the product-certification program of the Certified Steel Stud Association the Steel Framing Industry Association the Steel Stud Manufacturers Association.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Notify manufacturer of damaged materials received prior to installation.
B. Deliver materials in manufacturer's original, unopened, undamaged containers with identification labels intact.
C. Protect cold-formed metal framing from corrosion, deformation, and other damage during delivery, storage, and handling as required by AISI S202, "Code of Standard Practice for Cold-Formed Steel Structural Framing."

PART 2 - PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

A. Design framing systems in accordance with AISI S220, "North American Specification for the Design of Cold-Formed Steel Framing - Nonstructural Members," unless otherwise indicated.
B. Design Loads: As indicated on architectural Drawings or 5 lbf/sq. ft. (239 Pa) minimum as required by the IBC.
C. Design framing systems to accommodate deflection of primary building structure and construction tolerances and to withstand design loads with a maximum deflection of 1/240.

2.02 FRAMING SYSTEMS

A. Framing Members, General: Comply with AISI S220 for conditions indicated.
   1. Steel Sheet Components: Comply with AISI S220 requirements for metal unless otherwise indicated
   2. Protective Coating: Comply with AISI S220; ASTM A653/A653M, G40 (Z120); or coating with equivalent corrosion resistance. Galvannealed products are unacceptable.
      a. Coating demonstrates equivalent corrosion resistance with an evaluation report acceptable to authorities having jurisdiction.

B. Studs and Track: AISI S220.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. ClarkDietrich.
      b. SCAFCO Steel Stud Company; Stone Group of Companies.
      c. Steel Construction Systems; Stone Group of Companies.
   2. Minimum Base-Steel Thickness: As required by performance requirements for horizontal deflection minimum 0.0269 inch (0.683 mm).
   3. Depth: As indicated on Drawings.

C. Slip-Type Head Joints: Where indicated, provide one of the following:
   1. Clip System: Clips designed for use in head-of-wall deflection conditions that provide a positive attachment of studs to tracks while allowing 1-1/2-inch (38-mm) minimum vertical movement.
      a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
         1) ClarkDietrich.
         2) SCAFCO Steel Stud Company; Stone Group of Companies.
         3) Steel Construction Systems; Stone Group of Companies.
   2. Single Long-Leg Track System: ASTM C645 top track with 2-inch- (51-mm-) deep flanges in thickness not less than indicated for studs, installed with studs friction fit into top track and with continuous bridging located within 12 inches (305 mm) of the top of studs to provide lateral bracing.
   3. Double-Track System: ASTM C645 top outer tracks, inside track with 2-inch- (51-mm-) deep flanges in thickness not less than indicated for studs and fastened to studs, and outer track sized to friction-fit over inner track.
   4. Deflection Track: Steel sheet top track manufactured to prevent cracking of finishes applied to interior partition framing resulting from deflection of structure above; in thickness not less than indicated for studs and in width to accommodate depth of studs.
      a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
         1) ClarkDietrich.
         2) SCAFCO Steel Stud Company; Stone Group of Companies.
         3) Steel Construction Systems; Stone Group of Companies.

D. Flat Strap and Backing Plate: Steel sheet for blocking and bracing in length and width indicated.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. ClarkDietrich.
      b. SCAFCO Steel Stud Company; Stone Group of Companies.
      c. Steel Construction Systems; Stone Group of Companies.
   2. Minimum Base-Steel Thickness: 0.0296 inch (0.752 mm).

E. Cold-Rolled Channel Bridging: Steel, 0.0538-inch (1.367-mm) minimum base-steel thickness, with minimum 1/2-inch- (13-mm-) wide flanges.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. ClarkDietrich.
      b. SCAFCO Steel Stud Company; Stone Group of Companies.
      c. Steel Construction Systems; Stone Group of Companies.
   2. Depth: 1-1/2 inches (38 mm).
   3. Clip Angle: Not less than 1-1/2 by 1-1/2 inches (38 by 38 mm), 0.068-inch- (1.72-mm-) thick, galvanized steel.

F. Resilient Furring Channels: 1/2-inch- (13-mm-) deep, steel sheet members designed to reduce sound transmission.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. ClarkDietrich.
      b. SCAFCO Steel Stud Company; Stone Group of Companies.
      c. Steel Construction Systems; Stone Group of Companies.
   2. Configuration: Asymmetrical or hat shaped.

G. Cold-Rolled Furring Channels: 0.053-inch (1.34-mm) uncoated-steel thickness, with minimum 1/2-inch- (13-mm-) wide flanges.
   1. Depth: 3/4 inch (19 mm).
   2. Furring Brackets: Adjustable, corrugated-edge-type steel sheet with minimum uncoated-steel thickness of 0.0329 inch (0.8 mm).
   3. Tie Wire: ASTM A641/A641M, Class 1 zinc coating, soft temper, 0.062-inch- (1.59-mm-) diameter wire, or double strand of 0.048-inch- (1.21-mm-) diameter wire.

2.03 SUSPENSION SYSTEMS

A. Tie Wire: ASTM A641/A641M, Class 1 zinc coating, soft temper, 0.062-inch- (1.59-mm-) diameter wire, or double strand of 0.048-inch- (1.21-mm-) diameter wire.

B. Hanger Attachments to Concrete:
   1. Post-Installed Anchors: Fastener systems with an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC58 or AC308 as appropriate for the substrate.
      a. Uses: Securing hangers to structure.
      b. Type: Torque-controlled, expansion anchor
      c. Material for Interior Locations: Carbon-steel components zinc-plated to comply with ASTM B633 or ASTM F1941 (ASTM F1941M), Class Fe/Zn 5, unless otherwise indicated.

C. Wire Hangers: ASTM A641/A641M, Class 1 zinc coating, soft temper, 0.16 inch (4.12 mm) in diameter.

D. Carrying Channels (Main Runners): Cold-rolled, commercial-steel sheet with a base-steel thickness of 0.0538 inch (1.367 mm) and minimum 1/2-inch- (13-mm-) wide flanges.
   1. Depth: 2 inches (51 mm) 1-1/2 inches (38 mm).

E. Furring Channels (Furring Members):
   1. Cold-Rolled Channels: 0.0538-inch (1.367-mm) uncoated-steel thickness, with minimum 1/2-inch- (13-mm-) wide flanges, 3/4 inch (19 mm) deep.
   2. Resilient Furring Channels: 1/2-inch- (13-mm-) deep members designed to reduce sound transmission.
      a. Configuration: Asymmetrical or hat shaped.

2.04 AUXILIARY MATERIALS

A. General: Provide auxiliary materials that comply with referenced installation standards.
   1. Fasteners for Steel Framing: Of type, material, size, corrosion resistance, holding power, and other properties required to fasten steel members to substrates.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine areas and substrates, with Installer present, and including welded hollow-metal frames, cast-in anchors, and structural framing, for compliance with requirements and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Suspended Assemblies: Coordinate installation of suspension systems with installation of overhead structure to ensure that inserts and other provisions for anchorages to building structure have been installed to receive hangers at spacing required to support the Work and that hangers will develop their full strength.
   1. Furnish concrete inserts and other devices indicated to other trades for installation in advance of time needed for coordination and construction.

3.03 INSTALLATION, GENERAL

A. Installation Standard: ASTM C754.
   1. Gypsum Board Assemblies: Also comply with requirements in ASTM C840 that apply to framing installation.
B. Install framing and accessories plumb, square, and true to line, with connections securely fastened.
C. Install supplementary framing, and blocking to support fixtures, equipment services, heavy trim, grab bars, toilet accessories, furnishings, or similar construction.
D. Install bracing at terminations in assemblies.

3.04 INSTALLING FRAMED ASSEMBLIES

A. Install framing system components according to spacings indicated, but not greater than spacings required by referenced installation standards for assembly types.
   1. Single-Layer Application: 16 inches (406 mm) o.c. unless otherwise indicated.
   2. Multilayer Application: 16 inches (406 mm) o.c. unless otherwise indicated.
   3. Tile Backing Panels: 16 inches (406 mm) o.c. unless otherwise indicated.
B. Where studs are installed directly against exterior masonry walls or dissimilar metals at exterior walls, install isolation strip between studs and exterior wall.
C. Install studs so flanges within framing system point in same direction.
D. Install tracks at floors and overhead supports. Extend framing full height to structural supports or substrates above suspended ceilings except where partitions are indicated to terminate at suspended ceilings. Continue framing around ducts that penetrate partitions above ceiling.
   1. Slip-Type Head Joints: Where framing extends to overhead structural supports, install to produce joints at tops of framing systems that prevent axial loading of finished assemblies.
   2. Other Framed Openings: Frame openings other than door openings the same as required for door openings unless otherwise indicated. Install framing below sills of openings to match framing required above door heads.
E. Direct Furring:
   1. Screw to wood framing.
   2. Attach to concrete or masonry with stub nails, screws designed for masonry attachment, or powder-driven fasteners spaced 24 inches (610 mm) o.c.
F. Installation Tolerance: Install each framing member so fastening surfaces vary not more than 1/8 inch (3 mm) from the plane formed by faces of adjacent framing.

3.05 INSTALLING CEILING SUSPENSION SYSTEMS

A. Install suspension system components according to spacings indicated, but not greater than spacings required by referenced installation standards for assembly types.
   1. Hangers: 48 inches (1219 mm) o.c.
   2. Carrying Channels (Main Runners): 48 inches (1219 mm) o.c.
   3. Furring Channels (Furring Members): 24 inches (610 mm) o.c.

B. Isolate suspension systems from building structure where they abut or are penetrated by building structure to prevent transfer of loading imposed by structural movement.

C. Suspend hangers from building structure as follows:
   1. Install hangers plumb and free from contact with insulation or other objects within ceiling plenum that are not part of supporting structural or suspension system.
      a. Splay hangers only where required to miss obstructions and offset resulting horizontal forces by bracing, countersplaying, or other equally effective means.
   2. Where width of ducts and other construction within ceiling plenum produces hanger spacings that interfere with locations of hangers required to support standard suspension system members, install supplemental suspension members and hangers in the form of trapezes or equivalent devices.
      a. Size supplemental suspension members and hangers to support ceiling loads within performance limits established by referenced installation standards.
   3. Wire Hangers: Secure by looping and wire tying, either directly to structures or to inserts, eye screws, or other devices and fasteners that are secure and appropriate for substrate, and in a manner that will not cause hangers to deteriorate or otherwise fail.
   4. Flat Hangers: Secure to structure, including intermediate framing members, by attaching to inserts, eye screws, or other devices and fasteners that are secure and appropriate for structure and hanger, and in a manner that will not cause hangers to deteriorate or otherwise fail.
   5. Do not attach hangers to permanent metal forms. Furnish cast-in-place hanger inserts that extend through forms.
   6. Do not attach hangers to rolled-in hanger tabs of composite steel floor deck.
   7. Do not connect or suspend steel framing from ducts, pipes, or conduit.

D. Grid Suspension Systems: Attach perimeter wall track or angle where grid suspension systems meet vertical surfaces. Mechanically join main beam and cross-furring members to each other and butt-cut to fit into wall track.

E. Installation Tolerances: Install suspension systems that are level to within 1/8 inch in 12 feet (3 mm in 3.6 m) measured lengthwise on each member that will receive finishes and transversely between parallel members that will receive finishes.

END OF SECTION 09 22 16

SECTION 09 29 00 - GYPSUM BOARD

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Interior gypsum board ceilings.
B. Related Requirements:
   1. Section 07 92 19 "Acoustical Joint Sealants" for acoustical joint sealants installed in gypsum board assemblies.
   2. Section 09 22 16 "Non-Structural Metal Framing" for non-structural steel framing and suspension systems that support gypsum board panels.

1.02 ACTION SUBMITTALS

A. Product Data: For the following:
   1. Gypsum ceiling board.
   2. Mold-resistant gypsum board.
   3. Interior trim.
   4. Joint treatment materials.
   5. Acoustical sealant.
B. Shop Drawings: Show locations and installation of control and expansion joints, including plans, elevations, sections, details of components, and attachments to other work.

1.03 DELIVERY, STORAGE AND HANDLING

A. Store materials inside under cover and keep them dry and protected against weather, condensation, direct sunlight, construction traffic, and other potential causes of damage. Stack panels flat and supported on risers on a flat platform to prevent sagging.

1.04 FIELD CONDITIONS

A. Environmental Limitations: Comply with ASTM C840 requirements or gypsum board manufacturer's written instructions, whichever are more stringent.
B. Do not install paper-faced gypsum panels until installation areas are enclosed and conditioned.
C. Do not install panels that are wet, moisture damaged, and mold damaged.
   1. Indications that panels are wet or moisture damaged include, but are not limited to, discoloration, sagging, or irregular shape.
   2. Indications that panels are mold damaged include, but are not limited to, fuzzy or splotchy surface contamination and discoloration.

PART 2 - PRODUCTS

2.01 SOURCE LIMITATIONS

A. Obtain each type of gypsum panel and joint finishing material from single source with resources to provide products of consistent quality in appearance and physical properties.

2.02 PERFORMANCE REQUIREMENTS

A. Fire-Resistance-Rated Assemblies: For fire-resistance-rated assemblies, provide materials and construction identical to those tested in assembly indicated according to ASTM E119 by an independent testing agency.

B. STC-Rated Assemblies: For STC-rated assemblies, provide materials and construction identical to those tested in assembly indicated according to ASTM E90 and classified according to ASTM E413 by an independent testing agency.

2.03 GYPSUM BOARD, GENERAL

A. Size: Provide maximum lengths and widths available that will minimize joints in each area and that correspond with support system indicated.

2.04 INTERIOR GYPSUM BOARD CEILINGS

A. Mold-Resistant Gypsum Board: ASTM C1396/C1396M. With moisture- and mold-resistant core and paper surfaces.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. CertainTeed; SAINT-GOBAIN.
      b. Georgia-Pacific Gypsum LLC.
      c. USG Corporation.
   2. Core: 5/8 inch (15.9 mm), Type X.
   3. Long Edges: Tapered.
   4. Mold Resistance: ASTM D3273, score of 10 as rated according to ASTM D3274.

2.05 TRIM ACCESSORIES

A. Interior Trim: ASTM C1047.
   1. Material: Galvanized or aluminum-coated steel sheet or rolled zinc.
   2. Shapes:
      a. Cornerbead.
      b. LC-Bead: J-shaped; exposed long flange receives joint compound.
      c. Expansion (control) joint.

2.06 JOINT TREATMENT MATERIALS

A. General: Comply with ASTM C475/C475M.

B. Joint Tape:
   1. Interior Gypsum Board: Paperless.

C. Joint Compound for Interior Gypsum Board: For each coat, use formulation that is compatible with other compounds applied on previous or for successive coats.
   1. Prefilling: At open joints, rounded or beveled panel edges, and damaged surface areas, use setting-type taping compound.
   2. Embedding and First Coat: For embedding tape and first coat on joints, fasteners, and trim flanges, use setting-type taping compound.
      a. Use setting-type compound for installing paper-faced metal trim accessories.
   3. Fill Coat: For second coat, use setting-type, sandable topping compound.
   4. Finish Coat: For third coat, use drying-type, all-purpose compound.

2.07 AUXILIARY MATERIALS

A. Provide auxiliary materials that comply with referenced installation standards and manufacturer's written instructions.

B. Steel Drill Screws: ASTM C1002 unless otherwise indicated.
   1. Use screws complying with ASTM C954 for fastening panels to steel members from 0.033 to 0.112 inch (0.84 to 2.84 mm) thick.

C. Acoustical Sealant: As specified in Section 07 92 19 "Acoustical Joint Sealants."

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine areas and substrates including welded hollow-metal frames and support framing, with Installer present, for compliance with requirements and other conditions affecting performance of the Work.

B. Examine panels before installation. Reject panels that are wet, moisture damaged, and mold damaged.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION AND FINISHING OF PANELS, GENERAL

A. Comply with ASTM C840.

B. Install ceiling panels across framing to minimize the number of abutting end joints and to avoid abutting end joints in central area of each ceiling. Stagger abutting end joints of adjacent panels not less than one framing member.

C. Install panels with face side out. Butt panels together for a light contact at edges and ends with not more than 1/16 inch (1.5 mm) of open space between panels. Do not force into place.

D. Locate edge and end joints over supports, except in ceiling applications where intermediate supports or gypsum board back-blocking is provided behind end joints. Do not place tapered edges against cut edges or ends. Stagger vertical joints on opposite sides of partitions. Do not make joints other than control joints at corners of framed openings.

E. Form control and expansion joints with space between edges of adjoining gypsum panels.

F. Isolate perimeter of gypsum board applied to non-load-bearing partitions at structural abutments. Provide 1/4- to 1/2-inch- (6.4- to 12.7-mm-) wide spaces at these locations and trim edges with edge trim where edges of panels are exposed. Seal joints between edges and abutting structural surfaces with acoustical sealant.

G. Attachment to Steel Framing: Attach panels so leading edge or end of each panel is attached to open (unsupported) edges of stud flanges first.

H. Install sound attenuation blankets before installing gypsum panels unless blankets are readily installed after panels have been installed on one side.

3.03 INSTALLATION OF INTERIOR GYPSUM BOARD

A. Install interior gypsum board in the following locations:

1. Mold-Resistant Type: All locations.

B. Single-Layer Application:

1. On ceilings, apply gypsum panels before wall/partition board application to greatest extent possible and at right angles to framing unless otherwise indicated.
2. Fastening Methods: Apply gypsum panels to supports with steel drill screws.

3.04 INSTALLATION OF TRIM ACCESSORIES

A. General: For trim with back flanges intended for fasteners, attach to framing with same fasteners used for panels. Otherwise, attach trim according to manufacturer's written instructions.

B. Control Joints: Install control joints according to ASTM C840 and in specific locations approved by Architect for visual effect.

C. Interior Trim: Install in the following locations:

1. LC-Bead: Use at exposed panel edges.

3.05 FINISHING OF GYPSUM BOARD

A. General: Treat gypsum board joints, interior angles, edge trim, control joints, penetrations, fastener heads, surface defects, and elsewhere as required to prepare gypsum board surfaces for decoration. Promptly remove residual joint compound from adjacent surfaces.

B. Prefill open joints, rounded or beveled edges, and damaged surface areas.

C. Apply joint tape over gypsum board joints, except for trim products specifically indicated as not intended to receive tape.

D. Gypsum Board Finish Levels: Finish panels to levels indicated below and according to ASTM C840:

1. Level 4: At panel surfaces that will be exposed to view unless otherwise indicated.
    a. Primer and its application to surfaces are specified in Section 09 90 00 "Protective Coatings."

3.06 PROTECTION

A. Protect adjacent surfaces from drywall compound and promptly remove from floors and other non-drywall surfaces. Repair surfaces stained, marred, or otherwise damaged during drywall application.

B. Protect installed products from damage from weather, condensation, direct sunlight, construction, and other causes during remainder of the construction period.

C. Remove and replace panels that are wet, moisture damaged, and mold damaged.

1. Indications that panels are wet or moisture damaged include, but are not limited to, discoloration, sagging, or irregular shape.
2. Indications that panels are mold damaged include, but are not limited to, fuzzy or splotchy surface contamination and discoloration.

END OF SECTION 09 29 00

SECTION 09 51 13 - ACOUSTICAL PANEL CEILINGS

PART 1 - GENERAL

1.01 SUMMARY
- A. Section includes acoustical panels and exposed suspension systems for interior ceilings.
- B. Products furnished, but not installed under this Section, include anchors, clips, and other ceiling attachment devices to be cast in concrete.

1.02 PREINSTALLATION MEETINGS
- A. Preinstallation Conference: Conduct conference at Project site.

1.03 ACTION SUBMITTALS
- A. Product Data: For each type of product.
- B. Samples: Do not submit samples.

1.04 INFORMATIONAL SUBMITTALS
- A. Product Test Reports: For each acoustical panel ceiling, for tests performed by manufacturer and witnessed by a qualified testing agency.
- B. Evaluation Reports: For each acoustical panel ceiling suspension system and anchor and fastener type, from ICC-ES.
- C. Field quality-control reports.

1.05 CLOSEOUT SUBMITTALS
- A. Maintenance Data: For finishes to include in maintenance manuals.

1.06 MAINTENANCE MATERIAL SUBMITTALS
- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
  1. Acoustical Ceiling Units: Full-size panels equal to 2 percent of quantity installed.
  2. Suspension-System Components: Quantity of each exposed component equal to 2 percent of quantity installed.
  3. Hold-Down Clips: Equal to 2 percent of quantity installed.
  4. Impact Clips: Equal to 2 percent of quantity installed.

1.07 DELIVERY, STORAGE, AND HANDLING
- A. Deliver acoustical panels, suspension-system components, and accessories to Project site and store them in a fully enclosed, conditioned space where they will be protected against damage from moisture, humidity, temperature extremes, direct sunlight, surface contamination, and other causes.
- B. Before installing acoustical panels, permit them to reach room temperature and a stabilized moisture content.

1.08 FIELD CONDITIONS
- A. Environmental Limitations: Do not install acoustical panel ceilings until spaces are enclosed and weathertight, wet-work in spaces is complete and dry, work above ceilings is complete, and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Source Limitations: Obtain each type of acoustical ceiling panel and its supporting suspension system from single source from single manufacturer.

2.02 PERFORMANCE REQUIREMENTS

A. Surface-Burning Characteristics: Comply with ASTM E84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
   1. Flame-Spread Index: Class A according to ASTM E1264.
   2. Smoke-Developed Index: 50 or less.

2.03 ACOUSTICAL PANELS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Armstrong Ceiling & Wall Solutions.
   2. Certainteed; SAINT-GOBAIN.
   3. USG Corporation.

B. Acoustical Panel Standard: Provide manufacturer's standard panels according to ASTM E1264 and designated by type, form, pattern, acoustical rating, and light reflectance unless otherwise indicated.

C. Classification: Provide panels as follows:
   1. Type and Form: Type IV, mineral base with membrane-faced overlay; Form 2, water felted; with vinyl overlay on face.
   2. Pattern: E (lightly textured).

D. Color: White.

E. Light Reflectance (LR): Not less than 0.85.

F. Ceiling Attenuation Class (CAC): Not less than 35.

G. Noise Reduction Coefficient (NRC): Not less than 0.75.

H. Edge/Joint Detail: Reveal sized to fit flange of exposed suspension-system members.

I. Thickness: 3/4 inch (19 mm).

J. Modular Size: 24 by 24 inches (610 by 610 mm).

K. Antimicrobial Treatment: Manufacturer's standard broad spectrum, antimicrobial formulation that inhibits fungus, mold, mildew, and gram-positive and gram-negative bacteria and showing no mold, mildew, or bacterial growth when tested according to ASTM D3273, ASTM D3274, or ASTM G21 and evaluated according to ASTM D3274 or ASTM G21.

2.04 METAL SUSPENSION SYSTEM

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Armstrong Ceiling & Wall Solutions.
   2. Certainteed; SAINT-GOBAIN.
   3. USG Corporation.

B. Metal Suspension-System Standard: Provide manufacturer's standard, direct-hung, metal suspension system and accessories according to ASTM C635/C635M and designated by type, structural classification, and finish indicated.
   1. High-Humidity Finish: Where indicated, provide coating tested and classified for "severe environment performance" according to ASTM C635/C635M.

C. Narrow-Face, Capped, Double-Web, Steel Suspension System: Main and cross runners roll formed from cold-rolled steel sheet; prepainted, electrolytically zinc coated, or hot-dip

galvanized, G30 (Z90) coating designation; with prefinished 9/16-inch- (15-mm-) wide metal caps on flanges.

1. Structural Classification: Intermediate-duty system.
2. End Condition of Cross Runners: Override (stepped) type.
3. Face Design: Flat, flush.
4. Cap Material: Cold-rolled steel or aluminum.
5. Cap Finish: Painted white.

2.05 ACCESSORIES

A. Attachment Devices: Size for five times the design load indicated in ASTM C635/C635M, Table 1, "Direct Hung," unless otherwise indicated. Comply with seismic design requirements.
   1. Anchors in Concrete: Anchors of type and material indicated below, with holes or loops for attaching hangers of type indicated and with capability to sustain, without failure, a load equal to five times that imposed by ceiling construction, as determined by testing according to ASTM E488/E488M or ASTM E1512 as applicable, conducted by a qualified testing and inspecting agency.
      a. Type: Postinstalled expansion anchors.
      b. Corrosion Protection: Stainless-steel components complying with ASTM F593 and ASTM F594, Group 1 Alloy 304 or 316.
      c. Corrosion Protection: Components fabricated from nickel-copper-alloy rods complying with ASTM B164 for UNS No. N04400 alloy.

B. Wire Hangers, Braces, and Ties: Provide wires as follows:
   1. Zinc-Coated, Carbon-Steel Wire: ASTM A641/A641M, Class 1 zinc coating, soft temper.
   2. Stainless-Steel Wire: ASTM A580/A580M, Type 304, nonmagnetic.
   3. Size: Wire diameter sufficient for its stress at three times hanger design load (ASTM C635/C635M, Table 1, "Direct Hung") will be less than yield stress of wire, but not less than 0.106-inch- (2.69-mm-) diameter wire.

2.06 METAL EDGE MOLDINGS AND TRIM

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Armstrong Ceiling & Wall Solutions.
   2. Certainteed; SAINT-GOBAIN.
   3. USG Corporation.

B. Roll-Formed, Sheet-Metal Edge Moldings and Trim: Type and profile indicated or, if not indicated, manufacturer's standard moldings for edges and penetrations that comply with seismic design requirements; formed from sheet metal of same material, finish, and color as that used for exposed flanges of suspension-system runners.
   1. Edge moldings shall fit acoustical panel edge details and suspension systems indicated and match width and configuration of exposed runners unless otherwise indicated.
   2. For circular penetrations of ceiling, provide edge moldings fabricated to diameter required to fit penetration exactly.

2.07 ACOUSTICAL SEALANT

A. Acoustical Sealant: As specified in Section 07 92 19 "Acoustical Joint Sealants."

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine substrates, areas, and conditions, including structural framing to which acoustical panel ceilings attach or abut, with Installer present, for compliance with requirements specified in this and other Sections that affect ceiling installation and anchorage and with requirements for installation tolerances and other conditions affecting performance of acoustical panel ceilings.

B. Examine acoustical panels before installation. Reject acoustical panels that are wet, moisture damaged, or mold damaged.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Measure each ceiling area and establish layout of acoustical panels to balance border widths at opposite edges of each ceiling. Avoid using less-than-half-width panels at borders unless otherwise indicated, and comply with layout shown on reflected ceiling plans.

B. Layout openings for penetrations centered on the penetrating items.

3.03 INSTALLATION

A. Install acoustical panel ceilings according to ASTM C636/C636M and manufacturer's written instructions.

B. Suspend ceiling hangers from building's structural members and as follows:

1. Install hangers plumb and free from contact with insulation or other objects within ceiling plenum that are not part of supporting structure or of ceiling suspension system.
2. Splay hangers only where required to miss obstructions; offset resulting horizontal forces by bracing, countersplaying, or other equally effective means.
3. Where width of ducts and other construction within ceiling plenum produces hanger spacings that interfere with location of hangers at spacings required to support standard suspension-system members, install supplemental suspension members and hangers in form of trapezes or equivalent devices.
4. Secure wire hangers to ceiling-suspension members and to supports above with a minimum of three tight turns. Connect hangers directly to structure or to inserts, eye screws, or other devices that are secure and appropriate for substrate and that will not deteriorate or otherwise fail due to age, corrosion, or elevated temperatures.
5. Do not support ceilings directly from permanent metal forms or floor deck. Fasten hangers to cast-in-place hanger inserts, post-installed mechanical or adhesive anchors, or power-actuated fasteners that extend through forms into concrete.
6. Space hangers not more than 48 inches (1200 mm) o.c. along each member supported directly from hangers unless otherwise indicated; provide hangers not more than 8 inches (200 mm) from ends of each member.
7. Size supplemental suspension members and hangers to support ceiling loads within performance limits established by referenced standards.

C. Secure bracing wires to ceiling suspension members and to supports with a minimum of four tight turns. Suspend bracing from building's structural members as required for hangers, without attaching to permanent metal forms, steel deck, or steel deck tabs. Fasten bracing wires into concrete with cast-in-place or post-installed anchors.

D. Install edge moldings and trim of type indicated at perimeter of acoustical ceiling area and where necessary to conceal edges of acoustical panels.

1. Apply acoustical sealant in a continuous ribbon concealed on back of vertical legs of moldings before they are installed.

2. Screw attach moldings to substrate at intervals not more than 16 inches (400 mm) o.c. and not more than 3 inches (75 mm) from ends. Miter corners accurately and connect securely.
3. Do not use exposed fasteners, including pop rivets, on moldings and trim.

E. Install suspension-system runners so they are square and securely interlocked with one another. Remove and replace dented, bent, or kinked members.

F. Install acoustical panels with undamaged edges and fit accurately into suspension-system runners and edge moldings. Scribe and cut panels at borders and penetrations to provide precise fit.
1. For square-edged panels, install panels with edges fully hidden from view by flanges of suspension-system runners and moldings.
2. For reveal-edged panels on suspension-system runners, install panels with bottom of reveal in firm contact with top surface of runner flanges.
3. For reveal-edged panels on suspension-system members with box-shaped flanges, install panels with reveal surfaces in firm contact with suspension-system surfaces and panel faces flush with bottom face of runners.
4. Paint cut edges of panel remaining exposed after installation; match color of exposed panel surfaces using coating recommended in writing for this purpose by acoustical panel manufacturer.
5. Protect lighting fixtures and air ducts according to requirements indicated for fire-resistance-rated assembly.

3.04 ERECTION TOLERANCES

A. Suspended Ceilings: Install main and cross runners level to a tolerance of 1/8 inch in 12 feet (3 mm in 3.6 m), non-cumulative.

B. Moldings and Trim: Install moldings and trim to substrate and level with ceiling suspension system to a tolerance of 1/8 inch in 12 feet (3 mm in 3.6 m), non-cumulative.

3.05 CLEANING

A. Clean exposed surfaces of acoustical panel ceilings, including trim, edge moldings, and suspension-system members. Comply with manufacturer's written instructions for cleaning and touchup of minor finish damage.

B. Remove and replace ceiling components that cannot be successfully cleaned and repaired to permanently eliminate evidence of damage.

END OF SECTION 09 51 13

SECTION 09 65 13 - RESILIENT BASE AND ACCESSORIES

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Thermoset rubber base.
   2. Rubber molding accessories.

B. Related Requirements:
   1. Section 12 35 53.13 "Metal Laboratory Casework"

1.02 ACTION SUBMITTALS

A. Product Data: For each type of product.
   1. Include manufacturer's written data on physical characteristics, durability, and fade resistance.
   2. Include manufacturer's written installation instructions for each type of substrate.

B. Samples: For each exposed product and for each color and texture specified, not less than 12 inches long.

C. Samples for Verification: For each type of exposed product indicated and for each color, texture, and pattern required in manufacturer's standard-size Samples, but not less than 12 inches long.

D. Product Schedule: For resilient base and accessory products.

1.03 INFORMATIONAL SUBMITTALS

A. Product Test Reports: For resilient base and accessory products, for tests performed by a qualified testing agency.

1.04 MAINTENANCE MATERIAL SUBMITTALS

A. Extra Stock Material: Furnish extra materials to Owner that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
   1. Furnish not less than 10 linear ft. for every 500 linear ft. or fraction thereof, of each type, color, pattern, and size of resilient product installed.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Store resilient products and installation materials in dry spaces protected from the weather, with ambient temperatures maintained within range recommended by manufacturer, but not less than 50 deg F or more than 90 deg F.

1.06 FIELD CONDITIONS

A. Maintain ambient temperatures within range recommended by manufacturer, but not less than 70 deg F or more than 95 deg F , in spaces to receive resilient products during the following periods:
   1. 48 hours before installation.
   2. During installation.
   3. 48 hours after installation.

B. After installation and until Substantial Completion, maintain ambient temperatures within range recommended by manufacturer, but not less than 55 deg F or more than 95 deg F.

C. Install resilient products after other finishing operations, including painting, have been completed.

PART 2 - PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

A. Fire-Test-Response Characteristics: As determined by testing identical products in accordance with ASTM E648 or ASTM E662 by a qualified testing agency.
   1. Critical Radiant Flux Classification: Class I, not less than 0.45 W/sq. cm.

2.02 RESILIENT BASE

A. Thermoset Rubber Base:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Mannington Mills, Inc
      b. Roppe Corporation; Roppe Holding Company
      c. Tarkett USA
   2. Classification: ASTM F1861, Type TS (rubber, vulcanized thermoset), Group I (solid, homogeneous).
   3. Style and Location:
      a. Style B, Cove: Provide in areas with resilient floor coverings.
   4. Thickness: 0.125 inch.
   5. Height: To be coordinated with final laboratory casework selection. Reference section 13 35 53.13.
   6. Lengths: Cut lengths 48 inches long or coils in manufacturer's standard length.
   7. Outside Corners: Preformed.
   8. Inside Corners: Job formed or preformed.
   9. Colors: Match Architect's sample.

2.03 INSTALLATION MATERIALS

A. Adhesives: Water-resistant type recommended in writing by resilient-product manufacturer for resilient products and substrate conditions indicated.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine substrates, with Installer present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the Work.
   1. Verify that finishes of substrates comply with tolerances and other requirements specified in other Sections and that substrates are free of cracks, ridges, depressions, scale, and foreign deposits that might interfere with adhesion of resilient products.

B. Proceed with installation only after unsatisfactory conditions have been corrected.
   1. Installation of resilient products indicates acceptance of surfaces and conditions.

3.02 PREPARATION

A. Prepare substrates in accordance with manufacturer's written instructions to ensure adhesion of resilient products.

B. Concrete Substrates for Resilient Stair Accessories: Prepare horizontal surfaces in accordance with ASTM F710.
   1. Verify that substrates are dry and free of curing compounds, sealers, and hardeners.
   2. Remove substrate coatings and other substances that are incompatible with adhesives and that contain soap, wax, oil, or silicone, using mechanical methods recommended by manufacturer. Do not use solvents.

3. Alkalinity and Adhesion Testing: Perform tests recommended by manufacturer. Proceed with installation only after substrate alkalinity falls within range on pH scale recommended by manufacturer in writing, but not less than 5 or more than 10 pH.
4. Moisture Testing: Perform tests so that each test area does not exceed 200 sq. ft., and perform no fewer than three tests in each installation area and with test areas evenly spaced in installation areas.
    a. Anhydrous Calcium Chloride Test: ASTM F1869. Proceed with installation only after substrates have maximum moisture-vapor-emission rate of 3 lb of water/1000 sq. ft in 24 hours.
    b. Relative Humidity Test: Using in-situ probes, ASTM F2170. Proceed with installation only after substrates have a maximum [75]<Insert number> percent relative humidity level measurement.

C. Fill cracks, holes, and depressions in substrates with trowelable leveling and patching compound; remove bumps and ridges to produce a uniform and smooth substrate.
D. Do not install resilient products until materials are the same temperature as space where they are to be installed.
    1. At least 48 hours in advance of installation, move resilient products and installation materials into spaces where they will be installed.
E. Immediately before installation, sweep and vacuum clean substrates to be covered by resilient products.

3.03 INSTALLATION OF RESILIENT BASE

A. Comply with manufacturer's written instructions for installing resilient base.
B. Apply resilient base to walls, columns, pilasters, casework and cabinets in toe spaces, and other permanent fixtures in rooms and areas where base is required.
C. Install resilient base in lengths as long as practical without gaps at seams and with tops of adjacent pieces aligned.
D. Tightly adhere resilient base to substrate throughout length of each piece, with base in continuous contact with horizontal and vertical substrates.
E. Do not stretch resilient base during installation.
F. Preformed Corners: Install preformed corners before installing straight pieces.
G. Job-Formed Corners:
    1. Inside Corners: Use straight pieces of maximum lengths possible and form with returns not less than 3 inches in length.
        a. Miter corners to minimize open joints.

3.04 CLEANING AND PROTECTION

A. Comply with manufacturer's written instructions for cleaning and protecting resilient products.
B. Perform the following operations immediately after completing resilient-product installation:
    1. Remove adhesive and other blemishes from surfaces.
    2. Damp-mop horizontal surfaces to remove marks and soil.
C. Protect resilient products from mars, marks, indentations, and other damage from construction operations and placement of equipment and fixtures during remainder of construction period.
D. Cover resilient products subject to wear and foot traffic until Substantial Completion.

END OF SECTION 09 65 13

SECTION 09 84 00 - CEMENTITIOUS WOOD FIBER CEILINGS

PART 1 - GENERAL

1.01 SUMMARY

A. Section includes cementitious wood fiber plank acoustical ceiling and wall system.

B. Products furnished, but not installed under this Section, include anchors, clips, and other ceiling attachment devices to be cast in concrete.

1.02 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.03 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Samples: Do not submit samples.

1.04 INFORMATIONAL SUBMITTALS

A. Product Test Reports: For each acoustical ceiling, for tests performed by manufacturer and witnessed by a qualified testing agency.

B. Evaluation Reports (if applicable): For proprietary anchors or fasteners used for attachment to concrete, CMU, or structural steel, submit ICC-ES or equivalent evaluation reports verifying allowable loads and compliance with code requirements.

C. Field quality-control reports.

1.05 CLOSEOUT SUBMITTALS

A. Maintenance Data: For finishes to include in maintenance manuals.

1.06 MAINTENANCE MATERIAL SUBMITTALS

A. Extra Materials:

1. Furnish extra materials matching products installed, packaged with protective covering for storage, and clearly labeled for identification.
    a. Acoustical Panels:
        1) Provide full-size panels equal to 2 percent of quantity installed, but not less than two panels of each size, type, and finish.
    b. Mounting Components:
        1) Provide 2 percent of quantity installed, or a minimum of four of each type, of exposed fasteners, trim, and mounting clips or channels required for reinstallation or future repairs.
    c. Touch-Up Materials:
        1) Provide manufacturer’s recommended touch-up paint or coating for field repairs of cut or damaged edges.
    d. Acoustical Backing (if used):
        1) Provide 2 percent of insulation or liner board used behind panels, if visible or exposed at removable areas.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Deliver acoustical ceiling units to project site in original, unopened packages and store them in a fully enclosed space where they will be protected against damage from moisture, direct sunlight, surface contamination, and other causes.

B. Provide labels indicating brand name, style, size and thickness.
C. Before installing acoustical ceiling units, permit them to reach room temperature and a stabilized moisture content.
D. Handle acoustical ceiling units carefully to avoid chipping edges or damaged units in any way.

1.08 FIELD CONDITIONS
A. Environmental Requirements:
1. Do not install ceiling panels until building is closed in and HVAC system is operational.
2. Locate materials onsite at least 72 hours before beginning installation to allow materials to reach temperature and moisture content equilibrium.
3. Maintain the following conditions in areas where acoustical materials are to be installed 72 hours before, during and after installation:
a. Relative Humidity: 25 - 85%.
b. Uniform Temperature: 32 - 120 degrees F (0 - 49 degrees C).

PART 2 - PRODUCTS

2.01 MANUFACTURERS
A. Source Limitations: Obtain each type of acoustical ceiling panel and its supporting suspension system from single source from single manufacturer.

2.02 PERFORMANCE REQUIREMENTS
A. Surface-Burning Characteristics: Comply with ASTM E84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
1. Flame-Spread Index: Class A according to ASTM E1264.
2. Smoke-Developed Index: 50 or less.

2.03 ACOUSTICAL PANELS
A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Armstrong Ceiling & Wall Solutions.
2. Certainteed; SAINT-GOBAIN.
3. USG Corporation.
B. Acoustical Panel Standard: Provide manufacturer's standard panels according to ASTM E1264 and designated by type, form, pattern, acoustical rating, and light reflectance unless otherwise indicated.
C. Composition: wood fibers bonded with inorganic hydraulic cement
D. Color: White.
E. Size: Standard (23 ¾" x 48", 23 ¾" x 96", 47 ¾" x 96") Custom Sizes (width 23 ¾" – 48"; length 12" – 144" – Ceilings are limited to 12" -96" lengths if touching adjacent panels)
F. Thickness: Standard 1-1/2"
G. Edge Profile: Standard (long edge/short edge – Bevel/Square, long edge/short edge – Bevel/Bevel)
H. UL Classified Noise Reduction Coefficient (NRC): ASTM C 423; 1-1/2" thick panels mounting method: C-20(0.90) OR C-40(0.90) Classified with UL label.
I. UL Classified Flame Spread: ASTM E 1264; Class A. Product must be able to meet this criteria after being painted six times.
J. Light Reflectance (LR) White Panel: ASTM E 1477; (Light Reflectance)
K. Dimensional Stability/Mold Resistance: no significant mold growth when tested by ASTM D3273.

2.04 MOUNTING SYSTEM

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Armstrong Ceiling & Wall Solutions.
   2. Certainteed; SAINT-GOBAIN.
   3. USG Corporation.

B. Structural Performance:
Attachment devices, framing members, and anchors shall be designed to support five times the combined dead load of panels and supporting system, or as required by governing code, whichever is greater. Comply with ASTM C635/C635M, Table 1, "Direct Hung," as a minimum reference for load design and material strength, adapted for direct-attached ceiling assemblies.

C. Attachment to Structure:
   1. General:
      a. Provide a complete ceiling-mounted system including all framing members, attachment devices, anchors, fasteners, and accessories required to support Tectum acoustical panels and accommodate conduit, mechanical, and electrical components above the panel plane.
   2. Anchors in Concrete or Masonry:
      a. Type: Postinstalled expansion or adhesive anchors tested in accordance with ASTM E488/E488M or ASTM E1512, installed by qualified personnel.
   3. Corrosion Protection:
      a. Stainless steel (ASTM F593/F594, Type 304 or 316) for humid or exposed conditions.
      b. Zinc-plated carbon steel acceptable for dry, conditioned interiors.
      c. Anchors shall have minimum capacity to resist a load equal to five times the actual imposed load without failure.
   4. Attachment to Structural Steel:
      a. Use welded or bolted connections complying with AISC 360 and manufacturer's recommendations.
      b. Provide isolation washers or clips as required to prevent galvanic corrosion between dissimilar metals.
   5. Hat Channel Framing:
      a. Cold-formed galvanized steel hat channels, minimum 25 gauge (0.019 in. base metal thickness) unless otherwise noted.
      b. Install perpendicular to panel orientation, at spacing per manufacturer's structural data to support acoustical panel weight and resist deflection of L/360 or less.
      c. Provide continuous perimeter angle or track to secure channel ends and maintain ceiling plane.
      d. Allow clearance as indicated (typically 1-1/2 in. to 3-1/2 in.) for conduit or raceway passage above panel plane.
   6. Fasteners:
      a. Manufacturer-approved self-drilling screws or clips compatible with Tectum panel and substrate material.
      b. Conceal fasteners where possible; align visible fasteners consistently.
      c. Use corrosion-resistant coatings equivalent to ASTM B633, Type II, SC1 minimum.

D. Attachment to CMU Substrate:

1. General:
   a. Provide complete wall-mounted support system including all framing members, furring, attachment devices, and anchors required to support acoustical panels at specified offsets from the CMU substrate and to accommodate conduit or raceways behind panel plane.
2. Anchors:
   a. Type: Post-installed masonry anchors (expansion, screw, or adhesive type) tested in accordance with ASTM E488/E488M for both pull-out and shear.
   b. Material and Corrosion Resistance:
      1) Interior Dry Locations: Zinc-plated carbon steel complying with ASTM A510.
      2) High-Humidity or Exposed Locations: Stainless steel (ASTM F593/F594, Type 304 or 316).
      3) Capacity: Each anchor shall be capable of sustaining, without failure, five times the actual imposed load from panel and subframing assembly.
      4) Embedment: Minimum embedment depth per anchor manufacturer to achieve required pull-out and shear capacities in CMU.
3. Hat Channel or Z-Furring:
   a. Cold-formed galvanized steel channels, minimum 25 gauge (0.019 in.), unless otherwise noted.
   b. Space channels at 16 inches on center or as required to support panel weight and prevent deflection greater than L/360.
   c. Align furring vertically or horizontally as indicated to receive panel layout.
   d. Maintain specified clearance behind channels (typically 1-1/2 in. to 3-1/2 in.) for conduit routing.
4. Fasteners:
   a. Use self-drilling or self-tapping masonry screws, expansion bolts, or anchors as recommended by manufacturer for CMU substrate.
   b. Fastener heads shall be flush with or recessed into channels; provide corrosion protection per ASTM B633, Type II, SC1 minimum.
   c. Conceal fasteners from view where possible.
5. Isolation:
   a. Provide neoprene or EPDM isolation washers between steel furring and masonry to minimize vibration transfer where required for acoustical performance.

E. Coordination**:**
   1. Coordinate installation of furring and conduit. Ensure anchors and channels are located to avoid conflicts with embedded utilities, and maintain continuous support behind panel joints.

F. Inspection:
   1. Prior to panel installation, verify all anchors are torqued to manufacturer’s requirements and visually inspect for alignment and rigidity.

2.05 ACCESSORIES

A. Attachment Devices: Size for five times the design load indicated in ASTM C635/C635M, Table 1, "Direct Hung," unless otherwise indicated. Comply with seismic design requirements.
   1. Anchors in Concrete: Anchors of type and material indicated below, with holes or loops for attaching hangers of type indicated and with capability to sustain, without failure, a load equal to five times that imposed by ceiling construction, as determined by testing according to ASTM E488/E488M or ASTM E1512 as applicable, conducted by a qualified testing and inspecting agency.

a. Type: Postinstalled expansion anchors.
b. Corrosion Protection: Stainless-steel components complying with ASTM F593 and ASTM F594, Group 1 Alloy 304 or 316.
c. Corrosion Protection: Components fabricated from nickel-copper-alloy rods complying with ASTM B164 for UNS No. N04400 alloy.

2. Reveals, trims, and edge moldings to match panel finish.
3. Black scrim behind panel openings, where visible.
4. Touch-up coating kit for site repairs.

2.06 METAL EDGE MOLDINGS AND TRIM

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Armstrong Ceiling & Wall Solutions.
2. Certainteed; SAINT-GOBAIN.
3. USG Corporation.

B. Roll-Formed, Sheet-Metal Edge Moldings and Trim: Type and profile indicated or, if not indicated, manufacturer's standard moldings for edges and penetrations that comply with seismic design requirements; formed from sheet metal of same material, finish, and color as that used for exposed flanges of suspension-system runners.
1. Edge moldings shall fit acoustical panel edge details and suspension systems indicated and match width and configuration of exposed runners unless otherwise indicated.
2. For circular penetrations of ceiling, provide edge moldings fabricated to diameter required to fit penetration exactly.

2.07 ACOUSTICAL SEALANT

A. Acoustical Sealant: As specified in Section 07 92 19 "Acoustical Joint Sealants."

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine substrates, areas, and conditions, including structural framing to which wood fiber plank acoustical ceiling attach or abut, with Installer present, for compliance with requirements specified in this and other Sections that affect ceiling installation and anchorage and with requirements for installation tolerances and other conditions affecting performance of acoustical panel ceilings.

B. Examine acoustical panels before installation. Reject wood fiber plank acoustical ceiling panels that are wet, moisture damaged, or mold damaged.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Measure each ceiling area and establish layout of wood fiber plank acoustical ceiling panels to balance border widths at opposite edges of each ceiling. Avoid using less-than-half-width panels at borders unless otherwise indicated, and comply with layout shown on reflected ceiling plans.

B. Layout openings for penetrations centered on the penetrating items.

3.03 INSTALLATION

A. General:
1. Install wood fiber plank acoustical ceiling panels and supporting furring system in accordance with the manufacturer’s written instructions, approved shop drawings, and requirements of ASTM C754 for installation of steel framing and furring. Coordinate

with mechanical and electrical work within ceiling or wall cavities to maintain required clearances.

B. Substrate Preparation:
   1. Verify substrates are plumb, level, and free of protrusions or debris that would interfere with installation.
   2. Where applied to concrete or CMU, verify surfaces are sound and anchors are properly located to receive furring.
   3. Confirm layout and conduit routing before beginning installation.

C. Furring and Hat Channel Installation:
   1. Install galvanized steel hat channels or Z-furring members at spacing not to exceed 16 inches (400 mm) o.c., unless otherwise indicated by manufacturer's structural data.
   2. Fasten channels securely to substrate using post-installed anchors, screws, or other approved fasteners capable of supporting five times the imposed load.
   3. Shim and align channels to maintain a flat plane with a tolerance of 1/8 inch in 10 feet (3 mm in 3 m).
   4. Provide clearance behind furring (typically 1-1/2 to 3-1/2 inches) to accommodate conduit and other utilities as indicated.
   5. Install perimeter channels or angles to form continuous support at terminations and changes in plane.

D. Panel Installation:
   1. Install panels perpendicular to hat channels unless otherwise indicated.
   2. Secure panels with manufacturer-approved fasteners; drive flush with surface without over-compressing material.
   3. Locate fasteners as recommended—typically 6 inches (150 mm) from panel edges and spaced not more than 24 inches (600 mm) along intermediate supports.
   4. Stagger end joints and align reveals or edges uniformly.
   5. Maintain consistent joint width as specified; fill or treat per manufacturer's finish recommendations.
   6. Cut panels accurately at borders, penetrations, and terminations to achieve tight, even joints.
   7. Touch up cut edges and field cuts with manufacturer's recommended finish coating to match panel color.

E. Perimeter and Edge Conditions:
   1. Install trim and moldings of type and finish indicated to conceal edges and terminations.
   2. Apply acoustical sealant behind trim flanges where indicated for air and sound isolation.
   3. Fasten trims at maximum 16 inches (400 mm) o.c.; miter and secure corners neatly.
   4. Do not use exposed mechanical fasteners on finished surfaces unless specifically approved.

F. Field Quality Control:
   1. Verify panel alignment and surface plane visually from typical viewing distance.
   2. Replace damaged or nonconforming panels.
   3. Confirm all anchors and furring connections are secure prior to project closeout.

3.04 ERECTION TOLERANCES

A. Alignment and Plane:
   1. Install hat channels and acoustical panels true to plane within the following tolerances:
      a. Flatness: Maximum deviation of 1/8 inch in 10 feet (3 mm in 3 m), non-cumulative.
      b. Alignment: Adjacent panel edges shall be flush within 1/16 inch (1.5 mm).
      c. Level (Ceilings Only): Finished ceiling surface shall not vary more than 1/8 inch in 12 feet (3 mm in 3.6 m) in any direction.

B. Joints and Reveals:
   1. Maintain consistent joint widths and reveal alignment within ±1/16 inch (1.5 mm) over continuous runs.

C. Moldings and Trim:
   1. Install perimeter moldings and trim straight, level, and in plane with adjoining panels within 1/8 inch in 12 feet (3 mm in 3.6 m) tolerance, non-cumulative.

D. Fasteners:
   1. Set fasteners flush with panel surface without over-driving or crushing fiber; misaligned or overdriven fasteners shall be replaced or repaired per manufacturer's recommendations.

3.05 CLEANING

A. Cleaning and Protection:
   1. Remove dust, fingerprints, and debris with clean, dry cloth or vacuum.
   2. Protect installed panels from impact, moisture, and construction damage until Substantial Completion.

B. Remove and replace ceiling components that cannot be successfully cleaned and repaired to permanently eliminate evidence of damage.

END OF SECTION 09 84 00

SECTION 09 90 00 – PROTECTIVE COATINGS

PART 1 - GENERAL

1.01 RELATED DOCUMENTS:

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and DIVISION 01 Specification Sections, apply to this Section.

1.02 SUMMARY:

A. This Section includes coating of exterior and interior surfaces throughout the Project and which are listed in PART 2, with systems specified on "coating system" sheets at the end of this Section.

B. Coating systems include surface preparation, prime coat (first coat), finish coats (second and third coats), inspection, cleaning, and touch-up of surfaces and equipment. Shop preparation, prime coat, and finish coats to be shop-applied, may be specified elsewhere or referenced to this Section so that a complete system is specified and coordinated.

1. Where surface preparation and first (prime) coat are specified in other Sections to be shop-applied, such as for structural steel, hollow metal doors or equipment, only the touch-up and finish coats are a part of field painting. Surface preparation is the required degree of preparation prior to application of first (prime) coat regardless if done in shop or field.
2. If materials are provided without shop primer such as miscellaneous steel or sheet metal, then surface preparation, first, second, and third coats are a part of field painting.

1.03 RELATED REQUIREMENTS:

A. Shop Painting and Coatings: All applicable Divisions.

B. Factory Prefinished Items: All applicable Divisions.

1.04 REFERENCE STANDARDS:

A. Applicable Standards:

1. American National Standards Institute (ANSI):
   a. A13.1 - Scheme for the Identification of Piping Systems.
   b. Z53.1 - Safety Color Code for Marking Physical Hazards.
2. American Society for Testing and Materials (ASTM):
   a. D4259 - Abrading Concrete.
3. Society for Protective Coatings (SSPC) Surface Preparation Specifications:
   a. SP1 - Solvent Cleaning: Removes oil, grease, soil, drawing and cutting compounds, and other soluble contaminants.
   b. SP2 - Hand Tool Cleaning: Remove loose material. Not intended to remove adherent mill scale, rust, and paint.
   c. SP3 - Power Tool Cleaning: Removes loose material. Not intended to remove all scale or rust.
   d. SP5 - White Metal Blast Cleaning: Removes all scale, rust, foreign matter. Leaves surface gray-white uniform metallic color.
   e. SP6 - Commercial Blast Cleaning: Two-thirds of every nine square inches free of all visible residues; remainder only light discoloration.
   f. SP10 - Near-White Blast Cleaning: At least 95% of every nine square inches shall be free of all visible residues.
   g. SP11 - Power Tool Cleaning to Bare Metal.
   h. SP13 – Surface Preparation of Concrete.

1.05 SUBMITTALS:

A. Submit as specified in DIVISION 1.

B. Includes, but not limited to, the following:

1. Schedule of products and paint systems to be used. Schedule shall include the following information:
   a. Surfaces for system to be applied.
   b. Surface preparation method and degree of cleanliness.
   c. Product manufacturer, name, and number.
   d. Method of application.
   e. Dry film mil thickness per coat of coating to be applied.
2. Color charts for selection and acceptance.
3. Technical and material safety data sheets.
4. Certification(s) by coating manufacturer(s) that all coatings are suitable for service intended as stated on each coating system sheet. If manufacturer has an equivalent product as that specified, and it is suitable for the intended purpose, Contractor shall submit the recommended product for approval at no increase in cost, and state reasons for substitution.
5. Contractor shall certify in writing to the Engineer/Architect that applicators have previously applied all the systems in this Specification and have the ability and equipment to prepare the surfaces and apply the coatings correctly.

C. Submittals for industrial maintenance coatings shall be prepared by, or have assistance in preparation of, a corrosion engineer or industrial coatings technical representative of the coating manufacturer.

1.06 QUALITY ASSURANCE:

A. Include on label of container:

1. Manufacturer's name, product name, and number.
2. Type of paint and generic name.
3. Color name and number.
4. Storage and temperature limits.
5. Mixing and application instructions, including requirements for precautions which must be taken.
6. Drying, recoat, or curing time.

B. A coating report shall be completed daily by Contractor at each phase of the coating system starting with surface preparation. These shall be submitted on the form attached at end of this Section.

C. In the event a problem occurs with coating system, surface preparation, or application, Contractor shall require coating applicator and coating manufacturer's technical representative to promptly investigate the problem and submit results to Engineer/Architect.

1.07 DELIVERY, STORAGE, AND HANDLING:

A. Delivery of Materials:

1. Deliver in sealed containers with labels and information legible and intact. Containers shall also have correct labels with required information.

1.08 REGULATORY REQUIREMENTS:

A. In addition to requirements specified elsewhere for environmental protection, provide coating materials that conform to the restrictions of the U.S. EPA and the local and regional

jurisdictions. Notify Engineer/Architect of any coating specified herein that fails to conform to the requirements for the location of the Project or location of application.

B. Lead Content: Use only coatings that are totally lead free.
C. Chromate Content: Do not use coatings containing zinc-chromate or strontium chromate.
D. Asbestos Content: Materials shall not contain asbestos.
E. Mercury Content: Materials shall not contain mercury or mercury compounds.

1.09 WARRANTY

A. The Manufacturer shall warrant that all protective coatings shall be free from defects caused by faulty material or workmanship for a minimum period of one (1) year from the date of Substantial Completion, unless otherwise specified.
B. Warranties shall comply with the requirements of Section 01 78 36.

PART 2 - PRODUCTS

2.01 ACCEPTABLE MANUFACTURERS:

A. Proprietary names and product numbers are specified in most systems for material identification from these manufacturers:
   1. Ameron Protective Coatings Systems Group, PPG.
   2. Carboline Company, Inc.
   3. Tnemec Company, Inc.
   4. Sherwin-Williams.

2.02 GENERAL:

A. Materials furnished for each coating system must be compatible to the substrate.
B. When unprimed surfaces are to be coated, entire coating system shall be by the same coating manufacturer to assure compatibility of coatings.
C. When shop-painted surfaces are to be coated, ascertain whether finish materials will be compatible with shop coating. Inform Engineer/Architect of any unsuitable substrate or coating conditions.

2.03 COATING SYSTEMS:

A. Specified on the "Protective Coating System" sheets at the end of this Section.

2.04 SURFACES TO BE COATED:

A. System A-5:
   1. Item: Steel Bollards and exterior exposed carbon steel
      a. Reference: DIVISION 05, Architectural, Civil and Structural Drawings
      b. Location: As indicated
B. System B-4:
   1. Item: New Galvanized Steel, Including: Doors and Frames, Veneer Lintels, and Hollowcore Support Angles.
      a. Reference: DIVISION 05, Architectural and Structural Drawings
      b. Location: As indicated
C. System E-1:
   1. Item: New Iron and Steel Process Piping, Valves, Motors, Pipe Supports, Pumps, Drains, Air Lines & Related Accessories. Interior Exposure, Exterior Surfaces & Non-Potable Liquid Immersion:

a. Reference: DIVISION 22, 33, 41 & 46
b. Location: As indicated

2. Item: Misc. Non-galvanized Steel Interior Exposure, including interior structural steel:
   a. Reference: DIVISION 05 & drawings
   b. Location: As indicated
3. Item: Steel Hangers & Supports for Mechanical Equipment and Piping. Interior Exposure:
   a. Reference: DIVISION 05 & Mechanical Drawings
   b. Location: As indicated

D. System F-3:
   1. Item: Interior CMU walls
      a. Reference: Architectural Drawings
      b. Location: As indicated

E. System J-2:
   1. Item: Interior Gypsum Board
      a. Reference: Architecural Drawings
      b. Location: As indicated

F. Item: Blower Piping
   1. Provide the following Tnemec system or engineer approved equal meeting the design criteria listed below:
      a. Coating System:
         (1) Fully protect, mask and seal off everything in the room that will not receive the coating system.
         (2) Surface preparation: New piping - SSPC-SP10 and profile depth of 1.5 to 2.5 mils
         (3) Prime with one coat of Tnemec Series 135 Chembuild @ 4.0-6.0 mils DFT.
         (4) Intermediate Coat(s): two coats Tnemec Series 971 Aerolon Acrylic at 30.0-50.0 mils DFT.
         (5) Topcoat with Tnemec series 1028-T Enduratone @ 2.0-3.0 mils DFT for a total of 66.0-109.0 mils DFT. Color as selected by the owner/engineer from all manufacturer's standard colors.
         (6) Thermal Conductivity of (ASTM C518 at 77°F): 0.0356 W/m-°K or 0.2468 BTU-in/ft²-hr-°F required.
      b. Reference: Architecural and Process Drawings
      c. Location: As indicated

G. Item: Interior Chemical Containment Area: Polymer
   1. Provide the following Tnemec system or approved Sherwin Williams or Carboline equal meeting the design criteria listed below:
      a. Coating System:
         (1) Surface Preparation: Allow new cast-in-place concrete to cure a minimum of 28 days at 75°F (24°C). Verify concrete dryness and prepare concrete surfaces in accordance with NACE No. 6/SSPC-SP13 Joint Surface Preparation Standards and ICRI Technical Guidelines. Moisture vapor transmission should not exceed three lbs. per 1,000 sq. ft. in a 24-hour period. Relative humidity should not exceed 80%. Abrasive blast, shot-blast or mechanically abrade concrete surfaces to remove laitance, curing compounds, hardeners, sealers and other contaminants and to provide a minimum ICRI-CSP 5 or greater surface profile. Large cracks, voids and

other surface imperfections should be filled with a recommended filler or surfacer.
(2) Primer: Series 251SC @ 6.0-8.0 mils D.F.T.
(3) Base Coat: Series 252SC Chembloc MCK System w/fiberglass mat reinforcement per manufacturer's direction @ 60.0 - 80.0 mils.
(4) Saturant Coat: Series 252SC Chembloc @ 6.0-8.0 mils.
(5) Top Coat: Series 252SC Chembloc @ 6.0-8.0 mils. System Total D.F.T. of 78.0-104.0 mils minimum.

b. Location: As indicated on drawings including walls and floors; interior concrete surfaces including walls, floor, tank pads, sumps, and top of wall.

H. Item: Influent Wet Well, Diversion Structure, Covered Sludge Holding Tank. Concrete Immersion: Raw sewage.
1. Provide the following Tnemec system or engineer approved equal meeting the design criteria listed below:
a. Coating System:
(1) Fully protect, mask and seal off everything in the space that will not receive the coating system.
(2) Surface Preparation: High pressure water blast all areas with a minimum 3000-5000 lbs. psi at the tip at a rate of 3-5 gallons/minute, utilizing an orbital tip and TSP detergent additive to remove chalk, loose paint and other contaminants, followed by a clean water rinse. ASTM D4258.
(3) Verify concrete dryness and prepare concrete surfaces in accordance with NACE No. 6/SSPC-SP13.
(4) Joint Surface Preparation Standards and ICRI Technical Guidelines. Moisture vapor transmission should not exceed three lbs. per 1,000 sq. ft. in a 24-hour period.
(5) Relative humidity should not exceed 80%.
(6) Abrasive blast, shot-blast or mechanically abrade concrete surfaces to remove laitance, curing compounds, hardeners, sealers and other contaminants and to provide a minimum ICRI-CSP 5 or greater surface profile.
(7) Large cracks, voids and other surface imperfections should be filled. Clean & Dry per ASTM D4258.
(8) Parge coat 1/16” - 1/4" thick with Tnemec Series 218
(9) Finish Coat: Apply one coat of Series G435 Perma-Glaze @ 30.0-40.0 mils DFT per coat for a total of 30.0-40.0 mils DFT. Color as selected by engineer from manufacturer’s standard colors.
(10) Field touch-up.
b. Location: As indicated on drawings including the interior face of concrete wall, concrete floor, and top of concrete wall.

I. Item: Resinous Floor and Base System
1. Provide the following Tnemec system or engineer approved equal meeting the design criteria listed below.
a. Provide resinous floor system 2’-0” by 2’-0” mock-up for approval before applying coating system.
b. Coating System:
(1) Fully protect, mask and seal off everything in the room that will not receive the coating system, including floor drains.

(2) Surface preparation: Prepare concrete surfaces in accordance with NACE No. 6/SSPC-SP13 Joint Surface Preparation Standards and ICRI Technical Guidelines. Abrasive blast, shot-blast, water jet or mechanically abrade concrete surfaces to remove laitance, curing compounds, hardeners, sealers and other contaminants to provide a minimum ICRI-CSP 4-5 surface profile. Large cracks, voids and other surface imperfections should be filled with a recommended filler or surfacer.
(3) Prime with Series 241 Ultra-Tread MVT @ 46.0-52.0 mils DFT w/first broadcast coat
(4) Coat with Series 222 Deco-Tread @ 1/16" minimum DFT w/ one broadcast application
(5) Topcoat with series 248 Everthane @ 2.0-3.0 mils DFT.
(6) Color as selected by the architect from manufacturer's full range of colors.

c. Physical Properties:
(1) Compressive Strength: Minimum 14,000 psi.
(2) Flexural Strength: Minimum 4,500 psi.
(3) Water Absorption: 0.2%.
(4) Chemical resistance of cured floor surfacing system as indicated below. Test to qualify coatings for chemical splash and fumes (NACE TM-01-74 Procedure B):
(5) No effect from the following: Acetic acid (100%), chromic acid (10%), citric acid (20%), formaldehyde (37%), heavyduty detergent, hydrochloric acid (37%), hydrogen peroxide (28%), lactic acid (85%), mineral spirits, nitric acid (40%), oleic acid, oxalic acid (10%), phosphoric acid (85%), potassium hydroxide (50%), sulfuric acid (75%), tannic acid (20%), tartaric acid (10%), urine.
(6) System Thickness: 1/8 inch (6.4 mm).
(7) Wearing surface: Anti-slip.
(8) Components:
(a) Primer.
(b) Chemical-resistant sealing or finish coats.

d. Reference: Architecural Drawings
e. Location: As indicated

J. Item: Resinous Wall System
1. Provide the following Tnemec system or approved equal meeting the design criteria listed below.
a. Provide resinous wall system 2'-0" by 2'-0" mock-up for approval before applying coating system.
b. Coating System:
(1) Coating system to be smooth with a glossy appearance.
(2) Fully protect, mask and seal off everything in the room that will not receive the coating system.
(3) Surface preparation: Prepare concrete surfaces in accordance with NACE No. 6/SSPC-SP13 Joint Surface Preparation Standards and ICRI Technical Guidelines. Abrasive blast, shot-blast, water jet or mechanically abrade concrete surfaces to remove laitance, curing compounds, hardeners, sealers and other contaminants to provide a minimum ICRI-CSP 2-3 surface profile. Large cracks, voids and other surface imperfections should be filled with a recommended filler or surfacer.

(4) Surfacer: Tnemec Series215 and Series 211 as required. Fill all holes and grout lines smooth.
(5) Glass Mat: Tnemec Series273 mat
(6) Saturate: Tnemec Series 273
(7) Grout Coat: Tnemec Series 280
(8) Finish Coat: Tnemec Series 297
(9) Color as selected by the architect from manufacturer's full range of colors.

c. Reference: Architecural Drawings
d. Location: As indicated

K. Item: Exterior Concrete Secondary Chemical Containment, all interior concrete surfaces at Containment Structures including walls, floor, tank pads, sumps, and top of wall.
1. Provide the following Tnemec system or engineer approved equal meeting the design criteria listed below:
a. Coating System:
(1) Fully protect, mask and seal off everything that will not receive the coating system.
(2) Surface Preparation: Allow new cast-in-place concrete to cure a minimum of 28 days at 75°F (24°C). Verify concrete dryness and prepare concrete surfaces in accordance with NACE No. 6/SSPC-SP13 Joint Surface Preparation Standards and ICRI Technical Guidelines. Moisture vapor transmission should not exceed three lbs. per 1,000 sq. ft. in a 24-hour period. Relative humidity should not exceed 80%. Abrasive blast, shot-blast or mechanically abrade concrete surfaces to remove laitance, curing compounds, hardeners, sealers and other contaminants and to provide a minimum ICRI-CSP 5 or greater surface profile. Large cracks, voids and other surface imperfections should be filled with a recommended filler or surfacer.
(3) Primer: Series 251SC @ 6.0-8.0 mils D.F.T.
(4) Base Coat: Series 252SC Chembloc MCK System w/fiberglass mat reinforcement per manufacturer's direction @ 60.0 - 80.0 mils.
(5) Saturant Coat: Series 252SC Chembloc @ 6.0-8.0 mils.
(6) Top Coat: Series 252SC Chembloc @ 6.0-8.0 mils. System Total D.F.T. of 78.0-104.0 mils minimum.
(7) Outdoor Chemical Containment Basins Top Coat: Series 290 CRU Aliphatic Urethane @ 2.0-3.0 mils D.F.T.
(a) Reference: Process and Structural Drawings.
(b) Location: As indicated.
(c) Top Coat Color: 31GR Slate Gray

2.05 SURFACES NOT TO BE COATED:

A. Do not field coat any of the following items unless specifically noted otherwise.
1. Copper, stainless steel, aluminum, FRP fabrications, Conduit, PVC piping.

2.06 COLOR CODING OF PIPING AND PHYSICAL HAZARDS:

A. Color Coding of Piping: Exterior and interior by color coding entire pipe.
1. General:
a. Coat piping with solid colors as specified below for entire length of pipe in exposed finished and unfinished areas. Exclude areas in pipe chases and furred areas.

b. Piping colors to be selected by Engineer/Architect.
c. Coat all other piping in colors matching adjacent surfaces. If adjacent area is unfinished, paint in color determined by Engineer/Architect.
d. After completion of finish coating, identify piping with band, legend and, arrows as specified below. Apply after completion of finish coating.
e. For most pipe labeling, refer to section 22 05 53. Where not applicable, refer to pipe stenciling parameters below.

2. Color Scheme:

Description	Color	Notes
Potable	Dark Blue	Ref Plumbing/Process Drawings.
Process Non-Potable Water	Purple	Ref Process Drawings. Identification required: "CAUTION: NONPOTABLE WATER – DO NOT DRINK"
Drain	Dark Gray	Ref Process Drawings.
Influent	Gray	Ref Process Drawings
Blower Piping	Light Green	Ref Process Drawings
RAS	Tan	Ref Process Drawings.
WAS	Brown	Ref Process Drawings.
Clarified Effluent	Light Gray	Ref Process Drawings.
Filter Effluent	Light Gray	Ref Process Drawings.
Gas	Yellow	Ref Mechanical Drawings.
Plumbing Non-Potable Water	Purple	Ref Plumbing Drawings. Identification required: "CAUTION: NONPOTABLE WATER – DO NOT DRINK"

3. Location of Legends and Arrows:
   a. Place on piping near connections to Equipment, adjacent to valves or fittings, on both sides of walls penetrated, and at intervals not to exceed 50 feet (15 meters).
   b. Place arrows adjacent to or below legends depending upon visibility. Place arrows in direction of flow. For dual-flow piping, indicate both directions.
   c. Locate legends to be visible from normal line of vision above floor level. Legend locations subject to approval of Engineer/Architect.
4. Letter Size:
   a. Block-style letters, all capitals, conforming to ANSI A13.1.

Outside Diameter of Pipe or Covering	Width of Banding	Size of Letters and Arrows
Less than 3/4" (19 mm)	6" (150 mm)	Approved metal tag or band
3/4" to 1-1/4" (19 mm to 32 mm)	8" (200 mm)	1/2" (13 mm)
1-1/2" to 2" (38 mm to 50 mm)	10" (250 mm)	3/4" (19 mm)
2-1/2" to 6" (64 mm to 150 mm)	12" (300 mm)	1-1/4" (32 mm)
8" to 10" (200 mm to 250 mm)	24" (600 mm)	2-1/2" (64 mm)
Over 10" (250 mm)	32" (800 mm)	3-1/2" (89 mm)

B. Color Coding Physical Hazards: Exterior and interior.

1. General:
   a. Paint areas indicated to identify physical hazard areas as required by ANSI Z53.1.
   b. All colors shall conform to Federal Safety Color Code requirements.

PART 3 - EXECUTION

3.01 SURFACE PREPARATION:

A. Prepare surfaces for each coating system conforming to SSPC or ASTM surface preparation specifications listed.
   1. If grease or oils are present, SSPC-SP1 shall precede any other method specified for metal substrates.
   2. Remove surface irregularities such as weld spatter, burrs, or sharp edges prior to specified surface preparation.

B. Depth of profile will be as specified or as recommended by the manufacturer for each system, but in no instance shall it exceed one-third of the total dry film thickness of complete system.

C. Prepare only those areas which will receive the first coat of the system on the same day.
   1. On steel substrates, apply coating before rust bloom forms.

3.02 APPLICATION:

A. Apply coatings in accordance with coating manufacturer's recommendations.

B. Use properly designed brushes, rollers, and spray equipment for all applications.

C. On unprimed surfaces apply first coat of the system the same day as surface preparation.

D. Dry film thickness of each system shall meet the minimum specified. Maximum dry film thickness shall not exceed the minimum more than 20% or coating manufacturer's requirements if less. Where a dry film thickness range is specified, the range shall not be less than or exceeded.

E. Shop and field painting shall remain 3 inches (75mm) away from unprepared surface of any substrate such as areas to be welded or bolted.

F. Environmental Conditions:
   1. Atmospheric temperature must be 50°F (10°C) or higher during application, unless otherwise approved by coating manufacturer. Do not apply coatings when inclement weather or freezing temperature may occur within coating recoat cure times.
   2. Wind velocities for exterior applications shall be at a minimum to prevent overspray or fallout and not greater than coating manufacturer's limits.
   3. Relative humidity must be less than 85%. The ambient temperature and the temperature of the surface to be painted must be at least 5°F (2.8°C) above the dew point.
   4. Provide adequate ventilation in all areas of application to ensure that at no time does the content of air exceed the Threshold Limit Value given on the manufacturer's Material Safety Data Sheets for the specific coatings being applied.

G. Recoat Time: In the event a coating, such as an epoxy, has exceeded its recoat time limit, prepare the applied coating in accordance with manufacturer's recommendations.

H. Protection:
   1. Cover or otherwise protect surfaces not to be painted. Remove protective materials when appropriate.
   2. Mask, remove, or otherwise protect finish hardware, machined surfaces, grilles, lighting fixtures, and prefinished units as necessary.
   3. Provide cover or shields to prevent surface preparation media and coatings from entering orifices in electrical or mechanical Equipment. Where ventilation systems must be kept

in operation at time of surface preparation, take precautions to shield intakes and exhausts to prevent the materials from entering system or being dispersed.

4. Provide signs to indicate fresh paint areas.
5. Provide daily cleanup of both storage and working areas and removal of all paint refuse, trash, rags, and thinners. Dispose of leftover containers, thinners, rags, brushes, and rollers which cannot be reused in accordance with applicable regulations.
6. Do not remove or paint over Equipment data plates, code stamps on piping, or UL fire-rating labels.

3.03 INSPECTION:

A. Contractor shall provide and use a wet film gauges to check each application approximately every 15 minutes in order to immediately correct film thickness under or over that specified.
B. Contractor shall provide and use a dry film gauge to check each coat mil (mm) thickness when dry, and the total system mil (mm) thickness when completed.
C. Use holiday or pinhole detector on systems over metal substrates to detect and correct voids when indicated on system sheet.
D. Check air temperature and temperature of the substrate at regular intervals to be certain surface is 5°F (2.8°C) or more above the dew point.

3.04 CLEANING AND REPAIRS:

A. Remove spilled, dripped, or splattered paint from surfaces.
B. Touch up and restore damaged finishes to original condition. This includes surface preparation and application of coatings specified.
C. Provide remainder of open paint cans to owner for touch ups.

BURNS McDONNELL	PROTECTIVE COATING SYSTEM **System: A-5**

SERVICE:	Steel - Moderate to Severe Exposure (Nonimmersion)
Surface Preparation:	Shop: SSPC-SP6 and profile depth 1.5 to 2.5 mils (38 to 63 microns). Field: SSPC-SP2/3. Clean and dry.
First Coat:	High solids polyamine or polyamide epoxy with minimum 67% solids by volume. Apply at 5.0 to 7.0 mils (125 to 175 microns) dry film thickness.
Second Coat:	High solids aliphatic acrylic polyurethane gloss enamel with minimum 52% solids by volume. Apply at 3.0 to 5.0 mils (75 to 125 microns) film thickness.
System Total:	Minimum 8.0 mils (200 microns) dry film thickness.
Volatile Organic Content:	Maximum 2.8 lb/gal (340 g/L)

.

COATING MANUFACTURER	PRODUCT DESIGNATION

BURNS McDONNELL	PROTECTIVE COATING SYSTEM **System: B-4**

SERVICE:	Nonferrous & Galvanized Metal — Moderate to Severe Exposure Exterior or Interior (Including Galvanized Handrail)
Surface Preparation:	Shop or field first coat: Remove oil or soap film with neutral detergent or emulsion cleaner.
First Coat:	Pretreat and/or allow to weather as recommended by coating manufacturer.
Second Coat:	High build polyamide or polyamidoamine epoxy with minimum 65% solids by volume. Apply at 4.0 - 6.0 mils (100 -150 microns) dry film thickness.
Third Coat:	High solids aliphatic acrylic polyurethane gloss enamel with minimum 60% solids by volume. Apply at 2.0 – 3.0 mils (50 – 75 microns) dry film thickness.
System Total:	Minimum 6.0 mils (150 microns) dry film thickness in addition to galvanizing.
Volatile Organic Content:	Maximum 2.8 lb/gal (340 g/L).

SECTION 10 14 16 - PLAQUES

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Metal plaques.

B. Related Requirements:
   1. Section 10 14 23 "Panel Signage" and Section 10 14 23.16 "Room-Identification Panel Signage" for plaques or signs similar to metal plaques, with or without frames, except that they are made of materials other than solid metal.
   2. Section 22 05 53 "Identification for Plumbing Piping and Equipment" for labels, tags, and nameplates for plumbing systems and equipment.
   3. Section 23 05 53 "Identification for HVAC Piping and Equipment" for labels, tags, and nameplates for HVAC systems and equipment.
   4. Section 26 05 53 "Identification for Electrical Systems" for labels, tags, and nameplates for electrical equipment.

1.02 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings: For plaques.
   1. Include fabrication and installation details and attachments to other work.
   2. Show plaque mounting heights, locations of supplementary supports to be provided by other installers, and accessories.
   3. Show message list, typestyles, graphic elements, and layout for each plaque at least half size.

C. Samples for Initial Selection: For each type of plaque, exposed component, and exposed finish.
   1. Include representative Samples of available typestyles and graphic symbols.

D. Samples for Verification: For each type of plaque showing all components and with the required finish(es), in manufacturer's standard size unless otherwise indicated and as follows:
   1. Plaques: Half-size Sample.
   2. Exposed Accessories: Full-size Sample of each accessory type.

E. Product Schedule: For plaques. Use same designations indicated on Drawings or specified.

1.03 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer and manufacturer.

B. Sample Warranty: For special warranty.

1.04 CLOSEOUT SUBMITTALS

A. Maintenance Data: For plaques to include in maintenance manuals.

1.05 QUALITY ASSURANCE

A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.

1.06 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of plaques that fail in materials or workmanship within specified warranty period.
   1. Failures include, but are not limited to, the following:
      a. Deterioration of finishes beyond normal weathering.

b. Deterioration of embedded graphic image.

2. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.01 METAL PLAQUES

A. Cast Plaque: Cast-metal plaque with background texture, border, and characters having uniform faces, sharp corners, and precisely formed lines and profiles; and as follows:
   1. Plaque Material: Cast aluminum.
   2. Plaque Thickness: 0.50 inch (12.7 mm).
   3. Finishes:
      a. Integral Aluminum Finish: Anodized color as selected by Architect from full range of industry colors and color densities.
      b. Baked-Enamel or Powder-Coat Finish: Manufacturer's standard, in color as selected by Architect from manufacturer's full range.
      c. Overcoat: Manufacturer's standard baked-on clear coating.
   4. Background Texture: As selected by Architect from manufacturer's full range.
   5. Mounting: Projecting studs.
   6. Text and Typeface: Variable custom graphics and content as indicated on drawings.

B. Etched Plaque: Chemically etched or photochemically engraved metal sheet or plate with texture, border, and characters having uniform faces, sharp corners, and precisely formed lines and profiles; and as follows:
   1. Plaque Material: Sheet or plate aluminum.
   2. Plaque Thickness: 0.250 inch (6.35 mm).
   3. Finishes:
      a. Integral Aluminum Finish: Anodized color as selected by Architect from full range of industry colors and color densities.
      b. Baked-Enamel or Powder-Coat Finish: Manufacturer's standard, in color as selected by Architect from manufacturer's full range.
      c. Overcoat: Manufacturer's standard baked-on clear coating.
   4. Mounting: Projecting studs.
   5. Text and Typeface: Variable custom graphics and content as indicated on drawings.

2.02 MATERIALS

A. Aluminum Castings: ASTM B26/B26M, alloy and temper recommended by plaque manufacturer for casting process used and for type of use and finish indicated.

B. Aluminum Sheet and Plate: ASTM B209 (ASTM B209M), alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated.

C. Aluminum Extrusions: ASTM B221 (ASTM B221M), alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated.

2.03 ACCESSORIES

A. Fasteners and Anchors: Manufacturer's standard as required for secure anchorage of plaques, noncorrosive and compatible with each material joined, and complying with the following:
   1. Use concealed fasteners and anchors unless indicated to be exposed.
   2. For exterior exposure, furnish stainless steel devices unless otherwise indicated.
   3. Plaque Mounting Fasteners:
      a. Concealed Studs: Concealed (blind), threaded studs welded or brazed to back of plaque, screwed into back of plaque, or screwed into tapped lugs cast integrally into back of plaque unless otherwise indicated.

b. Through Fasteners: Exposed metal fasteners matching plaque finish, with type of head indicated, installed in predrilled holes.

B. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D1187/D1187M.

2.04 FABRICATION

A. General: Provide manufacturer's standard plaques according to requirements indicated.
1. Preassemble plaques in the shop to greatest extent possible. Disassemble plaques only as necessary for shipping and handling limitations. Clearly mark units for reassembly and installation; apply markings in locations concealed from view after final assembly.
2. Mill joints to a tight, hairline fit. Form assemblies and joints exposed to weather to resist water penetration and retention.
3. Conceal connections if possible; otherwise, locate connections where they are inconspicuous.
4. Provide rabbets, lugs, and tabs necessary to assemble components and to attach to existing work. Drill and tap for required fasteners. Use concealed fasteners.
5. Castings: Fabricate castings free of warp, cracks, blowholes, pits, scale, sand holes, and other defects that impair appearance or strength. Grind, wire brush, sandblast, and buff castings to remove seams, gate marks, casting flash, and other casting marks before finishing.

B. Surface-Engraved Graphics: Machine-engrave characters and other graphic devices into indicated plaque surface to produce precisely formed copy, incised to uniform depth.
1. Engraved Metal: Fill engraved graphics with manufacturer's standard baked enamel.

2.05 GENERAL FINISH REQUIREMENTS

A. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

C. Organic, Anodic, and Chemically Produced Finishes: Apply to formed metal after fabrication but before applying contrasting polished finishes on raised features unless otherwise indicated.

2.06 ALUMINUM FINISHES

A. Clear Anodic Finish: AAMA 611, Class I, 0.018 mm or thicker.

B. Color Anodic Finish: AAMA 611, Class I, 0.018 mm or thicker.

C. Baked-Enamel or Powder-Coat Finish: AAMA 2603 except with a minimum dry film thickness of 1.5 mils (0.04 mm). Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance.

B. Verify that plaque-support surfaces are within tolerances to accommodate plaques without gaps or irregularities between backs of plaques and support surfaces unless otherwise indicated.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION OF METAL PLAQUES

A. General: Install plaques using mounting methods indicated and according to manufacturer's written instructions.

1. Install plaques level, plumb, true to line, and at locations and heights indicated, with plaque surfaces free of distortion and other defects in appearance.
2. Install plaques so they do not protrude or obstruct according to the accessibility standard.
3. Before installation, verify that plaque surfaces are clean and free of materials or debris that would impair installation.
4. Corrosion Protection: Coat concealed surfaces of exterior aluminum in contact with grout, concrete, masonry, wood, or dissimilar metals, with a heavy coat of bituminous paint.

B. Mounting Methods:
1. Projecting Studs: Using a template, drill holes in substrate aligning with studs on back of sign. Remove loose debris from hole and substrate surface.
a. Masonry Substrates: Fill holes with adhesive. Leave recess space in hole for displaced adhesive. Place spacers on studs, place sign in position, and push until spacers are pinched between sign and substrate, embedding the stud ends in holes. Temporarily support sign in position until adhesive fully sets.

3.03 ADJUSTING AND CLEANING

A. Remove and replace damaged or deformed plaques and plaques that do not comply with specified requirements. Replace plaques with damaged or deteriorated finishes or components that cannot be successfully repaired by finish touchup or similar minor repair procedures.
B. Remove temporary protective coverings and strippable films as plaques are installed.
C. On completion of installation, clean exposed surfaces of plaques according to manufacturer's written instructions, and touch up minor nicks and abrasions in finish. Maintain plaques in a clean condition during construction and protect from damage until acceptance by Owner.

END OF SECTION 10 14 16

SECTION 10 14 19 - DIMENSIONAL LETTER SIGNAGE

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Dimensional characters.
      a. Cast dimensional characters.

1.02 COORDINATION

A. Furnish templates for placement of electrical service embedded in permanent construction by other installers.

1.03 ACTION SUBMITTALS

A. Product Data: For each type of product.
B. Shop Drawings: For signs.
   1. Include fabrication and installation details and attachments to other work.
   2. Show sign mounting heights, locations of supplementary supports to be provided by other installers, and accessories.
   3. Show message list, typestyles, graphic elements, and layout for each sign at least half size.
C. Samples for Initial Selection: For each type of sign assembly, exposed component, and exposed finish.
   1. Include representative Samples of available typestyles and graphic symbols.
D. Samples for Verification: For each type of sign assembly showing all components and with the required finish(es), in manufacturer's standard size unless otherwise indicated and as follows:
   1. Dimensional Characters: Full-size Sample of each type of dimensional character.
   2. Exposed Accessories: Full-size Sample of each accessory type.
E. Product Schedule: For dimensional letter signs. Use same designations indicated on Drawings or specified.

1.04 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer and manufacturer.
B. Sample Warranty: For special warranty.

1.05 CLOSEOUT SUBMITTALS

A. Maintenance Data: For signs to include in maintenance manuals.

1.06 QUALITY ASSURANCE

A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.

1.07 FIELD CONDITIONS

A. Field Measurements: Verify locations of electrical service embedded in permanent construction by other installers by field measurements before fabrication, and indicate measurements on Shop Drawings.

1.08 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of signs that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:
   a. Deterioration of finishes beyond normal weathering.
   b. Separation or delamination of sheet materials and components.
2. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

A. Structural Performance: Signs and supporting elements shall withstand the effects of gravity and other loads within limits and under conditions indicated.
   1. Uniform Wind Load: As indicated on Drawings.
   2. Concentrated Horizontal Load: As indicated on Drawings.
   3. Other Design Load: As indicated on Drawings
   4. Uniform and concentrated loads need not be assumed to act concurrently.

2.02 DIMENSIONAL CHARACTERS

A. Cast Characters: Characters with uniform faces, sharp corners, and precisely formed lines and profiles, and as follows:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. ACE Sign Systems, Inc.
      b. ASI Sign Systems, Inc.
      c. Gemini Signage; Gemini, Inc.
   2. Character Material: Cast aluminum.
   3. Character Height: As indicated on Drawings.
   4. Thickness: Manufacturer's standard for size of character.
   5. Finishes:
      a. Integral Aluminum Finish: Anodized color as selected by Architect from full range of industry colors and color densities.
   6. Mounting: Projecting studs.
   7. Typeface: Helvetica Medium.

2.03 DIMENSIONAL CHARACTER MATERIALS

A. Aluminum Castings: ASTM B26/B26M, alloy and temper recommended by sign manufacturer for casting process used and for type of use and finish indicated.
B. Aluminum Sheet and Plate: ASTM B209 (ASTM B209M), alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated.
C. Aluminum Extrusions: ASTM B221 (ASTM B221M), alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated.
D. Stainless Steel Sheet: ASTM A240/A240M or ASTM A666, Type 304, stretcher-leveled standard of flatness.
E. Zinc Castings: ASTM B240, alloy and temper recommended by sign manufacturer for type of use and finish indicated.
F. Zinc Sheet: ASTM B69, alloy and temper recommended by sign manufacturer for type of use and finish indicated.
G. Paints and Coatings for Sheet Materials: Inks, dyes, and paints that are recommended by manufacturer for optimum adherence to surface and are UV and water resistant for colors and exposure indicated.

2.04 ACCESSORIES

A. Fasteners and Anchors: Manufacturer's standard as required for secure anchorage of signs, noncorrosive and compatible with each material joined, and complying with the following:
   1. Use concealed fasteners and anchors unless indicated to be exposed.
   2. For exterior exposure, furnish stainless steel devices unless otherwise indicated.
   3. Sign Mounting Fasteners:
      a. Concealed Studs: Concealed (blind), threaded studs welded or brazed to back of sign material, screwed into back of sign assembly, or screwed into tapped lugs cast integrally into back of cast sign material, unless otherwise indicated.
      b. Projecting Studs: Threaded studs with sleeve spacer, welded or brazed to back of sign material, screwed into back of sign assembly, or screwed into tapped lugs cast integrally into back of cast sign material, unless otherwise indicated.

B. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D1187/D1187M.

2.05 FABRICATION

A. General: Provide manufacturer's standard sign assemblies according to requirements indicated.
   1. Preassemble signs and assemblies in the shop to greatest extent possible. Disassemble signs and assemblies only as necessary for shipping and handling limitations. Clearly mark units for reassembly and installation; apply markings in locations concealed from view after final assembly.
   2. Castings: Fabricate castings free of warp, cracks, blowholes, pits, scale, sand holes, and other defects that impair appearance or strength. Grind, wire brush, sandblast, and buff castings to remove seams, gate marks, casting flash, and other casting marks before finishing.

2.06 GENERAL FINISH REQUIREMENTS

A. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

C. Organic, Anodic, and Chemically Produced Finishes: Apply to formed metal after fabrication but before applying contrasting polished finishes on raised features unless otherwise indicated.

2.07 ALUMINUM FINISHES

A. Clear Anodic Finish: AAMA 611, Class I, 0.018 mm or thicker.

B. Color Anodic Finish: AAMA 611, Class I, 0.018 mm or thicker.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance.

B. Verify that sign-support surfaces are within tolerances to accommodate signs without gaps or irregularities between backs of signs and support surfaces unless otherwise indicated.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION OF DIMENSIONAL CHARACTERS

A. General: Install signs using mounting methods indicated and according to manufacturer's written instructions.

1. Install signs level, plumb, true to line, and at locations and heights indicated, with sign surfaces free of distortion and other defects in appearance.
2. Before installation, verify that sign surfaces are clean and free of materials or debris that would impair installation.
3. Corrosion Protection: Coat concealed surfaces of exterior aluminum in contact with grout, concrete, masonry, wood, or dissimilar metals, with a heavy coat of bituminous paint.

B. Mounting Methods:
1. Projecting Studs: Using a template, drill holes in substrate aligning with studs on back of sign. Remove loose debris from hole and substrate surface.
a. Masonry Substrates: Fill holes with adhesive. Leave recess space in hole for displaced adhesive. Place spacers on studs, place sign in position, and push until spacers are pinched between sign and substrate, embedding the stud ends in holes. Temporarily support sign in position until adhesive fully sets.

3.03 ADJUSTING AND CLEANING

A. Remove and replace damaged or deformed characters and signs that do not comply with specified requirements. Replace characters with damaged or deteriorated finishes or components that cannot be successfully repaired by finish touchup or similar minor repair procedures.
B. Remove temporary protective coverings and strippable films as signs are installed.
C. On completion of installation, clean exposed surfaces of signs according to manufacturer's written instructions and touch up minor nicks and abrasions in finish. Maintain signs in a clean condition during construction and protect from damage until acceptance by Owner.

END OF SECTION 10 14 19

SECTION 10 14 23 - PANEL SIGNAGE

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Panel signs.
   2. Hazardous Material Identification Signage.

B. Related Requirements:
   1. Section 01580 "Project Signs" for temporary Project identification signs and for temporary informational and directional signs.
   2. Section 22 05 53 "Identification for Plumbing Piping and Equipment" for labels, tags, and nameplates for plumbing systems and equipment.
   3. Section 23 05 53 "Identification for HVAC Piping and Equipment" for labels, tags, and nameplates for HVAC systems and equipment.
   4. Section 26 05 53 "Identification for Electrical Systems" for labels, tags, and nameplates for electrical equipment.
   5. Section 26 50 00 "Lighting" for illuminated, self-luminous, and photoluminescent exit sign units.

1.02 DEFINITIONS

A. Accessible: In accordance with the accessibility standard.

1.03 ACTION SUBMITTALS

A. Product Data:
   1. Panel signs.
   2. Hazardous Material Identification Signage.

B. Shop Drawings: For panel signs.
   1. Include fabrication and installation details and attachments to other work.
   2. Show sign mounting heights, locations of supplementary supports to be provided by other installers, and accessories.
   3. Show message list, typestyles, graphic elements, including raised characters and Braille, and layout for each sign at least half size.
   4. Schedule of Hazardous Material Identification Signage indicating text and graphics.
      a. Provide shop drawings showing type and location of each sign.

C. Samples for Initial Selection: For each type of sign assembly, exposed component, and exposed finish.
   1. Include representative Samples of available typestyles and graphic symbols.

D. Samples for Verification: For each type of sign assembly showing all components and with the required finish(es), in manufacturer's standard size unless otherwise indicated and as follows:
   1. Panel Signs: Full-size Sample.
   2. Variable Component Materials: Full-size Sample of each base material, character (letter, number, and graphic element) in each exposed color and finish not included in Samples above.
   3. Exposed Accessories: Full-size Sample of each accessory type.
   4. Full-size Samples, if approved, will be returned to Contractor for use in Project.

E. Product Schedule: For panel signs. Use same designations indicated on Drawings or specified.

1.04 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer and manufacturer.

B. Sample Warranty: For special warranty.

1.05 CLOSEOUT SUBMITTALS

A. Maintenance Data: For signs to include in maintenance manuals.

1.06 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials, from the same product run, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
   1. Variable Component Materials: 12 replaceable text inserts and interchangeable characters (letters, numbers, and graphic elements) of each type.
   2. Tools: One set of specialty tools for assembling signs and replacing variable sign components.

1.07 QUALITY ASSURANCE

A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.

1.08 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of signs that fail in materials or workmanship within specified warranty period.
   1. Failures include, but are not limited to, the following:
      a. Deterioration of finishes beyond normal weathering.
      b. Deterioration of embedded graphic image.
      c. Separation or delamination of sheet materials and components.
   2. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

A. Thermal Movements: For exterior signs, allow for thermal movements from ambient and surface temperature changes.
   1. Temperature Change: 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.

B. Accessibility Standard: Comply with applicable provisions in the USDOJ's "2010 ADA Standards for Accessible Design" and ICC A117.1.

2.02 PANEL SIGNS

A. Panel Sign: For room identification and ADA signs with smooth, uniform surfaces; with message and characters having uniform faces, sharp corners, and precisely formed lines and profiles; and as follows:
   1. Basis-of-Design Product: Subject to compliance with requirements, provide ASI Sign Systems, Inc.; SignEtch1 ADA–Ready Sign System or a comparable product by one of the following:
      a. Best Sign Systems, Inc.
      b. Intermarc Signage.
      c. inpro Corporation.
   2. Solid-Sheet Sign: Zinc sheet with finish specified in "Surface Finish and Applied Graphics" Subparagraph and as follows:
      a. Thickness: 0.25 inch (6.35 mm).
      b. Chemically Etched: Sign face chemically etched or routed to receive paint infill.
   3. Sign-Panel Perimeter: Finish edges smooth.

a. Edge Condition:
   1) Vertical Edges: Square cut.
   2) Horizontal Edges: Square cut.
b. Corner Condition in Elevation: Square.

4. Mounting: Surface mounted to wall with adhesive or two-face tape.
5. Surface Finish:
   a. Painted Finish and Graphics: Primer and urethane-based color coat, of type standard with manufacturer, in color as selected by Architect from manufacturer's full range.
   b. Overcoat: Special U.V. resistant clear urethane.
6. Text and Typeface: Accessible raised characters and Grade II Braille 1/32" minimum raised typeface as selected by Architect from manufacturer's full range and variable content as scheduled. Finish raised characters to contrast with background color, and finish Braille to match background color.
7. Flatness Tolerance: Sign is to remain flat or uniformly curved under installed conditions as indicated on Drawings and within a tolerance of plus or minus 1/16 inch (1.5 mm) measured diagonally from corner to corner.

2.03 DANGER IDENTIFICATION SIGNAGE:

A. Material: Exterior UV resistant Nonmetallic Signs
B. Fastener: Vinyl tape/adhesive
C. Signs
   1. Size: 7" by 14" minimum
   2. Copy: Ear protection symbol and words: DANGER EAR PROTECTION REQUIRED
   3. Location: Place at all doors to rooms labeled Blower or similar.

2.04 HAZARDOUS MATERIAL IDENTIFICATION SIGNAGE:

A. Material: Exterior UV resistant Nonmetallic Signs
B. Fastener: Vinyl tape/adhesive
C. NFPA Diamond signs per NFPA 704
   1. Size: 10" minimum.
   2. NFPA 704 Diamond hazard numbers: As appropriate for the Hazardous Material per the product's SDS and manufacturer's recommendations.
   3. Location: At the doors entering into the rooms with Hazardous Material and on the tanks or storage containers of Hazardous Materials.
D. Signs indicating Hazardous Material name, with concentration % where applicable
   1. Size: Letters to be 2 inches minimum.
   2. Hazardous Material name and concentration: As identified by the product's SDS and manufacturer's recommendations.
   3. Location: Directly below corresponding NFPA Diamond.
E. Polymer – Sludge Processing Building (stored inside solids processing building)
   1. Products: Seton Identifier NFPA 704 Hazard Rating Sign
   2. Sign Style: 10846b
   3. Health Hazard: 3
   4. Fire Hazard: 1
   5. Reactivity: 0
   6. Specific Hazard: None
F. Hydrogen Peroxide – IPS Odor Control (Stored and fed outside)
   1. Products: Seton Identifier NFPA 704 Hazard Rating Sign
   2. Sign Style: 10846b
   3. Health Hazard: 3

4. Fire Hazard: 0
5. Reactivity: 1
6. Specific Hazard: Ox

2.05 NON-POTABLE WATER IDENTIFICATION SIGNAGE:

A. Material: Aluminum.
B. Fastener: Exposed stainless steel at corners.
C. Signs
   1. Size: 10” wide by 7” high minimum.
   2. Text and Typeface: As selected by Architect from manufacturer's full range.
   3. Copy: NON-POTABLE WATER NOT FOR CONSUMPTION
   4. Pictogram: Do not drink
   5. Location: Place at all non-potable hydrants and hose-bibbs.

2.06 PANEL-SIGN MATERIALS

A. Aluminum Sheet and Plate: ASTM B209 (ASTM B209M), alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated.
B. Aluminum Extrusions: ASTM B221 (ASTM B221M), alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated.
C. Acrylic Sheet: ASTM D4802, category as standard with manufacturer for each sign, Type UVF (UV filtering).
D. Polycarbonate Sheet: ASTM C1349, Appendix X1, Type II (coated, mar-resistant, UV-stabilized polycarbonate), with coating on both sides.
E. PVC Sheet: Manufacturer's standard, UV-light stable, PVC plastic.
F. Paints and Coatings for Sheet Materials: Inks, dyes, and paints that are recommended by manufacturer for optimum adherence to surface and are UV and water resistant for colors and exposure indicated.

2.07 ACCESSORIES

A. Fasteners and Anchors: Manufacturer's standard as required for secure anchorage of signs, noncorrosive and compatible with each material joined, and complying with the following unless otherwise indicated:
   1. Use concealed fasteners and anchors unless indicated to be exposed.
   2. For exterior exposure, furnish stainless steel devices unless otherwise indicated.
B. Adhesive: As recommended by sign manufacturer.
C. Two-Face Tape: Manufacturer's standard high-bond, foam-core tape, 0.045 inch (1.14 mm) thick, with adhesive on both sides.
D. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D1187/D1187M.

2.08 FABRICATION

A. General: Provide manufacturer's standard sign assemblies according to requirements indicated.
   1. Preassemble signs in the shop to greatest extent possible. Disassemble signs and assemblies only as necessary for shipping and handling limitations. Clearly mark units for reassembly and installation; apply markings in locations concealed from view after final assembly.
   2. Mill joints to a tight, hairline fit. Form assemblies and joints exposed to weather to resist water penetration and retention.
   3. Comply with AWS for recommended practices in welding and brazing. Provide welds and brazes behind finished surfaces without distorting or discoloring exposed side. Clean exposed welded and brazed connections of flux, and dress exposed and contact surfaces.

4. Conceal connections if possible; otherwise, locate connections where they are inconspicuous.
5. Internally brace signs for stability, to meet structural performance loading without oil-canning or other surface deformation, and for securing fasteners.
6. Provide rabbets, lugs, and tabs necessary to assemble components and to attach to existing work. Drill and tap for required fasteners. Use concealed fasteners where possible; use exposed fasteners that match sign finish.

B. Surface-Engraved Graphics: Machine utilizing chemical etc process to produce raised numbers and letters with corresponding Grade II and pictograms, incised to uniform depth.
1. Engraved Metal: Fill engraved graphics with Factory applied baked-on-acrylic polyurethane enamel, UV inhibited.

C. Signs with Changeable Message Capability: Fabricate signs to allow insertion of changeable messages as follows:
1. For slide-in changeable inserts, fabricate slot without burrs or constrictions that inhibit function. Furnish initial changeable insert. Furnish two blank inserts for each sign for Owner's use.

2.09 GENERAL FINISH REQUIREMENTS

A. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

C. Organic, Anodic, and Chemically Produced Finishes: Apply to formed metal after fabrication but before applying contrasting polished finishes on raised features unless otherwise indicated.

2.010 ALUMINUM FINISHES

A. Baked-Enamel or Powder-Coat Finish: AAMA 2603 except with a minimum dry film thickness of 1.5 mils (0.04 mm). Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Verify that sign-support surfaces are within tolerances to accommodate signs without gaps or irregularities between backs of signs and support surfaces unless otherwise indicated.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. General: Install signs using mounting methods indicated and according to manufacturer's written instructions.
1. Install signs level, plumb, true to line, and at locations and heights indicated, with sign surfaces free of distortion and other defects in appearance.
2. Install signs so they do not protrude or obstruct according to the accessibility standard.
3. Before installation, verify that sign surfaces are clean and free of materials or debris that would impair installation.
4. Corrosion Protection: Coat concealed surfaces of exterior aluminum in contact with grout, concrete, masonry, wood, or dissimilar metals, with a heavy coat of bituminous paint.

B. Accessible Signage: Install in locations on walls according to the accessibility standard.
C. Mounting Methods:
   1. Adhesive: Clean bond-breaking materials from substrate surface and remove loose debris. Apply linear beads or spots of adhesive symmetrically to back of sign and of suitable quantity to support weight of sign after cure without slippage. Keep adhesive away from edges to prevent adhesive extrusion as sign is applied and to prevent visibility of cured adhesive at sign edges. Place sign in position and push to engage adhesive. Temporarily support sign in position until adhesive fully sets.
   2. Two-Face Tape: Clean bond-breaking materials from substrate surface and remove loose debris. Apply tape strips symmetrically to back of sign and of suitable quantity to support weight of sign without slippage. Keep strips away from edges to prevent visibility at sign edges. Place sign in position and push to engage tape adhesive.
D. Signs Mounted on Glass: Provide opaque sheet matching sign material and finish onto opposite side of glass to conceal back of sign and two-face tape.

3.03 ADJUSTING AND CLEANING

A. Remove and replace damaged or deformed signs and signs that do not comply with specified requirements. Replace signs with damaged or deteriorated finishes or components that cannot be successfully repaired by finish touchup or similar minor repair procedures.

B. Remove temporary protective coverings and strippable films as signs are installed.

C. On completion of installation, clean exposed surfaces of signs according to manufacturer's written instructions and touch up minor nicks and abrasions in finish. Maintain signs in a clean condition during construction and protect from damage until acceptance by Owner.

END OF SECTION 10 14 23

SECTION 10 22 39 - FOLDING PANEL PARTITIONS

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Operable acoustical panel partitions.

B. Related Requirements:
   1. Section 05 50 00 "Metal Fabrications" for supports that attach supporting tracks to overhead structural system.
   2. Section 09 29 00 "Gypsum Board" for sound barrier construction above the ceiling at track.

1.02 DEFINITIONS

A. NIC: Noise Isolation Class.

B. NRC: Noise Reduction Coefficient.

C. STC: Sound Transmission Class.

1.03 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.04 ACTION SUBMITTALS

A. Product Data:
   1. Operable acoustical panel partitions.
   2. Operable fire-rated panel partitions.

B. Shop Drawings: For operable panel partitions.
   1. Include plans, elevations, sections, and attachment details.
   2. Indicate stacking and operating clearances. Indicate location and installation requirements for hardware and track, blocking, and direction of travel.
   3. Include diagrams for power, signal, and control wiring.

C. Samples for Initial Selection: For each type of exposed material, finish, covering, or facing.
   1. Include Samples of accessories involving color selection.

1.05 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
   1. Partition track, track supports and bracing, switches, turning space, and storage layout.
   2. Suspended ceiling components.
   3. Structural members to which suspension systems will be attached.
   4. Size and location of initial access modules for acoustical tile.
   5. Items penetrating finished ceiling including the following:
      a. Lighting fixtures.
      b. HVAC ductwork, outlets, and inlets.
      c. Speakers.
      d. Sprinklers.
      e. Smoke detectors.
      f. Access panels.
   6. Plenum acoustical barriers.

B. Setting Drawings: For embedded items and cutouts required in other work, including support-beam, mounting-hole template.

C. Qualification Data: For Installer.
D. Product Certificates: For each type of operable panel partition.
   1. Include approval letter signed by manufacturer acknowledging Owner-furnished panel facing material complies with requirements.
E. Product Test Reports: For each operable panel partition, for tests performed by a qualified testing agency.
F. Field quality-control reports.
G. Sample Warranty: For manufacturer's special warranty.

1.06 CLOSEOUT SUBMITTALS
A. Operation and Maintenance Data: For operable panel partitions to include in maintenance manuals.
   1. In addition to items specified in Section 01021 "Operation and Maintenance Data," include the following:
      a. Panel finish facings and finishes for exposed trim and accessories. Include precautions for cleaning materials and methods that could be detrimental to finishes and performance.
      b. Seals, hardware, track, track switches, carriers, and other operating components.

1.07 MAINTENANCE MATERIAL SUBMITTALS
A. Furnish extra materials, from the same production run, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
   1. Panel Finish-Facing Material: Furnish full width in quantity to cover both sides of two panels when installed.

1.08 QUALITY ASSURANCE
A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.

1.09 DELIVERY, STORAGE, AND HANDLING
A. Protectively package and sequence panels in order for installation. Clearly mark packages and panels with numbering system used on Shop Drawings. Do not use permanent markings on panels.

1.010 WARRANTY
A. Special Warranty: Manufacturer agrees to repair or replace components of operable panel partitions that fail in materials or workmanship within specified warranty period.
   1. Failures include, but are not limited to, the following:
      a. Faulty operation of operable panel partitions.
      b. Deterioration of metals, metal finishes, and other materials beyond normal use.
   2. Warranty Period: 10 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.01 PERFORMANCE REQUIREMENTS
A. Acoustical Performance: Provide operable panel partitions tested by a qualified testing agency for the following acoustical properties in accordance with test methods indicated:
   1. Sound-Transmission Requirements: Operable panel partition assembly tested for laboratory sound-transmission loss performance in accordance with ASTM E90, determined by ASTM E413, and rated for not less than the STC indicated.

2. Noise-Reduction Requirements: Operable panel partition assembly, identical to partition tested for STC, tested for sound-absorption performance in accordance with ASTM C423, and rated for not less than the NRC indicated.
3. Noise-Isolation Requirements: Installed operable panel partition assembly, identical to partition tested for STC, tested for NIC in accordance with ASTM E336, determined by ASTM E413, and rated for 10 dB less than STC value indicated.

B. Fire-Test-Response Characteristics: Provide panels with finishes complying with one of the following as determined by testing identical products by a testing and inspecting agency acceptable to authorities having jurisdiction:
1. Surface-Burning Characteristics: Comply with ASTM E84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
a. Flame-Spread Index: 25 or less.
b. Smoke-Developed Index: 450 or less.
2. Fire Growth Contribution: Complying with acceptance criteria of local code and authorities having jurisdiction when tested in accordance with NFPA 265 Method B Protocol or NFPA 286.

2.02 OPERABLE ACOUSTICAL PANEL PARTITIONS

A. Operable Acoustical Panel Partitions: Partition system, including panels, seals, finish facing, suspension system, operators, and accessories.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. Hufcor, Inc., 642 series
b. Moderco Inc., Signature 842
c. Modernfold, Inc.

B. Panel Operation: Manually operated, paired panels.

C. Panel Construction: As required to support panel from suspension components and with reinforcement for hardware attachment. Fabricate panels with tight hairline joints and concealed fasteners. Fabricate panels so finished in-place partition is rigid; level; plumb; aligned, with tight joints and uniform appearance; and free of bow, warp, twist, deformation, and surface and finish irregularities.

D. Dimensions: Fabricate operable acoustical panel partitions to form an assembled system of dimensions indicated and verified by field measurements.
1. Panel Width: Equal widths.

E. STC: Not less than 52.

F. Panel Weight: 10 lb/sq. ft. (50 kg/sq. m) maximum.

G. Panel Thickness: Nominal dimension of 4 inches (102 mm).

H. Panel Materials:
1. Steel Frame: Steel sheet, 0.0641-inch (1.6-mm) nominal minimum thickness for uncoated steel.
2. Steel Face/Liner Sheets: Tension-leveled steel sheet, manufacturer's standard minimum nominal thickness for uncoated steel.
3. Aluminum: Alloy and temper recommended by aluminum producer and finisher for type of use, corrosion resistance, and finish indicated; ASTM B221 (ASTM B221M) for extrusions; manufacturer's standard strengths and thicknesses for type of use.
a. Frame Reinforcement: Manufacturer's standard steel or aluminum.
4. Gypsum Board: ASTM C1396/C1396M.
5. Cement Board: ASTM C1288.
6. Particleboard: ANSI A208.1.
7. Medium-Density Fiberboard: ANSI A208.2.
8. Plywood: DOC PS 1.

I. Panel Closure: Manufacturer's standard unless otherwise indicated.
   1. Initial Closure: Resilient, bulb-shaped acoustical seal.
   2. Final Closure: Constant-force, lever-operated mechanical closure expanding from panel edge to create a constant-pressure acoustical seal.

J. Hardware: Manufacturer's standard as required to operate operable panel partition and accessories; with decorative, protective finish.
   1. Hinges: Concealed (invisible).

K. Finish Facing: Steel markerboard.

2.03 SEALS

A. Description: Seals that produce operable panel partitions complying with performance requirements and the following:
   1. Manufacturer's standard seals unless otherwise indicated.
   2. Seals made from materials and in profiles that minimize sound leakage.
   3. Seals fitting tight at contact surfaces and sealing continuously between adjacent panels and between operable panel partition perimeter and adjacent surfaces, when operable panel partition is extended and closed.

B. Vertical Seals: Deep-nesting, interlocking astragals mounted on each edge of panel, with continuous, resilient acoustical seal.

C. Horizontal Top Seals: resilient, mechanical, retractable, constant-force-contact seal exerting uniform constant pressure on track when extended.

D. Horizontal Bottom Seals:
   1. Resilient, mechanical, retractable, constant-force-contact seal exerting uniform constant pressure on floor when extended, ensuring horizontal and vertical sealing and resisting panel movement.
      a. Automatically Operated for Acoustical Panels: Extension and retraction of bottom seal automatically operated by movement of partition, with operating range not less than 2 inches (50 mm) between retracted seal and floor finish.

2.04 PANEL FINISH FACINGS

A. Description: Finish facings for panels that comply with indicated fire-test-response characteristics and that are factory applied to operable panel partitions with appropriate backing, using mildew-resistant nonstaining adhesive as recommended by facing manufacturer's written instructions.
   1. Apply one-piece, seamless facings free of air bubbles, wrinkles, blisters, and other defects, with no gaps or overlaps. Horizontal seams are not permitted. Tightly secure and conceal raw and selvage edges of facing for finished appearance.
   2. Full height steel marker board Color/Pattern: As selected by Architect from manufacturer's full range.

B. Trimless Edges: Fabricate exposed panel edges so finish facing wraps uninterrupted around panel, covering edge and resulting in an installed partition with facing visible on vertical panel edges, without trim, for minimal sightlines at panel-to-panel joints.

2.05 SUSPENSION SYSTEMS

A. Tracks: Steel or aluminum with adjustable steel hanger rods for overhead support, designed for operation, size, and weight of operable panel partition indicated. Size track to support partition operation and storage without damage to suspension system, operable panel partitions, or adjacent construction. Limit track deflection to no more than 0.10 inch (2.54 mm) between bracket supports. Provide a continuous system of track sections and accessories to accommodate configuration and layout indicated for partition operation and storage.

B. Carriers: Trolley system as required for configuration type, size, and weight of partition and for easy operation; with ball-bearing wheels.
C. Aluminum Finish: Mill finish or manufacturer's standard, factory-applied, decorative finish unless otherwise indicated.
D. Steel Finish: Manufacturer's standard, factory-applied, corrosion-resistant, protective coating unless otherwise indicated.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine flooring, floor levelness, structural support, and opening, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of operable panel partitions.
B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION OF OPERABLE PANEL PARTITIONS

A. Install operable panel partitions and accessories after other finishing operations, including painting, have been completed in area of partition installation.
B. Install panels in numbered sequence indicated on Shop Drawings.
C. Broken, cracked, chipped, deformed, or unmatched panels are not acceptable.
D. Broken, cracked, deformed, or unmatched gasketing or gasketing with gaps at butted ends is not acceptable.
E. Light-Leakage Test: Illuminate one side of partition installation and observe vertical joints and top and bottom seals for voids. Adjust partitions for alignment and full closure of vertical joints and full closure along top and bottom seals.

3.03 ADJUSTING

A. Adjust operable panel partitions, hardware, and other moving parts to function smoothly, and lubricate as recommended by manufacturer.
B. Verify that safety devices are properly functioning.

3.04 MAINTENANCE SERVICE

A. Maintenance Service: Beginning at Substantial Completion, maintenance service is to include 12 months' full maintenance by manufacturer's authorized service representative. Include quarterly preventive maintenance, repair or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper operable-partition operation. Parts and supplies are to be manufacturer's authorized replacement parts and supplies.

END OF SECTION 10 22 39

SECTION 10 28 00 - TOILET, BATH, AND LAUNDRY ACCESSORIES

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Public-use washroom accessories.
   2. Public-use shower room accessories.
   3. Underlavatory guards.
   4. Custodial accessories.

1.02 COORDINATION

A. Coordinate accessory locations with other work to prevent interference with clearances required for access by people with disabilities, and for proper installation, adjustment, operation, cleaning, and servicing of accessories.

B. Deliver inserts and anchoring devices set into concrete or masonry as required to prevent delaying the Work.

1.03 ACTION SUBMITTALS

A. Product Data:
   1. Public-use washroom accessories.
   2. Public-use shower room accessories.
   3. Underlavatory guards.
   4. Custodial accessories.

B. Product Data Submittals: For each product.
   1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.
   2. Include anchoring and mounting requirements, including requirements for cutouts in other work and substrate preparation.

C. Product Schedule: Indicating types, quantities, sizes, and installation locations by room of each accessory required.
   1. Identify locations using room designations indicated.
   2. Identify accessories using designations indicated.

1.04 INFORMATIONAL SUBMITTALS

A. Sample Warranty: For manufacturer's special warranties.

1.05 CLOSEOUT SUBMITTALS

A. Maintenance Data: For accessories to include in maintenance manuals.

1.06 WARRANTY

A. Manufacturer's Special Warranty for Mirrors: Manufacturer agrees to repair or replace mirrors that fail in materials or workmanship within specified warranty period.
   1. Failures include, but are not limited to, visible silver spoilage defects.
   2. Warranty Period: 15 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

A. Structural Performance: Design accessories and fasteners to comply with the following requirements:
   1. Grab Bars: Installed units are able to resist 250 lbf (1112 N) concentrated load applied in any direction and at any point.
   2. Shower Seats: Installed units are able to resist 360 lbf (1601 N) concentrated load applied in any direction and at any point.

2.02 PUBLIC-USE WASHROOM ACCESSORIES

A. Source Limitations: Obtain public-use washroom accessories from single source from single manufacturer.

B. Toilet Tissue (Roll) Dispenser RA11:
   1. Manufacturers: Subject to compliance with requirements, provide products by the following:
      a. GP Pro; Georgia Pacific, LLC.
   2. Description: Quad-roll dispenser.
   3. Mounting: Surface mounted.
   4. Capacity: Designed for 4-1/2- or 5-inch- (114- or 127-mm-) diameter tissue rolls.
   5. Material and Finish: ABS plastic, black.

C. Automatic Paper Towel (Roll) Dispenser RA10:
   1. Manufacturers: Subject to compliance with requirements, provide products by the following:
      a. GP Pro; Georgia Pacific, LLC.
   2. Description: Automatic motion-sensing mechanism with user-adjustable delay and paper towel length; battery powered.
   3. Mounting: Surface mounted.
   4. Minimum Capacity: 8-inch- (203-mm-) wide, 800-foot- (244-m-) long roll.
   5. Material and Finish: ABS plastic, black.
   6. Lockset: Tumbler type.

D. Waste Receptacle RA14:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. ASI-American Specialties, Inc.
      b. Bobrick Washroom Equipment, Inc.
      c. Bradley Corporation.
   2. Mounting: Surface mounted.
   3. Material and Finish: Stainless steel, ASTM A480/A480M No. 4 finish (satin).

E. Waste Receptacle RA16:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. ASI-American Specialties, Inc.
      b. Bobrick Washroom Equipment, Inc.
      c. Bradley Corporation.
   2. Mounting: Undercounter.
   3. Material and Finish: Stainless steel, ASTM A480/A480M No. 4 finish (satin).

F. Countertop-Mounted Circular Waste Chute RA15:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. ASI-American Specialties, Inc.

b. Bobrick Washroom Equipment, Inc.
c. Bradley Corporation.

2. OD: 6 inches (152 mm).
3. Material and Finish: Stainless steel, ASTM A480/A480M No. 4 finish (satin).

G. Automatic Soap Dispenser RA12:
1. Manufacturers: Subject to compliance with requirements, provide products by the following:
a. GP Pro; Georgia Pacific, LLC.
2. Description: Automatic dispenser with infrared sensor to detect presence of hands; battery powered; designed for dispensing soap in liquid or lotion form.
3. Mounting: Surface mounted.
4. Refill Indicator: LED indicator.
5. Low-Battery Indicator: LED indicator.

H. Grab Bar RA1 & RA2:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. ASI-American Specialties, Inc.
b. Bobrick Washroom Equipment, Inc.
c. Bradley Corporation.
2. Mounting: Flanges with concealed fasteners.
3. Material: Stainless steel, 0.05 inch (1.3 mm) thick.
a. Finish: Smooth, ASTM A480/A480M No. 4 finish (satin).
4. Outside Diameter: 1-1/2 inches (38 mm).
5. Configuration and Length: As indicated on Drawings.

I. Mirror Unit RA3 & RA4:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. ASI-American Specialties, Inc.
b. Bobrick Washroom Equipment, Inc.
c. Bradley Corporation.
2. Frame: Stainless steel channel.
a. Corners: Welded and ground smooth.
3. Size: As indicated on Drawings.
4. Hangers: Manufacturer's standard rigid, tamper and theft resistant.

J. Hook RA6:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. ASI-American Specialties, Inc.
b. Bobrick Washroom Equipment, Inc.
c. Bradley Corporation.
2. Description: Double-prong unit.
3. Mounting: Concealed.
4. Material and Finish: Stainless steel, ASTM A480/A480M No. 4 finish (satin).

2.03 PUBLIC-USE SHOWER ROOM ACCESSORIES

A. Source Limitations: Obtain public-use shower room accessories from single source from single manufacturer.

B. Shower Curtain Rod RA5:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. ASI-American Specialties, Inc.

b. Bobrick Washroom Equipment, Inc.
c. Bradley Corporation.

2. Description: 1-1/4-inch- (32-mm-) outside diameter, straight rod.
3. Configuration: As indicated on Drawings
4. Mounting Flanges: Concealed fasteners; in material and finish matching rod.
5. Rod Material and Finish: Stainless steel, ASTM A480/A480M No. 4 finish (satin).

C. Shower Curtain RA5:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. ASI-American Specialties, Inc.
b. Bobrick Washroom Equipment, Inc.
c. Bradley Corporation.
2. Size: Minimum 12 inches (305 mm) wider than opening by 72 inches (1829 mm) high.
3. Material: Nylon-reinforced vinyl, minimum 9 oz. (255 g) or 0.008-inch- (0.2-mm-) thick vinyl, with integral antibacterial and flame-retardant agents.
4. Color: White.
5. Grommets: Corrosion resistant at minimum 6 inches (152 mm) o.c. through top hem.
6. Shower Curtain Hooks: Chrome-plated or stainless steel, spring wire curtain hooks with snap fasteners, sized to accommodate specified curtain rod. Provide one hook per curtain grommet.

D. Soap Dish RA17:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. ASI-American Specialties, Inc.
b. Bobrick Washroom Equipment, Inc.
c. Bradley Corporation.
2. Description: Surface mounted, with the following features:
a. Washcloth bar.
3. Material and Finish: Stainless steel, ASTM A480/A480M No. 4 finish (satin).

E. Robe Hook RA6:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. ASI-American Specialties, Inc.
b. Bobrick Washroom Equipment, Inc.
c. Bradley Corporation.
2. Description: Double-prong unit.
3. Material and Finish: Stainless steel, ASTM A480/A480M No. 4 finish (satin).

2.04 UNDERLAVATORY GUARDS

A. Underlavatory Guard RA18:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. Buckaroos, Inc.
b. Dearborn, an Oatey Company.
c. Plumberex Specialty Products, Inc.
d. Truebro; IPS Corporation.
2. Description: Soft Molded PVC insulating pipe covering for supply and drain piping assemblies that prevents direct contact with and burns from piping; allow service access without removing coverings.
3. Material and Finish: Antimicrobial, molded plastic, white.

2.05 CUSTODIAL ACCESSORIES

A. Source Limitations: Obtain custodial accessories from single source from single manufacturer.

B. Custodial Mop and Broom Holder RA7:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. ASI-American Specialties, Inc.
   b. Bobrick Washroom Equipment, Inc.
   c. Bradley Corporation.
2. Description: Unit with shelf, hooks, holders, and rod suspended beneath shelf.
3. Length: 36 inches (914 mm).
4. Hooks: Four.
5. Mop/Broom Holders: Three, spring-loaded, rubber hat, cam type.
6. Material and Finish: Stainless steel, ASTM A480/A480M No. 4 finish (satin).
   a. Shelf: Not less than nominal 0.05-inch- (1.3-mm-) thick stainless steel.

2.06 MATERIALS

A. Stainless Steel: ASTM A240/A240M or ASTM A666, Type 304, 0.031-inch- (0.8-mm-) minimum nominal thickness unless otherwise indicated.

B. Brass: ASTM B19, flat products; ASTM B16/B16M, rods, shapes, forgings, and flat products with finished edges; or ASTM B30, castings.

C. Steel Sheet: ASTM A1008/A1008M, Designation CS (cold rolled, commercial steel), 0.036-inch- (0.9-mm-) minimum nominal thickness.

D. Galvanized-Steel Sheet: ASTM A653/A653M, with G60 (Z180) hot-dip zinc coating.

E. Galvanized-Steel Mounting Devices: ASTM A153/A153M, hot-dip galvanized after fabrication.

F. Fasteners: Screws, bolts, and other devices of same material as accessory unit, unless otherwise recommended by manufacturer or specified in this Section, and tamper and theft resistant where exposed, and of stainless or galvanized steel where concealed.

G. Mirrors: ASTM C1503, Mirror Glazing Quality, clear-glass mirrors, nominal 6.0 mm thick.

2.07 FABRICATION

A. General: Fabricate units with tight seams and joints, and exposed edges rolled. Hang doors and access panels with full-length, continuous hinges. Equip units for concealed anchorage and with corrosion-resistant backing plates.

B. Keys: Provide universal keys for internal access to accessories for servicing and resupplying. Provide minimum of six keys to Owner's representative.

PART 3 - EXECUTION

3.01 INSTALLATION

A. Install accessories in accordance with manufacturers' written instructions, using fasteners appropriate to substrate indicated and recommended by unit manufacturer. Install units level, plumb, and firmly anchored in locations and at heights indicated.

1. Remove temporary labels and protective coatings.

B. Grab Bars: Install to comply with specified structural-performance requirements.

C. Shower Seats: Install to comply with specified structural-performance requirements.

3.02 ADJUSTING AND CLEANING

A. Adjust accessories for unencumbered, smooth operation. Replace damaged or defective items.

B. Clean and polish exposed surfaces in accordance with manufacturer's written instructions.

END OF SECTION 10 28 00

SECTION 10 44 13 - FIRE PROTECTION CABINETS

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Fire-protection cabinets for the following:
      a. Portable fire extinguisher.

B. Related Requirements:
   1. Section 10 44 16 "Fire Extinguishers" for portable, hand-carried fire extinguishers accommodated by fire-protection cabinets

1.02 PREINSTALLATION CONFERENCE

A. Preinstallation Conference: Conduct conference at Project site.
   1. Review methods and procedures related to fire-protection cabinets, including, but not limited to, the following:
      a. Schedules and coordination requirements.

1.03 ACTION SUBMITTALS

A. Product Data: For each type of product.
   1. Show door hardware, cabinet type, trim style, and panel style. Include roughing-in dimensions and details showing recessed-, semirecessed-, or surface-mounting method and relationships of box and trim to surrounding construction.

B. Shop Drawings: For fire-protection cabinets.
   1. Include plans, elevations, sections, details, and attachments to other work.

C. Samples: For each type of exposed finish required.

D. Product Schedule: For fire-protection cabinets. Indicate whether recessed, semirecessed, or surface mounted. Coordinate final fire-protection cabinet schedule with fire-extinguisher schedule to ensure proper fit and function.

1.04 CLOSEOUT SUBMITTALS

A. Maintenance Data: For fire-protection cabinets to include in maintenance manuals.

1.05 COORDINATION

A. Coordinate size of fire-protection cabinets to ensure that type and capacity of fire extinguishers indicated are accommodated.

B. Coordinate sizes and locations of fire-protection cabinets with wall depths.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Source Limitations: Obtain fire-protection cabinets, accessories, and fire extinguishers from single source from single manufacturer.

2.02 PERFORMANCE REQUIREMENTS

A. Fire-Rated Fire-Protection Cabinets: Listed and labeled to comply with requirements in ASTM E814 for fire-resistance rating of walls where they are installed.

2.03 FIRE-PROTECTION CABINET FE-1

A. Cabinet Type: Suitable for fire extinguisher.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Babcock-Davis.
   b. Guardian Fire Equipment, Inc.
   c. Larsens Manufacturing Company.
   d. Nystrom.

B. Cabinet Construction: Nonrated.

C. Cabinet Material: Aluminum sheet.

D. Semirecessed Cabinet: One-piece combination trim and perimeter door frame overlapping surrounding wall surface, with exposed trim face and wall return at outer edge (backbend).
   1. Square-Edge Trim: 1-1/4- to 1-1/2-inch (32- to 38-mm) backbend depth.

E. Surface-Mounted Cabinet: Cabinet box fully exposed and mounted directly on wall with no trim.

F. Cabinet Trim Material: Same material and finish as door.

G. Door Material: Aluminum sheet.

H. Door Style: Solid opaque panel with frame.

I. Door Hardware: Manufacturer's standard door-operating hardware of proper type for cabinet type, trim style, and door material and style indicated.
   1. Provide recessed door pull and friction latch.
   2. Provide continuous hinge, of same material and finish as trim,, permitting door to open 180 degrees.

J. Accessories:
   1. Identification: Lettering complying with authorities having jurisdiction for letter style, size, spacing, and location. Locate as indicated.
      a. Identify fire extinguisher in fire-protection cabinet with the words "FIRE EXTINGUISHER."
         1) Location: Applied to cabinet door.
         2) Application Process: Pressure-sensitive vinyl letters.
         3) Lettering Color: Black.
         4) Orientation: Vertical.

K. Materials:
   1. Aluminum: ASTM B221 (ASTM B221M) for extruded shapes and aluminum sheet, with strength and durability characteristics of not less than Alloy 6063-T5 for aluminum sheet.
      a. Finish: Clear anodic.

2.04 FABRICATION

A. Fire-Protection Cabinets: Provide manufacturer's standard box (tub) with trim, frame, door, and hardware to suit cabinet type, trim style, and door style indicated.
   1. Weld joints and grind smooth.
   2. Miter corners and grind smooth.
   3. Provide factory-drilled mounting holes.
   4. Prepare doors and frames to receive locks.
   5. Fabricate door frames with tubular stiles and rails and hollow-metal design, minimum 1/2 inch (13 mm) thick.
   6. Miter and weld perimeter door frames and grind smooth.

B. Cabinet Trim: Fabricate cabinet trim in one piece with corners mitered, welded, and ground smooth.

2.05 GENERAL FINISH REQUIREMENTS

A. Comply with NAAMM's AMP 500, "Metal Finishes Manual for Architectural and Metal Products," for recommendations for applying and designating finishes.

B. Protect mechanical finishes on exposed surfaces of fire-protection cabinets from damage by applying a strippable, temporary protective covering before shipping.
C. Finish fire-protection cabinets after assembly.
D. Appearance of Finished Work: Noticeable variations in same piece are unacceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine walls and partitions for suitable framing depth and blocking where semi-recessed cabinets will be installed.
B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Prepare recesses for semi-recessed fire-protection cabinets as required by type and size of cabinet and trim style.

3.03 INSTALLATION

A. General: Install fire-protection cabinets in locations and at mounting heights indicated or, if not indicated, at height indicated below:
   1. Fire-Protection Cabinet Mounting Height: 42 inches (1067 mm) above finished floor to top of fire extinguisher.
B. Fire-Protection Cabinets: Fasten cabinets to structure, square and plumb.
   1. Unless otherwise indicated, provide recessed fire-protection cabinets. If wall thickness is inadequate for recessed cabinets, provide semi-recessed fire-protection cabinets.
C. Identification:
   1. Apply vinyl lettering at locations indicated.

3.04 ADJUSTING AND CLEANING

A. Remove temporary protective coverings and strippable films, if any, as fire-protection cabinets are installed unless otherwise indicated in manufacturer's written installation instructions.
B. Adjust fire-protection cabinet doors to operate easily without binding. Verify that integral locking devices operate properly.
C. On completion of fire-protection cabinet installation, clean interior and exterior surfaces as recommended by manufacturer.
D. Touch up marred finishes or replace fire-protection cabinets that cannot be restored to factory-finished appearance. Use only materials and procedures recommended or furnished by fire-protection cabinet and mounting bracket manufacturers.
E. Replace fire-protection cabinets that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

END OF SECTION 10 44 13

SECTION 10 44 16 - FIRE EXTINGUISHERS

PART 1 - GENERAL

1.01 SUMMARY

A. Section includes portable, hand-carried fire extinguishers and mounting brackets for fire extinguishers.

B. Related Requirements:

1. Section 10 44 13 "Fire Protection Cabinets."

1.02 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1. Review methods and procedures related to fire extinguishers including, but not limited to, the following:

a. Schedules and coordination requirements.

1.03 ACTION SUBMITTALS

A. Product Data: For each type of product. Include rating and classification, material descriptions, dimensions of individual components and profiles, and finishes for fire extinguisher and mounting brackets.

B. Product Schedule: For fire extinguishers. Coordinate final fire-extinguisher schedule with fire-protection cabinet schedule to ensure proper fit and function. Use same designations indicated on Drawings.

1.04 INFORMATIONAL SUBMITTALS

A. Warranty: Sample of special warranty.

1.05 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For fire extinguishers to include in maintenance manuals.

1.06 COORDINATION

A. Coordinate type and capacity of fire extinguishers with fire-protection cabinets to ensure fit and function.

1.07 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace fire extinguishers that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:

a. Failure of hydrostatic test according to NFPA 10 when testing interval required by NFPA 10 is within the warranty period.

b. Faulty operation of valves or release levers.

2. Warranty Period: Six years from date of Substantial Completion.

PART 2 - PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

A. NFPA Compliance: Fabricate and label fire extinguishers to comply with NFPA 10, "Portable Fire Extinguishers."

B. Fire Extinguishers: Listed and labeled for type, rating, and classification by an independent testing agency acceptable to authorities having jurisdiction.

2.02 PORTABLE, HAND-CARRIED FIRE EXTINGUISHERS

A. Fire Extinguishers: Type, size, and capacity for each fire-protection cabinet indicated.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Amerex Corporation.
      b. Babcock-Davis.
      c. Kidde; Carrier Global Corporation.
      d. Larsen's Manufacturing Company.
      e. Nystrom, Inc.
   2. Source Limitations: Obtain fire extinguishers, fire-protection cabinets, and accessories, from single source from single manufacturer.
   3. Valves: Nickel-plated, polished-brass body.
   4. Handles and Levers: Stainless steel.
   5. Instruction Labels: Include pictorial marking system complying with NFPA 10, Appendix B, and bar coding for documenting fire-extinguisher location, inspections, maintenance, and recharging.

B. Multipurpose Dry-Chemical Type in Aluminum Container FE-1 & FE-2: UL-rated 2-A:10-B:C, 5-lb nominal capacity, with monoammonium phosphate-based dry chemical in enameled-aluminum container.

C. Clean-Agent Type in Brass Container FE-3: UL-rated 2-A: 10-B:C, 15.5-lb nominal capacity, with HCFC Blend B agent and inert material in chrome-plated-brass container; with pressure-indicating gage.

2.03 MOUNTING BRACKETS FE-2

A. Mounting Brackets: Manufacturer's standard stainless steel, designed to secure fire extinguisher to wall or structure, of sizes required for types and capacities of fire extinguishers indicated, with plated or red baked-enamel finish.
   1. Source Limitations: Obtain mounting brackets and fire extinguishers from single source from single manufacturer.

B. Identification: Lettering complying with authorities having jurisdiction for letter style, size, spacing, and location. Locate as indicated by Architect.
   1. Identify bracket-mounted fire extinguishers with the words "FIRE EXTINGUISHER" in red letter decals applied to mounting surface.
      a. Orientation: Vertical.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine fire extinguishers for proper charging and tagging.
   1. Remove and replace damaged, defective, or undercharged fire extinguishers.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. General: Install fire extinguishers in locations indicated and in compliance with requirements of authorities having jurisdiction.

END OF SECTION 10 44 16

SECTION 10 51 13 - METAL LOCKERS

PART 1 - GENERAL

1.01 SUMMARY
- A. Section Includes:
  1. Welded athletic lockers.
  2. Locker benches.

1.02 PREINSTALLATION MEETINGS
- A. Preinstallation Conference: Conduct conference at Project site.

1.03 ACTION SUBMITTALS
- A. Product Data: For each type of product.
  1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each type of metal locker and bench.
- B. Shop Drawings: For metal lockers.
  1. Include plans, elevations, sections, and attachment details.
  2. Show locker trim and accessories.
  3. Include locker identification system and numbering sequence.
- C. Samples: For each color specified, in manufacturer's standard size.
- D. Product Schedule: For lockers. Use same designations indicated on Drawings.

1.04 INFORMATIONAL SUBMITTALS
- A. Qualification Data: For Installer.
- B. Sample Warranty: For special warranty.

1.05 CLOSEOUT SUBMITTALS
- A. Maintenance Data: For adjusting, repairing, and replacing locker doors and latching mechanisms to include in maintenance manuals.

1.06 MAINTENANCE MATERIAL SUBMITTALS
- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
  1. The following metal locker hardware items equal to 10 percent of amount installed for each type and finish installed, but no fewer than two units:
     a. Locks.
     b. Blank identification plates.
     c. Hooks.

1.07 DELIVERY, STORAGE, AND HANDLING
- A. Do not deliver metal lockers until spaces to receive them are clean, dry, and ready for their installation.

1.08 FIELD CONDITIONS
- A. Field Measurements: Verify actual dimensions of recessed openings by field measurements before fabrication.

1.09 COORDINATION
- A. Coordinate sizes and locations of concrete bases for metal lockers.

B. Coordinate sizes and locations of framing, blocking, furring, reinforcements, and other related units of work specified in other Sections to ensure that metal lockers can be supported and installed as indicated.

1.010 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of metal lockers that fail in materials or workmanship, excluding finish, within specified warranty period.
   1. Failures include, but are not limited to, the following:
      a. Structural failures.
      b. Faulty operation of latches and other door hardware.
   2. Damage from deliberate destruction and vandalism is excluded.
   3. Warranty Period for Welded Metal Lockers: Lifetime from date of Substantial Completion.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Source Limitations: Obtain metal lockers and accessories from single source from single locker manufacturer.
   1. Obtain locks from single lock manufacturer.

2.02 PERFORMANCE REQUIREMENTS

A. Accessibility Standard: For lockers indicated to be accessible, comply with applicable provisions in ICC A117.1.

2.03 WELDED ATHLETIC LOCKERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. ASI Storage Solutions.
   2. Lyon LLC.
   3. Penco Products, Inc.

B. Perforated Doors: One piece; fabricated from 0.075-inch (1.90-mm) nominal-thickness steel sheet with manufacturer's standard diamond perforations; formed into channel shape with double bend at vertical edges and with right-angle single bend at horizontal edges and latch point (bottom) and right-angle single bend at remaining edges for box lockers.
   1. Reinforcement: Manufacturer's standard reinforcing angles, channels, or stiffeners for doors more than 15 inches (381 mm) wide; welded to inner face of doors.

C. Expanded-Metal Doors: Fabricated from 0.090-inch (2.28-mm) nominal-thickness expanded metal; welded to 0.105-inch (2.66-mm) nominal-thickness steel angle frame; with 0.090-inch (2.28-mm) nominal-thickness, steel sheet lock panel backed by 0.060-inch (1.52-mm) nominal-thickness, steel sheet retainer welded to door frame.

D. Body: Assembled by welding body components together. Fabricate from unperforated steel sheet with thicknesses as follows:
   1. Tops and Bottoms: 0.060-inch (1.52-mm) nominal thickness, with single bend at edges.
   2. Backs: 0.048-inch (1.21-mm) nominal thickness.
   3. Shelves: 0.060-inch (1.52-mm) nominal thickness, with double bend at front and single bend at sides and back.

E. Unperforated Sides: Fabricated from 0.060-inch (1.52-mm) nominal-thickness steel sheet.

F. Frames: Channel formed; fabricated from 0.060-inch (1.52-mm) nominal-thickness steel sheet or 0.097-inch (2.45-mm) nominal-thickness steel angles; lapped and factory welded at corners;

with top and bottom main frames factory welded into vertical main frames. Form continuous, integral, full-height door strikes on vertical main frames.

G. Hinges: Welded to door and attached to door frame with no fewer than two factory-installed rivets per hinge that are completely concealed and tamper resistant when door is closed; fabricated to swing 180 degrees.
   1. Continuous Hinges: Manufacturer's standard, steel; side or top mounted as required by locker configuration.

H. Recessed Door Handle and Latch: Stainless steel cup with integral door pull, recessed so locking device does not protrude beyond door face; pry and vandal resistant.
   1. Multipoint Latching: Finger-lift latch control designed for use with built-in combination locks, built-in cylinder locks, or padlocks; positive automatic latching and prelocking.
      a. Latch Hooks: Equip doors 48 inches (1219 mm) and higher with three latch hooks and doors less than 48 inches (1219 mm) high with two latch hooks; fabricated from 0.120-inch (3.04-mm) nominal-thickness steel sheet; welded to full-height door strikes; with resilient silencer on each latch hook.
      b. Latching Mechanism: Manufacturer's standard, rattle-free latching mechanism and moving components isolated to prevent metal-to-metal contact, and incorporating a prelocking device that allows locker door to be locked while door is open and then closed without unlocking or damaging lock or latching mechanism.

I. Locks: Combination padlocks.

J. Identification Plates: Manufacturer's standard, etched, embossed, or stamped aluminum plates, with numbers and letters at least 3/8 inch (9 mm) high.

K. Hooks: Manufacturer's standard ball-pointed, aluminum or steel; zinc plated. Minimum three per locker.

L. Continuous Sloping Tops: Fabricated from 0.048-inch (1.21-mm) nominal-thickness steel sheet, with a pitch of approximately 20 degrees.
   1. Closures: Vertical-end type.

M. Filler Panels: Fabricated from 0.048-inch (1.21-mm) nominal-thickness steel sheet.

N. Boxed End Panels: Fabricated from 0.060-inch (1.52-mm) nominal-thickness steel sheet.

O. Finished End Panels: Fabricated from 0.024-inch (0.61-mm) nominal-thickness steel sheet to cover unused penetrations and fasteners, except for perimeter fasteners, at exposed ends of nonrecessed metal lockers; finished to match lockers.

P. Materials:
   1. Metallic-Coated Steel Sheet: ASTM A653/A653M, Commercial Steel (CS), Type B; with A60 (ZF180) zinc-iron, alloy (galvannealed) coating designation.
   2. Expanded Metal: ASTM F1267, Type II (flattened), Class I (uncoated), 3/4-inch (19-mm) steel mesh, with at least 70 percent open area.

Q. Finish: Baked enamel or powder coat.
   1. Color: As selected by Architect from manufacturer's full range.

2.04 LOCKS

A. Combination Padlock: Provided by Owner.

2.05 FABRICATION

A. Fabricate metal lockers square, rigid, without warp, and with metal faces flat and free of dents or distortion. Make exposed metal edges safe to touch and free of sharp edges and burrs.
   1. Form body panels, doors, shelves, and accessories from one-piece steel sheet unless otherwise indicated.
   2. Provide fasteners, filler plates, supports, clips, and closures as required for complete installation.

B. Fabricate each metal locker with an individual door and frame; individual top, bottom, and back; and common intermediate uprights separating compartments.
C. Equipment: Provide each locker with an identification plate and the following equipment:
   1. Single-Tier Units: Shelf, one double-prong ceiling hook, and two single-prong wall hooks.
D. Welded Construction: Factory preassemble metal lockers by welding all joints, seams, and connections; with no bolts, nuts, screws, or rivets used in assembly of main locker groups. Factory weld main locker groups into one-piece structures. Grind exposed welds smooth and flush.
E. Accessible Lockers: Fabricate as follows:
   1. Locate bottom shelf no lower than 15 inches (381 mm) above the floor.
   2. Where hooks, coat rods, or additional shelves are provided, locate no higher than 48 inches (1219 mm) above the floor.
F. Continuous Sloping Tops: Fabricated in lengths as long as practical, without visible fasteners at splice locations; finished to match lockers.
G. Filler Panels: Fabricated in an unequal leg angle shape; finished to match lockers. Provide slip-joint filler angle formed to receive filler panel.
H. Finished End Panels: Fabricated to conceal unused penetrations and fasteners, except for perimeter fasteners, at exposed ends of nonrecessed metal lockers; finished to match lockers.
   1. Provide one-piece panels for double-row (back-to-back) locker ends.

2.06 ACCESSORIES
A. Fasteners: Zinc- or nickel-plated steel, slotless-type, exposed bolt heads; with self-locking nuts or lock washers for nuts on moving parts.
B. Anchors: Material, type, and size required for secure anchorage to each substrate.
   1. Provide nonferrous-metal or hot-dip galvanized anchors and inserts for corrosion resistance.
   2. Provide toothed-steel or lead expansion sleeves for drilled-in-place anchors.

PART 3 - EXECUTION

3.01 EXAMINATION
A. Examine walls and floors or support bases, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
B. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.
C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION
A. Install lockers level, plumb, and true; shim as required, using concealed shims.
   1. Anchor locker runs at ends and at intervals recommended by manufacturer, but not more than 36 inches (910 mm) o.c. Using concealed fasteners, install anchors through backup reinforcing plates, channels, or blocking as required to prevent metal distortion.
   2. Anchor single rows of metal lockers to walls near top and bottom of lockers.
   3. Anchor back-to-back metal lockers to floor.
B. Welded Lockers: Connect groups together with manufacturer's standard fasteners, with no exposed fasteners on face frames.
C. Equipment:
   1. Attach hooks with at least two fasteners.
   2. Attach door locks on doors using security-type fasteners.
   3. Identification Plates: Identify metal lockers with identification indicated on Drawings.

a. Attach plates to each locker door, near top, centered, with at least two aluminum rivets.
b. Attach plates to upper shelf of each open-front metal locker, centered, with a least two aluminum rivets.

D. Trim: Fit exposed connections of trim, fillers, and closures accurately together to form tight, hairline joints, with concealed fasteners and splice plates.
1. Attach recess trim to recessed metal lockers with concealed clips.
2. Attach filler panels with concealed fasteners. Locate filler panels where indicated on Drawings.
3. Attach sloping-top units to metal lockers, with closures at exposed ends.
4. Attach finished end panels using fasteners only at perimeter to conceal exposed ends of nonrecessed metal lockers.

3.03 ADJUSTING

A. Clean, lubricate, and adjust hardware. Adjust doors and latches to operate easily without binding.

3.04 PROTECTION

A. Protect metal lockers from damage, abuse, dust, dirt, stains, or paint. Do not permit use during construction.
B. Touch up marred finishes or replace metal lockers that cannot be restored to factory-finished appearance. Use only materials and procedures recommended or furnished by locker manufacturer.

END OF SECTION 10 51 13

SECTION 10 73 16 - CANOPIES

PART 1 - GENERAL

1.01 SUMMARY:

A. Freestanding, pre-engineered metal canopies including concrete foundation, steel framing, metal roof, roof drains and leaders, fascia components, metal ceiling and accessories.

B. Attached, pre-engineered aluminum canopies including framing, metal roof, roof drains and leaders, fascia components, metal ceiling and accessories.

1.02 RELATED SECTIONS:

A. Section 03 30 00 - Cast-In-Place Concrete: Concrete islands and curbing.

B. Division 5 - Steel.

C. Section 07 92 00 - Joint Sealants.

1.03 REFERENCES:

2. AWS D1.2 – Structural Welding Code – Aluminum

D. ASTM International (ASTM):

1. ASTM A 36/A 36M - Standard Specification for Structural Steel.

E. National Association of Architectural Metal Manufacturers (NAAMM): NAAMM MFM - Metal Finishes Manual.

F. National Fire Protection Association (NFPA): NFPA 70 - National Electrical Code (copyrighted by NFPA, ANSI approved) - hereinafter referred to as NEC.

G. American Architectural Manufacturers Association (AAMA):

1. Aluminum finishes AAMA 2603 Powder Coat
2. Aluminum finishes AAMA 2605 Kynar
3. Aluminum finishes AAMA 611 Anodize

1.04 PERFORMANCE REQUIREMENTS:

A. Structural Performance: Provide pre-engineered canopies capable of withstanding the effects of gravity, wind, seismic, snow, thermal and other project specific load conditions as required by the current building code for the site-specific location where canopy is installed:

1. Minimum design loads per ACSE 7.
2. Project Specific design requirements refer to structural general notes.
3. Design shall provide for the effect of unbalanced , drift and sliding snow loads.

B. Thermal Movements: Provide pre-engineered canopies that allow for thermal movements resulting from the following maximum change (range) in ambient and surface temperatures by preventing buckling, opening of joints, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Base engineering calculation on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.

1. Temperature Change (Range): 120 degrees F (67 degrees C), ambient; 180 degrees F (100 degrees C), material surfaces.

1.05 SUBMITTALS:

A. General: Submit under provisions of Section 01300 - Submittal Procedures.

B. Product Data: Submit manufacturer's data sheets on each product to be used, including:

1. Construction details, material descriptions, dimensions of individual components and profiles, and finishes.

C. Shop Drawings: Submit shop drawings. Include plans, elevations, sections, details, and attachments to other work. Canopy supplier shall furnish complete canopy drawings signed and sealed by a professional engineer licensed in the state where the canopy shall be installed.

D. Samples:

1. Submit samples for initial color selection. Submit samples of each specified finish. Submit samples in form of manufacturer's color charts showing full range of colors and finishes available. Where finishes involve normal color variations, include samples showing the full range of variations expected.

E. Certificates: Submit product certificates signed by the manufacturer certifying material compliance with specified performance characteristics and criteria, and physical requirements.

F. Warranty Data: Submit warranty documents specified herein.

1.06 QUALITY ASSURANCE:

A. Manufacturer Qualifications: Company specializing in engineering and manufacturing pre-engineered canopies and with an in-house quality inspection program.

B. Welding: Qualify procedures and personnel according to the following:

1. Welding shall be in accordance with AWS D1.1 (with E70XX electrodes).
2. Steel shop connections shall be welded and field connections shall be bolted (unless otherwise noted on the Drawings). Shop welds may be changed to field welds with the approval of the project engineer.
3. Slag shall be cleaned from welds and inspected. Steel shall be painted with red oxide rust-inhibitive primer (unless galvanizing specified).

C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NEC, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

D. Source Limitations: Obtain pre-engineered metal canopy through one source from a single manufacturer who shall manufacture and install the canopy.

E. Product:

1. Information on the Drawings and in the Specifications establishes requirements for system's aesthetic effects and performance characteristics. Aesthetic effects are indicated by dimensions, arrangements, alignment, and profiles of components and assemblies as they relate to sightlines, to one another, and to adjoining construction. Performance characteristics are indicated by criteria subject to verification by one or more methods including preconstruction testing, field testing, and in-service performance. Do not modify intended aesthetic effects, as judged solely by the Architect, except with the Architect's approval. If modifications are proposed, submit comprehensive explanatory data to the Architect for review.
2. The Drawings indicate size, profiles, and dimensional requirements of pre-engineered metal canopies and are based on the specific system indicated. Do not modify intended aesthetic effects, as judged solely by the Architect, except with the Architect's approval. If modifications are proposed, submit comprehensive explanatory data to the Architect for review.

F. Coordination:

1. The Contractor to conduct site meetings to verify project requirements, substrate

conditions, utility connections, manufacturer's drawings and installation instructions. Comply with Division 1 section on project meetings.

2. The contractor shall prepare for and pour the concrete footers for the pre-engineered metal canopies. Manufacturer shall furnish recommended footing drawings as per IBC Section 18 07 .3 and prints and rebar details for concrete footings, as well as provide anchor bolts to be embedded in concrete footer. Such items shall be delivered to project site in time for installation.

1.07 DELIVERY, STORAGE, AND HANDLING:

A. Store products in manufacturer's unopened packaging until ready for installation.

B. Protect components and accessories from corrosion, deformation, damage, and deterioration when stored at job site. Keep materials free from dirt and foreign matter.

1.08 PROJECT CONDITIONS:

A. Field Measurements: Verify location and elevation of footings relative to finished grade, columns, and other construction contiguous with pre-engineered metal canopies by field measurements before fabrication and indicate measurements on shop drawings.

1. Established Dimensions: Where field measurements cannot be made without delaying the work, establish dimensions and proceed with fabricating metal canopies without field measurements. Contractor is responsible to coordinate footer locations and elevations with any interferences with or attachments to abutting structures.

1.09 WARRANTY:

A. Manufacturer warrantees the products to be free of defects in materials, leaks, and workmanship for 1 year from date of shipment.

1. 20-year limited warranty against peeling, flaking, chipping of canopy deck when properly maintained, and passes on manufacturer's warrantees for accessory items and replacement of materials.

PART 2 PRODUCTS

2.01 MANUFACTURERS:

A. Acceptable freestanding canopy Manufacturer: Austin Mohawk and Company, Inc., or as approved by Architect.

B. Acceptable attached aluminum canopy Manufacturer: Architectural Fabrication, Inc. – Atlas Canopy, or as approved by Architect.

2.02 FREE STANDING CANOPY MATERIALS:

A. Structural Steel:

1. Material and work shall conform to the latest AISC 360.
2. Structural steel shall be hot-dip-galvanized.

B. Sheet Metal:

1. Decking: 3 inch (76 mm) by 16 inch (406 mm) by 20 gage smooth white, ASTM A 653/A 653M GR40, Fy = 40 ksi, galvanized steel with baked enamel finish.
2. Center and Tapered Gutter: 20 gage hot-dip galvanized steel baked enamel finish.
3. Perimeter Gutter: 20 gage hot-dip galvanized steel baked enamel finish.
4. Internal Downspout: 3 inch (76 mm) diameter PVC

C. General: Provide a complete, integrated set of manufacturer's standard design canopy components to form a pre-engineered canopy ready for installation on project site. Canopy steel framing consists of using stacked wide-flange roof beams which transfer loads to columns.

Columns are designed as fixed base elements to transfer vertical & lateral loads and moments to concrete foundations. Columns are typically located in an area of site protected from drive lane traffic. Pre-engineered metal canopy shall be designed to meet all site specific design loads per Section 1.4.A or project specific requirements.

D. Canopy Fascia:
   1. Aluminum Composite Panel (ACM): Available with a fluorocarbon paint finish, masked on one side. Shall be warranted for 10 years depending on color and finish selection.
   2. Fascia: Various custom fascia to meet design requirements such as architectural shingle, EIFS, standing seam panels.

E. Canopy Finishes: Comply with NAAMM MFM for recommendations for applying and designating finishes.
   1. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved samples. Noticeable variations in the same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved samples and are assembled or installed to minimize contrast.

F. Fabrication: Fabricate pre-engineered canopies completely in factory.

2.03 FREE STANDING CANOPY MATERIALS:

A. Framing: Aluminum gutter beams

B. Soffits: Pac-Clad, Berridge or equal Pre-finished Kynar sheet metal. 12” wide panels attached to 18ga galvanized c-channel

C. Hanger Rods: Zinc steel and powder coat (Prime and paint are not acceptable)

D. Connections: Wall plates and canopy mounting brackets are to be aluminum.

E. Hardware and Fasteners: Nuts, bolts, washers, clevis pins, screws, anchors and pipe spacers to be zinc plated or galvanized steel required to suit application and per pre-engineered canopy load requirements.

F. Flashing: Shall be minimum 0.040 inch aluminum, fabricated to prevent leakage and sealed with Novaflex metal roof sealant in clear or color match. Other equivalent sealant is acceptable.

G. Fascia: Flat aluminum 5052 alloy sheet .063 to .125 thickness – depending on height. Finish:
   1. Anodize per AAMA 611
   2. Powder coat per AAMA 2603
   3. Kynar per AAMA 2605

H. Fabricate and preassemble canopies in the shop to greatest extent possible. Disassemble units only as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation.

PART 3 EXECUTION

3.01 EXAMINATION:

A. Verification of Conditions: Examine areas and conditions under which the work is to be installed, and notify the Contractor in writing, with a copy to the Owner and the Architect, of any conditions detrimental to the proper and timely completion of the work. Do not proceed with the work until unsatisfactory conditions have been corrected.
   1. Examine supporting foundations for compliance with manufacturer's requirements, including installation tolerances and other conditions affecting performance of supporting members.
   2. Verify the rough-in of required mechanical and electrical services prior to placement.

3.02 PREPARATION:

A. Clean surfaces thoroughly prior to installation.

B. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions.

3.03 INSTALLATION:

A. Set pre-engineered metal canopy plumb and aligned. Level base plates true to plane with full bearing on concrete bases.

B. Use concealed anchors where possible.

C. Fasten pre-engineered metal canopy columns to anchor bolts and/or foundation bolts.

D. Provide anchor bolts as follows:

1. Anchor bolts or foundation bolts will be set by the Owner in accordance with approved site-specific drawings. They must not vary from the size and dimensions shown on the erection drawings. Use of a plywood template is recommended. Remove template prior to column erection.
2. Anchor bolts shall conform to ASTM F1554 grade 55 and shall have a minimum of 7 inches (178 mm) of exposed thread and 23 inch (584 mm) minimum embedment with 1-1/4 inch (32 mm) nut and washer as embedment end.

E. Provide bolted connections as follows:

1. Structural erection bolts shall conform to ASTM A 325/A 325M.
2. Bolts shall be tightened to snug tight per latest RCSC specifications (unless otherwise specified).

F. Provide screws as follows:

1. Fastening shall be performed per installation prints provided by the manufacturer.
2. Self-drilling and self-tapping screws shall have a sufficient cut point and a 1/2 inch (13 mm) outside diameter dished metal-backed neoprene washer to be used in water sealing applications.

G. Provide pedestrian protection and warnings during construction which comply with local, Federal, and OSHA codes.

H. Prior to steel erection of any kind, the Contractor shall grade, backfill and otherwise prepare the job site to allow for rolling scaffold and ensure safe working conditions including the removal or relocation of overhead power lines.

I. Any grade or elevation situations which deviate from the approved manufacturer's plans shall be conveyed to the manufacturer prior to fabrication.

J. All anchor bolts and/or leveling plates shall be set within 1/4-inch (6 mm) tolerance on layout and grade level.

K. Temporary electrical power shall be provided.

L. Connect electrical power service to power distribution system according to requirements specified in Division 16 - Electrical.

M. Dumpster for trash and debris shall be provided by the Contractor.

3.04 ADJUSTING AND CLEANING:

A. After completing installation, inspect exposed finishes and repair damaged finishes.

3.05 PROTECTION:

A. Protect installed products until completion of project.

B. Touch-up, repair, or replace damaged products before Substantial Completion.

END OF SECTION 10 73 16

DIVISION 11 – EQUIPMENT

SECTION 11 24 29.17 – HORIZONTAL LIFELINE FALL PROTECTION SYSTEMS

PART 1 - GENERAL

1.01 SUMMARY:

A. Section Includes:

1. Fall Protection Systems to allow users to walk uninterrupted the entire length of each system and provide secure anchorage to arrest a fall by the users. All components, including user equipment, shall be included, to provide a complete and fully operational system. The fall protection systems shall be supported by anchors which are permanently attached to structure. This system is not to be designed or utilized for suspended equipment operations.

1.02 REFERENCES:

A. American National Standards Institute (ANSI):

2. 1910.140 Personal Fall Protection Systems
3. State Administrative Code Safety Standards for Fall Restraint and Fall Arrest

C. International Building Code

D. American Welding Society (AWS):

1. Structural specification D1.1

E. American Society for Testing and Materials (ASTM):

1. A36-05a: Standard Specification for Carbon Structural Steel.

1.03 PREINSTALLATION MEETINGS:

A. Preinstallation Conference: Conduct conference at Project site.

1.04 ACTION SUBMITTALS:

A. Product Data: Include construction details, material descriptions, dimensions of individual components and profiles.

1. Horizontal Lifeline Fall Protection Systems.

B. Manufacturer's Instructions: Manufacturer's Instructions indicating the manufacturer's recommended method and sequence of installation shall be submitted for the following:

1. Energy absorbing devices
2. Horizontal Lifeline Cable and associated components

C. Shop Drawings: Provide pre-installation design drawings and system specifications, with each page stamped by the designing engineer.

1. A statement defining the type of system: fall arrest, fall restraint, etc.
2. A drawing showing the layout of the system, including where it is located on the structure and the complete assembly of all components. The drawings shall be specific to the site and location of the project.
3. A specification of the number, location and qualifications of workers using the system.
4. Specifications for all components, including sizes and minimum breaking strengths. The specifications shall reference applicable standards and/or fully specify the makes and models of the components.
5. A description of any proof testing required before the system may be put into use.

6. A specification of any environmental limitations on the use of the fall protection system, such as chemical, temperature, radiation or weather factors that may temporarily or permanently render the system unsafe to use.
7. Information on the expected performance of the system:
   a. Maximum arrest load unfactored
   b. Maximum loadings of all components unfactored
   c. Cable Sag
   d. Deflection of components contributing to fall distance where not otherwise accounted.
   e. Deployment of lanyard energy absorber(s) as applicable.
8. A description of the greatest required clearances for all permitted worker locations, connecting means, and full body harness combinations. Where a required clearance varies with environmental conditions, the worst-case value shall be specified.
9. A fall distance calculation drawing shall be provided for each system detailing the worst-case scenario.
10. Instructions for inspection, maintenance, and retirement of the system and all or its components, including how often inspection and maintenance are to be performed and a description of the qualifications required for persons performing these tasks.
11. Instructions for safe access to, egress from and use of the system.
12. For fall arrest systems, a rescue plan, or directions to the owner of the system or the employer of the workers using the system to develop and implement a rescue plan before the system is used. The engineer shall indicate the appropriate uses of the system or its anchorages during a rescue.
13. A statement specifying that the engineer who designed the system or an engineer with similar experience and qualifications shall be consulted before changing the design.
14. For permanent systems, "as-constructed" drawings shall be provided. The engineer shall state that the installation is in general accordance with the as-constructed drawings and specifications and shall indicated how often the anchorages shall be recertified by the engineer designing the system or an engineer with similar experience and qualifications.

D. Structural Review: The fall protection contractor shall provide the design loads to the engineer of record for the building. The engineer of record will verify that the supporting structure can withstand the potential loads imparted by the fall protection system.

E. Delegated Design Submittals: For Horizontal Lifeline Fall Protection Systems, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.05 INFORMATIONAL SUBMITTALS:

A. Proof of insurance, per contract requirements, for the design, installation, and certification of fall protection systems.

B. Test and Evaluation Reports:
   1. Product Test Reports: For each Horizontal Lifeline Fall Protection Systems, for tests performed by manufacturer and witnessed by a qualified testing agency.
   2. Research Reports: For Horizontal Lifeline Fall Protection Systems from an agency acceptable to authorities having jurisdiction showing compliance with.

C. Qualification Statements: For manufacturer, fabricator, and Installer.

D. Delegated design engineer qualifications.

1.06 CLOSEOUT SUBMITTALS:

A. Operation and Maintenance Data: For Horizontal Lifeline Fall Protection Systems.
   1. Maintenance Procedures: Including parts list and maintenance requirements for all equipment.

2. Operation Procedures: Indicating proper use of equipment for safe operation of the systems.
3. Test Certificate: Indicating completion of proof load testing on installed systems.
4. Manufacturer's Instructions: Instructions for use for the use of the supplied fall protection system and user equipment.

B. As-Built Drawings: A copy of as-built drawings and system specifications, with each page stamped by the designing engineer, shall also be included in the systems manual.

1.07 QUALITY ASSURANCE:

A. Qualifications:
1. Manufacturers: Company specializing in the design, production and installation and certification of the fall protection system.
2. Installers: Entity that employs installers and supervisors who are trained and approved by manufacturer.
3. Delegated Design Engineer: A professional engineer who is legally qualified to practice in the state where Project is located and who is experienced in providing engineering services of the type indicated.

PART 2 - PRODUCTS

2.01 MANUFACTURERS:

A. Horizontal Lifeline Fall Protection Systems.
1. Basis-of-Design Product: Subject to compliance with requirements, provide 3M; DBI-Sala or comparable product.

2.02 SOURCE LIMITATIONS:

A. Obtain Horizontal Lifeline Fall Protection Systems from a single source from single manufacturer.

2.03 PERFORMANCE REQUIREMENTS:

A. Delegated Design: Engage a qualified professional engineer, as defined in Section 01400 "Quality Control," to design Horizontal Lifeline Fall Protection Systems.

2.04 HORIZONTAL LIFELINE FALL PROTECTION SYSTEM DESIGN:

A. The Fall Arrest Systems shall be designed to fully protect the user at all times while in the area of potential fall hazard.
B. The Fall Arrest Systems shall be designed for 2 simultaneous users.
C. Deceleration Device: Provide 4 appropriate length lanyards that meet or exceed applicable standards of ANSI Z 359.1 and OSHA 1926.104.
D. Harnesses: Provide 4 full body harnesses with single back D-ring that meet or exceed applicable standards of ANSI Z 359.1 and OSHA 1926.104.

2.05 SYSTEM DESCRIPTION:

A. System shall not have internal components that cannot be visually inspected.
B. Horizontal Lifeline Cable: Stainless Steel AISI 316L 8mm diameter 7x7 or 1x19 wire rope with a minimum breaking strength >37kN.
C. Anchorage fabrications: Carbon steel construction and designed to withstand the maximum fall arrest forces with a minimum safety factor of two. Steel shall be structural grade with material test certificates for full material traceability. The rooftop anchor posts shall not have internal components that cannot be visually inspected

D. Swaging: The cable shall be swaged in-line with the anchor point. Each swage is to be proof tested according to the manufacturer's requirements. Cable clamps shall not be utilized for termination of the engineered horizontal lifeline system.
E. Shock Absorber: When the engineering design dictates the use of load limiting in-line shock absorbers, the shock absorber shall visually display deployment in the event a fall has occurred on the system. In-line shock absorbers are utilized in systems where the loads may exceed the structural ability of the support structure. Shock Absorbers shall not have internal components that cannot be visually inspected.
F. Cable Trolley: Stainless Steel. The cable trolley shall allow for pass-through of intermediate support points without disconnecting from the system.
G. Tension Indicator: The system shall include a tension indicator that will allow the user to physically inspect that the correct inline cable tension is achieved.
H. Fasteners: The Fall Arrest Systems shall be attached to the supporting structure with appropriate fasteners. The fasteners shall be designed to support a load on the system of 2 times the maximum design load without failure.
I. Cable system components shall be of stainless-steel construction unless otherwise indicated. Exposed work shall be true to line and level with accurate angles, surfaces and with straight square edges.
J. All primary cable system components shall be of same material unless otherwise indicated. Exposed work shall be true to line and level with accurate angles, surfaces and with straight square edges. Coordinate anchorage system with supporting structure. Fabricate anchoring devices as recommended by the manufacturer to provide adequate support for intended use.
K. Fabricate Joints in a manner to discourage water accumulation. Provide weep holes to drain any water, which could accumulate in the exposed joints.

2.06 MATERIALS:

A. All materials shall be new and completed Fall Protection System shall be the product of one manufacturer or the manufacture's authorized installer regularly engaged in the design and production of such equipment.
B. Primary cable assembly components shall be manufactured from stainless steel. Fabricated supports required for additional support shall be carbon steel with a corrosion resistant finish.
C. Material Control: All critical cable assembly components shall contain batch numbers or serial numbers, permanently stamped or engraved, identifying the specific job and system they are used for.

PART 3 - EXECUTION

3.01 EXAMINATION:

A. Examine areas and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of fall protection equipment.
B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 DELIVERY STORAGE AND HANDLING:

A. Store and stage materials in protective packaging at location specified. Prevent soiling, physical damage or wetting.

3.03 INSTALLATION OF HORIZONTAL LIFELINE FALL PROTECTION SYSTEMS:

A. Fall Protection Systems shall be installed by Fall Protection Contractor's authorized and trained personnel that have been certified by the manufacturer. Install anchorage and fasteners in accordance with the approved design drawings. If the installation of the anchor posts is not

performed by the fall protection contractor, then the posts installation shall be inspected, load tested and verified by the fall protection contractor.

B. Install engineered horizontal lifeline systems according to the approved design drawings and manufacturer's instructions. Do not load or stress the Fall Protection Systems until all materials and fasteners are properly installed and ready for service. Only an installation technician that is fully trained by manufacturer in the installation of the specific system shall perform the installation of the engineered lifeline system.

3.04 CLEANING:

A. Remove all loose materials, crating and packing materials from premises.

3.05 MAINTENANCE SERVICE:

A. Beginning at Substantial Completion, verify maintenance service includes 12 months' full maintenance by manufacturer's authorized service representative. Include one annual recertification per manufacturers' recommendation.

3.06 DEMONSTRATION:

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain Horizontal Lifeline Fall Protection Systems.

B. Demonstration: Demonstrate operation of system to Owner's personnel.
   1. Briefly describe function, operation, and inspection of each component.

C. Training: Train Owner's personnel on operation and inspection of system.
   1. Use operation and maintenance manual as training reference, supplemented with additional training materials as required.
   2. Provide a minimum of one hour of training.
   3. Location: Project site.

D. Training to take place at the completion of the installation.

E. Recertification: Coordinate annual recertification program per manufacturers' recommendation.

END OF SECTION 11 24 29.17

SECTION 11 30 00 - APPLIANCES

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Cooking appliances.
   2. Refrigeration appliances.

1.02 ALLOWANCES

A. Furnish residential appliances as part of residential appliance allowance.

1.03 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.04 ACTION SUBMITTALS

A. Product Data:
   1. Cooking appliances.
   2. Refrigeration appliances.
   3. Cleaning appliances.
B. Product Data Submittals: For each product.
   1. Include installation details, material descriptions, dimensions of individual components, and finishes for each appliance.
   2. Include rated capacities, operating characteristics, electrical characteristics, and furnished accessories.
C. Product Schedule: For appliances.

1.05 INFORMATIONAL SUBMITTALS

A. Qualification Data: For manufacturer.
B. Product Certificates: For each type of appliance.
C. Field quality-control reports.
D. Sample Warranties: For manufacturers' special warranties.

1.06 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For each residential appliance to include in operation and maintenance manuals.

1.07 QUALITY ASSURANCE

A. Manufacturer Qualifications: Maintains a service center capable of providing training, parts, and emergency maintenance repairs.

1.08 WARRANTY

A. Special Warranties: Manufacturer agrees to repair or replace residential appliances or components that fail in materials or workmanship within specified warranty period except as qualified below:
   1. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.01 SOURCE LIMITATIONS

A. Obtain residential appliances from single source.

2.02 PERFORMANCE REQUIREMENTS

A. Electrical Appliances: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. Accessibility: Where residential appliances are indicated to comply with accessibility requirements, comply with applicable provisions in the DOJ's 2010 ADA Standards for Accessible Design and ICC A117.1.

2.03 COOKING APPLIANCES

A. Microwave Oven:

1. Basis-of-Design Product: Subject to compliance with requirements, provide KitchenAid; Whirlpool Corporation; KMCC5015GSS or a comparable product by one of the following:
   a. GE Appliances; Haier Group.
   b. Maytag; Whirlpool Corporation.
2. Mounting: Counter-top.
3. Type: Convection.
4. Dimensions:
   a. Width: 24 inches (610 mm).
   b. Depth: 19-1/2 inches (495 mm).
   c. Height: 14 inches (356 mm).
5. Capacity: 1.5 cu. ft. (0.04 cu. m).
6. Oven Door: Door with observation window and pull handle.
7. Microwave Power Rating: 1000 W.
   a. Convection Element Power Rating: 1450 W.
8. Electric Power Supply: 120 V, 60 Hz, 1 phase, 15 A.
9. Controls: Digital panel controls and timer display.
10. Other Features: Turntable.
11. Material: Stainless steel.

2.04 REFRIGERATION APPLIANCES

A. Refrigerator/Freezer: Two-door refrigerator/freezer with freezer drawer on bottom and complying with AHAM HRF-1.

1. Basis-of-Design Product: Subject to compliance with requirements, provide KitchenAid; Whirlpool Corporation; KRFF507HPS or a comparable product by one of the following:
   a. GE Appliances; Haier Group.
   b. Maytag; Whirlpool Corporation.
2. Type: Freestanding.
3. Dimensions:
   a. Width: 36 inches (914 mm).
   b. Depth: 33-1/4 inches (845 mm).
   c. Height: 70 inches (1778 mm).
4. Storage Capacity:
   a. Refrigeration Compartment Volume: 15.6 cu. ft. (0.44 cu. m).
   b. Freezer Volume: 5.13 cu. ft. (0.15 cu. m).
   c. Shelf Area: Three adjustable glass shelves, 26 sq. ft. (2.42 sq. m).
5. General Features:

a. Door Configuration: Overlay.
b. Dispenser in door for ice and cold water with dispenser lock.
c. Built-in water-filtration system.
d. Separate touch-pad temperature controls for each compartment.

6. Refrigerator Features:
   a. Interior light in refrigeration compartment.
   b. Door Storage: Modular compartments 1 gal. (3.8 L) milk-container storage.
   c. Temperature-controlled meat/deli bin.
7. Freezer Features: Two freezer compartment(s) configured as pull-out drawer(s).
   a. Automatic defrost.
   b. Interior light in freezer compartment.
   c. Automatic icemaker and storage bin.
8. Energy Star: Provide appliances that qualify for the EPA/DOE Energy Star product-labeling program.
9. Front Panel(s): Stainless steel.
10. Appliance Color/Finish: Stainless steel.

B. Icemaker:
1. Basis-of-Design Product: Subject to compliance with requirements, provide Hoshizaki America, Inc. AM-50BAJ or as approved by architect.
2. Description: Freestanding units.
   a. Production: Individual crescent cube.
   b. Capacity: 55 lb (25 kg) per 24-hour period.
   c. Storage Capacity: 22 lb (10 kg).
   d. Accessories:
      1) Water filter.

2.05 GENERAL FINISH REQUIREMENTS

A. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, power connections, and other conditions affecting installation and performance of residential appliances.

B. Examine roughing-in for piping systems to verify actual locations of piping connections before appliance installation.

C. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. Install appliances according to manufacturer's written instructions.

B. Built-in Equipment: Securely anchor units to supporting cabinets or countertops with concealed fasteners. Verify that clearances are adequate for proper functioning and that rough openings are completely concealed.

C. Freestanding Equipment: Place units in final locations after finishes have been completed in each area. Verify that clearances are adequate to properly operate equipment.

3.03 FIELD QUALITY CONTROL

A. Perform the following tests and inspections:
   1. Perform visual, mechanical, and electrical inspection and testing for each appliance according to manufacturers' written recommendations. Certify compliance with each manufacturer's appliance-performance parameters.
   2. Leak Test: After installation, test for leaks. Repair leaks and retest until no leaks exist.
   3. Operational Test: After installation, start units to confirm proper operation.
   4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and components.

B. An appliance will be considered defective if it does not pass tests and inspections.

C. Prepare test and inspection reports.

END OF SECTION 11 30 00

SECTION 11 53 23 - LABORATORY REFRIGERATORS & FREEZERS

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Laboratory Refrigeration appliances.
B. Related Requirements:
   1. Division 27 “Communications” for connection of Refrigeration to monitoring systems.

1.02 ACTION SUBMITTALS

A. Product Data: For each type of product.
   1. Include installation details, material descriptions, dimensions of individual components, and finishes for each appliance.
   2. Include rated capacities, operating characteristics, electrical characteristics, and furnished accessories.
B. Product Schedule: For appliances. Use same designations indicated on Drawings.

1.03 INFORMATIONAL SUBMITTALS

A. Qualification Data: For manufacturer.
B. Product Certificates: For each type of appliance.
C. Field quality-control reports.
D. Sample Warranties: For manufacturers' special warranties.

1.04 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For each residential appliance to include in operation and maintenance manuals.

1.05 QUALITY ASSURANCE

A. Manufacturer Qualifications: Maintains a service center capable of providing training, parts, and emergency maintenance repairs.

1.06 WARRANTY

A. Refrigerator/Freezer, freezer and Refrigerator, Sealed System: Full warranty, including parts and labor, for on-site service on the product.
   1. Warranty Period for Sealed Refrigeration System: Five years from date of Substantial Completion.
   2. Warranty Period for Other Components: Two years from date of Substantial Completion.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Source Limitations: Obtain laboratory refrigeration from single source and each type of from laboratory refrigeration single manufacturer.
B. Basis-of-Design: Subject to compliance provide product designated on drawings by Thermo Scientific or comparable product.

2.02 PERFORMANCE REQUIREMENTS

A. Electrical Appliances: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.03 REFRIGERATOR

A. Refrigerator: Two-door refrigerator/freezer with freezer on top and complying with NEMA5-15R/5-15P.
   1. Type: Freestanding.
   2. Dimensions:
      a. Width: As indicated on Drawings.
      b. Depth: As indicated on Drawings.
      c. Height: As indicated on Drawings.
   3. General Features:
      a. Door Configuration: Overlay.
      b. Dual refrigeration systems.
      c. Touch-pad temperature controls.
      d. 2” Caster (2 Locking)
      e. 7 Day Graphic Chart Recorder.
      f. External monitor into owner’s system
      g. Interior LED lights
   4. Front Panel(s): Manufacturer's standard.

2.04 GENERAL FINISH REQUIREMENTS

A. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, power connections, and other conditions affecting installation and performance of Laboratory Refrigeration.

B. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. Install appliances according to manufacturer's written instructions.

B. Freestanding Equipment: Place units in final locations after finishes have been completed in each area. Verify that clearances are adequate to properly operate equipment.

C. Connect monitoring to Owner system and program notifications to the proper personnel.

3.03 FIELD QUALITY CONTROL

A. Perform the following tests and inspections with the assistance of a factory-authorized service representative:
   1. Perform visual, mechanical, and electrical inspection and testing for each appliance according to manufacturers' written recommendations. Certify compliance with each manufacturer's appliance-performance parameters.

2. Operational Test: After installation, start units to confirm proper operation.
3. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and components.

B. An appliance will be considered defective if it does not pass tests and inspections.
C. Prepare test and inspection reports.

3.04 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain residential appliances.

END OF SECTION 11 53 23

SECTION 12 24 13 - ROLLER WINDOW SHADES

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Manually operated, single-roller shades.

1.02 ACTION SUBMITTALS

A. Product Data: For each type of product.
   1. Include construction details, material descriptions, dimensions of individual components and profiles, features, finishes, and operating instructions for roller shades.
B. Shop Drawings: Show fabrication and installation details for roller shades, including shadeband materials, their orientation to rollers, and their seam and batten locations.
C. Samples: For each exposed product and for each color and texture specified, 10 inches (250 mm) long.

1.03 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer.
B. Product Certificates: For each type of shadeband material.
C. Product Test Reports: For each type of shadeband material, for tests performed by manufacturer and witnessed by a qualified testing agency.

1.04 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For roller shades to include in maintenance manuals.

1.05 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
   1. Roller Shades: Full-size units equal to 5 percent of quantity installed for each size, color, and shadeband material indicated, but no fewer than two units.

1.06 QUALITY ASSURANCE

A. Installer Qualifications: Fabricator of products.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Deliver roller shades in factory packages, marked with manufacturer, product name, and location of installation using same designations indicated on Drawings.

1.08 FIELD CONDITIONS

A. Environmental Limitations: Do not install roller shades until construction and finish work in spaces, including painting, is complete and dry and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.
B. Field Measurements: Where roller shades are indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication and indicate measurements on Shop Drawings. Allow clearances for operating hardware of operable glazed units through entire operating range. Notify Architect of installation conditions that vary from Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.

PART 2 - PRODUCTS

2.01 SOURCE LIMITATIONS

A. Obtain roller shades from single source from single manufacturer.

2.02 MANUALLY OPERATED, SINGLE-ROLLER SHADES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Hunter Douglas, Inc.
   2. MechoShade Systems, LLC.
   3. Windowtex.

B. Chain-and-Clutch Operating Mechanisms: With continuous-loop bead chain and clutch that stops shade movement when bead chain is released; permanently adjusted and lubricated.
   1. Bead Chains: Stainless steel.
      a. Loop Length: Full length of roller shade.
      b. Limit Stops: Provide upper and lower ball stops.
      c. Chain-Retainer Type: Chain tensioner, jamb mounted.
   2. Spring Lift-Assist Mechanisms: Manufacturer's standard for balancing roller shade weight and for lifting heavy roller shades.
      a. Provide for shadebands that weigh more than 10 lb (4.5 kg) or for shades as recommended by manufacturer, whichever criterion is more stringent.

C. Rollers: Corrosion-resistant steel or extruded-aluminum tubes of diameters and wall thicknesses required to accommodate operating mechanisms and weights and widths of shadebands indicated without deflection. Provide with permanently lubricated drive-end assemblies and idle-end assemblies designed to facilitate removal of shadebands for service.
   1. Roller Drive-End Location: Right side of interior face of shade.
   2. Direction of Shadeband Roll: Regular, from back (exterior face) of roller.
   3. Shadeband-to-Roller Attachment: Manufacturer's standard method.

D. Mounting Hardware: Brackets or endcaps, corrosion resistant and compatible with roller assembly, operating mechanism, installation accessories, and mounting location and conditions indicated.

E. Shadebands:
   1. Shadeband Material: Light-filtering fabric.
   2. Shadeband Bottom (Hem) Bar: Steel or extruded aluminum.
      a. Type: Enclosed in sealed pocket of shadeband material.
      b. Color and Finish: As selected by Architect from manufacturer's full range.

F. Installation Accessories:
   1. Front Fascia: Aluminum extrusion that conceals front and underside of roller and operating mechanism and attaches to roller endcaps without exposed fasteners.
      a. Shape: L-shaped.
      b. Height: Manufacturer's standard height required to conceal roller and shadeband assembly when shade is fully open, but not less than 3 inches (76 mm).
   2. Exposed Headbox: Rectangular, extruded-aluminum enclosure including front fascia, top and back covers, endcaps, and removable bottom closure.
      a. Height: Manufacturer's standard height required to enclose roller and shadeband assembly when shade is fully open, but not less than 3 inches (76 mm).
   3. Installation Accessories Color and Finish: As selected from manufacturer's full range.

2.03 SHADEBAND MATERIALS

A. Shadeband Material Flame-Resistance Rating: Comply with NFPA 701. Testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

B. Light-Filtering Fabric: Woven fabric, stain and fade resistant.
   1. Source: Roller shade manufacturer.
   2. Type: Woven polyester and PVC-coated polyester.
   3. Weave: Basketweave.
   4. Thickness: 0.036 inches (0.9144mm).
   5. Weight: 20 oz./sq. yd. (567 g/sq. m).
   6. Roll Width: 126 inches (3200 mm).
   7. Orientation on Shadeband: Up the bolt.
   8. Openness Factor: 3 percent.
   9. Color: As selected by Architect from manufacturer's full range.

2.04 ROLLER SHADE FABRICATION

A. Product Safety Standard: Fabricate roller shades to comply with WCMA A 100.1, including requirements for flexible, chain-loop devices; lead content of components; and warning labels.

B. Unit Sizes: Fabricate units in sizes to fill window and other openings as follows, measured at 74 deg F (23 deg C):
   1. Between (Inside) Jamb Installation: Width equal to jamb-to-jamb dimension of opening in which shade is installed less 1/4 inch (6 mm) per side or 1/2-inch (13-mm) total, plus or minus 1/8 inch (3.1 mm). Length equal to head-to-sill or -floor dimension of opening in which shade is installed less 1/4 inch (6 mm), plus or minus 1/8 inch (3.1 mm).

C. Shadeband Fabrication: Fabricate shadebands without battens or seams to extent possible, except as follows:
   1. Vertical Shades: Where width-to-length ratio of shadeband is equal to or greater than 1:4, provide battens and seams at uniform spacings along shadeband length to ensure shadeband tracking and alignment through its full range of movement without distortion of the material.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, operational clearances,and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 ROLLER SHADE INSTALLATION

A. Install roller shades level, plumb, and aligned with adjacent units according to manufacturer's written instructions.

B. Roller Shade Locations: At exterior windows.

3.03 ADJUSTING

A. Adjust and balance roller shades to operate smoothly, easily, safely, and free from binding or malfunction throughout entire operational range.

3.04 CLEANING AND PROTECTION

A. Clean roller shade surfaces, after installation, according to manufacturer's written instructions.

B. Provide final protection and maintain conditions, in a manner acceptable to manufacturer and Installer, that ensure that roller shades are without damage or deterioration at time of Substantial Completion.

C. Replace damaged roller shades that cannot be repaired, in a manner approved by Architect, before time of Substantial Completion.

END OF SECTION 12 24 13

SECTION 12 35 53.13 - METAL LABORATORY CASEWORK

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Metal laboratory casework.
   2. Auxiliary cabinets.
   3. Countertops.
   4. Laboratory casework systems.
   5. Laboratory accessories.
   6. Water and laboratory gas service fittings.

B. Related Requirements:
   1. Section 09 65 13 "Resilient Base and Accessories" for resilient base applied to laboratory casework.

1.02 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.03 COORDINATION

A. Coordinate layout and installation of framing and reinforcements for support of laboratory casework.

B. Coordinate installation of laboratory casework with installation of laboratory equipment.

1.04 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings: For laboratory casework.
   1. Include plans, elevations, sections, and attachments to other work including blocking and reinforcements required for installation.
   2. Indicate types and sizes of casework.
   3. Indicate manufacturer's catalog numbers for casework.
   4. Show fabrication details, including types and locations of hardware.
   5. Indicate locations and types of service fittings.
   6. Include details of utility spaces showing supports for conduits and piping.
   7. Include details of support framing system.
   8. Include details of exposed conduits, if required, for service fittings.
   9. Indicate locations of and clearances from adjacent walls, doors, windows, other building components, and laboratory equipment.
   10. Include coordinated dimensions for laboratory equipment specified in other Sections.

C. Samples: For casework finishes and materials requiring color selection.

1.05 INFORMATIONAL SUBMITTALS

A. Qualification Data: For manufacturer.

B. Product Test Reports:
   1. Casework: Based on evaluation of comprehensive tests performed by a qualified testing agency, indicating compliance of laboratory casework with requirements of specified product standard.
   2. Countertop Surface Material: Based on evaluation of comprehensive tests performed by a qualified testing agency, indicating compliance of laboratory countertop surface material with requirements specified for chemical and physical resistance.

1.06 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish complete touchup kit for each type and color of casework finish provided. Include fillers, primers, paints, and other materials necessary to perform permanent repairs to damaged laboratory casework finish.

B. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Cabinet Mounting Clips and Related Hardware: Quantity equal to 5 percent of amount installed, but no fewer than 20 of each type.

1.07 QUALITY ASSURANCE

A. Manufacturer Qualifications: A qualified manufacturer that produces casework of types indicated for this Project that has been tested for compliance with SEFA 8 M.

1.08 DELIVERY, STORAGE, AND HANDLING

A. Protect finished surfaces during handling and installation with protective covering of polyethylene film or other suitable material.

1.09 FIELD CONDITIONS

A. Environmental Limitations: Do not deliver or install laboratory casework until building is enclosed, utility roughing-in and wet-work are complete, and HVAC system is operating and maintaining temperature and relative humidity at levels planned for building occupants during the remainder of the construction period.

B. Field Measurements: Where laboratory casework is indicated to fit to existing construction, verify dimensions of existing construction by field measurements before fabrication and indicate measurements on Shop Drawings. Provide fillers and scribes to allow for trimming and fitting.

C. Locate concealed framing, blocking, and reinforcements that support casework by field measurements before enclosing them, and indicate measurements on Shop Drawings.

PART 2 - PRODUCTS

2.01 SOURCE LIMITATIONS

A. Obtain laboratory casework from single source from single manufacturer unless otherwise indicated.

B. Product Designations: Drawings indicate sizes and configurations of laboratory casework by referencing designated manufacturer's catalog numbers. Other manufacturers' laboratory casework of similar sizes and similar door and drawer configurations and complying with Specifications may be considered.

2.02 PERFORMANCE REQUIREMENTS

A. System Structural Performance: Laboratory casework and support framing system shall withstand the effects of the following gravity loads and stresses without permanent deformation, excessive deflection, or binding of drawers and doors:

1. Support Framing System: 600 lb/ft. (900 kg/m).
2. Suspended Base Cabinets (Internal Load): 160 lb/ft. (240 kg/m).
3. Work Surfaces (Including Tops of Suspended Base Cabinets): 160 lb/ft. (240 kg/m).
4. Wall Cabinets (Upper Cabinets): 160 lb/ft. (240 kg/m).
5. Shelves: 40 lb/sq. ft. (200 kg/sq. m).

2.03 CASEWORK, GENERAL

A. Casework Product Standard: Comply with SEFA 8 M, "Laboratory Grade Metal Casework."

B. Flammable Liquid Storage: Where cabinets are indicated for solvent or flammable liquid storage, provide units that are listed and labeled as complying with requirements in NFPA 30 by a testing and inspecting agency acceptable to authorities having jurisdiction.

2.04 METAL LABORATORY CASEWORK

A. Steel Sheet: Cold-rolled, commercial steel (CS) sheet, complying with ASTM A1008/A1008M; matte finish; suitable for exposed applications.

B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Hamilton Laboratory Solutions, LLC.
   2. Kewaunee Scientific Corporation.
   3. Mott Manufacturing Ltd.

C. Nominal Metal Thickness:
   1. Sides, Ends, Fixed Backs, Bottoms, Tops, Soffits, and Items Not Otherwise Indicated: 0.048 inch (1.21 mm). Except for flammable liquid storage cabinets, bottoms may be 0.036 inch (0.91 mm) if reinforced.
   2. Back Panels, Doors, Drawer Fronts and Bodies, and Shelves: 0.036 inch (0.91 mm) except 0.048 inch (1.21 mm) for back panels and doors of flammable liquid storage cabinets and for unreinforced shelves more than 36 inches (900 mm) long.
   3. Intermediate Horizontal Rails, Table Aprons and Cross Rails, Center Posts, and Top Gussets: 0.060 inch (1.52 mm).
   4. Drawer Runners, Sink Supports, and Hinge Reinforcements: 0.075 inch (1.90 mm).
   5. Leveling and Corner Gussets: 0.105 inch (2.66 mm).

2.05 AUXILIARY CABINETS

A. Acid Storage-Cabinet Lining: 1/4-inch- (6-mm-) thick, polyethylene, polypropylene, epoxy, or phenolic-composite lining material.

B. Tempered Glass for Glazed Doors: Clear tempered glass complying with ASTM C1048, Kind FT, Condition A, Type I, Class 1, Quality-Q3; not less than 5.0 mm thick.

2.06 CABINET HARDWARE

A. General: Provide laboratory casework manufacturer's standard, commercial-quality, heavy-duty hardware complying with requirements indicated for each type.

B. Hinges: Stainless-steel, five-knuckle hinges complying with BHMA A156.9, Grade 1, with antifriction bearings and rounded tips. Provide two for doors 48 inches (1200 mm) high or less and three for doors more than 48 inches (1200 mm) high.

C. Recessed Pulls: Aluminum. Provide two pulls for drawers more than 24 inches (600 mm) wide.

D. Door Catches: Positive door latching mechanism is self-closing and prevents rebounding. Provide two catches on doors more than 48 inches (1200 mm) high.

E. Drawer Slides: ANSI/BHMA A156.9.
   1. Heavy Duty (Grade 1HD-100): Side mount.
      a. Type: Full extension.
      b. Material: Zinc-plated ball bearing slides.
      c. Motion Feature: Self-closing mechanism.
   2. General-purpose drawers; provide 100 lb (45 kg) load capacity.
   3. File drawers; provide 150 lb (45 kg) load capacity.

F. Label Holders: Stainless steel, aluminum, or chrome plated; sized to receive standard label cards approximately 1 by 2 inches (25 by 50 mm), attached with screws or rivets. Provide on drawers and cabinet doors.

G. Sliding-Door Hardware Sets: Laboratory casework manufacturer's standard, to suit type and size of sliding-door units.

2.07 COUNTERTOPS

A. General: Provide laboratory countertops with integral sink as indicated on Drawings.

B. Epoxy: Factory-molded, modified epoxy-resin formulation with smooth, nonspecular finish.

1. Manufacturers: Subject to compliance with requirements, provide products by the following:
   a. Durcon; a Wilsonart Company.
2. Physical Properties:
   a. Flexural Strength: Not less than 10,000 psi (70 MPa).
   b. Modulus of Elasticity: Not less than 2,000,000 psi (1400 MPa).
   c. Hardness (Rockwell M): Not less than 100.
   d. Water Absorption (24 Hours): Not more than 0.02 percent.
   e. Heat Distortion Point: Not less than 260 deg F (127 deg C).
3. Chemical Resistance: Epoxy-resin material has the following ratings when tested with indicated reagents according to NEMA LD 3, Test Procedure 3.4.5:
   a. No Effect: Acetic acid (98 percent), acetone, ammonium hydroxide (28 percent), benzene, carbon tetrachloride, dimethyl formamide, ethyl acetate, ethyl alcohol, ethyl ether, methyl alcohol, nitric acid (70 percent), phenol, sulfuric acid (60 percent), and toluene.
   b. Slight Effect: Chromic acid (60 percent) and sodium hydroxide (50 percent).
4. Color: Black.

C. Stainless Steel Sheet: ASTM A240/A240M, Type 304.

2.08 METAL CABINET FABRICATION

A. General: Assemble and finish units at point of manufacture. Use precision dies for interchangeability of like-size drawers, doors, and similar parts. Perform assembly on precision jigs to provide units that are square. Reinforce units with angles, gussets, and channels. Except where otherwise specified, integrally frame and weld cabinet bodies to form dirt- and vermin-resistant enclosures. Where applicable, reinforce base cabinets for sink support. Maintain uniform clearance around door and drawer fronts of 1/16 to 3/32 inch (1.5 to 2.4 mm).

B. Flush Doors: Outer and inner pans that nest into box formation, with full-height channel reinforcements at center of door. Fill doors with noncombustible, sound-deadening material.

C. Glazed Doors: Hollow-metal stiles and rails of similar construction as flush doors, with glass held in resilient channels or gasket material.

D. Hinged Doors: Mortise for hinges and reinforce with angles welded inside inner pans at hinge edge.

E. Drawers: Fronts made from outer and inner pans that nest into box formation, without raw metal edges at top. Sides, back, and bottom fabricated in one piece with rolled or formed top of sides for stiffening and comfortable grasp for drawer removal.

F. Adjustable Shelves: Front, back, and ends formed down, with edges returned horizontally at front and back to form reinforcing channels.

G. Toe Space: Fully enclosed, 4 inches (100 mm) high by 3 inches (75 mm) deep, with no open gaps or pockets.

H. Tables: Welded tubing legs, not less than 2 inches (50 mm) square with channel stretchers as needed to comply with product standard. Weld or bolt stretchers to legs and cross-stretchers, and bolt legs to table aprons. Provide leveling device welded to bottom of each leg.

1. Leg Shoes: Black vinyl or rubber, open-bottom, slip-on type.

I. Utilities: Provide space, cutouts, and holes for pipes, conduits, and fittings in cabinet bodies to accommodate utility services and their support-strut assemblies.

1. Provide base cabinets with removable backs for access to utility space.

J. Utility-Space Framing: Steel framing units consisting of two steel slotted channels complying with MFMA-4, not less than 1-5/8 inches (41 mm) square by 0.105-inch (2.66-mm) nominal

thickness, that are connected at top and bottom by U-shaped brackets made from 1-1/4-by-1/4-inch (32-by-6-mm) steel flat bars. Framing units may be made by welding channel material into rectangular frames instead of using U-shaped brackets.

K. Filler and Closure Panels: Provide where indicated and as needed to close spaces between casework and walls, ceilings, and equipment. Fabricate from same material and with same finish as casework and with hemmed or flanged edges unless otherwise indicated.
   1. Provide knee-space panels (modesty panels) at spaces between base cabinets, where cabinets are not installed against a wall or where space is not otherwise closed. Fabricate from back-to-back panels or of hollow construction to eliminate exposed hemmed or flanged edges.
   2. Provide utility-space closure panels at spaces between base cabinets where utility space would otherwise be exposed, including spaces below countertops.
   3. Provide closure panels at ends of utility spaces where utility space would otherwise be exposed.

L. Undercabinet Task-Light Luminaires:
   1. Lamp Type: [LED] with switch and heavy-duty cord and plug.
   2. Finish: Baked enamel.
   3. Diffusers: Virgin acrylic with high resistance to yellowing and other changes from aging, heat, and UV radiation.

M. Countertops: Provide in modular lengths indicated, without seams.

2.09 METAL CABINET FINISH

A. General: Prepare, treat, and finish welded assemblies after assembling. Prepare, treat, and finish components that are to be assembled with mechanical fasteners before assembling. Prepare, treat, and finish concealed surfaces same as exposed surfaces.

B. Preparation: After assembly, clean surfaces of mill scale, rust, oil, and other contaminants. After cleaning, apply a conversion coating suited to organic coating to be applied over it.

C. Chemical-Resistant Finish: Immediately after cleaning and pretreating, apply laboratory casework manufacturer's standard two-coat, chemical-resistant, baked-on finish consisting of prime coat and thermosetting topcoat. Comply with coating manufacturer's written instructions for applying and baking to achieve a minimum dry film thickness of 2 mils (0.05 mm).
   1. Chemical and Physical Resistance of Finish System: Finish complies with acceptance levels of cabinet surface finish tests in SEFA 8 M. Acceptance level for chemical spot test shall be no more than for Level 3 conditions.
   2. Colors for Metal Laboratory Casework Finish: As selected by Architect from manufacturer's full range.

2.10 COUNTERTOP FABRICATION

A. Countertops, General: Provide units with smooth surfaces in uniform plane, free of defects. Make exposed edges and corners straight and uniformly beveled. Provide front and end overhang of 1 inch (25 mm).

B. Sinks, General: Provide sizes indicated or laboratory casework manufacturer's closest standard size of equal or greater volume, as approved by Architect.
   1. Outlets: Provide with strainers and tailpieces, NPS 1-1/2 (DN 40), unless otherwise indicated.

C. Epoxy:
   1. Countertops: Fabricate with factory cutouts for sinks, holes for service fittings and accessories, and butt joints assembled with epoxy adhesive and concealed metal splines.
      a. Flat Configuration: 1 inch (25 mm) thick with continuous drip groove on underside 1/2 inch (13 mm) from overhang edge.
         1) Edges and Corners: Rounded.

2) Backsplash: Applied.

b. Marine-Edge Configuration: 1-inch (25-mm) minimum thickness, with integral or applied raised edge.
1) Edges and Corners: Rounded.
2) Backsplash: Applied.

c. Construction: Epoxy composition not less than 1/4 inch (6 mm) thick, laminated to backing.

2. Sinks: Molded in one piece with smooth surfaces, coved corners, and bottom sloped to outlet; 1/2-inch (13-mm) minimum thickness.
a. Provide with polypropylene strainers and tailpieces.
b. Provide integral sinks in epoxy countertops, bonded to countertops with invisible joint line.
c. Provide sinks for underside installation with manufacturer's recommended adjustable support system for table- and cabinet-type installations.

2.11 LABORATORY ACCESSORIES

A. Reagent Shelves: Provide as indicated, fabricated from same material as adjacent countertop unless otherwise indicated.

B. Plastic or Resin Pegboards: Polypropylene, epoxy, or phenolic-composite pegboards with removable polypropylene pegs and stainless steel drip troughs with drain outlet.

2.12 WATER AND LABORATORY GAS SERVICE FITTINGS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Broen A/S.
2. Chicago Faucets; Geberit Group.
3. WaterSaver Faucet Co.

B. Service Fittings: Provide units that comply with SEFA 7, "Recommended Practices for Fixtures." Provide fittings complete with washers, locknuts, nipples, and other installation accessories. Include wall and deck flanges, escutcheons, handle extension rods, and similar items.

C. Materials: Fabricated from cast or forged red brass unless otherwise indicated.

D. Finish: Chromium plated.
1. Provide chemical-resistant powder coating in laboratory casework manufacturer's standard metallic brown, aluminum, white, or other color as approved by Architect.

E. Water Valves and Faucets: Provide units complying with ASME A112.18.1, with renewable seats, designed for working pressure up to 80 psig (550 kPa).
1. Vacuum Breakers: Provide ASSE 1035 vacuum breakers on water fittings with serrated outlets.
2. Aerators: Provide aerators on water fittings that do not have serrated outlets.
3. Self-Closing Valves: Provide self-closing valves where indicated.

F. Hand of Fittings: Furnish right-hand fittings unless fitting designation is followed by "L."

G. Handles: Provide three- or four-arm, forged-brass handles for valves unless otherwise indicated.
1. Provide lever-type handles for ground-key cocks. Lever handle aligns with outlet when valve is closed and is perpendicular to outlet when valve is fully open.
2. Provide lever-type handles for ball valves unless otherwise indicated. Lever handle aligns with outlet when valve is closed and is perpendicular to outlet when valve is fully open.

2.13 ELECTRICAL AND COMMUNICATION SERVICE FITTINGS

A. Service Fittings, General: Provide units complete with metal housings, receptacles, switches, pilot lights, data communication outlets, cover plates, accessories, and gaskets required for mounting on laboratory casework.

B. Electrical Wiring Devices: Comply with requirements in Section 26 27 26 "Wiring Devices" for receptacles, switches, pilot lights, cover plates, and accessories.

C. Twisted-Pair Copper Data Outlets: Comply with requirements in Section 27 15 13 "Communications Copper Horizontal Cabling."

D. Optical-Fiber Data Outlets: Comply with requirements Section 27 15 23 "Communications Optical Fiber Horizontal Cabling."

E. Cover Plates: Provide satin-finish, chrome-plated Type 304, stainless steel cover plates with formed, beveled edges.

F. Finishes for Service-Fitting Components: Provide housings or boxes for pedestal- and line-type fittings with manufacturer's standard baked-on, chemical-resistant enamel in color as selected by Architect from manufacturer's full range.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas, with Installer present, for compliance with requirements for installation tolerances, location of reinforcements, and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION OF CABINETS

A. Comply with installation requirements in SEFA 2. Install level, plumb, and true in line; shim as required using concealed shims. Where laboratory casework abuts other finished work, apply filler strips and scribe for accurate fit, with fasteners concealed where practical. Do not exceed the following tolerances:

1. Variation of Tops of Base Cabinets from Level: 1/16 inch in 10 feet (1.5 mm in 3 m).
2. Variation of Bottoms of Upper Cabinets from Level: 1/8 inch in 10 feet (3 mm in 3 m).
3. Variation of Faces of Casework from a True Plane: 1/8 inch in 10 feet (3 mm in 3 m).
4. Variation of Adjacent Surfaces from a True Plane (Lippage): 1/32 inch (0.8 mm).
5. Variation in Alignment of Adjacent Door and Drawer Edges: 1/16 inch (1.5 mm).

B. Utility-Space Framing: Secure to floor with two fasteners at each frame. Fasten to partition partitions and to base cabinets.

C. Base Cabinets: Fasten cabinets to utility-space framing, partitions, or reinforcements in partitions, with fasteners spaced not more than 16 inches (400 mm) o.c. Bolt adjacent cabinets together with joints flush, tight, and uniform.

1. Where base cabinets are installed away from walls, fasten to floor at toe space at not more than 24 inches (600 mm) o.c. and at sides of cabinets with not less than two fasteners per side.

D. Wall Cabinets: Fasten to hanging strips, masonry, partition framing, blocking, or reinforcements in partitions. Fasten each cabinet through back, near top, at not less than 16 inches (400 mm) o.c.

E. Install hardware uniformly and precisely.

F. Adjust operating hardware so doors and drawers align and operate smoothly without warp or bind and contact points meet accurately. Lubricate operating hardware as recommended by manufacturer.

3.3 INSTALLATION OF COUNTERTOPS

A. Comply with installation requirements in SEFA 2. Abut top and edge surfaces true in plane with flush hairline joints and with internal supports placed to prevent deflection. Locate joints where indicated on Shop Drawings.

B. Field Jointing: Where possible, make in same manner as shop-made joints, using dowels, splines, fasteners, adhesives, and sealants recommended by manufacturer. Shop prepare edges for field-made joints.

C. Fastening:

1. Secure countertops, except for epoxy countertops, to cabinets with Z-type fasteners or equivalent, using two or more fasteners at each cabinet front, end, and back.
2. Secure epoxy countertops to cabinets with epoxy cement, applied at each corner and along perimeter edges at not more than 48 inches (1200 mm) o.c.
3. Where necessary to penetrate countertops with fasteners, countersink heads approximately 1/8 inch (3 mm) and plug hole flush with material equal to countertop in chemical resistance, hardness, and appearance.

D. Provide holes and cutouts required for service fittings.

E. Provide scribe moldings for closures at junctures of countertop, curb, and splash with walls as recommended by manufacturer for materials involved. Match materials and finish to adjacent laboratory casework. Use chemical-resistant, permanently elastic sealing compound where recommended by manufacturer.

F. Dress joints smooth, remove surface scratches, and clean entire surface.

3.4 INSTALLATION OF SINKS

A. Comply with installation requirements in SEFA 2.

B. Underside Installation of Epoxy Sinks: Use laboratory casework manufacturer's recommended adjustable support system for table- and cabinet-type installations. Set top edge of sink unit in sink and countertop manufacturers' recommended chemical-resistant sealing compound or adhesive, and firmly secure to produce a tight and fully leakproof joint. Adjust sink and securely support to prevent movement. Remove excess sealant or adhesive while still wet and finish joint for neat appearance.

3.5 INSTALLATION OF LABORATORY ACCESSORIES

A. Install accessories in accordance with Shop Drawings, installation requirements in SEFA 2, and manufacturer's written instructions.

B. Securely fasten adjustable shelving supports, stainless steel shelves, and pegboards to partitions, or reinforcements in partitions.

C. Install shelf standards plumb and at heights to align shelf brackets for level shelves. Install shelving level and straight, closely fitted to other work where indicated.

D. Securely fasten pegboards to partitions, or reinforcements in partitions.

3.6 INSTALLATION OF SERVICE FITTINGS

A. Comply with requirements in other Sections for installing water and laboratory gas service fittings and electrical devices.

B. Install fittings in accordance with Shop Drawings, installation requirements in SEFA 2, and manufacturer's written instructions. Set bases and flanges of sink- and countertop-mounted fittings in sealant recommended by manufacturer of sink or countertop material. Securely anchor fittings to laboratory casework unless otherwise indicated.

3.7 CLEANING AND PROTECTING

A. Clean finished surfaces, touch up as required, and remove or refinish damaged or soiled areas to match original factory finish, as approved by Architect.

B. Protect countertop surfaces during construction with 6-mil (0.15-mm) plastic or other suitable water-resistant covering. Tape to underside of countertop at a minimum of 48 inches (1200 mm) o.c.

3.8 SERVICE-FITTING SCHEDULE

A. As indicated on drawings

END OF SECTION 12 35 53.13

SECTION 12 36 61.16 - SOLID SURFACING COUNTERTOPS

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Solid surface material countertops.
   2. Solid surface material backsplashes.
   3. Solid surface material end splashes.

1.02 ACTION SUBMITTALS

A. Product Data: For countertop materials.

B. Shop Drawings: For countertops. Show materials, finishes, edge and backsplash profiles, methods of joining, and cutouts for plumbing fixtures.
   1. Show locations and details of joints.
   2. Show direction of directional pattern, if any.

C. Samples for Initial Selection: For each type of material exposed to view.

D. Samples for Verification: For the following products:
   1. Countertop material, 6 inches square.
   2. One full-size solid surface material countertop, with front edge, 8 by 10 inches (200 by 250 mm), of construction and in configuration specified.

1.03 INFORMATIONAL SUBMITTALS

A. Qualification Data: For fabricator.

1.04 CLOSEOUT SUBMITTALS

A. Maintenance Data: For solid surface material countertops to include in maintenance manuals. Include Product Data for care products used or recommended by Installer and names, addresses, and telephone numbers of local sources for products.

1.05 QUALITY ASSURANCE

A. Fabricator Qualifications: Shop that employs skilled workers who custom-fabricate countertops similar to that required for this Project, and whose products have a record of successful in-service performance.

B. Installer Qualifications: Fabricator of countertops.

1.06 FIELD CONDITIONS

A. Field Measurements: Verify dimensions of countertops by field measurements after base cabinets are installed but before countertop fabrication is complete.

1.07 COORDINATION

A. Coordinate locations of utilities that will penetrate countertops or backsplashes.

PART 2 - PRODUCTS

2.01 SOLID SURFACE COUNTERTOP MATERIALS

A. Solid Surface Material: Homogeneous-filled plastic resin complying with ISFA 2-01.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Formica Corporation.

b. Wilsonart LLC.
2. Type: Provide Standard type unless Special Purpose type is indicated.
3. Integral Sink Bowls: Comply with CSA B45.5/IAPMO Z124.
4. Colors and Patterns: As selected by Architect from manufacturer's full range.

2.02 FABRICATION

A. Fabricate countertops according to solid surface material manufacturer's written instructions and to the AWI/AWMAC/WI's "Architectural Woodwork Standards."
1. Grade: Custom.

B. Configuration:
1. Front: Straight, slightly eased at top.
2. Backsplash: Straight, slightly eased at corner.
3. End Splash: Matching backsplash.

C. Countertops:
1. 3/4-inch- (19-mm-) thick, solid surface material with front edge built up with same material.

D. Backsplashes: 3/4-inch- (19-mm-) thick, solid surface material.

E. Windowsills: 3/4-inch- (19-mm-) thick, solid surface material with front edge built up with same material.

F. Fabricate tops with shop-applied edges and backsplashes unless otherwise indicated. Comply with solid surface material manufacturer's written instructions for adhesives, sealers, fabrication, and finishing.

G. Joints:
1. Fabricate countertops in sections for joining in field, with joints at locations as approved.
a. Joint Locations: Not within 18 inches (450 mm) of a sink or cooktop and not where a countertop section less than 36 inches (900 mm) long would result, unless unavoidable.

H. Cutouts and Holes:
1. Undercounter Plumbing Fixtures: Make cutouts for fixtures in shop using template or pattern furnished by fixture manufacturer. Form cutouts to smooth, even curves.
a. Provide vertical edges, slightly eased at juncture of cutout edges with top and bottom surfaces of countertop and projecting 3/16 inch (5 mm) into fixture opening.
2. Counter-Mounted Plumbing Fixtures: Prepare countertops in shop for field cutting openings for counter-mounted fixtures. Mark tops for cutouts and drill holes at corners of cutout locations. Make corner holes of largest radius practical.
3. Fittings: Drill countertops in shop for plumbing fittings, undercounter soap dispensers, and similar items.

2.03 INSTALLATION MATERIALS

A. Adhesive: Product recommended by solid surface material manufacturer.

B. Sealant for Countertops: Comply with applicable requirements in Section 07 92 00 "Joint Sealants."

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine substrates to receive solid surface material countertops and conditions under which countertops will be installed, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of countertops.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. Install countertops level to a tolerance of 1/8 inch in 8 feet (3 mm in 2.4 m), 1/4 inch (6 mm) maximum. Do not exceed 1/64-inch (0.4-mm) difference between planes of adjacent units.

B. Fasten countertops by screwing through corner blocks of base units into underside of countertop. Predrill holes for screws as recommended by manufacturer. Align adjacent surfaces and, using adhesive in color to match countertop, form seams to comply with manufacturer's written instructions. Carefully dress joints smooth, remove surface scratches, and clean entire surface.

C. Bond joints with adhesive and draw tight as countertops are set. Mask areas of countertops adjacent to joints to prevent adhesive smears.
   1. Clamp units to temporary bracing, supports, or each other to ensure that countertops are properly aligned and joints are of specified width.

D. Install backsplashes and end splashes by adhering to wall and countertops with adhesive. Mask areas of countertops and splashes adjacent to joints to prevent adhesive smears.

E. Install aprons to backing and countertops with adhesive. Mask areas of countertops and splashes adjacent to joints to prevent adhesive smears. Fasten by screwing through backing. Predrill holes for screws as recommended by manufacturer.

F. Complete cutouts not finished in shop. Mask areas of countertops adjacent to cutouts to prevent damage while cutting. Make cutouts to accurately fit items to be installed, and at right angles to finished surfaces unless beveling is required for clearance. Ease edges slightly to prevent snipping.

G. Install windowsills adhering to wall. Mask areas of countertops and splashes adjacent to joints to prevent adhesive smears.

H. Apply sealant to gaps at walls; comply with Section 07 92 00 "Joint Sealants."

END OF SECTION 12 36 61.16

SECTION 124813 - ENTRANCE FLOOR MATS AND FRAMES

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Entrance matting systems, including recessed and surface mounted aluminum foot grids

B. Related Requirements:
   1. Division 3 "Concrete" for depressed slab
   2. Section 08 11 19 - Steel Doors and Frames.
   3. Section 08 71 00 - Door Hardware.

1.02 COORDINATION

A. Coordinate size and location of recesses in concrete to receive floor mats and frames.

1.03 ACTION SUBMITTALS

A. Product Data: For each type of product.
   1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for floor mats and frames.

B. Shop Drawings:
   1. Items penetrating floor mats and frames, including door control devices.
   2. Divisions between mat sections.
   3. Perimeter floor frames.

C. Samples: For the following products, in manufacturer's standard sizes:
   1. Floor Mat: Assembled sections of floor mat.
   2. Tread Rail: Sample of each type and color.
   3. Frame Members: Sample of each type and color.

1.04 CLOSEOUT SUBMITTALS

A. Maintenance Data: For floor mats and frames to include in maintenance manuals.

1.05 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
   1. Resilient-Tile Entrance Mats: Full-size tile units equal to 2 percent of amount installed, but no fewer than 10 units.

PART 2 - PRODUCTS

2.01 ACCEPTABLE MANUFACTURER

A. Mats Inc.

B. Forbo Flooring Systems

C. Amarco Products

2.02 MATERIALS

A. Recessed Aluminum Foot Grid:
1. Thickness 7/16” linear mats.
2. Wiper Strip Colors: Unbuffed OR selected from manufacturer’s standard colors of buffed fibered reinforced rubber strip.
3. Scraper Bar Colors: Aluminum
4. Construction: Closed
5. Frame type: Ramp frame 7/16 inch depth only

2.03 ENTRANCE FLOOR MATS AND FRAMES, GENERAL

A. Structural Performance: Provide roll-up rail mats and frames capable of withstanding the following loads and stresses within limits and under conditions indicated:
1. Wheel load of 1,000 lbs per wheel.

B. Accessibility Standard: Comply with applicable provisions in the DOJ's "2010 ADA Standards for Accessible Design" .

2.04 FRAMES

A. Recessed Frames: Manufacturer's standard extrusion.
1. Extruded Aluminum: **ASTM B221**, Alloy 6061-T6 or Alloy 6063-T5, T6, or T52.
a. Color: Mill finish .

2.05 CONCRETE FILL AND GROUT MATERIALS

A. Provide concrete fill and grout equivalent in strength to cast-in-place concrete slabs for recessed mats and frames. Use aggregate no larger than one-third fill thickness.

2.06 FABRICATION

A. Floor Mats: Shop fabricate units to greatest extent possible in sizes indicated. Unless otherwise indicated, provide single unit for each mat installation; do not exceed manufacturer's recommended maximum sizes for units that are removed for maintenance and cleaning. Where joints in mats are necessary, space symmetrically and away from normal traffic lanes. Miter corner joints in framing elements with hairline joints or provide prefabricated corner units without joints.

B. Recessed Frames: As indicated, for permanent recessed installation, complete with corner pins or reinforcement and anchorage devices.
1. Fabricate edge-frame members in single lengths or, where frame dimensions exceed maximum available lengths, provide minimum number of pieces possible, with hairline joints equally spaced and pieces spliced together by straight connecting pins.

C. Coat concealed surfaces of aluminum frames that contact cementitious material with manufacturer's standard protective coating.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine substrates and floor conditions for compliance with requirements for location, sizes, minimum recess depth, and other conditions affecting installation of floor mats and frames.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. Install recessed mat frames and mats to comply with manufacturer's written instructions so that tops of mats will be flush with adjoining finished flooring. Set mats with tops at height recommended by manufacturer for most effective cleaning action; coordinate tops of mat surfaces with bottoms of doors that swing across mats to provide clearance between door and mat.
   1. Install necessary shims, spacers, and anchorages for proper location, and secure attachment of frames.
   2. Install grout and fill around frames and, if required to set mat tops at proper elevations, in recesses under mats. Finish grout and fill smooth and level.
   3. Delay setting mats until construction traffic has ended.

3.03 PROTECTION

A. After completing frame installation and concrete work, provide temporary filler of plywood or fiberboard in recesses and cover frames with plywood protective flooring. Maintain protection until construction traffic has ended and Project is near Substantial Completion.

END OF SECTION 12 48 13

SECTION 13 34 23 - FIBERGLASS BUILDINGS AND ENCLOSURES

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Freestanding, shop fabricated fiberglass reinforced plastic (FRP) composite buildings including the following:
      a. Doors and frames.
      b. Roof hatch.

B. Related Requirements:
   1. Section 03 30 00 - Concrete.
   2. Section 05 12 00 - Steel.
   3. Section 07 90 00 - Joint Sealants.
   4. Section 08 71 00 - Door Hardware.
   5. Division 23 - HVAC services and connections.
   6. Division 26 - Electrical; electrical power service and wiring connections.

1.02 REFERENCES

A. ASTM E 72 - Standard Test Method of Conducting Strength Tests of Panels for Building Construction

B. ASTM E 84 - Standard Test Method for Surface Burning Characteristics of Building Materials.
   1. ASTM C 582 - Standard Specification for Contact Molded Reinforced Thermosetting Plastic (FRP) Laminates for Corrosion-Resistant Equipment

C. American Society of Civil Engineers (ASCE):
   1. ASCE 7 - Minimum Design Loads for Buildings and Other Structures.

D. International Business Code (IBC).

1.03 DESIGN REQUIREMENTS

A. Buildings shall conform to dimensions shown on Drawings.

B. Waterproof, airtight, corrosion resistant, chemical resistant, lightweight, and environmentally aesthetic.

C. Code Requirements:
   1. IBC.
   2. Local authorities having jurisdiction.

1.04 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.05 ACTION SUBMITTALS

A. Product Data: Manufacturer's data sheets on each product to be used, including:
   1. Construction details, material descriptions, dimensions of individual components and profiles, and finishes.
   2. Preparation instructions and recommendations.
   3. Storage and handling requirements and recommendations.
   4. Installation methods.

B. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.

C. Selection Samples: For each finish product specified, two complete sets of color chips representing manufacturer's full range of available colors and patterns.

D. Delegated Design Submittals: For structural design and engineering, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.
   1. Project name.
   2. Manufacturer.
   3. Contractor.
   4. Dimensions of building.
   5. Governing building codes.
   6. Design loads.
   7. Load combinations.
   8. Building use categories.

1.06 INFORMATIONAL SUBMITTALS

A. Certificates:
   1. Welding certificates.
B. Test and Evaluation Reports:
   1. Material Test Reports: For each component of Fiberglass Buildings and Enclosures, by a qualified testing agency.
C. Delegated design engineer qualifications.
D. Sample warranties.

1.07 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing FRP prefabricated structures.
B. Engineering Responsibility: Preparation of comprehensive engineering analysis and Shop Drawings by a professional engineer who is legally qualified to practice in jurisdiction where Project is located.
C. Prefabricated Components: Comply with manufacturer's published literature for products meeting indicated design loads in accordance with state and local requirements as applicable.
D. Preconstruction and Preinstallation Meetings: Conduct meetings to verify project requirements, substrate conditions, utility connections, manufacturer's installation instructions, and warranty requirements. Comply with Division 01 requirements.

1.08 DELIVERY, STORAGE, AND HANDLING

A. Shrink-wrap the completed structure or building components with protective plastic for shipment to and storage at the job site.
   1. Support structure for shipment and handling to prevent warping and fracturing.
B. Store products in manufacturer's unopened packaging until ready for installation.
C. Protect all components and accessories from corrosion, deformation, damage and deterioration when stored at job site. Keep materials free from dirt and foreign matter.

1.09 FIELD CONDITIONS

A. Maintain environmental conditions (temperature, humidity, and ventilation) within limits recommended by manufacturer for optimum results. Do not install products under environmental conditions outside manufacturer's recommended limits.

1.010 WARRANTY

A. Manufacturer's Warranties: Provide manufacturer's 1-year limited warranty on products of its manufacture to be free of leaks and defects in materials and workmanship from date of shipment.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Acceptable Manufacturer: Mekco a division of ConceptWorks, or as approved by Architect.

2.02 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer to design fiberglass buildings and enclosures.

B. Design to sustain superimposed loads for load combinations in accordance with ASCE 7 and as applicable at the location of the project.

C. Design to withstand effects of gravity loads and the following loads and stresses within limits and under conditions indicated.

1. Determine loads based on the following minimum requirements:
    a. Dead load of building.
    b. Mechanical equipment.
    c. Uniform pressure of 40 lbf per sq ft (1.92 kPa), acting inward or outward (standard).
    d. Wind Load: As determined by delegated design engineer.
    e. Snow Load: As determined by delegated design engineer.
    f. Live Load: As determined by delegated design engineer.

D. Design shall provide for the effect of unbalanced, drift and sliding snow loads.

E. Energy Code: Meet energy code requirements for state where structure resides.

F. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes.

1. Temperature Change: 120 deg F **(67 deg C)**, ambient; 180 deg F **(100 deg C)**, material surfaces.

2.03 FIBERGLASS REINFORCED PLASTIC (FRP) PANELS

A. Wall and Roof Building Panels: High gloss molded to desired structural architectural shapes.

1. Uninsulated FRP Laminate Panels: 3/16 inch (5 mm) thick.
    a. Isophthalic NPG Exterior Gel Coat: 18 mils (0.457 mm) minimum.
    b. Glass Fiber Chopped Roving: 1-1/4 inch (32 mm) random fiber (minimum glass content to be 35 percent by weight.
    c. Polyester structural laminating resin.
2. Insulated FRP Laminate Panels: Two, 1/8 inch (3 mm) thick skins sandwiching a core of insulation.
    a. Isophthalic NPG Exterior Gel Coat: 18 mils (0.457 mm) minimum.
    b. Glass Fiber Chopped Roving: 1-1/4 inch (32 mm) random fiber (minimum glass content to be 35 percent by weight.
    c. Polyester structural laminating resin.
    d. Core Insulation: Solid polyisocyanurate urethane insulation.
3. Panel Flanges: Minimum 1/4 inch (6 mm) FRP laminate.
4. Perimeter Anchoring Flanges: 1/4 inch (6 mm) minimum thickness FRP laminates.
    a. One layer of stitch mat laminated within the anchoring flange.
5. Roof Hatches: Bilco style roof hatch or equivalent.
    a. Hatch and Size 4 feet by 2 feet longer than ends of pump array

B. FRP Panel Properties:

1. Barcol Hardness: 35 minimum.
2. Laminates with Stitch Mat and Random Chopped Fibers Warp Direction: Minimum values.
    a. Tensile Strength: 61,400 psi (423338.1 kPa).

b. Tensile Modulus: 2.98 msi (20.54 gPa).
c. Compressive Strength: 44,500 psi (306816.7 kPa).
d. Compressive Modulus: 2.28 msi (15.72 gPa).
e. Flexural Strength: 73,700 psi (508143.6 kPa).
f. Flexural Modulus: 2.35 msi (16.20 gPa).

C. Fabrication:
1. Form individual segments on high gloss molds ensuring consistent dimensions of finished parts. Cast each segment in one piece.
2. Laminate shall consist of alternating layers of stitch mat and/or chopped roving impregnated with resin.
3. Form panel flanges and perimeter anchoring flanges to the interior of the building.
4. Insulation: Bonded to interior and exterior laminate with resin.
a. Panels without a continuous and consistent bond between insulation and laminate are not acceptable.
5. Interior Finish: White corrosion resistant FRP.
6. Exterior Finish: White.
7. Exterior Finish: White high gloss molded gel coat.
8. Exterior Finish: Color as selected by the Architect from manufacturer's standard selections.

2.04 DOORS AND FRAMES

A. Doors and Frames: (Grade I - Premium): FRP.
1. Manufacturer: FRP Doors and Frames shall be as manufactured by Tiger Door, 1181 Garden Street, Greensburg, PA 15601; Tel: 724-832-4416; www.tigerdoor.com.
2. Double Panel 6068.
3. Face Panels: Chemical resistant, using a fiberglass- reinforced polyester resin system with light stabilizing additives.
a. Thickness: 0.090 to 0.125 inch (2.29 to 3.2 mm).
4. Door Thickness: 1-3/4 inch (44 mm).
5. Finish: All surfaces shall have a textured, semi-gloss, seamless gel coat Finish. Gel Coat coverage shall be 12 to 18 mils (0.305 to 0.457 mm) thick.
6. Color: As selected by architect to match building exterior.
7. Internal Construction:
a. Stiles and Rails: Rectangular and square high modulus pultruded fiberglass tubes.
b. Core material: Rigid polyurethane foam laminated to interior of face panels.
1) Thickness: 1-1/2 inch (38 mm).
2) "R" factor: 11-12.
c. Internal Reinforcements for Full Mortise Hinges: Solid FRP blocking and for thru-bolted hardware to be high modulus pultrusions.
8. Fiberglass Reinforced Plastic Frames:
a. Head and Jamb: Pultruded fiberglass reinforced plastic, conforming to SDI requirements.
1) Wall Thickness: 1/4 inch (6 mm) wall minimum.
b. Frame Profile: Double rabbeted with 5/8 inch (16 mm) stop.
1) Face: 2 inch (51 mm).
2) Jamb Depth: 5-3/4 inch (146 mm).
c. Joint Connection: Jamb to Head joints will be neatly mitered at 45 degrees.
d. Finish: 12 to 18 mil (0.305 to 0.457 mm) gel coat.
e. Color: Match door unless otherwise indicated.
f. Frame Corner Reinforcements (WxDxLxT): 4 x 4 x 5-3/8 x 1/4 inch (102 x 102 x 135.5 x 6 mm) pultruded fiberglass angle.

9. Hardware and Fasteners: Highest grade corrosion resistant available.
    a. Hinges: Aluminum Continuous as specified in 08 71 00 Door Hardware.
    b. Closer: as specified in 08 71 00 Door Hardware.
    c. Lockset: as specified in 08 71 00 Door Hardware.
    d. Threshold: Solid FRP, 1/2 inch (13 mm) beveled profile.
    e. Weatherstrip and Sweep: Full perimeter sealing.

2.05 MISCELLANEOUS ITEMS

A. Concrete Stainless Steel Anchor Bolts: Minimum 3/8 inch (9 mm). Diameter.
    1. Oversized Stainless Steel Plate Washers: Used to prevent localized stressing of the base flange.
    2. Conform to requirements of Section 05 12 00 - Steel.
B. Connection of Building Panels:
    1. Permanently fused building assembly yielding a watertight one-piece structure.
C. Base Gasket:
    1. Soft, closed cell, neoprene foam gasket material.
    2. Suitable for exposure to weather conditions at building location.
    3. Suitable for exposure to sewage and sewage gases.
    4. Thickness: 3/8 inch (9 mm) minimum.

2.06 MATERIALS

A. Resin:
    1. COR61-AA-545 Resin as manufactured by Interplastic Corporation. or equivalent.
    2. Orthophthalic polyesters. Fillers and additives may be used to achieve chemical resistance and fire-retardant properties specified.
    3. Suitable for Service Temperature Range: Minus 30 to 140 degrees F (minus 1 to 60 degrees C).
B. Gel Coat: Isophthalic NPG, UV- stable, chalk resistant.
    1. Manufacturer: LHM-2900 Low Hap White HydroShield LITE, NPG/ISO Marine Gel Coat as manufactured and supplied by HK Research Corporation or equivalent
    2. Color: As selected by the Architect from manufacturer's standard selections.
C. Glass Fiber Reinforcing: Type E glass and treated with finish compatible to resin being used.
    1. Glass Fiber Chopped Roving: Manufactured by PPG, Owens Corning, or equivalent. Used for making random fibers 1-1/4 inch (32 mm) in length.
    2. Stitch Mat: Type CM-2415 or CDM-2415 manufactured by BTI, Knytex, or equivalent.
D. Insulation: Ridged polyisocyanurate urethane foam designed for permanent thermal insulation.
    1. Thickness: As indicated on the Drawings.

2.07 ASSEMBLY

A. Shop assemble complete building.
    1. Flanges between adjacent panels shall be factory bonded together with methyl methacrylate.
    2. Seal exterior edges of adjacent panels with color matched silicon sealant.
B. Fit and bond appurtenances, formed separately, into openings cut in finished panel or integrally mold into panel. Bond attachments with glass fibers and resin from interior of panel.
C. Resin seal cut all drilled edges.

2.08 EQUIPMENT BY OTHERS

A. Equipment Schedule: refer to drawings and other specification divisions. for equipment to be purchased and installed by other trades. Coordinate equipment to be installed.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine supporting foundations for compliance with manufacturer's requirements, including installation tolerances and other conditions affecting performance of supporting members.
B. Check installed anchor bolts for accuracy. Verify that bearing surfaces are ready to receive the work.
C. Verify the rough-in of required mechanical and electrical services prior to placement of the structure.

3.02 PREPARATION

A. Do not begin installation until substrates have been properly prepared.
B. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.
C. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions. Clean surfaces thoroughly prior to installation.
D. Commencement of installation constitutes acceptance of conditions.

3.03 INSTALLATION

A. Install in accordance with manufacturer's instructions.
B. Install continuous neoprene gasket between perimeter anchoring flange and where panels rest on supporting structure.
C. Resin seal cut all drilled edges.
D. Repair damaged panels.
E. Minimum spacing and edge distances of concrete anchors shall conform to requirements of Section 05 12 00 - Steel.
F. Place on prepared concrete foundations and slabs provided as specified under Section 03 30 00 - Cast-in-Place Concrete.
G. Anchor securely in place, allowing for required movement, including expansion and contraction.

3.04 PROTECTION

A. Protect installed buildings until completion of project.
B. Touch-up, repair or replace damaged items before Substantial Completion.

END OF SECTION 13 34 23

SECTION 13 46 00 – LIGHTNING PROTECTION SYSTEMS

PART 1 - GENERAL

1.01 RELATED DOCUMENTS:

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY:

A. This Section includes the design, furnishing and installation of a complete lightning protection system, including below-grade ground grid systems.
   1. Air terminals.
   2. Roof conductors.
   3. Down conductors.
   4. All mounting accessories.

B. Furnish a Master Label Certificate issued by Underwriters' Laboratories, Inc. for each system and attach to the base of the appropriate structure.

C. Provide lightning protection for structures as indicated on plans:

1.03 RELATED REQUIREMENTS:

A. Section 26 05 17 - Wire, Cables, and Accessories.

B. Section 26 05 26 - Grounding.

1.04 REFERENCE STANDARDS:

A. American National Standards Institute (ANSI).

B. Underwriters' Laboratories, Inc. (UL):
   1. 96 - Lightning Protection Components.
   2. 96A - Installation Requirements for Lightning Protection Systems.
   3. 467 - Standard for Grounding and Bonding Equipment.

C. American Society for Testing and Materials (ASTM):
   1. B3 - Soft or Annealed Copper Wire.
   2. B8 - Concentric Lay Stranded Copper Conductors, Hard, Medium-Hard, or Soft.
   3. B33 - Tin-Coated Soft or Annealed Copper Wire for Electrical Purposes.

D. National Fire Protection Association (NFPA):
   1. 70 - National Electrical Code.
   2. 780 - Installation of Lightning Protection System.

E. Lightning Protection Institute (LPI):
   1. 175 - Standard of Practice for the Design - Installation - Inspection of Lightning Protection Systems.

1.05 DEFINITIONS:

A. Definitions provided by NPFA 780:
   1. Class I Materials: Lightning conductors, air terminals, grounding electrodes, and associated fittings required for the protection of structures not exceeding 75 feet in height.
   2. Class II Materials: Lightning conductors, air terminals, grounding electrodes, and associated fittings required for the protection of structures exceeding 75 feet in height.

1.06 SUBMITTALS:

A. Submit at specified in Division 01 and Section 26 05 10 – General Electrical Requirements for administrative and procedural requirements for submittals.
B. Product Data: For each type of product indicated.
C. Shop Drawings: For air terminals and mounting accessories.
   1. Layout of the lightning protection system, along with details of the components to be used in the installation.
   2. Include indications for use of raceway, data on how any concealments requirements will be met, and calculations required by NFPA 780 for bonding of grounded and isolated metal bodies.
   3. Mounting details for all components.
   4. Detailed layout drawings of lightning protection system, including air terminal locations, conductor routing and connections, and bonding and grounding provisions. Include indications for use of raceway and data on how concealment requirements will be met.

1.07 INFORMATIONAL SUBMITTALS:

A. Qualification Data: For qualified Installer and manufacturer. Include data on UL listing.
B. Material Certificates:
   1. Certification, signed by Contractor, that roof adhesive is approved by manufacturer of roofing material.
C. Field quality-control reports.
   1. Comply with recommendations in NPFA 780, Annex D, "Inspection and Maintenance of Lightning Protection Systems," for recommended inspection reports of the lightning protection system.
D. Plans showing dimensioned as-built locations of grounding features, including the following:
   1. Ground rods.
   2. Ground loop conductor.

1.08 QUALITY ASSURANCE:

A. Installer Qualifications: Certified by UL as a Master Installer/Designer, trained and approved for installation of units required for this Project.
B. System Certificate:
   1. UL Master Label.
C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 780, "Definitions" Article.

1.09 PROJECT SITE CONDITIONS:

A. The following areas are considered hazardous:
   1. Refer to Plan E101.

1.10 COORDINATION:

A. Coordinate installation of lightning protection system with the installation of other building systems and components including electrical wiring, supporting structures, building materials, roof, and metal components requiring interface with lightning protection systems.
B. Coordinate installation of air terminals attached to roof systems with roofing manufacturer and Installer.
C. Flashings of through-roof assemblies shall comply with roofing manufacturers' specifications.

PART 2 - PRODUCTS

2.01 MANUFACTURERS:

A. Lightning Protection System Components:
   1. AC Lightning Security, Inc.
   2. Advanced Lightning Technology.
   3. Approved Lightning Protection Co., Inc.
   4. Bonded Lightning Protection.
   5. Independent Protection Co., Inc.
   6. Preferred Lightning Protection.
   7. Robbins Lightning Protection.
   8. Thompson Lightning Protection, Inc.
   9. Erico International Corporation.

B. Grounding Components:
   1. Burndy LLC.
   2. Erico International Corporation.
   3. Harger.
   4. Thomas & Betts.

C. Bare Ground Cable:
   1. Refer to Section 26 05 26.

D. Connection Materials:
   1. Exothermic Type Welding Process:
      a. Erico Products (CADWELD).
   2. Compression Type Connectors:
      a. Amp.
      b. Burndy.
      c. Thomas and Betts.

E. Ground Test Wells:
   1. Advanced Lightning Technology.
   2. Erico International Corporation.
   3. Synertech.
   4. Approved Equal.

F. Mastic:
   1. Sonneborn-Sonoshield Mastics.
   2. W.R. Meadows-Sealmastic.

2.02 PERFORMANCE/DESIGN CRITERIA:

A. Materials shall be in compliance with the following standards:
   1. UL96.
   2. NFPA 780.
   3. All materials used for the system installation shall comply in size, composition, and weight to all requirements of NFPA and UL for the class of system in which they are installed. All materials shall be labeled or listed by UL for use in Master Labeled Systems.
   4. Roof and down conductors shall be in compliance with ASTM B8.

2.03 LIGHTNING PROTECTION SYSTEM:

A. General Requirements:
   1. Material: All materials shall be aluminum, copper, or bronze.

2. Compatibility: All portions of the system shall be galvanically compatible to the building material to which they are to be attached. Connections between copper and aluminum portions of the system shall be made with appropriate bimetallic coupling devices. In all areas, the conductor shall be supported to maintain clearance from all galvanically incompatible materials or shall be of the same material.
3. All system components shall be, to the maximum extent possible, the product of a single manufacturer. All components shall be type Class I or Class II as required by NFPA 780.

B. Air Terminals:
1. For structures not exceeding 75 feet in height, use Class I materials.
2. For structures exceeding 75 feet in height, use Class II materials.
3. 1/2-inch diameter nickel-tipped solid copper rod. Length: 18 inches.
4. Copper mounting hardware supplied with mounting as required.
5. 1/2-inch diameter solid aluminum rod. Length: 18 inches.
6. Aluminum or bronze base for mounting as required.
7. Shall be equipped with the correct type of base for side, roof, or universal mounting.
8. Air terminals and interconnecting cable shall be provided for all roof-mounted equipment subject to a direct strike as required by NFPA 780.
9. All air terminal bases shall be securely mounted to the building structure by bases secured as specified.

C. Roof and Down Conductors:
1. Tin-plated Copper Conductors - Gage and weight shall meet the requirements of LP Class I and II.
2. Aluminum Conductors - Gage and weight shall meet the requirements of LP Class I and II.

D. Down Conductor Guards: Guards shall be of self-extinguishing, high-impact polyvinyl chloride or polyethylene.

E. Grounding Grid System: Refer to Section 26 05 26.

F. Ground Test Wells:
1. Concrete or high-density polymer concrete box or ring with bolted cover.
2. Cover shall be permanently marked as “Electrical” or “Ground Test Well.”
3. Refer to Section 26 05 26.

G. Bonding Plates, Connectors, Terminals, and Clamps: Provide electrical bonding plates, connectors, terminals, lugs, and clamps as recommended by bonding plate, connector, terminal, and clamp manufacturers for indicated applications.
1. Bolted Connectors for Pipes: Copper or copper-alloy, pressure type with at least two silicon bronze or stainless-steel bolts and lock washers.
2. Irreversible Compression Fittings: Pure wrought copper extrusion clamps and connectors, made to be held in the dies of an installation tool. Connectors must be factory filled with an oxide inhibitor.
3. Welded Connectors: Exothermic-welding kits of types recommended by kit manufacturer for materials being joined and installation conditions.

PART 3 - EXECUTION

3.01 INSTALLATION:

A. Lightning Protection System:
1. Install lightning protection systems as indicated, in accordance with equipment manufacturer's written instructions, and in compliance with UL 96A.
2. Suitably protect cable and air terminals from damage during construction.

3. Air Terminals:
    a. The structural steel framework of building may be used as the main conductor of a lightning protection system.
    b. Air terminals shall be installed within 2 feet of all ends, edges, and corners of the building.
    c. Place air terminals so that roof hatches fall within the zone of protection. Bond roof hatches to the lightning protection system with braided bonding jumpers.
4. Conductors:
    a. Protect down conductors from physical damage and displacement by installing guards.
    b. Install conductor with direct paths from air terminals to ground connections avoiding sharp bends (minimum radius - 8 inches and no bends shall be less than 90 degrees) and narrow loops. Where indicated, run conductors in nonmetallic PVC raceway Schedule 80 with a minimum elbow radius of 8 inches.
    c. Conceal the following conductors:
        (1) System conductors.
        (2) Down conductors.
        (3) Interior conductors.
    d. Do not install copper lightning protection materials on aluminum roofing, siding material, or other aluminum surfaces. On aluminum surfaces, use aluminum lightning protection materials.
5. Bonding: Install in accordance with UL 96A.

B. Connection Materials:
1. Cable-to-cable, cable-to-rod connection shall be exothermic-type welding process or irreversible compression type connectors. All compression-type connections shall be inspected for proper die index number.
2. Provide bimetallic or tin-plated copper connectors when joining copper to aluminum conductors.
3. Cable to structural steel:
    a. Use exothermic weld where possible.
    b. Where exothermic weld will damage structural steel, use bolted fittings if it can be field drilled.
    c. Use irreversible compression ground clamp with breakaway bolt head to building steel that cannot be altered.
    d. When structural steel is used as part of the lightning protection system, the structural steel shall be electrically continuous and shall be bonded to the lightning protection conductors at both the top and the bottom of the structural columns.
4. Cable to Equipment Ground Lugs:
    a. Copper alloy terminal with twin clamping element.
    b. Bolt to equipment housing with silicon bronze or stainless-steel bolts and lock washers.

C. Ground Grid System:
1. Wire and Cable:
    a. General:
        (1) Install using as few joints as possible.
        (2) Protect against unraveling, caging, and abrasion by several wrappings of plastic tape on all ends.
        (3) Install so as not to be entirely encircled or closely encircled by magnetic material.

(4) Suitably protect against damage during construction. Replace or repair cable at Owner's discretion if cable is damaged by anyone before final acceptance.
(5) Protect cable at all points where cable leaves concrete by wrapping rubber tape on 2 inches either side of the plane formed by the finished concrete surface.

b. Buried Installations:
(1) Install at locations and depths as specified or indicated. Otherwise install at least 18 inches below finished grade or deeper if necessary in order to be in contact with earth. Install outside of foundation or wall at a distance of not less than 2 feet.
(2) Maintain clearance of at least three feet from all underground metal piping or structures where possible, otherwise tape all ground conductors within this clearance.
(3) Backfill with excavated earth free from rocks or stones. Thoroughly compact backfill.

2. Ground Rods:
a. Install rods where indicated by driving and not by drilling or jetting.
b. Drive rods into unexcavated portion of the earth where possible.
c. Where rods must be installed in excavation areas, drive rods into earth after compaction of backfill is completed.
d. Drive to a depth such that top of rods will be approximately 18 inches below final grade, or subgrade, and connect to the buried grid ground conductors.

3. Connections:
a. Conform to manufacturer's instructions.
b. Chemically degrease and dry completely before welding or applying compression type connectors.
c. Apply coating to all exothermic-welded connections to be buried, at 15-mils dry film thickness.
d. Make up bolted connections clean and tight.
e. Low-resistance connections with resistance drop not exceeding 1 ohm.
f. Do not cover up connections before they are checked by Engineer.

4. Ground Test Wells:
a. Install at locations indicated on Drawings.
b. Use bolted connections at test wells.

5. The lightning protection system shall be permanently bonded to the grounding electrode system per NPFA 780.

D. Corrosion Protection:
1. Use no combination of materials that may form an electrolytic couple of such nature that corrosion is accelerated in the presence of moisture, unless moisture is permanently excluded from the junction of such metals.
2. Where unusual conditions exist that would cause deterioration or corrosion of conductors, use conductors with suitable protective coatings.
3. Aluminum down conductors shall not be used where contact with the earth is possible.

E. Sleeve and Sleeve Seal Installation for Electrical Penetrations:
1. Install sleeves and sleeve seals at penetrations of exterior floor and wall assemblies.

3.02 FIELD QUALITY CONTROL:

A. Notify Engineer at least 48 hours in advance of inspection before concealing lightning protection components.

B. Provide inspection according to UL 96A and delivery of UL Master Label Certificate to Owner.

END OF SECTION 13 46 00

SECTION 220513 - COMMON MOTOR REQUIREMENTS FOR PLUMBING EQUIPMENT

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. Section includes general requirements for single-phase and polyphase, general-purpose, horizontal, small and medium, squirrel-cage induction motors for use on alternating-current power systems up to 600 V and installed at equipment manufacturer's factory or shipped separately by equipment manufacturer for field installation.

1.03 COORDINATION

A. Coordinate features of motors, installed units, and accessory devices to be compatible with the following:
   1. Motor controllers.
   2. Torque, speed, and horsepower requirements of the load.
   3. Ratings and characteristics of supply circuit and required control sequence.
   4. Ambient and environmental conditions of installation location.

PART 2 - PRODUCTS

2.01 GENERAL MOTOR REQUIREMENTS

A. Comply with NEMA MG 1 unless otherwise indicated.
B. Comply with IEEE 841 for severe-duty motors.

2.02 MOTOR CHARACTERISTICS

A. Duty: Continuous duty at ambient temperature of 40 deg C and at altitude of 700 above sea level.
B. Capacity and Torque Characteristics: Sufficient to start, accelerate, and operate connected loads at designated speeds, at installed altitude and environment, with indicated operating sequence, and without exceeding nameplate ratings or considering service factor.

2.03 POLYPHASE MOTORS

A. Description: NEMA MG 1, Design B, medium induction motor.
B. Efficiency: Premium efficient, as defined in NEMA MG 1.
C. Service Factor: 1.15.
D. Multispeed Motors: Variable torque.
   1. For motors with 2:1 speed ratio, consequent pole, single winding.
   2. For motors with other than 2:1 speed ratio, separate winding for each speed.
E. Multispeed Motors: Separate winding for each speed.
F. Rotor: Random-wound, squirrel cage.
G. Bearings: Regreasable, shielded, antifriction ball bearings suitable for radial and thrust loading.

H. Temperature Rise: Match insulation rating.
I. Insulation: Class F.
J. Code Letter Designation:
    1. Motors 15 HP and Larger: NEMA starting Code F or Code G.
    2. Motors Smaller Than 15 HP: Manufacturer's standard starting characteristic.
K. Enclosure Material: Cast iron for motor frame sizes 324T and larger; rolled steel for motor frame sizes smaller than 324T.

2.04 ADDITIONAL REQUIREMENTS FOR POLYPHASE MOTORS

A. Motors Used with Reduced-Voltage and Multispeed Controllers: Match wiring connection requirements for controller with required motor leads. Provide terminals in motor terminal box, suited to control method.
    1. Thermal Protection: Comply with NEMA MG 1 requirements for thermally protected motors.

2.05 SINGLE-PHASE MOTORS

A. Motors larger than 1/20 hp shall be one of the following, to suit starting torque and requirements of specific motor application:
    1. Permanent-split capacitor.
    2. Split phase.
    3. Capacitor start, inductor run.
    4. Capacitor start, capacitor run.
B. Multispeed Motors: Variable-torque, permanent-split-capacitor type.
C. Bearings: Prelubricated, antifriction ball bearings or sleeve bearings suitable for radial and thrust loading.
D. Motors 1/20 HP and Smaller: Shaded-pole type.
E. Thermal Protection: Internal protection to automatically open power supply circuit to motor when winding temperature exceeds a safe value calibrated to temperature rating of motor insulation. Thermal-protection device shall automatically reset when motor temperature returns to normal range.

PART 3 - EXECUTION (Not Applicable)

END OF SECTION 220513

SECTION 22 05 17 – SLEEVES AND SLEEVE SEALS FOR PLUMBING PIPING

PART 1 - GENERAL

1.01 RELATED DOCUMENTS:

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY:

A. This Section includes:
   1. Sleeves without waterstop.
   2. Sleeves with waterstop.
   3. Stack-sleeve fittings.
   4. Sleeve-seal systems.
   5. Grout.

1.03 REFERENCE STANDARDS:

A. Applicable Standards (Latest Edition):
   1. ASTM International (ASTM):
      a. ASTM A53 - Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated Welded and Seamless.
      b. ASTM C1107 - Specification for Packaged Dry, Hydraulic-Cement Grout (Nonshrink).

1.04 SUBMITTALS:

A. Product data: For each type of product indicated.

PART 2 - PRODUCTS

2.01 SLEEVES WITHOUT WATERSTOP:

A. Stainless-Steel Pipe Sleeves: ASME A112.3.1 drainage pattern seamless, Type 316L stainless steel, with plain ends.
B. Stainless-Steel Sheet Sleeves: ASTM A480/A480M, Type 316, 0.024-inch minimum thickness; round tube closed with welded longitudinal joint.
C. PVC Pipe Sleeves: ASTM D1785, Schedule 40.
D. Molded-PVC Sleeves: With nailing flange for attaching to wooden forms.
E. Molded-PE or -PP Sleeves: Removable, tapered-cup shaped, and smooth outer surface with nailing flange for attaching to wooden forms.

2.02 SLEEVES WITH WATERSTOP:

A. Description: Manufactured PVC/HDPE and stainless steel, sleeve-type, waterstop assembly made for imbedding in concrete slab or wall.

2.03 STACK-SLEEVE FITTINGS:

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Smith, Jay R. Mfg. Co.
   2. Zurn Specification Drainage Operation; Zurn Plumbing Products Group.
   3. Or Engineer Approved Equal.

B. Description: Manufactured, Dura-coated or Duco-coated galvanized cast-iron sleeve with integral clamping flange. Include clamping ring, bolts, and nuts for membrane flashing.

2.04 SLEEVE-SEAL SYSTEMS:

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Metraflex Company (The).
   2. Link-Seal.
   3. Or Engineer Approved Equal.

B. Description: Modular sealing-element unit, designed for field assembly, for filling annular space between piping and sleeve.
   1. Designed to form a hydrostatic seal of 20 psig minimum.
   2. Sealing Elements: EPDM-rubber interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size of pipe.
   3. Pressure Plates: Stainless steel, Type 316.
   4. Connecting Bolts and Nuts: Stainless steel, Type 316 of length required to secure pressure plates to sealing elements.

2.05 GROUT:

A. Standard: ASTM C1107, Grade B, post-hardening and volume-adjusting, dry, hydraulic-cement grout.

B. Characteristics: Nonshrink; recommended for interior and exterior applications.

C. Design Mix: 5,000-psi, 28-day compressive strength.

D. Packaging: Premixed and factory packaged.

PART 3 - EXECUTION

3.01 SLEEVE INSTALLATION:

A. Install sleeves for piping passing through penetrations in floors, partitions, roofs, and walls.

B. For sleeves that will have sleeve-seal system installed, select sleeves of size large enough to provide 1 inch annular clear space between piping and concrete slabs and walls.

C. Install sleeves in concrete floors, concrete roof slabs, and concrete walls as new slabs and walls are constructed.
   1. Permanent sleeves are not required for holes in slabs formed by molded-PE or -PP sleeves.
   2. Cut sleeves to length for mounting flush with both surfaces.
      a. Exception: Extend sleeves installed in floors of mechanical equipment areas or other wet areas 2 inches above finished floor level.
   3. Using grout, seal the space outside of sleeves in slabs and walls without sleeve-seal system.

D. Install sleeves for pipes passing through interior partitions.
   1. Cut sleeves to length for mounting flush with both surfaces.
   2. Seal annular space between sleeve and piping or piping insulation; use joint sealants appropriate for size, depth, and location of joint. Comply with requirements for sealants specified in Division 07.

E. Fire-Barrier Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with firestop materials. Comply with requirements for firestopping specified in Division 07.

3.02 SLEEVE WITH WATERSTOP INSTALLATION:

A. Install sleeve with waterstop as new walls and slabs are constructed.
B. Assemble fitting components of length to be flush with both surfaces of concrete slabs and walls. Position waterstop flange to be centered in concrete slab or wall.
C. Secure nailing flanges to concrete forms.
D. Using grout, seal the space around outside of sleeves.

3.03 STACK-SLEEVE-FITTING INSTALLATION:

A. Install stack-sleeve fittings in new slabs as slabs are constructed.
   1. Secure flashing between clamping flanges for pipes penetrating floors with membrane waterproofing. Comply with requirements for flashing specified in Division 07.
   2. Install section of cast-iron soil pipe to extend sleeve to 2 inches above finished floor level.
   3. Extend cast-iron sleeve fittings below floor slab as required to secure clamping ring if ring is specified.
   4. Using grout, seal the space around outside of stack-sleeve fittings.
B. Fire-Barrier Penetrations: Maintain indicated fire rating of floors at pipe penetrations. Seal pipe penetrations with firestop materials. Comply with requirements for firestopping specified in Division 07.

3.04 SLEEVE-SEAL-SYSTEM INSTALLATION:

A. Install sleeve-seal systems in sleeves in exterior concrete walls and slabs-on-grade at service piping entries into building.
B. Select type, size, and number of sealing elements required for piping material and size and for sleeve ID or hole size. Position piping in center of sleeve. Center piping in penetration, assemble sleeve-seal system components, and install in annular space between piping and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make a watertight seal.

3.05 SLEEVE AND SLEEVE-SEAL SCHEDULE:

A. Use sleeves and sleeve seals for the following piping-penetration applications:
   1. Exterior Concrete Walls above Grade:
      a. Molded-PE or -PP sleeve or sleeve with waterstop.
      b. Sleeve-seal system.
      c. Select sleeve size to allow for 1 inch (25 mm) annular clear space between piping and sleeve for installing sleeve-seal system .
   2. Exterior Concrete Walls below Grade:
      a. Molded-PE or -PP sleeve or sleeve with waterstop.
      b. Sleeve-seal system.
      c. Select sleeve size to allow for 1 inch (25 mm) annular clear space between piping and sleeve for installing sleeve-seal system.
   3. Concrete Slabs-on-Grade:
      a. Sleeve with waterstop.
      b. Sleeve-seal system.
      c. Select sleeve size to allow for 1 inch (25 mm) annular clear space between piping and sleeve for installing sleeve-seal system.
   4. Concrete Slabs above Grade:
      a. Sleave with waterstop or stack-sleeve fitting.

5. Interior Partitions:
   a. Sleeve without waterstop.

END OF SECTION 22 05 17

SECTION 22 05 18 – ESCUTCHEONS FOR PLUMBING PIPING

PART 1 - GENERAL

1.01 RELATED DOCUMENTS:

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY:

A. This Section includes:
   1. Escutcheons.
   2. Floor plates.

1.03 SUBMITTALS:

A. Product Data: For each type of product indicated.

PART 2 - PRODUCTS

2.01 ESCUTCHEONS:

A. One-Piece, Stainless-Steel Type: With polished stainless-steel finish.
B. Split-Plate, Stainless-Steel Type: With polished, stainless-steel finish; concealed and exposed-rivet hinge; and spring-clip fasteners.

2.02 FLOOR PLATES:

A. Split Floor Plates: Stainless steel with concealed hinge.

PART 3 - EXECUTION

3.01 INSTALLATION:

A. Install escutcheons for piping penetrations of walls, ceilings, and finished floors.
B. Install escutcheons with ID to closely fit around pipe, tube, and insulation of insulated piping and with OD that completely covers opening.
   1. Escutcheons for New Piping:
      a. Piping with Fitting or Sleeve Protruding from Wall: One-piece, deep-pattern type.
      b. Insulated Piping: One-piece stainless steel with polished stainless-steel finish.
      c. Bare Piping: One-piece stainless steel with polished stainless-steel finish.
C. Install floor plates for piping penetrations of equipment-room floors.
   1. Install floor plates with ID to closely fit around pipe, tube, and insulation of piping and with OD that completely covers opening.
   2. New Piping: One-piece, floor plate.

3.02 FIELD QUALITY CONTROL:

A. Replace broken and damaged escutcheons and floor plates using new materials.

END OF SECTION 22 05 18

SECTION 22 05 19 – METERS AND GAGES FOR PLUMBING PIPING

PART 1 - GENERAL

1.01 RELATED DOCUMENTS:

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY:

A. Section Includes:
   1. Liquid-in-glass thermometers.
   2. Thermowells.
   3. Dial-type pressure gages.
   4. Gage attachments.

1.03 RELATED REQUIREMENTS:

1. Section 22 11 13 – Facility Water Distribution Piping for domestic water meters and combined domestic and fire-protection water-service meters outside the building.
2. Section 22 11 16 – Domestic Water Piping for water meters inside the building.

1.04 REFERENCE STANDARDS:

A. Applicable Standards (Latest Edition):
   1. ASME International (ASME):
      a. ASME B1.1 - Unified Inch Screw Threads, UN and UNR Thread Form.
      b. ASME B1.20.1 - Pipe Threads, General Purpose, Inch.
      c. ASME B40.100 - Pressure Gauges and Gauge Attachments.
      d. ASME B40.200 - Thermometers, Direct Reading, and Remote Reading.

1.05 SUBMITTALS:

A. Product Data: For each type of product indicated.
B. Product Certificates: For each type of meter and gage, from manufacturer.
C. Operation and Maintenance Data: For meters and gages to include in operation and maintenance manuals.

PART 2 - PRODUCTS

2.01 LIQUID-IN-GLASS THERMOMETERS:

A. Metal-Case, Compact-Style, Liquid-in-Glass Thermometers:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Trerice, H. O. Co.
      b. Or Engineer Approved Equal.
   2. Standard: ASME B40.200.
   3. Case: Cast aluminum; 6-inch nominal size.
   4. Case Form: Back angle, unless otherwise indicated.
   5. Tube: Glass with magnifying lens and blue organic liquid.
   6. Tube Background: Nonreflective aluminum with permanently etched scale markings graduated in ºF.
   7. Window: Glass or plastic.
   8. Stem: Aluminum and of length to suit installation.

a. Design for Thermowell Installation: Bare stem.
9. Connector: 3/4 inch, with ASME B1.1 screw threads.
10. Accuracy: ±1% of scale range or one scale division, to a maximum of 1.5% of scale range.

2.02 THERMOWELLS:

A. Thermowells:
1. Standard: ASME B40.200.
2. Description: Pressure-tight, socket-type fitting made for insertion into piping tee fitting.
3. Material: Stainless steel.
4. Type: Stepped shank, unless straight or tapered shank is indicated.
5. External Threads: NPS 1/2, NPS 3/4, or NPS 1, ASME B1.20.1 pipe threads.
6. Internal Threads: 1/2, 3/4, and 1 inch, with ASME B1.1 screw threads.
7. Bore: Diameter required to match thermometer bulb or stem.
8. Insertion Length: Length required to match thermometer bulb or stem.
9. Lagging Extension: Include on thermowells for insulated piping and tubing.
10. Bushings: For converting size of thermowell's internal screw thread to size of thermometer connection.

B. Heat-Transfer Medium: Mixture of graphite and glycerin.

2.03 PRESSURE GAGES:

A. Direct-Mounted, Metal-Case, Dial-Type Pressure Gages:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. AMETEK, Inc.; U.S. Gauge.
b. Ashcroft, Inc.
c. Ernst Flow Industries.
d. Flo Fab, Inc.
e. Marsh Bellofram.
f. Miljoco Corporation.
g. Noshok.
h. Palmer Wahl Instrumentation Group.
i. REOTEMP Instrument Corporation.
j. Tel-Tru Manufacturing Company.
k. Trerice, H. O. Co.
l. Watts Regulator Co.; a div. of Watts Water Technologies, Inc.
m. Weiss Instruments, Inc.
n. WIKA Instrument Corporation - USA.
o. Winters Instruments - U.S.
p. Or Engineer Approved Equal.
2. Standard: ASME B40.100.
3. Case: Liquid-filled Sealed type(s);cast aluminum; 4-1/2-inch nominal diameter.
4. Pressure-Element Assembly: Bourdon tube, unless otherwise indicated.
5. Pressure Connection: Brass, with NPS 1/4, ASME B1.20.1 pipe threads and bottom-outlet type, unless back-outlet type is indicated.
6. Movement: Mechanical, with link to pressure element and connection to pointer.
7. Dial: Nonreflective aluminum with permanently etched scale markings graduated in psi.
8. Pointer: Dark-colored metal.
9. Window: Glass.

10. Ring: Stainless steel.
11. Accuracy: Grade A, ±1% of middle half of scale range.

2.04 GAGE ATTACHMENTS:

A. Snubbers: ASME B40.100, stainless steel; with NPS 1/4, ASME B1.20.1 pipe threads and piston-type surge-dampening device. Include extension for use on insulated piping.
B. Valves: Stainless-steel needle, with NPS 1/4, ASME B1.20.1 pipe threads.

PART 3 - EXECUTION

3.01 INSTALLATION:

A. Install thermowells with socket extending one-third of pipe diameter and in vertical position in piping tees.
B. Install thermowells of sizes required to match thermometer connectors. Include bushings if required to match sizes.
C. Install thermowells with extension on insulated piping.
D. Fill thermowells with heat-transfer medium.
E. Install direct-mounted thermometers in thermowells and adjust vertical and tilted positions.
F. Install direct-mounted pressure gages in piping tees with pressure gage located on pipe at the most readable position.
G. Install valve and snubber in piping for each pressure gage for fluids.
H. Install thermometers in the following locations:
   1. Outlet of each water heater.
I. Install pressure gages in the following locations:
   1. Building water service entrance into building.
   2. Outlet of each pressure-reducing valve.

3.02 CONNECTIONS:

A. Install meters and gages adjacent to machines and equipment to allow service and maintenance of meters, gages, machines, and equipment.

3.03 ADJUSTING:

A. Adjust faces of meters and gages to proper angle for best visibility.

3.04 THERMOMETER SCHEDULE:

A. Thermometers at outlet of each domestic water heater shall be the following:
   1. Industrial-style, liquid-in-glass type.
B. Thermometer stems shall be of length to match thermowell insertion length.

3.05 THERMOMETER SCALE-RANGE SCHEDULE:

A. Scale Range for Domestic Hot-Water Piping: 30 to 240ºF.

3.06 PRESSURE-GAGE SCHEDULE:

A. Pressure gages at discharge of each water service into building shall be the following:
   1. Liquid-filled, direct-mounted, metal case.
B. Pressure gages at outlet of each water pressure-reducing valve shall be the following:
   1. Liquid-filled, direct-mounted, metal case.

3.07 PRESSURE-GAGE SCALE-RANGE SCHEDULE:

A. Scale Range for Water Service Piping: 0 to 160 psi.

B. Scale Range for Domestic Water Piping: 0 to 100 psi.

END OF SECTION 22 05 19

SECTION 22 05 23 - GENERAL-DUTY VALVES FOR PLUMBING PIPING

PART 1 - GENERAL

1.01 RELATED DOCUMENTS:

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01, Specification Sections, apply to this Section.

1.02 SUMMARY:

A. This Section includes:
   1. CPVC ball valves.
   2. PVC ball valves.

B. Related Sections:
   1. Division 22 Plumbing Piping Sections for specialty valves applicable to those sections only.
   2. Section 22 05 53 - Identification for Plumbing Piping and Equipment for valve tags and schedules.
   3. Division 33 Water Distribution Piping Sections for general-duty and specialty valves for site construction piping.

1.03 REFERENCE STANDARDS:

A. Applicable Standards (Latest Edition):
   1. ASME International (ASME):
      a. ASME B1.20.1 - Pipe Threads, General Purpose (Inch).
      b. ASME B16.1 - Cast Iron Pipe Flanges and Flanged Fittings.
      c. ASME B16.10 - Face-to-Face and End-to-End Dimensions of Valves.
      d. ASME B16.34 - Valves - Flanged, Threaded, and Welding End.
      e. ASME B31.9 - Building Services Piping.
   2. Manufacturers Standardization Society of The Valve and Fittings Industry, Inc. (MSS):
      a. MSS SP-45 - Bypass and Drain Connections.
      b. MSS SP-67 - Butterfly Valves.
      c. MSS SP-110 - Ball Valves, Threaded, Socket-Welding, Solder Joint, Grooved and Flared Ends.
   3. NSF International (NSF):
      a. NSF 61 - Drinking Water System Components - Health Effects.
      b. NSF 372 - Drinking Water System Components - Lead Content.

1.04 DEFINITIONS:

A. CWP: Cold working pressure.
B. EPDM: Ethylene propylene copolymer rubber.
C. NBR: Acrylonitrile-butadiene, Buna-N, or nitrile rubber.

1.05 SUBMITTALS:

A. Product Data: For each type of valve indicated.

1.06 QUALITY ASSURANCE:

A. Source Limitations for Valves: Obtain each type of valve from single source from single manufacturer.
B. ASME Compliance:
   1. ASME B16.10 and ASME B16.34 for ferrous valve dimensions and design criteria.

2. ASME B31.9 for building services piping valves.

C. NSF Compliance: NSF 61 and NSF 372 for valve materials for potable-water service.

1.07 DELIVERY, STORAGE, AND HANDLING:

A. Prepare valves for shipping as follows:
1. Protect internal parts against rust and corrosion.
2. Protect threads, flange faces, grooves, and weld ends.
3. Set angle, gate, and globe valves closed to prevent rattling.
4. Set ball and plug valves open to minimize exposure of functional surfaces.
5. Set butterfly valves closed or slightly open.
6. Block check valves in either closed or open position.

B. Use the following precautions during storage:
1. Maintain valve end protection.
2. Store valves indoors and maintain at higher than ambient dew point temperature. If outdoor storage is necessary, store valves off the ground in watertight enclosures.

C. Use sling to handle large valves; rig sling to avoid damage to exposed parts. Do not use handwheels or stems as lifting or rigging points.

PART 2 - PRODUCTS

2.01 GENERAL REQUIREMENTS FOR VALVES:

A. Refer to valve schedule articles for applications of valves.

B. Valve Pressure and Temperature Ratings: Not less than indicated and as required for system pressures and temperatures.

C. Valve Sizes: Same as upstream piping, unless otherwise indicated.

D. Valve Actuator Types:
1. Handwheel: For valves other than quarter-turn types.
2. Hand lever: For quarter-turn valves NPS 6 and smaller.

E. Valves in Insulated Piping: With 2-inch stem extensions and the following features:
1. Gate Valves: With rising stem.
2. Ball Valves: With extended operating handle of non-thermal-conductive material, and protective sleeve that allows operation of valve without breaking the vapor seal or disturbing insulation.

F. Valve-End Connections:
1. Threaded: With threads according to ASME B1.20.1.

G. Valve Bypass and Drain Connections: MSS SP-45.

2.02 CPVC BALL VALVES:

A. CPVC Union Ball Valves, Full Port, Socket or Threaded Ends:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. Boshart Industries LLC.
b. Hayward Industries, Inc.
c. NIBCO INC.
2. Description:
a. Standard: MSS SP-122.
b. Maximum Pressure/Temperature Rating: 125 psig at 73ºF.
c. Body Material: CPVC.
d. Body Design: Non-union type.

e. Ends: Detachable, socket or threaded.
f. Ball: CPVC.
g. Port: Full
h. Seals: PTFE or EPDM-rubber O-rings.
i. Handle: Tee shaped.

B. CPVC Non-Union Ball Valves, Full Port, Socket or Threaded Ends:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. Boshart Industries LLC.
b. Hayward Industries, Inc.
c. NIBCO INC.
2. Description:
a. Standard: MSS SP-122.
b. Maximum Pressure/Temperature Rating: 125 psig at 73ºF.
c. Body Material: CPVC.
d. Body Design: Union type.
e. Ends: Detachable, socket or threaded.
f. Ball: CPVC.
g. Port: Full
h. Seals: PTFE or EPDM-rubber O-rings.
i. Handle: Tee shaped.

2.03 PVC BALL VALVES:

A. PVC Union Ball Valves, Full Port, Socket or Threaded Ends:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. Boshart Industries LLC.
b. Hayward Industries, Inc.
c. NIBCO INC.
2. Description:
a. Standard: MSS SP-122.
b. Maximum Pressure/Temperature Rating: 125 psig at 73ºF.
c. Body Material: PVC.
d. Body Design: Union type.
e. Ends: Detachable, socket or threaded.
f. Ball: PVC.
g. Port: Full
h. Seals: PTFE or EPDM-rubber O-rings.
i. Handle: Tee shaped.

B. PVC Non-Union Ball Valves, Full Port, Socket or Threaded Ends:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. Boshart Industries LLC.
b. Hayward Industries, Inc.
c. NIBCO INC.
2. Description:
a. Standard: MSS SP-122.
b. Maximum Pressure/Temperature Rating: 125 psig at 73ºF.
c. Body Material: PVC.

d. Body Design: Non-union type.
e. Ends: Detachable, socket or threaded.
f. Ball: PVC.
g. Port: Full
h. Seals: PTFE or EPDM-rubber O-rings.
i. Handle: Tee shaped.

PART 3 - EXECUTION

3.01 EXAMINATION:

A. Examine valve interior for cleanliness, freedom from foreign matter, and corrosion. Remove special packing materials, such as blocks, used to prevent disc movement during shipping and handling.
B. Operate valves in positions from fully open to fully close. Examine guides and seats made accessible by such operations.
C. Examine threads on valve and mating pipe for form and cleanliness.
D. Examine mating flange faces for conditions that might cause leakage. Check bolting for proper size, length, and material. Verify that gasket is of proper size, that its material composition is suitable for service, and that it is free from defects and damage.
E. Do not attempt to repair defective valves; replace with new valves.

3.02 VALVE INSTALLATION:

A. Install valves with unions or flanges at each piece of equipment arranged to allow service, maintenance, and equipment removal without system shutdown.
B. Locate valves for easy access and provide separate support where necessary.
C. Install valves in horizontal piping with stem at or above center of pipe.
D. Install valves in position to allow full stem movement.

3.03 ADJUSTING:

A. Adjust or replace valve packing after piping systems have been tested and put into service but before final adjusting and balancing. Replace valves if persistent leaking occurs.

3.04 GENERAL REQUIREMENTS FOR VALVE APPLICATIONS:

A. If valve applications are not indicated, use the following:
   1. Shutoff Service: Ball.
   2. Throttling Service: Ball.
B. If valves with specified CWP ratings are not available, the same types of valves with higher CWP ratings may be substituted.

3.05 DOMESTIC, HOT- AND COLD-WATER VALVE SCHEDULE:

A. CPVC Pipe NPS 2 and Smaller:
   1. Where adjacent to a pump, backflow preventer, check valve, strainer, regulator, or other serviceable devices: CPVC union ball valve.
   2. Otherwise: CPVC non-union ball valve
B. PVC Pipe NPS 2 and Smaller:
   1. Where adjacent to a pump, backflow preventer, check valve, strainer, regulator, or other serviceable devices: PVC union ball valve.
   2. Otherwise: PVC non-union ball valve

END OF SECTION 22 05 23

SECTION 22 05 29 - HANGERS AND SUPPORTS FOR PLUMBING PIPING AND EQUIPMENT

PART 1 - GENERAL

1.01 RELATED DOCUMENTS:

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and DIVISION 01 Specification Sections, apply to this Section.

1.02 SUMMARY:

A. This Section includes:
   1. Metal pipe hangers and supports.
   2. Trapeze pipe hangers.
   3. Fiberglass pipe hangers.
   4. Thermal-hanger shield inserts.
   5. Fastener systems.
   6. Pipe positioning systems.

1.03 RELATED REQUIREMENTS:

1. Division 05 for structural-steel shapes and plates for trapeze hangers for pipe and equipment supports.

1.04 REFERENCE STANDARDS:

A. Applicable Standards (Latest Edition):
   1. American Society of Civil Engineers/Structural Engineering Institute (ASCE/SEI):
      a. ASCE/SEI 7 - Minimum Design Loads for Buildings and Other Structures.
   2. American Welding Society (AWS):
      a. AWS D1.1 - Structural Welding Code - Steel.
   3. ASME International (ASME):
      a. ASME B31.9 - Building Services Piping.
      b. 2007 ASME Boiler and Pressure Vessel Code: Section IX, "Welding and Brazing Qualifications."
   4. ASTM International (ASTM):
      a. ASTM A36 - Specification for Carbon Structural Steel.
      b. ASTM C533 - Specification for Calcium Silicate Block and Pipe Thermal Insulation.
      c. ASTM C552 - Specification for Cellular Glass Thermal Insulation.
      d. ASTM C591 - Specification for Unfaced Preformed Rigid Cellular Polyisocyanurate Thermal Insulation.
      e. ASTM C1107 - Specification for Packaged Dry, Hydraulic-Cement Grout (Nonshrink).
   5. The International Association of Plumbing and Mechanical Officials (IAPMO):
      a. IAPMO PS 42 - Pipe Alignment and Secondary Support Systems.
   6. Manufacturers Standardization Society of the Valve and Fittings Industry, Inc. (MSS):
      a. MSS SP-58 - Pipe Hangers and Supports - Materials, Design and Manufacture.
      b. MSS SP-69 - Pipe Hangers and Supports - Selection and Application.
      c. MSS SP-89 - Pipe Hangers and Supports - Fabrication and Installation Practices.
   7. The Society for Protective Coatings (SSPC):
      a. SSPC-PA 1 - Paint Application Specification No. 1: Shop, Field, and Maintenance Painting of Steel.

1.05 DEFINITIONS:
- A. MSS: Manufacturers Standardization Society of the Valve and Fittings Industry, Inc.

1.06 PERFORMANCE REQUIREMENTS:
- A. Structural Performance: Hangers and supports for plumbing piping and equipment shall withstand the effects of gravity loads and stresses within limits and under conditions indicated according to ASCE/SEI 7.
  1. Design supports for multiple pipes, including pipe stands, capable of supporting combined weight of supported systems, system contents, and test water.

1.07 SUBMITTALS:
- A. Product Data: For each type of product indicated.
- B. Shop Drawings: Show fabrication and installation details and include calculations for the following: Include Product Data for components:
  1. Trapeze pipe hangers.

PART 2 - PRODUCTS

2.01 METAL PIPE HANGERS AND SUPPORTS:
- A. Stainless-Steel Pipe Hangers and Supports:
  1. Description: MSS SP-58, Types 1 through 58 (except as noted in PART 3 - EXECUTION), factory-fabricated components.
  2. Padded Hangers: Hanger with fiberglass or other pipe insulation pad or cushion to support bearing surface of piping.
  3. Hanger Rods: Continuous-thread rod, nuts, and washer made of stainless steel.

2.02 TRAPEZE PIPE HANGERS:
- A. Description: MSS SP-69, Type 59, shop- or field-fabricated pipe-support assembly made from structural stainless-steel shapes with MSS SP-58 stainless-steel hanger rods, nuts, saddles, and U-bolts.

2.03 FIBERGLASS PIPE HANGERS:
- A. Clevis-Type, Fiberglass Pipe Hangers:
  1. Description: Similar to MSS SP-58, Type 1, steel pipe hanger except hanger is made of fiberglass or fiberglass-reinforced resin.
  2. Hanger Rods: Continuous-thread rod, washer, and nuts made of stainless steel.
- B. Strap-Type, Fiberglass Pipe Hangers:
  1. Description: Similar to MSS SP-58, Type 9 or Type 10, steel pipe hanger except hanger is made of fiberglass-reinforced resin.
  2. Hanger Rod and Fittings: Continuous-thread rod, washer, and nuts made of stainless steel.

2.04 THERMAL-HANGER SHIELD INSERTS:
- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  1. Carpenter & Paterson, Inc.
  2. PHS Industries, Inc.
  3. Pipe Shields, Inc.; a subsidiary of Piping Technology & Products, Inc.

4. Or Engineer Approved Equal.

B. Insulation-Insert Material for Cold Piping: ASTM C552, Type II cellular glass with 100-psig minimum compressive strength and vapor barrier.

C. Insulation-Insert Material for Hot Piping: ASTM C552, Type II cellular glass with 100-psig minimum compressive strength.

D. For Trapeze or Clamped Systems: Insert and shield shall cover entire circumference of pipe.

E. For Clevis or Band Hangers: Insert and shield shall cover lower 180 degrees of pipe.

F. Insert Length: Extend 2 inches beyond sheet metal shield for piping operating below ambient air temperature.

2.05 FASTENER SYSTEMS:

A. Mechanical-Expansion Anchors: Insert-wedge-type or stainless-steel anchors, for use in hardened Portland cement concrete; with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.

2.06 PIPE POSITIONING SYSTEMS:

A. Description: IAPMO PS 42, positioning system of metal brackets, clips, and straps for positioning piping in pipe spaces; for plumbing fixtures in commercial applications.

2.07 MISCELLANEOUS MATERIALS:

A. Aluminum: ASTM B221.

B. Stainless Steel: ASTM A240/A240M.

C. Threaded Rods: Continuously threaded. stainless-steel for indoor and outdoor applications. Mating nuts and washers of similar materials as rods.

D. Grout: ASTM C1107, factory-mixed and -packaged, dry, hydraulic-cement, nonshrink and nonmetallic grout; suitable for interior and exterior applications.

1. Properties: Nonstaining, noncorrosive, and nongaseous.
2. Design Mix: 5,000-psi, 28-day compressive strength.

PART 3 - EXECUTION

3.01 HANGER AND SUPPORT INSTALLATION:

A. Metal Pipe-Hanger Installation: Comply with MSS SP-69 and MSS SP-89. Install hangers, supports, clamps, and attachments as required to properly support piping from the building structure.

B. The following figure types given in Figure 1 of MSS SP-69 will not be acceptable: Types 5, 6, 7, 9, 10, 11, 12, 16, 19, 20, 23, 25, 27, 28, 29, and 30. However, Types 7, 9, 10, 10, 11, 19, and 23 may be used for nonferrous and plastic piping systems 2 inches and smaller.

C. Thermal-Hanger Shield Installation: Install in pipe hanger or shield for insulated piping.

D. Fastener System Installation:

1. Install mechanical-expansion anchors in concrete after concrete is placed and completely cured. Install fasteners according to manufacturer's written instructions. Do not use in lightweight concrete or in concrete slabs less than 4 inches thick. Powder actuated fasteners will not be permitted.

E. Pipe Positioning-System Installation: Install support devices to make rigid supply and waste piping connections to each plumbing fixture. See Division 22 Plumbing Fixture Sections for requirements for pipe positioning systems for plumbing fixtures.

F. Install hangers and supports complete with necessary attachments, inserts, bolts, rods, nuts, washers, and other accessories.
G. Install hangers and supports to allow controlled thermal and seismic movement of piping systems, to permit freedom of movement between pipe anchors, and to facilitate action of expansion joints, expansion loops, expansion bends, and similar units.
H. Install lateral bracing with pipe hangers and supports to prevent swaying.
I. Install building attachments within concrete slabs or attach to structural steel. Install additional attachments at concentrated loads, including valves, flanges, and strainers, NPS 2-1/2 and larger and at changes in direction of piping. Install concrete inserts before concrete is placed; fasten inserts to forms and install reinforcing bars through openings at top of inserts.
J. Load Distribution: Install hangers and supports so that piping live and dead loads and stresses from movement will not be transmitted to connected equipment.
K. Pipe Slopes: Install hangers and supports to provide indicated pipe slopes and to not exceed maximum pipe deflections allowed by ASME B31.9 for building services piping.
L. Insulated Piping:
    1. Attach clamps and spacers to piping.
        a. Piping Operating above Ambient Air Temperature: Clamp may project through insulation.
        b. Piping Operating below Ambient Air Temperature: Use thermal-hanger shield insert with clamp sized to match OD of insert.
        c. Do not exceed pipe stress limits allowed by ASME B31.9 for building services piping.
    2. Install MSS SP-58, Type 39, protection saddles if insulation without vapor barrier is indicated. Fill interior voids with insulation that matches adjoining insulation.
        a. Option: Thermal-hanger shield inserts may be used. Include steel weight-distribution plate for pipe NPS 4 and larger if pipe is installed on rollers.
    3. Install MSS SP-58, Type 40, protective shields on cold piping with vapor barrier. Shields shall span an arc of 180 degrees.
        a. Option: Thermal-hanger shield inserts may be used. Include steel weight-distribution plate for pipe NPS 4 and larger if pipe is installed on rollers.
    4. Shield Dimensions for Pipe: Not less than the following:
        a. NPS 1/4 to NPS 3-1/2: 12 inches long and 0.048 inch thick.
        b. NPS 4: 12 inches long and 0.06 inch thick.
        c. NPS 5 and NPS 6: 18 inches long and 0.06 inch thick.
        d. NPS 8 to NPS 14: 24 inches long and 0.075 inch thick.
        e. NPS 16 to NPS 24: 24 inches long and 0.105 inch thick.
    5. Pipes NPS 8 and Larger: Include wood or reinforced calcium-silicate-insulation inserts of length at least as long as protective shield.
    6. Thermal-Hanger Shields: Install with insulation same thickness as piping insulation.

3.02 ADJUSTING:

A. Hanger Adjustments: Adjust hangers to distribute loads equally on attachments and to achieve indicated slope of pipe.
B. Trim excess length of continuous-thread hanger and support rods to 1-1/2 inches.

3.03 PAINTING:

A. Touchup: Clean field welds and abraded areas of shop paint. Paint exposed areas immediately after erecting hangers and supports. Use same materials as used for shop painting. Comply with SSPC-PA 1 requirements for touching up field-painted surfaces.
   1. Apply paint by brush or spray to provide a minimum dry film thickness of 2.0 mils.

3.04 HANGER AND SUPPORT SCHEDULE:

A. Specific hanger and support requirements are in sections specifying piping systems and equipment.
B. Comply with MSS SP-69 for pipe-hanger selections and applications that are not specified in piping system sections.
C. Use stainless-steel pipe hangers and stainless-steel or corrosion-resistant attachments for hostile environment applications.
D. Use padded hangers for piping that is subject to scratching.
E. Use thermal-hanger shield inserts for insulated piping and tubing.
F. Horizontal-Piping Hangers and Supports: Unless otherwise indicated and except as specified in piping system sections, install the following types:
   1. Exception: The following figure types given in Figure 1 of MSS SP-69 will not be acceptable: Types 5, 6, 7, 9, 10, 11, and 12. However, Types 7, 9, 10, and 11 may be used for nonferrous and plastic piping systems 2 inches and smaller.
   2. Adjustable, Steel Clevis Hangers (MSS Type 1): For suspension of noninsulated or insulated, stationary pipes NPS 1/2 to NPS 30.
   3. Yoke-Type Pipe Clamps (MSS Type 2): For suspension of up to 1,050ºF, pipes NPS 4 to NPS 24, requiring up to 4-inches of insulation.
   4. Carbon- or Alloy-Steel, Double-Bolt Pipe Clamps (MSS Type 3): For suspension of pipes NPS 3/4 to NPS 36, requiring clamp flexibility and up to 4-inches of insulation.
   5. Steel Pipe Clamps (MSS Type 4): For suspension of cold and hot pipes NPS 1/2 to NPS 24 if little or no insulation is required.
   6. U-Bolts (MSS Type 24): For support of heavy pipes NPS 1/2 to NPS 30.
   7. Clips (MSS Type 26): For support of insulated pipes not subject to expansion or contraction.
   8. Pipe Saddle Supports (MSS Type 36): For support of pipes NPS 4 to NPS 36, with stainlesss steel-pipe base stanchion support and stainless-steel plate.
   9. Pipe Stanchion Saddles (MSS Type 37): For support of pipes NPS 4 to NPS 36, with steel-pipe base stanchion support and stainless steel floor flange or stainless-steel plate, and with U-bolt to retain pipe.
   10. Adjustable Pipe Saddle Supports (MSS Type 38): For stanchion-type support for pipes NPS 2-1/2 to NPS 36 if vertical adjustment is required, with stainless steel-pipe base stanchion support and stainless steel floor flange.
   11. Single-Pipe Rolls (MSS Type 41): For suspension of pipes NPS 1 to NPS 30, from two rods if longitudinal movement caused by expansion and contraction might occur.
   12. Adjustable Roller Hangers (MSS Type 43): For suspension of pipes NPS 2-1/2 to NPS 24, from single rod if horizontal movement caused by expansion and contraction might occur.
   13. Complete Pipe Rolls (MSS Type 44): For support of pipes NPS 2 to NPS 42 if longitudinal movement caused by expansion and contraction might occur but vertical adjustment is not necessary.

14. Pipe Roll and Plate Units (MSS Type 45): For support of pipes NPS 2 to NPS 24 if small horizontal movement caused by expansion and contraction might occur and vertical adjustment is not necessary.
15. Adjustable Pipe Roll and Base Units (MSS Type 46): For support of pipes NPS 2 to NPS 30 if vertical and lateral adjustment during installation might be required in addition to expansion and contraction.

G. Vertical-Piping Clamps: Unless otherwise indicated and except as specified in piping system sections, install the following types:
1. Extension Pipe or Riser Clamps (MSS Type 8): For support of pipe risers NPS 3/4 to NPS 24.
2. Stainless-Steel Riser Clamps (MSS Type 42): For support of pipe risers NPS 3/4 to NPS 24 if longer ends are required for riser clamps.

H. Hanger-Rod Attachments: Unless otherwise indicated and except as specified in piping system sections, install the following types:
1. Exception: The following figure type given in Figure 1 of MSS SP-69 will not be acceptable: Type 16.
2. Stainless Steel Turnbuckles (MSS Type 13): For adjustment up to 6 inches for heavy loads.
3. Stainless Steel Clevises (MSS Type 14): For 120 to 450ºF piping installations.
4. Swivel Turnbuckles (MSS Type 15): For use with MSS Type 11, split pipe rings.
5. Stainless Steel Weldless Eye Nuts (MSS Type 17): For 120 to 450ºF piping installations.

I. Building Attachments: Unless otherwise indicated and except as specified in piping system sections, install the following types:
1. Exception: The following figure types given in Figure 1 of MSS SP-69 will not be acceptable: 19, 20, 23, 25, 27, 28, 29, 30, and 34.
2. Stainless Steel or Malleable Concrete Inserts (MSS Type 18): For upper attachment to suspend pipe hangers from concrete ceiling.
3. Center-Beam Clamps (MSS Type 21): For attaching to center of bottom flange of beams.
4. Welded Beam Attachments (MSS Type 22): For attaching to bottom of beams if loads are considerable and rod sizes are large.
5. Welded-Stainless Steel Brackets: For support of pipes from below or for suspending from above by using clip and rod. Use one of the following for indicated loads:
   a. Light (MSS Type 31): 750 pounds.
   b. Medium (MSS Type 32): 1,500 pounds.
   c. Heavy (MSS Type 33): 3,000 pounds.
6. Plate Lugs (MSS Type 57): For attaching to steel beams if flexibility at beam is required.
7. Horizontal Travelers (MSS Type 58): For supporting piping systems subject to linear horizontal movement where headroom is limited.

J. Saddles and Shields: Unless otherwise indicated and except as specified in piping system sections, install the following types:
1. Stainless Steel-Pipe-Covering Protection Saddles (MSS Type 39): To fill interior voids with insulation that matches adjoining insulation.
2. Protection Shields (MSS Type 40): Of length recommended in writing by manufacturer to prevent crushing insulation.
3. Thermal-Hanger Shield Inserts: For supporting insulated pipe.

K. Spring Hangers and Supports: Unless otherwise indicated and except as specified in piping system sections, install the following types:
1. Restraint-Control Devices (MSS Type 47): Where indicated to control piping movement.

2. Spring Cushions (MSS Type 48): For light loads if vertical movement does not exceed 1-1/4 inches.
3. Spring-Cushion Roll Hangers (MSS Type 49): For equipping Type 41, roll hanger with springs.
4. Spring Sway Braces (MSS Type 50): To retard sway, shock, vibration, or thermal expansion in piping systems.
5. Variable-Spring Hangers (MSS Type 51): Preset to indicated load and limit variability factor to 25% to allow expansion and contraction of piping system from hanger.
6. Variable-Spring Base Supports (MSS Type 52): Preset to indicated load and limit variability factor to 25% to allow expansion and contraction of piping system from base support.
7. Variable-Spring Trapeze Hangers (MSS Type 53): Preset to indicated load and limit variability factor to 25% to allow expansion and contraction of piping system from trapeze support.
8. Constant Supports: For critical piping stress and if necessary to avoid transfer of stress from one support to another support, critical terminal, or connected equipment. Include auxiliary stops for erection, hydrostatic test, and load-adjustment capability. These supports include the following types:
    a. Horizontal (MSS Type 54): Mounted horizontally.
    b. Vertical (MSS Type 55): Mounted vertically.
    c. Trapeze (MSS Type 56): Two vertical type supports and one trapeze member.

L. Use mechanical-expansion anchors instead of building attachments where required in concrete construction.

M. Use pipe positioning systems in pipe spaces behind plumbing fixtures to support supply and waste piping for plumbing fixtures.

END OF SECTION 22 05 29

SECTION 22 05 53 – IDENTIFICATION FOR PLUMBING PIPING AND EQUIPMENT

PART 1 - GENERAL

1.01 RELATED DOCUMENTS:

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY:

A. This Section includes:
   1. Equipment labels.
   2. Warning signs and labels.
   3. Warning tape.
   4. Pipe labels.
   5. Valve tags.

1.03 REFERENCE STANDARDS:

A. Applicable Standards (Latest Edition):
   1. ASME International (ASME):
      a. ASME A13.1 - Scheme for the Identification of Piping Systems.

1.04 SUBMITTALS:

A. Product Data: For each type of product indicated.
B. Equipment Label Schedule: Include a listing of all equipment to be labeled with the proposed content for each label.
C. Valve numbering scheme.
D. Valve Schedules: For each piping system to include in maintenance manuals.

1.05 COORDINATION:

A. Coordinate installation of identifying devices with completion of covering and painting of surfaces where devices are to be applied.
B. Coordinate installation of identifying devices with locations of access panels and doors.
C. Install identifying devices before installing acoustical ceilings and similar concealment.

PART 2 - PRODUCTS

2.01 EQUIPMENT LABELS:

A. Plastic Labels for Equipment:
   1. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/8 inch thick and having predrilled holes for attachment hardware.
   2. Letter and Background Color: As indicated for specific application under Part 3.
   3. Maximum Temperature: Able to withstand temperatures up to 160ºF.
   4. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch
   5. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches, 1/2 inch for viewing distances up to 72 inches, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
   6. Fasteners: Stainless-steel rivets or self-tapping screws.
   7. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.
B. Label Content: Include equipment's Drawing designation and asset tag number.

2.02 LABELS:

A. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/8 inch thick, and having predrilled holes for attachment hardware.
B. Letter and Background Color: As indicated for specific application under Part 3.
C. Maximum Temperature: Able to withstand temperatures up to 160ºF.
D. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch.
E. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches, 1/2 inch for viewing distances up to 72 inches, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
F. Fasteners: Stainless-steel rivets or self-tapping screws.
G. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.
H. Label Content: Include caution and warning information, plus emergency notification instructions.

2.03 PIPE LABELS:

A. General Requirements for Manufactured Pipe Labels: Preprinted, color-coded, with lettering indicating service, and showing flow direction.
B. Self-Adhesive Pipe Labels: Printed plastic with contact-type, permanent-adhesive backing.
C. Pipe Label Contents: Include identification of piping service using same designations or abbreviations as used on Drawings. Also include:
    1. Pipe size.
    2. Flow-Direction Arrows: Include flow-direction arrows on distribution piping. Arrows may be either integral with label or applied separately.
    3. Lettering Size: Size letters in accordance with ASME A13.1 for piping.

2.04 VALVE TAGS:

A. Valve Tags: Stamped or engraved with 1/4-inch letters for piping system abbreviation and 1/2-inch numbers.
    1. Tag Material: Stainless steel, 0.024 inch minimum thickness and having predrilled or stamped holes for attachment hardware.
    2. Fasteners: Stainless-steel S-hook.
B. Valve Schedules: For each piping system, on 8-1/2 by 11-inch bond paper. Tabulate valve number, piping system, system abbreviation (as shown on valve tag), location of valve (room or space), normal operating position (open, closed, or modulating), and variations for identification. Mark valves for emergency shutoff and similar special uses.
    1. Valve-tag schedule shall be included in operation and maintenance data.

PART 3 - EXECUTION

3.01 PREPARATION:

A. Clean piping and equipment surfaces of incompatible primers, paints, and encapsulants, as well as dirt, oil, grease, release agents, and other substances that could impair bond of identification devices.

3.02 INSTALLATION, GENERAL REQUIREMENTS:

A. Coordinate installation of identifying devices with completion of covering and painting of surfaces where devices are to be applied.
B. Coordinate installation of identifying devices with locations of access panels and doors.

C. Install identifying devices before installing acoustical ceilings and similar concealment.
D. Locate identifying devices so that they are readily visible from the point of normal approach.

3.03 INSTALLATION OF EQUIPMENT LABELS, WARNING SIGNS, AND LABELS:

A. Permanently fasten labels on each item of mechanical equipment.
B. Sign and Label Colors:
   1. White letters on an ANSI Z535.1 safety-blue background.
C. Locate equipment labels where accessible and visible.

3.04 INSTALLATION OF PIPE LABELS:

A. Piping Color Coding: Painting of piping is specified in Section 09 96 00 "High-Performance Coatings.":
B. Install pipe labels showing service and flow direction with permanent adhesive on pipes.
C. Pipe-Label Locations: Locate pipe labels where piping is exposed or above accessible ceilings in finished spaces; machine rooms; accessible maintenance spaces such as shafts, tunnels, and plenums; and exterior exposed locations as follows:
   1. Within 3 ft. of each valve and control device.
   2. At access doors, manholes, and similar access points that permit view of concealed piping.
   3. Within 3 ft. of equipment items and other points of origination and termination .
   4. Spaced at maximum intervals of 25 ft. along each run. Reduce intervals to 10 ft. in areas of congested piping, ductwork, and equipment .
D. Do not apply plastic pipe labels or plastic tapes directly to bare pipes conveying fluids at temperatures of 125 deg F or higher. Where these pipes are to remain uninsulated, use a short section of insulation or use stenciled labels.
E. Flow-Direction Arrows: Use arrows to indicate direction of flow in pipes, including pipes where flow is allowed in both directions.
F. Pipe-Label Color Schedule.
   1. Domestic Cold-Water Piping: White letters on an ANSI Z535.1 safety-green background.
   2. Domestic Hot-Water Piping: White letters on an ANSI Z535.1 safety-green background.
   3. Domestic Hot-Water Return Piping White letters on an ANSI Z535.1 safety-green background.
   4. Sanitary Waste and Storm Drainage Piping: White letters on a black background.

3.05 INSTALLATION OF VALVE-TAGS:

A. Install tags on valves and control devices in piping systems, except check valves, valves within factory-fabricated equipment units, shutoff valves, faucets, convenience and lawn-watering hose connections, and similar roughing-in connections of end-use fixtures and units. List tagged valves in a valve schedule in the operating and maintenance manual.
B. Valve-Tag Application Schedule: Tag valves according to size, shape, and color scheme and with captions similar to those indicated in "Valve-Tag Size and Shape" Subparagraph below:
   1. Valve-Tag Size and Shape:
      a. Domestic Cold Water: 2 inches, round.
      b. Domestic Hot Water: 2 inches, round.
      c. Domestic Hot-Water Return: 2 inches, round.

END OF SECTION 22 05 53

SECTION 22 07 19 – PLUMBING PIPING INSULATION

PART 1 - GENERAL

1.01 RELATED DOCUMENTS:

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY:

A. This Section includes requirements for insulating plumbing piping and devices.
   1. Indoor Domestic Hot, Cold, and Recirculated Water Piping.
   2. Indoor Exposed Sanitary Drains, Domestic Water, Domestic Hot Water, and Stops for Plumbing Fixtures for People with Disabilities.
   3. Indoor and outdoor aeration piping.

1.03 REFERENCE STANDARDS:

A. Applicable Standards (latest editions):
   1. ASTM International (ASTM):
      a. ASTM B209 - Specification for Aluminum and Aluminum-Alloy Sheet and Plate.
      b. ASTM C534 - Specification for Preformed Flexible Elastomeric Cellular Thermal Insulation in Sheet and Tubular Form.
      c. ASTM C795 - Specification for Thermal Insulation for Use in Contact with Austenitic Stainless Steel.
      d. ASTM C871 - Test Methods for Chemical Analysis of Thermal Insulation Materials for Leachable Chloride, Fluoride, Silicate, and Sodium Ions.
      e. ASTM C921 - Practice for Determining the Properties of Jacketing Materials for Thermal Insulation.
      f. ASTM C1136 - Specification for Flexible, Low Permeance Vapor Retarders for Thermal Insulation.
      g. ASTM D1644 - Test Methods for Nonvolatile Content of Varnishes.
      h. ASTM D1784 - Specification for Rigid Poly(Vinyl Chloride) (PVC) Compounds and Chlorinated Poly(Vinyl Chloride) (CPVC) Compounds.
      i. ASTM E84 - Test Method for Surface Burning Characteristics of Building Materials.
      j. ASTM E96 - Test Methods for Water Vapor Transmission of Materials.
      k. ASTM F1249 - Test Method for Water Vapor Transmission Rate Through Plastic Film and Sheeting Using a Modulated Infrared Sensor.
   2. Military Specifications:
      a. MIL-A-24179A - Adhesive, Flexible Unicellular-Plastic Thermal Insulation.
      b. MIL-A-3316C - Adhesives, Fire-Resistant, Thermal Insulation.
      c. MIL-PRF-19565C - Coating Compounds, Thermal Insulation, Fire- and Water-Resistant, Vapor Barrier.

1.04 SUBMITTALS:

A. Product Data: For each type of product indicated. Include thermal conductivity, water-vapor permeance thickness, and jackets (both factory- and field-applied, if any).
B. Qualification Data: For qualified Installer.
C. Material Test Reports: From a qualified testing agency acceptable to authorities having jurisdiction indicating, interpreting, and certifying test results for compliance of insulation

materials, sealers, attachments, cements, and jackets, with requirements indicated. Include dates of tests and test methods employed.

1.05 QUALITY ASSURANCE:

A. Surface-Burning Characteristics: For insulation and related materials, as determined by testing identical products according to ASTM E84 by a testing agency acceptable to authorities having jurisdiction. Factory label insulation and jacket materials and adhesive, mastic, tapes, and cement material containers, with appropriate markings of applicable testing agency.
   1. All Insulation: Flame-spread index of 25 or less, and smoke-developed index of 50 or less.

B. Comply with the following applicable standards and other requirements specified for miscellaneous components:
   1. Supply and Drain Protective Shielding Guards: ICC A117.1.

1.06 DELIVERY, STORAGE, AND HANDLING:

A. Packaging: Insulation material containers shall be marked by manufacturer with appropriate ASTM standard designation, type and grade, and maximum use temperature.

1.07 COORDINATION:

A. Coordinate sizes and locations of supports, hangers, and insulation shields specified in Section 22 05 29 - Hangers and Supports for Plumbing Piping and Equipment.

B. Coordinate clearance requirements with piping Installer for piping insulation application. Before preparing piping Shop Drawings, establish and maintain clearance requirements for installation of insulation and field-applied jackets and finishes and for space required for maintenance.

C. Coordinate installation and testing of heat tracing.

1.08 SCHEDULING:

A. Schedule insulation application after pressure testing systems and, where required, after installing and testing heat tracing. Insulation application may begin on segments that have satisfactory test results.

B. Complete installation and concealment of plastic materials as rapidly as possible in each area of construction.

PART 2 - PRODUCTS

2.01 INSULATION MATERIALS:

A. Comply with requirements in "Piping Insulation Schedule, General," "Indoor Piping Insulation Schedule" articles for where insulating materials shall be applied.

B. Products shall not contain asbestos, lead, mercury, or mercury compounds.

C. Products that come in contact with stainless steel shall have a leachable chloride content of less than 50 ppm when tested according to ASTM C871.

D. Insulation materials for use on austenitic stainless steel shall be qualified as acceptable according to ASTM C795.

E. Foam insulation materials shall not use CFC or HCFC blowing agents in the manufacturing process.

F. Cellular Glass: Inorganic, incombustible, foamed or cellulated glass with annealed, rigid, hermetically sealed cells. Comply with ASTM C552.

1. Products: Subject to compliance with requirements, provide products by one of the following:
   a. Owens Corning
   b. Pittsburgh Corning
   c. Or Engineer approved equal.
2. Preformed Pipe Insulation, Type II, Class 2: With factory-applied ASJ jacket.
3. Fabricated shapes in accordance with ASTM C450, ASTM C585, and ASTM C1639.

G. Flexible Elastomeric Insulation: Closed-cell, sponge- or expanded-rubber materials. Comply with ASTM C534, Type I for tubular materials.
   1. Products: Subject to compliance with requirements, provide products by one of the following:
      a. Aeroflex USA, Inc.; Aerocel.
      b. Armacell LLC; AP Armaflex.
      c. K-Flex USA; Insul-Lock, Insul-Tube, and K-FLEX LS.

2.02 ADHESIVES:

A. Materials shall be compatible with insulation materials, jackets, and substrates and for bonding insulation to itself and to surfaces to be insulated, unless otherwise indicated.

B. Cellular-Glass Adhesive: One part acetoxy cure, silicone adhesive, sealant formulated for use at high temperatures. Cures to elastomeric solid at room temperature. Service temperature range minus 50 deg F to plus 400 deg F.

C. Flexible Elastomeric Adhesive: Comply with MIL-A-24179A, Type II, Class I.
   1. Products: Subject to compliance with requirements, provide products by one of the following:
      a. Aeroflex USA, Inc.; Aeroseal.
      b. Armacell LLC; Armaflex 520 Adhesive.
      c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 85-75.
      d. K-Flex USA; R-373 Contact Adhesive.
      e. Or Engineer Approved Equal.

D. PVC Jacket Adhesive: Compatible with PVC jacket.
   1. Products: Subject to compliance with requirements, provide products by one of the following:
      a. Dow Corning Corporation; 739, Dow Silicone.
      b. Johns Manville; Zeston Perma-Weld, CEEL-TITE Solvent Welding Adhesive.
      c. P.I.C. Plastics, Inc.; Welding Adhesive.
      d. Speedline Corporation; Polyco VP Adhesive.
      e. Or Engineer Approved Equal.

2.03 SEALANTS:

A. Joint Sealants:
   1. Products: Subject to compliance with requirements, provide products by one of the following:
      a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-76.
      b. Eagle Bridges - Marathon Industries; 405.
      c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 30-45.
      d. Mon-Eco Industries, Inc.; 44-05.

e. Pittsburgh Corning Corporation; Pittseal 444.
2. Materials shall be compatible with insulation materials, jackets, and substrates.
3. Permanently flexible, elastomeric sealant.
4. Service Temperature Range: +100 to +300ºF.
5. Color: White or gray.

B. PVC Jacket Flashing Sealants:
1. Products: Subject to compliance with requirements, provide products by one of the following:
a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-76.
b. Or Engineer Approved Equal.
2. Materials shall be compatible with insulation materials, jackets, and substrates.
3. Fire- and water-resistant, flexible, elastomeric sealant.
4. Service Temperature Range: +40 to +250ºF.
5. Color: White.

2.04 FIELD-APPLIED JACKETS:

A. Field-applied jackets shall comply with ASTM C921, Type I, unless otherwise indicated.
B. PVC Jacket: High-impact-resistant, UV-resistant PVC complying with ASTM D1784, Class 16354-C; thickness as scheduled; roll stock ready for shop or field cutting and forming. Thickness is indicated in field-applied jacket schedules.
1. Products: Subject to compliance with requirements, provide products by one of the following:
a. Johns Manville; Zeston.
b. P.I.C. Plastics, Inc.; FG Series.
c. Proto Corporation; LoSmoke.
d. Speedline Corporation; SmokeSafe.
e. Or Engineer Approved Equal.
2. Adhesive: As recommended by jacket material manufacturer.
3. Color: White.
4. Factory-fabricated fitting covers to match jacket if available; otherwise, field fabricate.
a. Shapes: 45- and 90-degree, short- and long-radius elbows, tees, valves, flanges, unions, reducers, end caps, soil-pipe hubs, traps, mechanical joints, and P-trap and supply covers for lavatories.

C. Metal Jacket:
1. Aluminum Jacket: Comply with ASTM B209, Alloy 3003, 3005, 3105, or 5005, Temper H-14.
a. Finish and thickness are indicated in field-applied jacket schedules.
b. Moisture Barrier for Indoor Applications: 1-mil- thick, heat-bonded polyethylene and kraft paper.
c. Moisture Barrier for Outdoor Applications: 3-mil- thick, heat-bonded polyethylene and kraft paper.
d. Factory-Fabricated Fitting Covers:
(1) Same material, finish, and thickness as jacket.
(2) Preformed two-piece or gore, 45- and 90-degree, short- and long-radius elbows.
(3) Tee covers.
(4) Flange and union covers.
(5) End caps.

(6) Beveled collars.
(7) Valve covers.
(8) Field fabricate fitting covers only if factory-fabricated fitting covers are not available.

2.05 TAPES:

A. PVC Tape: White vapor-retarder tape matching field-applied PVC jacket with acrylic adhesive; suitable for indoor and outdoor applications.
1. Products: Subject to compliance with requirements, provide products by one of the following:
a. ABI, Ideal Tape Division; 370 White PVC tape.
b. Compac Corporation; 130.
c. Venture Tape; 1506 CW NS.
d. Or Engineer Approved Equal.
2. Width: 2 inches.
3. Thickness: 6 mils.
4. Adhesion: 64 ounces force/inch in width.
5. Elongation: 500%.
6. Tensile Strength: 18 lbf./inch in width.

2.06 PROTECTIVE SHIELDING GUARDS:

A. Protective Shielding Pipe Covers:
1. Products: Subject to compliance with requirements, provide products by one of the following:
a. Engineered Brass Company.
b. Insul-Tect Products Co.; a subsidiary of MVG Molded Products.
c. McGuire Manufacturing.
d. Plumberex.
e. Truebro; a brand of IPS Corporation.
f. Zurn Industries, LLC; Tubular Brass Plumbing Products Operation.
g. Or Engineer Approved Equal.
2. Description: Manufactured plastic wraps for covering plumbing fixture hot- and cold-water supplies and trap and drain piping. Comply with Americans with Disabilities Act (ADA) requirements.
3. SECUREMENTS
a. Bands:
(1) Aluminum: ASTM B209, Alloy 3003, 3005, 3105, or 5005; Temper H-14, 0.020 inch thick, 1/2 inch wide with wing seal.
b. Staples: Outward-clinching insulation staples, nominal 3/4-inch-wide, stainless steel or Monel.

PART 3 - EXECUTION

3.01 EXAMINATION:

A. Examine substrates and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of insulation application.
1. Verify that systems to be insulated have been tested and are free of defects.
2. Verify that surfaces to be insulated are clean and dry.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION:

A. Clean and dry surfaces to receive insulation. Remove materials that will adversely affect insulation application.
B. Coordinate insulation installation with the tradesman installing heat tracing. Comply with requirements for heat tracing that apply to insulation.
C. Mix insulating cements with clean potable water; if insulating cements are to be in contact with stainless steel surfaces, use demineralized water.

3.03 GENERAL INSTALLATION REQUIREMENTS:

A. Install insulation materials, accessories, and finishes with smooth, straight, and even surfaces; free of voids throughout the length of piping including fittings, valves, and specialties.
B. Install insulation materials, forms, vapor barriers or retarders, jackets, and thicknesses required for each item of pipe system as specified in insulation system schedules.
C. Install accessories compatible with insulation materials and suitable for the service. Install accessories that do not corrode, soften, or otherwise attack insulation or jacket in either wet or dry state.
D. Install insulation with longitudinal seams at top and bottom of horizontal runs.
E. Install multiple layers of insulation with longitudinal and end seams staggered.
F. Do not weld brackets, clips, or other attachment devices to piping, fittings, and specialties.
G. Keep insulation materials dry during application and finishing.
H. Install insulation with tight longitudinal seams and end joints. Bond seams and joints with adhesive recommended by insulation material manufacturer.
I. Install insulation with least number of joints practical.
J. Apply adhesives, mastics, and sealants at manufacturer's recommended coverage rate and wet and dry film thicknesses.
K. Cut insulation in a manner to avoid compressing insulation more than 75% of its nominal thickness.
L. Finish installation with systems at operating conditions. Repair joint separations and cracking due to thermal movement.
M. Repair damaged insulation facings by applying same facing material over damaged areas. Extend patches at least 4 inches beyond damaged areas. Adhere, and seal patches similar to butt joints.
N. For above-ambient services, do not install insulation to the following:
    1. Vibration-control devices.
    2. Testing agency labels and stamps.
    3. Nameplates and data plates.
    4. Cleanouts.

3.04 PENETRATIONS:

A. Install insulation continuously through wall penetrations.
    1. Seal penetrations with flashing sealant.
    2. For applications requiring only indoor insulation, terminate insulation inside wall surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.
    3. Extend jacket of outdoor insulation outside wall flashing and overlap wall flashing at least 2 inches.
    4. Seal jacket to wall flashing with flashing sealant.

B. Insulation Installation at Interior Wall and Partition Penetrations (That Are Not Fire Rated): Install insulation continuously through walls and partitions.
C. Insulation Installation at Fire-Rated Wall and Partition Penetrations: Install insulation continuously through penetrations of fire-rated walls and partitions.
   1. Comply with requirements in Division 07 for firestopping and fire-resistive joint sealers.
D. Insulation Installation at Floor Penetrations:
   1. Pipe: Install insulation continuously through floor penetrations.
   2. Seal penetrations through fire-rated assemblies. Comply with requirements in Division 07.

3.05 GENERAL PIPE INSULATION INSTALLATION:

A. Requirements in this article generally apply to all insulation materials except where more specific requirements are specified in various pipe insulation material installation articles.
B. Insulation Installation on Fittings, Valves, Strainers, Flanges, and Unions:
   1. Install insulation over fittings, valves, strainers, flanges, unions, and other specialties with continuous thermal and vapor-retarder integrity unless otherwise indicated.
   2. Insulate pipe elbows using preformed fitting insulation or mitered fittings made from same material and density as adjacent pipe insulation. Each piece shall be butted tightly against adjoining piece and bonded with adhesive. Fill joints, seams, voids, and irregular surfaces with insulating cement finished to a smooth, hard, and uniform contour that is uniform with adjoining pipe insulation.
   3. Insulate tee fittings with preformed fitting insulation or sectional pipe insulation of same material and thickness as used for adjacent pipe. Cut sectional pipe insulation to fit. Butt each section closely to the next and hold in place with tie wire. Bond pieces with adhesive.
   4. Insulate valves using preformed fitting insulation or sectional pipe insulation of same material, density, and thickness as used for adjacent pipe. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. For valves, insulate up to and including the bonnets, valve stuffing-box studs, bolts, and nuts. Fill joints, seams, and irregular surfaces with insulating cement.
   5. Insulate strainers using preformed fitting insulation or sectional pipe insulation of same material, density, and thickness as used for adjacent pipe. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. Fill joints, seams, and irregular surfaces with insulating cement. Insulate strainers so strainer basket flange or plug can be easily removed and replaced without damaging the insulation and jacket. Provide a removable reusable insulation cover. For below-ambient services, provide a design that maintains vapor barrier.
   6. Insulate flanges and unions using a section of oversized preformed pipe insulation. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker.
   7. Cover segmented insulated surfaces with a layer of finishing cement and coat with a mastic. Install vapor-barrier mastic for below-ambient services and a breather mastic for above-ambient services. Reinforce the mastic with fabric-reinforcing mesh. Trowel the mastic to a smooth and well-shaped contour.
   8. For services not specified to receive a field-applied jacket except for flexible elastomeric and polyolefin, install fitted PVC cover over elbows, tees, strainers, valves, flanges, and

unions. Terminate ends with PVC end caps. Tape PVC covers to adjoining insulation facing using PVC tape.

9. Stencil or label the outside insulation jacket of each union with the word "union." Match size and color of pipe labels.

C. Insulate instrument connections for thermometers, pressure gages, pressure temperature taps, test connections, flow meters, sensors, switches, and transmitters on insulated pipes. Shape insulation at these connections by tapering it to and around the connection with insulating cement and finish with finishing cement, mastic, and flashing sealant.

D. Install removable insulation covers at locations indicated. Installation shall conform to the following:

1. Make removable flange and union insulation from sectional pipe insulation of same thickness as that on adjoining pipe. Install same insulation jacket as adjoining pipe insulation.
2. When flange and union covers are made from sectional pipe insulation, extend insulation from flanges or union long at least two times the insulation thickness over adjacent pipe insulation on each side of flange or union. Secure flange cover in place with stainless-steel or aluminum bands. Select band material compatible with insulation and jacket.
3. Construct removable valve insulation covers in same manner as for flanges, except divide the two-part section on the vertical center line of valve body.
4. When covers are made from block insulation, make two halves, each consisting of mitered blocks wired to stainless-steel fabric. Secure this wire frame, with its attached insulation, to flanges with tie wire. Extend insulation at least 2 inches over adjacent pipe insulation on each side of valve. Fill space between flange or union cover and pipe insulation with insulating cement. Finish cover assembly with insulating cement applied in two coats. After first coat is dry, apply and trowel second coat to a smooth finish.
5. Unless a PVC jacket is indicated in field-applied jacket schedules, finish exposed surfaces with a metal jacket.

3.06 INSTALLATION OF FLEXIBLE ELASTOMERIC INSULATION:

A. Seal longitudinal seams and end joints with manufacturers recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

B. Insulation Installation on Pipe Flanges:

1. Install pipe insulation to outer diameter of pipe flange.
2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of sheet insulation of same thickness as pipe insulation.
4. Secure insulation to flanges and seal seams with manufacturers recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

C. Insulation Installation on Pipe Fittings and Elbows:

1. Install mitered sections of pipe insulation.
2. Secure insulation materials and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

D. Insulation Installation on Valves and Pipe Specialties:

1. Install preformed valve covers manufactured of same material as pipe insulation when available.

2. When preformed valve covers are not available, install cut sections of pipe and sheet insulation to valve body. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
3. Install insulation to flanges as specified for flange insulation application.
4. Secure insulation to valves and specialties and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

3.07 INSTALLATION OF CELLULAR-GLASS INSULATION

A. Insulation Installation on Straight Pipes and Tubes:
1. Secure each layer of insulation to pipe with wire or bands, and tighten bands without deforming insulation materials.
2. Where vapor barriers are indicated, seal longitudinal seams, end joints, and protrusions with vapor-barrier mastic and joint sealant.
3. For insulation with jackets on above-ambient services, secure laps with outward-clinched staples at 6 inches o.c.
4. For insulation with jackets on below-ambient services, do not staple longitudinal tabs. Instead, secure tabs with additional adhesive, as recommended by insulation material manufacturer, and seal with vapor-barrier mastic and flashing sealant.

B. Insulation Installation on Pipe Flanges:
1. Install prefabricated pipe insulation to outer diameter of pipe flange.
2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of cellular-glass block insulation of same thickness as that of pipe insulation. Where voids are difficult to fill with block insulation, fill the voids with a fibrous insulation material suitable for the specific operating temperature.
4. Install jacket material with manufacturer's recommended adhesive, overlap seams at least 1 inch, and seal joints with flashing sealant.

C. Insulation Installation on Pipe Fittings and Elbows:
1. Install prefabricated sections of same material as that of straight segments of pipe insulation when available. Secure according to manufacturer's written instructions.
2. When preformed sections of insulation are not available, install mitered or routed sections of cellular-glass insulation. Secure insulation materials with wire or bands.

D. Insulation Installation on Valves and Pipe Specialties:
1. Install prefabricated sections of cellular-glass insulation to valve body.
2. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
3. Install insulation to flanges as specified for flange insulation application.

3.08 FIELD-APPLIED JACKET INSTALLATION:

A. Where PVC jackets are indicated, install with 1-inch overlap at longitudinal seams and end joints. Seal with manufacturers recommended adhesive.
1. Apply two continuous beads of adhesive to seams and joints, one bead under lap and the finish bead along seam and joint edge.

3.09 FINISHES:

A. Flexible Elastomeric Thermal Insulation: After adhesive has fully cured, apply two coats of insulation manufacturer's recommended protective coating.
B. Color: Final color as selected by Engineer. Vary first and second coats to allow visual inspection of the completed Work.
C. Do not field paint aluminum or stainless-steel jackets.

3.10 PLUMBING PIPING INSULATION SCHEDULE, GENERAL:

A. Acceptable preformed pipe and tubular insulation materials and thicknesses are identified for each piping system and pipe size range. If more than one material is listed for a piping system, selection from materials listed is Contractor's option.
B. Items Not Insulated: Unless otherwise indicated, do not install insulation on the following:
    1. Drainage piping located in crawl spaces.
    2. Underground piping.
    3. Chrome-plated pipes and fittings unless there is a potential for personnel injury.

3.11 PLUMBING PIPING INSULATION SCHEDULE:

A. Indoor Domestic Hot, Cold, and Recirculated Water:
    1. All Pipe Sizes: Insulation shall be the following:
        a. Flexible Elastomeric.
    2. Hot and Recirculated water 1 inch thick for pipe <1 1/2"; 1.5 inch thick for pipe =>1 1/2" pipe.
    3. Cold water 0.5" thick for pipe <1 1/2 inch think 1 inch thick for pipe =>1 1/2" pipe.
B. Exposed Sanitary Drains, Domestic Water, Domestic Hot Water, and Stops for Plumbing Fixtures for People with Disabilities:
    1. All Pipe Sizes: Insulation shall be one of the following:
        a. Flexible Elastomeric: 1/2 inch thick.
C. Floor Drains, Traps, and Sanitary Drain Piping within 10 Feet of Drain Receiving Condensate and Equipment Drain Water below 60ºF:
    1. All Pipe Sizes: Insulation shall be one of the following:
        a. Flexible Elastomeric: 1/2 inch thick.
D. Indoor and outdoor aeration piping:
    1. All Pipe Sizes: Insulation shall be one of the following:
        a. Cellular Glass: 1-1/2” thick.

3.12 INDOOR, FIELD-APPLIED JACKET SCHEDULE:

A. Install jacket over insulation material. For insulation with factory-applied jacket, install the field-applied jacket over the factory-applied jacket.
B. If more than one material is listed, selection from materials listed is Contractor's option.
C. Indoor or Outdoor Domestic Water Piping, Floor Drains and Traps, Exposed and less than 7’ above finished floor:
    1. PVC: 20 mils thick.
D. Indoor and outdoor aeration piping:
    1. Aluminum, Smooth or Stucco Embossed: 0.024 inch thick.

END OF SECTION 22 07 19

SECTION 22 11 16 - DOMESTIC WATER PIPING

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Ductile-iron pipe and fittings.
   2. CPVC piping.
   3. PVC pipe and fittings.
   4. Transition fittings.

1.02 ACTION SUBMITTALS

A. Product Data:
   1. Pipe and tube.
   2. Fittings.
   3. Joining materials.
   4. Transition fittings.

1.03 INFORMATIONAL SUBMITTALS

A. System purging and disinfecting activities report.
B. Field quality-control reports.

PART 2 - PRODUCTS

2.01 PIPING MATERIALS

A. Potable-water piping and components shall comply with NSF 14, NSF 61, and NSF 372. Include marking "NSF-pw" on piping.

2.02 DUCTILE-IRON PIPE AND FITTINGS

A. Mechanical-Joint, Ductile-Iron Pipe:
   1. AWWA C151/A21.51, with mechanical-joint bell and plain spigot end unless flanged ends are indicated.
   2. Glands, Gaskets, and Bolts: AWWA C111/A21.11, ductile- or gray-iron glands, rubber gaskets, and steel bolts.
B. Standard-Pattern, Mechanical-Joint Fittings:
   1. AWWA C110/A21.10, ductile or gray iron.
   2. Glands, Gaskets, and Bolts: AWWA C111/A21.11, ductile- or gray-iron glands, rubber gaskets, and steel bolts.
C. Compact-Pattern, Mechanical-Joint Fittings:
   1. AWWA C153/A21.53, ductile iron.
   2. Glands, Gaskets, and Bolts: AWWA C111/A21.11, ductile- or gray-iron glands, rubber gaskets, and steel bolts.
D. Push-on-Joint, Ductile-Iron Pipe:
   1. AWWA C151/A21.51.
   2. Push-on-joint bell and plain spigot end unless grooved or flanged ends are indicated.
E. Standard-Pattern, Push-on-Joint Fittings:
   1. AWWA C110/A21.10, ductile or gray iron.
   2. Gaskets: AWWA C111/A21.11, rubber.
F. Compact-Pattern, Push-on-Joint Fittings:
   1. AWWA C153/A21.53, ductile iron.

2. Gaskets: AWWA C111/A21.11, rubber.

G. Plain-End, Ductile-Iron Pipe: AWA C151/A21.51.

2.03 CPVC PIPING

A. CPVC Pipe: ASTM F441/F441M, with wall thickness as indicated in "Piping Applications" Article.
   1. CPVC Socket Fittings: ASTM F439 for Schedule 80.
   2. CPVC Threaded Fittings: ASTM F437, Schedule 80.

2.04 PVC PIPE AND FITTINGS

A. PVC Pipe: ASTM D1785, with wall thickness as indicated in "Piping Applications" Article.
B. PVC Socket Fittings: ASTM D2467 for Schedule 80.
C. PVC Schedule 80 Threaded Fittings: ASTM D2464.

2.05 PIPING JOINING MATERIALS

A. Pipe-Flange Gasket Materials:
   1. AWWA C110/A21.10, rubber, flat face, 1/8 inch thick or ASME B16.21, nonmetallic and asbestos free unless otherwise indicated.
   2. Full-face or ring type unless otherwise indicated.
B. Solvent Cements for Joining PVC Piping: ASTM D2564. Include primer according to ASTM F656.
   1. Solvent Cements for Joining PVC Piping: ASTM D2564. Include primer according to ASTM F656.
C. Plastic, Pipe-Flange Gaskets, Bolts, and Nuts: Type and material recommended by piping system manufacturer unless otherwise indicated.

2.06 ENCASEMENT FOR PIPING

A. Standard: ASTM A674 or AWWA C105/A21.5.
B. Form: Sheet or tube.
C. Color: Black or natural.

2.07 TRANSITION FITTINGS

A. General Requirements:
   1. Same size as pipes to be joined.
   2. Pressure rating at least equal to pipes to be joined.
   3. End connections compatible with pipes to be joined.
B. Fitting-Type Transition Couplings: Manufactured piping coupling or specified piping system fitting.
C. Sleeve-Type Transition Coupling: AWWA C219.
D. Plastic-to-Metal Transition Fittings:
   1. Description:
      a. CPVC or PVC one-piece fitting with manufacturer's Schedule 80 equivalent dimensions.
      b. One end with threaded brass insert and one solvent-cement-socket or threaded end.
E. Plastic-to-Metal Transition Unions:
   1. Description:
      a. CPVC or PVC four-part union.
      b. Stainless steel threaded end.
      c. Solvent-cement-joint or threaded plastic end.
      d. Rubber O-ring.
      e. Union nut.

PART 3 - EXECUTION

3.01 PIPING APPLICATIONS

A. Transition and special fittings with pressure ratings at least equal to piping rating may be used in applications below unless otherwise indicated.

B. Flanges and unions may be used for aboveground piping joints unless otherwise indicated.

C. Under-building-slab, domestic water, building-service piping, NPS 3 and smaller, shall be the following:
   1. PVC, Schedule 80; socket fittings; and solvent-cemented joints.

D. Under-building-slab, domestic water, building-service piping, NPS 4 and larger, shall be the following:
   1. Ductile iron pipe.

E. Aboveground domestic water piping, NPS 3 and smaller, shall be one of the following:
   1. CPVC, Schedule 80; socket fittings; and solvent-cemented joints. Hot water pipe and hot water recirculation pipe.
   2. CPVC, Schedule 80 pipe; CPVC, Schedule 80 threaded fittings; and threaded joints. Hot water pipe and hot water recirculation pipe.
   3. PVC, Schedule 80; socket fittings; and solvent-cemented joints. Cold water pipe.

F. Aboveground domestic water piping, NPS 4 and larger, shall be the following:
   1. Mechanical-joint, ductile-iron pipe; standard- or compact-pattern, mechanical-joint fittings; and mechanical joints.

3.02 EARTHWORK

A. Comply with requirements for excavating, trenching, and backfilling specified in Division 31.

3.03 INSTALLATION OF PIPING

A. Drawing plans, schematics, and diagrams indicate general location and arrangement of domestic water piping. Indicated locations and arrangements are used to size pipe and calculate friction loss, expansion, and other design considerations. Install piping as indicated unless deviations to layout are approved on coordination drawings.

B. Install ductile-iron piping under building slab with restrained joints according to AWWA C600 and AWWA M41.

C. Install underground ductile-iron pipe in PE encasement according to ASTM A674 or AWWA C105/A21.5.

D. Install valves according to the following:
   1. Section 220523.12 "Ball Valves for Plumbing Piping."

E. Install domestic water piping level without pitch and plumb.

F. Install piping concealed from view and protected from physical contact by building occupants unless otherwise indicated and except in equipment rooms and service areas.

G. Install piping exposed and at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.

H. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal, and coordinate with other services occupying that space.

I. Install piping to permit valve servicing.

J. Install nipples, unions, special fittings, and valves with pressure ratings the same as or higher than the system pressure rating used in applications below unless otherwise indicated.

K. Install piping free of sags and bends.

L. Install fittings for changes in direction and branch connections.

M. Install thermostats in hot-water circulation piping. Comply with requirements for thermostats in Section 221123 "Domestic Water Pumps."

N. Install thermometers on outlet piping from each water heater. Comply with requirements for thermometers in Section 220519 "Meters and Gages for Plumbing Piping."
O. Install sleeves for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Section 220517 "Sleeves and Sleeve Seals for Plumbing Piping."
P. Install sleeve seals for piping penetrations of concrete walls and slabs. Comply with requirements for sleeve seals specified in Section 220517 "Sleeves and Sleeve Seals for Plumbing Piping."
Q. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Section 220518 "Escutcheons for Plumbing Piping."

3.04 JOINT CONSTRUCTION

A. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.
B. Remove scale, slag, dirt, and debris from inside and outside of pipes, tubes, and fittings before assembly.
C. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
    1. Apply appropriate tape or thread compound to external pipe threads.
    2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged.
D. Flanged Joints: Select appropriate asbestos-free, nonmetallic gasket material in size, type, and thickness suitable for domestic water service. Join flanges with gasket and bolts according to ASME B31.9.
E. Joint Construction for Solvent-Cemented Plastic Piping: Clean and dry joining surfaces. Join pipe and fittings according to the following:
    1. Comply with ASTM F402 for safe-handling practice of cleaners, primers, and solvent cements. Apply primer.
    2. CPVC Piping: Join according to ASTM D2846/D2846M Appendix.
    3. PVC Piping: Join according to ASTM D2855.
F. Joints for Dissimilar-Material Piping: Make joints using adapters compatible with materials of both piping systems.

3.05 INSTALLATION OF TRANSITION FITTINGS

A. Install transition couplings at joints of dissimilar piping.
B. Transition Fittings in Underground Domestic Water Piping:
    1. Fittings for NPS 1-1/2 and Smaller: Fitting-type coupling.
    2. Fittings for NPS 2 and Larger: Sleeve-type coupling.
C. Transition Fittings in Aboveground Domestic Water Piping NPS 2 and Smaller: Plastic-to-metal transition fittings or unions.

3.06 INSTALLATION OF DIELECTRIC FITTINGS

A. Install dielectric fittings in piping at connections of dissimilar metal piping and tubing.
B. Dielectric Fittings for NPS 2 and Smaller: Use dielectric couplings, nipples, or unions.
C. Dielectric Fittings for NPS 2-1/2 to NPS 4: Use dielectric flanges, flange kits, or nipples.
D. Dielectric Fittings for NPS 5 and Larger: Use dielectric flange kits.

3.07 INSTALLATION OF HANGERS AND SUPPORTS

A. Comply with requirements for hangers, supports, and anchor devices in Section 220529 "Hangers and Supports for Plumbing Piping and Equipment."

B. Install hangers for stainless steel tubing and piping, with maximum horizontal spacing and minimum rod diameters, to comply with MSS SP-58, locally enforced codes, and authorities having jurisdiction requirements, whichever are most stringent.
C. Install vinyl-coated hangers for CPVC and PVC piping, with maximum horizontal spacing and minimum rod diameters, to comply with manufacturer's written instructions, locally enforced codes, and authorities having jurisdiction requirements, whichever are most stringent.
D. Support horizontal piping within 12 inches of each fitting.
E. Support vertical runs of stainless steel tubing and piping to comply with MSS SP-58, locally enforced codes, and authorities having jurisdiction requirements, whichever are most stringent.
F. Support vertical runs of CPVC and PVC piping to comply with manufacturer's written instructions, locally enforced codes, and authorities having jurisdiction requirements, whichever are most stringent.

3.08 CONNECTIONS

A. Drawings indicate general arrangement of piping, fittings, and specialties.
B. When installing piping adjacent to equipment and machines, allow space for service and maintenance.
C. Connect domestic water piping to exterior water-service piping. Use transition fitting to join dissimilar piping materials.
D. Connect domestic water piping to water-service piping with shutoff valve; extend and connect to the following:
    1. Water Heaters: Cold-water inlet and hot-water outlet piping in sizes indicated, but not smaller than sizes of water heater connections.
    2. Plumbing Fixtures: Cold- and hot-water-supply piping in sizes indicated, but not smaller than that required by plumbing code.
    3. Equipment: Cold- and hot-water-supply piping as indicated, but not smaller than equipment connections. Provide shutoff valve and union for each connection. Use flanges instead of unions for NPS 2-1/2 and larger.

3.09 IDENTIFICATION

A. Identify system components. Comply with requirements for identification materials and installation in Section 220553 "Identification for Plumbing Piping and Equipment."

3.10 ADJUSTING

A. Perform the following adjustments before operation:
    1. Close drain valves, hydrants, and hose bibbs.
    2. Open shutoff valves to fully open position.
    3. Adjust balancing valves in hot-water-circulation return piping to provide adequate flow.
        a. Manually adjust ball-type balancing valves in hot-water-circulation return piping to provide hot-water flow in each branch.
    4. Remove plugs used during testing of piping and for temporary sealing of piping during installation.
    5. Remove and clean strainer screens. Close drain valves and replace drain plugs.
    6. Check plumbing specialties and verify proper settings, adjustments, and operation.

3.11 FIELD QUALITY CONTROL

A. Perform the following tests and inspections:
    1. Piping Inspections:
        a. Do not enclose, cover, or put piping into operation until it has been inspected and approved by authorities having jurisdiction.

b. During installation, notify authorities having jurisdiction at least one day before inspection must be made. Perform tests specified below in presence of authorities having jurisdiction:
   1) Roughing-in Inspection: Arrange for inspection of piping before concealing or closing in after roughing in and before setting fixtures.
   2) Final Inspection: Arrange for authorities having jurisdiction to observe tests specified in "Piping Tests" Subparagraph below and to ensure compliance with requirements.
c. Reinspection: If authorities having jurisdiction find that piping will not pass tests or inspections, make required corrections and arrange for reinspection.
d. Reports: Prepare inspection reports and have them signed by authorities having jurisdiction.

2. Piping Tests:
   a. Fill domestic water piping. Check components to determine that they are not air bound and that piping is full of water.
   b. Test for leaks and defects in new piping and parts of existing piping that have been altered, extended, or repaired. If testing is performed in segments, submit a separate report for each test, complete with diagram of portion of piping tested.
   c. Leave domestic water piping uncovered and unconcealed until it has been tested and approved. Expose work that was covered or concealed before it was tested.
   d. Cap and subject piping to static water pressure of 50 psig above operating pressure, without exceeding pressure rating of piping system materials. Isolate test source and allow it to stand for four hours. Leaks and loss in test pressure constitute defects that must be repaired.
   e. Repair leaks and defects with new materials, and retest piping or portion thereof until satisfactory results are obtained.
   f. Prepare reports for tests and for corrective action required.

B. Domestic water piping will be considered defective if it does not pass tests and inspections.
C. Prepare test and inspection reports.

3.12 CLEANING

A. Clean and disinfect potable domestic water piping as follows:
   1. Purge new piping and parts of existing piping that have been altered, extended, or repaired before using.
   2. Use purging and disinfecting procedures prescribed by authorities having jurisdiction; if methods are not prescribed, use procedures described in either AWWA C651 or AWWA C652 or follow procedures described below:
      a. Flush piping system with clean, potable water until dirty water does not appear at outlets.
      b. Fill and isolate system according to either of the following:
         1) Fill system or part thereof with water/chlorine solution with at least 50 ppm of chlorine. Isolate with valves and allow to stand for 24 hours.
         2) Fill system or part thereof with water/chlorine solution with at least 200 ppm of chlorine. Isolate and allow to stand for three hours.
      c. Flush system with clean, potable water until no chlorine is in water coming from system after the standing time.
      d. Repeat procedures if biological examination shows contamination.
      e. Submit water samples in sterile bottles to authorities having jurisdiction.
B. Clean interior of domestic water piping system. Remove dirt and debris as work progresses.

END OF SECTION 22 11 16

SECTION 22 11 19 - DOMESTIC WATER PIPING SPECIALTIES

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Vacuum breakers.
   2. Backflow preventers.
   3. Balancing valves.
   4. Temperature-actuated, water mixing valves.
   5. Strainers for domestic water piping.
   6. Hose bibbs.
   7. Wall hydrants.
   8. Water-hammer arresters.
   9. Flexible connectors.
   10. Outlet box (ice machine).

B. Related Requirements:
   1. Section 220519 "Meters and Gauges for Plumbing Piping" for thermometers, pressure gauges, and flow meters in domestic water piping.

1.02 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings: For domestic water piping specialties.
   1. Include diagrams for power, signal, and control wiring.

1.03 INFORMATIONAL SUBMITTALS

A. Test and inspection reports.

B. Field quality-control reports.

1.04 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For domestic water piping specialties to include in emergency, operation, and maintenance manuals.

PART 2 - PRODUCTS

2.01 GENERAL REQUIREMENTS FOR PIPING SPECIALTIES

A. Domestic water piping specialties intended to convey or dispense water for human consumption are to comply with the SDWA, requirements of authorities having jurisdiction, and NSF 61 and NSF 372, or to be certified in compliance with NSF 61 and NSF 372 by an American National Standards Institute (ANSI)-accredited third-party certification body that the weighted average lead content at wetted surfaces is less than or equal to 0.25 percent.

2.02 PERFORMANCE REQUIREMENTS

A. Minimum Working Pressure for Domestic Water Piping Specialties: 125 psig unless otherwise indicated.

2.03 VACUUM BREAKERS

A. Hose-Connection Vacuum Breakers:
   1. Standard: ASSE 1011.
   2. Body: Stainless steel, nonremovable, with manual drain.
   3. Outlet Connection: Garden-hose threaded complying with ASME B1.20.7.

4. Finish: Polished stainless steel.

2.04 BACKFLOW PREVENTERS

A. Reduced-Pressure-Principle Backflow Preventers:
   1. Standard: ASSE 1013.
   2. Operation: Continuous-pressure applications.
   3. Pressure Loss: 12 psig maximum, through middle third of flow range.
   4. Size: As scheduled on drawings.
   5. Design Flow Rate: As scheduled on drawings.
   6. Pressure Loss at Design Flow Rate: 12 psig for sizes NPS 2 and smaller; 12psig for NPS 2-1/2 and larger.
   7. Body: Stainless steel for NPS 2 and smaller; stainless steel for NPS 2-1/2 and larger.
   8. End Connections: Threaded for NPS 2 and smaller; flanged for NPS 2-1/2 and larger.
   9. Configuration: Designed for horizontal, straight-through flow.
   10. Accessories:
      a. Valves NPS 2 and Smaller: Ball type with threaded ends on inlet and outlet.
      b. Valves NPS 2-1/2 and Larger: Outside-screw and yoke-gate type with flanged ends on inlet and outlet.
      c. Air-Gap Fitting: ASME A112.1.2, matching backflow-preventer connection.

B. Hose-Connection Backflow Preventers
   1. Standard: ASSE 1052.
   2. Operation: Up to 10-foot head of water back pressure.
   3. Inlet Size: NPS 3/4.
   4. Outlet Size: Garden-hose thread complying with ASME B1.20.7.
   5. Capacity: At least 3-gpm flow.

2.05 BALANCING VALVES

A. Memory-Stop Balancing Valves.
   1. Standard: MSS SP-110 for two-piece, copper-alloy ball valves.
   2. Pressure Rating: 400-psig minimum CWP.
   3. Size: NPS 2 or smaller.
   4. Body: Copper alloy.
   5. Port: Standard or full port.
   6. Ball: Chrome-plated brass or stainless steel.
   7. Seats and Seals: Replaceable.
   8. End Connections: Solder joint or threaded.
   9. Handle: Vinyl-covered steel with memory-setting device.

2.06 TEMPERATURE-ACTUATED, WATER MIXING VALVES

A. Water-Temperature Limiting Devices (Serving Lavatories, kitchen sink and hand sink):
   1. Standard: ASSE 1070.
   2. Pressure Rating: 125 psig.
   3. Type: Thermostatically controlled, water mixing valve.
   4. Material: Bronze body with corrosion-resistant interior components.
   5. Connections: Threaded inlets and outlet.
   6. Accessories: Check stops on hot- and cold-water supplies, and adjustable, temperature-control handle.
   7. Tempered-Water Setting: 110°F.
   8. Valve Finish: Chrome plated.
   9. Wall box for sinks without a cabinet below.

B. Primary, Thermostatic, Water Mixing Valves (TMV-1):

1. Standard: ASSE/ISEA XZ 358.1.
2. Pressure Rating: 125 psig minimum unless otherwise indicated.
3. Type: Exposed-mounted, thermostatically controlled, water mixing valve.
4. Material: Bronze body with corrosion-resistant interior components.
5. Connections: Threaded inlets and outlet.
6. Accessories: Check stops on hot- and cold-water supplies, and adjustable.
7. Tempered-Water Setting: 85°F.
8. Tempered-Water Design Flow Rate: 23 gpm.
9. Valve Finish: Brass.
10. Positive Shut off when cold supply is lost.
11. Built in cold water bypass.
12. ASSE 1017..

2.07 STRAINERS FOR DOMESTIC WATER PIPING

A. Y-Pattern Strainers:
   1. Pressure Rating: 125 psig minimum unless otherwise indicated.
   2. Body: Stainless steel.
   3. End Connections: Threaded for NPS 2 and smaller; flanged for NPS 2-1/2 and larger.
   4. Screen: Stainless steel with round perforations unless otherwise indicated.
   5. Perforation Size:
      a. Strainers NPS 2 and Smaller: 0.033 inch.
      b. Strainers NPS 2-1/2 to NPS 4: 0.045 inch.
      c. Strainers NPS 5 and Larger: 0.10 inch.
   6. Drain: Factory-installed, hose-end drain valve.

2.08 HOSE BIBBS

A. Hose Bibbs:
   1. Standard: ASME A112.18.1 for sediment faucets.
   2. Body Material: Stainless steel.
   3. Seat: Stainless steel, replaceable.
   4. Supply Connections: NPS 3/4 threaded inlet.
   5. Outlet Connection: Garden-hose thread complying with ASME B1.20.7.
   6. Pressure Rating: 125 psig.
   7. Vacuum Breaker: Integral nonremovable, drainable, hose-connection vacuum breaker complying with ASSE 1011.
   8. Finish: Polished stainless steel.
   9. Operation: Wheel handle.

2.09 WALL HYDRANTS

A. Nonfreeze Vacuum Breaker Wall Hydrants:
   1. Standard: ASSE 1019, Type A or Type B.
   2. Type: Automatic draining with integral air-inlet valve.
   3. Classification: Type B, for automatic draining with hose removed or with hose attached and nozzle closed.
   4. Pressure Rating: 125 psig.
   5. Operation: Wheel handle.
   6. Casing and Operating Rod: Of length required to match wall thickness. Include wall clamp.
   7. Inlet: NPS 1/2 or NPS 3/4.
   8. Outlet: Exposed with garden-hose thread complying with ASME B1.20.7.

2.10 WATER-HAMMER ARRESTERS

A. Water-Hammer Arresters:
   1. Standard: ASSE 1010 or PDI-WH 201.
   2. Type: Metal bellows, piston or diaphragm.
   3. Size: ASSE 1010, Sizes AA and A through F, or PDI-WH 201, Sizes A through F.

2.11 FLEXIBLE CONNECTORS

A. Stainless Steel-Hose Flexible Connectors: Corrugated-stainless steel tubing with stainless steel wire-braid covering and ends welded to inner tubing.
   1. Working-Pressure Rating: Minimum 200 psig.
   2. End Connections NPS 2 and Smaller: Threaded steel-pipe nipple.
   3. End Connections NPS 2-1/2 and Larger: Flanged steel nipple.

2.12 OUTLET BOX

A. High impact polystyrene.
B. ¼ turn shut-off valve.
C. Water hammer arrester.
D. Threaded connection.
E. Brass body assembly.
F. Complies with NSF 61, Section 9.

PART 3 - EXECUTION

3.01 INSTALLATION OF PIPING SPECIALTIES

A. Backflow Preventers: Install in each water supply to mechanical equipment and systems and to other equipment and water systems that may be sources of contamination. Comply with authorities having jurisdiction.
   1. Locate backflow preventers in same room as connected equipment or system.
   2. Install drain for backflow preventers with atmospheric-vent drain connection with air-gap fitting, fixed air-gap fitting, or equivalent positive pipe separation of at least two pipe diameters in drain piping and pipe-to-floor drain. Locate air-gap device attached to or under backflow preventer. Simple air breaks are unacceptable for this application.
   3. Do not install bypass piping around backflow preventers.
B. Temperature-Actuated, Water Mixing Valves: Install with check stops or shutoff valves on inlets and with shutoff valve on outlet.
   1. Install cabinet-type units recessed in or surface mounted on wall as specified.
C. Y-Pattern Strainers: For water, install on supply side of each water pressure-reducing valve.
D. Outlet Boxes: Install boxes recessed in wall or surface mounted on wall. Install 1-1/2-by-3-1/2-inch fire-retardant-treated-wood blocking, wall reinforcement between studs. Comply with requirements for fire-retardant-treated-wood blocking in Section 06 10 00 "Rough Carpentry."
E. Hose Stations: Install with check stops or shutoff valves on inlets and with thermometer on outlet.
   1. Install cabinet-type units recessed in or surface mounted on wall as specified. Install 1-1/2-by-3-1/2-inch fire-retardant-treated-wood blocking, wall reinforcement between studs. Comply with requirements for fire-retardant-treated-wood blocking in Section 061000 "Rough Carpentry."
F. Water-Hammer Arresters: Install in water piping in accordance with PDI-WH 201.

3.02 PIPING CONNECTIONS

A. Drawings indicate general arrangement of piping, fittings, and specialties.

B. When installing piping specialties adjacent to equipment and machines, allow space for service and maintenance.

3.03 IDENTIFICATION

A. Plastic Labels for Equipment: Install engraved plastic-laminate equipment nameplate or sign on or near each of the following:
   1. Vacuum breakers.
   2. Backflow preventers.
   3. Water pressure-reducing valves.
   4. Temperature-actuated, water mixing valves.
   5. Wall hydrants.

B. Distinguish among multiple units, inform operator of operational requirements, indicate safety and emergency precautions, and warn of hazards and improper operations, in addition to identifying unit. Nameplates and signs are specified in Section 22 05 53 "Identification for Plumbing Piping and Equipment."

3.04 ADJUSTING

A. Set field-adjustable pressure set points of water pressure-reducing valves.

B. Set field-adjustable temperature set points of temperature-actuated, water mixing valves.

C. Adjust each reduced-pressure-principle backflow preventer in accordance with manufacturer's written instructions, authorities having jurisdiction and the device's reference standard.

3.05 FIELD QUALITY CONTROL

A. Perform the following tests and inspections.
   1. Test each reduced-pressure-principle backflow preventer according to authorities having jurisdiction and the device's reference standard.
   2. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
   3. Operational Test: After electrical circuitry has been energized, start units to confirm unit operation.
   4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

B. Domestic water piping specialties will be considered defective if they do not pass tests and inspections.

C. Prepare test and inspection reports.

END OF SECTION 22 11 19

SECTION 22 11 23 – DOMESTIC WATER PUMPS

PART 1 - GENERAL

1.01 RELATED DOCUMENTS:

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY:

A. This Section includes:
   1. Recirculation Pump

1.03 DEFINITIONS:

A. Low Voltage: As defined in NFPA 70 for circuits and equipment operating at less than 50V or for remote-control, signaling power-limited circuits.

1.04 REFERENCE STANDARDS:

A. Applicable Standards (Latest Edition):
   1. ASTM International (ASTM):
      a. ASTM B 584 - Specification for Copper Alloy Sand Castings for General Applications.
      b. Application, Operation and Test (ANSI).
   2. National Electrical Manufacturers Association.
      a. NEMA 250 - Enclosures for Electrical Equipment (1000 Volts Maximum).
   3. National Fire Protection Association (NFPA):
      a. NFPA 70 - National Electrical Code.
   4. Underwriters Laboratories Inc. (UL):
      a. UL 778 - Motor Operated Water Pumps.

1.05 SUBMITTALS:

A. Product Data: For each type of product indicated. Include materials of construction, rated capacities, certified performance curves with operating points plotted on curves, operating characteristics, electrical characteristics, and furnished specialties and accessories.
B. Operation and Maintenance Data: For domestic water pumps to include in operation and maintenance manuals.
C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
D. UL Compliance: Comply with UL 778 for motor-operated water pumps.

1.06 DELIVERY, STORAGE, AND HANDLING:

A. Retain shipping flange protective covers and protective coatings during storage.
B. Protect bearings and couplings against damage.
C. Comply with pump manufacturer's written rigging instructions for handling.

PART 2 - PRODUCTS

2.01 RECIRCULATION PUMPS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Armstrong Pumps, Inc.
   2. Bell & Gossett Domestic Pump; ITT Corporation.

3. Grundfos Pumps Corp.
4. Or Engineer Approved Equal.

B. Description: Hot water recirculation pump

C. Pump Construction:
1. Pump Body: stainless steel
2. Impeller: Stainless steel
3. Motor: ECM
4. Bearings: Carbon Steel
5. Gasket/O-ring: EPDM
6. Rotor: Permanent Magnet
7. Shaft: AISI 420 Stainless Steel
8. all other wetted parts: AISI 304 Stainless Steel
9. Insulation Class: F

D. Capacities and Characteristics:
1. Horse power: 1/12
2. Voltage: 120
3. Phase: 1
4. Hz: 60
5. Amp Range: 0.1-1.3
6. Enclousre: Class 2, NEMA Type 2
7. UL 778; YK 1004-1, 1004.7; and UL 60730-1
8. NSF/ANSI-372 certified
9. Provide for signal input from BAS BACnet for scheduling. Coordinate with controls contractor.
10. Onboard user interface.

2.02 CONTROLS:

A. Thermostats: Electric. Internal

PART 3 - EXECUTION

3.01 EXAMINATION:

A. Examine roughing-in of domestic-water-piping system to verify actual locations of connections before pump installation.

3.02 PUMP INSTALLATION:

A. Comply with HI 1.4.

B. Install Recirculation pump in accordance with manufacturers recommendations.

3.03 CONNECTIONS:

A. Comply with requirements for piping specified in Section 22 11 16 - Domestic Water Piping. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Install piping adjacent to pumps to allow service and maintenance.

C. Connect domestic water piping to pumps. Install suction and discharge piping equal to or greater than size of pump nozzles.
1. Install shutoff valve and strainer on suction side of each pump, and check, shutoff, and throttling valves on discharge side of each pump. Install valves same size as connected piping

D. Comply with Division 26 Sections for electrical connections, and wiring methods.

3.04 IDENTIFICATION:

A. Comply with requirements for identification specified in Section 22 05 53 - Identification for Plumbing Piping and Equipment for identification of pumps.

3.05 STARTUP SERVICE:

A. Perform startup service.
   1. Complete installation and startup checks according to manufacturer's written instructions.
   2. Check piping connections for tightness.
   3. Clean strainers on suction piping.
   4. Perform the following startup checks for each pump before starting:
      a. Verify bearing lubrication.
      b. Verify that pump is free to rotate by hand and that pump for handling hot liquid is free to rotate with pump hot and cold. If pump is bound or drags, do not operate until cause of trouble is determined and corrected.
      c. Verify that pump is rotating in the correct direction.
   5. Start motor.
   6. Open discharge valve slowly.
   7. Adjust temperature settings on thermostats.

3.06 ADJUSTING:

A. Adjust domestic water pumps to function smoothly, and lubricate as recommended by manufacturer.
B. Adjust initial temperature set points.
C. Set field-adjustable switches and circuit-breaker trip ranges as indicated.

END OF SECTION 22 11 23

SECTION 22 13 16 – SANITARY WASTE AND VENT PIPING

PART 1 - GENERAL

1.01 RELATED DOCUMENTS:

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY:

A. This Section includes:
   1. Pipe, tube, and fittings.
   2. Specialty pipe fittings.

B. Related Sections:
   1. Section 22 13 29 - Sanitary Sewerage Pumps for effluent and sewage pumps.

1.03 REFERENCES:

   4. ASME International (ASME):
      a. ASME B1.20.1 - Pipe Threads, General Purpose, Inch.
      b. ASME B16.21 - Nonmetallic Flat Gaskets for Pipe Flanges.
      c. ASME B18.2.1 - Square and Hex Bolts and Screws, Inch Series.
   5. ASTM International (ASTM):
      a. ASTM C564 - Specification for Rubber Gaskets for Cast Iron Soil Pipe and Fittings.
      b. ASTM C1173 - Specification for Flexible Transition Couplings for Underground Piping Systems.
      c. ASTM D2321 - Practice for Underground Installation of Thermoplastic Pipe for Sewers and Other Gravity-Flow Applications.
      d. ASTM D2564 - Specification for Solvent Cements for Poly (Vinyl Chloride) (PVC) Plastic Piping Systems.
      e. ASTM D2665 - Specification for Poly (Vinyl Chloride) (PVC) Plastic Drain, Waste, and Vent Pipe and Fittings.
      f. ASTM D2855 - Practice for Making Solvent-Cemented Joints with Poly (Vinyl Chloride) (PVC) Pipe and Fittings.
      g. ASTM D3311 - Specification for Drain, Waste, and Vent (DWV) Plastic Fittings Patterns.
      h. ASTM D5926 - Specification for Poly (Vinyl Chloride) (PVC) Gaskets for Plastic Drain, Waste, and Vent (DWV), Sewer, Sanitary, and Storm Plumbing Systems.
      i. ASTM F402 - Practice for Safe Handling of Solvent Cements, Primers, and Cleaners Used for Joining Thermoplastic Pipe and Fittings.
      j. ASTM F477 - Specification for Elastomeric Seals (Gaskets) for Joining Plastic Pipe.
      k. ASTM F656 - Specification for Primers for Use in Solvent Cement Joints of Poly (Vinyl Chloride) (PVC) Plastic Pipe and Fittings.

l. ASTM F891 - Specification for Coextruded Poly (Vinyl Chloride) (PVC) Plastic Pipe with a Cellular Core.
m. ASTM F1476 - Performance of Gasketed Mechanical Couplings for Use in Piping Applications.

6. Code of Federal Regulations (CFR):
   a. 40 CFR 59, Subpart D - National Volatile Organic Compound Emission Standards for Architectural Coatings.
7. International Association of Plumbing and Mechanical Officials (IAPMO):
   a. IAPMO PS 66 - Dielectric Waterway Fittings.
8. Manufacturers Standardization Society of the Valve and Fittings Industry (MSS):
   a. MSS SP-69 - Pipe Hangers and Supports - Selection and Application.
9. NSF International (NSF):
   a. NSF/ANSI 14 - Plastics Piping System Components and Related Materials.

1.04 PERFORMANCE REQUIREMENTS:

A. Components and installation shall be capable of withstanding the following minimum working pressure, unless otherwise indicated:
   1. Soil, Waste, and Vent Piping: 10-foot head of water.

1.05 ACTION SUBMITTALS:

A. Product Data: For each type of product indicated.

1.06 QUALITY ASSURANCE:

A. Piping materials shall bear label, stamp, or other markings of specified testing agency.
B. Comply with NSF/ANSI 14, "Plastics Piping Systems Components and Related Materials," for plastic piping components. Include marking with "NSF-dwv" for plastic drain, waste, and vent piping and "NSF-sewer" for plastic sewer piping.

1.07 PROJECT CONDITIONS:

A. Interruption of Existing Sanitary Waste Service: Do not interrupt service to facilities occupied by Owner or others, unless permitted under the following conditions and then only after arranging to provide temporary service according to requirements indicated:
   1. Notify Construction Manager no fewer than 2 days in advance of proposed interruption of sanitary waste service.

PART 2 - PRODUCTS

2.01 PIPING MATERIALS:

A. Comply with requirements in "Piping Schedule" Article for applications of pipe, tube, fitting materials, and joining methods for specific services, service locations, and pipe sizes.

2.02 PVC PIPE AND FITTINGS:

A. Solid-Wall PVC Pipe: ASTM D2665, drain, waste, and vent.
B. PVC Socket Fittings: ASTM D2665, made to ASTM D3311, drain, waste, and vent patterns and to fit Schedule 40 pipe.
C. Adhesive Primer: ASTM F656.
   1. Adhesive primer shall have a VOC content of 550 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
D. Solvent Cement: ASTM D2564.

1. PVC solvent cement shall have a VOC content of 510 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

2.03 SPECIALTY PIPE FITTINGS:

A. Transition Couplings:
   1. General Requirements: Fitting or device for joining piping with small differences in ODs or of different materials. Include end connections same size as and compatible with pipes to be joined.
   2. Fitting-Type Transition Couplings: Manufactured piping coupling or specified piping system fitting.
   3. Unshielded, Nonpressure Transition Couplings:
      a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
         (1) Dallas Specialty & Mfg. Co.
         (2) Fernco, Inc.
         (3) Mission Rubber Company; a division of MCP Industries, Inc.
         (4) Plastic Oddities; a division of Diverse Corporate Technologies, Inc.
         (5) Or Engineer Approved Equal.
      b. Standard: ASTM C1173.
      c. Description: Elastomeric, sleeve-type, reducing or transition pattern. Include shear ring and corrosion-resistant-metal tension band and tightening mechanism on each end.
      d. Sleeve Materials:
         (1) For Plastic Pipes: ASTM F477, elastomeric seal or ASTM D5926, PVC.
         (2) For Dissimilar Pipes: ASTM D5926, PVC or other material compatible with pipe materials being joined.
   4. Shielded, Nonpressure Transition Couplings:
      a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
         (1) Cascade Waterworks Mfg. Co.
         (2) Mission Rubber Company; a division of MCP Industries, Inc.
         (3) Or Engineer Approved Equal.
      b. Standard: ASTM C1460.
      c. Description: Elastomeric or rubber sleeve with full-length, corrosion-resistant outer shield and corrosion-resistant-metal tension band and tightening mechanism on each end.

2.04 FIRE WRAP

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. 3M
   2. Fire
   3. Master
B. Flexible wrap.
C. Meets ASTM E84, NFPA 262 (UL 910) and UL 1887.
D. Foil encapsulated scrim.
E. Fire Wrap all PVC pipe in plenum space.

PART 3 - EXECUTION

3.01 EARTH MOVING:

A. Comply with requirements for excavating, trenching, and backfilling specified in Division 31.

3.02 PIPING INSTALLATION:

A. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on coordination drawings.
B. Install piping in concealed locations, unless otherwise indicated and except in equipment rooms and service areas.
C. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited, unless specifically indicated otherwise.
D. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.
E. Install piping to permit valve servicing.
F. Install piping at indicated slopes.
G. Install piping free of sags and bends.
H. Install fittings for changes in direction and branch connections.
I. Install piping to allow application of insulation.
J. Make changes in direction for soil and waste drainage and vent piping using appropriate branches, bends, and long-sweep bends. Sanitary tees and short-sweep 1/4 bends may be used on vertical stacks if change in direction of flow is from horizontal to vertical. Use long-turn, double Y-branch, and 1/8-bend fittings if two fixtures are installed back-to-back or side by side with common drain pipe. Straight tees, elbows, and crosses may be used on vent lines. Do not change direction of flow more than 90 degrees. Use proper size of standard increasers and reducers if pipes of different sizes are connected. Reducing size of drainage piping in direction of flow is prohibited.
K. Lay buried building drainage piping beginning at low point of each system. Install true to grades and alignment indicated, with unbroken continuity of invert. Place hub ends of piping upstream. Install required gaskets according to manufacturer's written instructions for use of lubricants, cements, and other installation requirements. Maintain swab in piping and pull past each joint as completed.
L. Install soil and waste drainage and vent piping at the following minimum slopes, unless otherwise indicated:
    1. Building Sanitary Drain: 2% downward in direction of flow for piping NPS 3 and smaller; 1% downward in direction of flow for piping NPS 4 and larger.
    2. Horizontal Sanitary Drainage Piping: 2% downward in direction of flow.
    3. Vent Piping: 1% down toward vertical fixture vent or toward vent stack.
M. Install aboveground PVC piping according to ASTM D2665
N. Install underground PVC piping in accordance with ASTM D2321.
O. Install engineered soil and waste drainage and vent piping systems as follows:
    1. Combination Waste and Vent: Comply with standards of authorities having jurisdiction.
P. Plumbing Specialties:
    1. Install cleanouts at grade and extend to where building sanitary drains connect to building sanitary sewers in sanitary drainage gravity-flow piping. Install cleanout fitting with closure plug inside the building in sanitary drainage force-main piping. Comply with

requirements for cleanouts specified in Section 22 13 19 - Sanitary Waste Piping Specialties.

2. Install drains in sanitary drainage gravity-flow piping. Comply with requirements for drains specified in Section 22 13 19 - Sanitary Waste Piping Specialties.

Q. Do not enclose, cover, or put piping into operation until it is inspected and approved by authorities having jurisdiction.

R. Install sleeves for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Section 22 05 17 - Sleeves and Sleeve Seals for Plumbing Piping.

S. Install sleeve seals for piping penetrations of concrete walls and slabs. Comply with requirements for sleeve seals specified in Section 22 05 17 - Sleeves and Sleeve Seals for Plumbing Piping.

T. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Section 22 05 18 - Escutcheons for Plumbing Piping.

3.03 JOINT CONSTRUCTION:

A. Plastic, Nonpressure-Piping, Solvent-Cement Joints: Clean and dry joining surfaces. Join pipe and fittings according to the following:

1. Comply with ASTM F402 for safe-handling practice of cleaners, primers, and solvent cements.
2. PVC Piping: Join according to ASTM D2855 and ASTM D2665 Appendixes.

3.04 SPECIALTY PIPE FITTING INSTALLATION:

A. Transition Couplings:

1. Install transition couplings at joints of piping with small differences in ODs.
2. In Drainage Piping: Shielded, nonpressure transition couplings.

3.05 HANGER AND SUPPORT INSTALLATION:

A. Comply with requirements for pipe hanger and support devices and installation specified in Section 22 05 29 - Hangers and Supports for Plumbing Piping and Equipment.

1. Install stainless-steel pipe hangers for horizontal piping in corrosive environments.
2. Install stainless-steel pipe support clamps for vertical piping in corrosive environments.
3. Vertical Piping: MSS Type 8 or Type 42 clamps.
4. Install individual, straight, horizontal piping runs:
   a. 100 Feet and Less: MSS Type 1, adjustable, steel clevis hangers.
   b. Longer than 100 Feet: MSS Type 43, adjustable roller hangers.
   c. Longer than 100 Feet if Indicated: MSS Type 49, spring cushion rolls.
5. Multiple, Straight, Horizontal Piping Runs 100 Feet or Longer: MSS Type 44, pipe rolls. Support pipe rolls on trapeze.
6. Base of Vertical Piping: MSS Type 52, spring hangers.

B. Support horizontal piping and tubing within 12 inches of each fitting and coupling.

C. Support vertical piping and tubing at base and at each floor.

D. Rod diameter may be reduced one size for double-rod hangers, with 3/8-inch minimum rods.

E. Install supports for vertical copper tubing every 10 feet.

F. Install hangers for PVC piping with the following maximum horizontal spacing and minimum rod diameters:

1. NPS 1-1/2 and NPS 2: 48 inches with 3/8-inch rod.
2. NPS 3: 48 inches with 1/2-inch rod.
3. NPS 4 and NPS 5: 48 inches with 5/8-inch rod.
4. NPS 6 and NPS 8: 48 inches with 3/4-inch rod.

5. NPS 10 and NPS 12: 48 inches with 7/8-inch rod.

G. Install supports for vertical PVC piping every 48 inches.

H. Support piping and tubing not listed above according to MSS SP-69 and manufacturer's written instructions.

3.06 CONNECTIONS:

A. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Connect soil and waste piping to exterior sanitary sewerage piping. Use transition fitting to join dissimilar piping materials.

C. Connect drainage and vent piping to the following:

1. Plumbing Fixtures: Connect drainage piping in sizes indicated, but not smaller than required by plumbing code.
2. Plumbing Fixtures and Equipment: Connect atmospheric vent piping in sizes indicated, but not smaller than required by authorities having jurisdiction.
3. Plumbing Specialties: Connect drainage and vent piping in sizes indicated, but not smaller than required by plumbing code.
4. Install test tees (wall cleanouts) in conductors near floor and floor cleanouts with cover flush with floor.

3.07 IDENTIFICATION:

A. Identify exposed sanitary waste and vent piping. Comply with requirements for identification specified in Section 22 05 53 - Identification for Plumbing Piping and Equipment.

3.08 FIELD QUALITY CONTROL:

A. During installation, notify authorities having jurisdiction at least 24 hours before inspection must be made. Perform tests specified below in presence of authorities having jurisdiction.

1. Roughing-in Inspection: Arrange for inspection of piping before concealing or closing-in after roughing-in and before setting fixtures.
2. Final Inspection: Arrange for final inspection by authorities having jurisdiction to observe tests specified below and to ensure compliance with requirements.

B. Reinspection: If authorities having jurisdiction find that piping will not pass test or inspection, make required corrections, and arrange for reinspection.

C. Reports: Prepare inspection reports and have them signed by authorities having jurisdiction.

D. Test sanitary drainage and vent piping according to procedures of authorities having jurisdiction or, in absence of published procedures, as follows:

1. Test for leaks and defects in new piping and parts of existing piping that have been altered, extended, or repaired. If testing is performed in segments, submit separate report for each test, complete with diagram of portion of piping tested.
2. Leave uncovered and unconcealed new, altered, extended, or replaced drainage and vent piping until it has been tested and approved. Expose work that was covered or concealed before it was tested.
3. Roughing-in Plumbing Test Procedure: Test drainage and vent piping except outside leaders on completion of roughing-in. Close openings in piping system and fill with water to point of overflow, but not less than 10-foot head of water. From 15 minutes before inspection starts to completion of inspection, water level must not drop. Inspect joints for leaks.
4. Finished Plumbing Test Procedure: After plumbing fixtures have been set and traps filled with water, test connections and prove they are gastight and watertight. Plug vent-stack openings on roof and building drains where they leave building. Introduce air into

piping system equal to pressure of 1-inch wg. Use U-tube or manometer inserted in trap of water closet to measure this pressure. Air pressure must remain constant without introducing additional air throughout period of inspection. Inspect plumbing fixture connections for gas and water leaks.

5. Repair leaks and defects with new materials and retest piping, or portion thereof, until satisfactory results are obtained.
6. Prepare reports for tests and required corrective action.

3.09 CLEANING AND PROTECTION:

A. Clean interior of piping. Remove dirt and debris as work progresses.
B. Protect drains during remainder of construction period to avoid clogging with dirt and debris and to prevent damage from traffic and construction work.
C. Place plugs in ends of uncompleted piping at end of day and when work stops.
D. Exposed PVC Piping: Protect plumbing vents exposed to sunlight with two coats of water-based latex paint.

3.10 PIPING SCHEDULE:

A. Soil and waste piping shall be the following:
   1. Solid-wall PVC pipe, PVC socket fittings, and solvent-cemented joints.
   2. Dissimilar Pipe-Material Couplings: Shielded, nonpressure transition couplings.

END OF SECTION 22 13 16

SECTION 22 13 19 – SANITARY WASTE PIPING SPECIALTIES

PART 1 - GENERAL

1.01 RELATED DOCUMENTS:

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01, Specification Sections, apply to this Section.

1.02 SUMMARY:

A. This Section includes:
   1. Cleanouts.
   2. Floor drains.
   3. Channel drainage systems.
   4. Roof flashing assemblies.
   5. Through-penetration firestop assemblies.
   6. Miscellaneous sanitary drainage piping specialties.
   7. Flashing materials.
   8. Trap guard.

1.03 REFERENCES:

   6. Underwriters Laboratories, Inc. (UL):
      a. UL 1479 - Fire Tests of Through-Penetration Firestops.

1.04 DEFINITIONS:

A. PVC: Polyvinyl chloride plastic.

1.05 QUALITY ASSURANCE:

A. Drainage piping specialties shall bear label, stamp, or other markings of specified testing agency.

B. Comply with NSF 14, "Plastics Piping Components and Related Materials," for plastic sanitary piping specialty components.

1.06 COORDINATION:

A. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03.

B. Coordinate size and location of roof penetrations.

PART 2 - PRODUCTS

2.01 CLEANOUTS:

A. Exposed Metal Cleanouts :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Josam Company; Josam Div.
   b. MIFAB, Inc.
   c. Smith, Jay R. Mfg. Co.; Division of Smith Industries, Inc.
   d. Tyler Pipe; Wade Div.
   e. Watts Drainage Products, Inc.
   f. Zurn Plumbing Products Group; Specification Drainage Operation.
   g. Or Engineer Approved Equal.
   h. Josam Company; Blucher-Josam Div.
   i. Or Engineer Approved Equal.
2. Standard: ASME A112.3.1 for stainless steel for cleanout test tee.
3. Size: Same as connected drainage piping.
4. Body Material: Stainless-steel tee with side cleanout as required to match connected piping.
5. Closure Plug Size: Same as or not more than one size smaller than cleanout size.
6. Closure: Stainless-steel plug with seal.

B. Metal Floor Cleanouts :

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Josam Company; Josam Div.
   b. Oatey.
   c. Sioux Chief Manufacturing Company, Inc.
   d. Smith, Jay R. Mfg. Co.; Division of Smith Industries, Inc.
   e. Tyler Pipe; Wade Div.
   f. Watts Drainage Products, Inc.
   g. Zurn Plumbing Products Group; Light Commercial Operation.
   h. Zurn Plumbing Products Group; Specification Drainage Operation.
   i. Or Engineer Approved Equal.
2. Standard: ASME A112.3.1.
3. Size: Same as connected branch.
4. Housing: Stainless steel.
5. Closure: Stainless steel with seal.
6. Riser: Stainless-steel drainage pipe fitting to cleanout.

2.02 FLOOR DRAINS:

A. Stainless-Steel Floor Drains:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Josam Company; Josam Div.
   b. Smith, Jay R. Mfg. Co.; Division of Smith Industries, Inc.
   c. Watts Drainage Products, Inc.
   d. Zurn Plumbing Products Group; Specification Drainage Operation.
   e. Or Engineer Approved Equal.
2. Standard: ASME A112.6.3.
3. Outlet: Bottom or side as indicated or schedule on Drawings or otherwise required.
4. Top or Strainer Material: Stainless-steel.
5. Top Shape: Round or Square as indicated or scheduled on Drawings.
6. Dimensions of Top or Strainer: As indicated or scheduled on Drawings .
7. Seepage (Membrane) Flange: Required with waterproof membrane, otherwise not required.
8. Anchor Flange: Not required with seepage flange for light-duty and medium-duty, otherwise required.
9. Clamping (Underdeck) Device: Not required where seepage flange or anchor flange is cast in concrete, otherwise required.
10. Trap-Primer Connection: Not required.
11. PVC.
12. Trap Pattern: Deep-seal P-trap.

2.03 CHANNEL DRAINAGE SYSTEMS:

A. FRP Channel Drainage Systems:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. ACO Polymer Products, Inc.
   b. Aquaduct, Inc.; an ACO Polymer Products, Inc. Company.
   c. Josam Company; Mea-Josam Div.
   d. Smith, Jay R. Mfg. Co.; Division of Smith Industries, Inc.
   e. Zurn Plumbing Products Group; Flo-Thru Operation.
   f. Or Engineer Approved Equal.
2. Description: Modular system of channel sections, grates, and appurtenances; designed so grates fit into channel recesses without rocking or rattling.
   a. Channel Sections: Interlocking-joint, sloped-invert, FRP modular units, with end caps. Include flat, rounded, or inclined inside bottom, with outlets in number, sizes, and locations indicated.
      (1) Dimensions: As indicated on Drawings.
      (2) Frame: Stainless steel for grates.
   b. Grates: With slots or perforations and widths and thickness that fit recesses in channel sections.
      (1) Material: Fiberglass.
      (2) Locking Mechanism: Not required.
   c. Covers: Solid Fiberglass, of width and thickness that fit recesses in channel sections, and of lengths indicated.
   d. Supports, Anchors, and Setting Devices: Manufacturer's standard, unless otherwise indicated.

e. Channel-Section Joining and Fastening Materials: As recommended by system manufacturer.

2.04 ROOF FLASHING ASSEMBLIES:

A. Roof Flashing Assemblies:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. Acorn Engineering Company; Elmdor/Stoneman Div.
b. Thaler Metal Industries Ltd.
c. Or Engineer Approved Equal.

B. Description: Manufactured assembly made of 6.0 lb./sq. ft., 0.0938 inch thick, lead flashing collar and skirt extending at least 8 inches from pipe, with stainless-steel boot reinforcement and counterflashing fitting.
1. Open-Top Vent Cap: Without cap.
2. Low-Silhouette Vent Cap: With vandal-proof vent cap.
3. Extended Vent Cap: With field-installed, vandal-proof vent cap.

2.05 THROUGH-PENETRATION FIRESTOP ASSEMBLIES:

A. Through-Penetration Firestop Assemblies:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. ProSet Systems, Inc.
b. Or Engineer Approved Equal.
2. Standard: UL 1479 assembly of sleeve and stack fitting with firestopping plug.
3. Size: Same as connected soil, waste, or vent stack.
4. Sleeve: Molded PVC plastic, of length to match slab thickness and with integral nailing flange on one end for installation in cast-in-place concrete slabs.
5. Stack Fitting: ASTM A48, Stainless-steel, hubless-pattern, wye branch with neoprene O-ring at base and stainless-steel plug in thermal-release harness. Include PVC protective cap for plug.
6. Special Coating: Corrosion-resistant on interior of fittings.

2.06 MISCELLANEOUS SANITARY DRAINAGE PIPING SPECIALTIES:

A. Deep-Seal Traps:
1. Description: PVC, with inlet and outlet matching connected piping and cleanout trap-seal primer valve connection.
2. Size: Same as connected waste piping.
a. NPS 2: 4-inch minimum water seal.
b. NPS 2-1/2 and Larger: 5-inch minimum water seal.

B. Air-Gap Fittings:
1. Standard: ASME A112.1.2, for fitting designed to ensure fixed, positive air gap between installed inlet and outlet piping.
2. Body: PVC.
3. Inlet: Opening in top of body.
4. Outlet: Larger than inlet.
5. Size: Same as connected waste piping and with inlet large enough for associated indirect waste piping.

C. Sleeve Flashing Device:

1. Description: Manufactured, stainless-steel fitting, with clamping device that forms sleeve for pipe floor penetrations of floor membrane. Include stainless-steel pipe extension in top of fitting that will extend 2 inches above finished floor and stainless-steel pipe extension in bottom of fitting that will extend through floor slab.
2. Size: As required for close fit to riser or stack piping.

D. Stack Flashing Fittings:
1. Description: Counterflashing-type, stainless-steel fitting, with bottom recess for terminating roof membrane, and with threaded or hub top for extending vent pipe.
2. Size: Same as connected stack vent or vent stack.

E. Vent Caps:
1. Description: Stainless-steel body with threaded or hub inlet and vandal-proof design. Include vented hood and setscrews to secure to vent pipe.
2. Size: Same as connected stack vent or vent stack.

F. Frost-Resistant Vent Terminals:
1. Description: Manufactured or shop-fabricated assembly constructed of stainless-steel.
2. Design: To provide 1-inch enclosed air space between outside of pipe and inside of flashing collar extension, with counterflashing.

G. Expansion Joints:
1. Standard: ASME A112.21.2M.
2. Body: Stainless-steel, packing, and gland.
3. End Connections: Matching connected piping.
4. Size: Same as connected soil, waste, or vent piping.

2.07 FLASHING MATERIALS:

A. Elastic Membrane Sheet: ASTM D4068, flexible, chlorinated polyethylene, 40 mil minimum thickness.
B. Fasteners: Stainless-steel.
C. Metal Accessories: Stainless-steel strips, clamps, anchoring devices, and similar accessory units required for installation; matching or compatible with material being installed.
D. Bituminous Coating: SSPC-Paint 12, solvent-type, bituminous mastic.

2.08 TRAP GUARD

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Jay R Smith
2. Zurn
3. Rectorseal

B. UV resistant ABS plastic frame.
C. Silicon rubber sealing flapper.
D. Tested and certified with IAPMO and I.P.C.

PART 3 - EXECUTION

3.01 INSTALLATION:

A. Install backwater valves in building drain piping. For interior installation, provide cleanout deck plate flush with floor and centered over backwater valve cover, and of adequate size to remove valve cover for servicing.
B. Install cleanouts in aboveground piping and building drain piping according to the following, unless otherwise indicated:

1. Size same as drainage piping up to NPS 4. Use NPS 4 for larger drainage piping, unless larger cleanout is indicated.
2. Locate at each change in direction of piping greater than 45 degrees.
3. Locate at minimum intervals of 50 feet for piping NPS 4 and smaller and 100 feet for larger piping.
4. Locate at base of each vertical soil and waste stack.

C. For floor cleanouts for piping below floors, install cleanout deck plates with top flush with finished floor.

D. For cleanouts located in concealed piping, install cleanout wall access covers, of types indicated, with frame and cover flush with finished wall.

E. Install floor drains at low points of surface areas to be drained. Set grates of drains flush with finished floor, unless otherwise indicated.
1. Position floor drains for easy access and maintenance.
2. Set floor drains below elevation of surrounding finished floor to allow floor drainage. Set with grates depressed according to the following drainage area radii:
   a. Radius, 30 Inches or Less: Equivalent to 1% slope, but not less than 1/4 inch total depression.
   b. Radius, 30 to 60 Inches: Equivalent to 1% slope.
   c. Radius, 60 Inches or Larger: Equivalent to 1% slope, but not greater than 1 inch total depression.
3. Install floor-drain flashing collar or flange so no leakage occurs between drain and adjoining flooring. Maintain integrity of waterproof membranes where penetrated.
4. Install individual traps for floor drains connected to sanitary building drain, unless otherwise indicated.

F. Assemble FRP channel drainage system components according to manufacturer's written instructions. Install on support devices so that top will be flush with adjacent surface.

G. Install fixture air-admittance valves on fixture drain piping.

H. Install roof flashing assemblies on sanitary stack vents and vent stacks that extend through roof.

I. Install flashing fittings on sanitary stack vents and vent stacks that extend through roof.

J. Install through-penetration firestop assemblies in plastic conductors and stacks at floor penetrations.

K. Assemble open drain fittings and install with top of hub 2 inches above floor.

L. Install deep-seal traps on floor drains and other waste outlets, if indicated.

M. Install floor-drain, trap-seal primer fittings on inlet to floor drains that require trap-seal primer connection.
1. Exception: Fitting may be omitted if trap has trap-seal primer connection.
2. Size: Same as floor drain inlet.

N. Install air-gap fittings on draining-type backflow preventers and on indirect-waste piping discharge into sanitary drainage system.

O. Install sleeve flashing device with each riser and stack passing through floors with waterproof membrane.

P. Install vent caps on each vent pipe passing through roof.

Q. Install frost-resistant vent terminals on each vent pipe passing through roof. Maintain 1-inch clearance between vent pipe and roof substrate.

R. Install expansion joints on vertical stacks and conductors. Position expansion joints for easy access and maintenance.

S. Install frost-proof vent caps on each vent pipe passing through roof. Maintain 1-inch clearance between vent pipe and roof substrate.

T. Install wood-blocking reinforcement for wall-mounting-type specialties.
U. Install traps on plumbing specialty drain outlets. Omit traps on indirect wastes unless trap is indicated.

3.02 CONNECTIONS:
A. Piping installation requirements are specified in other Division 22 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
B. Install piping adjacent to equipment to allow service and maintenance.
C. Ground equipment according to Division 26.
D. Connect wiring according to Division 26.

3.03 FLASHING INSTALLATION:
A. Fabricate flashing from single piece, unless large pans, sumps, or other drainage shapes are required.
B. Install sheet flashing on pipes, sleeves, and specialties passing through or embedded in floors and roofs with waterproof membrane.
1. Pipe Flashing: Sleeve type, matching pipe size, with minimum length of 10 inches, and skirt or flange extending at least 8 inches around pipe.
2. Sleeve Flashing: Flat sheet, with skirt or flange extending at least 8 inches around sleeve.
3. Embedded Specialty Flashing: Flat sheet, with skirt or flange extending at least 8 inches around specialty.
C. Set flashing on floors and roofs in solid coating of bituminous cement.
D. Secure flashing into sleeve and specialty clamping ring or device.
E. Install flashing for piping passing through roofs with counterflashing or commercially made flashing fittings, according to Division 07.
F. Extend flashing up vent pipe passing through roofs and turn down into pipe, or secure flashing into Stainless-steel sleeve having calking recess.
G. Fabricate and install flashing and pans, sumps, and other drainage shapes.

3.04 LABELING AND IDENTIFYING:
A. Distinguish among multiple units, inform operator of operational requirements, indicate safety and emergency precautions, and warn of hazards and improper operations, in addition to identifying unit. Nameplates and signs are specified in Section 22 05 53 - Identification for Plumbing Piping and Equipment.

3.05 FIELD QUALITY CONTROL:
A. Tests and Inspections:
1. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

3.06 PROTECTION:
A. Protect drains during remainder of construction period to avoid clogging with dirt or debris and to prevent damage from traffic or construction work.
B. Place plugs in ends of uncompleted piping at end of each day or when Work stops.

END OF SECTION 22 13 19

SECTION 22 13 29 – SANITARY SEWERAGE PUMPS

PART 1 - GENERAL

1.01 RELATED DOCUMENTS:

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY:

A. This Section Includes:
   1. Terminology and descriptions for pumps used in this Section are from HI 1.1-1.2 and HI 3.1-3.5.
   2. Packaged, submersible sewage pump units.

1.03 REFERENCES:

   7. Underwriters Laboratories, Inc. (UL):
      a. UL 778 - Motor-Operated Water Pumps.

1.04 ACTION SUBMITTALS:

A. Product Data: For each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.

B. Wiring Diagrams: For power, signal, and control wiring.

1.05 CLOSEOUT SUBMITTALS:

A. Operation and Maintenance Data: For pumps and controls, to include in operation and maintenance manuals.

1.06 QUALITY ASSURANCE:

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. UL Compliance: Comply with UL 778 for motor-operated water pumps.

1.07 DELIVERY, STORAGE, AND HANDLING:

A. Retain shipping flange protective covers and protective coatings during storage.

B. Protect bearings and couplings against damage.

C. Comply with pump manufacturer's written rigging instructions for handling.

1.08 COORDINATION:

A. Coordinate sizes and locations of concrete bases with actual equipment provided.

PART 2 - PRODUCTS

2.01 PACKAGED, SUBMERSIBLE SEWAGE PUMP UNITS:

A. Packaged, Submersible, Grinder, Sewage Pump Units:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Liberty Pumps.
   b. Pentair Pump Group; Myers.
   c. Zoeller Company.
   d. Or Engineer Approved Equal.
2. Description: Factory-assembled and -tested, automatic-operation, basin-mounted, grinder, sewage pump unit.
3. Pump Type: Submersible, end-suction, single-stage, centrifugal pump.
4. Pump Casing: Epoxy coated cast iron.
5. Impeller: 440C Stainless-steel hardened to RC55-60 cutter plate.
6. Motor: Hermetically sealed, capacitor-start type; with built-in overload protection; and three-conductor, waterproof power cable of length required and with grounding plug and cable-sealing assembly for connection at pump.
7. Control: Manufacturer's standard panel for one pump.
8. Controls: Automatic, with mechanical float switches.
9. Pump Discharge Piping: Factory or field fabricated, schedule 80 PVC.
10. Basin: Watertight plastic. Fiberglass and of size required for pumps, with inlet pipe connection and gastight steel cover with pump discharge and vent connections.
11. Stainless steel lifting chain and guide rails.
12. 304 stainless steel float switch brackets.

B. Capacities and Characteristics:

1. System Capacity: 50 gpm.
2. Number of Pumps: One.
3. Each Pump:
   a. Capacity: 50 gpm.
   b. Total Dynamic Head: 28 feet.
   c. Speed: 3,450 rpm.
   d. Discharge Pipe Size: 2".
   e. Motor Horsepower: 2.
   f. Electrical Characteristics:
      (1) Volts: 208.

(2) Phases: Single.
(3) Hertz: 60.

4. Unit Electrical Characteristics:
   a. Full-Load Amperes: 20.
5. Alternator Control Required: No.
6. Basin:
   a. Dimensions: 30” diameter.
   b. Inlet Size: 4.
   c. Bottom to Inlet Centerline: Contractor to field verify.
   d. Vent Size: 2”.

2.02 MOTORS:

A. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Section 22 05 13 - Common Motor Requirements for Plumbing Equipment.
   1. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
   2. Controllers, Electrical Devices, and Wiring: Comply with requirements for electrical devices and connections specified in Division 26 Sections.

B. Motors for submersible pumps shall be hermetically sealed.

PART 3 - EXECUTION

3.01 EARTHWORK:

A. Excavation and filling are specified in Division 31.

3.02 EXAMINATION:

A. Examine roughing-in for plumbing piping to verify actual locations of sanitary drainage and vent piping connections before sewage pump installation.

3.03 INSTALLATION:

A. Pump Installation Standards:
   1. Comply with HI 1.4 for installation of centrifugal pumps.
   2. Comply with HI 3.1-3.5 for installation of progressing-cavity sewage pumps.

B. Wiring Method: Comply with requirements in Division 26.

C. Wiring within Enclosures: Bundle, lace, and train conductors to terminal points with no excess and without exceeding manufacturer’s limitations on bending radii. Provide and use lacing bars and distribution spools.

3.04 CONNECTIONS:

A. Comply with requirements for piping specified in Section 22 13 16 - Sanitary Waste and Vent Piping. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Install piping adjacent to equipment to allow service and maintenance.

3.05 FIELD QUALITY CONTROL:

A. Perform tests and inspections.
   1. Manufacturer’s Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.

B. Tests and Inspections:
   1. Perform each visual and mechanical inspection.
   2. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
   3. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
   4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
C. Pumps and controls will be considered defective if they do not pass tests and inspections.
D. Prepare test and inspection reports.

3.06 STARTUP SERVICE:
A. Engage a factory-authorized service representative to perform startup service.
   1. Complete installation and startup checks according to manufacturer's written instructions.

3.07 ADJUSTING:
A. Adjust pumps to function smoothly, and lubricate as recommended by manufacturer.
B. Adjust control set points.

3.08 DEMONSTRATION:
A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain controls and pumps.

END OF SECTION 22 13 29

SECTION 22 33 00 – ELECTRIC, DOMESTIC-WATER HEATERS

PART 1 - GENERAL

1.01 RELATED DOCUMENTS:

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY:

A. This Section includes:
   1. Commercial, electric, storage, domestic-water heaters.
   2. Thermostat-control, electric, tankless, domestic-water heaters.
   3. Domestic-water heater accessories.

1.03 REFERENCES:

A. Applicable Standards (Latest Edition):

      d. ASME B16.24 - Cast Copper Alloy Pipe Flanges and Flanged Fittings, Class 150, 300, 400, 600, 900, 1500, and 2500.
      e. 2007 ASME Boiler and Pressure Vessel Code: Section VIII, "Pressure Vessels," Division 1.
   7. NFPA:
      a. NFPA 70 - National Electrical Code.
   8. NSF International (NSF):
      a. NSF 5 - Water Heaters, Hot Water Supply Boilers, and Heat Recovery Equipment.
      b. NSF 61 - Drinking Water System Components - Health Effects.
   9. Plumbing & Drainage Institute (PDI):
      a. PDI-WH 201 - Water Hammer Arresters.
   10. Underwriters Laboratories, Inc. (UL):
      a. UL 174 - Household Electric Storage Tank Water Heaters.
      b. UL 499 - Electric Heating Appliances.

c. UL 1279 - Solar Collectors.
d. UL 1453 - Electric Booster and Commercial Storage Tank Water Heaters.

1.04 ACTION SUBMITTALS:

A. Product Data: For each type and size of domestic-water heater indicated. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.

1.05 INFORMATIONAL SUBMITTALS:

A. Product Certificates: For each type of commercial and tankless, electric, domestic-water heater, from manufacturer.
B. Domestic-Water Heater Labeling: Certified and labeled by testing agency acceptable to authorities having jurisdiction.
C. Source quality-control reports.
D. Field quality-control reports.
E. Warranty: Sample of special warranty.

1.06 CLOSEOUT SUBMITTALS:

A. Operation and Maintenance Data: For electric, domestic-water heaters to include in emergency, operation, and maintenance manuals.

1.07 QUALITY ASSURANCE:

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
B. ASHRAE/IESNA Compliance: Applicable requirements in ASHRAE/IESNA 90.1.
C. ASME Compliance: Where ASME-code construction is indicated, fabricate and label commercial, domestic-water heater storage tanks to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.
D. NSF Compliance: Fabricate and label equipment components that will be in contact with potable water to comply with NSF 61, "Drinking Water System Components - Health Effects."

1.08 COORDINATION:

A. Coordinate sizes and locations of concrete bases with actual equipment provided.

1.09 WARRANTY:

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of electric, domestic-water heaters that fail in materials or workmanship within specified warranty period.
   1. Failures include, but are not limited to, the following:
      a. Structural failures including storage tank and supports.
      b. Faulty operation of controls.
      c. Deterioration of metals, metal finishes, and other materials beyond normal use.
   2. Warranty Periods: From date of Substantial Completion.
      a. Commercial, Electric, Storage, Domestic-Water Heaters:
         (1) Storage Tank: 5 years.
         (2) Controls and Other Components: 1 year.
      b. Electric, Tankless, Domestic-Water Heaters: 1 year.

PART 2 - PRODUCTS

2.01 COMMERCIAL, ELECTRIC, DOMESTIC-WATER HEATERS:

A. Commercial, Electric, Storage, Domestic-Water Heaters:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. American Water Heaters.
   b. Bradford White Corporation.
   c. Cemline Corporation.
   d. Electric Heater Company (The).
   e. GSW Water Heating.
   f. HESco Industries, Inc.
   g. Lochinvar Corporation.
   h. Precision Boilers, Inc.
   i. PVI Industries, LLC.
   j. RECO USA.
   k. Rheem Manufacturing Company.
   l. Smith, A. O. Water Products Co.; a division of A. O. Smith Corporation.
   m. State Industries.
   n. Vaughn Manufacturing Corporation.
   o. Or Engineer Approved Equal.
2. Standard: UL 1453.
3. Storage-Tank Construction: Non-ASME-code, steel vertical arrangement.
   a. Tappings: Factory fabricated of materials compatible with tank and piping connections. Attach tappings to tank before testing.
      (1) NPS 2 and Smaller: Threaded ends according to ASME B1.20.1.
   b. Pressure Rating: 150 psig.
   c. Interior Finish: Comply with NSF 61 barrier materials for potable-water tank linings, including extending lining material into tappings.
4. Factory-Installed Storage-Tank Appurtenances:
   a. Anode Rod: Replaceable magnesium.
   b. Drain Valve: Corrosion-resistant metal complying with ASSE 1005.
   c. Insulation: Comply with ASHRAE/IESNA 90.1.
   d. Jacket: Steel with enameled finish.
   e. Heating Elements: Electric, screw-in or bolt-on immersion type arranged in multiples of three.
   f. Temperature Control: Adjustable thermostat.
   g. Safety Controls: High-temperature-limit and low-water cutoff devices or systems.
   h. Relief Valves: ASME rated and stamped for combination temperature-and-pressure relief valves. Include one or more relief valves with total relieving capacity at least as great as heat input, and include pressure setting less than domestic-water heater working-pressure rating. Select one relief valve with sensing element that extends into storage tank.

B. Capacity and Characteristics:

1. Capacity: 119 gal.
2. Recovery: 140 gph at 40ºF temperature rise.
3. Temperature Setting: 140ºF.
4. Power Demand: 13.5 kilowatts.

5. Heating Elements:
   a. Number of Elements: 3.
   b. Kilowatts Each Element: 4.5 kilowatts.
   c. Number of Stages: 1.
6. Electrical Characteristics:
   a. Volts: 480.
   b. Phases: 3.
   c. Hertz: 60.
   d. Full-Load Amperes: 16.2.

2.02 COMMERCIAL, LIGHT-DUTY, STORAGE, ELECTRIC, DOMESTIC-WATER HEATERS:

A. Source Limitations: Obtain domestic-water heaters from single source form single manufacturer.
B. Standard: UL 174.
C. Storage-Tank Construction: Steel, vertical arrangement.
   1. Tappings: ASME B1.20.1 pipe thread.
   2. Pressure rating: 150 psig,
   3. Interior Finish: Comply with NSF 61 and MSF 372 barrier materials for potable-water tank linings, including extending lining material into tappings.
D. Factory-Installed, Storage-Tank Appurtenances:
   1. Anode Rod: Replaceable magnesium.
   2. Dip Tube: Required unless cold-water inlet is near bottom of tank.
   3. Drain Valve: Corrosion-resistant metal with hose-end connection.
   4. Insulation: Comply with ASHRAE/IES 90.1.
   5. Jacket: Steel with enameled finish or high-impact composite material.
   6. Heat-Trap Fittings: Inlet type in cold-eater inlet and outlet type in hot water outlet.
   7. Heating Elements: Electric, screw-in immersion type.
   8. Temperature Control: Adjustable thermostat.
   9. Safety Control: High-temperature-limit cutoff device or system.
   10. Relief Valve: ASME rated and stamped for combination temperature-and-pressure releif valves. Include relieving capacity at least as great as heat input, and include pressure settng less than working-pressure rating of domestic-water heaster. Select relief valve with sensing element that extends into storage tank.
E. Capacity and Characteristics:
   1. Capacity: 30 gallon,
   2. Temperature Setting: 125 deg F.
   3. Power Demad: 4500 watts.
   4. Heating Elements:
      a. Number of Elements: two.
      b. Kilowatts Each Element: 4.5.
      c. Number of Stages: One.
   5. Electrical Characteristics:
      a. Volts: 240.
      b. Phases: Single.
      c. Hertz: 60 Hz.

2.03 ELECTRIC, TANKLESS, DOMESTIC-WATER HEATERS:

A. Thermostat-Control, Electric, Tankless, Domestic-Water Heaters (TWH-2):

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Bradford White
   b. Bosch Water Heating.
   c. Chronomite Laboratories, Inc.
   d. E-Tankless Water Heaters Corp.
   e. Keltech, Inc.
   f. EeMax.
   g. Or Engineer Approved Equal.
2. Standard: UL 499 for electric, tankless, (domestic-water heater) heating appliance.
3. Construction: Copper piping or tubing complying with NSF 61 barrier materials for potable water, without storage capacity.
   a. Connections: Compression Fitting.
   b. Pressure Rating: 150 psig.
   c. Heating Element: Resistance heating system.
   d. Temperature Control: Thermostat.
   e. Safety Control: High-temperature-limit cutoff device or system.
   f. Jacket: Aluminum or steel with enameled finish or plastic.
4. Support: Bracket for wall mounting.
5. Capacity and Characteristics:
   a. Flow Rate: 0.5 gpm at 48°F temperature rise.
   b. Temperature Setting: 110ºF.
   c. Power Demand: 3.5 kilowatts.
   d. Electrical Characteristics:
      (1) Volts: 240.
      (2) Phases: Single.
      (3) Hertz: 60.
      (4) Full-Load Amperes: 30.

2.04 DOMESTIC-WATER HEATER ACCESSORIES:

A. Domestic-Water Compression Tanks:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. AMTROL, Inc.
   b. Flexcon Industries.
   c. Honeywell International, Inc.
   d. Pentair Pump Group (The); Myers.
   e. Smith, A. O. Water Products Co.; a division of A. O. Smith Corporation.
   f. State Industries.
   g. Taco, Inc.
   h. Or Engineer Approved Equal.
2. Description: Steel pressure-rated tank constructed with welded joints and factory-installed butyl-rubber diaphragm. Include air precharge to minimum system-operating pressure at tank.
3. Construction:
   a. Tappings: Factory-fabricated steel, welded to tank before testing and labeling. Include ASME B1.20.1 pipe thread.

b. Interior Finish: Comply with NSF 61 barrier materials for potable-water tank linings, including extending finish into and through tank fittings and outlets.
c. Air-Charging Valve: Factory installed.

4. Capacity and Characteristics:
   a. Working-Pressure Rating: 150 psig.
   b. Capacity Acceptable: 6.3 gal..
   c. Air Precharge Pressure: Field determine.

B. Drain Pans: Corrosion-resistant metal with raised edge. Comply with ANSI/CSA LC 3. Include dimensions not less than base of domestic-water heater, and include drain outlet not less than NPS 3/4 with ASME B1.20.1 pipe threads or with ASME B1.20.7 garden-hose threads.

C. Piping-Type Heat Traps: Field-fabricated piping arrangement according to ASHRAE/IESNA 90.1 or ASHRAE 90.2.

D. Heat-Trap Fittings: ASHRAE 90.2.

E. Manifold Kits: Domestic-water heater manufacturer's factory-fabricated inlet and outlet piping for field installation, for multiple domestic-water heater installation. Include ball-, butterfly-, or gate-type shutoff valves to isolate each domestic-water heater and calibrated or memory-stop balancing valves to provide balanced flow through each domestic-water heater.
   1. Comply with requirements for ball-, butterfly-, or gate-type shutoff valves specified in Section 22 05 23 - General-Duty Valves for Plumbing Piping.
   2. Comply with requirements for balancing valves specified in Section 22 11 19 - Domestic Water Piping Specialties.

F. Combination Temperature-and-Pressure Relief Valves: ASME rated and stamped. Include relieving capacity at least as great as heat input, and include pressure setting less than domestic-water heater working-pressure rating. Select relief valves with sensing element that extends into storage tank.

2.05 SOURCE QUALITY CONTROL:

A. Hydrostatically test commercial domestic-water heaters to minimum of one and one-half times pressure rating before shipment.

B. Electric, domestic-water heaters will be considered defective if they do not pass tests and inspections. Comply with requirements in Division 01 for retesting and reinspecting requirements and Division 01 for requirements for correcting the Work.

C. Prepare test and inspection reports.

PART 3 - EXECUTION

3.01 DOMESTIC-WATER HEATER INSTALLATION:

A. Commercial, Electric, Domestic-Water Heater Mounting: Install commercial, electric, domestic-water heaters on concrete base. Comply with requirements for concrete bases specified in Division 03.
   1. Exception: Omit concrete bases for commercial, electric, domestic-water heaters if installation on stand, bracket, suspended platform, or directly on floor is indicated.
   2. Maintain manufacturer's recommended clearances.
   3. Arrange units so controls and devices that require servicing are accessible.
   4. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch centers around the full perimeter of concrete base.
   5. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.

6. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
7. Install anchor bolts to elevations required for proper attachment to supported equipment.
8. Anchor domestic-water heaters to substrate.

B. Electric, Tankless, Domestic-Water Heater Mounting: Install electric, tankless, domestic-water heaters at least 18 inches above floor on wall bracket.
1. Maintain manufacturer's recommended clearances.
2. Arrange units so controls and devices that require servicing are accessible.
3. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
4. Install anchor bolts to elevations required for proper attachment to supported equipment.
5. Anchor domestic-water heaters to substrate.

C. Install electric, domestic-water heaters level and plumb, according to layout drawings, original design, and referenced standards. Maintain manufacturer's recommended clearances. Arrange units so controls and devices needing service are accessible.
1. Install shutoff valves on domestic-water-supply piping to domestic-water heaters and on domestic-hot-water outlet piping. Comply with requirements for shutoff valves specified in Section 22 05 23 - General-Duty Valves for Plumbing Piping.

D. Install combination temperature-and-pressure relief valves in top portion of storage tanks. Use relief valves with sensing elements that extend into tanks. Extend commercial-water-heater relief-valve outlet, with drain piping same as domestic-water piping in continuous downward pitch, and discharge by positive air gap onto closest floor drain.

E. Install water-heater drain piping as indirect waste to spill by positive air gap into open drains or over floor drains. Install hose-end drain valves at low points in water piping for electric, domestic-water heaters that do not have tank drains. Comply with requirements for hose-end drain valves specified in Section 22 11 19 - Domestic Water Piping Specialties.

F. Install thermometers on outlet piping of electric, domestic-water heaters. Comply with requirements for thermometers specified in Section 22 05 19 - Meters and Gauges for Plumbing Piping.

G. Assemble and install inlet and outlet piping manifold kits for multiple electric, domestic-water heaters. Fabricate, modify, or arrange manifolds for balanced water flow through each electric, domestic-water heater. Include shutoff valve and thermometer in each domestic-water heater inlet and outlet, and throttling valve in each electric, domestic-water heater outlet. Comply with requirements for valves specified in Section 22 05 23 - General-Duty Valves for Plumbing Piping, and comply with requirements for thermometers specified in Section 22 05 19 - Meters and Gauges for Plumbing Piping.

H. Install piping-type heat traps on inlet and outlet piping of electric, domestic-water heater storage tanks without integral or fitting-type heat traps.

I. Fill electric, domestic-water heaters with water.

J. Charge domestic-water compression tanks with air.

3.02 CONNECTIONS:

A. Comply with requirements for piping specified in Section 22 11 16 - Domestic Water Piping. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Where installing piping adjacent to electric, domestic-water heaters, allow space for service and maintenance of water heaters. Arrange piping for easy removal of domestic-water heaters.

3.03 IDENTIFICATION:

A. Identify system components. Comply with requirements for identification specified in Section 22 05 53 - Identification for Plumbing Piping and Equipment.

3.04 FIELD QUALITY CONTROL:

A. Perform tests and inspections.
   1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
   2. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
   3. Operational Test: After electrical circuitry has been energized, start units to confirm proper operation.
   4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

B. Electric, domestic-water heaters will be considered defective if they do not pass tests and inspections. Comply with requirements in Division 01 for retesting and reinspecting requirements and Division 01 for requirements for correcting the Work.

C. Prepare test and inspection reports.

3.05 DEMONSTRATION:

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain commercial and tankless, electric, domestic-water heaters.

END OF SECTION 22 33 00

SECTION 22 42 13.13 – COMMERCIAL WATER CLOSETS

PART 1 - GENERAL

1.01 RELATED DOCUMENTS:

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY:

A. This Section Includes:
   1. Water closets.
   2. Flushometer valves.
   3. Toilet seats.

1.03 REFERENCES:

A. Applicable Standards (Latest Edition):
   1. American Society of Sanitary Engineering (ASSE):
      a. ASSE 1037 - Pressurized Flushing Devices (Flushometers) for Plumbing Fixtures.
   2. ASME International (ASME):
      a. ASME A112.4.3 - Plastic Fittings for Connecting Water Closets to the Sanitary Drainage System.
      b. ASME A112.6.1M - Floor-Affixed Supports for Off-the-Floor Plumbing Fixtures for Public Use.
      c. ASME A112.19.5 - Trim for Water Closet Bowls, Tanks, and Urinals.
   3. ASME International/Canadian Standards Association (ASME/CSA):
      a. ASME A112.19.2/CSA B45.1 - Ceramic Plumbing Fixtures.
   4. ASTM International (ASTM):
      a. ASTM A1045 - Specification for Flexible Poly (Vinyl Chloride) (PVC) Gaskets Used in Connection of Water Closets to Sanitary Drainage Systems.
   5. International Association of Plumbing and Mechanical Officials/American National Standards Institute (IAPMO/ANSI):
      a. IAPMO/ANSI Z124.5 - Plastic Toilet (Water Closet) Seats.
   6. International Code Council/American National Standards Institute (ICC/ANSI):
      a. ICC/ANSI A117.1 - Accessible and Usable Buildings and Facilities.
   7. NFPA:
      a. NFPA 70 - National Electrical Code.
   8. Underwriters Laboratories, Inc. (UL):
      a. UL 1951 - Electric Plumbing Accessories.

1.04 ACTION SUBMITTALS:

A. Product Data: For each type of product.
   1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for water closets.
   2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.

B. Shop Drawings: Include diagrams for power, signal, and control wiring.

1.05 CLOSEOUT SUBMITTALS:

A. Operation and Maintenance Data: For flushometer valves and electronic sensors to include in operation and maintenance manuals.

PART 2 - PRODUCTS

2.01 WALL-MOUNTED WATER CLOSETS:

A. Water Closets WC-1: Wall mounted, top spud, accessible.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. American Standard America.
      b. Briggs Plumbing Products, Inc.
      c. Capizzi.
      d. Crane Plumbing, LLC.
      e. Ferguson Enterprises, Inc.; ProFlo Brand.
      f. Gerber Plumbing Fixtures, LLC.
      g. Kohler Co.
      h. Mansfield Plumbing Products, LLC.
      i. Peerless Pottery Sales, Inc.
      j. TOTO USA, Inc.
      k. Zurn Industries, LLC; Commercial Brass and Fixtures.
      l. Or Engineer Approved Equal.
   2. Bowl:
      a. Standards: ASME A112.19.2/CSA B45.1 and ASME A112.19.5.
      b. Material: Vitreous china.
      c. Type: Siphon jet.
      d. Style: Flushometer valve.
      e. Height: Standard.
      f. Rim Contour: Elongated.
      g. Water Consumption: 1.28 gal. per flush.
      h. Spud Size and Location: NPS 1-1/2; top.
   3. Support:
      a. Standard: ASME A112.6.1M.
      b. Description: Waste-fitting assembly as required to match drainage piping material and arrangement with faceplates, couplings gaskets, and feet; bolts and hardware matching fixture.
      c. Water Closet Mounting Height: Handicapped/elderly according to ICC/ANSI A117.1 for WC-2.

2.02 FLUSHOMETER VALVES:

A. Solenoid-Actuator, Diaphragm Flushometer Valves WC-1:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Coyne & Delany Co.
      b. Gerber Plumbing Fixtures, LLC.
      c. Sloan Valve Company.
      d. Zurn Industries, LLC; Commercial Brass and Fixtures.
      e. Or Engineer Approved Equal.
   2. Standard: ASSE 1037.
   3. Minimum Pressure Rating: 125 psig.
   4. Features: Include integral check stop and backflow-prevention device.
   5. Material: Brass body with corrosion-resistant components.
   6. Exposed Flushometer-Valve Finish: Chrome plated.

7. Panel Finish: Chrome plated or stainless steel.
8. Style: Exposed.
9. Actuator: Solenoid complying with UL 1951, and listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
10. Trip Mechanism: Battery-powered electronic sensor complying with UL 1951, and listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
11. Consumption: 1.28 gal. per flush.
12. Minimum Inlet: NPS 1.
13. Minimum Outlet: NPS 1-1/4.

2.03 TOILET SEATS:

A. Toilet Seats WC-1:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. American Standard America.
      b. Bemis Manufacturing Company.
      c. Centoco Manufacturing Corporation.
      d. Church Seats.
      e. Jones Stephens Corp.; Comfort Seat Brand.
      f. Kohler Co.
      g. Olsonite Seat Co.
      h. Sanderson Plumbing Products, Inc.
      i. Sperzel of Lexington.
      j. TOTO USA, Inc.
      k. Zurn Industries, LLC; Commercial Brass and Fixtures.
      l. Or Engineer Approved Equal.
   2. Standard: IAPMO/ANSI Z124.5.
   3. Material: Plastic.
   4. Type: Commercial (Standard).
   5. Shape: Elongated rim, open front.
   6. Hinge: Self-sustaining, check.
   7. Hinge Material: Noncorroding metal.
   8. Seat Cover: Not required.
   9. Color: White.

PART 3 - EXECUTION

3.01 EXAMINATION:

A. Examine roughing-in of water supply and sanitary drainage and vent piping systems to verify actual locations of piping connections before water closet installation.
B. Examine walls and floors for suitable conditions where water closets will be installed.
C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION:

A. Water Closet Installation:
   1. Install level and plumb according to roughing-in Drawings.
   2. Install floor-mounted water closets on bowl-to-drain connecting fitting attachments to piping or building substrate.

3. Install accessible, wall-mounted water closets at mounting height for handicapped/elderly, according to ICC/ANSI A117.1.

B. Support Installation:
1. Install supports, affixed to building substrate, for floor-mounted, back-outlet water closets.
2. Use carrier supports with waste-fitting assembly and seal.
3. Install wall-mounted, back-outlet water closet supports with waste-fitting assembly and waste-fitting seals; and affix to building substrate.

C. Flushometer Valve Installation:
1. Install flushometer valve, water supply fitting on each supply to each water closet.
2. Attach supply piping to supports or substrate within pipe spaces behind fixtures.
3. Install actuators in locations that are easy for people with disabilities to reach.
4. Install fresh batteries in battery-powered, electronic-sensor mechanisms.

D. Install toilet seats on water closets.

E. Wall Flange and Escutcheon Installation:
1. Install wall flanges or escutcheons at piping wall penetrations in exposed, finished locations and within cabinets and millwork.
2. Install deep-pattern escutcheons if required to conceal protruding fittings.
3. Comply with escutcheon requirements specified in Section 22 05 18 - Escutcheons for Plumbing Piping.

F. Joint Sealing:
1. Seal joints between water closets and walls and floors using sanitary-type, one-part, mildew-resistant silicone sealant.
2. Match sealant color to water closet color.
3. Comply with sealant requirements specified in Division 07.

3.03 CONNECTIONS:

A. Connect water closets with water supplies and soil, waste, and vent piping. Use size fittings required to match water closets.

B. Comply with water piping requirements specified in Section 22 11 16 - Domestic Water Piping.

C. Comply with soil and waste piping requirements specified in Section 22 13 16 - Sanitary Waste and Vent Piping.

D. Where installing piping adjacent to water closets, allow space for service and maintenance.

3.04 ADJUSTING:

A. Operate and adjust water closets and controls. Replace damaged and malfunctioning water closets, fittings, and controls.

B. Adjust water pressure at flushometer valves to produce proper flow.

C. Install fresh batteries in battery-powered, electronic-sensor mechanisms.

3.05 CLEANING AND PROTECTION:

A. Clean water closets and fittings with manufacturers' recommended cleaning methods and materials.

B. Install protective covering for installed water closets and fittings.

C. Do not allow use of water closets for temporary facilities, unless approved in writing by Owner.

END OF SECTION 22 42 13.13

SECTION 22 42 16.13 – COMMERCIAL LAVATORIES

PART 1 - GENERAL

1.01 RELATED DOCUMENTS:

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY:

A. This Section includes:
   1. Lavatories.
   2. Faucets.

1.03 REFERENCES:

A. Applicable Standards (Latest Edition):
   1. American National Standards Institute (ANSI):
      a. ANSI Z124.3 - Plastic Lavatories.
      b. ANSI Z124.6 - Plastic Sinks.
   2. American National Standards Institute/International Cast Polymer Association (ANSI/ICPA):
      a. ANSI/ICPA SS-1 - Performance Standard for Solid Surface Materials.
   3. ASME International (ASME):
      a. ASME A112.6.1M - Floor-Affixed Supports for Off-the-Floor Plumbing Fixtures for Public Use.
      b. ASME A112.18.3 - Performance Requirements for Backflow Protection Devices and Systems in Plumbing Fixture Fittings.
      c. ASME A112.18.6 - Flexible Water Connectors.
   4. ASME International/Canadian Standards Association (ASME/CSA):
      a. ASME A112.18.1/CSA B125.1 - Plumbing Supply Fittings.
      b. ASME A112.18.2/CSA B125.2 - Plumbing Waste Fittings.
      c. ASME A112.19.1/CSA B45.2 - Enameled Cast Iron and Enameled Steel Plumbing Fixtures.
      d. ASME A112.19.2/CSA B45.1 - Ceramic Plumbing Fixtures.
   5. International Code Council/American National Standards Institute (ICC/ANSI):
      a. ICC/ANSI A117.1 - Accessible and Usable Buildings and Facilities.
   6. NSF International/American National Standards Institute (NSF/ANSI):
      a. NSF/ANSI 61 - Drinking Water System Components - Health Effects.
   7. Underwriters Laboratories, Inc. (UL):
      a. UL 1951 - Electric Plumbing Accessories.

1.04 ACTION SUBMITTALS:

A. Product Data: For each type of product.
   1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for lavatories.
   2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.

B. Shop Drawings: Include diagrams for power, signal, and control wiring of automatic faucets.

1.05 INFORMATIONAL SUBMITTALS:

A. Coordination Drawings: Counter cutout templates for mounting of counter-mounted lavatories.

1.06 CLOSEOUT SUBMITTALS:

A. Operation and Maintenance Data: For lavatories and faucets to include in operation and maintenance manuals.
   1. In addition to items specified in Division 01, include the following:
      a. Servicing and adjustments of automatic faucets.

PART 2 - PRODUCTS

2.01 VITREOUS-CHINA, COUNTER-MOUNTED LAVATORIES:

A. Lavatory L-2: Oval, self-rimming, vitreous china, counter mounted.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. American Standard America.
      b. Crane Plumbing, LLC.
      c. Kohler Co.
      d. TOTO USA, Inc.
      e. Or Engineer Approved Equal.
   2. Fixture:
      a. Standard: ASME A112.19.2/CSA B45.1.
      b. Type: Self-rimming for above-counter mounting.
      c. Nominal Size: Rectangular, 21 by 19 inches.
      d. Faucet-Hole Punching: One hole.
      e. Faucet-Hole Location: Top.
      f. Color: White.
      g. Mounting Material: Sealant.
   3. Faucet: L-2.

2.02 VITREOUS-CHINA, WALL-MOUNTED LAVATORIES:

A. Lavatory L-1: Wheelchair, vitreous china, wall mounted.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. American Standard America.
      b. Crane Plumbing, LLC.
      c. Ferguson Enterprises, Inc.; ProFlo Brand.
      d. Gerber Plumbing Fixtures, LLC.
      e. Kohler Co.
      f. Mansfield Plumbing Products, LLC.
      g. Peerless Pottery Sales, Inc.
      h. Or Engineer Approved Equal.
   2. Fixture:
      a. Standard: ASME A112.19.2/CSA B45.1.
      b. Type: Slab or wheelchair.
      c. Nominal Size: Rectangular, 27 by 20 inches.
      d. Faucet-Hole Punching: One hole.
      e. Faucet-Hole Location: Top.

f. Color: White.
g. Mounting: For concealed-arm carrier.
3. Faucet:
4. Support: ASME A112.6.1M, Type II, concealed-arm lavatory carrier with rectangular, steel uprights.

2.03 SOLID-BRASS, AUTOMATICALLY OPERATED LAVATORY FAUCETS:

A. NSF Standard: Comply with NSF/ANSI 61, "Drinking Water System Components - Health Effects," for faucet materials that will be in contact with potable water.

B. Lavatory Faucets L-1 and L-2: Automatic-type, battery-powered, electronic-sensor-operated, mixing, solid-brass valve.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. American Standard America.
   b. Bradley Corporation.
   c. Chicago Faucets.
   d. Gerber Plumbing Fixtures, LLC.
   e. Grohe America, Inc.
   f. Hydrotek International, Inc.
   g. Kohler Co.
   h. Moen, Incorporated.
   i. Sloan Valve Company.
   j. Speakman Company.
   k. T & S Brass and Bronze Works, Inc.
   l. TOTO USA, Inc.
   m. Zurn Industries, LLC; Commercial Brass and Fixtures.
   n. Or Engineer Approved Equal.
2. Standards: ASME A112.18.1/CSA B125.1 and UL 1951.
3. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
4. General: Include hot- and cold-water indicators; coordinate faucet inlets with supplies and fixture hole punchings; coordinate outlet with spout and fixture receptor.
5. Body Type: Single hole.
6. Body Material: Commercial, solid brass.
7. Finish: Polished chrome plate.
8. Maximum Flow Rate: 0.5 gpm.
9. Mounting Type: Deck, concealed.
10. Spout: Rigid type.
11. Spout Outlet: Aerator.
12. Drain: Solid brass, polished chrome plated, grid pattern.

2.04 LAMINAR-FLOW, FAUCET-SPOUT OUTLETS:

A. NSF Standard: Comply with NSF/ANSI 61, "Drinking Water System Components - Health Effects," for faucet-spout-outlet materials that will be in contact with potable water.

B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. AM Conservation Group, Inc.
2. Chronomite Laboratories, Inc.; a division of Acorn Engineering Company.

3. NEOPERL, Inc.
4. Or Engineer Approved Equal.

C. Description: Chrome-plated brass, faucet-spout outlet that produces non-aerating, laminar stream. Include external or internal thread that mates with faucet outlet for attachment to faucets where indicated and flow-rate range that includes flow of faucet.

2.05 SUPPLY FITTINGS:

A. NSF Standard: Comply with NSF/ANSI 61 and NSF 372, "Drinking Water System Components - Health Effects," for supply-fitting materials that will be in contact with potable water.
B. Standard: ASME A112.18.1/CSA B125.1.
C. Supply Piping: Chrome-plated brass pipe or chrome-plated copper tube matching water-supply piping size. Include chrome-plated brass or stainless-steel wall flange.
D. Supply Stops: Chrome-plated brass, one-quarter-turn, ball-type, or compression valve with inlet connection matching supply piping.
E. Operation: Wheel handle.
F. Risers:
1. NPS 3/8.
2. Chrome-plated, rigid copper pipe and brass straight or offset tailpieces riser.

2.06 WASTE FITTINGS:

A. Standard: ASME A112.18.2/CSA B125.2.
B. Drain: Grid type with NPS 1-1/4 offset and straight tailpiece.
C. Trap:
1. Size: NPS 1-1/2 by NPS 1-1/4.
2. Material: Chrome-plated, two-piece, cast-brass trap and swivel elbow with 0.032-inch thick brass tube to wall; and chrome-plated, brass or steel wall flange.

PART 3 - EXECUTION

3.01 EXAMINATION:

A. Examine roughing-in of water supply and sanitary drainage and vent piping systems to verify actual locations of piping connections before lavatory installation.
B. Examine counters and walls for suitable conditions where lavatories will be installed.
C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION:

A. Install lavatories level and plumb according to roughing-in Drawings.
B. Install supports, affixed to building substrate, for wall-mounted lavatories.
C. Install accessible wall-mounted lavatories at handicapped/elderly mounting height for people with disabilities or the elderly, according to ICC/ANSI A117.1.
D. Install wall flanges or escutcheons at piping wall penetrations in exposed, finished locations. Use deep-pattern escutcheons if required to conceal protruding fittings. Comply with escutcheon requirements specified in Section 22 05 18 - Escutcheons for Plumbing Piping.
E. Seal joints between lavatories, counters, and walls using sanitary-type, one-part, mildew-resistant silicone sealant. Match sealant color to fixture color. Comply with sealant requirements specified in Division 07.

F. Install protective shielding pipe covers and enclosures on exposed supplies and waste piping of accessible lavatories. Comply with requirements in Section 22 07 19 - Plumbing Piping Insulation.

3.03 CONNECTIONS:

A. Connect fixtures with water supplies, stops, and risers, and with traps, soil, waste, and vent piping. Use size fittings required to match fixtures.
B. Comply with water piping requirements specified in Section 22 11 16 - Domestic Water Piping.
C. Comply with soil and waste piping requirements specified in Section 22 13 16 - Sanitary Waste and Vent Piping.

3.04 ADJUSTING:

A. Operate and adjust lavatories and controls. Replace damaged and malfunctioning lavatories, fittings, and controls.
B. Adjust water pressure at faucets to produce proper flow.
C. Install fresh batteries in battery-powered, electronic-sensor mechanisms.

3.05 CLEANING AND PROTECTION:

A. After completing installation of lavatories, inspect and repair damaged finishes.
B. Clean lavatories, faucets, and other fittings with manufacturers' recommended cleaning methods and materials.
C. Provide protective covering for installed lavatories and fittings.
D. Do not allow use of lavatories for temporary facilities, unless approved in writing by Owner.

END OF SECTION 22 42 16.13

SECTION 22 42 16.16 – COMMERCIAL SINKS

PART 1 - GENERAL

1.01 RELATED DOCUMENTS:

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY:

A. This Section includes:
   1. Kitchen/utility sinks.
   2. Service basins.
   3. Sink faucets.

1.03 REFERENCES:

A. Applicable Standards (Latest Edition):
   1. ASME International (ASME):
      a. ASME A112.6.1M - Floor-Affixed Supports for Off-the-Floor Plumbing Fixtures for Public Use.
      b. ASME A112.18.6 - Flexible Water Connectors.
      c. ASME B1.20.7 - Hose Coupling Screw Threads (Inch).
   2. ASME International/Canadian Standards Association (ASME/CSA):
      a. ASME A112.18.1/CSA B125.1 - Plumbing Supply Fittings.
      b. ASME A112.18.2/CSA B125.2 - Plumbing Waste Fittings.
      c. ASME A112.19.1/CSA B45.2 - Enameled Cast-Iron and Enameled Steel Plumbing Fixtures.
      d. ASME A112.19.2/CSA B45.1 - Ceramic Plumbing Fixtures.
      e. ASME A112.19.3/CSA B45.4 - Stainless-Steel Plumbing Fixtures.
   3. ASTM International (ASTM):
      a. ASTM C1107 - Specification for Packaged Dry, Hydraulic-Cement Grout (Nonshrink).
   4. International Association of Plumbing and Mechanical Officials (IAPMO):
      a. IAPMO PS 99 - Terrazzo, Marble, Concrete, Granite, and Slate Plumbing Fixtures.
   5. International Association of Plumbing and Mechanical Officials/American National Standards Institute (IAPMO/ANSI):
      a. IAPMO/ANSI Z124.6 - Plastic Sinks.
   6. International Code Council/American National Standards Institute (ICC/ANSI):
      a. ICC/ANSI A117.1 - Accessible and Usable Buildings and Facilities.
   7. NSF International/American National Standards Institute (NSF/ANSI):
      a. NSF/ANSI 2 - Food Equipment.
      b. NSF/ANSI 61 - Drinking Water System Components - Health Effects.

1.04 ACTION SUBMITTALS:

A. Product Data: For each type of product.
   1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for sinks.
   2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.

1.05 CLOSEOUT SUBMITTALS:

A. Operation and Maintenance Data: For sinks and faucets to include in operation and maintenance manuals.

PART 2 - PRODUCTS

2.01 KITCHEN/UTILITY SINKS:

A. Kitchen/Utility Sinks, Counter Mounted - Stainless Steel: "KS-1"

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   a. Advance Tabco
   b. Eagle Group
   c. Elkay
   d. Just Manufacturing
   e. Krowne
   f. Or Engineer Approved Equal.
2. Source Limitations: Obtain sinks from single source from single manufacturer.
3. Fixture:
   a. Standard: ASME A112.19.3/CSA B45.4.
   b. Type: Stainless steel, self-rimming, sound-deadened unit with ledge back.
   c. Number of Compartments: Two.
   d. Overall Dimensions: 32 x 22 x 6-5/16 Inch.
   e. Material: 20 gauge, Type 304 stainless steel.
   f. Each Compartment:
      (1) Drains: Grid with NPS 2 tailpiece and twist drain.
      (2) Drain Location: Centered in compartment.
      (3) Depth: Accessible in accordance with ICC A117.1.
4. Faucet(s): "KSF"
   a. Number Required: One.
   b. Mounting: On ledge.
5. Supply Fittings:
   a. Standard: ASME A112.18.1/CSA B125.1.
   b. Supplies: Chrome-plated brass compression stop with inlet connection matching water-supply piping type and size.
      (1) Operation: Loose key.
      (2) Risers: NPS 1/2, ASME A112.18.6/CSA B125.6, braided or corrugated stainless steel flexible hose.
6. Waste Fittings:
   a. Standard: ASME A112.18.2/CSA B125.2.
   b. Trap(s) Size: NPS 2.
   c. Trap(s) Material:
      (1) Chrome-plated, two-piece, cast-brass trap and ground-joint swivel elbow with 17-gauge brass tube to wall; and chrome-plated brass or steel wall flange.
      (2) Stainless steel, two-piece trap and swivel elbow with 0.012-inch- thick stainless steel tube to wall; and stainless steel wall flange.
7. Mounting: On counter with sealant.

B. Kitchen/Utility Sinks, Counter Mounted - Stainless Steel: “LS-1”
   1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      a. Advance Tabco
      b. Eagle Group
      c. Elkay
      d. Just Manufacturing
      e. Krowne
      f. Or Engineer Approved Equal.
   2. Source Limitations: Obtain sinks from single source from single manufacturer.
   3. Fixture:
      a. Standard: ASME A112.19.3/CSA B45.4.
      b. Type: Stainless steel, self-rimming, sound-deadened unit with ledge back.
      c. Number of Compartments: One.
      d. Overall Dimensions: <Insert dimensions>.
      e. Material: 18 gauge, Type 304 stainless steel.
      f. Compartment:
         (1) Dimensions: <Insert dimensions>.
         (2) Drain: Grid with NPS 2 tailpiece and twist drain.
         (3) Drain Location: Centered in compartment.
         (4) Depth: Accessible in accordance with ICC A117.1.
   4. Faucet(s): <Insert sink faucet designation from "Sink Faucets, Manually Operated" or "Sink Faucets, Automatically Operated" Subparagraph>.
      a. Number Required: One.
      b. Mounting: On ledge.
   5. Supply Fittings:
      a. Standard: ASME A112.18.1/CSA B125.1.
      b. Supplies: Chrome-plated brass compression stop with inlet connection matching water-supply piping type and size.
         (1) Operation: Loose key.
         (2) Risers: NPS 1/2, ASME A112.18.6/CSA B125.6, braided or corrugated stainless steel flexible hose.
   6. Waste Fittings:
      a. Standard: ASME A112.18.2/CSA B125.2.
      b. Trap(s) Size: NPS 2.
      c. Trap(s) Material:
         (1) Chrome-plated, two-piece, cast-brass trap and ground-joint swivel elbow with 17-gauge brass tube to wall; and chrome-plated brass or steel wall flange.
         (2) Stainless steel, two-piece trap and swivel elbow with 0.012-inch- thick stainless steel tube to wall; and stainless steel wall flange.
   7. Mounting: On counter with sealant.

2.02 SERVICE BASINS:

A. Mop Basin: Terrazzo, floor mounted. “MB-1”
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Acorn Engineering Company.
      b. Crane Plumbing, LLC.

c. Florestone Products Co., Inc.
d. Stern-Williams Co., Inc.
e. Or Engineer Approved Equal.

2. Fixture:
a. Standard: IAPMO PS 99.
b. Shape: Square.
c. Nominal Size: 24 by 24 inches.
d. Height: 12 inches.
e. Tiling Flange: Not required.
f. Rim Guard: On all top surfaces.
g. Color: Not applicable.
h. Drain: Grid with NPS 2 outlet.

3. Faucet(s): "MBF"
4. Mounting: On floor and flush to wall.

2.03 SINK FAUCETS:

A. Sink Faucets, Manually Operated: Single control, mixing. "KSF"
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. Central Brass Company; a Pioneer Industries, Inc. brand
b. Chicago Faucets; Geberit Group
c. Elkay
d. Gerber Plumbing Fixtures LLC.
e. Just Manufacturing
f. ProFlo; a Ferguson Enterprises, Inc. brand
g. T&S Brass and Bronze Works, Inc.
h. Or Engineer Approved Equal.

2. Source Limitations: Obtain sink faucets from single source from single manufacturer.
3. Standards:
a. ASME A112.18.1/CSA B125.1.
b. NSF 61.
c. NSF 372.

4. Description: Include hot- and cold-water indicators; coordinate faucet inlets with supplies and fixture hole punchings; coordinate outlet with spout and sink receptor.
5. Body Type: Centerset.
6. Body Material: Commercial, solid-brass, or die-cast housing with brazed copper and brass waterway.
7. Finish: Polished chrome plate.
8. Maximum Flow Rate: 1.5 gpm.
9. Mounting Type: Deck, exposed.
10. Valve Handle(s): Lever.
11. Spout Type: Swivel, gooseneck.
12. Spout Outlet: Aerator with Spray

B. Sink Faucets: Manual type, two-lever-handle mixing valve. "MBF"
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. American Standard America.
b. Bradley Corporation.
c. Chicago Faucets.

d. Or Engineer Approved Equal.
2. Maximum Flow Rate: 4.0 gpm.
3. Handle(s): Lever.
4. Mounting Type: Back/wall, exposed.
5. Spout Type: Rigid, solid brass with wall brace.
6. Vacuum Breaker: Required for hose outlet.
7. Spout Outlet: Hose thread according to ASME B1.20.7.

2.04 GROUT:

A. Standard: ASTM C1107, Grade B, post-hardening and volume-adjusting, dry, hydraulic-cement grout.
B. Characteristics: Nonshrink; recommended for interior and exterior applications.
C. Design Mix: 5,000 psi, 28-day compressive strength.
D. Packaging: Premixed and factory packaged.

PART 3 - EXECUTION

3.01 EXAMINATION:

A. Examine roughing-in of water supply and sanitary drainage and vent piping systems to verify actual locations of piping connections before sink installation.
B. Examine walls, floors, and counters for suitable conditions where sinks will be installed.
C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION:

A. Install sinks level and plumb according to roughing-in Drawings.
B. Install supports, affixed to building substrate, for wall-hung sinks.
C. Set floor-mounted sinks in leveling bed of cement grout.
D. Install water-supply piping with stop on each supply to each sink faucet.
1. Exception: Use ball, gate, or globe valves if supply stops are not specified with sink. Comply with valve requirements specified in Section 22 05 23 - General-Duty Valves for Plumbing Piping.
2. Install stops in locations where they can be easily reached for operation.
E. Seal joints between sinks and counters, floors, and walls using sanitary-type, one-part, mildew-resistant silicone sealant. Match sealant color to fixture color. Comply with sealant requirements specified in Division 07.
F. Install wall flanges or escutcheons at piping wall penetrations in exposed, finished locations. Use deep-pattern escutcheons if required to conceal protruding fittings. Comply with escutcheon requirements specified in Section 22 05 18 – Escutcheons for Plumbing Piping.

3.03 CONNECTIONS:

A. Connect sinks with water supplies, stops, and risers, and with traps, soil, waste, and vent piping. Use size fittings required to match fixtures.
B. Comply with water piping requirements specified in Section 22 11 16 - Domestic Water Piping.
C. Comply with soil and waste piping requirements specified in Section 22 13 16 - Sanitary Waste and Vent Piping.

3.04 ADJUSTING:

A. Operate and adjust sinks and controls. Replace damaged and malfunctioning sinks, fittings, and controls.
B. Adjust water pressure at faucets to produce proper flow.

3.05 CLEANING AND PROTECTION:

A. After completing installation of sinks, inspect and repair damaged finishes.
B. Clean sinks, faucets, and other fittings with manufacturers' recommended cleaning methods and materials.
C. Provide protective covering for installed sinks and fittings.
D. Do not allow use of sinks for temporary facilities, unless approved in writing by Owner.

END OF SECTION 22 42 16.16

SECTION 22 45 00 – EMERGENCY PLUMBING FIXTURES

PART 1 - GENERAL

1.01 RELATED DOCUMENTS:

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY:

A. This Section includes:
   1. Emergency Shower
   2. Eyewash equipment.
   3. Combination units.
   4. Water-tempering equipment.

1.03 REFERENCES:

A. Applicable Standards (Latest Edition):
   1. American National Standards Institute (ANSI):
      a. ANSI Z358.1 - Emergency Eyewash and Shower Equipment.
   2. American Society of Mechanical Engineers/Canadian Standards Association (ASME/SCACSA):
      a. ASME A112.18.1/CSA B125.1 – Water-Supply Fittings.
      b. ASME A112.18.2/CSA B125.2 - Plumbing Waste Fittings.
   3. Federal Government:
      a. Public Law 90-480 - Architectural Barriers Act.
      b. Public Law 101-336 - Americans with Disabilities Act.
   4. International Code Council/American National Standards Institute (ICC/ANSI):
      a. ICC/ANSI A117.1 - Accessible and Usable Buildings and Facilities.
   5. NFPA:
      a. NFPA 70 - National Electrical Code.
   6. NSF International (NSF):
      a. NSF 61 and NSF 372 - Drinking Water System Components - Health Effects.

1.04 DEFINITIONS:

A. Accessible Fixture: Emergency plumbing fixture that can be approached, entered, and used by people with disabilities.
B. Plumbed Emergency Plumbing Fixture: Fixture with fixed, potable-water supply.
C. Tepid: Between 60 and 100 deg. F.

1.05 ACTION SUBMITTALS:

A. Product Data: For each type of product indicated. Include flow rates and capacities, furnished specialties, and accessories.
B. Shop Drawings: Diagram power, signal, and control wiring.
   1. Plans. Elevations, sections, and mounting and/or attachment details.
   2. Details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.

3. Vibration Isolation Base Details: Detail fabrication including anchorages and attachments to structure and to supported equipment. Include adjustable motor bases, rails, and frames for equipment mounting.
4. Diagram for power, signal, and control wiring.

1.06 INFORMATIONAL SUBMITTALS:

A. Field quality-control test reports.

1.07 CLOSEOUT SUBMITTALS:

A. Operation and Maintenance Data: For emergency plumbing fixtures to include in operation and maintenance manuals.

1.08 QUALITY ASSURANCE:

A. ANSI Standard: Comply with ANSI Z358.1, "Emergency Eyewash and Shower Equipment."
B. NSF Standard: Comply with NSF 61, "Drinking Water System Components - Health Effects," for fixture materials that will be in contact with potable water.
C. Regulatory Requirements: Comply with requirements in ICC/ANSI A117.1, "Accessible and Usable Buildings and Facilities" [; Public Law 90-480, "Architectural Barriers Act"; and Public Law 101-336, "Americans with Disabilities Act";] for plumbing fixtures for people with disabilities.

PART 2 - PRODUCTS

2.01 COMBINATION EMERGENCY SHOWER/EYEWASH:

A. Emergency Combination Shower with Eyewash or Eye/Face Wash, Freeze Resistant, Plumbed, ES/EW-1:
1. Subject to compliance with requirements, provide products by one of the following:
a. Bradley Corporation
b. Encon Safety Products
c. Guardian Equipment Co
d. Haws Corporation
e. Acorn Safety; a division of Acorn Engineering Company
f. Safety Manufacturing
g. Or Engineer Approved Equal.
2. Source Limitations: Obtain emergency combination showers with eye/face washes, freeze resistant, plumbed, from single manufacturer.
3. Standards:
a. ANSI/ISEA Z358.1.
b. ASME A112.18.1/CSA B125.1.
c. ASME A112.18.2/CSA B125.2.
4. Integral Supply Pipe Material: Galvanized steel.
a. Supply Connection: NPS 1-1/4 minimum.
5. Heating System: Electric, 120 V ac; insulation enclosed in a protective jacket with thermometer.
6. Shower:
a. Shower Capacity: Not less than 20 gpm for at least 15 minutes.
b. Supply Piping: NPS 1 with flow regulator and stay-open control valve.
c. Control Valve:
(1) Type: Stay-open type with flow regulator.

(2) Actuator: Pull rod , 60-inch.
d. Shower Head: 3-inch- minimum diameter, plastic.
e. Mounting: Pedestal.
7. Eye/Face Wash:
a. Capacity: Not less than 3 gpm for at least 15 minutes.
b. Control Valve:
(1) Type: Stay-open type with flow regulator.
(2) Actuator: Paddle.
8. Accessories:
a. Electric alarm with flashing light and horn.
b. Flow switch; single pole.

2.02 EYEWASH EQUIPMENT:

A. Standard, Freestanding, Plumbed Eyewash Units, EW-1:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. Acorn Safety; a division of Acorn Engineering Company.
b. Bradley Corporation.
c. Encon Safety Products.
d. Guardian Equipment Co.
e. Haws Corporation.
f. Sellstrom Manufacturing Company.
g. Speakman Company.
h. WaterSaver Faucet Co.
i. Or Engineer Approved Equal.
2. Capacity: Not less than 0.4 gpm for at least 15 minutes.
3. Supply Piping: NPS 1/2 chrome-plated brass or stainless steel with flow regulator and stay-open control valve.
4. Control-Valve Actuator: Paddle.
5. Spray-Head Assembly: Two receptor-mounted spray heads.
6. Receptor: Chrome-plated brass or stainless-steel bowl.
7. Drain Piping: NPS 1-1/4 minimum, chrome-plated brass, receptor drain, P trap, waste to wall, and wall flange complying with ASME A112.18.2/CSA B125.2.
8. Mounting: Pedestal.

2.03 WATER-TEMPERING EQUIPMENT:

A. Hot- and Cold-Water, Water-Tempering Equipment, TMV-1:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. Acorn Safety; a division of Acorn Engineering Company.
b. Armstrong International, Inc.
c. Bradley Corporation.
d. Encon Safety Products.
e. Guardian Equipment Co.
f. Haws Corporation.
g. Lawler Manufacturing Co., Inc.
h. Leonard Valve Company.
i. Powers; a Division of Watts Water Technologies, Inc.
j. Speakman Company.

k. Or Engineer Approved Equal.

2. Description: Factory-fabricated equipment with thermostatic mixing valve.
   a. Thermostatic Mixing Valve: Designed to provide 85ºF tepid, potable water at emergency plumbing fixtures, to maintain temperature at ±5ºF throughout required 15-minute test period, and in case of unit failure to continue cold-water flow, with union connections, controls, metal piping, and corrosion-resistant enclosure.
   b. Supply Connections: For hot and cold water.

2.04 ACCESSORIES:

A. Flow Switches:
   1. Double Pole: double throw for alarm.
   2. Electrical 120 VAC
   3. Activation flowrate: Less than 3 GPM.
   4. Installation location: Install flow switches on outlet tepid water piping for each mixing valve.

2.05 INSTANTANEOUS TEPID WATER HEATER:

A. Tepid water heater equipment, TWH-1:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Eemax
      b. Bradford White
      c. Rheem
      d. Chronomite Laboratories, Inc
      e. Or Engineer Approved Equal.
   2. Description: tankless water heater for ANSIZ358.1 Safety emergency eyewash.
      a. Maximum outlet temperature 90 degrees F.
      b. Minimum flowrate 0.4 GPM.
      c. Electric power:
         (1) 120 volt
         (2) single phase
         (3) 3.5 kW
         (4) 29 amps
         (5) Temperature Rise 60 degrees F at 0.3 GPM.
         (6) On at 0.2 GPM.

B. Tepid water heater equipment, TWH-3:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Eemax
      b. Bradford White
      c. Rheem
      d. Chronomite Laboratories, Inc
      e. Or Engineer Approved Equal.
   2. Standards:
      a. ANSI/ISEA Z358.1.
      b. ASME A112.18.1/CSA B125.1.
   3. Description: tankless water heater for emergency shower/eyewash.
      a. Maximum outlet temperature 90 degrees F.

b. Minimum flowrate 23 GPM.
c. Electric power:
   (1) 480 volt
   (2) three phase
   (3) 77 kW
   (4) 93 amps
   (5) Temperature Rise 23 degrees F at 23 GPM.
   (6) On at 2.6 GPM.
d. Integral fused disconnect switch.

PART 3 - EXECUTION

3.01 EXAMINATION:

A. Examine roughing-in for water piping systems to verify actual locations of piping connections before plumbed emergency plumbing fixture installation.
B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 EMERGENCY PLUMBING FIXTURE INSTALLATION:

A. Assemble emergency plumbing fixture piping, fittings, control valves, and other components.
B. Install fixtures level and plumb.
C. Fasten fixtures to substrate.
D. Install shutoff valves in water-supply piping to fixtures. Use ball, gate, or globe valve if specific type valve is not indicated. Install valves chained or locked in open position if permitted. Install valves in locations where they can easily be reached for operation. Comply with requirements for valves specified in Section 22 05 23 - General-Duty Valves for Plumbing Piping.
   1. Exception: Omit shutoff valve on supply to group of plumbing fixtures that includes emergency equipment.
   2. Exception: Omit shutoff valve on supply to emergency equipment if prohibited by authorities having jurisdiction.
E. Install dielectric fitting in supply piping to emergency equipment if piping and equipment connections are made of different metals. Comply with requirements for dielectric fittings specified in Section 22 11 16 - Domestic Water Piping.
F. Install thermometers in supply and outlet piping connections to water-tempering equipment. Comply with requirements for thermometers specified in Section 22 05 19 - Meters and Gauges for Plumbing Piping.
G. Install trap and waste piping on drain outlet of emergency equipment receptors that are indicated to be directly connected to drainage system. Comply with requirements for waste piping specified in Division 22, Section "Sanitary Waste and Vent Piping."
H. Install indirect waste piping on drain outlet of emergency equipment receptors that are indicated to be indirectly connected to drainage system. Comply with requirements for waste piping specified in Division 22, Section "Sanitary Waste and Vent Piping."
I. Install escutcheons on piping wall and ceiling penetrations in exposed, finished locations. Comply with requirements for escutcheons specified in Division 22, Section "Escutcheons for Plumbing Piping."

3.03 CONNECTIONS:

A. Connect cold-water-supply piping to plumbed emergency plumbing fixtures not having water-tempering equipment. Comply with requirements for cold-water piping specified in Division 22, Section "Domestic Water Piping."

B. Connect hot- and cold-water-supply piping to hot- and cold-water, water-tempering equipment. Connect output from water-tempering equipment to emergency plumbing fixtures. Comply with requirements for hot- and cold-water piping specified in Division 22, Section "Domestic Water Piping."

C. Connect cold water and electrical power to electric heating water-tempering equipment. Comply with requirements for cold-water piping specified in Division 22, Section "Domestic Water Piping."

D. Directly connect emergency plumbing fixture receptors with trapped drain outlet to sanitary waste and vent piping. Comply with requirements for waste piping specified in Division 22, Section "Sanitary Waste and Vent Piping."

E. Indirectly connect emergency plumbing fixture receptors without trapped drain outlet to sanitary waste or storm drainage piping.

F. Where installing piping adjacent to emergency plumbing fixtures, allow space for service and maintenance of fixtures.

3.04 IDENTIFICATION:

A. Install equipment nameplates or equipment markers on emergency plumbing fixtures and equipment and equipment signs on water-tempering equipment. Comply with requirements for identification materials specified in Section 22 05 53 - Identification for Plumbing Piping and Equipment.

3.05 FIELD QUALITY CONTROL:

A. Mechanical-Component Testing: After plumbing connections have been made, test for compliance with requirements. Verify ability to achieve indicated capacities.

B. Tests and Inspections:

1. Perform each visual and mechanical inspection.
2. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
3. Operational Test: After electrical circuitry has been energized, start units to confirm proper unit operation.
4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
5. Emergency plumbing fixtures and water-tempering equipment will be considered defective if they do not pass tests and inspections.

C. Prepare test and inspection reports.

3.06 ADJUSTING:

A. Operate and adjust emergency plumbing fixtures and controls. Replace damaged and malfunctioning fixtures and controls.

B. Adjust or replace fixture flow regulators for proper flow.

C. Adjust equipment temperature settings.

3.07 CLEANING AND PROTECTION

A. Clean emergency plumbing fixtures with manufacturers' recommended cleaning methods and materials.

B. Install protective covering for installed emergency plumbing fixtures and fittings.

END OF SECTION 22 45 00

SECTION 22 47 13 – DRINKING FOUNTAIN

PART 1 - GENERAL

1.01 RELATED DOCUMENTS:

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY:

A. This Section includes drinking fountains and related components.

1.03 REFERENCE STANDARDS:

A. Applicable Standards (Latest Edition):
   1. ASME International (ASME):
      a. ASME A112.6.1M - Floor-Affixed Supports for Off-the-Floor Plumbing Fixtures for Public Use.
   2. ASME International/Canadian Standards Association (ASME/CSA):
      a. ASME A112.18.2/CSA B125.2 - Plumbing Waste Fittings.
      b. ASME A112.19.2/CSA B45.1 - Ceramic Plumbing Fixtures.
      c. ASME A112.19.3/CSA B45.4 - Stainless-Steel Plumbing Fixtures.
   3. International Code Council, Inc. (ICC):
      a. ICC A117.1 - Accessible and Usable Buildings and Facilities (ANSI).
   4. NSF International (NSF):
      a. NSF 61 - Drinking Water System Components - Health Effects (ANSI).

1.04 SUBMITTALS:

A. Product Data: For each type of drinking fountain.
   1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.
   2. Include operating characteristics, and furnished specialties and accessories.

B. Maintenance Data: For drinking fountains to include in maintenance manuals.

PART 2 - PRODUCTS

2.01 WATER COOLERS:

A. Water Coolers - Surface Wall Mounted, Powder-Coated Metal (DF-1):
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Elkay Manufacturing Co.
      b. Filtrine Manufacturing Company.
      c. Halsey Taylor.
      d. Haws Corporation.
      e. Murdock-Super Secur; a division of Acorn Engineering Company.
      f. Stern-Williams Co., Inc.
      g. Tri Palm International, LLC; Oasis Brand.
      h. Tri Palm International, LLC; Sunroc Brand.
      i. Or Engineer Approved Equal.
   2. Source Limitations: Obtain surface wall-mounted, powder-coated-metal, water coolers from single source from single manufacturer.
   3. Standards:

a. NSF 61.
b. NSF 372.
c. ASHRAE 18.
d. UL 399.
e. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

4. Color: Gray.
5. Type: Vandal resistant.
6. Bubbler: One, with adjustable stream regulator, located on each cabinet deck.
7. Control: Push bar.
8. Bottle Filler: Sensor activation: Fill rate is 0.5 to 1.5 gpm.
9. Drain: Grid with NPS 1-1/4 tailpiece.
10. Supply: NPS 3/8 with shutoff valve.
11. Waste Fitting: ASME A112.18.2/CSA B125.2, NPS 1-1/4 brass P-trap.
12. Cooling System: Electric, with hermetically sealed compressor, cooling coil, air-cooled condensing unit, corrosion-resistant tubing, refrigerant, corrosion-resistant-metal storage tank, and adjustable thermostat.
13. Support: Fixture carrier.
14. Water-Cooler Mounting Height: High/low - standard/accessible in accordance with ICC A117.1.
15. Capacities and Characteristics:
    a. Cooled Water: 8 gph.
    b. Ambient-Air Temperature: 90 deg F.
    c. Inlet-Water Temperature: 80 deg F.
    d. Cooled-Water Temperature: 50 deg F.
    e. Electrical Characteristics:
        (1) Volts: 120 V ac.
        (2) Phase: Single.
        (3) Hertz: 60 Hz.
        (4) Full-Load Amperes: 15 A.
16. Support: ASME A112.6.1M.

PART 3 - EXECUTION

3.01 EXAMINATION:

A. Examine roughing-in for water-supply and sanitary drainage and vent piping systems to verify actual locations of piping connections before fixture installation.
B. Examine walls and floors for suitable conditions where fixtures will be installed.
C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION:

A. Install fixtures level and plumb according to roughing-in drawings. For fixtures indicated for children, install at height required by authorities having jurisdiction.
B. Install off-the-floor carrier supports, affixed to building substrate, for wall-mounted fixtures.
C. Install water-supply piping with shutoff valve on supply to each fixture to be connected to domestic-water distribution piping. Use ball, gate, or globe valve. Install valves in locations where they can be easily reached for operation. Valves are specified in Section 22 05 23 - General-Duty Valves for Plumbing Piping.

D. Install trap and waste piping on drain outlet of each fixture to be connected to sanitary drainage system.
E. Install wall flanges or escutcheons at piping wall penetrations in exposed, finished locations. Use deep-pattern escutcheons where required to conceal protruding fittings. Comply with escutcheon requirements specified in Section 22 05 18 - Escutcheons for Plumbing Piping.
F. Seal joints between fixtures and walls using sanitary-type, one-part, mildew-resistant, silicone sealant. Match sealant color to fixture color. Comply with sealant requirements specified in Section 079200 – Joint Sealants.

3.03 CONNECTIONS:
A. Connect fixtures with water supplies, stops, and risers, and with traps, soil, waste, and vent piping. Use size fittings required to match fixtures.
B. Comply with water piping requirements specified in Section 22 11 16 - Domestic Water Piping.
C. Install ball, gate, or globe shutoff valve on water supply to each fixture. Comply with valve requirements specified in Section 22 05 23 - General-Duty Valves for Plumbing Piping.
D. Comply with soil and waste piping requirements specified in Section 22 13 16 - Sanitary Waste and Vent Piping.

3.04 ADJUSTING:
A. Adjust fixture flow regulators for proper flow and stream height.

3.05 CLEANING:
A. After installing fixtures, inspect unit. Remove paint splatters and other spots, dirt, and debris. Repair damaged finish to match original finish.
B. Clean fixtures, on completion of installation, according to manufacturer's written instructions.
C. Provide protective covering for installed fixtures.
D. Do not allow use of fixtures for temporary facilities, unless approved in writing by Owner.

END OF SECTION 22 47 13

SECTION 23 05 13 – COMMON MOTOR REQUIREMENTS FOR HVAC EQUIPMENT

PART 1 - GENERAL

1.01 RELATED DOCUMENTS:

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY:

A. Section includes general requirements for single-phase and polyphase, general-purpose, horizontal, small and medium, squirrel-cage induction motors for use on ac power systems up to 600V and installed at equipment manufacturer's factory or shipped separately by equipment manufacturer for field installation.

1.03 REFERENCE STANDARDS:

A. Applicable Standards (latest edition):
   1. The Institute of Electrical and Electronics Engineers, Inc. (IEEE):
      a. IEEE 841-2009 - Standard for Petroleum and Chemical Industry - Severe Duty Totally Enclosed Fan-Cooled (TEFC) Squirrel Cage Induction Motors - Up to and Including 370 kW (500 hp).
   2. National Electrical Manufacturers Association (NEMA):
      a. NEMA MG 1 - Motors and Generators.

1.04 COORDINATION:

A. Coordinate features of motors, installed units, and accessory devices to be compatible with the following:
   1. Motor controllers.
   2. Torque, speed, and horsepower requirements of the load.
   3. Ratings and characteristics of supply circuit and required control sequence.
   4. Ambient and environmental conditions of installation location.

PART 2 - PRODUCTS

2.01 GENERAL MOTOR REQUIREMENTS:

A. Comply with requirements in this Section except when stricter requirements are specified in HVAC equipment schedules or Sections.
B. Comply with NEMA MG 1 unless otherwise indicated.
C. Comply with minimum efficiency requirements in accordance with DOE 10 CFR 431.

2.02 MOTOR CHARACTERISTICS:

A. Duty: Continuous duty at ambient temperature of 40ºC and at altitude of 3300 feet above sea level.

B. Capacity and Torque Characteristics: Sufficient to start, accelerate, and operate connected loads at designated speeds, at installed altitude and environment, with indicated operating sequence, and without exceeding nameplate ratings or considering service factor.

2.03 POLYPHASE MOTORS:

A. Description: NEMA MG 1, Design B, medium induction motor.
B. Efficiency: Energy efficient, as defined in NEMA MG 1.
C. Service Factor: 1.15.
D. Rotor: Random-wound, squirrel cage.
E. Bearings: Regreasable, shielded, antifriction ball bearings suitable for radial and thrust loading.
F. Temperature Rise: Class B.
G. Insulation: Class F.
H. Code Letter Designation:
   1. Motors 15 HP and Larger: NEMA starting Code F or Code G.
   2. Motors Smaller than 15 HP: Manufacturer's standard starting characteristic.
I. Enclosure Material: Cast iron for motor frame sizes 324T and larger; rolled steel for motor frame sizes smaller than 324T.

2.04 POLYPHASE MOTORS WITH ADDITIONAL REQUIREMENTS:

A. Motors Used with Variable Frequency Controllers: Ratings, characteristics, and features coordinated with and approved by controller manufacturer.
   1. Windings: Copper magnet wire with moisture-resistant insulation varnish, designed and tested to resist transient spikes, high frequencies, and short time rise pulses produced by pulse-width modulated inverters.
   2. Bearing Protection: All motors operated on variable frequency drives shall be equipped with maintenance free, 360 degree circumferential conductive microfiber shaft grounding ring with a minimum two continuous rows of conductive micro fibers completely surrounding the motor shaft to discharge electrical shaft voltages away from the motor’s bearings to ground. Note: Friction/spring contact brushes shall not be acceptable.
   3. Application Note: Motors up to 100HP shall be provided with a minimum of one shaft grounding ring as described above installed by the manufacturer internally to the motor or externally on the drive end. Motors over 100HP shall be provided with an insulated bearing on the non-drive end and a shaft grounding ring on the drive end of the motor. Grounding rings shall be provided and installed by the motor manufacturer or contractor and shall be installed in accordance with the manufacturer’s recommendations.

4. Energy- and Premium-Efficient Motors: Class B temperature rise; Class F insulation.
5. Inverter-Duty Motors: Class F temperature rise; Class H insulation.
6. Thermal Protection: Comply with NEMA MG 1 requirements for thermally protected motors.

B. Severe-Duty Motors: Comply with IEEE 841, with 1.15 minimum service factor.

2.05 SINGLE-PHASE MOTORS:

A. Motors larger than 1/20 hp shall be one of the following, to suit starting torque and requirements of specific motor application:
   1. Permanent-split capacitor.
   2. Split phase.
   3. Capacitor start, inductor run.
   4. Capacitor start, capacitor run.

B. Multispeed Motors: Variable-torque, permanent-split-capacitor type.

C. Bearings: Prelubricated, antifriction ball bearings or sleeve bearings suitable for radial and thrust loading.

D. Motors 1/20 HP and Smaller: Shaded-pole type.

E. Thermal Protection: Internal protection to automatically open power supply circuit to motor when winding temperature exceeds a safe value calibrated to temperature rating of motor insulation. Thermal-protection device shall automatically reset when motor temperature returns to normal range.

PART 3 - EXECUTION (NOT APPLICABLE)

END OF SECTION 23 05 13

SECTION 23 05 53 – IDENTIFICATION FOR HVAC EQUIPMENT

PART 1 - GENERAL

1.01 RELATED DOCUMENTS:

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY:

A. This Section includes:
   1. Equipment labels.
   2. Warning signs and labels.

1.03 REFERENCE STANDARDS:

A. Applicable Standards (Latest Edition):
   1. ASME International (ASME):
      a. ASME A13.1 - Scheme for the Identification of Piping Systems.

1.04 SUBMITTALS:

A. Product Data: For each type of product indicated.
B. Equipment Label Schedule: Include a listing of all equipment to be labeled with the proposed content for each label.

1.05 COORDINATION:

A. Coordinate installation of identifying devices with completion of covering and painting of surfaces where devices are to be applied.
B. Coordinate installation of identifying devices with locations of access panels and doors.
C. Install identifying devices before installing acoustical ceilings and similar concealment.

PART 2 - PRODUCTS

2.01 EQUIPMENT LABELS:

A. Plastic Labels for Equipment:
   1. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/8 inch thick, and having predrilled holes for attachment hardware.
   2. Letter and Background Color: As indicated for specific application under Part 3.
   3. Maximum Temperature: Able to withstand temperatures up to 160ºF.
   4. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inches.
   5. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches, 1/2 inch for viewing distances up to 72 inches, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
   6. Fasteners: Stainless-steel rivets or self-tapping screws.
   7. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.
B. Label Content: Include equipment's Drawing designation and asset tag number.

2.02 LABELS:

A. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/8 inch thick, and having predrilled holes for attachment hardware.

B. Letter and Background Color: As indicated for specific application under Part 3.
C. Maximum Temperature: Able to withstand temperatures up to 160ºF.
D. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inches.
E. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches, 1/2 inch for viewing distances up to 72 inches, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
F. Fasteners: Stainless-steel rivets or self-tapping screws.
G. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.

PART 3 - EXECUTION

3.01 PREPARATION:

A. Clean piping and equipment surfaces of incompatible primers, paints, and encapsulants, as well as dirt, oil, grease, release agents, and other substances that could impair bond of identification devices.

3.02 INSTALLATION, GENERAL REQUIREMENTS:

A. Coordinate installation of identifying devices with completion of covering and painting of surfaces where devices are to be applied.
B. Coordinate installation of identifying devices with locations of access panels and doors.
C. Install identifying devices before installing acoustical ceilings and similar concealment.
D. Locate identifying devices so that they are readily visible from the point of normal approach.

3.03 INSTALLATION OF EQUIPMENT LABELS, WARNING SIGNS, AND LABELS:

A. Permanently fasten labels on each item of mechanical equipment.
B. Sign and Label Colors:
   1. White letters on an ANSI Z535.1 safety-blue background.
C. Locate equipment labels where accessible and visible.

END OF SECTION 23 05 53

SECTION 23 05 93 – TESTING, ADJUSTING, AND BALANCING

PART 1 - GENERAL

1.01 RELATED DOCUMENTS:

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY:

A. This Section includes:
   1. Balancing Air Systems:
      a. Constant-volume air systems.
      b. Variable-air-volume systems.
      c. Multizone systems.
   2. Other Systems/Equipment:
      a. Motors.
      b. Condensing units.
      c. Heat transfer coils.

1.03 REFERENCE STANDARDS:

A. Applicable Standards (latest edition):
   1. Air Movement and Control Association International Inc. (AMCA):
      a. 201 - Fans and Systems.
   2. American National Standards Institute (ANSI):
      a. S1.4 - Specification for Sound Level Meters.
      b. S1.11 - Specification for Octave Band and Fraction Octave Band Analog and Digital Filters.
      c. S1.13 - Methods for the Measurement of Sound Pressure Levels.
      d. S1.40 - Specification for Acoustical Calibrators.
   3. American Society of Heating, Refrigerating and Air-Conditioning Engineers (ASHRAE):
      a. 62.1 - Ventilation for Acceptable Indoor Air Quality (ANSI).
      b. 111 - Practices for Measurement, Testing, Adjusting, and Balancing of Building Heating, Ventilation, Air-Conditioning, and Refrigeration Systems.
   4. Associated Air Balance Council (AABC):
      a. National Standards for Total System Balance.
   5. National Environmental Balancing Bureau (NEBB):
      a. Procedural Standards for Testing, Adjusting, and Balancing of Environmental Systems.
   6. Sheet Metal and Air Conditioning Contractors' National Association (SMACNA):
      a. HVAC Systems - Duct Design.
      b. HVAC Systems - Testing, Adjusting, and Balancing.

1.04 DEFINITIONS:

A. AABC: Associated Air Balance Council.
B. NEBB: National Environmental Balancing Bureau.
C. TAB: Testing, Adjusting, and Balancing.
D. TABB: Testing, Adjusting, and Balancing Bureau.
E. TAB Specialist: An entity engaged to perform TAB Work.
F. Adjust: To regulate fluid flow rate and air patterns at the terminal equipment, such as to reduce fan speed or adjust a damper.

G. Balance: To proportion flows within the distribution system, including submains, branches, and terminals, according to indicated quantities.
H. Barrier or Boundary: Construction, either vertical or horizontal, such as walls, floors, and ceilings that are designed and constructed to restrict the movement of airflow, smoke, odors, and other pollutants.
I. Draft: A current of air, when referring to localized effect caused by one or more factors of high air velocity, low ambient temperature, or direction of airflow, whereby more heat is withdrawn from a person's skin that is normally dissipated.
J. NC: Noise criteria.
K. Procedure: An approach to and execution of a sequence of work operations to yield repeatable results.
L. RC: Room criteria.
M. Report Forms: Test data sheets for recording test data in logical order.
N. System Effect: A phenomenon that can create undesired or unpredicted conditions that cause reduced capacities in all or part of a system.
O. System Effect Factors: Allowances used to calculate a reduction of the performance ratings of a fan when installed under conditions different from those presented when the fan was performance tested.
P. Terminal: A point where the controlled medium, such as fluid or energy, enters or leaves the distribution system.
Q. Test: A procedure to determine quantitative performance of systems or equipment.
R. Testing, Adjusting, and Balancing (TAB) Firm: The entity responsible for performing and reporting TAB procedures.

1.05 SUBMITTALS:

A. Submit as specified in Section 23 05 00 - Common Work Results for HVAC.
B. Qualification Data: Within 15 days of Contractor's Notice to Proceed, submit documentation that the TAB contractor and this Project's TAB team members meet the qualifications specified in "Quality Assurance" Article.
C. Contract Documents Examination Report: Within 15 days of Contractor's Notice to Proceed, submit the Contract Documents review report as specified in Part 3.
D. Strategies and Procedures Plan: Within 30 days of Contractor's Notice to Proceed, submit TAB strategies and step-by-step procedures as specified in "Preparation" Article.
E. Certified TAB reports.
F. Sample report forms.
G. Instrument calibration reports, to include the following:
    1. Instrument type and make.
    2. Serial number.
    3. Application.
    4. Dates of use.
    5. Dates of calibration.

1.06 QUALITY ASSURANCE:

A. AB Contractor Qualifications: Engage a TAB entity certified by AABC, NEBB, or TABB.
    1. TAB Field Supervisor: Employee of the TAB contractor and certified by AABC, NEBB, or TABB.
    2. TAB Technician: Employee of the TAB contractor and who is certified by AABC, NEBB, or TABB as a TAB technician.

B. TAB Conference: Meet with Construction Manager on approval of the TAB strategies and procedures plan to develop a mutual understanding of the details. Require the participation of the TAB field supervisor and technicians. Provide seven days' advance notice of scheduled meeting time and location.
   1. Agenda Items:
      a. The Contract Documents examination report.
      b. The TAB plan.
      c. Coordination and cooperation of trades and subcontractors.
      d. Coordination of documentation and communication flow.

C. Certify TAB field data reports and perform the following:
   1. Review field data reports to validate accuracy of data and to prepare certified TAB reports.
   2. Certify that the TAB team complied with the approved TAB plan and the procedures specified and referenced in this Specification.

D. TAB Report Forms: Use standard TAB contractor's forms approved by Engineer.

E. Instrumentation Type, Quantity, Accuracy, and Calibration: As described in ASHRAE 111, Section 5, "Instrumentation."

F. Instrumentation Calibration: Calibrate instruments at least every six months or more frequently if required by instrument manufacturer.
   1. Keep an updated record of instrument calibration that indicates date of calibration and the name of party performing instrument calibration.

1.07 COORDINATION:

A. Coordinate the efforts of factory-authorized service representatives for systems and equipment, HVAC controls installers, and other mechanics to operate HVAC systems and equipment to support and assist TAB activities.

B. Notice: Provide seven days' advance notice for each test. Include scheduled test dates and times.

C. Perform TAB after leakage and pressure tests on air distribution systems have been satisfactorily completed.

PART 2 - PRODUCTS (NOT APPLICABLE)

PART 3 - EXECUTION

3.01 EXAMINATION:

A. Examine the Contract Documents to become familiar with Project requirements and to discover conditions in systems' designs that may preclude proper TAB of systems and equipment.

B. Examine systems for installed balancing devices, and manual volume dampers. Verify that locations of these balancing devices are accessible.

C. Examine the approved submittals for HVAC systems and equipment.

D. Examine design data including HVAC system descriptions, statements of design assumptions for environmental conditions and systems' output, and statements of philosophies and assumptions about HVAC system and equipment controls.

E. Examine ceiling plenums and underfloor air plenums used for supply, return, or relief air to verify that they meet the leakage class of connected ducts as specified in Section 23 31 13 - Metal Ducts and are properly separated from adjacent areas. Verify that penetrations in plenum walls are sealed and fire-stopped if required.

F. Examine Equipment performance data including fan and pump curves.

1. Relate performance data to Project conditions and requirements, including system effects that can create undesired or unpredicted conditions that cause reduced capacities in all or part of a system.
2. Calculate system-effect factors to reduce performance ratings of HVAC Equipment when installed under conditions different from the conditions used to rate Equipment performance. To calculate system effects for air systems, use tables and charts found in AMCA 201, "Fans and Systems," or in SMACNA's "HVAC Systems - Duct Design." Compare results with the design data and installed conditions.

G. Examine system and equipment installations and verify that field quality control testing, cleaning, and adjusting specified in individual Sections have been performed.
H. Examine test reports specified in individual system and equipment Sections.
I. Examine HVAC Equipment and filters and verify that bearings are greased, belts are aligned and tight, and equipment with functioning controls is ready for operation.
J. Examine terminal units, such as variable-air-volume boxes, and verify that they are accessible, and their controls are connected and functioning.
K. Examine heat-transfer coils for correct piping connections and for clean and straight fins.
L. Examine operating safety interlocks and controls on HVAC Equipment.
M. Report deficiencies discovered before and during performance of TAB procedures. Observe and record system reactions to changes in conditions. Record default set points if different from indicated values.
N. Examine automatic temperature system components to verify the following:
   1. Dampers, and other controlled devices are operated by the intended controller.
   2. Dampers are in the position indicated by the controller.
   3. Integrity of dampers for free and full operation and for tightness of fully closed and fully open positions. This includes dampers in multizone units, mixing boxes, and variable-air-volume terminals.
   4. Thermostats and humidistats are located to avoid adverse effects of sunlight, drafts, and cold walls.
   5. Sensors are located to sense only the intended conditions.
   6. Sequence of operation for control modes in according to the Contract Documents.
   7. Controller set points are set at indicated values.
   8. Interlocked systems are operating.
   9. Changeover from heating to cooling mode occurs according to indicated values.

3.02 PREPARATION:

A. Prepare a TAB plan that includes strategies and step-by-step procedures.
B. Complete system-readiness checks and prepare reports. Verify the following:
   1. Permanent electrical-power wiring is complete.
   2. Automatic temperature-control systems are operational.
   3. Equipment and duct access doors are securely closed.
   4. Balance, smoke, and fire dampers are open.
   5. Isolating and balancing valves are open and control valves are operational.
   6. Ceilings are installed in critical areas where air-pattern adjustments are required and access to balancing devices is provided.
   7. Windows and doors can be closed so indicated conditions for system operations can be met.

3.03 GENERAL PROCEDURES FOR TESTING AND BALANCING:

A. Perform testing and balancing procedures on each system according to the procedures contained in AABC's "National Standards for Total System Balance", ASHRAE 111, NEBB's "Procedural Standards for Testing, Adjusting, and Balancing of Environmental Systems", SMACNA's "HVAC Systems - Testing, Adjusting, and Balancing", and in this Section.
   1. Comply with requirements in ASHRAE 62.1, Section 7.2.2, "Air Balancing."

B. Cut insulation, ducts, pipes, and equipment cabinets for installation of test probes to the minimum extent necessary for TAB procedures.
   1. After testing and balancing, install test ports and duct access doors that comply with requirements in Section 23 33 00 - Duct Accessories.
   2. Install and join new insulation that matches removed materials. Restore insulation, coverings, vapor barrier, and finish according to Section 23 07 00 - Mechanical Insulation.

C. Mark Equipment and balancing devices, including damper-control positions, fan-speed-control levers, and similar controls and devices, with paint or other suitable, permanent identification material to show final settings.

D. Take and report testing and balancing measurements in [inch-pound (IP)] units.

3.04 GENERAL PROCEDURES FOR BALANCING AIR SYSTEMS:

A. Prepare test reports for both fans and outlets. Obtain manufacturer's outlet factors and recommended testing procedures. Crosscheck the summation of required outlet volumes with required fan volumes.

B. Prepare schematic diagrams of systems' "as-built" duct layouts.

C. For variable-air-volume systems, develop a plan to simulate diversity.

D. Determine the best locations in main and branch ducts for accurate duct-airflow measurements.

E. Check airflow patterns from the outdoor-air louvers and dampers and the return- and exhaust-air dampers through the supply-fan discharge and mixing dampers.

F. Locate start-stop and disconnect switches, electrical interlocks, and motor starters.

G. Verify that motor starters are equipped with properly sized thermal protection.

H. Check dampers for proper position to achieve desired airflow path.

I. Check for airflow blockages.

J. Check condensate drains for proper connections and functioning.

K. Check for proper sealing of air-handling-unit components.

L. Verify that air duct system is sealed as specified in Section 23 31 13 - Metal Ducts.

3.05 PROCESURES FOR CONSTANT-VOLUME AIR SYSTEMS

A. Adjust fans to deliver total indicated airflows within the maximum allowable fan speed listed by fan manufacturer.
   1. Measure total airflow.
      a. Set outside-air, return-air, and relief-air dampers for proper position that simulates minimum outdoor-air conditions.
      b. Where duct conditions allow, measure airflow by main Pitot-tube traverse. If necessary, perform multiple Pitot-tube traverses close to the fan and prior to any outlets, to obtain total airflow.
      c. Where duct conditions are unsuitable for Pitot-tube traverse measurements, a coil traverse may be acceptable.
   2. Measure fan static pressures as follows:
      a. Measure static pressure directly at the fan outlet or through the flexible connection.
      b. Measure static pressure directly at the fan outlet or through the flexible connection.

c. Measure static pressure across each component that makes up the air-handling system.
d. Report artificial loading of filters at the time static pressures are measured.

3. Review Contractor-prepared shop drawings and Record drawings to determine variations in design static pressures versus actual static pressures. Calculate actual system-effect factors. Recommend adjustments to accommodate actual conditions.
4. Obtain approval from Commissioning Authority for adjustment of fan speed higher or lower than indicated speed. Comply with requirements in HVAC Sections for air-handling units for adjustment of fans, belts, and pulley sizes to achieve indicated air-handling-unit performance.
5. Do not make fan-speed adjustments that result in motor overload. Consult equipment manufacturers about fan-speed safety factors. Modulate damper and measure fan-motor amperage to ensure that no overload occurs. Measure amperage in full-cooling, full-heating, economizer, and any other operating mode to determine the maximum required brake horsepower.

B. Adjust volume dampers for main duct, submain ducts, and major branch ducts to indicated airflows.
1. Measure airflow of submain and branch ducts.
2. Adjust submain and branch duct volume dampers for specified airflow.
3. Re-measure each submain and branch duct after all have been adjusted.

C. Adjust air inlets and outlets for each space to indicated airflows.
1. Set airflow patterns of adjustable outlets for proper distribution without drafts.
2. Measure inlets and outlets airflow.
3. Adjust each inlet and outlet for specified airflow.
4. Re-measure each inlet and outlet after they have been adjusted.

D. Verify final system conditions.
1. Re-measure and confirm that minimum outdoor, return, and relief airflows are within design. Readjust to design if necessary.
2. Re-measure and confirm that total airflow is within design.
3. Re-measure and all final fan operating data, speed, volts, amps, and static profile.
4. Mark all final settings.
5. Test system in economizer mode. Verify proper operation and adjust if necessary.
6. Measure and record all operating data.
7. Record final fan-performance data.

3.06 PROCEDURES FOR SINGLE-ZONE VARIABLE-AIR-VOLUME SYSTEMS:

A. Adjust fans to deliver total indicated airflows within the maximum allowable fan speed listed by fan manufacturer.
1. Measure total airflow.
a. Where duct conditions allow, measure airflow by main Pitot-tube traverse. If necessary, perform multiple Pitot-tube traverses close to the fan and prior to any outlets, to obtain total airflow.
b. Where sufficient space in ducts is unavailable for Pitot-tube traverse measurements, measure airflow at terminal outlets and inlets and calculate the total airflow.
2. Measure fan static pressures as follows to determine actual static pressure:
a. Measure outlet static pressure as far downstream from the fan as practical and upstream from restrictions in ducts such as elbows and transitions.
b. Measure static pressure directly at the fan outlet or through the flexible connection.

c. Measure inlet static pressure of single-inlet fans in the inlet duct as near the fan as possible, upstream from the flexible connection, and downstream from duct restrictions.
d. Measure inlet static pressure of double-inlet fans through the wall of the plenum that houses the fan.

3. Measure static pressure across each component that makes up an air-handling unit, rooftop unit, and other air-handling and -treating equipment.
   a. Report the cleanliness status of filters and the time static pressures are measured.
4. Measure static pressures entering and leaving other devices, such as sound traps, heat-recovery equipment, and air washers, under final balanced conditions.
5. Obtain approval from Engineer for adjustment of fan speed higher or lower than indicated speed. Comply with requirements in Division 23 Sections for air-handling units for adjustment of fans, belts, and pulley sizes to achieve indicated air-handling-unit performance.
6. Do not make fan-speed adjustments that result in motor overload. Consult equipment manufacturers about fan-speed safety factors. Modulate dampers and measure fan-motor amperage to ensure that no overload will occur. Measure amperage in full-cooling, full-heating, economizer, and any other operating mode to determine the maximum required brake horsepower.

B. Adjust air outlets and inlets for each space to indicated airflows within specified tolerances of indicated values. Make adjustments using extractors and the dampers at air terminals.
   1. Adjust patterns of adjustable outlets for proper distribution without drafts.

3.07 PROCEDURES FOR MULTI-ZONE VARIABLE-AIR-VOLUME SYSTEMS:

A. Compensating for Diversity: When the total airflow of all terminal units is more than the indicated airflow of the fan, place a selected number of terminal units at a minimum set-point airflow with the remainder at maximum-airflow condition until the total airflow of the terminal units equals the indicated airflow of the fan. Select the reduced-airflow terminal units so they are distributed evenly among the branch ducts.

B. Pressure-Dependent, Variable-Air-Volume Systems with Diversity: After the fan systems have been adjusted, adjust the variable-air-volume systems as follows:
   1. Set system at maximum indicated airflow by setting the required number of terminal units at minimum airflow. Select the reduced-airflow terminal units so they are distributed evenly among the branch ducts.
   2. Adjust supply fan to maximum indicated airflow with the variable-airflow controller set at maximum airflow.
   3. Set terminal units at full-airflow condition.
   4. Adjust terminal units starting at the supply-fan end of the system and continuing progressively to the end of the system. Adjust inlet dampers of each terminal unit to indicated airflow. When total airflow is correct, balance the air outlets downstream from terminal units the same as described for constant-volume air systems.
   5. Adjust terminal units for minimum airflow.
   6. Measure static pressure at the sensor.
   7. Measure the return airflow to the fan while operating at maximum return airflow and minimum outdoor airflow. Adjust the fan and balance the return-air ducts and inlets the same as described for constant-volume air systems.

3.08 PROCEDURES FOR MOTORS:

A. Motors, 1/2 HP and Larger: Test at final balanced conditions and record the following data:

1. Manufacturer's name, model number, and serial number.
2. Motor horsepower rating.
3. Motor rpm.
4. Efficiency rating.
5. Nameplate and measured voltage, each phase.
6. Nameplate and measured amperage, each phase.
7. Starter thermal-protection-element rating.

B. Motors Driven by Variable-Frequency Controllers: Test for proper operation at speeds varying from minimum to maximum. Test the manual bypass of the controller to prove proper operation. Record observations including name of controller manufacturer, model number, serial number, and nameplate data.

3.09 PROCEDURES FOR CONDENSING UNITS:

A. Verify proper rotation of fans.
B. Measure entering- and leaving-air temperatures.
C. Record compressor data.

3.10 TOLERANCES:

A. Set HVAC system's air flow rates flow rates within the following tolerances:
1. Supply, Return, and Exhaust Fans and Equipment with Fans: ±10%.
2. Air Outlets and Inlets: 0 to +10%.

3.11 REPORTING:

A. Initial Construction-Phase Report: Based on examination of the Contract Documents as specified in "Examination" Article, prepare a report on the adequacy of design for systems' balancing devices. Recommend changes and additions to systems' balancing devices to facilitate proper performance measuring and balancing. Recommend changes and additions to HVAC systems and general construction to allow access for performance measuring and balancing devices.
B. Status Reports: Prepare weekly progress reports to describe completed procedures, procedures in progress, and scheduled procedures. Include a list of deficiencies and problems found in systems being tested and balanced. Prepare a separate report for each system and each building floor for systems serving multiple floors.

3.12 FINAL REPORT:

A. General: Prepare a certified written report; tabulate and divide the report into separate sections for tested systems and balanced systems.
1. Include a certification sheet at the front of the report's binder, signed and sealed by the certified testing and balancing engineer.
2. Include a list of instruments used for procedures, along with proof of calibration.

B. Final Report Contents: In addition to certified field-report data, include the following:
1. Fan curves.
2. Manufacturers' test data.
3. Field test reports prepared by system and equipment installers.
4. Other information relative to equipment performance; do not include Shop Drawings and product data.

C. General Report Data: In addition to form titles and entries, include the following data:
1. Title page.
2. Name and address of the TAB contractor.

3. Project name.
4. Project location.
5. Architect's name and address.
6. Engineer's name and address.
7. Contractor's name and address.
8. Report date.
9. Signature of TAB supervisor who certifies the report.
10. Table of Contents with the total number of pages defined for each section of the report. Number each page in the report.
11. Summary of contents including the following:
    a. Indicated versus final performance.
    b. Notable characteristics of systems.
    c. Description of system operation sequence if it varies from the Contract Documents.
12. Nomenclature sheets for each item of equipment.
13. Data for terminal units, including manufacturer's name, type, size, and fittings.
14. Notes to explain why certain final data in the body of reports vary from indicated values.
15. Test conditions for fans and pump performance forms including the following:
    a. Settings for outdoor-, return-, and exhaust-air dampers.
    b. Conditions of filters.
    c. Cooling coil, wet- and dry-bulb conditions.
    d. Fan drive settings including settings and percentage of maximum pitch diameter.
    e. Settings for supply-air, static-pressure controller.
    f. Other system operating conditions that affect performance.

D. System Diagrams: Include schematic layouts of air and hydronic distribution systems. Present each system with single-line diagram and include the following:
1. Quantities of outdoor, supply, return, and exhaust airflows.
2. Duct, outlet, and inlet sizes.
3. Pipe and valve sizes and locations.
4. Terminal units.
5. Balancing stations.
6. Position of balancing devices.

E. Air-Handling-Unit Test Reports: For air-handling units with coils, include the following:
1. Unit Data:
    a. Unit identification.
    b. Location.
    c. Make and type.
    d. Model number and unit size.
    e. Manufacturer's serial number.
    f. Unit arrangement and class.
    g. Discharge arrangement.
    h. Sheave make, size in inches, and bore.
    i. Center-to-center dimensions of sheave, and amount of adjustments in inches.
    j. Number, make, and size of belts.
    k. Number, type, and size of filters.
2. Motor Data:
    a. Motor make, and frame type and size.
    b. Horsepower and rpm.
    c. Volts, phase, and hertz.
    d. Full-load amperage and service factor.

e. Sheave make, size in inches, and bore.
f. Center-to-center dimensions of sheave, and amount of adjustments in inches.

3. Test Data (Indicated and Actual Values):
a. Total air flow rate in cfm.
b. Total system static pressure in inches w.g.
c. Fan rpm.
d. Discharge static pressure in inches w.g.
e. Filter static-pressure differential in inches w.g.
f. Preheat-coil static-pressure differential in inches w.g.
g. Cooling-coil static-pressure differential in inches w.g.
h. Heating-coil static-pressure differential in inches w.g.
i. Outdoor airflow in cfm.
j. Return airflow in cfm.
k. Outdoor-air damper position.
l. Return-air damper position.
m. Vortex damper position.

F. Apparatus-Coil Test Reports:
1. Coil Data:
a. System identification.
b. Location.
c. Coil type.
d. Number of rows.
e. Fin spacing in fins per inch o.c.
f. Make and model number.
g. Face area in $ft.^2$
h. Tube size in NPS.
i. Tube and fin materials.
j. Circuiting arrangement.

2. Test Data (Indicated and Actual Values):
a. Air flow rate in cfm.
b. Average face velocity in fpm.
c. Air pressure drop in inches w.g.
d. Outdoor-air, wet- and dry-bulb temperatures in ºF.
e. Return-air, wet- and dry-bulb temperatures in ºF.
f. Entering-air, wet- and dry-bulb temperatures in ºF.
g. Leaving-air, wet- and dry-bulb temperatures in ºF.
h. Refrigerant expansion valve and refrigerant types.
i. Refrigerant suction pressure in psig.
j. Refrigerant suction temperature in ºF.

G. Electric-Coil Test Reports: For electric furnaces, duct coils, and electric coils installed in central-station air-handling units, include the following:
1. Unit Data:
a. System identification.
b. Location.
c. Coil identification.
d. Capacity in Btu/hr.
e. Number of stages.
f. Connected volts, phase, and hertz.
g. Rated amperage.

h. Air flow rate in cfm.
i. Face area in ft.²
j. Minimum face velocity in fpm.

2. Test Data (Indicated and Actual Values):
a. Heat output in Btu/hr.
b. Air flow rate in cfm.
c. Air velocity in fpm.
d. Entering-air temperature in ºF.
e. Leaving-air temperature in ºF.
f. Voltage at each connection.
g. Amperage for each phase.

H. Fan Test Reports: For supply, return, and exhaust fans, include the following:
1. Fan Data:
a. System identification.
b. Location.
c. Make and type.
d. Model number and size.
e. Manufacturer's serial number.
f. Arrangement and class.
g. Sheave make, size in inches, and bore.
h. Center-to-center dimensions of sheave, and amount of adjustments in inches.

2. Motor Data:
a. Motor make, and frame type and size.
b. Horsepower and rpm.
c. Volts, phase, and hertz.
d. Full-load amperage and service factor.
e. Sheave make, size in inches, and bore.
f. Center-to-center dimensions of sheave, and amount of adjustments in inches.
g. Number, make, and size of belts.

3. Test Data (Indicated and Actual Values):
a. Total airflow rate in cfm.
b. Total system static pressure in inches w.g.
c. Fan rpm.
d. Discharge static pressure in inches w.g.
e. Suction static pressure in inches w.g.

I. Round, Flat-Oval, and Rectangular Duct Traverse Reports: Include a diagram with a grid representing the duct cross-section and record the following:
1. Report Data:
a. System and air-handling-unit number.
b. Location and zone.
c. Traverse air temperature in ºF.
d. Duct static pressure in inches w.g.
e. Duct size in inches.
f. Duct area in ft.²
g. Indicated air flow rate in cfm.
h. Indicated velocity in fpm.
i. Actual air flow rate in cfm.
j. Actual average velocity in fpm.
k. Barometric pressure in psig.

J. Air-Terminal-Device Reports:
   1. Unit Data:
      a. System and air-handling unit identification.
      b. Location and zone.
      c. Apparatus used for test.
      d. Area served.
      e. Make.
      f. Number from system diagram.
      g. Type and model number.
      h. Size.
      i. Effective area in ft.²
   2. Test Data (Indicated and Actual Values):
      a. Air flow rate in cfm.
      b. Air velocity in fpm.
      c. Preliminary air flow rate as needed in cfm.
      d. Preliminary velocity as needed in fpm.
      e. Final air flow rate in cfm.
      f. Final velocity in fpm.
      g. Space temperature in ºF.

K. System-Coil Reports: For reheat coils of terminal units, include the following:
   1. Unit Data:
      a. System and air-handling-unit identification.
      b. Location and zone.
      c. Room or riser served.
      d. Coil make and size.
      e. Flowmeter type.
   2. Test Data (Indicated and Actual Values):
      a. Air flow rate in cfm.
      b. Entering-air temperature in ºF.
      c. Leaving-air temperature in ºF.

L. Compressor and Condenser Reports: For refrigerant side of unitary systems, stand-alone refrigerant compressors, or air-cooled condensing units, include the following:
   1. Unit Data:
      a. Unit identification.
      b. Location.
      c. Unit make and model number.
      d. Compressor make.
      e. Compressor model and serial numbers.
      f. Refrigerant weight in lb.
      g. Low ambient temperature cutoff in ºF.
   2. Test Data (Indicated and Actual Values):
      a. Inlet-duct static pressure in inches w.g.
      b. Outlet-duct static pressure in inches w.g.
      c. Entering-air, dry-bulb temperature in ºF.
      d. Leaving-air, dry-bulb temperature in ºF.
      e. Control settings.
      f. Unloader set points.
      g. Low-pressure-cutout set point in psig.
      h. High-pressure-cutout set point in psig.

i. Suction pressure in psig.
j. Suction temperature in ºF.
k. Condenser refrigerant pressure in psig.
l. Condenser refrigerant temperature in ºF.
m. Oil pressure in psig.
n. Oil temperature in ºF.
o. Voltage at each connection.
p. Amperage for each phase.
q. Kilowatt input.
r. Crankcase heater kilowatt.
s. Number of fans.
t. Condenser fan rpm.
u. Condenser fan airflow rate in cfm.
v. Condenser fan motor make, frame size, rpm, and horsepower.
w. Condenser fan motor voltage at each connection.
x. Condenser fan motor amperage for each phase.

M. Instrument Calibration Reports:
1. Report Data:
a. Instrument type and make.
b. Serial number.
c. Application.
d. Dates of use.
e. Dates of calibration.

3.13 INSPECTIONS:

A. Initial Inspection:
1. After testing and balancing are complete, operate each system and randomly check measurements to verify that the system is operating according to the final test and balance readings documented in the final report.
2. Check the following for each system:
a. Measure airflow of at least 10% of air outlets.
b. Measure room temperature at each thermostat/temperature sensor. Compare the reading to the set point.
c. Verify that balancing devices are marked with final balance position.
d. Note deviations from the Contract Documents in the final report.

B. Final Inspection:
1. After initial inspection is complete and documentation by random checks verifies that testing and balancing are complete and accurately documented in the final report, request that a final inspection be made by Engineer.
2. The TAB contractor's test and balance engineer shall conduct the inspection in the presence of Engineer.
3. Engineer shall randomly select measurements, documented in the final report, to be rechecked. Rechecking shall be limited to either 10% of the total measurements recorded or the extent of measurements that can be accomplished in a normal 8-hour business day.
4. If rechecks yield measurements that differ from the measurements documented in the final report by more than the tolerances allowed, the measurements shall be noted as "FAILED."

5. If the number of "FAILED" measurements is greater than 10% of the total measurements checked during the final inspection, the testing and balancing shall be considered incomplete and shall be rejected.

C. TAB work will be considered defective if it does not pass final inspections. If TAB work fails, proceed as follows:
   1. Recheck all measurements and make adjustments. Revise the final report and balancing device settings to include all changes; resubmit the final report and request a second final inspection.
   2. If the second final inspection also fails, Owner may contract the services of another TAB contractor to complete TAB work according to the Contract Documents and deduct the cost of the services from the original TAB contractor's final payment.

D. Prepare test and inspection reports.

3.14 ADDITIONAL TESTS:

A. Within 90 days of completing TAB, perform additional TAB to verify that balanced conditions are being maintained throughout and to correct unusual conditions.

B. Seasonal Periods: If initial TAB procedures were not performed during near-peak summer and winter conditions, perform additional TAB during near-peak summer and winter conditions.

END OF SECTION 23 05 93

SECTION 23 07 13 – DUCT INSULATION

PART 1 - GENERAL

1.01 RELATED DOCUMENTS:

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY:

A. This Section includes requirements for insulating sheet metal ductwork.

1.03 REFERENCE STANDARDS:

A. Applicable Standards (Latest Edition):
   1. ASTM International (ASTM):
      a. ASTM A167 - Specification for Stainless and Heat-Resisting Chromium-Nickel Steel Plate, Sheet, and Strip.
      b. ASTM A240 - Specification for Chromium and Chromium-Nickel Stainless Steel Plate, Sheet, and Strip for Pressure Vessels and for General Applications.
      c. ASTM B209 - Specification for Aluminum and Aluminum-Alloy Sheet and Plate.
      d. ASTM C553 - Specification for Mineral Fiber Blanket and Thermal Insulation for Commercial and Industrial Applications.
      e. ASTM C612 - Specification for Mineral Fiber Block and Board Thermal Insulation.
      f. ASTM C795 - Specification for Thermal Insulation for Use in Contact with Austenitic Stainless Steel.
      g. ASTM C871 - Test Methods for Chemical Analysis of Thermal Insulation Materials for Leachable Chloride, Fluoride, Silicate, and Sodium Ions.
      h. ASTM C1136 - Specification for Flexible, Low Permeance Vapor Retarders for Thermal Insulation.
      i. ASTM D1644 - Test Methods for Nonvolatile Content of Varnishes.
      j. ASTM E84 - Test Method for Surface Burning Characteristics of Building Materials.
      k. ASTM E96 - Test Methods for Water Vapor Transmission of Materials.
      l. ASTM F1249 - Test Method for Water Vapor Transmission Rate Through Plastic Film and Sheeting Using a Modulated Infrared Sensor.
   2. Military Specifications (MIL):
      a. MIL-A-3316C - Adhesives, Fire-Resistant, Thermal Insulation.
      b. MIL-PRF-19565C - Coating Compounds, Thermal Insulation, Fire- and Water Resistant, Vapor Barrier.
   3. NFPA:
      a. NFPA 90A - Installation of Air-Conditioning and Ventilating Systems.
      b. NFPA 90B - Installation of Warm Air Heating and Air-Conditioning Systems.

1.04 SUBMITTALS:

A. Product Data: For each type of product indicated. Include thermal conductivity, water-vapor permeance thickness, and field-applied jackets (if any).

B. Qualification Data: For qualified Installer.

C. Material Test Reports: From a qualified testing agency acceptable to authorities having jurisdiction indicating, interpreting, and certifying test results for compliance of insulation materials, sealers, attachments, cements, and jackets, with requirements indicated. Include dates of tests and test methods employed.

1.05 QUALITY ASSURANCE:

A. Installer Qualifications: Skilled mechanics who have successfully completed an apprenticeship program or another craft training program certified by the Department of Labor, Bureau of Apprenticeship and Training.

B. Surface-Burning Characteristics: For insulation and related materials, as determined by testing identical products according to ASTM E84, by a testing agency acceptable to authorities having jurisdiction. Factory label insulation and jacket materials and adhesive, mastic, tapes, and cement material containers, with appropriate markings of applicable testing agency.

1. All Insulation Installed Indoors and Outdoors: Flame-spread index of 25 or less, and smoke-developed index of 50 or less.

1.06 DELIVERY, STORAGE, AND HANDLING:

A. Packaging: Insulation material containers shall be marked by manufacturer with appropriate ASTM standard designation, type and grade, and maximum use temperature.

1.07 COORDINATION:

A. Coordinate clearance requirements with duct Installer for duct insulation application. Before preparing ductwork Shop Drawings, establish and maintain clearance requirements for installation of insulation and field-applied jackets and finishes and for space required for maintenance.

B. Coordinate installation and testing of heat tracing.

1.08 SCHEDULING:

A. Schedule insulation application after pressure testing systems and, where required, after installing and testing heat tracing. Insulation application may begin on segments that have satisfactory test results.

B. Complete installation and concealment of plastic materials as rapidly as possible in each area of construction.

PART 2 - PRODUCTS

2.01 INSULATION MATERIALS:

A. Comply with requirements in "Duct Insulation Schedule, General," "Aboveground Indoor Duct and Plenum Insulation Schedule," and "Aboveground, Outdoor Duct and Plenum Insulation Schedule" articles for where insulating materials shall be applied.

B. Products shall not contain asbestos, lead, mercury, or mercury compounds.

C. Products that come in contact with stainless steel shall have a leachable chloride content of less than 50 ppm when tested according to ASTM C871.

D. Insulation materials for use on austenitic stainless steel shall be qualified as acceptable according to ASTM C795.

E. Foam insulation materials shall not use CFC or HCFC blowing agents in the manufacturing process.

F. Mineral-Fiber Blanket Insulation: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C553, Type II and ASTM C1290, Type I unfaced and Type III with factory-applied FSK jacket. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.

1. Products: Subject to compliance with requirements, provide products by one of the following:

a. CertainTeed Corp.; SoftTouch Duct Wrap.

b. Johns Manville; Microlite.
c. Knauf Insulation; Friendly Feel Duct Wrap.
d. Owens Corning; SOFTR All-Service Duct Wrap.
e. Or Engineer Approved Equal.

G. Mineral-Fiber Board Insulation: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C612, Type IA or Type IB. For duct and plenum applications, provide insulation with FSK factory-applied jacket.
1. Products: Subject to compliance with requirements, provide products by one of the following:
a. CertainTeed Corp.; Commercial Board.
b. Fibrex Insulations, Inc.; FBX.
c. Johns Manville; 800 Series Spin-Glas.
d. Knauf Insulation; Insulation Board.
e. Owens Corning; Fiberglas 700 Series.
f. Or Engineer Approved Equal.

2.02 ADHESIVES:

A. Materials shall be compatible with insulation materials, jackets, and substrates and for bonding insulation to itself and to surfaces to be insulated, unless otherwise indicated.
B. Mineral-Fiber Board or Blanket Adhesive: Comply with MIL-A-3316C, Class 2, Grade A.
1. Products: Subject to compliance with requirements, provide products by one of the following:
a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-127.
b. Eagle Bridges - Marathon Industries; 225.
c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 85-60/85-70.
d. Mon-Eco Industries, Inc.; 22-25.
e. Or Engineer Approved Equal.
C. FSK Jacket Adhesive: Comply with MIL-A-3316C, Class 2, Grade A for bonding insulation jacket lap seams and joints.
1. Products: Subject to compliance with requirements, provide products by one of the following:
a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-82.
b. Eagle Bridges - Marathon Industries; 225.
c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 85-50.
d. Mon-Eco Industries, Inc.; 22-25.
e. Or Engineer Approved Equal.

2.03 MASTICS:

A. Materials shall be compatible with insulation materials, jackets, and substrates; comply with MIL-PRF-19565C, Type II.
B. Vapor-Barrier Mastic: Water based; suitable for indoor use on below ambient services.
1. Products: Subject to compliance with requirements, provide products by one of the following:
a. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 30-80/30-90.

b. Vimasco Corporation; 749.
c. Or Engineer Approved Equal.

2. Water-Vapor Permeance: ASTM E96, Procedure B, 0.013 perm at 43-mil dry film thickness.
3. Service Temperature Range: -20 to +180ºF.
4. Solids Content: ASTM D1644, 58% by volume and 70% by weight.
5. Color: White.

C. Vapor-Barrier Mastic: Solvent based; suitable for indoor use on below ambient services.
1. Products: Subject to compliance with requirements, provide products by one of the following:
a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-30.
b. Eagle Bridges - Marathon Industries; 501.
c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 30-35.
d. Mon-Eco Industries, Inc.; 55-10.
e. Or Engineer Approved Equal.
2. Water-Vapor Permeance: ASTM F1249, 0.05 perm at 35-mil dry film thickness.
3. Service Temperature Range: 0 to 180ºF.
4. Solids Content: ASTM D1644, 44% by volume and 62% by weight.
5. Color: White.

D. Vapor-Barrier Mastic: Solvent based; suitable for outdoor use on below ambient services.
1. Products: Subject to compliance with requirements, provide products by one of the following:
a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; Encacel.
b. Eagle Bridges - Marathon Industries; 570.
c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 60-95/60-96.
d. Or Engineer Approved Equal.
2. Water-Vapor Permeance: ASTM F1249, 0.05 perm at 30-mil dry film thickness.
3. Service Temperature Range: -50 to +220ºF.
4. Solids Content: ASTM D1644, 33% by volume and 46% by weight.
5. Color: White.

E. Breather Mastic: Water based; suitable for indoor and outdoor use on above ambient services.
1. Products: Subject to compliance with requirements, provide products by one of the following:
a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-10.
b. Eagle Bridges - Marathon Industries; 550.
c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 46-50.
d. Mon-Eco Industries, Inc.; 55-50.
e. Vimasco Corporation; WC-1/WC-5.
f. Or Engineer Approved Equal.
2. Water-Vapor Permeance: ASTM F1249, 1.8 perms at 0.0625-inch dry film thickness.
3. Service Temperature Range: -20 to +180ºF.
4. Solids Content: 60% by volume and 66% by weight.
5. Color: White.

2.04 SEALANTS:

A. FSK and Metal Jacket Flashing Sealants:
   1. Products: Subject to compliance with requirements, provide products by one of the following:
      a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-76.
      b. Eagle Bridges - Marathon Industries; 405.
      c. Foster Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; 95-44.
      d. Mon-Eco Industries, Inc.; 44-05.
      e. Or Engineer Approved Equal.
   2. Materials shall be compatible with insulation materials, jackets, and substrates.
   3. Fire- and water-resistant, flexible, elastomeric sealant.
   4. Service Temperature Range: -40 to +250ºF.
   5. Color: Aluminum.

B. PVC Jacket Flashing Sealants:
   1. Products: Subject to compliance with requirements, provide products by the following:
      a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; CP-76.
      b. Or Engineer Approved Equal.
   2. Materials shall be compatible with insulation materials, jackets, and substrates.
   3. Fire- and water-resistant, flexible, elastomeric sealant.
   4. Service Temperature Range: -40 to +250ºF.
   5. Color: White.

2.05 FACTORY-APPLIED JACKETS:

A. Insulation system schedules indicate factory-applied jackets on various applications. When factory-applied jackets are indicated, comply with the following:
   1. FSK Jacket: Aluminum-foil, fiberglass-reinforced scrim with Kraft-paper backing; complying with ASTM C1136, Type II.
   2. FSP Jacket: Aluminum-foil, fiberglass-reinforced scrim with polyethylene backing; complying with ASTM C1136, Type II.

2.06 FIELD-APPLIED JACKETS:

A. PVC Jacket: High-impact-resistant, UV-resistant PVC complying with ASTM D1784, Class 16354-C; thickness as scheduled; roll stock ready for shop or field cutting and forming. Thickness is indicated in field-applied jacket schedules.
   1. Products: Subject to compliance with requirements, provide products by one of the following:
      a. Johns Manville; Zeston.
      b. P.I.C. Plastics, Inc.; FG Series.
      c. Proto Corporation; LoSmoke.
      d. Speedline Corporation; SmokeSafe.
      e. Or Engineer Approved Equal.
   2. Adhesive: As recommended by jacket material manufacturer.
   3. Color: White.

B. Metal Jacket:
   1. Products: Subject to compliance with requirements, provide products by one of the following:

a. Childers Brand, Specialty Construction Brands, Inc., a business of H. B. Fuller Company; Metal Jacketing Systems.
b. ITW Insulation Systems; Aluminum Jacketing.
c. RPR Products, Inc.; Insul-Mate.
d. Or Engineer Approved Equal.

2. Aluminum Jacket: Comply with ASTM B209, Alloy 3003, 3005, 3105, or 5005, Temper H-14.
a. Finish and thickness are indicated in field-applied jacket schedules.
b. Moisture Barrier for Indoor Applications: 3-mil thick, heat-bonded polyethylene and Kraft paper or 2.5-mil thick polysurlyn.
c. Moisture Barrier for Outdoor Applications: 3-mil thick, heat-bonded polyethylene and Kraft paper or 2.5-mil thick polysurlyn.

2.07 TAPES:

A. FSK Tape: Foil-face, vapor-retarder tape matching factory-applied jacket with acrylic adhesive; complying with ASTM C1136.
1. Products: Subject to compliance with requirements, provide products by one of the following:
a. ABI, Ideal Tape Division; 491 AWF FSK.
b. Avery Dennison Corporation, Specialty Tapes Division; Fasson 0827.
c. Compac Corporation; 110 and 111.
d. Venture Tape; 1525 CW NT, 1528 CW, and 1528 CW/SQ.
e. Or Engineer Approved Equal.
2. Width: 3 inches.
3. Thickness: 6.5 mils.
4. Adhesion: 90 ounces force/inch in width.
5. Elongation: 2%.
6. Tensile Strength: 40 lbf/inch in width.
7. FSK Tape Disks and Squares: Precut disks or squares of FSK tape.

B. PVC Tape: White vapor-retarder tape matching field-applied PVC jacket with acrylic adhesive; suitable for indoor and outdoor applications.
1. Products: Subject to compliance with requirements, provide products by one of the following:
a. ABI, Ideal Tape Division; 370 White PVC tape.
b. Compac Corporation; 130.
c. Venture Tape; 1506 CW NS.
d. Or Engineer Approved Equal.
2. Width: 2 inches.
3. Thickness: 6 mils.
4. Adhesion: 64 ounces force/inch in width.
5. Elongation: 500%.
6. Tensile Strength: 18 lbf/inch in width.

C. Aluminum-Foil Tape: Vapor-retarder tape with acrylic adhesive.
1. Products: Subject to compliance with requirements, provide products by one of the following:
a. ABI, Ideal Tape Division; 488 AWF.
b. Avery Dennison Corporation, Specialty Tapes Division; Fasson 0800.
c. Compac Corporation; 120.
d. Venture Tape; 3520 CW.

e. Or Engineer Approved Equal.
2. Width: 2 inches.
3. Thickness: 3.7 mils.
4. Adhesion: 100 ounces force/inch in width.
5. Elongation: 5%.
6. Tensile Strength: 34 lbf/inch in width.

2.08 SECUREMENTS:

A. Bands:
1. Products: Subject to compliance with requirements, provide products by one of the following:
a. ITW Insulation Systems; Gerrard Strapping and Seals.
b. RPR Products, Inc.; Insul-Mate Strapping, Seals, and Springs.
c. Or Engineer Approved Equal.
2. Stainless Steel: ASTM A167 or ASTM A240, Type 304; 0.015 inch thick, 1/2 inch wide with wing seal or closed seal.
3. Aluminum: ASTM B209, Alloy 3003, 3005, 3105, or 5005; Temper H 14, 0.020 inch thick, 1/2 inch wide with wing seal or closed seal.
4. Springs: Twin spring set constructed of stainless steel with ends flat and slotted to accept metal bands. Spring size determined by manufacturer for application.

B. Insulation Pins and Hangers:
1. Metal, Adhesively Attached, Perforated-Base Insulation Hangers: Baseplate welded to projecting spindle that is capable of holding insulation, of thickness indicated, securely in position indicated when self-locking washer is in place. Comply with the following requirements:
a. Products: Subject to compliance with requirements, provide products by one of the following:
(1) AGM Industries, Inc.; Tactoo Perforated Base Insul-Hangers.
(2) GEMCO; Perforated Base.
(3) Midwest Fasteners, Inc.; Spindle.
(4) Or Engineer Approved Equal.
b. Baseplate: Perforated, aluminum sheet, 0.030 inch thick by 2 inches square.
c. Spindle: Aluminum, fully annealed, 0.106-inch diameter shank, length to suit depth of insulation indicated.
d. Adhesive: Recommended by hanger manufacturer. Product with demonstrated capability to bond insulation hanger securely to substrates indicated without damaging insulation, hangers, and substrates.
2. Nonmetal, Adhesively Attached, Perforated-Base Insulation Hangers: Baseplate fastened to projecting spindle that is capable of holding insulation, of thickness indicated, securely in position indicated when self-locking washer is in place. Comply with the following requirements:
a. Products: Subject to compliance with requirements, provide products by one of the following:
(1) GEMCO; Nylon Hangers.
(2) Midwest Fasteners, Inc.; Nylon Insulation Hangers.
(3) Or Engineer Approved Equal.
b. Baseplate: Perforated, nylon sheet, 0.030 inch thick by 1-1/2 inches in diameter.
c. Spindle: Nylon, 0.106-inch diameter shank, length to suit depth of insulation indicated, up to 2-1/2 inches.

d. Adhesive: Recommended by hanger manufacturer. Product with demonstrated capability to bond insulation hanger securely to substrates indicated without damaging insulation, hangers, and substrates.

3. Self-Sticking-Base Insulation Hangers: Baseplate welded to projecting spindle that is capable of holding insulation, of thickness indicated, securely in position indicated when self-locking washer is in place. Comply with the following requirements:
   a. Products: Subject to compliance with requirements, provide products by one of the following:
      (1) AGM Industries, Inc.; Tactoo Self-Adhering Insul-Hangers.
      (2) GEMCO; Peel & Press.
      (3) Midwest Fasteners, Inc.; Self Stick.
      (4) Or Engineer Approved Equal.
   b. Baseplate: Aluminum-steel sheet, 0.030 inch thick by 2 inches square.
   c. Spindle: Aluminum, fully annealed, 0.106-inch diameter shank, length to suit depth of insulation indicated.
   d. Adhesive-backed base with a peel-off protective cover.
4. Insulation-Retaining Washers: Self-locking washers formed from 0.016-inch thick, galvanized-steel, or stainless-steel sheet, with beveled edge sized as required to hold insulation securely in place but not less than 1-1/2 inches in diameter.
   a. Products: Subject to compliance with requirements, provide products by one of the following:
      (1) AGM Industries, Inc.; RC-150.
      (2) GEMCO; R-150.
      (3) Midwest Fasteners, Inc.; WA-150.
      (4) Nelson Stud Welding; Speed Clips.
      (5) Or Engineer Approved Equal.
   b. Protect ends with capped self-locking washers incorporating a spring steel insert to ensure permanent retention of cap in exposed locations.
5. Nonmetal Insulation-Retaining Washers: Self-locking washers formed from 0.016-inch thick nylon sheet, with beveled edge sized as required to hold insulation securely in place but not less than 1-1/2 inches in diameter.
   a. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to the following:
      (1) GEMCO.
      (2) Midwest Fasteners, Inc.
      (3) Or Engineer Approved Equal.

C. Staples: Outward-clinching insulation staples, nominal 3/4-inch wide, stainless steel or Monel.

D. Wire: 0.062-inch soft-annealed, stainless steel.
   1. Manufacturers: Subject to compliance with requirements, provide products by the following:
      a. C & F Wire.
      b. Or Engineer Approved Equal.

2.09 CORNER ANGLES:

A. PVC Corner Angles: 30 mils thick, minimum 1- by 1-inch PVC according to ASTM D1784, Class 16354-C. White or color-coded to match adjacent surface.

B. Aluminum Corner Angles: 0.040 inch thick, minimum 1- by 1-inch aluminum according to ASTM B209, Alloy 3003, 3005, 3105, or 5005; Temper H-14.

PART 3 - EXECUTION

3.01 EXAMINATION:

A. Examine substrates and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of insulation application.
   1. Verify that systems to be insulated have been tested and are free of defects.
   2. Verify that surfaces to be insulated are clean and dry.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION:

A. Surface Preparation: Clean and dry surfaces to receive insulation. Remove materials that will adversely affect insulation application.

3.03 GENERAL INSTALLATION REQUIREMENTS:

A. Install insulation materials, accessories, and finishes with smooth, straight, and even surfaces, free of voids throughout the length of ducts and fittings.

B. Install insulation materials, vapor barriers or retarders, jackets, and thicknesses required for each item of duct system as specified in insulation system schedules.

C. Install accessories compatible with insulation materials and suitable for the service. Install accessories that do not corrode, soften, or otherwise attack insulation or jacket in either wet or dry state.

D. Install insulation with longitudinal seams at top and bottom of horizontal runs.

E. Install multiple layers of insulation with longitudinal and end seams staggered.

F. Keep insulation materials dry during application and finishing.

G. Install insulation with tight longitudinal seams and end joints. Bond seams and joints with adhesive recommended by insulation material manufacturer.

H. Install insulation with least number of joints practical.

I. Where vapor barrier is indicated, seal joints, seams, and penetrations in insulation at hangers, supports, anchors, and other projections with vapor-barrier mastic.
   1. Install insulation continuously through hangers and around anchor attachments.
   2. For insulation application where vapor barriers are indicated, extend insulation on anchor legs from point of attachment to supported item to point of attachment to structure. Taper and seal ends at attachment to structure with vapor-barrier mastic.
   3. Install insert materials and install insulation to tightly join the insert. Seal insulation to insulation inserts with adhesive or sealing compound recommended by insulation material manufacturer.

J. Apply adhesives, mastics, and sealants at manufacturer's recommended coverage rate and wet and dry film thicknesses.

K. Install insulation with factory-applied jackets as follows:
   1. Draw jacket tight and smooth.
   2. Cover circumferential joints with 3 inch wide strips, of same material as insulation jacket. Secure strips with adhesive and outward clinching staples along both edges of strip, spaced 4 inches o.c.
   3. Overlap jacket longitudinal seams at least 1-1/2 inches. Clean and dry surface to receive self-sealing lap. Staple laps with outward clinching staples along edge at 2 inches o.c.
      a. For below ambient services, apply vapor-barrier mastic over staples.
   4. Cover joints and seams with tape, according to insulation material manufacturer's written instructions, to maintain vapor seal.

5. Where vapor barriers are indicated, apply vapor-barrier mastic on seams and joints and at ends adjacent to duct flanges and fittings.

L. Cut insulation in a manner to avoid compressing insulation more than 75% of its nominal thickness.

M. Finish installation with systems at operating conditions. Repair joint separations and cracking due to thermal movement.

N. Repair damaged insulation facings by applying same facing material over damaged areas. Extend patches at least 4 inches beyond damaged areas. Adhere, staple, and seal patches similar to butt joints.

3.04 PENETRATIONS:

A. Insulation Installation at Aboveground Exterior Wall Penetrations: Install insulation continuously through wall penetrations.
1. Seal penetrations with flashing sealant.
2. For applications requiring only indoor insulation, terminate insulation inside wall surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.
3. Extend jacket of outdoor insulation outside wall flashing and overlap wall flashing at least 2 inches.
4. Seal jacket to wall flashing with flashing sealant.

B. Insulation Installation at Interior Wall and Partition Penetrations (That Are Not Fire Rated): Install insulation continuously through walls and partitions.

C. Insulation Installation at Fire-Rated Wall and Partition Penetrations: Terminate insulation at fire damper sleeves for fire-rated wall and partition penetrations. Externally insulate damper sleeves to match adjacent insulation and overlap duct insulation at least 2 inches.
1. Comply with requirements in Division 07.

D. Insulation Installation at Floor Penetrations:
1. Duct: For penetrations through fire-rated assemblies, terminate insulation at fire damper sleeves and externally insulate damper sleeve beyond floor to match adjacent duct insulation. Overlap damper sleeve and duct insulation at least 2 inches.
2. Seal penetrations through fire-rated assemblies. Comply with requirements in Division 07.

3.05 INSTALLATION OF MINERAL-FIBER INSULATION:

A. Blanket Insulation Installation on Ducts and Plenums: Secure with adhesive and insulation pins.
1. Apply adhesives according to manufacturer's recommended coverage rates per unit area.
2. Apply adhesive to entire circumference of ducts and to all surfaces of fittings and transitions.
3. Install either capacitor-discharge-weld pins and speed washers or cupped-head, capacitor-discharge-weld pins on sides and bottom of horizontal ducts and sides of vertical ducts as follows:
a. On duct sides with dimensions 18 inches and smaller, place pins along longitudinal centerline of duct. Space 3 inches maximum from insulation end joints, and 16 inches o.c.
b. On duct sides with dimensions larger than 18 inches, place pins 16 inches o.c. each way, and 3 inches maximum from insulation joints. Install additional pins to hold insulation tightly against surface at cross bracing.

c. Pins may be omitted from top surface of horizontal, rectangular ducts and plenums.
d. Do not overcompress insulation during installation.
e. Impale insulation over pins and attach speed washers.
f. Cut excess portion of pins extending beyond speed washers or bend parallel with insulation surface. Cover exposed pins and washers with tape matching insulation facing.

4. For ducts and plenums with surface temperatures below ambient, install a continuous unbroken vapor barrier. Create a facing lap for longitudinal seams and end joints with insulation by removing 2 inches from one edge and one end of insulation segment. Secure laps to adjacent insulation section with 1/2-inch outward-clinching staples, 1-inch o.c. Install vapor barrier consisting of factory- or field-applied jacket, adhesive, vapor-barrier mastic, and sealant at joints, seams, and protrusions.
   a. Repair punctures, tears, and penetrations with tape or mastic to maintain vapor-barrier seal.
   b. Install vapor stops for ductwork and plenums operating below 50ºF at 18-foot intervals. Vapor stops shall consist of vapor-barrier mastic applied in a Z-shaped pattern over insulation face, along butt end of insulation, and over the surface. Cover insulation face and surface to be insulated a width equal to two times the insulation thickness, but not less than 3 inches.
5. Overlap unfaced blankets a minimum of 2 inches on longitudinal seams and end joints. At end joints, secure with steel bands spaced a maximum of 18 inches o.c.
6. Install insulation on rectangular duct elbows and transitions with a full insulation section for each surface. Install insulation on round and flat-oval duct elbows with individually mitered gores cut to fit the elbow.
7. Insulate duct stiffeners, hangers, and flanges that protrude beyond insulation surface with 6-inch wide strips of same material used to insulate duct. Secure on alternating sides of stiffener, hanger, and flange with pins spaced 6-inches o.c.

B. Board Insulation Installation on Ducts and Plenums: Secure with adhesive and insulation pins.
1. Apply adhesives according to manufacturer's recommended coverage rates per unit area.
2. Apply adhesive to entire circumference of ducts and to all surfaces of fittings and transitions.
3. Install either capacitor-discharge-weld pins and speed washers or cupped-head, capacitor-discharge-weld pins on sides and bottom of horizontal ducts and sides of vertical ducts as follows:
   a. On duct sides with dimensions 18 inches and smaller, place pins along longitudinal centerline of duct. Space 3 inches maximum from insulation end joints, and 16-inches o.c.
   b. On duct sides with dimensions larger than 18 inches, space pins 16-inches o.c. each way, and 3 inches maximum from insulation joints. Install additional pins to hold insulation tightly against surface at cross bracing.
   c. Pins may be omitted from top surface of horizontal, rectangular ducts and plenums.
   d. Do not overcompress insulation during installation.
   e. Cut excess portion of pins extending beyond speed washers or bend parallel with insulation surface. Cover exposed pins and washers with tape matching insulation facing.
4. For ducts and plenums with surface temperatures below ambient, install a continuous unbroken vapor barrier. Create a facing lap for longitudinal seams and end joints with insulation by removing 2 inches from one edge and one end of insulation segment. Secure laps to adjacent insulation section with 1/2-inch outward-clinching staples, 1-inch

o.c. Install vapor barrier consisting of factory- or field-applied jacket, adhesive, vapor-barrier mastic, and sealant at joints, seams, and protrusions.

a. Repair punctures, tears, and penetrations with tape or mastic to maintain vapor-barrier seal.
b. Install vapor stops for ductwork and plenums operating below 50ºF at 18-foot intervals. Vapor stops shall consist of vapor-barrier mastic applied in a Z-shaped pattern over insulation face, along butt end of insulation, and over the surface. Cover insulation face and surface to be insulated a width equal to two times the insulation thickness, but not less than 3 inches.

5. Install insulation on rectangular duct elbows and transitions with a full insulation section for each surface. Groove and score insulation to fit as closely as possible to outside and inside radius of elbows. Install insulation on round and flat-oval duct elbows with individually mitered gores cut to fit the elbow.
6. Insulate duct stiffeners, hangers, and flanges that protrude beyond insulation surface with 6-inch wide strips of same material used to insulate duct. Secure on alternating sides of stiffener, hanger, and flange with pins spaced 6-inches o.c.

3.06 FIELD-APPLIED JACKET INSTALLATION:

A. Where PVC jackets are indicated, install with 1-inch overlap at longitudinal seams and end joints; for horizontal applications, install with longitudinal seams along top and bottom of tanks and vessels. Seal with manufacturers recommended adhesive.
   1. Apply two continuous beads of adhesive to seams and joints, one bead under lap and the finish bead along seam and joint edge.
B. Where metal jackets are indicated, install with 2-inch overlap at longitudinal seams and end joints. Overlap longitudinal seams arranged to shed water. Seal end joints with weatherproof sealant recommended by insulation manufacturer. Secure jacket with stainless-steel bands 12-inches o.c. and at end joints.

3.07 FINISHES:

A. Do not field paint PVC or aluminum jackets.

3.08 DUCT INSULATION SCHEDULE, GENERAL:

A. Plenums and Ducts Requiring Insulation:
   1. Indoor, supply ductwork in spaces with air conditioning.
   2. Outdoor, supply and return ductwork.
B. Items Not Insulated:
   1. Exhaust and odor-control ductwork.
   2. Factory-insulated flexible ducts.
   3. Factory-insulated plenums and casings.
   4. Flexible connectors.
   5. Vibration-control devices.
   6. Factory-insulated access panels and doors.

3.09 ABOVEGROUND INDOOR DUCT AND PLENUM INSULATION SCHEDULE:

A. Indoor air duct insulation shall be one of the following:
   1. Mineral-Fiber Blanket: 2 inches thick and 1.5-lb./cu. ft. nominal density. Minimum installed R-6, 3.
   2. Mineral-Fiber Board: 1-1/2 inches thick and 2-lb./cu. ft. nominal density.

3.10 ABOVEGROUND, OUTDOOR DUCT AND PLENUM INSULATION SCHEDULE:

A. Aboveground outdoor rectangular duct insulation shall be the following:
   1. Mineral-Fiber Board: 2 ½ inches thick and 3-lb./cu. ft. nominal density. Minimum installed R-8 insulation value.

3.11 INDOOR, FIELD-APPLIED JACKET SCHEDULE:

A. Install jacket over insulation material where exposed in finished spaces and less than 8 foot above floor in utility spaces. For insulation with factory-applied jacket, install the field-applied jacket over the factory-applied jacket.
B. Ducts and Plenums:
   1. PVC: 30 mils thick.

3.12 OUTDOOR, FIELD-APPLIED JACKET SCHEDULE:

A. Install jacket over insulation material. For insulation with factory-applied jacket, install the field-applied jacket over the factory-applied jacket.
B. If more than one material is listed, selection from materials listed is Contractor's option.
C. Ducts and Plenums, Concealed:
   1. Aluminum, Smooth or Stucco Embossed: 0.024 inch thick.

END OF SECTION 23 07 13

SECTION 23 09 00 – INSTRUMENTATION AND CONTROL FOR HVAC

PART 1 - GENERAL

1.01 RELATED DOCUMENTS:

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY:

A. This Section includes control equipment for HVAC systems and components, including control components for terminal heating and cooling units not supplied with factory-wired controls.

B. Related Sections include the following:

1.03 RELATED REQUIREMENTS

A. Section 23 05 19 – "Meters ang Gages for HVAC Piping" for measuring equipment that relates to this Section.

B. Section 23 09 93 – "Sequence of Operations for HVAC Controls" for requirements that relate to this Section.

1.04 REFERENCE STANDARDS:

A. Applicable Standards (Latest Edition):

1. Air Movement and Control Association International, Inc. (AMCA):
   a. AMCA 500D - Methods of Testing Dampers for Rating.
2. American Society of Heating, Refrigerating and Air-Conditioning Engineers (ASHRAE):
   a. ASHRAE 135 - BACnet - A Data Communication Protocol for Building Automation and Control Networks.
3. ASME International (ASME):
   a. ASME B16.18 - Cast Copper Alloy Solder Joint Pressure Fittings.
   b. ASME B16.22 - Wrought Copper and Copper Alloy Solder Joint Pressure Fittings.
4. ASTM International (ASTM):
   a. ASTM A126 - Specification for Gray Iron Castings for Valves, Flanges, and Pipe Fittings.
   b. ASTM A536 - Specification for Ductile Iron Casting.
   c. ASTM B88 - Specification for Seamless Copper Water Tube.
   d. ASTM B280 - Specification for Seamless Copper Tube for Air Conditioning and Refrigeration Field Service.
   e. ASTM D2737 - Specification for Polyethylene (PE) Plastic Tubing.
5. Electronic Industries Alliance/Canadian Electricity Association (EIA/CEA):
   a. EIA/CEA 709.1-B - Control Network Protocol Specification.
6. The Instrumentation, Systems, and Automation Society (67 Alexander Dr., Research Triangle Park, NC 27709; 919-549-8411) (ISA):
   a. ISA 50.00.01 - Compatibility of Analog Signals for Electronic Industrial Process Instruments.
7. National Electrical Manufacturers Association (NEMA):
   a. NEMA 250 - Enclosures for Electrical Equipment (100V Maximum).
   b. NEMA DC 3 - Residential Controls - Electrical Wall-Mounted Room Thermostats.
8. NFPA:
   a. NFPA 70 - National Electrical Code.

1.05 DEFINITIONS:

A. DDC: Direct digital control.
B. I/O: Input/output.
C. MS/TP: Master slave/token passing.
D. PC: Personal computer.
E. PID: Proportional plus integral plus derivative.
F. RTD: Resistance temperature detector.

1.06 SYSTEM PERFORMANCE:

A. Comply with the following performance requirements:
   1. Reporting Accuracy and Stability of Control: Report values and maintain measured variables within tolerances as follows:
      a. Water Temperature: ±1ºF.
      b. Water Flow: ±5% of full scale.
      c. Water Pressure: ±2% of full scale.
      d. Space Temperature: ±1ºF.
      e. Ducted Air Temperature: ±1ºF.
      f. Outside Air Temperature: ±2ºF.
      g. Dew Point Temperature: ±3ºF.
      h. Temperature Differential: ±0.25ºF.
      i. Relative Humidity: ±5%.
      j. Airflow (Pressurized Spaces): ±3% of full scale.
      k. Airflow (Measuring Stations): ±5% of full scale.
      l. Airflow (Terminal): ±10% of full scale.
      m. Air Pressure (Space): ±0.01-inch wg.
      n. Air Pressure (Ducts): ±0.1-inch wg.
      o. Carbon Monoxide: ±5% of reading.
      p. Carbon Dioxide: ±50 ppm.
      q. Electrical: ±5% of reading.

1.07 SUBMITTALS:

A. Product Data: Include manufacturer's technical literature for each control device. Indicate dimensions, capacities, performance characteristics, electrical characteristics, finishes for materials, and installation and startup instructions for each type of product indicated.
   1. DDC System Hardware: Bill of materials of equipment indicating quantity, manufacturer, and model number. Include technical data for operator workstation equipment, interface equipment, control units, transducers/transmitters, sensors, actuators, valves, relays/switches, control panels, and operator interface equipment.
   2. Control System Software: Include technical data for operating system software, operator interface, color graphics, and other third-party applications.
   3. Controlled Systems: Instrumentation list with element name, type of device, manufacturer, model number, and product data. Include written description of sequence of operation including schematic diagram.
B. Shop Drawings: Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
   1. Bill of materials of equipment indicating quantity, manufacturer, and model number.
   2. Schematic flow diagrams showing fans, pumps, coils, dampers, valves, and control devices.

3. Wiring Diagrams: Power, signal, and control wiring.
4. Details of control panel faces, including controls, instruments, and labeling.
5. Written description of sequence of operation.
6. Schedule of dampers including size, leakage, and flow characteristics.
7. Schedule of valves including flow characteristics.
8. DDC System Hardware:
    a. Wiring diagrams for control units with termination numbers.
    b. Schematic diagrams and floor plans for field sensors and control hardware.
    c. Schematic diagrams for control, communication, and power wiring, showing trunk data conductors and wiring between operator workstation and control unit locations.
9. Control System Software: List of color graphics indicating monitored systems, data (connected and calculated) point addresses, output schedule, and operator notations.
10. Controlled Systems:
    a. Schematic diagrams of each controlled system with control points labeled and control elements graphically shown, with wiring.
    b. Scaled drawings showing mounting, routing, and wiring of elements including bases and special construction.
    c. Written description of sequence of operation including schematic diagram.
    d. Points list.

C. Qualification Data: For Installer and manufacturer.

D. Software Upgrade Kit: For Owner to use in modifying software to suit future systems revisions or monitoring and control revisions.

E. Field quality-control test reports.

F. Operation and Maintenance Data: For HVAC instrumentation and control system to include in emergency, operation, and maintenance manuals. In addition to items specified in Division 01, include the following:
1. Maintenance instructions and lists of spare parts for each type of control device and compressed-air station.
2. Interconnection wiring diagrams with identified and numbered system components and devices.
3. Keyboard illustrations and step-by-step procedures indexed for each operator function.
4. Inspection period, cleaning methods, cleaning materials recommended, and calibration tolerances.
5. Calibration records and list of set points.

G. Software and Firmware Operational Documentation: Include the following:
1. Software operating and upgrade manuals.
2. Program Software Backup: On a magnetic media or compact disc, complete with data files.
3. Device address list.
4. Printout of software application and graphic screens.
5. Software license required by and installed for DDC workstations and control systems.

1.08 QUALITY ASSURANCE:

A. Installer Qualifications: Automatic control system manufacturer's authorized representative who is trained and approved for installation of system components required for this Project.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

1.09 DELIVERY, STORAGE, AND HANDLING:

A. Factory-Mounted Components: Where control devices specified in this Section are indicated to be factory mounted on equipment, arrange for shipping of control devices to equipment manufacturer.

B. System Software: Update to latest version of software at Project completion.

1.10 COORDINATION:

A. Coordinate location of thermostats, humidistats, and other exposed control sensors with plans and room details before installation.

B. Coordinate equipment with Division 26 to achieve compatibility with lighting controls, motor starters, VFDs, SCADA, and fire alarm systems.

C. Coordinate supply of conditioned electrical branch circuits for control units and operator workstation.

D. Coordinate equipment with Division 26 to achieve compatibility with motor starters and annunciation devices.

PART 2 - PRODUCTS

2.01 MANUFACTURERS:

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

2.02 CONTROL SYSTEM:

A. Manufacturers:
1. American Auto-Matrix.
2. Delta Controls Inc.
3. Honeywell International Inc.; Home & Building Control.
4. Johnson Controls, Inc.; Controls Group.
5. McQuay International.
6. Siemens Building Technologies, Inc.
7. Or Engineer Approved Equal.

B. Control system shall consist of sensors, indicators, actuators, final control elements, interface equipment, other apparatus, and accessories to control mechanical systems.

C. Control system shall consist of sensors, indicators, actuators, final control elements, interface equipment, other apparatus, accessories, and software connected to distributed controllers operating in multiuser, multitasking environment on token-passing network and programmed to control mechanical systems. An operator workstation permits interface with the network via dynamic color graphics with each mechanical system, building floor plan, and control device depicted by point-and-click graphics.

2.03 DDC EQUIPMENT

A. Operator Workstation: One PC-based microcomputer(s) with minimum configuration as follows:
1. Motherboard: With 6 integrated USB 2.0 ports, 2 integrated USB 3.0 ports, integrated Intel Pro 10/100/1000 (Ethernet), integrated audio, bios, and hardware monitoring.
2. Processor: Intel Core i9, 16 cores, 3.2 GHz.
3. Random-Access Memory: 16 GB.
4. Graphics: Video adapter, minimum 3,840 by 2,160 pixels, support for 4 monitors.
5. Monitor: Two, 28 inches, 3,840 by 2,160 pixels, 60 Hz, LED color.

6. Keyboard: QWERTY, 105 keys in ergonomic shape.
7. Solid-State Drive: 1 TB.
8. Mouse: Two button plus center wheel, optical.
9. Uninterruptible Power Supply: 2 kVa.
10. Operating System: Microsoft Windows 11 Professional.
    a. ASHRAE 135 Compliance: Workstation shall use ASHRAE 135 protocol and communicate using ISO 8802-3 (Ethernet) datalink/physical layer protocol.
11. Application Software:
    a. I/O capability from operator station.
    b. System security for each operator via software password and access levels.
    c. Automatic system diagnostics; monitor system and report failures.
    d. Database creation and support.
    e. Automatic and manual database save and restore.
    f. Dynamic color graphic displays with up to 10 screen displays at once.
    g. Custom graphics generation and graphics library of HVAC equipment and symbols.
    h. Alarm processing, messages, and reactions.
    i. Trend logs retrievable in spreadsheets and database programs.
    j. Alarm and event processing.
    k. Object and property status and control.
    l. Automatic restart of field equipment on restoration of power.
    m. Data collection, reports, and logs. Include standard reports for the following:
        (1) Current values of all objects.
        (2) Current alarm summary.
        (3) Disabled objects.
        (4) Alarm lockout objects.
        (5) Logs.
    n. Custom report development.
    o. Utility and weather reports.
    p. Workstation application editors for controllers and schedules.
    q. Maintenance management.
12. Custom Application Software:
    a. English language oriented.
    b. Full-screen character editor/programming environment.
    c. Allow development of independently executing program modules with debugging/simulation capability.
    d. Support conditional statements.
    e. Contains predefined time variables.

B. Diagnostic Terminal Unit: Portable notebook-style, PC-based microcomputer terminal capable of accessing system data by connecting to system network with minimum configuration as follows:
1. System: With two integrated USB 3.0 port, integrated Intel Pro 10/100/1000 (Ethernet), integrated audio, bios, and hardware monitoring.
2. Processor: Intel Core i7, 10 cores, 1.7 GHz.
3. Random-Access Memory: 16 GB.
4. Graphics: Video adapter, minimum 3,840 by 2,160 pixels, Support for an external monitor.
5. Monitor: 14 inches, 2,240 by 1,400, LED color.
6. Keyboard: QWERTY, backlit.
7. Solid-State Drive: 1 TB.

8. Pointing Device: Touch pad or other internal device.

C. Control Units: Modular, comprising processor board with programmable, nonvolatile, random-access memory; local operator access and display panel; integral interface equipment; and backup power source.
   1. Units monitor or control each I/O point; process information; execute commands from other control units, devices, and operator stations; and download from or upload to operator workstation or diagnostic terminal unit.
   2. Stand-alone mode control functions operate regardless of network status. Functions include the following:
      a. Global communications.
      b. Discrete/digital, analog, and pulse I/O.
      c. Monitoring, controlling, or addressing data points.
      d. Software applications, scheduling, and alarm processing.
      e. Testing and developing control algorithms without disrupting field hardware and controlled environment.
   3. Standard Application Programs:
      a. Electric Control Programs: Demand limiting, duty cycling, automatic time scheduling, start/stop time optimization, night setback/setup, on-off control with differential sequencing, staggered start, antishort cycling, PID control, DDC with fine tuning, and trend logging.
      b. HVAC Control Programs: Optimal run time, supply-air reset, and enthalpy switchover.
      c. Chiller Control Programs: Control function of condenser-water reset, chilled-water reset, and equipment sequencing.
      d. Programming Application Features: Include trend point; alarm processing and messaging; weekly, monthly, and annual scheduling; energy calculations; run-time totalization; and security access.
      e. Remote communications.
      f. Maintenance management.
      g. Units of Measure: Inch-pound and SI (metric).
   4. Local operator interface provides for download from or upload to operator workstation or diagnostic terminal unit.
   5. ASHRAE 135 Compliance: Control units shall use ASHRAE 135 protocol and communicate using ISO 8802-3 (Ethernet) datalink/physical layer protocol.

D. Local Control Units: Modular, comprising processor board with electronically programmable, nonvolatile, read-only memory; and backup power source.
   1. Units monitor or control each I/O point, process information, and download from or upload to operator workstation or diagnostic terminal unit.
   2. Stand-alone mode control functions operate regardless of network status. Functions include the following:
      a. Global communications.
      b. Discrete/digital, analog, and pulse I/O.
      c. Monitoring, controlling, or addressing data points.
   3. Local operator interface provides for download from or upload to operator workstation or diagnostic terminal unit.
   4. ASHRAE 135 Compliance: Control units shall use ASHRAE 135 protocol and communicate using ISO 8802-3 (Ethernet) datalink/physical layer protocol.

E. I/O Interface: Hardwired inputs and outputs may tie into system through controllers. Protect points so that shorting will cause no damage to controllers.

1. Binary Inputs: Allow monitoring of on-off signals without external power.
2. Pulse Accumulation Inputs: Accept up to 10 pulses per second.
3. Analog Inputs: Allow monitoring of low-voltage (0 to 10Vdc), current (4 to 20 mA), or resistance signals.
4. Binary Outputs: Provide on-off or pulsed low-voltage signal, selectable for normally open or normally closed operation with three-position (on-off-auto) override switches and status lights. Provide bifurcated contacts rated for at least 2 A and 120 V, unless application requires otherwise.
5. Analog Outputs: Provide modulating signal, either low voltage (0 to 10Vdc) or current (4 to 20 mA) with status lights, two-position (auto-manual) switch, and manually adjustable potentiometer.
6. Tri-State Outputs: Provide two coordinated binary outputs for control of three-point, floating-type electronic actuators.
7. Universal I/Os: Provide software selectable binary or analog outputs.

F. Power Supplies: Transformers with Class 2 current-limiting type or overcurrent protection; limit connected loads to 80% of rated capacity. DC power supply shall match output current and voltage requirements and be full-wave rectifier type with the following:
1. Output ripple of 5.0 mV maximum peak to peak.
2. Combined 1% line and load regulation with 100-mic.sec. response time for 50% load changes.
3. Built-in overvoltage and overcurrent protection and be able to withstand 150% overload for at least 3 seconds without failure.

G. Power Line Filtering: Internal or external transient voltage and surge suppression for workstations or controllers with the following:
1. Minimum dielectric strength of 1,000V.
2. Maximum response time of 10 nanoseconds.
3. Minimum transverse-mode noise attenuation of 65 dB.
4. Minimum common-mode noise attenuation of 150 dB at 40 to 100 Hz.

2.04 UNITARY CONTROLLERS:

A. Unitized, capable of stand-alone operation with sufficient memory to support its operating system, database, and programming requirements, and with sufficient I/O capacity for the application.
1. Configuration: Local keypad and display; diagnostic LEDs for power, communication, and processor; wiring termination to terminal strip or card connected with ribbon cable; memory with bios; and 72-hour battery backup.
2. Operating System: Manage I/O communication to allow distributed controllers to share real and virtual object information and allow central monitoring and alarms. Perform scheduling with real-time clock. Perform automatic system diagnostics; monitor system and report failures.
3. ASHRAE 135 Compliance: Communicate using read (execute and initiate) and write (execute and initiate) property services defined in ASHRAE 135. Reside on network using MS/TP datalink/physical layer protocol and have service communication port for connection to diagnostic terminal unit.
4. Enclosure: Dustproof rated for operation at 32 to 120ºF (0 to 50ºC).

2.05 ELECTRONIC SENSORS:

A. Description: Vibration and corrosion resistant; for wall, immersion, or duct mounting as required.

B. Corrosive Environment: All devices located outdoors or in areas other than the Administration building and electrical rooms shall be rated for exposure to elevated levels of hydrogen sulfide and sulfur dioxide.

C. Thermistor Temperature Sensors and Transmitters:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. BEC Controls Corporation.
      b. Ebtron, Inc.
      c. Heat-Timer Corporation.
      d. I.T.M. Instruments Inc.
      e. MAMAC Systems, Inc.
      f. RDF Corporation.
      g. Or Engineer Approved Equal.
   2. Accuracy: ±0.36ºF at calibration point.
   3. Wire: Twisted, shielded-pair cable.
   4. Insertion Elements in Ducts: Single point, 8 inches long; use where not affected by temperature stratification or where ducts are smaller than 9 sq. ft.
   5. Averaging Elements in Ducts: 72 inches long, flexible; use where prone to temperature stratification or where ducts are larger than 10 sq. ft..
   6. Outside-Air Sensors: Watertight inlet fitting, shielded from direct sunlight.

D. RTDs and Transmitters:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. BEC Controls Corporation.
      b. MAMAC Systems, Inc.
      c. RDF Corporation.
      d. Or Engineer Approved Equal.
   2. Accuracy: ±0.2% at calibration point.
   3. Wire: Twisted, shielded-pair cable.
   4. Insertion Elements in Ducts: Single point, 8 inches long; use where not affected by temperature stratification or where ducts are smaller than 9 sq. ft..
   5. Averaging Elements in Ducts: 72 inches long, flexible; use where prone to temperature stratification or where ducts are larger than 9 sq. ft.; length as required.
   6. Outside-Air Sensors: Watertight inlet fitting, shielded from direct sunlight.

E. Pressure Transmitters/Transducers:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. BEC Controls Corporation.
      b. General Eastern Instruments.
      c. MAMAC Systems, Inc.
      d. ROTRONIC Instrument Corp.
      e. TCS/Basys Controls.
      f. Vaisala.
      g. Or Engineer Approved Equal.
   2. Static-Pressure Transmitter: Nondirectional sensor with suitable range for expected input, and temperature compensated.
      a. Accuracy: 2% of full scale with repeatability of 0.5%.
      b. Output: 4 to 20 mA.
      c. Building Static-Pressure Range: 0- to 0.25-inch wg.

d. Duct Static-Pressure Range: 0- to 5-inch wg.

F. Room Sensor Cover Construction: Manufacturer's standard locking covers.
1. Set-Point Adjustment: Exposed, digital.
2. Set-Point Indication: Exposed, digital.
3. Thermometer: Exposed, digital.
4. Color: Match wall-mounted light switch covers.

G. Room sensor accessories include the following:
1. Insulating Bases: For sensors located on exterior walls.

2.06 FLOW MEASURING STATIONS:

A. Duct Airflow Station: Combination of air straightener and multiport, self-averaging pitot tube station.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. Air Monitor Corporation.
b. Wetmaster Co., Ltd.
c. Or Engineer Approved Equal.
2. Corrosive Environment: All devices shall be rated for exposure to elevated levels of hydrogen sulfide and sulfur dioxide.
3. Casing: Aluminum or stainless-steel frame.
4. Flow Straightener: Aluminum honeycomb, 3/4-inch (20-mm) parallel cell, 3 inches (75 mm) deep.
5. Sensing Manifold: Stainless-steel manifold with bullet-nosed static pressure sensors positioned on equal area basis.

2.07 ACTUATORS:

A. Electronic Actuators: Direct-coupled type designed for minimum 60,000 full-stroke cycles at rated torque.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
a. Belimo Aircontrols (USA), Inc.
b. Or Engineer Approved Equal.
2. Dampers: Size for running torque calculated as follows:
a. Parallel-Blade Damper with Edge Seals: 7 inch-lb/sq. ft. of damper.
b. Opposed-Blade Damper with Edge Seals: 5 inch-lb/sq. ft. of damper.
c. Parallel-Blade Damper without Edge Seals: 4 inch-lb/sq. ft. of damper.
d. Opposed-Blade Damper without Edge Seals: 3 inch-lb/sq. ft. of damper.
e. Dampers with 2- to 3-Inch wg of Pressure Drop or Face Velocities of 1,000 to 2,500 fpm: Increase running torque by 1.5.
f. Dampers with 3- to 4-Inch wg of Pressure Drop or Face Velocities of 2,500 to 3,000 fpm: Increase running torque by 2.0.
3. Coupling: V-bolt and V-shaped, toothed cradle.
4. Overload Protection: Electronic overload or digital rotation-sensing circuitry.
5. Fail-Safe Operation: Mechanical, spring-return mechanism. Provide external, manual gear release on nonspring-return actuators.
6. Power Requirements (Two-Position Spring Return): As scheduled on Drawings or otherwise required.
7. Power Requirements (Modulating): Maximum 10 VA at 24Vac or 8 W at 24Vdc.
8. Proportional Signal: 2 to 10Vdc or 4 to 20 mA, and 2 to 10Vdc position feedback signal.

9. Temperature Rating: -22 to +122ºF.
10. Temperature Rating (Smoke Dampers): -22 to +250ºF.
11. Run Time: As scheduled on Drawings or as otherwise required.

2.08 DAMPERS:

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Air Balance, Inc.
   2. Don Park, Inc.; Autodamp Div.
   3. TAMCO (T. A. Morrison & Co., Inc.).
   4. United Enertech Corp.
   5. Vent Products Company, Inc.
   6. Ruskin.
   7. Or Engineer Approved Equal.

B. Dampers: AMCA-rated, construction and design as scheduled on Drawings.

PART 3 - EXECUTION

3.01 EXAMINATION:

A. Verify that conditioned power supply is available to control units and operator workstation.

B. Verify that duct- and equipment-mounted devices are installed before proceeding with installation.

3.02 INSTALLATION:

A. Install software in control units and operator workstation(s). Implement all features of programs to specified requirements and as appropriate to sequence of operation.

B. Connect and configure equipment and software to achieve sequence of operation specified.

C. Verify location of exposed control sensors with Drawings and room details before installation. Install devices at location and height as indicated on drawings.
   1. Install averaging elements in ducts and plenums in crossing or zigzag pattern.

D. Install automatic dampers according to Section 23 33 00 – "Air Duct Accessories."

E. Install damper motors on outside of duct in warm areas, not in locations exposed to outdoor temperatures.

F. Install labels and nameplates to identify control components according to Section 23 05 53 – "Identification for HVAC Piping and Equipment."

G. Install duct volume-control dampers according to Division 23 Sections specifying air ducts.

3.03 ELECTRICAL WIRING AND CONNECTION INSTALLATION:

A. Install raceways, boxes, and cabinets according to Division 26.

B. Install building wire and cable according to Division 26.

C. Install signal and communication cable according to Division 26.
   1. Conceal cable, except in mechanical rooms and areas where other conduit and piping are exposed.
   2. Install exposed cable in raceway.
   3. Install concealed cable in raceway.
   4. Bundle and harness multiconductor instrument cable in place of single cables where several cables follow a common path.
   5. Fasten flexible conductors, bridging cabinets and doors, along hinge side; protect against abrasion. Tie and support conductors.

6. Number-code or color-code conductors for future identification and service of control system, except local individual room control cables.
7. Install wire and cable with sufficient slack and flexible connections to allow for vibration of piping and equipment.

D. Connect manual-reset limit controls independent of manual-control switch positions. Automatic duct heater resets may be connected in interlock circuit of power controllers.

E. Connect hand-off-auto selector switches to override automatic controls when switch is in hand position. However, hand position shall not override safety interlocks such as smoke detection shutdown of fans and closure of smoke dampers.

3.04 FIELD QUALITY CONTROL:

A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust field-assembled components and equipment installation, including connections. Report results in writing.

B. Perform the following field tests and inspections and prepare test reports:
1. Operational Test: After electrical circuitry has been energized, start units to confirm proper unit operation. Remove and replace malfunctioning units and retest.
2. Test and adjust controls and safeties.
3. Test calibration of electronic controllers by disconnecting input sensors and stimulating operation with compatible signal generator.
4. Test each point through its full operating range to verify that safety and operating control set points are as required.
5. Test each control loop to verify stable mode of operation and compliance with sequence of operation. Adjust PID actions.
6. Test each system for compliance with sequence of operation.
7. Test software and hardware interlocks.

C. DDC Verification
1. Verify that instruments are installed before calibration, testing, and loop or leak checks.
2. Check instruments for proper location and accessibility.
3. Check instrument installation for direction of flow, elevation, orientation, insertion depth, and other applicable considerations.
4. Check instrument tubing for proper fittings, slope, material, and support.
5. Check flow instruments. Inspect tag number and line and bore size, and verify that inlet side is identified and that meters are installed correctly.
6. Check pressure instruments, piping slope, installation of valve manifold, and self-contained pressure regulators.
7. Check temperature instruments and material and length of sensing elements.
8. Check control valves. Verify that they are in correct direction.
9. Check DDC system as follows:
   a. Verify that DDC controller power supply is from emergency power supply, if applicable.
   b. Verify that wires at control panels are tagged with their service designation and approved tagging system.
   c. Verify that spare I/O capacity has been provided.
   d. Verify that DDC controllers are protected from power supply surges.

D. Replace damaged or malfunctioning controls and equipment and repeat testing procedures.

~~D.~~

3.05 ADJUSTING:

A. Calibrating and Adjusting:
   1. Calibrate instruments.
   2. Make three-point calibration test for both linearity and accuracy for each analog instrument.
   3. Calibrate equipment and procedures using manufacturer's written recommendations and instruction manuals. Use test equipment with accuracy at least double that of instrument being calibrated.
   4. Control System Inputs and Outputs:
      a. Check analog inputs at 0, 50, and 100% of span.
      b. Check analog outputs using milliampere meter at 0, 50, and 100% output.
      c. Check digital inputs using jumper wire.
      d. Check digital outputs using ohmmeter to test for contact making or breaking.
      e. Check resistance temperature inputs at 0, 50, and 100% of span using a precision-resistant source.
   5. Flow:
      a. Set differential pressure flow transmitters for 0 and 100% values with 3-point calibration accomplished at 50, 90, and 100% of span.
      b. Manually operate flow switches to verify that they make or break contact.
   6. Pressure:
      a. Calibrate pressure transmitters at 0, 50, and 100% of span.
      b. Calibrate pressure switches to make or break contacts, with adjustable differential set at minimum.
   7. Temperature:
      a. Calibrate resistance temperature transmitters at 0, 50, and 100% of span using a precision-resistance source.
      b. Calibrate temperature switches to make or break contacts.
   8. Stroke and adjust control dampers, following manufacturer's recommended procedure, so that and damper is 0, 50, and 100% closed.
   9. Provide diagnostic and test instruments for calibration and adjustment of system.
   10. Provide written description of procedures and equipment for calibrating each type of instrument. Submit procedures review and approval before initiating startup procedures.

B. Adjust initial temperature and humidity set points.

C. Occupancy Adjustments: When requested within 12 months of date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to three visits to Project during other than normal occupancy hours for this purpose.

3.06 DEMONSTRATION:

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain HVAC instrumentation and controls. Refer to Division 01.

END OF SECTION 23 09 00

SECTION 23 31 13 – METAL DUCTS

PART 1 - GENERAL

1.01 RELATED DOCUMENTS:

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY:

A. This Section includes:
   1. Single-wall rectangular ducts and fittings.
   2. Single-wall round and flat-oval ducts and fittings.
   3. Sheet metal materials.
   4. Duct liner.
   5. Sealants and gaskets.
   6. Hangers and supports.

1.03 RELATED REQUIREMENTS:

A. Section 23 05 93 - Testing, Adjusting and Balancing for HVAC for testing, adjusting, and balancing requirements for metal ducts.

B. Section 23 33 00 - Air Duct Accessories for dampers, sound-control devices, duct-mounting access doors and panels, turning vanes, and flexible ducts.

1.04 REFERENCE STANDARDS:

A. Applicable Standards (Latest Edition):
   1. American Society of Civil Engineers/Structural Engineering Institute (ASCE/SEI):
      a. ASCE/SEI 7 - Minimum Design Loads for Buildings and Other Structures.
   2. American Society of Heating, Refrigerating and Air-Conditioning Engineers (ASHRAE):
      a. ASHRAE 62.1 - Ventilation for Acceptable Indoor Air Quality (ANSI).
   3. American Society of Heating, Refrigerating and Air-Conditioning Engineers/Illuminating Engineering Society of North America (ASHRAE/IESNA):
      a. ASHRAE/IESNA 90.1 - Energy Standard for Buildings except Low-Rise Residential Buildings (ANSI).
   4. American Welding Society (AWS):
      a. AWS D1.1- Structural Welding Code - Steel.
      b. AWS D1.2- Structural Welding Code - Aluminum.
      c. AWS D9.1- Sheet Metal Welding Code.
   5. ASTM International (ASTM):
      a. ASTM A36 - Specification for Carbon Structural Steel.
      b. ASTM A480 - Specification for General Requirements for Flat-Rolled Stainless and Heat-Resisting Steel Plate, Sheet, and Strip.
      c. ASTM A492 - Specification for Stainless Steel Rope Wire.
      d. ASTM A603 - Specification for Zinc-Coated Steel Structural Wire Rope.
      e. ASTM A653 - Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.
      f. ASTM A1008 - Specification for Steel, Sheet, Cold-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy with Improved Formability, Solution Hardened, and Bake Hardenable.
      g. ASTM B209 - Specification for Aluminum and Aluminum-Alloy Sheet and Plate.

h. ASTM C518 - Steady-State Thermal Transmission Properties by Means of the Heat Flow Meter Apparatus.
i. ASTM C916 - Specification for Adhesives for Duct Thermal Insulation.
j. ASTM C920 - Specification for Elastomeric Joint Sealants.
k. ASTM C1071 - Specification for Fibrous Glass Duct Lining Insulation (Thermal and Sound Absorbing Material).
l. ASTM E84 - Test Method for Surface Burning Characteristics of Building Materials.
m. ASTM E488 - Test Methods for Strength of Anchors in Concrete and Masonry Elements.

6. Code of Federal Regulations (CFR):
   a. 40 CFR - Protection of Environment, Chapter I - Environmental Protection Agency, Part 59 - "National Volatile Organic Compound Emission Standards for Consumer and Commercial Products," Subpart D - "National Volatile Organic Compound Emission Standards for Architectural Coatings."
7. National Air Duct Cleaners Association (NADCA):
   a. NADCA 1992 - Mechanical Cleaning of Non-Porous Air Conveyance System Components.
   b. NADCA ACR - Assessment, Cleaning and Restoration of HVAC Systems.
8. NFPA:
   a. NFPA 90A - Installation of Air Conditioning and Ventilating Systems (ANSI).
   b. NFPA 90B - Installation of Warm Air Heating and Air Conditioning Systems (ANSI).
   c. NFPA 96 - Ventilation Control and Fire Protection of Commercial Cooking Operations (ANSI).
9. The North American Insulation Manufacturers Association (NAIMA):
   a. NAIMA AH124 - Fibrous Glass Duct Liner Standard.
10. Sheet Metal and Air Conditioning Contractors' National Association (SMACNA):
    a. HVAC Air Duct Leakage Test Manual.
    b. HVAC Duct Construction Standards - Metal and Flexible.
    c. IAQ Guidelines for Occupied Buildings under Construction - Appendix G, Duct Cleanliness for New Construction Guidelines.
    d. Seismic Restraint Manual: Guidelines for Mechanical Systems.
11. Underwriters Laboratories, Inc. (UL):
    a. UL 723 - Test for Surface Burning Characteristics of Building Materials.

1.05 PERFORMANCE/DESIGN CRITERIA:

A. Delegated Duct Design: Duct construction, including sheet metal thicknesses, seam and joint construction, reinforcements, and hangers and supports, shall comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" and performance requirements and design criteria indicated in "Duct Schedule" Article.

1.06 SUBMITTALS:

A. Product Data: For each type of the following products:
   1. Liners and adhesives.
   2. Sealants and gaskets.
   3. Seismic-restraint devices.

B. Shop Drawings:
   1. Fabrication, assembly, and installation, including plans, elevations, sections, components, and attachments to other work.
   2. Factory- and shop-fabricated ducts and fittings.
   3. Duct layout indicating sizes, configuration, liner material, and static-pressure classes.
   4. Elevation of top of ducts.
   5. Dimensions of main duct runs from building grid lines.
   6. Fittings.
   7. Reinforcement and spacing.
   8. Seam and joint construction.
   9. Penetrations through fire-rated and other partitions.
   10. Equipment installation based on equipment being used on Project.
   11. Locations for duct accessories, including dampers, turning vanes, and access doors and panels.
   12. Hangers and supports, including methods for duct and building attachment and vibration isolation.

C. Delegated-Design Submittal:
   1. Sheet metal thicknesses.
   2. Joint and seam construction and sealing.
   3. Reinforcement details and spacing.
   4. Materials, fabrication, assembly, and spacing of hangers and supports.

D. Coordination Drawings: Plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
   1. Duct installation in congested spaces, indicating coordination with general construction, building components, and other building services. Indicate proposed changes to duct layout.
   2. Suspended ceiling components.
   3. Structural members to which duct will be attached.
   4. Size and location of initial access modules for acoustical tile.
   5. Penetrations of smoke barriers and fire-rated construction.
   6. Items penetrating finished ceiling including the following:
      a. Lighting fixtures.
      b. Air outlets and inlets.
      c. Speakers.
      d. Sprinklers.
      e. Access panels.
      f. Perimeter moldings.

E. Welding Procedure Specification (WPS) and Welder Performance Qualification Record (WPQR)

1.07 QUALITY ASSURANCE:

A. Welding Qualifications: Qualify welding procedures, welders, and welding operators according to the following:
   1. AWS D1.1, "Structural Welding Code - Steel," for hangers and supports.
   2. AWS D1.2, "Structural Welding Code - Aluminum," for aluminum supports.
   3. AWS D9.1, "Sheet Metal Welding Code," for duct joint and seam welding.

PART 2 - PRODUCTS

2.01 SINGLE-WALL RECTANGULAR DUCTS AND FITTINGS:

A. General Fabrication Requirements: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" based on indicated static-pressure class, unless otherwise indicated.

B. Transverse Joints: Select joint types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 2-1, "Rectangular Duct/Transverse Joints," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

C. Longitudinal Seams: Select seam types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 2-2, "Rectangular Duct/Longitudinal Seams," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

D. Elbows, Transitions, Offsets, Branch Connections, and Other Duct Construction: Select types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Chapter 4, "Fittings and Other Construction," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

2.02 SINGLE-WALL ROUND DUCTS AND FITTINGS:

A. General Fabrication Requirements: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Chapter 3, "Round, Oval, and Flexible Duct," based on indicated static-pressure class, unless otherwise indicated.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Lindab, Inc.
   b. McGill AirFlow, LLC.
   c. SEMCO Incorporated.
   d. Sheet Metal Connectors, Inc.
   e. Spiral Manufacturing Co., Inc.
   f. Or Engineer Approved Equal.

B. Transverse Joints: Select joint types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-1, "Round Duct Transverse Joints," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

1. Transverse Joints in Ducts Larger Than 60 inches in Diameter: Flanged.

C. Longitudinal Seams: Select seam types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-2, "Round Duct Longitudinal Seams," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

1. Fabricate round ducts larger than 90 inches in diameter with butt-welded longitudinal seams.

D. Tees and Laterals: Select types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-5, "90 Degree Tees and Laterals," and Figure 3-6, "Conical Tees," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

2.03 SHEET METAL MATERIALS:

A. General Material Requirements: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for acceptable materials, material thicknesses, and duct construction methods, unless otherwise indicated. Sheet metal materials shall be free of pitting, seam marks, roller marks, stains, discolorations, and other imperfections.
B. Aluminum Sheets: Comply with ASTM B209 Alloy 3003, H14 temper; with mill finish for concealed ducts, and standard, one-side bright finish for duct surfaces exposed to view.
C. Reinforcement Shapes and Plates: 6061-T6, aluminum plates, shapes, and bars.
D. Tie Rods: Stainless steel, 1/4-inch minimum diameter for lengths 36 inches or less; 3/8-inch minimum diameter for lengths longer than 36 inches.

2.04 SEALANT AND GASKETS:

A. General Sealant and Gasket Requirements: Surface-burning characteristics for sealants and gaskets shall be a maximum flame-spread index of 25 and a maximum smoke-developed index of 50 when tested according to UL 723; certified by an NRTL.
B. Two-Part Tape Sealing System:
    1. Tape: Woven cotton fiber impregnated with mineral gypsum and modified acrylic/silicone activator to react exothermically with tape to form hard, durable, airtight seal.
    2. Tape Width: 4 inches.
    3. Sealant: Modified styrene acrylic.
    4. Water resistant.
    5. Mold and mildew resistant.
    6. Maximum Static-Pressure Class: 10-inch w.g., positive and negative.
    7. Service: Indoor and outdoor.
    8. Service Temperature: -40 to +200ºF.
    9. Substrate: Compatible with galvanized sheet steel (both PVC coated and bare), stainless steel, or aluminum.
C. Water-Based Joint and Seam Sealant:
    1. Application Method: Brush on.
    2. Solids Content: Minimum 65%.
    3. Shore A Hardness: Minimum 20.
    4. Water resistant.
    5. Mold and mildew resistant.
    6. VOC: Maximum 75 g/L (less water).
    7. Maximum Static-Pressure Class: 10-inch w.g. positive and negative.
    8. Service: Indoor or outdoor.
    9. Substrate: Compatible with galvanized sheet steel (both PVC coated and bare), stainless steel, or aluminum sheets.
D. Flanged Joint Sealant: Comply with ASTM C920.
    1. General: Single-component, acid-curing, silicone, elastomeric.
    2. Type: S.

3. Grade: NS.
4. Class: 25.
5. Use: O.

E. Flange Gaskets: Butyl rubber, neoprene, or EPDM polymer with polyisobutylene plasticizer.

2.05 HANGERS AND SUPPORTS:

A. Hanger Rods: Stainless-steel rods and nuts.
B. Strap and Rod Sizes: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Table 5-1, "Rectangular Duct Hangers Minimum Size," and Table 5-2, "Minimum Hanger Sizes for Round Duct."
C. Steel Cables for Aluminum Ducts: Stainless steel complying with ASTM A492.
D. Duct Attachments: Sheet metal screws, blind rivets, or self-tapping metal screws; compatible with duct materials.
E. Trapeze and Riser Supports:
1. Supports for Aluminum Ducts: Aluminum.

PART 3 - EXECUTION

3.01 DUCT INSTALLATION:

A. Coordinate duct layout and duct accessory arrangement with Drawings. Drawing plans, schematics, and diagrams indicate general location and arrangement of duct system. Indicated duct locations, configurations, and arrangements were used to size ducts and calculate friction loss for air-handling equipment sizing and for other design considerations. Install duct systems as indicated, unless deviations to layout are approved on Shop Drawings and Coordination Drawings.
B. Install ducts according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," unless otherwise indicated.
C. Install round ducts in maximum practical lengths.
D. Install ducts with fewest possible joints.
E. Install factory- or shop-fabricated fittings for changes in direction, size, and shape and for branch connections.
F. Unless otherwise indicated, install ducts vertically and horizontally, and parallel and perpendicular to building lines.
G. Install ducts close to walls, overhead construction, columns, and other structural and permanent enclosure elements of building.
H. Install ducts with a clearance of 1 inch, plus allowance for insulation thickness.
I. Where ducts pass through non-fire-rated interior partitions and exterior walls and are exposed to view, cover the opening between the partition and duct or duct insulation with sheet metal flanges of same metal thickness as the duct. Overlap openings on four sides by at least 1-1/2 inches.
J. Where ducts pass through fire-rated interior partitions and exterior walls, install fire dampers. Comply with requirements in Section 23 33 00 - Air Duct Accessories for fire and smoke dampers.
K. Protect duct interiors from moisture, construction debris and dust, and other foreign materials. Comply with SMACNA's "IAQ Guidelines for Occupied Buildings Under Construction," Appendix G, "Duct Cleanliness for New Construction Guidelines."

3.02 INSTALLATION OF EXPOSED DUCTWORK:

A. Protect ducts exposed in finished spaces from being dented, scratched, or damaged.
B. Trim duct sealants flush with metal. Create a smooth and uniform exposed bead. Do not use two-part tape sealing system.
C. Grind welds to provide smooth surface free of burrs, sharp edges, and weld splatter. When welding stainless steel with a No. 3 or 4 finish, grind the welds flush, polish the exposed welds, and treat the welds to remove discoloration caused by welding.
D. Maintain consistency, symmetry, and uniformity in the arrangement and fabrication of fittings, hangers and supports, duct accessories, and air outlets.
E. Repair or replace damaged sections and finished work that does not comply with these requirements.

3.03 DUCTWORK EXPOSED TO WEATHER:

A. All external joints are to be welded. Seal all openings to provide weatherproof construction.
B. Construct ductwork to resist external loads of wind, snow, ice, and other effects of weather. Provide necessary supporting structures.
C. Single Wall:
    1. Ductwork is to be aluminum.
    2. Where ducts have external insulation, provide weatherproof aluminum jacket. See Section 230713 "Duct Insulation."

3.04 DUCT SEALING:

A. Seal ducts for duct static-pressure, seal classes, and leakage classes specified in "Duct Schedule" Article according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
B. Seal ducts to the following seal classes according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible":
    1. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
    2. Outdoor, Supply-Air Ducts: Seal Class B.
    3. Outdoor, Return-Air Ducts: Seal Class C.
    4. Heating-Only Space, Supply-Air Ducts: Not Sealed.
    5. Heating-Only Space, Exhaust Ducts: Not Sealed.
    6. Conditioned Space, Supply-Air Ducts in Pressure Classes 2-inch w.g. and Lower: Seal Class C.
    7. Conditioned Space, Supply-Air Ducts in Pressure Classes Higher Than 2-inch w.g.: Seal Class B.
    8. Conditioned Space, Restroom and Locker Room Exhaust Ducts: Seal Class C.
    9. Conditioned Space, Laboratory Exhaust Ducts: Seal Class A.
    10. Conditioned Space, Return-Air Ducts: Seal Class C.

3.05 HANGER AND SUPPORT INSTALLATION:

A. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Chapter 5, "Hangers and Supports."
B. Building Attachments: Concrete inserts or stainless-steel fasteners appropriate for construction materials to which hangers are being attached.
    1. Where practical, install concrete inserts before placing concrete.
    2. Install stainless-steel concrete anchors with epoxy after concrete is placed and completely cured.

3. Do not use powder-actuated concrete fasteners.

C. Hanger Spacing: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Table 5-1, "Rectangular Duct Hangers Minimum Size," and Table 5-2, "Minimum Hanger Sizes for Round Duct," for maximum hanger spacing; install hangers and supports within 24 inches of each elbow and within 48 inches of each branch intersection.

D. Hangers Exposed to View: Threaded rod and angle or channel supports.

E. Support vertical ducts with steel angles or channel secured to the sides of the duct with welds, bolts, sheet metal screws, or blind rivets; support at each floor and at a maximum intervals of 16 feet.

F. Install upper attachments to structures. Select and size upper attachments with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.

3.06 CONNECTIONS:

A. Make connections to equipment with flexible connectors complying with Section 23 33 00 - Air Duct Accessories.

B. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for branch, outlet and inlet, and terminal unit connections.

3.07 PAINTING:

A. Paint interior of metal ducts that are visible through registers and grilles and that do not have duct liner. Apply one coat of flat, black, latex paint over a compatible galvanized-steel primer. Paint materials and application requirements are specified in DIVISION 09 Painting Sections.

3.08 START UP:

A. Air Balance: Comply with requirements in Section 23 05 93 - Testing, Adjusting, and Balancing for HVAC.

END OF SECTION 23 31 13

SECTION 23 33 00 – AIR DUCT ACCESSORIES

PART 1 - GENERAL

1.01 RELATED DOCUMENTS:

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY:

A. This Section includes:
   1. Backdraft and pressure relief dampers.
   2. Manual volume dampers.
   3. Control dampers.
   4. Combination fire and smoke dampers.
   5. Flange connectors.
   6. Turning vanes.
   7. Duct-mounted access doors.
   8. Flexible connectors.
   9. Flexible ducts.
   10. Duct accessory hardware.

1.03 RELATED DOCUMENTS:

A. Section 23 37 23 - HVAC Gravity Ventilators for roof-mounted ventilator caps.

1.04 REFERENCE STANDARDS:

A. Applicable Standards (Latest Edition):
   1. Air Movement and Control Association International, Inc. (AMCA):
      a. AMCA 500-D - Laboratory Methods of Testing Dampers for Rating (ANSI).

   a. UL 181 - Factory-Made Air Ducts and Air Connectors.
   b. UL 555 - Fire Dampers.
   c. UL 555C - Ceiling Dampers.
   d. UL 555S - Smoke Dampers.
   e. UL 1978 - Standard for Grease Ducts.
   f. Fire Resistance Directory.

1.05 SUBMITTALS:

A. Product Data: For each type of product.
   1. For duct silencers, include pressure drop and dynamic insertion loss data. Include breakout noise calculations for high transmission loss casings.
B. Shop Drawings: For duct accessories. Include plans, elevations, sections, details, and attachments to other work.
   1. Detail duct accessories fabrication and installation in ducts and other construction. Include dimensions, weights, loads, and required clearances, and method of field assembly into duct systems and other construction. Include the following:
      a. Special fittings.
      b. Manual volume damper installations.
      c. Control-damper installations.
      d. Combination fire- and smoke-damper installations, including sleeves; and duct-mounted access doors and remote damper operators.
C. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which ceiling-mounted access panels and access doors required for access to duct accessories are shown and coordinated with each other, using input from Installers of the items involved.
D. Source quality-control reports.
E. Operation and Maintenance Data: For air duct accessories to include in operation and maintenance manuals.
F. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
   1. Fusible Links: Furnish quantity equal to 10% of amount installed.

PART 2 - PRODUCTS

2.01 ASSEMBLY DESCRIPTION:

A. Comply with NFPA 90A, "Installation of Air Conditioning and Ventilating Systems," and with NFPA 90B, "Installation of Warm Air Heating and Air Conditioning Systems."
B. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for acceptable materials, material thicknesses, and duct construction methods unless otherwise indicated. Sheet metal materials shall be free of pitting, seam marks, roller marks, stains, discolorations, and other imperfections.

2.02 MATERIALS:

A. Stainless-Steel Sheets: Comply with ASTM A480, Type 304, and having a No. 2 finish for concealed ducts and exposed ducts.
B. Aluminum Sheets: Comply with ASTM B209, Alloy 3003, Temper H14; with mill finish for concealed ducts and standard, 1-side bright finish for exposed ducts.
C. Extruded Aluminum: Comply with ASTM B221, Alloy 6063, Temper T6.
D. Reinforcement Shapes and Plates: Compatible materials for aluminum ducts.
E. Tie Rods: Stainless steel, 1/4-inch minimum diameter for lengths 36 inches or less; 3/8-inch minimum diameter for lengths longer than 36 inches.

2.03 BACKDRAFT AND PRESSURE RELIEF DAMPERS:

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. American Warming and Ventilating; a division of Mestek, Inc.
   2. Greenheck Fan Corporation.
   3. Nailor Industries Inc.
   4. Pottorff.
   5. Ruskin Company.
   6. Or Engineer Approved Equal.
B. Description: Gravity balanced.
C. Maximum Air Velocity: As scheduled on Drawings or as otherwise required.
D. Maximum System Pressure: As scheduled on Drawings or as otherwise required.
E. Frame: Hat-shaped, 0.090 inch thick extruded aluminum, with welded corners or mechanically attached.
F. Blades: Multiple single-piece blades, end pivoted, maximum 6-inch width, 0.050 inch thick aluminum sheet with sealed edges.
G. Blade Action: Parallel.
H. Blade Seals: Extruded vinyl, mechanically locked.
I. Blade Axles:
   1. Material: Stainless steel.
   2. Diameter: 0.20 inch.
J. Tie Bars and Brackets: Aluminum.
K. Bearings: Synthetic pivot bushings.

2.04 MANUAL VOLUME DAMPERS:

A. Standard, Steel, Manual Volume Dampers:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. American Warming and Ventilating; a division of Mestek, Inc.
      b. McGill AirFlow, LLC.
      c. Nailor Industries, Inc.
      d. Pottorff.
      e. Ruskin Company.
      f. Or Engineer Approved Equal.
   2. Standard leakage rating.
   3. Suitable for horizontal or vertical applications.
   4. Frames:
      a. Frame: Hat-shaped, 0.090 inch thick, aluminum.
      b. Mitered and welded corners.

c. Flanges for attaching to walls and flangeless frames for installing in ducts.

5. Blades:
   a. Multiple or single blade.
   b. Parallel- or opposed-blade design.
   c. Stiffen damper blades for stability.
   d. Aluminum, 0.064 inch thick.
6. Blade Axles: Stainless steel.
7. Bearings:
   a. Molded synthetic.
   b. Dampers in ducts with pressure classes of 3-inch w.g. or greater shall have axles full length of damper blades and bearings at both ends of operating shaft.
8. Tie Bars and Brackets: Stainless steel.

2.05 CONTROL DAMPERS:

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Arrow United Industries; a division of Mestek, Inc.
   2. Greenheck Fan Corporation.
   3. McGill AirFlow, LLC.
   4. Nailor Industries, Inc.
   5. Pottorff.
   6. Ruskin Company.
   7. Or Engineer Approved Equal.

B. Low-leakage rating and bearing AMCA's Certified Ratings Seal for both air performance and air leakage.

C. Frames:
   1. Hat shaped.
   2. 0.090-inch thick, aluminum.
   3. Mitered and welded corners.

D. Blades:
   1. Multiple blade with maximum blade width of 6 inches.
   2. Parallel- and opposed-blade design, as scheduled on Drawings.
   3. Aluminum.
   4. 0.064-inch thick single skin.
   5. Blade Edging: PVC.

E. Blade Axles: 1/2-inch diameter; stainless steel; blade-linkage hardware of stainless steel and brass; ends sealed against blade bearings.
   1. Operating Temperature Range: From -40 to +200ºF.

F. Bearings:
   1. Molded synthetic.
   2. Dampers in ducts with pressure classes of 3-inch w.g. or greater shall have axles full length of damper blades and bearings at both ends of operating shaft.
   3. Thrust bearings at each end of every blade.

2.06 COMBINATION FIRE AND SMOKE DAMPERS:

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Air Balance, Inc.; a division of Mestek, Inc.
   2. Greenheck Fan Corporation.

3. Nailor Industries, Inc.
4. Pottorff.
5. Ruskin Company.
6. Or Engineer Approved Equal.

B. Type: Dynamic; rated and labeled according to UL 555 and UL 555S by an NRTL.
C. Closing rating in ducts up to 4-inch w.g. static pressure class and minimum 2,000-fpm velocity.
D. Fire Rating: 1-1/2.
E. Frame: Hat-shaped, 0.094 inch thick, stainless steel, with welded corners.
F. Heat-Responsive Device: Electric resettable device and switch package, factory installed, rated.
G. Blades: Roll-formed, horizontal, interlocking, 0.063 inch thick, stainless steel.
H. Leakage: Class II.
I. Rated pressure and velocity to exceed design airflow conditions.
J. Mounting Sleeve: Factory-installed, 0.05 inch thick, stainless steel; length to suit wall or floor application.
K. Accessories:
1. Auxiliary switches for signaling, fan control, or position indication.
2. Test and reset switches, remote mounted.

2.07 TURNING VANES:

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Ductmate Industries, Inc.
2. Duro Dyne, Inc.
3. Elgen Manufacturing.
4. METALAIRE, Inc.
5. SEMCO, Incorporated.
6. Ward Industries, Inc.; a division of Hart & Cooley, Inc.
7. Or Engineer Approved Equal.

B. Manufactured Turning Vanes for Metal Ducts: Curved blades of aluminum; support with bars perpendicular to blades set; set into vane runners suitable for duct mounting.
C. General Requirements: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible"; Figures 4-3, "Vanes and Vane Runners," and 4-4, "Vane Support in Elbows."
D. Vane Construction: Single wall for ducts up to 48 inches wide and double wall for larger dimensions.

2.08 DUCT-MOUNTED ACCESS DOORS:

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. American Warming and Ventilating; a division of Mestek, Inc.
2. Ductmate Industries, Inc.
3. Greenheck Fan Corporation.
4. McGill AirFlow, LLC.
5. Nailor Industries, Inc.
6. Pottorff.
7. Or Engineer Approved Equal.

B. Duct-Mounted Access Doors: Fabricate access panels according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible"; Figures 7-2, "Duct Access Doors and Panels," and 7-3, "Access Doors - Round Duct."

1. Door:
   a. Double wall, rectangular.
   b. Aluminum with insulation fill and thickness as indicated for duct pressure class.
   c. Vision panel.
   d. Hinges and Latches: 1- by 1-inch butt or piano hinge and cam latches.
   e. Fabricate doors airtight and suitable for duct pressure class.
2. Frame: Aluminum, with bend-over tabs and foam gaskets.
3. Number of Hinges and Locks:
   a. Access Doors Less Than 12 Inches Square: No hinges and two sash locks.
   b. Access Doors up to 18 Inches Square: Two hinges or continuous and two sash locks.
   c. Access Doors up to 24 by 48 Inches: Three hinges or continuous and two compression latches with outside and inside handles.
   d. Access Doors Larger Than 24 by 48 Inches: Four hinges or continuous and two compression latches with outside and inside handles.

2.09 FLEXIBLE CONNECTORS:

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Ductmate Industries, Inc.
   2. Duro Dyne, Inc.
   3. Elgen Manufacturing.
   4. Ventfabrics, Inc.
   5. Ward Industries, Inc.; a division of Hart & Cooley, Inc.
   6. Or Engineer Approved Equal.

B. Materials: Flame-retardant or noncombustible fabrics.

C. Coatings and Adhesives: Comply with UL 181, Class 1.

D. Metal-Edged Connectors: Factory fabricated with a fabric strip 3-1/2 inches wide attached to two strips of 2-3/4 inches wide, 0.032 inch thick aluminum sheets. Provide metal compatible with connected ducts.

E. Flexible Connectors: Glass fabric with chemical-resistant coating.
   1. Minimum Weight: 14 oz./sq. yd.
   2. Tensile Strength: 450 lbf/inch in the warp and 340 lbf/inch in the filling.
   3. Service Temperature: -67 to +500ºF.

2.10 FLEXIBLE DUCTS:

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Flexmaster U.S.A., Inc.
   2. McGill AirFlow, LLC.
   3. Ward Industries, Inc.; a division of Hart & Cooley, Inc.
   4. Or Engineer Approved Equal.

B. Insulated, Flexible Duct: UL 181, Class 0, interlocking spiral of aluminum foil; fibrous-glass insulation; aluminized vapor-barrier film.
   1. Pressure Rating: 8-inch w.g. positive or negative.
   2. Maximum Air Velocity: 5,000 fpm.
   3. Temperature Range: -20 to +250ºF.
   4. Insulation R-value: Comply with ASHRAE/IESNA 90.1.

C. Flexible Duct Connectors:
   1. Clamps: Nylon strap in sizes 3 through 18 inches, to suit duct size.
   2. Non-Clamp Connectors: Liquid adhesive plus tape.

2.11 DUCT ACCESSORY HARDWARE:
   1. Instrument Test Holes: Cast iron or cast aluminum to suit duct material, including screw cap and gasket. Size to allow insertion of pitot tube and other testing instruments and of length to suit duct-insulation thickness.
   2. Adhesives: High strength, quick setting, neoprene based, waterproof, and resistant to gasoline and grease.

PART 3 - EXECUTION

3.01 EXAMINATION:
A. Install duct accessories according to applicable details in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for metal ducts and in NAIMA AH116, "Fibrous Glass Duct Construction Standards," for fibrous-glass ducts.
B. Install duct accessories of materials suited to duct materials; use galvanized-steel accessories in galvanized-steel and fibrous-glass ducts, stainless-steel accessories in stainless-steel ducts, and aluminum accessories in aluminum ducts.
C. Install backdraft dampers at exhaust fans or exhaust ducts as close as possible to exhaust fan unless otherwise indicated.
D. Install volume dampers for Administration Building at points on supply, return, and exhaust systems where branches extend from larger ducts.
E. Set dampers to fully open position before testing, adjusting, and balancing.
F. Install test holes at fan inlets and outlets and elsewhere as indicated.
G. Install fire and smoke dampers according to UL listing.
H. Install duct access doors on sides of ducts to allow for inspecting, adjusting, and maintaining accessories and equipment at the following locations:
   1. Downstream from manual volume dampers, control dampers, backdraft dampers, and equipment.
   2. Adjacent to and close enough to fire or smoke dampers, to reset or reinstall fusible links. Access doors for access to fire or smoke dampers having fusible links shall be pressure relief access doors and shall be outward operation for access doors installed upstream from dampers and inward operation for access doors installed downstream from dampers.
   3. Upstream from turning vanes.
   4. Control devices requiring inspection.
   5. Elsewhere as indicated.
I. Install access doors with swing against duct static pressure.
J. Access Door Sizes:
   1. One-Hand or Inspection Access: 8 by 5 inches.
   2. Two-Hand Access: 12 by 6 inches.
   3. Head and Hand Access: 18 by 10 inches.
   4. Head and Shoulders Access: 21 by 14 inches.
   5. Body Access: 25 by 14 inches.
   6. Body plus Ladder Access: 25 by 17 inches.

   Label access doors according to Section 23 05 53 - Identification for HVAC Equipment to indicate the purpose of access door.
K. Install flexible connectors to connect ducts to equipment.

L. For fans developing static pressures of 5-inch w.g. and more, cover flexible connectors with loaded vinyl sheet held in place with metal straps.
M. Connect terminal units to supply ducts directly.
N. Connect diffusers to ducts with maximum 60-inch lengths of flexible duct clamped or strapped in place.
O. Connect flexible ducts to metal ducts with liquid adhesive plus tape.
P. Install duct test holes where required for testing and balancing purposes.

3.02 FIELD QUALITY CONTROL:

A. Tests and Inspections:
1. Operate dampers to verify full range of movement.
2. Inspect locations of access doors and verify that purpose of access door can be performed.
3. Operate fire, smoke, and combination fire and smoke dampers to verify full range of movement and verify that proper heat-response device is installed.
4. Inspect turning vanes for proper and secure installation.
5. Operate remote damper operators to verify full range of movement of operator and damper.

END OF SECTION 23 33 00

SECTION 23 34 23 – HVAC POWER VENTILATORS

PART 1 - GENERAL

1.01 RELATED DOCUMENTS:

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY:

A. This Section includes:
   1. Side wall propeller fans.
   2. Ceiling mounted ventilators.
   3. Centrifugal ventilators – roof upblast or side wall.

1.03 REFERENCE STANDARDS:

A. American Bearing Manufacturers Association (ABMA):
   1. ABMA 9 - Load Ratings and Fatigue Life for Ball Bearings (ANSI).
   2. ABMA 11 - Load Ratings and Fatigue Life for Roller Bearings.

B. Air Movement and Control Association International, Inc. (AMCA):
   1. AMCA 99 - Standards Handbook.
   2. AMCA 300 - Reverberant Room Method for Sound Testing of Fans.
   3. AMCA 301 - Methods for Calculating Fan Sound Ratings from Laboratory Test Data (ANSI).

C. Air Movement and Control Association International, Inc./American Society of Heating, Refrigerating and Air-Conditioning Engineers (AMCA/ASHRAE):
   1. AMCA 210/ASHRAE 51 - Laboratory Methods of Testing Fans for Aerodynamic Performance Rating (ANSI).

D. NFPA:
   1. NFPA 70 - National Electrical Code.

E. Underwriters Laboratories, Inc. (UL):
   1. UL 705 - Power Ventilators.
   2. UL 762 - Outline of Investigation for Power Roof Ventilators for Restaurant Exhaust Appliances.

1.04 PERFORMANCE REQUIREMENTS:

A. Project Altitude: Base fan-performance ratings on actual Project Site elevations.

B. Operating Limits: Classify according to AMCA 99.

1.05 SUBMITTALS:

A. Product Data: For each type of product indicated. Include rated capacities, operating characteristics, and furnished specialties and accessories. Also include the following:
   1. Certified fan performance curves with system operating conditions indicated.
   2. Certified fan sound-power ratings.
   3. Motor ratings and electrical characteristics, plus motor and electrical accessories.
   4. Material thickness and finishes, including color charts.
   5. Dampers, including housings, linkages, and operators.
   6. Fan speed controllers.

B. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.

1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
2. Wiring Diagrams: For power, signal, and control wiring.

C. Field quality-control reports.
D. Operation and Maintenance Data: For power ventilators to include in emergency, operation, and maintenance manuals.

1.06 QUALITY ASSURANCE:

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
B. UL Standards: Power ventilators shall comply with UL 705. Power ventilators for use for restaurant kitchen exhaust shall also comply with UL 762.

PART 2 - PRODUCTS

2.01 CEILING MOUNTED VENTILATORS:

A. Housing: aluminum, lined with acoustical insulation.
1. Fan Wheel: Centrifugal wheels directly mounted on motor shaft. Fan shrouds, motor, and fan wheel removable for service.
2. Back-draft damper: Integral.
3. Grille: Painted aluminum, louvered grille with flange on intake and thumbscrew or spring retainer attachment to fan housing.
4. Electrical Requirements: Junction box for electrical connection on housing and receptacle for motor plug-in.
5. Accessories:
a. Manufacturer's standard roof jack or wall cap, and transition fittings.

2.02 CENTRIFUGAL VENTILATORS – ROOF UPBLAST OR SIDEWALL

A. Configuration: Centrifugal sidewall ventilator.
B. Housing: Removable spun aluminum; square, one-piece aluminum base with venturi inlet cone.
1. Upblast Units: Provide spun-aluminum discharge baffle to direct discharge air upward, with rain and snow drains.
C. Fan Wheels: Aluminum hub and wheel with backward-inclined blades; spark-resistant construction classified in accordance with AMCA 99, Section 8, Type C.
D. Direct Drive:
1. Resiliently mounted to housing.
2. Fan Shaft: Turned, ground, and polished steel; keyed to wheel hub.
3. Shaft Bearings: Permanently lubricated, permanently sealed, self-aligning ball bearings; minimum ABMA.
E. Motor:
1. Rate for variable frequency drive control
F. Accessories:
1. Disconnect Switch: Nonfusible type, with thermal-overload protection mounted outside fan housing, factory wired through an internal aluminum conduit.
2. Bird Screens: Removable, 1/2-inch mesh, aluminum or brass wire.
3. Dampers: Counterbalanced, parallel-blade, backdraft dampers mounted in curb base; factory set to close when fan stops.

4. Spark-resistant, all-aluminum wheel construction.
5. Wall Mount Adapter: Attach wall-mounted fan to wall.

2.03 SIDEWALL PROPELLER FANS

A. Housing: Steel sheet with flanged edges and integral orifice ring, with baked-enamel finish coat applied after assembly.
B. Fan Wheels: Formed-steel blades riveted to heavy-gauge steel spider bolted to cast-iron hub.
C. Fan Wheel: Replaceable, steel, airfoil blades fastened to steel; factory set pitch angle of blades.
D. Fan Drive, Direct Drive:
   1. Resiliently mounted to housing.
   2. Statically and dynamically balanced.
   3. Selected for continuous operation at maximum rated fan speed and motor horsepower, with final alignment and belt adjustment made after installation.
   4. Extend grease fitting to accessible location outside of unit.
   5. Service Factor Based on Fan Motor Size: 1.5.
   6. Fan Shaft: Turned, ground, and polished steel; keyed to wheel hub.
   7. Shaft Bearings: Permanently lubricated, permanently sealed, self-aligning ball bearings.
   8. Pulleys: Cast iron with split, tapered bushing; dynamically balanced at factory.
E. Accessories:
   1. Dampers: Counterbalanced, parallel-blade, backdraft dampers factory set to close when fan stops.
   2. Motor-Side Back Guard: Steel, complying with OSHA specifications, removable for maintenance.
   3. Wall Sleeve: Steel to match fan and accessory size.
F. Weathershield Hood: Steel to match fan and accessory size.
G. Factory power coated baked epoxy on all steel.

2.04 MOTORS:

A. Comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Section 23 05 13 - Common Motor Requirements for HVAC Equipment.
   1. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
   2. Controllers, Electrical Devices, and Wiring: Comply with requirements for electrical devices and connections specified in Division 26 Sections.
B. Enclosure Type: Totally enclosed, fan cooled.

PART 3 - EXECUTION

3.01 INSTALLATION:

A. Install power ventilators level and plumb.
B. Support units using restrained spring isolators having a static deflection of 1 inch.
C. Ceiling Units: Suspend units from structure; use steel wire or metal straps.
D. Support suspended units from structure using threaded steel rods and elastomeric hangers having a static deflection of 1 inch.
E. Install units with clearances for service and maintenance.
F. Label units according to requirements specified in Section 23 05 53 - Identification for HVAC Piping and Equipment.

3.02 CONNECTIONS:

A. Duct installation and connection requirements are specified in other Division 23 Sections. Drawings indicate general arrangement of ducts and duct accessories. Make final duct connections with flexible connectors. Flexible connectors are specified in Section 23 33 00 - Air Duct Accessories.
B. Install ducts adjacent to power ventilators to allow service and maintenance.
C. Ground equipment according to Division 26.
D. Connect wiring according to Division 26.

3.03 FIELD QUALITY CONTROL:

A. Perform tests and inspections.
B. Tests and Inspections:
   1. Verify that shipping, blocking, and bracing are removed.
   2. Verify that unit is secure on mountings and supporting devices and that connections to ducts and electrical components are complete. Verify that proper thermal-overload protection is installed in motors, starters, and disconnect switches.
   3. Verify that cleaning and adjusting are complete.
   4. Disconnect fan drive from motor, verify proper motor rotation direction, and verify fan wheel free rotation and smooth bearing operation. Reconnect fan drive system, align and adjust belts, and install belt guards.
   5. Adjust belt tension.
   6. Verify lubrication for bearings and other moving parts.
   7. Verify that manual and automatic volume control and fire and smoke dampers in connected ductwork systems are in fully open position.
   8. Disable automatic temperature-control operators, energize motor, and adjust fan to indicated rpm, and measure and record motor voltage and amperage.
   9. Shut unit down and reconnect automatic temperature-control operators.
   10. Remove and replace malfunctioning units and retest as specified above.
C. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
D. Prepare test and inspection reports.

3.04 ADJUSTING:

A. Adjust damper linkages for proper damper operation.
B. Adjust belt tension.
C. Comply with requirements in Section 23 05 93 - Testing, Adjusting, and Balancing for HVAC for testing, adjusting, and balancing procedures.
D. Replace fan and motor pulleys as required to achieve design airflow.
E. Lubricate bearings.

END OF SECTION 23 34 23

SECTION 23 36 00 – AIR TERMINAL UNITS

PART 1 - GENERAL

1.01 RELATED DOCUMENTS:

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY:

A. This Section includes:
   1. Shutoff, single-duct air terminal units.

1.03 REFERENCE STANDARDS:

A. Applicable Standards (Latest Edition):
   1. Air-Conditioning & Refrigeration Institute (ARI):
      a. ARI 880 - Air Terminals.
   2. American Society of Civil Engineers/Structural Engineering Institute (ASCE/SEI):
      a. ASCE/SEI 7 - Minimum Design Loads for Buildings and Other Structures.
   3. American Society of Heating, Refrigerating and Air-Conditioning Engineers (ASHRAE):
      a. ASHRAE 52.1 - Gravimetric and Dust-Spot Procedures for Testing Air-Cleaning Devices Used in General Ventilation for Removing Particulate Matter.
      b. ASHRAE 52.2 - Method of Testing General Ventilation Air-Cleaning Devices for Removal Efficiency by Particle Size (ANSI).
      c. ASHRAE 62.1 - Ventilation for Acceptable Indoor Air Quality (ANSI).
   4. ASTM International (ASTM):
      a. ASTM A492 - Specification for Stainless-Steel Rope Wire.
      b. ASTM A603 - Specification for Zinc-Coated Steel Structural Wire Rope.
      c. ASTM C1071 - Specification for Fibrous Glass Duct Lining Insulation (Thermal and Sound Absorbing Material).
      d. ASTM E84 - Test Method for Surface Burning Characteristics of Building Materials.
      e. ASTM E488 - Test Methods for Strength of Anchors in Concrete and Masonry Elements.
   5. National Electrical Manufacturers Association (NEMA):
      a. NEMA 250 - Enclosures for Electrical Equipment (1,000V Maximum).
   6. NFPA:
      a. NFPA 70 - National Electrical Code.
      b. NFPA 90A - Installation of Air Conditioning and Ventilating Systems.
   7. Sheet Metal and Air Conditioning Contractors' National Association:
      a. HVAC Duct Construction Standards - Metal and Flexible.
      b. Seismic Restraint Manual: Guidelines for Mechanical Systems.
   8. Underwriters Laboratories, Inc. (UL):
      a. UL 181 - Factory-Made Air Ducts and Air Connectors.

1.04 PERFORMANCE REQUIREMENTS:

A. Refer to Mechanical drawings for capacity performance.

1.05 SUBMITTALS:

A. Action Submittals:

1. Product Data: For each type of the following products, including rated capacities, furnished specialties, sound-power ratings, and accessories.
    a. Air terminal units.
    b. Liners and adhesives.
    c. Sealants and gaskets.
2. Shop Drawings: For air terminal units. Include plans, elevations, sections, details, and attachments to other work.
    a. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
    b. Wiring Diagrams: For power, signal, and control wiring.
    c. Hangers and supports, including methods for duct and building attachment, seismic restraints, and vibration isolation.
3. Delegated-Design Submittal:
    a. Materials, fabrication, assembly, and spacing of hangers and supports.

B. Informational Submittals:
1. Field quality control reports.

C. Closeout submittals:
1. Operation and Maintenance Data: For air terminal units to include in emergency, operation, and maintenance manuals. In addition to items specified in Division 01, include the following:
    a. Instructions for resetting minimum and maximum air volumes.
    b. Instructions for adjusting software set points.

D. Maintenance Material Submittals:
1. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1.06 QUALITY ASSURANCE:

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

PART 2 - PRODUCTS

2.01 SHUTOFF, SINGLE-DUCT AIR TERMINAL UNITS:

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Krueger.
2. Nailor Industries, Inc.
3. Price Industries.
4. Titus.
5. Trane; a business of American Standard Companies.
6. Or Engineer Approved Equal.

B. Configuration: Volume-damper assembly inside unit casing with control components inside a protective metal shroud.

C. Casing: 0.032-inch aluminum, single wall.
1. Casing Lining: Adhesive attached, 1 inch thick, coated, fibrous-glass duct liner complying with ASTM C1071, and having a maximum flame-spread index of 25 and a maximum smoke-developed index of 50, for both insulation and adhesive, when tested according to ASTM E84.

a. Cover liner with nonporous foil.
2. Air Inlet: Round stub connection or S-slip and drive connections for duct attachment.
3. Air Outlet: S-slip and drive connections.
4. Access: Removable panels for access to parts requiring service, adjustment, or maintenance; with airtight gasket.
5. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

D. pressure, and shall be factory tested for leaks.

E. Volume Damper: Aluminum with peripheral gasket and self-lubricating bearings.
1. Maximum Damper Leakage: ARI 880 rated, 2% of nominal airflow at 3-inch w.g. inlet static pressure.
2. Damper Position: Normally closed.

F. Electric-Resistance Heating Coils: Nickel-chromium heating wire, free of expansion noise and hum, mounted in ceramic inserts in a aluminum housing; with primary automatic, and secondary manual, reset thermal cutouts. Terminate elements in stainless-steel, machine-staked terminals secured with stainless-steel hardware.
1. Access door interlocked disconnect switch.
2. Downstream air temperature sensor with local connection to override discharge-air temperature to not exceed a maximum temperature set point (adjustable.)
3. Nickel chrome 80/20 heating elements.
4. Airflow switch for proof of airflow.
5. Fan interlock contacts.
6. Fuses in terminal box for overcurrent protection (for coils more than 48 A).
7. Mercury contactors.
8. Pneumatic-electric switches and relays.

G. Direct Digital Controls: Bidirectional damper operators and microprocessor-based controller and room sensor. Control devices shall be compatible with temperature controls specified in Section 23 09 00 - Instrumentation and Control for HVAC and shall have the following features:
1. Damper Actuator: 24V, powered closed, powered open.
2. Terminal Unit Controller: Pressure-independent, variable-air-volume controller, approved or furnished by HVAC control contractor with electronic airflow transducer with multipoint velocity sensor at air inlet, factory calibrated to minimum and maximum air volumes, and having the following features:
a. Occupied and unoccupied operating mode.
b. Remote reset of airflow or temperature set points.
c. Communication with temperature-control system specified in Section 23 09 00 - Instrumentation and Control for HVAC.
3. Room Sensor: Wall mounted with temperature set-point adjustment and access for connection of portable operator terminal.

H. Control Sequence:
1. Suitable for operation with duct pressures between 0.25- and 3.0-inch w.g. inlet static pressure.
2. System-powered, wall-mounted thermostat.

2.02 SOURCE QUALITY CONTROL:

A. Factory Tests: Test assembled air terminal units according to ARI 880.
1. Label each air terminal unit with plan number, nominal airflow, maximum and minimum factory-set airflows, and ARI certification seal.

PART 3 - EXECUTION

3.01 INSTALLATION:

A. Install air terminal units according to NFPA 90A, "Standard for the Installation of Air Conditioning and Ventilating Systems."

B. Install air terminal units' level and plumb. Maintain sufficient clearance for normal service and maintenance.

3.02 HANGER AND SUPPORT INSTALLATION:

A. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Chapter 5, "Hangers and Supports."

B. Building Attachments: Concrete inserts, or structural-steel fasteners appropriate for construction materials to which hangers are being attached.

1. Where practical, install concrete inserts before placing concrete.
2. Do not use powder-actuated concrete fasteners for lightweight-aggregate concretes and for slabs less than 4 inches thick.
3. Do not use powder-actuated concrete fasteners for seismic restraints.

C. Hangers Exposed to view: Threaded rod and angle or channel supports. Install upper attachments to structures. Select and size upper attachments with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.

3.03 CONNECTIONS:

A. Connect ducts to air terminal units according to Section 23 31 13 - Metal Ducts.

B. Make connections to air terminal units with flexible connectors complying with requirements in Section 23 33 00 - Air Duct Accessories.

3.04 IDENTIFICATION:

A. Label each air terminal unit with plan number, nominal airflow, and maximum and minimum factory-set airflows. Comply with requirements in Section 23 05 53 - Identification for HVAC Piping and Equipment for equipment labels and warning signs and labels.

3.05 FIELD QUALITY CONTROL:

A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

B. Perform tests and inspections.

C. Tests and Inspections:

1. After installing air terminal units and after electrical circuitry has been energized, test for compliance with requirements.
2. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
3. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

D. Air terminal unit will be considered defective if it does not pass tests and inspections.

E. Prepare test and inspection reports.

3.06 STARTUP SERVICE:

A. Engage a factory-authorized service representative to perform startup service.

1. Complete installation and startup checks according to manufacturer's written instructions.
2. Verify that inlet duct connections are as recommended by air terminal unit manufacturer to achieve proper performance.

3. Verify that controls and control enclosure are accessible.
4. Verify that control connections are complete.
5. Verify that nameplate and identification tag are visible.
6. Verify that controls respond to inputs as specified.

3.07 DEMONSTRATION:

A. Factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain air terminal units.

END OF SECTION 23 36 00

SECTION 23 37 13 – DIFFUSERS, REGISTERS, AND GRILLES

PART 1 - GENERAL

1.01 RELATED DOCUMENTS:

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY:

A. This Section includes:
   1. Rectangular and square ceiling diffusers.
   2. Adjustable bar registers and grilles.
   3. Fixed face registers and grilles.

1.03 RELATED REQUIREMENTS:

A. Section 23 33 00 - Air Duct Accessories for fire and smoke dampers and volume-control dampers not integral to diffusers, registers, and grilles.

1.04 REFERENCE STANDARDS:

A. Publication Dates: Comply with standards in effect as of date of the Contract Documents unless otherwise indicated.

B. Applicable Standards (Latest Edition):
   1. American Society of Heating, Refrigerating and Air-Conditioning Engineers (ASHRAE):
      a. ASHRAE 70 - Method of Testing for Rating the Performance of Air Outlets and Inlets (ANSI).

1.05 SUBMITTALS:

A. Action Submittals:
   1. Product Data: For each type of product indicated, include the following:
      a. Data Sheet: Indicate materials of construction, finish, and mounting details; and performance data including throw and drop, static-pressure drop, and noise ratings.
      b. Diffuser, Register, and Grille Schedule: Indicate drawing designation, room location, quantity, model number, size, and accessories furnished.

B. Informational Submittals:
   1. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from Installers of the items involved:
      a. Ceiling suspension assembly members.
      b. Method of attaching hangers to building structure.
      c. Size and location of initial access modules for acoustical tile.
      d. Ceiling-mounted items including lighting fixtures, diffusers, grilles, speakers, sprinklers, access panels, and special moldings.
      e. Duct access panels.
   2. Source quality-control reports.

PART 2 - PRODUCTS

2.01 DIFFUSERS, REGISTERS, AND GRILLES:

A. For all diffusers, registers, and grilles:
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Krueger.
      b. Nailor Industries, Inc.
      c. Price Industries.
      d. Titus.
   2. All products shall conform to the schedules.

2.02 SOURCE QUALITY CONTROL:

A. Verification of Performance: Rate diffusers, registers, and grilles according to ASHRAE 70, "Method of Testing for Rating the Performance of Air Outlets and Inlets."

PART 3 - EXECUTION

3.01 EXAMINATION:

A. Examine areas where diffusers, registers, and grilles are to be installed for compliance with requirements for installation tolerances and other conditions affecting performance of equipment.
B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION:

A. Install diffusers, registers, and grilles level and plumb.
B. Ceiling-Mounted Outlets and Inlets: Drawings indicate general arrangement of ducts, fittings, and accessories. Air outlet and inlet locations have been indicated to achieve design requirements for air volume, noise criteria, airflow pattern, throw, and pressure drop. Make final locations where indicated, as much as practical. For units installed in lay-in ceiling panels, locate units in the center of panel. Where architectural features or other items conflict with installation, notify Architect for a determination of final location.
C. Install diffusers, registers, and grilles with airtight connections to ducts and to allow service and maintenance of dampers, air extractors, and fire dampers.

3.03 ADJUSTING:

A. After installation, adjust diffusers, registers, and grilles to air patterns indicated, or as directed, before starting air balancing.

END OF SECTION 23 37 13

SECTION 23 37 23 - HVAC GRAVITY VENTILATORS

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. Section Includes:
   1. Hooded ventilators.

1.03 ACTION SUBMITTALS

A. Product Data: For each type of product
B. Shop Drawings: For gravity ventilators.
   1. Include plans, elevations, sections, details, ventilator attachments to curbs, and curb attachments to roof structure.
   2. Show weep paths, gaskets, flashing, sealant, and other means of preventing water intrusion.

1.04 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Roof-framing plans and other details, drawn to scale, and coordinated with each other, based on input from installers of the items involved:

1.05 COORDINATION

A. Coordinate sizes and locations of roof curbs, equipment supports, and roof penetrations with actual equipment provided.

PART 2 - PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

A. Structural Performance: Ventilators shall withstand the effects of gravity loads and the following loads and stresses within limits and under conditions indicated without permanent deformation of ventilator components, noise or metal fatigue caused by ventilator blade rattle or flutter, or permanent damage to fasteners and anchors. Wind pressures shall be considered to act normal to the face of the building.
   1. Wind Loads, Basis: Determine loads based on a uniform pressure of 30 lbf/sq. ft., acting inward or outward.
B. ASHRAE/IES 90.1 Compliance: Applicable requirements in ASHRAE/IES 90.1.
C. ASHRAE 62.1 Compliance: Section 5, "Systems and Equipment" and Section 7, "Construction and System Start-up."
D. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes, without buckling, opening of joints, overstressing of components, failure of connections, or other detrimental effects.
   1. Temperature Change (Range):
      a. Ambient: 120 deg F.
      b. Material Surfaces: 180 deg F.
E. Water Entrainment: Limit water penetration through unit to comply with ASHRAE 62.1.
F. Capacities and Characteristics:
   1. See schedule

2.02 FABRICATION

A. Factory or shop fabricate gravity ventilators to minimize field splicing and assembly. Disassemble units to the minimum extent as necessary for shipping and handling. Clearly mark units for reassembly and coordinated installation.

B. Fabricate frames, including integral bases, to fit in openings of sizes indicated, with allowances made for fabrication and installation tolerances, adjoining material tolerances, and perimeter sealant joints.

C. Fabricate units with closely fitted joints and exposed connections accurately located and secured.

D. Fabricate supports, anchorages, and accessories required for complete assembly.

E. Perform shop welding by AWS-certified procedures and personnel.

2.03 HOODED VENTILATORS

A. Description: Hooded rectangular penthouse for intake air.

B. Source Limitations: Obtain hooded ventilators from single manufacturer.

C. Construction:

1. Material, Aluminum: Thickness required to comply with structural performance requirements, but not less than 0.063-inch- thick base and 0.050-inch- thick hood; suitably reinforced.
2. Bird Screening: Aluminum, 1/2-inch-square mesh or flattened, expanded aluminum,

D. Dampers:

1. Control: Motorized.

E. Roof Curbs: Aluminum sheet; with mitered and welded corners; 1-1/2-inch-thick, rigid fiberglass insulation adhered to inside walls; and 1-1/2-inch wood nailer. Size as required to fit roof opening and ventilator base.

1. Configuration: Self-flashing without a cant strip, with mounting flange.
2. Overall Height: 12 inches.

2.04 SOURCE QUALITY CONTROL

A. AMCA Certification for Hooded Ventilators: Test, rate, and label gravity ventilators in accordance with AMCA 511.

2.05 MATERIALS

A. Aluminum Extrusions: ASTM B221, Alloy 6063-T5 or T-52.

B. Aluminum Sheet: ASTM B209, Alloy 3003 or 5005, with temper as required for forming or as otherwise recommended by metal producer for required finish.

C. Stainless Steel Sheet: ASTM A666, Type 304, with No. 4 finish.

D. Fasteners: Same basic metal and alloy as fastened metal or 300 Series stainless steel unless otherwise indicated. Do not use metals that are incompatible with joined materials.

1. Use types and sizes to suit unit installation conditions.
2. Use Phillips flat-head screws for exposed fasteners unless otherwise indicated.

E. Post-Installed Fasteners for Concrete and Masonry: Torque-controlled expansion anchors made from stainless-steel components, with capability to sustain without failure a load equal to 4 times the loads imposed for concrete, or 6 times the load imposed for masonry, as determined by testing according to ASTM E488/E488M, conducted by a qualified independent testing agency.

F. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D1187/D1187M.

PART 3 - EXECUTION

3.01 INSTALLATION, GENERAL

A. Install gravity ventilators level, plumb, and at indicated alignment with adjacent work.
B. Secure gravity ventilators to roof curbs with zinc-plated hardware, that comply with the wind fastening requirements. Use concealed anchorages where possible.
C. Install gravity ventilators with clearances for service and maintenance.
D. Install perimeter reveals and openings of uniform width for sealants and joint fillers, as indicated.
E. Install concealed gaskets, flashings, joint fillers, and insulation as installation progresses. Comply with Section 07 92 00 "Joint Sealants" for sealants applied during installation.
F. Label gravity ventilators according to requirements specified in Section 23 05 53 "Identification for HVAC Piping and Equipment."
G. Protect galvanized and nonferrous-metal surfaces from corrosion or galvanic action by applying a heavy coating of bituminous paint on surfaces that will be in contact with concrete, masonry, or dissimilar metals.
H. Repair finishes damaged by cutting, welding, soldering, and grinding. Restore finishes, so no evidence remains of corrective work. Return items that cannot be refinished in the field to the factory, make required alterations, and refinish entire unit or provide new units.

3.02 ADJUSTING

A. Adjust damper linkages for proper damper operation.

END OF SECTION 23 37 23

SECTION 23 74 13 – PACKAGED, OUTDOOR, CENTRAL-STATION AIR-HANDLING UNITS

PART 1 - GENERAL

1.01 RELATED DOCUMENTS:

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY:

A. This Section includes packaged, outdoor, central-station air-handling units (rooftop units) with the following components and accessories:
   1. Direct-expansion cooling.
   2. Electric heating coils.
   3. Economizer outdoor- and return-air damper section.

1.03 RELATED SECTIONS:

1. Section 23 73 33 - Indoor Indirect Fuel-Fired Heating and Ventilating Units for outdoor units providing 100% tempered outdoor air with heat exchangers.
2. Section 23 73 39 - Indoor Direct Gas-Fired Heating and Ventilating Units for outdoor units providing 100% tempered outdoor air without heat exchangers.
3. Division 23, Section "Packaged, Outdoor, Heating and Cooling Makeup Air-Conditioners" for outdoor equipment air conditioning 100% outdoor air to replace air exhausted from a building.

1.04 REFERENCES:

9. Underwriters Laboratories, Inc. (UL):
   a. UL 1995 - Heating and Cooling Equipment.

1.05 DEFINITIONS:

A. DDC: Direct-digital controls.
B. ECM: Electrically commutated motor.
C. Outdoor-Air Refrigerant Coil: Refrigerant coil in the outdoor-air stream to reject heat during cooling operations and to absorb heat during heating operations. "Outdoor air" is defined as the air outside the building or taken from outdoors and not previously circulated through the system.
D. Outdoor-Air Refrigerant Coil Fan: The outdoor-air refrigerant coil fan in AHUs. "Outdoor air" is defined as the air outside the building or taken from outdoors and not previously circulated through the system.
E. AHU: Air handling unit. As used in this Section, this abbreviation means packaged, outdoor, central-station air-handling units. This abbreviation is used regardless of whether the unit is mounted on the roof or on a concrete base on ground.
F. Supply-Air Fan: The fan providing supply air to conditioned space. "Supply air" is defined as the air entering a space from air-conditioning, heating, or ventilating apparatus.
G. Supply-Air Refrigerant Coil: Refrigerant coil in the supply-air stream to absorb heat (provide cooling) during cooling operations and to reject heat (provide heating) during heating operations. "Supply air" is defined as the air entering a space from air-conditioning, heating, or ventilating apparatus.
H. VVT: Variable-air volume and temperature.

1.06 PERFORMANCE REQUIREMENTS:

A. Delegated Design: Design AHU supports to comply with wind performance requirements, including comprehensive engineering analysis by a qualified Professional Engineer, using performance requirements and design criteria indicated.
B. Wind-Restraint Performance:
   1. Basic Wind Speed: 100 miles per hour.
   2. Building Classification Category: II.
   3. Minimum 10 lb./ft.^{2} multiplied by the maximum area of the mechanical component projected on a vertical plane that is normal to the wind direction, and 45 degrees either side of normal.

1.07 ACTION SUBMITTALS:

A. Product Data: Include manufacturer's technical data for each AHU, including rated capacities, dimensions, required clearances, characteristics, furnished specialties, and accessories.

B. Shop Drawings: Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.

1. Wiring Diagrams: Power, signal, and control wiring.

1.08 INFORMATIONAL SUBMITTALS:

A. Field quality control test reports.

B. Warranty: Special warranty specified in this Section.

1.09 CLOSEOUT SUBMITTALS:

A. Operation and Maintenance Data: For AHUs to include in emergency, operation, and maintenance manuals.

1.10 QUALITY ASSURANCE:

A. ARI Compliance:

1. Comply with ARI 210/240 and ARI 340/360 for testing and rating energy efficiencies for RTUs.
2. Comply with ARI 270 for testing and rating sound performance for AHUs.

B. ASHRAE Compliance:

1. Comply with ASHRAE 15 for refrigeration system safety.
2. Comply with ASHRAE 33 for methods of testing cooling and heating coils.

C. NFPA Compliance: Comply with NFPA 90A and NFPA 90B.

D. UL Compliance: Comply with UL 1995.

E. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

1.11 WARRANTY:

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to replace components of AHUs that fail in materials or workmanship within specified warranty period.

1. Warranty Period for Compressors: Manufacturer's standard, but not less than five years from date of Substantial Completion.
2. Warranty Period for Control Boards: Manufacturer's standard, but not less than three years from date of Substantial Completion.

PART 2 - PRODUCTS

2.01 MANUFACTURERS:

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. AAON, Inc.
2. Engineered Air.
3. McQuay International.

2.02 CASING:

A. General Fabrication Requirements for Casings: Formed and reinforced double-wall insulated panels, fabricated to allow removal for access to internal parts and components, with joints between sections sealed.

B. Exterior Casing Material: Stainless steel with factory-painted finish, with pitched roof panels and knockouts with grommet seals for electrical and piping connections and lifting lugs.
   1. Exterior Casing Thickness: 18 gauge.

C. Inner Casing Fabrication Requirements:
   1. Inside Casing: Stainless steel, 22 gauge.

D. Casing Insulation and Adhesive: Comply with NFPA 90A or NFPA 90B.
   1. Materials: ASTM C1071, Type I.
   2. Thickness: 2 inch, 1.5 lb/cu.ft..
   3. Liner materials shall have air stream surface coated with an erosion- and temperature-resistant coating or faced with a plain or coated fibrous mat or fabric.
   4. Liner Adhesive: Comply with ASTM C916, Type I.

E. Condensate Drain Pans: Formed sections of stainless-steel sheet, a minimum of 2 inches deep.
   1. Double-Wall Construction: Fill space between walls with foam insulation and seal moisture tight.
   2. Drain Connections: Threaded nipple both sides of drain pan.
   3. Pan-Top Surface Coating: Corrosion-resistant compound.

2.03 FANS:

A. Fan Motor: Comply with requirements in Section 23 05 13 - Common Motor Requirements for HVAC Equipment. Rated for VFD operation

2.04 COILS:

A. Supply-Air Refrigerant Coil:
   1. Aluminum-plate fin and seamless heresite coated copper tube in stainless steel casing with equalizing-type vertical distributor.
   2. Coil Split: Interlaced.
   3. Braze 56 on refrigerant piping
   4. Condensate Drain Pan: Stainless steel formed with pitch and drain connections.
   5. Here site coating.

B. Electric-Resistance Heating:
   1. Open Heating Elements: Resistance wire of stainless steel casing and tubular element NEMA 4x panel, supported and insulated by floating ceramic bushings recessed into casing openings, fastened to supporting brackets, and mounted in stainless-steel frame. Terminate elements in stainless-steel machine-staked terminals secured with stainless-steel hardware.
   2. Overtemperature Protection: Disk-type, automatically reset, thermal-cutout, safety device; serviceable through terminal box.
   3. Overcurrent Protection: Manual-reset thermal cutouts, factory wired in each heater stage.
   4. Control Panel: Unit mounted with disconnecting means and overcurrent protection. Include the following controls:
      a. SCR Controller: Pilot lights operate on load ratio, a minimum of five steps.
      b. Time-delay relay.
      c. Airflow proving switch.

2.05 REFRIGERANT CIRCUIT COMPONENTS:

A. Compressor: Hermetic, scroll, mounted on vibration isolators; with internal overcurrent and high temperature protection, internal pressure relief, and crankcase heater.

B. Refrigeration Specialties:

1. Refrigerant: R-410A.
2. Expansion valve with replaceable thermostatic element.
3. Refrigerant filter/dryer.
4. Manual-reset high-pressure safety switch.
5. Automatic-reset low-pressure safety switch.
6. Minimum off-time relay.
7. Automatic-reset compressor motor thermal overload.
8. Stainless steel service valves installed in compressor suction and liquid lines.

2.06 AIR FILTRATION:

A. See schedule.

2.07 DAMPERS:

A. Aluminum, opposed blade, low leakage.

2.08 ELECTRICAL POWER CONNECTION:

A. Provide for single connection of power to unit with unit-mounted disconnect switch accessible from outside unit and control-circuit transformer with built-in overcurrent protection.

B. Electrical Data:

1. V/Ph/Hz: 480 V/ 3 phase / 60 hz.

2.09 CONTROLS:

A. Control equipment as specified in Section 23 09 00 - Instrumentation and Control for HVAC. Controllers shall be approved or furnished by HVAC controls contractor.

B. Provide manufacturer’s standard safety controls

2.10 CAPACITIES AND CHARACTERISTICS:

A. Refer to equipment schedules on Mechanical drawings.

2.11 OPTIONAL:

A. 304 stainless steel piano hinges and filter rack.

B. All aluminum rigid conduit and liquid tight flex.

C. NEMA 4X enclosed, disconnect, switches, panels.

PART 3 - EXECUTION

3.01 EXAMINATION:

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of AHUs.

B. Examine roughing-in for AHUs to verify actual locations of piping and duct connections before equipment installation.

C. Examine roofs for suitable conditions where AHUs will be installed.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION:

A. Concrete Bases: Anchor equipment to concrete base according to equipment manufacturer's written instructions and according to seismic codes at Project.
   1. Construct concrete bases of dimensions indicated, but not less than 4 inches larger than supported equipment and minimum 6 inches above finished ground elevation.
   2. Place and secure anchorage devices. Use supported equipment manufacturer's Setting Drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
   3. Install anchor bolts to elevations required for proper attachment to supported equipment.
   4. Install anchor bolts according to anchor-bolt manufacturer's written instructions.
   5. Use 3,000-psi, 28-day compressive-strength concrete and reinforcement as specified in Division 03.

3.03 CONNECTIONS:

A. Install condensate drain, minimum connection size, with trap and indirect connection to nearest roof drain or area drain.
B. Install piping adjacent to AHUs to allow service and maintenance.

3.04 FIELD QUALITY CONTROL:

A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections. Report results in writing.
B. Tests and Inspections:
   1. After installing AHUs and after electrical circuitry has been energized, test units for compliance with requirements.
   2. Inspect for and remove shipping bolts, blocks, and tie-down straps.
   3. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
   4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
C. Remove and replace malfunctioning units and retest as specified above.

3.05 STARTUP SERVICE:

A. Engage a factory-authorized service representative to perform startup service.
B. Complete installation and startup checks according to manufacturer's written instructions and do the following:
   1. Inspect for visible damage to unit casing.
   2. Inspect for visible damage to furnace combustion chamber.
   3. Inspect for visible damage to compressor, coils, and fans.
   4. Inspect internal insulation.
   5. Verify that labels are clearly visible.
   6. Verify that clearances have been provided for servicing.
   7. Verify that controls are connected and operable.
   8. Verify that filters are installed.
   9. Clean condenser coil and inspect for construction debris.
   10. Inspect operation of barometric relief dampers.
   11. Verify lubrication on fan and motor bearings.

12. Inspect fan-wheel rotation for movement in correct direction without vibration and binding.
13. Adjust fan belts to proper alignment and tension.
14. Start unit according to manufacturer's written instructions.
    a. Start refrigeration system.
    b. Do not operate below recommended low ambient temperature.
    c. Complete startup sheets and attach copy with Contractor's startup report.
15. Inspect and record performance of interlocks and protective devices; verify sequences.
16. Operate unit for an initial period as recommended or required by manufacturer.
17. Calibrate thermostats.
18. Adjust and inspect high temperature limits.
19. Inspect outdoor-air dampers for proper stroke and interlock with return-air dampers.
20. Start refrigeration system and measure and record the following when ambient is a minimum of 15ºF above return air temperature:
    a. Coil leaving air, dry and wet bulb temperatures.
    b. Coil entering air, dry and wet bulb temperatures.
    c. Outdoor air, dry bulb temperature.
    d. Outdoor air coil, discharge air, dry bulb temperature.
21. Inspect controls for correct sequencing of heating, mixing dampers, refrigeration, and normal and emergency shutdown.
22. Measure and record the following minimum and maximum airflows. Plot fan volumes on fan curve.
    a. Supply air volume.
    b. Return air volume.
    c. Relief air volume.
    d. Outdoor air intake volume.
23. Simulate maximum cooling demand and inspect the following:
    a. Compressor refrigerant suction and hot gas pressures.
    b. Short circuiting of air through condenser coil or from condenser fans to outdoor-air intake.
24. Verify operation of remote panel including pilot light operation and failure modes. Inspect the following:
    a. High temperature limit on gas-fired heat exchanger.
    b. Low temperature safety operation.
    c. Filter high-pressure differential alarm.
    d. Economizer to minimum outdoor-air changeover.
    e. Relief-air fan operation.
    f. Smoke and firestat alarms.
25. After startup and performance testing and prior to Substantial Completion, replace existing filters with new filters.

3.06 CLEANING AND ADJUSTING:

A. Occupancy Adjustments: When requested within 12 months of date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to one visits to Site during other-than-normal occupancy hours for this purpose.

B. After completing system installation and testing, adjusting, and balancing AHU and air-distribution systems, clean filter housings and install new filters.

3.07 DEMONSTRATION:

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain AHUs. Refer to Division 01.

END OF SECTION 23 74 13

SECTION 23 74 33 – MAKEUP AIR UNITS

PART 1 - GENERAL

1.01 RELATED DOCUMENTS:

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY:

A. This Section includes factory-packaged units capable of supplying up to 100% outdoor air and providing heating.

1.04 ACTION SUBMITTALS:

A. Product Data: For each type of product. Include rated capacities, operating characteristics, and furnished specialties and accessories.

B. Shop Drawings:
   1. Include plans, elevations, sections, and attachment details.
   2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
   3. Prepare the following by or under the supervision of a qualified Professional Engineer:
      a. Include diagrams for power, signal, and control wiring.

1.05 INFORMATIONAL SUBMITTALS:

A. Startup service reports.

1.06 CLOSEOUT SUBMITTALS:

A. Operation and Maintenance Data: For units to include in emergency, operation, and maintenance manuals.

PART 2 - PRODUCTS

2.01 MANUFACTURERS:

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Captive-Air Sytems, Inc..
   2. Engineered Air.
   3. Greenheck Model.

4. Trane.

B. Cabinet Thermal Performance:
   1. Maximum Overall U-Value: Comply with requirements in ASHRAE/IESNA 90.1.
   2. Include effects of metal-to-metal contact and thermal bridges in the calculations.

C. Maximum Cabinet Leakage: 1% of the total supply-air flow at a pressure rating equal to the fan shut-off pressure.

D. Electrical components, devices, and accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
   1. Capacities and Characteristics:
      a. As scheduled on Drawings.

2.02 CABINET:

A. Construction: Double wall.

B. Exterior Casing Material: Stainless steel.

C. Interior Casing Material: Stainless steel.

D. Lifting and Handling Provisions: Factory-installed shipping skids and lifting lugs.

E. Base Rails: Stainless-steel rails for mounting on roof curb or pad as indicated.

F. Access for Inspection, Cleaning, and Maintenance: Comply with requirements in ASHRAE 62.1.
   1. Service Doors: Hinged access doors with gaskets. Material and construction of doors shall match material and construction of cabinet in which doors are installed.

G. Roof: Standing seam or membrane; sloped to drain water.

H. Floor: Reinforced, metal surface; reinforced to limit deflection when walked on by service personnel. Insulation shall be below metal walking surface.

I. Cabinet Insulation:
   1. Type: Fibrous-glass duct lining complying with ASTM C1071, Type II.
   2. Thickness: 1 inch, 1.5 lb/cu. ft.
   3. Insulation Adhesive: Comply with ASTM C916, Type I.
   4. Mechanical Fasteners: Suitable for adhesive, mechanical, or welding attachment to casing without damaging liner and without causing air leakage when applied as recommended by manufacturer.

J. Surfaces in Contact with Airstream: Comply with requirements in ASHRAE 62.1 for resistance to mold and erosion.

2.03 SUPPLY FAN:

A. Air-Foil Fan Type: Centrifugal; statically and dynamically balanced.
   1. Fan Wheel Material: Aluminum steel, mounted on stainless-steel shaft.
   2. Bearings: Self-aligning, permanently lubricated ball bearings.

B. Service Factor for Belt Drive Applications: Multiple V-belt drive with matching fan pulley and adjustable motor sheaves and belt assembly with minimum 2.0 service factor.

C. Motors:
   1. Comply with NEMA designation, temperature rating, service factor, and efficiency requirements for motors specified in Section 23 05 13 - Common Motor Requirements for HVAC Equipment.
   2. Enclosure: Severe-Duty.
   3. Enclosure Materials: Cast aluminum.
   4. Efficiency: Premium efficient.
   5. Service Factor: 1.15.

D. Mounting: Fan wheel, motor, and drives shall be mounted to fan casing with spring isolators.

2.04 ELECTRIC-RESISTANCE HEATING COIL:

A. UL Compliance: Comply with requirements in UL 1995, "Heating and Cooling Equipment."
B. Electric-Resistance Heating Elements:
   1. Coiled Resistance Wire: Stainless steel tubular sheath, stainless steel casing.
   2. Fins: Spiral-wound, copper-plated, steel fins continuously brazed to sheath.
   3. Safety Controls:
      a. Blower-motor interlock, air-pressure switch.
      b. Quiet mercury contactors.
      c. Time delay between steps.
      d. Integral, nonfused power disconnect switch.
   4. Heresite coating.
   5. Stainless steel casing.
   6. NEMA 4X Panel.

2.05 OUTDOOR-AIR INTAKE HOOD:

A. Type: Manufacturer's standard hood or louver.
B. Materials: Match cabinet.
C. Bird Screen: Comply with requirements in ASHRAE 62.1.
D. Configuration: Designed to inhibit wind-driven rain and snow from entering unit.

2.06 FILTERS:

A. As schedule of Drawings.

2.07 ELECTRICAL POWER CONNECTIONS:

A. General Electrical Power Connection Requirements: Factory-installed and -wired switches, motor controllers, transformers, and other necessary electrical devices shall provide a single-point field power connection to unit.
B. Enclosure: NEMA 250, Type 4X, mounted in unit with hinged access door in unit cabinet having a lock and key or padlock and key,
C. Wiring: Numbered and color-coded to match wiring diagram.
D. Wiring Location: Install factory wiring outside an enclosure in a raceway.
E. Power Interface: Field power interface shall be to NEMA KS 1, heavy-duty, nonfused disconnect switch.
F. Factory Wiring: Branch power circuit to each motor and to controls with one of the following disconnecting means:
   1. NEMA KS 1, heavy-duty, fusible switch with rejection-type fuse clips rated for fuses. Select and size fuses to provide Type 2 protection according to IEC 60947-4-1.
   2. NEMA KS 1, heavy-duty, nonfusible switch.
   3. UL 489, motor-circuit protector (circuit breaker) with field-adjustable, short-circuit trip coordinated with motor locked-rotor amperes.
G. Factory-Mounted, Overcurrent-Protection Service: For each motor.
H. Transformer: Factory mounted with primary and secondary fuses and sized with enough capacity to operate electrical load plus spare capacity.
I. Controls: Factory-wire unit-mounted controls where indicated.
J. Receptacle: Factory-wire unit-mounted, ground fault interrupt (GFI) duplex receptacle. Provide required transformer.
K. Control Relays: Auxiliary and adjustable time-delay relays.
L. Aluminum wiring.
M. Aluminum rigid conduit and liquid tight flex.

2.08 CONTROLS:

A. Control equipment and sequence of operation are specified in Section 23 09 00 - Instrumentation and Control for HVAC. Controllers shall be approved or furnished by HVAC controls contractor.
B. Control Wiring: Factory-wire connection for controls' power supply.
C. Control Devices: Sensors, transmitters, relays, switches, detectors, operators, and actuators shall be manufacturer's standard items to accomplish indicated control functions.

2.09 ACCESSORIES:

A. Duplex Receptacle: Factory mounted in unit supply-fan section and refrigeration section, with 20 A, 120V GFI duplex receptacle and weatherproof cover.
B. Stainless steel fan flex connector.
C. NEMA 4X enclosures, switches, panels, disconnect.

PART 3 - EXECUTION

3.01 EXAMINATION:

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.
B. Examine roughing-in for piping, ducts, and electrical systems to verify actual locations of connections before equipment installation.
C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION:

A. Comply with manufacturer's rigging and installation instructions for unloading units and moving to final locations.
B. Equipment Mounting: Install floor or on-grade mounted units on cast-in-place concrete equipment bases. Comply with requirements for equipment bases specified in Division 03.
    1. Coordinate sizes and locations of concrete bases with actual equipment provided. Cast anchor-bolt inserts into bases.
    2. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch centers around the full perimeter of concrete base.
    3. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base, and anchor into structural concrete floor.
    4. Place and secure anchorage devices. Use Setting Drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
    5. Install anchor bolts to elevations required for proper attachment to supported equipment.
    6. Install on 6-inch high concrete base.
C. Install separate devices furnished by manufacturer and not factory installed.
D. Install new filters at completion of equipment installation and before testing, adjusting, and balancing.

3.03 CONNECTIONS:

A. Where installing piping adjacent to units, allow space for service and maintenance.
B. Duct Connections:
    1. Comply with requirements in Section 23 31 13 - Metal Ducts.
    2. Drawings indicate the general arrangement of ducts.

3. Connect ducts to units with flexible duct connectors. Comply with requirements for flexible duct connectors in Section 23 33 00 - Air Duct Accessories.

C. Electrical Connections: Comply with requirements for power wiring, switches, and motor controls in Division 26 Sections.
   1. Install electrical devices furnished by unit manufacturer but not factory mounted.

3.04 STARTUP SERVICE:

A. Perform startup service.
   1. Complete installation and startup checks according to manufacturer's written instructions.
   2. Inspect casing insulation for integrity, moisture content, and adhesion.
   3. Verify that clearances have been provided for servicing.
   4. Verify that controls are connected and operable.
   5. Verify that filters are installed.
   6. Clean coils and inspect for construction debris.
   7. Inspect and adjust vibration isolators and seismic restraints.
   8. Verify bearing lubrication.
   9. Clean fans and inspect fan-wheel rotation for movement in correct direction without vibration and binding.
   10. Adjust fan belts to proper alignment and tension.
   11. Start unit.
   12. Inspect and record performance of interlocks and protective devices, including response to smoke detectors by fan controls and fire alarm.
   13. Operate unit for run-in period.
   14. Calibrate controls.
   15. Adjust and inspect high-temperature limits.
   16. Verify operational sequence of controls.
   17. Measure and record the following airflows. Plot fan volumes on fan curve.
      a. Supply-air volume.

B. After startup, change filters, verify bearing lubrication, and adjust belt tension.

C. Remove and replace components that do not properly operate and repeat startup procedures as specified above.

D. Prepare written report of the results of startup services.

3.05 ADJUSTING:

A. Adjust initial temperature and humidity set points.

B. Set field-adjustable switches and circuit-breaker trip ranges as indicated.

C. Occupancy Adjustments: When requested within 12 months from date of Substantial Completion, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to two visits to Project during other-than-normal occupancy hours for this purpose.

3.06 DEMONSTRATION:

A. Engage a factory-authorized service representative to train Owner’s maintenance personnel to adjust, operate, and maintain Make-up Air Units. Refer to Division 1.

END OF SECTION 23 74 33

SECTION 23 81 13 – PACKAGED TERMINAL AIR-CONDITIONERS

PART 1 - GENERAL

1.01 RELATED DOCUMENTS:

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY:

A. This Section includes packaged terminal air conditioners and their accessories and controls, in the following configurations:
   1. Through-the-wall air conditioners.
   2. Cooling units with electric heat.

1.03 REFERENCE STANDARDS:

A. Applicable Standards (Latest Edition):
   1. Air-Conditioning & Refrigeration Institute (AHRI):
      a. AHRI 300 - Sound Rating and Sound Transmission Loss of Packaged Terminal Equipment
   2. Air-Conditioning & Refrigeration Institute/CSA International (AHRI/CSA):
      a. AHRI 310/380/CSA C744 - Packaged Terminal Air-Conditioners and Heat Pumps.
   3. American National Standards Institute/CSA International (ANSI):
      a. ANSI Z21.86/CSA 2.32 - Vented Gas-Fired Space Heating Appliances.
   4. American Society of Heating, Refrigerating and Air-Conditioning Engineers (ASHRAE):
      a. ASHRAE 62.1 - Ventilation for Acceptable Indoor Air Quality (ANSI).
   5. American Society of Heating, Refrigerating and Air-Conditioning Engineers/Illuminating Engineering Society of North America (ASHRAE/IESNA):
      a. ASHRAE/IESNA 90.1 - Energy Standard for Buildings except Low-Rise Residential Buildings (ANSI).
   6. NFPA:
      a. NFPA 54 - National Fuel Gas Code.
      b. NFPA 70 - National Electrical Code.

1.04 SUBMITTALS:

A. Product Data: For each type of product indicated. Include rated capacities, operating characteristics, furnished specialties, electrical characteristics, and accessories.

B. Shop Drawings: For packaged terminal air conditioners. Include plans, elevations, sections, details for wall penetrations, and attachments to other work.
   1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
   2. Wiring Diagrams: For power, signal, and control wiring.

C. Product Test Reports: Based on evaluation of comprehensive tests performed by manufacturer and witnessed by a qualified testing agency, for packaged terminal air conditioners.

D. Warranty: Sample of special warranty.

E. Operation and Maintenance Data: For packaged terminal air conditioners to include in emergency, operation, and maintenance manuals.

1.05 QUALITY ASSURANCE:

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 4, "Outdoor Air Quality," Section 5, "Systems and Equipment," Section 6, "Ventilation Rate Procedures," and Section 7, "Construction and Startup."
C. ASHRAE/IESNA Compliance: Applicable requirements in ASHRAE/IESNA 90.1.

1.06 COORDINATION:
A. Coordinate layout and installation of packaged terminal air conditioners and wall construction with other construction that penetrates walls or is supported by them.

1.07 WARRANTY:
A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of packaged terminal air conditioners that fail in materials or workmanship within specified warranty period.
1. Warranty Period for Sealed Refrigeration System: Manufacturer's standard, but not less than five years from date of Substantial Completion, including components and labor.
2. Warranty Period for Nonsealed System Parts: Manufacturer's standard, but not less than five years from date of Substantial Completion, including only components and excluding labor.
3. Warranty Period for Heat Exchangers: Manufacturer's standard, but not less than five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.01 MANUFACTURERS:
A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Barb.
2. Carrier Corporation; a United Technologies company.
3. ClimateMaster, Inc.
4. Friedrich Air Conditioning Co.
5. General Electric Company; GE Consumer & Industrial - Appliances.
6. Daikin-McQuay.
7. Trane; a business of American Standard Companies.

2.02 MANUFACTURED UNITS:
A. Description: Factory-assembled and -tested, self-contained, packaged terminal air conditioner with room cabinet, electric refrigeration system, heating, and temperature controls; fully charged with refrigerant and filled with oil; with hardwired chassis.

2.03 CHASSIS:
A. Cabinet: 20 gauge thick stainless steel with removable front panel with concealed latches.
1. Mounting: Wall with wall sleeve.
2. Discharge Grille: Punched-louver discharge grille.
3. Finish: Baked enamel.
4. Access Door: Hinged door in top of cabinet for access to controls.
5. Cabinet Extension: Matching cabinet in construction and finish, allowing diversion of airflow to adjoining room; with grille.
6. Finish of Interior Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1.

7. Wall Sleeves: Molded fiberglass-reinforced polyester.

B. Refrigeration System: Direct-expansion indoor coil with capillary restrictor; and hermetically sealed scroll compressor with vibration isolation and overload protection.
   1. Indoor and Outdoor Coils: Seamless copper tubes mechanically expanded into aluminum fins.
   2. Accumulator.
   3. Constant-pressure expansion valve.
   4. Reversing valve.
   5. Charge: R-410A.
   6. Heresite coating.

C. Indoor Fan: Forward curved, centrifugal; with motor and positive-pressure ventilation damper with electric operator.

D. Filters: Washable polyurethane in molded plastic frame.

E. Condensate Drain: Drain pan to direct condensate to outdoor coil for re-evaporation.
   1. Comply with ASHRAE 62.1 for drain pan construction and connections.

F. Outdoor Fan: Forward curved, centrifugal type motor.
   1. Indoor and Outdoor Fan Motors: Five speed ECM; comply with NEMA designation, temperature rating, service factor, enclosure type, and efficiency requirements for motors specified in Section 23 05 13 - Common Motor Requirements for HVAC Equipment.
      a. Fan Motors: Permanently lubricated split capacitor.
      b. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.
      c. Controllers, Electrical Devices, and Wiring: Comply with requirements for electrical devices and connections specified in Division 26.

2.04 HEATING:

A. Electric-Resistance Heating Coil: Nickel-chromium-wire, electric-resistance heating elements with contactor and high-temperature-limit switch. Heresite coating.

2.05 CONTROLS:

A. See controls and specifications.

2.06 CAPACITIES AND CHARACTERISTICS:

A. See schedule on Mechanical drawings.

2.07 SOURCE QUALITY CONTROL:

A. Sound-Power Level Ratings: Factory test to comply with AHRI 300, "Sound Rating and Sound Transmission Loss of Packaged Terminal Equipment."

B. Unit Performance Ratings: Factory test to comply with AHRI 310/380/CSA C744, "Packaged Terminal Air-Conditioners and Heat Pumps."

PART 3 - EXECUTION

3.01 INSTALLATION:

A. Install units level and plumb, maintaining manufacturer's recommended clearances and tolerances.

B. Install wall sleeves in finished wall assembly; seal and weatherproof. Joint-sealant materials and applications are specified in Division 07.

3.02 FIELD QUALITY CONTROL:

A. Tests and Inspections:
   1. Inspect for and remove shipping bolts, blocks, and tie-down straps.
   2. After installing packaged terminal air conditioners and after electrical circuitry has been energized, test for compliance with requirements.
   3. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
   4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

B. Packaged terminal air conditioners will be considered defective if they do not pass tests and inspections.

C. Prepare test and inspection reports.

3.03 STARTUP SERVICE:

A. Perform startup service.

B. After installation, verify the following:
   1. Unit is level on base and is flashed in exterior wall.
   2. Unit casing has no visible damage.
   3. Compressor, air-cooled condenser coil, and fans have no visible damage.
   4. Labels are clearly visible.
   5. Controls are connected and operable.
   6. Shipping bolts, blocks, and tie-down straps are removed.
   7. Filters are installed and clean.
   8. Drain pan and drain line are installed correctly.
   9. Electrical wiring installation complies with manufacturer's submittal and installation requirements in Division 26.
   10. Installation. Perform startup checks according to manufacturer's written instructions, including the following:
      a. Lubricate bearings on fan.
      b. Check fan-wheel rotation for correct direction without vibration and binding.

C. After startup service and performance test, change filters.

3.04 ADJUSTING:

A. Adjust initial temperature set points.

B. Set field-adjustable switches and circuit-breaker trip ranges as indicated.

3.05 DEMONSTRATION:

A. Engage a factory-authorized service representative to train Owner’s maintenance personnel to adjust, operate, and maintain Make-up Air Units. Refer to Division 1.

END OF SECTION 23 81 13

SECTION 23 82 39 – ELECTRIC UNIT HEATERS

PART 1 - GENERAL

1.01 RELATED DOCUMENTS:

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY:

A. This Section includes:
   1. Ceiling mounted unit heater with fan and electric resistance heating coils.
   2. Propeller unit heaters with electric-resistance heating coils.

1.03 REFERENCE STANDARDS:

A. Applicable Standards (Latest Edition):
   1. Air-Conditioning, Heating, & Refrigeration Institute (AHRI):
      a. AHRI 440 - Room Fan Coils.
   2. American Society of Heating, Refrigerating and Air-Conditioning Engineers (ASHRAE):
      a. ASHRAE 33 - Method of Testing Forced Circulation Air Cooling and Heating Coils (ANSI).
      b. ASHRAE 52.1 - Gravimetric and Dust-Spot Procedures for Testing Air-Cleaning Devices Used in General Ventilation for Removing Particulate Matter (ANSI).
      c. ASHRAE 52.2 - Method of Testing General Ventilation Air-Cleaning Devices for Removal Efficiency by Particle Size (ANSI).
      d. ASHRAE 62.1 - Ventilation for Acceptable Indoor Air Quality (ANSI).
   3. American Society of Heating, Refrigerating and Air-Conditioning Engineers/Illuminating Engineering Society of North America (ASHRAE/IESNA):
      a. ASHRAE/IESNA 90.1 - Energy Standard for Buildings except Low-Rise Residential Buildings (ANSI).
   4. ASME International (ASME):
      a. ASME B16.22 - Wrought Copper and Copper Alloy Solder Joint Pressure Fittings.
   5. ASTM International (ASTM):
      a. ASTM A126 - Specification for Gray Iron Castings for Valves, Flanges, and Pipe Fittings.
      b. ASTM B88 - Specification for Seamless Copper Water Tube.
      c. ASTM C411 - Test Method for Hot-Surface Performance of High-Temperature Thermal Insulation.
      d. ASTM C534 - Specification for Preformed Flexible Elastomeric Cellular Thermal Insulation in Sheet and Tubular Form.
      e. ASTM C916 - Specification for Adhesives for Duct Thermal Insulation.
      f. ASTM C1071 - Specification for Fibrous Glass Duct Lining Insulation (Thermal and Sound Absorbing Material).
      g. ASTM E84 - Test Method for Surface Burning Characteristics of Building Materials.
   6. NFPA:
      a. NFPA 70 - National Electrical Code.
      b. NFPA 90A - Installation of Air Conditioning and Ventilating Systems.
      c. NFPA 90B - Installation of Warm Air Heating and Air Conditioning Systems (ANSI).
   7. Underwriters Laboratories, Inc. (UL):

a. UL 823 - Standard for Electric Heaters for Use in Hazardous (Classified) Locations.
b. UL 1995 - Heating and Cooling Equipment.
c. UL 2021 - Fixed and Location-Dedicated Electric Room Heaters.

1.04 DEFINITIONS:

A. CWP: Cold working pressure.
B. PTFE: Polytetrafluoroethylene plastic.
C. TFE: Tetrafluoroethylene plastic.

1.05 SUBMITTALS:

A. Product Data: Include rated capacities, operating characteristics, furnished specialties, and accessories for each product indicated.
B. Shop Drawings: Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
   1. Equipment schedules to include rated capacities, operating characteristics, furnished specialties, and accessories.
   2. Wiring Diagrams: Power, signal, and control wiring.
   3. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
   4. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.
C. Field quality-control test reports.
D. Operation and Maintenance Data: For cabinet unit heaters to include in emergency, operation, and maintenance manuals.

1.06 QUALITY ASSURANCE:

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
B. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1, Section 5 - "Systems and Equipment" and Section 7 - "Construction and Startup."

PART 2 - PRODUCTS

2.01 PROPELLER UNIT HEATERS:

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Berko Electric Heating; a division of Marley Engineered Products.
   2. Modine Manufacturing Company.
   3. QMark Electric Heating; a division of Marley Engineered Products.
   4. Or Engineer Approved Equal.
B. Description: An assembly including casing, coil, fan, and motor in vertical discharge configuration with adjustable discharge louvers,
   1. NEMA 4X Washdown.
C. Comply with UL 2021.
D. Comply with UL 823.
E. Cabinet material: 16-gauge 304 stainless steel.
   1. Stainless steel combination wall and ceiling swivel-type mounting bracket.

F. Discharge Louver: Adjustable fin diffuser for horizontal units and conical diffuser for vertical units.
G. Electrical-Resistance Heating Elements; 300 stainless steel sheathed with 316 stainless steel fins. Elements attached to junction box with leak resistant stainless steel.
H. Control center: Factor prewired tested and enclosed in NEMA 4X molded fiberglass control enclosure.
    1. Include Contactors.
    2. Automatic reset over-temperature protector.
    3. Fan delay relay.
    4. Motor contactor a fused 24V control circuit.
    5. Terminal blocks for remote thermostat connection.
I. Fan and motor assembly:
    1. Totally enclosed permanently lubricated ball bearing motor.
    2. Epoxy coated.
    3. Fan:
        a. Aluminum epoxy coated, directly connected to the motor.
        b. Dynamically balanced.
        c. Epoxy sealed thermal fan delay for fan shutoff.
J. Control Devices:
    1. Wall-mounting fan-speed switch.
K. Capacities and Characteristics: Refer to equipment schedules on Mechanical drawings.

PART 3 - EXECUTION

3.01 EXAMINATION:

A. Examine areas to receive unit heaters for compliance with requirements for installation tolerances and other conditions affecting performance.
B. Examine roughing-in for electrical connections to verify actual locations before unit heater installation.
C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION:

A. Install wall boxes in finished wall assembly; seal and weatherproof. Joint-sealant materials and applications are specified in Division 07.
B. Install propeller unit heaters level and plumb.
C. Suspend propeller unit heaters from structure with manufacturer's mounting bracket.
D. Install wall-mounting thermostats and switch controls in electrical outlet boxes at heights to match lighting controls. Verify location of thermostats and other exposed control sensors with Drawings and room details before installation.

3.03 CFIELD QUALITY CONTROL:

A. Perform the following field tests and inspections and prepare test reports:
    1. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
    2. Operate electric heating elements through each stage to verify proper operation and electrical connections.
    3. Test and adjust controls and safety devices. Replace damaged and malfunctioning controls and equipment.
B. Remove and replace malfunctioning units and retest as specified above.

3.04 DEMONSTRATION:

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain cabinet unit heaters. Refer to Division 01.

END OF SECTION 23 82 39

DIVISION 26 - ELECTRICAL

SECTION 26 05 10 – GENERAL ELECTRICAL REQUIREMENTS

PART 1 - GENERAL

1.01 RELATED DOCUMENTS:

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY:

A. This Section specifies general administrative and procedural requirements for electrical installations. The following administrative and procedural requirements are included in this Section to expand the requirements specified in Division 01:
   1. Submittals.
   2. Coordination drawings.
   3. Record documents.
   4. Maintenance manuals.
   5. Rough-ins.
   6. Electrical installations.
   7. Cutting and patching.
   8. Electrical Demolition.
   9. Touch-up Painting.

B. Furnish and install (including supports) all electrical equipment, wiring, and associated connections to Equipment specified in this and all other Specification Divisions, unless specified or indicated otherwise. Equipment and installation shall be as per the Contract Drawings and Specifications herein.

1.03 RELATED REQUIREMENTS:

A. Division 03 – Concrete.
B. Division 31 – Earthwork:
C. Section 01 0 19 – Closeout Procedures.
D. Section 09 96 00 - Protective Coatings for surface coatings.
E. Section 23 05 13 - Common Motors Requirements for HVAC Equipment for factory-installed motors, controllers, accessories, and connections.
F. Section 46 05 13 – Common Motor Requirements for Water and Wastewater Equipment.
G. Division 40 – Process Integration.
H. Division 46 – Water and Wastewater Equipment.

1.04 REFERENCE STANDARDS:

A. Publication Dates: Comply with standards in effect as of the date of the Contract Documents unless otherwise indicated.
B. National Electrical Contractors Association (NECA).
C. National Electrical Installation Standards (NEIS): Except where the NEIS requirements specifically deviate from specific requirements of the NEC, the NEC shall take precedence.
D. National Fire Protection Association (NFPA):
   1. NFPA 70 – National Electrical Code (NEC).
E. Institute of Electrical and Electronics Engineers (IEEE):

1. IEEE C2 – National Electrical Safety Code (NESC).

F. Underwriters Laboratories (UL).

1.05 DEFINITIONS:

A. When applied to Equipment and Materials, the words "furnish", "install", and "provide" shall mean the following:

B. The word "provide" shall mean to furnish, pay for, deliver, assemble, install, adjust, clean and otherwise make Equipment and Materials fit for their intended use.

C. The word "furnish" shall mean to secure, pay for, deliver to Site, unload and uncrate Equipment and Materials.

D. The word "install" shall mean to assemble, place in position, incorporate in the Work, adjust, clean, and make fit for use.

E. The phrase "furnish and install" shall be equivalent to the word "provide."

1.06 SUBMITTALS:

A. Submit as specified in Division 01 for administrative and procedural requirements for submittals.

B. Refer to each Section of this Division for specific Submittal requirements.

C. Provide Conforming to Construction Records schematic diagrams and wiring diagrams.

D. Provide product data on electrical material and products.

E. Prepare coordination drawings in accordance with Division 01, for equipment rooms, and other congested areas to a scale of 1/4 inch=1 foot-0 inch or larger if required. Detail major elements, components, and systems of electrical equipment and materials in relationship with other systems, installations, and building components. Drawings shall be prepared on 24-by-36-inch sheets. Indicate locations where space is limited for installation and access and where sequencing and coordination of installations are of importance to the efficient flow of the Work, including (but not necessarily limited to) the following:

1. Indicate the proposed locations of major raceway systems, equipment, and materials.
2. Clearances for servicing equipment, including space for equipment disassembly required for periodic maintenance.
3. Exterior wall and foundation penetrations.
4. Fire-rated wall and floor penetrations.
5. Equipment connections and support details.
6. Sizes and location of required concrete pads and bases.
7. Support details.
8. Indicate scheduling, sequencing, movement, and positioning of large equipment into the building during construction.
9. Prepare floor plans, elevations, and appropriate details to indicate penetrations in floors, walls, and ceilings, and their relationship to other penetrations and installations.
10. Prepare reflected ceiling plans to coordinate and integrate installations, air outlets, air inlets, light fixtures, communications systems' components, sprinklers, heat detectors, smoke detectors, motion detectors, speakers, and other ceiling-mounted devices.
11. Coordinate chases, slots, inserts, sleeves, and openings with general construction work.

F. Prepare record documents in accordance with the requirements in Section 01019 - Closeout Procedures. In addition to the requirements specified in Division 01, indicate installed conditions for:

1. Major raceway systems, size and location for both exterior and interior; locations of control devices; distribution and branch electrical circuitry; fuse sizes, circuit breaker sizes and arrangements.

2. Equipment locations (exposed and concealed), dimensioned from prominent building lines.
3. Approved substitutions, Contract Modifications, and actual equipment and materials installed.

G. Prepare operation and maintenance manuals in accordance with Section 010190 - Closeout Procedures. In addition to the requirements specified in Division 01, include the following information for equipment items:
1. Description of function, normal operating characteristics and limitations, performance curves, engineering data, tests, and complete nomenclature and commercial numbers of replacement parts.
2. Manufacturer's printed operating procedures to include start-up, break-in, routine and normal operating instructions; regulation, control, stopping, shutdown, and emergency instructions; lockout/tagout procedures; and summer and winter operating instructions.
3. Maintenance procedures for routine preventive maintenance and troubleshooting; disassembly, repair, reassembly; aligning and adjusting instructions.
4. Servicing instructions, lubrication charts and schedules.
5. "Conforming to Construction Records" schematic and wiring diagrams.

1.07 QUALITY ASSURANCE:

A. Source Limitations: To the fullest extent possible, provide products of the same kind from a single source.

1.08 DELIVERY, STORAGE, AND HANDLING:

A. Deliver products to the Project Site properly identified with names, model numbers, types, grades, compliance labels, and other information needed for identification.

1.09 PROJECT SITE CONDITIONS:

A. Altitude = 700 feet above mean sea level.
B. Maximum Outdoor Ambient Temperature = 101 degrees F.
C. Minimum Outdoor Ambient Temperature = +2 degrees F.
D. Maximum Outdoor Relative Humidity = 100 percent.
E. Seismic Factors:
1. Seismic Design Category: B
2. S_S: 0.091
3. S_1: 0.067
4. S_{DS}: 0.097
5. S_{D1}: 0.106
6. Site Class: D
7. Importance Factor: Ie: 1.25

1.10 WARRANTY:

A. Provide a minimum one-year warranty (unless indicated in individual specifications as a longer period) on all electrical equipment. Warranty period shall begin when equipment is permanently energized or started unless specified otherwise. Contractor shall provide written notification to Owner's Representative prior to this warranty start date. Refer to specification 00700 Construction General Conditions for additional warranty requirements.

PART 2 - PRODUCTS

2.01 GENERAL:

A. Unless indicated otherwise, all equipment and material shall be new, undamaged and meet the requirements of Underwriters Laboratories, Inc. (UL). Where UL requirements are not applicable, equipment and material shall be identified as such by Contractor and approved by Owner before purchase and installation.

B. All Equipment and Materials shall be in accordance with the National Electrical Code (NEC).

C. All Equipment conductor termination shall be UL listed for 75°C unless specified otherwise.

2.02 ELECTRONIC EQUIPMENT COMPLIANCE:

A. Contractor warrants that all equipment, devices, items, systems, software, hardware, or firmware provided shall properly, appropriately, and consistently function and accurately process date and time data (including without limitation: calculating, comparing, and sequencing). This warranty supersedes anything in the Specifications or other Contract Documents which might be construed inconsistently. This warranty is applicable whether the equipment, device, item, system, software, hardware, or firmware is specified with or without reference to a manufacturer's name, make, or model number.

2.03 SYSTEMS TO BE INSTALLED:

A. This Contract includes, but is not limited to, the following systems:

1. 208Y/120 V, 3-phase, 60 hertz, 4 wire lighting, convenience power, and small power system.
2. 480Y/277 V, 3-phase, 60 hertz, 4 wire power system.
3. Grounding systems.
4. Conduit system for telephone service.
5. Control systems.
6. Underground conduit system, including handholes.
7. Temporary lighting and convenience power facilities during construction.
8. Paging systems.
9. Intercommunication system.
10. Industrial Ethernet networks.
11. Fire alarm system.
12. Underground duct banks, including handholes and manholes.
13. Instrumentation systems.
14. Security and access control systems, fire alarm systems, lightning protection systems.

2.04 FINISHES:

A. For equipment: Equipment manufacturer's paint selected to match installed equipment finish.

B. Galvanized surfaces: Zinc-rich paint recommended by item manufacturer.

C. Provide finishes in accordance with Section 09 96 00 - Protective Coatings.

PART 3 - EXECUTION

3.01 ERECTION, INSTALLATION, APPLICATION, AND COORDINATION:

A. Verify final locations for rough-ins with field measurements and with the requirements of the actual equipment to be connected.

B. All electrical work and material shall comply with the following requirements:

1. NFPA 70 - The National Electrical Code (NEC).

2. IEEE C2, National Electrical Safety Code, Federal Information Processing Standards Publication (FIPS).

C. NECA National Electrical Installation Standards (NEIS) (all except Table 1 of NECA 1).

D. Sequence, coordinate, and integrate the various elements of electrical systems, materials, and equipment with the established construction schedule.

E. Equipment motor horsepower sizes and kilowatt sizes shown are approximate. If equipment of a different size is furnished by Contractor, Contractor shall furnish and install the proper support equipment, motor starter, switchgear, feeders, fuses, circuit breaker, disconnect switch, wire, and conduit required for the equipment furnished, at no additional cost to Owner.

F. Verify all existing dimensions by field measurements.

G. Arrange for chases, slots, and openings in other building components during progress of construction to allow for electrical installations.

H. Coordinate the installation of required supporting devices and sleeves to be set in poured-in-place concrete and other structural components as they are constructed.

I. Sequence, coordinate, and integrate installations of electrical materials and equipment for efficient flow of the Work. Give particular attention to large equipment requiring positioning prior to closing in the building. Coordinate concrete pads, bases, roof curbs, and related items.

J. Coordinate with all other building trades.

K. Where mounting heights are not specifically detailed, specified, or dimensioned, install systems, materials, and equipment to provide the maximum headroom possible.

L. Coordinate connection of electrical systems with exterior underground utilities and services. Comply with requirements of governing regulations, franchised service companies, and controlling agencies. Provide required connection for each service.

M. Install systems, materials, and equipment to conform with approved submittal data, including coordination drawings, to greatest extent possible. Conform to arrangements indicated by the Contract Documents, recognizing that portions of the Work are shown only in diagrammatic form. Should coordination requirements conflict with individual system requirements, refer conflict to Owner's Representative in writing. Design based on ABB, Eaton, and SquareD for large equipment. It is Contractor’s responsibility to coordinate provided equipment meeting design intent. Any deviation will be at the cost of Contractor.

N. Install systems, materials, and equipment level, plumb, parallel and perpendicular to other building systems and components, where installed exposed in finished spaces.

O. Install electrical equipment to facilitate servicing, maintenance, and repair or replacement of equipment components. As much as practical, connect equipment for ease of disconnecting with minimum of interference with other installations.

P. Install systems, materials, and equipment giving right-of-way priority to systems required to be installed at a specified slope.

Q. All equipment conductor termination provisions and equipment lugs shall be UL listed for 75ºC.

R. All electrical equipment and installations shall be of adequate strength to withstand, without failure, forces encountered in defined Seismic conditions.

S. Install raceways, cables, wireways, cable trays and busways clear of obstructions and clear of the required working space of equipment.

T. Concrete work for all electrical equipment pads, foundations, duct banks and other Division 26 applications shall conform to Division 03 – Concrete.

U. Refer to each Section of this Division for specific performance requirements.

3.02 WORK ON EXISTING EQUIPMENT:

A. Do not remove any equipment from service without obtaining permission from Owner and Engineer.
B. Perform work that requires taking equipment out of service at times designated by Owner so as to cause minimum interruption in plant operation.
C. Continue work with as many workmen as can be efficiently utilized from the time any equipment is removed from service until equipment is tested and back in service.
D. Connect electrical Equipment to provide same phasing as existing equipment, unless otherwise specified or indicated.

3.03 TESTING:

A. Test all electrical Equipment upon completion of installation to ensure that the Equipment operates satisfactorily and conforms to Contract Documents.
B. Furnish temporary power sources of proper type for testing purposes when normal supply is not available at the time of testing.

3.04 DEMOLITION:

A. Protect existing electrical equipment and installations indicated to remain. If damaged or disturbed in the course of the Work, remove damaged portions and install new products of equal capacity, quality, and functionality.
B. Accessible Work: Remove exposed electrical equipment and installations, indicated to be demolished, in their entirety.
C. Abandoned Work: Cut and remove buried raceway and wiring indicated to be abandoned in place, 2 inches below surface of adjacent construction. Cap raceways and patch surface to match existing surface finish.
D. Remove demolished material from Project Site.
E. Remove, store, clean, re-install, reconnect and make operational components indicated for relocation.

3.05 CUTTING AND PATCHING:

A. General: Cut, channel, chase, and drill floors, walls, partitions, ceilings, and other surfaces required to permit electrical installations. Perform cutting by skilled mechanics of the trades involved.
    1. Perform cutting and patching for electrical equipment and materials required to:
        a. Uncover work to provide for installation of ill-timed work.
        b. Remove and replace defective work.
        c. Remove and replace work not conforming to requirements of the Contract Documents.
        d. Remove samples of installed work as specified for testing.
        e. Install equipment and materials in existing structures.
        f. Upon written instructions from Engineer, uncover and restore work to provide for Engineer's observation of concealed work if installed without using the proper specified procedures.
B. For work in existing installations, the Contractor shall cut, remove, and legally dispose of selected electrical equipment, components, and materials as indicated, including, but not limited to, removal of electrical items indicated to be removed and items made obsolete by the new work.
C. Protect the structure, furnishings, finishes, and adjacent materials not indicated or scheduled to be removed.

D. Provide and maintain temporary partitions or dust barriers adequate to prevent the spread of dust and dirt to adjacent areas.
E. Protection of Installed Work: During cutting and patching operations, protect adjacent installations.
F. All penetrations through fire-rated walls, ceilings and floors shall be sealed with a UL listed and FM Global approved sealant system that matches the fire rating of the surface penetrated.
G. Patch existing finished surfaces and building components that must be cut for the electrical installation or are damaged by Contractor using new materials matching existing materials.
H. Patch finished surfaces and building components using new materials specified for the original installation.
I. All cutting, patching, and repairing shall be subject to the supervision and the approval of Owner's Representative.
J. Repair and re-finish disturbed finish materials and other surfaces to match adjacent undisturbed surfaces. Install new fire proofing where existing fireproofing has been disturbed. Repair and re-finish materials and other surfaces by skilled mechanics of trades involved.

3.06 FINISHES:

A. Clean damaged and disturbed areas and apply primer, intermediate, and finish coats to suit degree of damage at each location.
B. Follow paint manufacturer's written instructions for surface preparation and for timing and application of successive coats.
C. Repair damage to galvanized finishes with zinc-rich paint recommended by manufacturer.
D. Repair damage to PVC or paint finishes with matching touchup coating recommended by manufacturer.
E. Repair damage to protective coatings in accordance with Section 09 96 00 - Protective Coatings.

3.07 CLEANING:

A. On completion of installation, including outlets, fittings, and devices, inspect exposed finish. Remove burrs, dirt, paint spots, and construction debris.

3.08 PROTECTION:

A. Protect equipment and installations and maintain conditions to ensure that coatings, finishes and cabinets are without damage or deterioration at time of Substantial Completion.

3.09 CLOSEOUT:

A. Instructions, training, and manufacturer’s service representative:
    1. Provide on-site instructions and training of Owner's personnel as specified.
    2. Provide on-site services of a manufacturer's authorized service representative as specified.

END OF SECTION 26 05 10

SECTION 26 05 19 – LOW-VOLTAGE ELECTRICAL POWER CONDUCTORS AND CABLE

PART 1 - GENERAL

1.01 RELATED DOCUMENTS:

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY:

A. This Section includes the requirements for furnishing and installing (including terminations) all low-voltage electrical conductors, cable, and accessories.

1.03 RELATED REQUIREMENTS:

A. Section 26 05 26 – Grounding and Bonding for Electrical Systems.
B. Section 26 05 33 – Raceways, Boxes, Seals and Fittings for Electrical Systems.
C. Section 26 05 53 –Identification for Electrical Systems.
D. Section 26 50 00 – Lighting.

1.04 REFERENCE STANDARDS:

A. Publication Dates: Comply with standards in effect as of the date of the Contract Documents unless otherwise indicated.
B. American Society for Testing and Materials (ASTM):
C. ASTM B3 – Standard Specification for Soft or Annealed Copper Wire.
D. ASTM B8 – Standard Specification for Concentric-Lay-Stranded Copper Conductors, Hard, Medium-Hard, or Soft.
E. ASTM B33 – Tin-Coated Soft or Annealed Copper Wire for Electrical Purposes.
F. ASTM B172 – Rope-Lay Stranded Copper Conductors Having Bunch-Stranded Members, for Electrical Conductors.
G. ASTM B189 – Standard Specification for Lead-Coated and Lead-Alloy-Coated Soft Copper Wire for Electrical Purposes.
H. Insulated Cable Engineers Association (ICEA):
I. ANSI/ICEA S-81-570 – 600Volt Rated Cables of Ruggedized Design for Direct Burial Installations as Single Conductors or Assemblies of Single Conductors.
J. ANSI/ICEA S-105-692 – 600Volt Single Layer Thermoset Insulated Utility Underground Distribution Cables.
K. ICEA T-29-520 – Vertical Cable Tray Flame Tests at 210,000 Btu.
L. Institute of Electrical and Electronics Engineers (IEEE):
M. IEEE 1202 – Flame-Propagation Testing of Wire and Cable.
N. InterNational Electrical Testing Association (NETA):
O. ANSI/NETA ATS – Acceptance Testing Specifications for Electrical Power Equipment and Systems.
P. National Electric Manufacturers Association (NEMA) and Insulated Cable Engineers Association (ICEA):
Q. NEMA WC57/ ICEA S-73-532 – Standard for Control, Thermocouple Extension, and Instrumentation Cables.
R. NEMA WC70/ ICEA S-95-658 – Power Cables Rates 2000 V or Less For The Distribution of Electrical Energy.
S. National Fire Protection Association (NFPA):
T. NFPA 70 – National Electrical Code (NEC).
U. Underwriters Laboratories, Inc. (UL):

V. UL 44 – Thermoset Insulated Wires and Cables.
W. UL 83 – Thermoplastic-Insulated Wires and Cables.
X. UL 854 – Service Entrance Cables.
Y. UL 1277 – Standard for Electrical Power and Control Tray Cables with Optional Optical Fiber Members.

1.05 DEFINITIONS:

A. Burns & McDonnell type designations, such as SE2, CEV1, and BC2 indicated or specified, are for identification purposes only and are not intended to correspond to any trade designation. Burns & McDonnell type designations are defined by the Wire and Cable Specification Sheets located at the end of this section.

1.06 SUBMITTALS:

A. Submit ats specified in Division 01 and Section 26 05 10 – General Electrical Requirements for administrative and procedural requirements for submittals.
B. Product Data: For each type of product including:
C. Data sheets for each wire and cable type specified.
D. Data sheets for wire and cable accessories.
E. Cable manufacturer's approval of splicing and terminating materials.
F. Cable manufacturer's approval of pulling compounds.
G. Cable manufacturer's installation requirements such as maximum pulling tensions, sidewall pressures, minimum bending radii, and other considerations.
H. Other Equipment and Materials to be used.

1.07 DELIVERY, STORAGE, AND HANDLING:

A. Packing and shipping: Cable shall be shipped on reels such that it is protected from mechanical injury. Each end of each length of cable shall be hermetically sealed with manufacturer’s end caps and securely attached to the reel. Cable reels shall be delivered vertically to allow for easy unloading. There shall be a minimum of six (6) inches between the top of the cable and the edge of the reel. Any cable reels that are not shipped vertically may be rejected upon delivery.
B. Storage and protection: Cable stored and/or cut on site shall have the ends turned down, and sealed with cable manufacturer’s standard cable end seals, or field-installed heat-shrink cable end seals.
C. Cable shall be stored on-site in a fashion that will prevent mechanical damage to the cable. Cable shall be stored away from areas that may have splashing or airborne debris. If necessary, cable shall be protected from hazards by visqueen, tarps, or similar materials. Store at secured and insured warehouse location.

PART 2 - PRODUCTS

2.01 MANUFACTURERS:

A. Wire and Cable: Acceptable manufacturers for each wire and cable type will be manufacturers that meet all the requirements listed on the Wire and Cable Specification Sheets.
B. Cable Connectors for Control and Instrument Cable:
C. TE Connectivity Ltd.
D. Hollingsworth Solderless Terminal Company.
E. Panduit Corporation.
F. 3M Company.

G. Thomas and Betts Company, Inc.
H. Cable Connectors for Power Cable:
I. TE Connectivity Ltd.
J. Thomas and Betts Company, Inc.
K. 3M Company.
L. Panduit Corporation.
M. Termination and Splice Kits:
N. 3M Company.
O. Raychem.
P. Shielded VFD Power Cable Termination Kits:
    1. Service Wire Company.
    2. Southwire Company LLC.
    3. Engineer approved equal.
Q. Tape and Insulation Putty:
    1. 3M Company.
R. Cable Ties:
    1. TE Connectivity Ltd.
    2. Avery-Dennison Corporation.
    3. Panduit Corporation.
    4. 3M Company.
    5. Thomas and Betts Company, Inc.
S. Cable Supports:
    1. Emerson - O. Z./ Gedney Company.
    2. Hubbell, Kellems Grips.
T. Terminal Blocks:
    1. Allen Bradley.
    2. Buchanan.
    3. Phoenix Contact.
    4. Square D Company.
    5. Weidmuller.
U. Cable Identification Tags:
    1. Allen Marking Products.
    2. Panduit.
    3. Specialty Products Company.
    4. Thomas and Betts.
    5. Brady Corporation.
V. Cable Fire and Smoke Stop Fittings:
    1. Crouse Hinds.
    2. Nelson Electric.
    3. Emerson – O. Z./Gedney Company.

2.02 WIRE AND CABLE:

A. Wire and cable shall be furnished in accordance with the specification sheets at the end of this Section.

2.03 CONNECTORS:

A. General Requirements:
    1. Designed and sized for specific cable being connected.

2. Solderless, pressure type connectors constructed of non-corrodible tin plated copper.
3. Application tooling for connectors shall contain die or piston stops to prevent over crimping and cycling or pressure relief to prevent under crimping. Dies of all application tooling shall provide dot or wire size coding for quality control verification. All tooling shall be manufactured by the connector manufacturer.

B. Power Connectors (10 AWG and Smaller) 600V and Below:
1. "Scotchlok" pre-insulated spring wire connectors.
2. Buchanan open end copper splicing caps, applied with "Lok Seal" tool, with nylon snap on insulators.

C. Power Connectors (sizes 8 to 4 AWG) 600V and Below:
1. Non-insulated ring tongue type.
2. Ring tongue sized to match terminal stud size.
3. Brazed barrel seam.
4. Application tooling designed to crimp the wire barrel (conductor grip) with a one-step crimp.

D. Power Connectors (sizes 2 AWG to 750 MCM) 600V and Below:
1. Non-insulated one hole rectangular tongue for sizes 2 AWG through 3/0 AWG and two hole rectangular tongue for 4/0 AWG through 750 MCM.
2. Acceptable manufacturers' cross reference chart is listed at end of this Section.

E. Power Connectors (sizes 2 AWG to 750 MCM) above 600V:
1. Non-insulated one hole rectangular tongue for sizes 2 AWG through 3/0 AWG and two hole rectangular tongue for 4/0 AWG through 750 MCM.
2. Voltage rating equal or greater than that of the cable being used.
3. Application tooling shall be hydraulically operated.

F. Control, Instrument, and Specialty Cable Connectors:
1. Tin plated copper.
2. Vinyl or nylon pre-insulated ring tongue type. Spade lugs will not be permitted.
3. Vinyl pre-insulated spring type spade terminals. (Hollingsworth "Mini Spring Spades"; Thomas and Betts "Locking Fork"; Panduit "Locking Fork.")
4. Sized to match terminal stud size.
5. Have insulation grip sleeve to firmly hold to cable insulation.
6. Insulation grip sleeve shall be funneled to facilitate wire insertion and prevent turned back strands.
7. Application tooling designed to crimp the wire barrel (conductor grip) and the insulation grip sleeve with a one-step crimp.

2.04 MOTOR LEAD TERMINATION/SPLICE (LOW VOLTAGE, 600 V AND BELOW, POWER CABLE):

A. Splices shall be made using compression type connectors bolted together. The compression type connectors shall be properly sized for the cables. Reference acceptable connector manufacturer's cross reference chart.

B. Splice to be covered with heat shrinkable tubing connector insulators or slip-on rubber boot or sleeve.

C. Splicing shall be done in accordance with the instructions provided with the Raychem brand MCK Motor Connector Kit or 3M Company 5300 Series Motor Lead Splice Kit.

2.05 VFD CABLE TERMINATION KITS:

A. Provide termination kit designed for terminating VFD cable shield.

B. Flat tinned copper braid with woven tinned copper construction conforming to ASTM B-33, constant force spring clamp, and adhesive-backed copper foil tape for EMI/RFI shielding conforming to UL 510 for flame retardancy.
C. Conform to requirements of ASTM B-33 and UL 510.
D. Termination kit shall be designed for use with VFD cable and approved by the cable manufacturer.

2.06 CABLE SUPPORTS:
A. Cable supports for cables in vertical conduit risers shall be Emerson – O.Z. Gedney Type "R" wedging plug type or approved equal.
B. Kellems stainless steel basket type wire mesh grip for cables in vertical cable tray.
C. Stainless steel cable clamps every 12 inches in non-horizontal ladder type cable tray.

2.07 CABLE TIES:
A. Nylon self-locking type.
B. Have a normal service temperature range of 40°C to 85°C.
C. Be weather resistant type for outdoor use.
D. TE Connectivity "AMP TY," Avery-Dennison "BAR LOK," Panduit Corporation "PAN TY," Thomas & Betts "TY RAP," or 3M Brand cable ties.

2.08 TERMINAL BLOCKS:
A. For mounting in terminal boxes (TBs):
1. Designed and sized for the cables being terminated.
2. Block rated 600V.
3. Binding screw type terminals for power cables and spring-cage terminals for control and instrument cables.
4. Rated current carrying capacity equal to or greater than the cable being terminated.
5. Marking strip.
B. For Mounting in Cabinets, Panels, Control Boards, etc.:
1. Designed and sized for the cables being terminated.
2. Block rated 600V.
3. Binding screw type terminals for power cables and current transformer circuits and spring-cage terminals for control and instrument cables.
4. Rated current carrying capacity equal to or greater than the cable being terminated.
5. Marking strip on blocks for power cables and control and instrument cables.
6. Short circuit strips with one shorting screw for each terminal for current transformer circuits.
7. Shorting type terminal blocks rated for 10 AWG shall be used for all cables connected to current transformers (CTs).

2.09 CABLE IDENTIFICATION TAGS:
A. Designed to provide a permanent wire and cable identification system.
B. Show complete cable number. Cable numbers are defined in the Cable Schedule and/or Contract Drawings.
C. Cable numbers may be typed or printed and shall be legible and permanent.
D. Character size for cable numbers shall be a minimum of 1/8 inch.
E. Material shall be vinyl-cloth or other non-metallic material and shall be impervious to moisture.

F. Be securely attached to cables and accessible for inspection.
G. Cable identification tags, marking and attachment methods shall be subject to approval of Engineer.
H. Coordinate with the requirements of Section 26 05 53 – Identification for Electrical Systems.

2.10 CABLE FIRE AND SMOKE STOP FITTINGS:
A. Rating shall equal or exceed the fire rating of the fire wall, floor, or ceiling penetrated.
B. Fitting shall be sized for cable diameter and quantity of cable installed.
C. Fitting shall be UL labeled.

PART 3 - EXECUTION

3.01 INSTALLATION:
A. General Requirements:
1. Install in conduit, tray, duct system, or direct burial as indicated.
2. Cable shall not be subjected to pulling tensions or sidewall pressures in excess of the manufacturer's recommendations.
3. Attach pulling grips over the cable sheath to prevent slipping of the insulation.
4. Do not subject cable to bending radius less than those recommended by the cable manufacturer or as noted below (whichever is greater) during or after installation:
a. Eight times the cable outside diameter for 600V or lower rated cables.
5. Install intermediate pull boxes as indicated or as required to avoid subjecting cable to excessive pulling tension or sidewall pressures.
6. Support cables at connections or termination points such that any strain on cable will not be transmitted to the connection or termination.
7. Install cable supports in vertical runs of tray or conduit, at boxes and at terminations in equipment, and as required to meet intermediate support requirements of National Electrical Code (NEC).
8. All pulling compounds shall be approved by wire and cable manufacturer as being compatible with cable materials.
9. Attach a cable identification tag to each cable at all termination or end points.
10. Install fire and smoke stop fittings at all cable penetrations of fire rated walls, floors, and ceilings.
B. Power (600V and Below), Control, Instrument, and Specialty Cable:
1. Install metallic barrier in all tray and boxes to separate power, control, and instrumentation from low level signal (50V or less) instrumentation circuits where run in the same tray or box.
2. Secure with cable ties in cable tray risers at intervals not to exceed 3 feet.
3. Tie together with cable ties all single conductor cable on each individual circuit in each junction box, equipment or manhole, and in cable tray, at intervals not to exceed 6 feet.
4. Attach a cable identification tag to each cable.
a. Tag shall be applied at each terminal to identify the circuit and cable.
(1) Multi conductor control cable identification tags shall include the cable circuit number and corresponding color letter at each termination.
b. Attach fiber tags with cable ties.
c. Use nylon ties and identification tabs color coded as follows:
(1) 480V circuits – Red.
(2) 277, 240, or 208Vac circuits – Orange.

(3) 120V circuits – White.
(4) Control cables – Natural Nylon.

5. Insulation Color Coding for Phase Identification:
   a. Color code 600-volt insulated, service entrance, feeder, and branch circuit conductors with factory-applied colored insulation for No. 8 AWG and smaller (except: No. 6 AWG and smaller for green ground wire); 1-inch band of colored tape at all splices and terminations for No. 6 AWG and larger (except: No. 4 AWG and larger for green ground wire) as follows:

Phase	208Y/120 Volts	480Y/277 Volts
A	Black	Brown
B	Red	Orange
C	Blue	Yellow
Neutral	White	Gray
Ground	Green	Green

   b. Tag each individual conductor or wire with wire markers as follows:
      (1) With terminal designation indicated on schematic diagrams or given on manufacturer's equipment drawings.
      (2) At each terminal.
      (3) In addition to specified circuit tags.
   c. Terminate and ground, control, instrument, and specialty cable shields as indicated and recommended by the manufacturer of the equipment being connected. In general, ground the shields at the control panels.
   d. Terminate shields for VFD cables at both the source and load using VFD cable termination kit.
   e. Intermediate cable splices shall not be allowed when installing power, control, and instrument wiring except when spicing to lead wires provided with the equipment or device, or unless approved by the Engineer prior to cable installation.
   f. Control and instrument and thermocouple cable splices shall be as follows:
      (1) Made only in junction or terminal boxes.
      (2) Made on terminal blocks with marking strips.
      (3) Conductor color coding shall be maintained.
      (4) For shielded cables, shield continuity and isolation shall be maintained.
      (5) Thermocouple cable splices to be made only on terminal blocks which correspond to thermocouple type used.
   g. Power cable (600V or below) splices and motor terminations shall be as follows:
      (1) Made only in junction or terminal boxes.
      (2) Splices shall be made using compression type connectors bolted together.
      (3) Splice to be covered with a heat shrinkable connector insulator.
   h. High-Temperature Wiring:
      (1) Install from device to a terminal box for all devices which by their location have the body of the device or electrical connection subject to ambient temperatures in excess of 185°F. Typical locations are feed water heaters, burner fronts, boiler penthouse, and deaerator.
      (2) Locate terminal box far enough from the source of heat so that the temperature does not exceed 175°F. This distance generally is between 3 and 5 feet.

(3) Replace with high-temperature wire any wiring installed by this Contract that is damaged by excessive heat.

6. Lighting Cable: Install as specified in Division 26.
7. Ground Cable: Install as specified in Division 26.
8. Control and Instrument Cable: Install as specified this Section and Division 40.
9. Communications Cable: Install as specified in this Section and Section 40 66 00 – Process Control Networks.

C. Direct buried cables:
1. Excavation and backfilling shall be as specified in Division 31.
2. Installation:
a. Install in trenches at least 36 inches below finished grade, except at railroad crossings and under roads or other paved areas exceeding 5 feet in width.
b. Where direct burial cable crosses under railroad tracks, roads, or other paving exceeding 5 feet in width, install cable in concrete encased Schedule 40 PVC conduit. If railroad tracks or paving are in place when the cable is to be installed, a wrought iron pipe driven under the tracks or paving may be used in lieu of the nonmetallic conduit. Extend conduit or pipe at least 5 feet beyond each side of railroad tracks and at least 1 foot beyond the edge of paving.
c. The bottom of the trench shall be smooth and free of stones and sharp objects. Where bottom of trench comprises material other than sand or earth, place a 3 inch layer of sand- or stone free earth on the bottom of the trench and compact to the approximate density of the surrounding firm soil.
d. Unreel the cables in place along the side of or in the trench and carefully place on the sand or earth bottom. Prereeling cables into the trench from a fixed reel position will not be permitted, except as required to pull the cables through conduits under railroad tracks or paving.
e. Where cables cross, provide a separation of at least 3 inches, unless the cables are protected by nonmetallic sleeves at the crossing.
f. The radius of bends in cables shall be not less than 10 times the diameter of the cable. In no case shall cables be left under longitudinal tension.
g. The first layer of backfill shall be of sand- or stone free earth.
h. Place a 1 inch treated plank, not less than 8 inches wide, or approved equal protection, approximately 3 inches above the cable.
i. Place a 6 inch wide yellow Mylar marking tape approximately 12 inches above the buried cable. The tape shall have the following wording printed at intervals along the tape: "Caution Electrical Lines Buried Below." Tape shall be as manufactured by Allen Marking Products.
j. Where cuts are made in paving, restore the paving and subbase to original condition.
k. Center direct burial cable in an entrance to a conduit or duct line. An approved waterproof non-hardening mastic compound shall be used to facilitate the centering.
3. Locate cable markers:
a. Locate as indicated.
b. Place approximately 2 feet to the right of the cable when facing the longitudinal axis of the cable and in the direction of the electrical load.
c. The marker shall be Class B concrete, 6 inch square or round section by 3 feet long. The top edge of the marker shall have a 1/2 inch chamfer all around. The letter "C" with two arrows shall be impressed or cast on top of the marker. One arrow shall

be located below the letter and shall point toward the cable. When pointing toward a splice, the circle shall be impressed in the shaft of the arrow. The second arrow shall be located adjacent to the letter and shall point in a direction parallel to the cable. The letter and arrow adjacent to it shall each be approximately 3 inches long. The arrow under the letter shall be approximately 2 inches long. The letter and arrows shall be V shaped and shall have a width of stroke at least 1/4 inch at the top and depth of 1/4 inch.

d. Where the cable changes direction, the arrow located adjacent to the letter shall be cast or impressed with an angle in the arrow approximately the same as the angular change of the cable run. The top of the marker shall protrude not more than 2 inches above finished grade.

D. Cable Connections and Terminations:
1. Make up clean and tight to assure a low-resistance joint.
2. Make only in terminal boxes, equipment, or other accepted enclosures and not in conduit or cable tray.
3. Install all connectors with tooling manufactured by the connector manufacturer and as specified.

3.02 FIELD QUALITY CONTROL:

A. Perform tests and inspections and prepare test reports. Submit test reports as specified.

B. General Requirements:
1. Test all wire, cable, and electrical equipment installed or connected by Contractor to assure proper installation, setting, connection, and functioning as indicated or to conform to Contract Documents and manufacturer's instructions.
2. Conduct all tests except megger insulation testing in the presence of Engineer and/or Owner and under the supervision of Equipment manufacturer's field engineer.
3. Include all tests recommended by the Equipment manufacturer unless specifically waived by Engineer.
4. Include all additional tests issued by Engineer that he deems necessary because of field conditions to determine that Equipment and Material and systems meet requirements of Contract Documents.
5. Include all tests recommended by the NETA Acceptance Testing Specifications.
6. The contractor shall be responsible for all damage to Equipment or Material due to improper test procedures or test apparatus handling.

C. Cable Testing Requirements:
1. Megger all 600V insulated power cable with a 1000Vdc megger for one minute, and values must not be less than 50 megohms per NETA ATS 7.3. Determine the values with all switchboards, panelboards, fuse holders, switches, and overcurrent devices in place. Do not connect motors and transformers during meggering. Megger wire and cable after installation and not on the cable reel.
2. Cables with conductors failing this test shall be removed and replaced.
3. Provide all phasing tests and make all changes necessary to assure proper rotation of all motors, the correct phasing and phase sequence of all circuits susceptible to being paralleled, the proper polarity on all instrument transformer wiring, and such other phasing tests as may be required for the equipment being connected under this Contract.

D. 600V Control Cable:
1. Check all control cable for rightness of terminal contacts.

2. Megger the specific control cables selected by Resident Project Representative. The quantity of cables required to be meggered will not exceed 10% of the control cable installed by this Contract. Megger as described for 600V power cable after installation, but with cables disconnected from control panels and other equipment.
3. All control cables shall have a continuity check performed on each conductor to ensure the conductance of each wire before the wires are terminated.
4. Cables with conductors failing this test shall be removed and replaced.

E. 300V Instrument Cable:
1. Megger the specific instrument cables selected by Resident Project Representative. The quantity of cables required to be meggered will not exceed 10% of the instrument cable installed by this Contract. Insulation resistance shall be a minimum of 1,000 megohms per 1,000 feet.
2. All instrument cables shall have a continuity check performed on each conductor and shield to ensure the conductance of each wire and shield before the wires are terminated.
3. Cables with conductors or shields failing this test shall be removed and replaced.

F. Quality Assurance:
1. Test Reports:
   a. Submit as specified in Division 01.
   b. Maintain a written record of all tests showing date, personnel making tests, equipment used, Equipment or Material tested, tests performed, and results.
   c. Notify Engineer two weeks prior to commencement of all testing except for megger tests.

BARE COPPER GROUND CABLE

GENERAL REQUIREMENTS:

Annealed, tin-coated, bare copper (ASTM B33)

SPECIFIC REQUIREMENTS:

1. Solid in sizes 4 AWG and smaller.

2. Class B stranded in sizes 2 AWG and larger (ASTM B8)

Burns & McDonnell Engineering Company Engineers – Architects – Consultants Kansas City, Missouri	WIRE AND CABLE SPECIFICATION SHEET	
	CEV1 **B&McD TYPE:**	**TC** **NEC TYPE:**

600 VOLT – UNSHIELDED MULTI-CONDUCTOR CONTROL CABLE

GENERAL REQUIREMENTS:

CONDUCTOR: Class B or C stranded annealed copper (NEMA WC57/ICEA S-73-532 Section 2). Conductor shall be tin-coated.

INSULATION: Cross-linked polyethylene "XLPE" (NEMA WC57/ICEA S-73-532 Section 3) and rated as Type XHHW-2. Color coding shall be Method 1 (NEMA WC57/ICEA S-73-532 Appendix E, Paragraph. E3.1) using color pigmented compounds with colors as designated by Table E-2 (K-2).

CABLE JACKET: Polyvinyl chloride "PVC" (NEMA WC57/ICEA S-73-532 Section 4.2) and rated for outdoor use.

IDENTIFICATION: Surface printing on the cable shall show manufacturer's name, cable type (TC), insulation type (XHHW-2), number and size of conductors, voltage rating, and Underwriters Laboratories label (UL).

SPECIFIC REQUIREMENTS:

TEMPERATURE RATING: Cable shall be suitable for operation under the following maximum conductor temperatures:

90°C --- Continuous, wet or dry locations

CONDUCTOR SIZE: #14 AWG

INSULATION THICKNESS:

Conductor Size (AWG)	Insulation Thickness (Mils) (NEMA WC57 / ICEA S-73-532 Table 3-1)
14 - 11	30

JACKET THICKNESS:

Calculated Diameter Of Cable Under Jacket (inches)	Jacket Thickness (Mils) (NEMA WC57 / ICEA S-73-532 Table 4-1)
0.425 or less	45
0.426 - 0.700	60
0.701 - 1.500	80
1.501 - 2.500	110
2.501 or larger	140

FACTORY TESTS: All cable shall be tested in accordance with requirements of NEMA WC57/ICEA S-73-532 Section 6, ICEA 210,000 BTU flame test (ICEA T-29-520), and UL1277.

CERTIFICATION: Cables shall be certified to be in conformance with all applicable requirements of NEMA WC57/ICEA S-73-532, ICEA T-29-520, and UL1277.

600 VOLT – SHIELDED INSTRUMENT CABLE (WITH SHIELDED TWISTED PAIRS/TRIADS)

GENERAL REQUIREMENTS:

CONDUCTOR:	Class B stranded annealed copper (NEMA WC57/ICEA S-73-532 Section 2). Conductor shall be tin-coated.
INSULATION:	Polyvinyl chloride "PVC" (NEMA WC57/ICEA S-73-532 Section 3). Color coding shall use pigmented compounds as follows; one conductor coded white, the second conductor coded black, and if the cable is for a triad, the third conductor shall be coded red. Each pair or triad will be sequentially numbered by surface printing.
CONDUCTOR JACKET:	Nylon (NEMA WC57/ICEA S-73-532 Section 3)
PAIR SHIELD:	Aluminized mylar or polyester tape with tinned copper drain wire.
SHIELD ISOLATION TAPE:	Mylar or polyester tape.
CABLE SHIELD:	Aluminized mylar or polyester tape with tinned copper drain wire.
CABLE JACKET:	Polyvinyl chloride "PVC" (NEMA WC57/ICEA S-73-532 Section 4.2).
IDENTIFICATION:	Surface printing on the cable jacket shall show manufacturer's name, cable type (TC), insulation type, conductor type, conductor size, voltage rating, and Underwriters Laboratories label (UL).

SPECIFIC REQUIREMENTS:

TEMPERATURE RATING	Cable shall be suitable for operation under the following maximum conductor temperatures: 90°C --- Continuous dry locations 75°C --- Continuous wet locations
CONDUCTOR SIZE:	#18 AWG
INSULATION THICKNESS:	All conductors to have 15 mils of PVC and 4 mils nylon insulation. (NEMA WC57/ICEA S-73-532, Table 3-1).

JACKET THICKNESS:

Calculated Diameter Of Cable Under Jacket (Inches)	Thickness (Mils) (NEMA WC57 / ICEA S-73-532 Table 4-1)
0.425 or less	45
0.426 - 0.700	60
0.701 - 1.500	80
1.501 - 2.500	110
2.501 or larger	140

FACTORY TESTS:	All cable shall be tested in accordance with requirements of NEMA WC57/ICEA S-73-532 Section 6, ICEA 210,000 BTU flame test (ICEA T-29-520), and UL1277.
CERTIFICATION:	Cables shall be certified to be in conformance with all applicable requirements of NEMA WC57/ICEA S-73-532, ICEA T-29-520, and UL1277.

SECTION 26 05 26 – GROUNDING AND BONDING FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.01 RELATED DOCUMENTS:

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY:

A. This Section specifies electrical grounding and bonding as indicated on Drawings and schedules and as specified herein. Grounding and bonding Work is defined to encompass systems, circuits, and equipment.

B. Type of electrical grounding and bonding Work specified in this Section includes the following:
   1. Solidly grounded. Grounded through a ground connection in which no impedance has been intentionally inserted.

C. Applications of electrical grounding and bonding Work in this Section include the following:
   1. Underground metal piping.
   2. Underground metal water piping.
   3. Underground metal structures.
   4. Metal building frames.
   5. Electrical power systems.
   6. Grounding electrodes.
   7. Ground test wells.
   8. Counterpoise grounding loops.
   9. Separately derived systems.
   10. Raceways.
   11. Service equipment.
   12. Boxes and enclosures.
   13. Equipment.
   14. Lighting standards and poles.
   15. Lightning protection systems.
   16. Cable tray.
   17. Chain-link fences and gates.

D. Refer to other Division 26 Sections for wires/cables, electrical raceways, boxes and fittings, and wiring devices which are required in conjunction with electrical grounding and bonding Work; not Work of this Section.

1.03 RELATED REQUIREMENTS:

A. Section 26 05 33 - Raceways, Boxes, and Supports for Electrical Systems.
B. Section 26 05 53 - Identification for Electrical Systems.
C. Section 13 46 00 - Lightning Protection Systems.
D. Section 26 43 13 - Surge Protection Devices.
E. Section 31 20 50 – Site Preparation and Earthwork.

1.04 REFERENCE STANDARDS:

A. Publication Dates: Comply with standards in effect as of date of the Contract Documents unless otherwise indicated.

B. American Society for Testing and Materials (ASTM):
   1. ASTM B3 - Soft or Annealed Copper Wire.

2. ASTM B8 - Concentric Lay Stranded Copper Conductors, Hard, Medium-Hard, or Soft.
3. ASTM B33 - Tin-Coated Soft or Annealed Copper Wire for Electrical Purposes.

C. Institute of Electrical and Electronic Engineers (IEEE): Comply with applicable requirements and recommended installation practices of the following IEEE Standards pertaining to grounding and bonding of systems, circuits, and equipment:
1. IEEE 80 - Guide for Safety in Substation Grounding.
2. IEEE 81 - Guide for Measuring Ground Resistance, and Potential Gradient in the Earth.
3. IEEE 141 - Recommended Practice for Electric Power Distribution for Industrial Plants.
4. IEEE 142 - Recommended Practice for Grounding Industrial and Commercial Power Systems.

D. National Electrical Contractors Association (NECA) Installation Standards.

E. National Fire Protection Association (NFPA):
1. NFPA 70 - National Electrical Code (NEC): Comply with applicable local electrical code requirements of the authority having jurisdiction, and NEC as applicable to electrical grounding and bonding, pertaining to systems, circuits, and equipment.
2. NFPA 780 - Lightning Protection Code.

F. Underwriters Laboratories (UL): Comply with applicable requirements of the following standards. Provide grounding and bonding products which are UL-listed and labeled for their intended usage.
1. UL 96A - Installation Requirements for Lightning Protection Systems.
2. UL 467 - Electrical Grounding and Bonding Equipment.
3. UL 486A - Wire Connectors and Soldering Lugs for Use with Copper Conductors.
4. UL 869 - Electrical Service Equipment.
5. UL 891 - Switchboards.

1.05 SUBMITTALS:

A. Refer to Division 01 and Section 26 05 10 - General Electrical Requirements for administrative and procedural requirements for Submittals.

B. Includes, but not limited to, the following:
1. Product Data: Submit manufacturer's data on all grounding and bonding components and associated accessories.
2. Qualification Data: For Qualified Testing Agency and testing agency's field Supervisor.
3. All field test reports.

1.06 QUALITY ASSURANCE:

A. Testing Agency Qualifications: Must be a member company of NETA or an NRTL.
1. Testing Agency's Field Supervisor: Currently certified by NETA to supervise on-site testing.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

C. Comply with UL 467 for grounding and bonding materials and equipment.

PART 2 - PRODUCTS

2.01 MANUFACTURERS:
