00485.02 Project Specific Workforce Monthly Report
00485.02.1 Workforce Monthly Report Instructions
00485.03 Company-Wide Workforce Monthly Report
00485.04 CREO KC Construction Employee Identification Report Form
00485.05 CREO 14 Affirmative action Program Affidavit
00485.06 CREO Affidavit of Training Program
00485.07 CREO Contract Assurance Addendum
00490 Pre-Contract Bidder's Certification Form

CONTRACTING REQUIREMENTS

00515 Construction Contract Required Submissions
00515.01 Employee Eligibility Verification Affidavit
00515.02 MOU for E-Verify Employment
00560 Missouri Project Exemption Certificate
00560.01 Kansas City Missouri Tax Exempt Certificate
00610 Performance and Maintenance Bond Form
00615 Payment Bond Form
00620 Insurance Certificate Sample
00630 Revenue Clearance Release Authorization
00700 General Conditions
00800 Supplementary Conditions
00830 Wage Rate Requirements - ***Platte***

00830.1 Federal Prevailing Wage Heavy
00830.2 Federal Prevailing Wage Building
00910 Construction Addenda
00930 Request for Interpretation Form
00930.01 Request for Interpretation Form Log
00931 Supplemental Design Instructions
00932 Request for Proposal
00933 Request for Proposal Log
00940 Change Order Form
00945 Work Change Directive
00993 CSSRF Drop-in Specs
00990.01 Attachment 1 Missouri DBE Requirements.

DIVISION 1 - GENERAL REQUIREMENTS

01000 General Project Requirements
01015 Specific Project Requirements
01019 Closeout procedures
01020 Record Documents
01021 Operation Maintenance Data
01110 Summary of Work
01140.01 Process & System, Shutdown Constraints Schedule
01140.02 Operational Changes Control Plan Documents
01210.01 Allowance Authorization
01290.01 Application for Payment
01290.02 Schedule of Values
01290.09 Subcontractors and Major Material Suppliers List
01290.11 Daily Labor Force Report
01290.12 Certificate of Substantial Completion
01290.13 Punch List
01290.14 Contractor Affidavit for Final Payment
01290.15 Subcontractor Affidavit for Final Payment
01300 Submittals
01320.01 Daily Field Observation Report
01320.02 Periodic Field Observation Report
01320.03 Working Day Report
01322 Photographic Documentation
01329 Safety Plan
01330.01 Letter of Transmittal
01335 Documentation Management
01340 Project BIM Coordination
01340.A Attribute Standard
01352 Selective Alterations and Demolition
01354 Hazardous Material Procedures
01400 Quality Control
01410 Regulatory Requirements
01433 Manufacturer Field Services
01480 Water Tightness
01500 Temporary Facilities
01565 Asbestos Abatement
01566 Cleanup Operations
01570 Temporary Erosions & Sediment Control

01580 Project Signs
01581 Public Communications
01600 Product Delivery Storage & Handling
01615 Equipment Identification & Tagging ~
01630 Substitution Request
01664 Training
01757 Commissioning
01810 Project Design Criteria
01 43 39 Mockups

DIVISION 2 – DEMOLITION
02 41 00 Demolition

DIVISION 3 – CONCRETE
03 10 00 Concrete Formwork
03 15 00 Vapor Retarder
03 20 00 Concrete Reinforcement
03 30 00 Concrete
03 41 00 Precast Structural Concrete
03 52 16 Low Density Concrete Fill

DIVISION 4 – MASONRY
04 20 00 Unit Masonry

DIVISION 5 – METALS
05 05 19 Post Installed Anchors
05 12 00 Steel
05 45 00 Aluminum

DIVISION 6 - WOOD AND PLASTICS
06 10 00 Rough Carpentry
06 41 16 Plastic Laminate Clad Architectural Cabinets
06 85 81 Fiber Reinforced Plastic Covers

DIVISION 7 - THERMAL AND MOISTURE PROTECTION
07 16 00 Bituminous Dampproofing
07 41 13. 16 Standing Seam Metal Roof Panels
07 42 93 Soffit Panels
07 44 00 Concrete Faced Panels
07 54 23 Thermoplastic Polyolefin Roofing
07 62 00 Sheet Metal Flashing and Trim
07 71 00 Roof Specialties
07 72 53 Snow Guards
07 84 13 Penetration Firestopping
07 84 43 Joint Firestopping
07 92 00 Joint Sealants
07 92 19 Acoustical Joints and Sealants

DIVISION 8 - DOORS AND WINDOWS
08 16 13 Fiberglass Doors and Frames
08 31 13 Access Doors and Frames
08 33 23 Overhead Coiling Doors
08 34 83 Floor Access Doors
08 41 13 Aluminum-Framed Entrances and Storefronts
08 45 23 Fiberglass-Sandwich-Panel Assemblies
08 71 00 Door Hardware
08 80 00 Glazing

DIVISION 9 – FINISHES
09 22 16 Non-Structural Metal Framing
09 29 00 Gypsum Board
09 51 13 Acoustical Panel Ceilings
09 65 13 Resilient Base & Accessories
09 84 00 Cementitious Wood Fiber Ceilings
09 90 00 Protective Coatings

DIVISION 10 – SPECIALTIES
10 14 16 Plaques
10 14 19 Dimensional Letter Signage
10 14 23 Panel Signage
10 22 39 Folding Panel Partitions
10 28 00 Toilet, Bath, and Laundry Accessories
10 44 13 Fire Protection Cabinets
10 44 16 Fire Extinguishers
10 51 13 Metal Lockers
10 73 16 Canopies

DIVISION 11 – EQUIPMENT
11 24 29.17 Horizontal Lifeline Fall Protection Systems
11 30 00 Appliances
11 53 23 Laboratory Refrigerators and Freezers

DIVISION 12 – FURNISHINGS
12 24 13 Roller Window Shades
12 35 53.13 Metal Laboratory Casework
12 36 61.16 Solid Surfacing Countertops
12 48 13 Entrance Floor Mats & Frames

DIVISION 13 - SPECIAL CONSTRUCTION
13 34 23 Fiberglass Buildings and Enclosures
13 46 00 Lighting Protection Systems

DIVISION 14 THRU 20 NOT USED

DIVISION 22 – PLUMBING
22 05 13 Common Motor Requirements for Plumbing Equipment
22 05 17 Sleeves and Sleeve Seals for Plumbing Piping
22 05 18 Escutcheons for Plumbing Piping

22 05 19 Meters and Gages for Plumbing Piping
22 05 23 General-Duty Valves for Plumbing Piping
22 05 29 Hangers and Supports for Plumbing, Piping and Equipment
22 05 53 Identification for Plumbing, Piping and Equipment
22 07 19 Plumbing Piping Insulation
22 11 16 Domestic Water Piping
22 11 19 Domestic Water Piping Specialties
22 11 23 Domestic Water Pumps
22 13 16 Sanitary Waste and Vent Piping
22 13 19 Sanitary Waste Piping Specialties
22 13 29 Sanitary Sewerage Pumps
22 33 00 Electric, Domestic-Water Heaters
22 42 13.13 Commercial Water Closets
22 42 16.13 Commercial Lavatories
22 42 16.16 Commercial Sinks
22 45 00 Emergency Plumbing Fixtures
22 47 13 Drinking Fountains

DIVISION 23 – HEATING, VENTILATION AND AIR CONDITIONING

23 05 13 Common Motor Requirements for HVAC Equipment
23 05 53 Identification for HVAC Piping and Equipment
23 05 93 Testing, Adjusting, and Balancing for HVAC
23 07 13 Duct Insulation
23 09 00 Instrumentation and Control for HVAC
23 31 13 Metal Ducts
23 33 00 Air Duct Accessories
23 34 23 HVAC Power Ventilators
23 36 00 Air Terminal Units
23 37 13 Diffusers, Registers and Grilles
23 37 23 HVAC Gravity Ventilators
23 74 13 Packaged Outdoor Central Station Air Handling Units
23 74 33 Makeup Air Units
23 81 13 Packaged Terminal Air Conditioners
23 82 39 Electric Unit Heaters

DIVISION 24 THRU 25 NOT USED

DIVISION 26 – ELECTRICAL

26 05 10 General Electrical Requirements
26 05 19 Low-Voltage Electrical Conductors and Cables
26 05 26 Grounding and Bonding for Electrical Systems
26 05 33 Raceways, Boxes, Seals, and Fittings for Electrical Systems
26 05 36 Cable Trays for Electrical Systems
26 05 43 Underground Duct Banks and Manholes
26 05 48 Vibration and Seismic Controls for Electrical Systems
26 05 53 Identification for Electrical Systems
26 05 73 Power System Studies
26 09 23 Lighting Control Equipment
26 22 13 Low-Voltage Distribution Transformers
26 24 13 Switchboards

26 24 14 Docking Station for Portable Generator
26 24 16 Panelboards
26 24 19 Motor Control Centers
26 27 26 Wiring Devices
26 28 13 Fuses
26 29 13 Enclosed Controllers
26 29 23 Variable-Frequency Motor Controllers
26 33 53 Static Uninterruptible Power Supply
26 43 13 Surge Protection Devices for Low Voltage Electrical Power Equipment
26 50 00 Lighting

DIVISION 27 NOT USED

DIVISION 28 – ELECTRONIC SAFETY AND SECURITY

28 10 00 Electronic Access Control and Intrusion Detection
28 15 23 Video Intercom Entry Systems
28 20 00 Video Surveillance System
28 31 00 Addressable Fire Alarm Systems

DIVISION 29 THRU 30 NOT USED

DIVISION 31 – EARTHWORK

31 11 00 Clearing and Grubbing
31 20 50 Site Preparation and Earthwork
31 23 33 Trenching & Backfilling for Open-Cut Construction
31 66 12 Subsurface Improvement

DIVISION 32 – EXTERIOR IMPROVEMENTS

32 12 17 Hot Mix Asphaltic-Concrete Pavement
32 15 00 Aggregate Surface Course
32 16 00 Curb, Gutter, Sidewalk, Median, and Paved Drainage
32 31 13 Chain Link Fence
32 92 00.10 Native Grasses
32 93 00 Trees and Shrubs
32 93 13 Ground Cover and Plants

DIVISION 33 – UTILITIES

33 01 30.19 Temporary Bypass Pumping Systems for Sewer Pipelines
33 11 00 Pressure Pipe
33 12 16 Utility Valves and Accessories
33 12 41 Vertical Turbine Pumps
33 31 50 Pipe Installation
33 32 22 Submersible Pumps
33 33 11 Gravity Piping

DIVISION 34 NOT USED

DIVISION 35 – WATERWAY AND MARINE CONSTRUCTION
35 20 16 Slide Gates

DIVISION 36 THRU 39 NOT USED

DIVISION 40 – PROCESS INTEGRATION
40 60 00 Process Control and Instrumentation - General Requirements
40 61 96 Process Control Software Programming and Reports
40 61 96A IO List
40 62 00 Computer System Hardware and Ancillaries
40 66 00 Process Control Networks
40 67 00 Process Control Panels and Hardware
40 68 00 Process Control Software
40 70 00 Instrument for Process Systems
40 70 00A Instrument List
40 71 90 Parshall Flume Liner

DIVISION 41 – MATERIAL PROCESSING AND HANDLING EQUIPMENT
41 22 00 Cranes and Hoists

DIVISION 42 NOT USED

DIVISION 43 – PROCESS INTEGRATION
43 11 38 Positive Displacement Blowers
43 23 57 Progressive Cavity Pumps
43 23 58 Rotary Lobe Pumps

DIVISION 44 – POLLUTION AND WASTE CONTROL EQUIPMENT
44 31 19 Odor Control System

DIVISION 46 – WATER AND WASTEWATER EQUIPMENT
46 05 13 Common Motor Requirements for Water and Wastewater Equipment
46 21 13 Coarse Screening Equipment
46 21 16 Screening Equipment
46 23 00 Grit Removal and Treatment Equipment
46 33 33 Polymer Blending and Feed Equipment
46 42 57 Large Bubble Mixing System
46 51 21 Medium Bubble Membrane Diffuser
46 53 60 Granular Sludge Biological Treatment Package
46 66 00 Ultraviolet Light Disinfection Equipment
46 71 33 Rotary Drum Thickener

APPENDIX A
Grit Removal System Pre-Selection Information

APPENDIX B
AGS System Preselection Information

APPENDIX C
Asbestos, Lead-Containing Paint, & Hazardous Materials Survey Report

APPENDIX D
Report of Subsurface Exploration & Geotechnical Engineering Evaluation

APPENDIX E
SKM electrical One Line Models WAITING ON B&M

INSTRUCTIONS TO BIDDERS

Project Number: 81000927/1698

Project Title: Todd Creek WWTP Expansion & Major Upgrades

(DBE)

1. Sealed Bids for the ***Todd Creek WWTP Expansion & Major Upgrades*** project will be received by the General Services Department at 4800 E 63rd Street, Kansas City, Missouri 64130 **until 2:00 P.M., February 3rd, 2026,** at which time bidding will be closed.

   a. All Bids will be opened and read aloud. The Bid Envelope must contain all required submissions to be included with the Bid. No Bid may be withdrawn for a period of ninety (90) days after the Bid is opened. Bid security shall likewise continue for the same ninety (90) days unless earlier released by the City. The successful Bidder shall comply with all Bidding and contract requirements. Bids, once opened and read, may not be withdrawn without forfeiture of the Bid security.

   b. All Bids shall be addressed to *the Senior Officer off Procurement Services Marzella N. Buckner*, shall state on the outside of the sealed Bid envelope "Bid Enclosed", title and Project number, and shall be deposited in the locked Bid box. All Bids must comply with the Bidding Requirements of Kansas City, Missouri (CITY).

2. Consideration of Bids

   a. The City will determine the lowest, responsive and responsible Bid. The City may reject any or all bids. If the City rejects all Bids, the City may: (1) resolicit Bids following the City's normal solicitation procedure; or (2) solicit Bids only from those Bidders that submitted a Bid pursuant to the original solicitation; or (3) use an expedited Bid submission schedule with or without readvertising or issuing any other public notice when the City determines that the delay from the normal City solicitation procedure would not be in the City's best interests.

   b. Alternates. If this solicitation includes Bid Alternates, the City, in its sole discretion, may include any, all or none of the Alternates in determining the lowest, responsive and responsible Bid. In determining lowest, responsive and responsible Bid, the City may include the Alternates in any combination and in any order or priority or choose none of the Alternates. The City may make this determination at any time after Bid Closing and prior to Contract award. The City will act in the best interest of the City in determining whether to include any, all or none of the Alternates and the combination and priority of any Alternates selected. If additional funding becomes available after Contract award, City may add any or all of the Alternates to the Contract by change order.

3. Evidence of Competency to Perform. Each bidder shall furnish with the bid satisfactory evidence of Bidder's competency to perform the proposed work. Such evidence of competency shall consist of the following:

   a. Completed Form 00410.01 Experience Reference Summary for three projects of similar scope performed within the past 5 years including the name, address and telephone number of the contact person having knowledge of the project and the dollar value of the project.

   b. Statement that, during the three (3) years immediately preceding the date of the Bid, Bidder has received no written notices of violations of any federal or state prevailing wage statute in which prevailing wage penalties were assessed against the Bidder or Bidder has been found in such but has made restitution to affected workmen and complied with any statutory penalty; and a

statement that Bidder is current on payment of Federal and State income tax withholdings and unemployment insurance payments

c. Statement that Bidder participates in a training program that facilitates entry into the construction industry and which may include an on-the-job or in-house training program. By submitting its Bid, Bidder is agreeing to timely submit during the 48 hours after Bid opening an affidavit of describing such program and Bidder's participation.

d. Identify the following Key Personnel proposed for the Project. (**NOTE:** Key Personnel must be committed to the Project for its duration and may not be removed or substituted without the City's prior written consent.)

   (1) GC Project Manager

   (2) On-Site Field Superintendent

   (3) QC/QA Manager

   (4) Safety Officer

e. For each of the Key Personnel, provide the following background information.

   (1) Years of employment with current employer

   (2) City of residence

   (3) Identify any other projects this person will be involved with concurrently with the Project, and state the time commitment for the Project and each other project

   (4) Discuss professional registrations, education, certifications, and credentials held by this person that are applicable to the Project

f. Discuss generally the tasks involved in the Project.

g. Illustrate clearly and concisely Bidder's understanding of the technical elements that must be addressed for successful completion of the Project.

h. Submit a bid schedule with anticipated milestones for the Project using Microsoft Project 2007 or later format.

i. Describe key issues that might affect the Project schedule and how Bidder proposes to address them.

j. Summary of the Project Safety Plan for the Project.

   (1) Describe how Bidder proposes to address any unique safety issues for the Project

   (2) Describe your safety record and environmental compliance record along with your Firm's OSHA reportable accident rates on recent comparable size projects

   (3) Statement of Bidder's Experience Modification Ratio (EMR)

k. Discuss Bidder's understanding of the traffic control required for the Project, if applicable, and how traffic control will impact the Project schedule. Discuss any major traffic control issues that need to be addressed and Bidder's proposed solutions.

l. Identify any other special issues or problems that are likely to be encountered. Outline the manner in which Bidder suggests resolving them.

m. Outline key community relations issues and how they might be resolved.

n. Describe any difficulties Bidder anticipates encountering in serving the City, in light of the City's status as a municipality and public entity. Explain how Bidder plans to manage them.

o. Summary of Bidder's Quality Assurance/Quality Control Plan for this project

p. Statement regarding all work performed two (2) years immediately preceding the date of the Bid, that contains either (a) a contract by contract listing of any written notices of violations of any

federal, state or local DBE/MBE/WBE Program and any damages assessed; or (b) a statement that there have been no such written notices of violations or such penalties assessed; and a statement that Program requirements have been met.

q. Statement that the Bidder has not been rescinded or debarred from any bidding, contractual, procurement, or other such programs by federal, state or local entities.

r. Statement that Bidder is current on payment of Federal and State income tax withholdings and unemployment insurance payments

s. Statement of Bidder's litigation and/or arbitration history over the past five (5) years including final ruling.

t. Statement of Bidder's bond history over the past five (5) years including any incidences of failure to perform.

u. MBE / WBE past project performance and compliance with participation goals in comparable size commercial projects

v. Other.

4. Waiver of Bid Requirements The City Manager or his delegate at any time may waive any requirements imposed by this solicitation or by any City regulation when failure to grant the waiver will result in an increased cost to the City and the requirement waived would be waived for all Bidders for this solicitation and it is in the best interest of the City to grant the waiver. The City Council at any time may waive any requirements imposed in this solicitation by the City's Code of Ordinances when it finds failure to grant the waiver will result in an increased cost to the City and the waived requirement would be waived for all Bidders for this solicitation and it is in the best interest of the City to grant the waiver. The City reserves the right to waive any irregularities and/or formalities as deemed appropriate.

5. Late Bids Bids and modifications of Bids received after the exact hour and date specified for receipt will not be considered unless: (1) the Bid is sent via the U.S. Postal Service, common carrier or contract carrier, by a delivery method that guarantees the Bid will be delivered to the City prior to the submission deadline; or (2) if the Bid is submitted by mail, common carrier or contract carrier it is determined by the City that the late receipt was due solely to an error by the U.S Postal Service, common carrier or contract carrier; or (3) the Bid is timely delivered to the City but is at a different City location than that specified in this IFB; or (4) the City extends the time after the deadline for a force majeure event that could potentially affect any or all Bidders meeting the deadline.

6. Interpretations and Addenda All questions about the meaning or intent of the Bidding Documents may be directed to the Project Manager listed at the end of these Instructions to Bidders. Interpretations or clarifications considered necessary by the Project Manager in response to such questions will be issued by Addenda to all parties recorded as having received the Bidding Documents. Questions received less than ten (10) days prior to the date for opening of Bids may not be answered. Only answers issued by formal written Addenda will be binding. Oral and other interpretations or clarifications will be without legal effect. Addenda may also be issued to modify the Bidding Documents as deemed advisable by the City.

7. Bid Security Requirements All Bids submitted must be accompanied by a Bid deposit in the amount of five percent (5%) of the base Bid which shall be in the form of a Bid Bond (on the form provided in these Bidding Documents), Cashier's Check, Letter of Credit, Certificate of Deposit or other instrument approved in advance by the City. Prior to submittal of the Bid the City Treasurer must approve both the financial institution and text of a Letter of Credit. A Cashier's Check or a Certificate of Deposit shall be payable to the City Treasurer.

8. Forfeiture of Security If a Bidder fails or refuses to execute the Contract when requested by the City, any Bid security given to the City shall immediately become due and payable and forfeited to the City as liquidated damages.

9. Mistake in Bid Security By submitting a Bid, Bidder agrees to correct any mistakes on a Bid security submission when requested by the City. When such a mistake occurs and a Bidder fails or refuses to

correct the mistake or execute the Contract when requested by the City, any Bid security shall be forfeited to the City and the Bidder shall also be subject to debarment and damages.

10. Bids that Exceed the Engineer's Estimate The City may offer the apparent lowest, responsive and responsible Bidders the option of performing the Work for the Engineer's estimate for the Project with no changes to the Bid requirements or scope of the Project if the Bid is not more than five percent higher than the Engineer's estimate.

11. Post Bid Required Submissions The successful Bidder will be required to submit the following documents with the signed copies of the Bid Form/Contract or within the timeframes specified in the Notice of Intent to Contract letter. Copies of the City's forms that the successful Bidder will be required to sign are bound into this Project Manual for information:

a. Properly signed, dated, and sealed Performance and Maintenance Bond and Payment Bond;

b. Properly completed certificates of insurance;

c. Copies of licenses required by the City to do the Work;

d. A copy of CONTRACTOR's current Certificate of Good Standing or Fictitious Name Registration from the Missouri Secretary of State, or other acceptable proof; and

12. Indemnification – City of Kansas City. The contract documents contains a requirement that Contractor shall indemnify, defend and hold harmless the City and any of its agencies, officials, officers, or employees from and against all claims, damages, liability, losses, costs, and expenses, including reasonable attorneys' fees, arising out of or resulting from any acts or omissions in connection with the contract, caused in whole or in part by Contractor, its employees, agents, or Subcontractors, or caused by others for whom Contractor is liable, including negligent acts or omissions of the City, its agencies, officials, officers, or employees. The contract requires Contractor to obtain specified limits of insurance to insure the indemnity obligation. Contractor has the opportunity to recover the cost of the required insurance in the Contract Price by including the cost of that insurance in the Bid amount.

13. City's Buy American and Missouri Preference Policies It is the policy of the City that any manufactured goods or commodities used or supplied in the performance of any City contract or any subcontract thereto shall be manufactured or produced in the United States whenever possible. When Bids offer quality, price, conformity with specifications, term of delivery and other conditions imposed in the specifications that are equal, the City shall select the Bid that uses manufactured goods or commodities that are manufactured or produced in the United States. The City shall give preference to all commodities manufactured, produced, or grown within the State of Missouri and to all firms, corporations, or individuals doing business as Missouri firms, corporations or individuals, when quality is equal or better and delivered price is the same or less. It is the bidder's responsibility to claim these preferences.

14. Affirmative Action It is the policy of the City that any person or entity entering into a contract with the City, will employ applicants and treat employees equally without regard to their race, color, sex, religion, national origin or ancestry, disability, sexual orientation, gender identity or age. Bidder will be required to comply with the City's Affirmative Action ordinance if Bidder is awarded a contract from the City totaling more than $300,000.00. If you have any questions regarding the City's Affirmative Action requirements, please contact CREO KC at (816) 513-1836 or visit the City's website at www.kcmo.gov.

15. Tax Clearance Bidder will be required to furnish to CITY sufficient proof from City's Commissioner of Revenue, verifying that Bidder is in compliance with the license and tax ordinances administered by City's Revenue Division as a precondition to CITY making its first payment under any CONTRACT over $160,000.00. Bidder will also be required to obtain proof of City tax compliance from all of its Subcontractors prior to the Subcontractors performing any Work.

16. Substitutions or "Or-Equal" Items The procedure for submission of substitutions or "or-equal" items is set forth in the General Conditions and Supplementary Conditions.

17. Prevailing Wage Requirements The successful Bidder shall pay the prevailing hourly rate of wages as determined by the Missouri Annual Wage Order and/or Federal Wage Determination set forth in the Project Manual. In case of a conflict between Missouri and Federal wage rates, the higher rate shall apply.

Successful Bidder shall be required to use City's Internet web based Prevailing Wage Reporting System provided by City and protocols included in that software during the term of this Contract. When requested by the City, Bidder shall submit user applications to City's provided Prevailing Wage Reporting System for all applicable personnel and shall require subcontractors to submit same.

18. Contract Information Management System Successful Bidder shall be required to use City's Internet web-based Contract Information Management System/Project Management Communications Tool provided by City and protocols included in that software during the term of this Contract. Bidder/Proposer shall submit user applications to City's provided Contract Information Management System for all personnel, subcontractors or suppliers as applicable.

19. Disadvantaged Business Statement The Kansas City Water Services Department is an Equal Opportunity Employer and invites the submission of bids from Disadvantaged Business Enterprises.

20. Forfeiture of Bid Bonds for Failure to Make DBE Submission: By submitting its Bid, Bidders is agreeing to following the (1) Bidder has made by Bid opening a good faith effort to meet the DBE requirements established for the Project; or Bidder will continue to make during the **48 hours** after Bid opening a good faith effort to meet the DBE requirements. Established for the Project: and a timely submitting its **00990.01** attachment form for the DBE Missouri requirements.

21. DBE Program Requirements City desires that Disadvantaged Business Enterprises (DBE) have a maximum opportunity to participate in the performance of City contracts. Program specifics are available in Section 00990 Clean Water State Revolving Funds Specification Requirements.

22. Workforce Program Requirements City desires that minorities and women have a maximum opportunity to practice their trades on city construction projects. The minimum company-wide goals are a ten percent (10%) minority workforce and two percent (2%) women workforce. The City's CREO KC Forms and CREO KC Instructions for Construction Projects are incorporated into these Bidding Documents and the Contract Documents.

Successful Bidder shall be required to use City's Internet web-based Workforce Program Reporting System provided by City and protocols included in that software during the term of this Contract. When requested by the City, Bidder shall submit user applications to City's provided Workforce Program Reporting System for all applicable personnel and shall require subcontractors to submit same.

23. Subcontractors, Suppliers and Others

a. If the Contract Documents require the identity of certain Subcontractors, Suppliers and other persons and organizations (including those who are to furnish the principal items of material and equipment) to be submitted to City, the apparent lowest, responsive and responsible Bidder, and any other Bidder so requested, shall submit to City a list of all such Subcontractors, Suppliers and other persons and organizations proposed for those portions of the Work for which such identification is required. An experience statement shall accompany such list with pertinent information regarding similar projects and other evidence of qualification for each such Subcontractor, Supplier or organization if requested by City. If City has reasonable objection to any proposed Subcontractor, Supplier or other person or organization, City may request the apparent lowest, responsive and responsible Bidder to submit an acceptable substitute without an increase in Bid price.

b. By submitting its Bid, Bidder agrees that it has read and understands all the provisions of General Condition No. 6.07, Concerning Subcontractors, Suppliers and Others, and that it will comply with all those provisions including but not limited to mandatory mediation of disputes and the prohibition against paid-if-paid and paid-when-paid contract clauses. It is the City's expectation that all Subcontractors and Suppliers will be treated fairly and in good faith by the successful Bidders and that the successful Bidder will make all reasonable efforts to resolve contract disputes with a Subcontractor or Supplier in a prompt and fair manner. If the City is notified by a Subcontractor or Supplier of a contract claim with the successful Bidder, City will notify the successful Bidder and will request prompt resolution of the claim. City will provide any such Subcontractor or Supplier information regarding mandatory mediation as well as a copy of the Payment Bond. City may notify the Surety that City has taken cognizance of such claim.

c. In accordance with the Missouri Prompt Payment Act, City reserves the right to withhold payment(s) in good faith from the successful Bidder due to: i)the successful Bidder's failure to comply with any

material provision of the contract; ii)third party claims filed or reasonable evidence that a claim will be filed; iii)the successful Bidder's failure to make timely payments for labor, equipment or materials; or iv)for damage to a Subcontractor or Supplier.

d. By submitting its Bid, Bidder agrees it will not deny any Subcontractor subcontracting opportunities solely because the Subcontractor is not a signatory to collective bargaining agreements with organized labor.

e. The provisions of GC 6.07 are a material term of the Contract with the City and failure by the successful Bidder to comply with the provisions of this section will be taken into consideration by City in making the determination of lowest, responsive and responsible bidder in any subsequent City contracts.

24. Pre-Bid Conference The Water Services Department will hold a pre-Bid conference on January 9th, 2026, at 2:00 PM on Microsoft Teams and in-person at Kansas City Water Services Department. Contact the Project Manager prior to the meeting for the link to attend. Attendance at the pre-Bid conference is **mandatory** for all Bidders on this Project. For this Project, the City shall not contract with a Bidder who has not attended the entire pre-Bid conference for this Project.

25. On-Site Inspection The Project Site will be available for inspection by Bidders. Bidders visiting the Project Site shall be responsible for their own safety. The Project Site shall be available for inspection by appointment from 8 AM to 3 PM each day Monday through Friday (holidays excepted). Bidders may contact the following individual from the Water Services Department for an appointment.

Contact: Shawn Cross

Phone: (816) 503-0442

E-mail: shawn.cross@kcmo.org

26. Signatures Each copy of the Bid Form/Contract must be signed and properly dated by the following, as applicable:

Limited Liability Company:

□ a member of the limited liability Company authorized to sign on behalf of the company.

Partnership:

□ a partner authorized to sign on behalf of the partnership.

Sole Proprietor:

□ the proprietor.

Joint Venture:

□ the parties to the Joint Venture authorized to sign on behalf of each party to the Joint Venture, or a person authorized by each party to the Joint Venture to sign on behalf of all parties to the Joint Venture.

Corporation:

□ a corporate office authorized to sign on behalf of the corporation. Corporation's seal must be attached to the signature.

27. SRF Statement This project is being financed through the Missouri State Revolving Fund, by the Water and Wastewater Loan Revolving Fund and federal Capitalization Grants to Missouri.

28. Forward all questions in writing to the following Project Manager and Contract Administrator. Questions received less than three (3) days prior to the Bid Date may not be answered. Interpretations or clarifications considered necessary by the Project Manager in response to such questions will be issued by Addenda to all Bidders. Oral or other interpretations or clarifications shall be without legal effect, even if made at a Pre-Bid Meeting.

Bidder: _____

BID FORM/CONTRACT

Project Number: 81000927/1698

Project Title: Todd Creek WWTP Expansion & Major Upgrades

1. Bidder, having examined the Bidding Documents, related documents and the Site of the Work, and being familiar with all the conditions affecting the construction of the proposed Work, including Laws and Regulations and the availability of materials and supplies, agrees, if this Bid is selected by CITY, this Bid Form/Contract will become the Contract between Bidder and CITY for Bidder to furnish all labor and materials, equipment and services necessary for the proper completion of the Work in accordance with the Contract Documents, including general construction work at the price(s) stated below, which stated sums include fees and all other charges applicable to materials, appliances, labor and all things subject to and upon which other charges may be levied.
2. Bidder agrees the Contract Documents will comprise the entire agreement between CITY and Bidder. The Contract Documents are identified in the General Conditions and are incorporated into and made part hereof this Bid Form/Contract by reference.
3. Bidder agrees that if this Bid Form/Contract is executed by CITY, Bidder's offer is accepted and this Bid Form/Contract that incorporates all other Contract Documents shall constitute the Contract between the parties. Bidder authorizes the CITY to fill in the Contract Price on this Bid Form/Contract in accordance with Bidder's Bid. Bidder agrees that this Bid Form/Contract may be executed in one or more counterparts, each of which will be deemed an original copy of this Bid Form/Contract and all of which, when taken together, will be deemed to constitute one and the same Bid Form/Contract. This Bid Form/Contract shall be effective upon the execution of counterparts by both parties, notwithstanding that both parties may not sign the same counterpart. The parties' signatures transmitted by facsimile or by other electronic means shall be proof of the execution of this Bid Form/Contract and shall be acceptable in a court of law. A copy of this Bid Form/Contract shall constitute an original and shall be acceptable in a court of law.
4. The Bid Price(s) shall be shown in numeric figures only.

TOTAL BASE BID IN NUMERIC FIGURES	$_____
ALLOWANCE NO. 1 – Unknown Site Conditions	$250,000.00
ALLOWANCE NO. 2 – Admin Building Furnishings	$500,000.00
ALLOWANCE NO. 3 – Evergy Power Buildout	$4,250,000.00
TOTAL BID IN NUMERIC FIGURES	$_____

5. The undersigned Bidder has given CITY'S Project Manager written notice of all conflicts, errors or discrepancies that it has discovered in the Contract Documents and the written resolution thereof by the Project Manager or by the DESIGN PROFESSIONAL is acceptable to Bidder.
6. The undersigned Bidder agrees that this Bid shall remain subject to selection by CITY, and may not be withdrawn for ninety (90) days after the day Bids are opened.
7. The undersigned Bidder certifies that this Bid contains no modifications, deviations, riders or qualifications.
8. Form(s) 00411 Itemized Prices, contain prices included in the Base Bid, and are incorporated into this Bid. Form(s) must be completed and returned with this Bid.

a. The itemized prices provided for in this Bid Form shall apply only in the event of a Change Order providing for such increase or decrease in the quantities.

b. The Contract Price will be subject to adjustment according to final measured, used, or delivered quantities, and the adjustment unit prices in the Bid will apply to such final quantities

9. The undersigned Bidder acknowledges receipt of the following addenda listed by number and date appearing on each addendum:

Addendum Number	Dated	Addendum Number	Dated
(_____)	(_____)	(_____)	(_____)
(_____)	(_____)	(_____)	(_____)
(_____)	(_____)	(_____)	(_____)
(_____)	(_____)	(_____)	(_____)
(_____)	(_____)	(_____)	(_____)
(_____)	(_____)	(_____)	(_____)
(_____)	(_____)	(_____)	(_____)

10. By submitting its bid, Bidder is agreeing to meet or exceed the minimum employment goals of 10% minority and 6.9% women during the term of its contract with the City, or request a waiver of the goals. If a waiver is requested, Bidder must establish good faith efforts towards meeting the goals as set forth in the CREO-KC Instructions for Construction Contracts and the City's Workforce Ordinance. Should Bidder fail to meet or exceed the minimum employment goals or otherwise establish that Bidder is entitled to a waiver under circumstances in which Bidder has previously failed to meet or exceed the goals on one or more occasions with the twenty-four month period immediately preceding the completion of the Work under this Bid Form/Contract, Bidder may be suspended from participating, either as a contractor or subcontractor, on any future contract with the City for a period ranging from thirty days to six months as further specified in the Contract Documents.

11. By submitting its bid, Bidder warrants that if its bid should exceed $300,000.00 and Bidder employs fifty (50) or more people, Bidder has an affirmative action program in place and will maintain the affirmative action program in place for the duration of its contract with the City. Bidder further warrants that it will comply with the affirmative action requirements contained in the General Conditions as incorporated by reference into this Bid Form/Contract.

12. Section 13 through Section 14 constitutes the Affidavit of Intended Utilization required to be submitted by Bidders.

13. By submitting its bid, Bidder is agreeing to the following: (1) Bidder has made by bid opening a good faith effort to meet the DBE goals established for the project; or Bidder will continue to make during the 48 hours after bid opening a good faith effort to meet the DBE goals established for the project; and (2) Bidder will timely submit its **Missouri State Revolving Fund Disadvantaged Business Enterprise Utilization Worksheet (found in Section 00990 Clean Water State Revolving Fund Requirements** for each DBE listed; and (3) Bidder will submit documentation of its good faith efforts to meet the DBE goals when requested by the City or State. Failure to meet these requirements in good faith will result in Bidder forfeiting its bid bond.

14. To the best of Bidder's knowledge, the following are names of certified DBEs with whom Bidder, or Bidder's subcontractors, presently intend to contract with if awarded the Contract on the above project:

A. Name of DBE Firm _____
Address _____
Telephone No. _____

SECTION 00410.04 – EQUIPMENT QUESTIONNAIRE

The Bidder shall enter in the spaces provided the names of the manufacturers of equipment which Bidder proposes to furnish and shall submit this Equipment Questionnaire with its Bid. Owner will review and evaluate the information before award of the Contract.

Only one manufacturer's name shall be listed for each item of equipment. Upon award of a contract, the named equipment shall be furnished. Substitutions will be permitted only if named equipment does not meet the requirements of the Contract Documents, the manufacturer is unable to meet the delivery requirements of the construction schedule, or the manufacturer is dilatory in complying with the requirements of the Contract Documents. Substitutions shall be subject to concurrence of Owner and shall be confirmed by Change Order.

Preliminary acceptance of equipment listed by manufacturer's name shall not in any way constitute a waiver of the specifications covering such equipment; final acceptance will be based on full conformity with the Contract Documents.

Failure to furnish all information requested or entering more than one manufacturer's name for any item in this Equipment Questionnaire may be cause for rejection of the Bid.

SECTION 00410.05 – INSTRUMENTATION AND CONTROL SYSTEM SUPPLIER QUESTIONNAIRE

The Bidder shall submit with its Bid a copy of this Instrumentation and Control System Supplier Questionnaire completed by Bidder's intended Instrumentation and Control System Supplier. Owner will review and evaluate the information before award of the Contract.

Upon award of a contract, the named Instrumentation and Control System Supplier shall be employed to perform the work and the named equipment shall be furnished, unless changes are specifically authorized by Owner. Substitutions will be permitted only if named equipment does not meet the requirements of the Contract Documents, the manufacturer is unable to meet the delivery requirements of the construction schedule, or the manufacturer is dilatory in complying with the requirements of the Contract Documents.

Preliminary acceptance of equipment listed by manufacturer's name shall not in any way constitute a waiver of the specifications covering such equipment; final acceptance will be based on full conformity with the Contract Documents.

Failure to furnish all information requested or entering more than one manufacturer's name for any item in this Instrumentation and Control System Supplier Questionnaire may be cause for rejection of the Bid.

00410.06 Electrical (Sub-)Contractor(s) Readiness Questionnaire (Above 240 V)

Project/Contract Numbers: 81000927/1698

Project Title: Todd Creek WWTP Expansion & Major Upgrades

Firm: _____

The Bidder shall submit with its Bid a copy of this Electrical Contractor Readiness Questionnaire completed by each firm that will be doing electrical work on power systems above 240 Volts. Owner will review and evaluate the information before the award of the Contract.

Electrical Contractor Readiness:

1. **Does the electrical contractor have a documented electrical safety program updated with the most current version of NFPA 70 & 70e requirements? Yes or No, if no explain.**

2. **Does the electrical contractor have record of all direct hire employees who have reviewed and accepted to follow the electrical contractors documented electrical safety program? Yes or No, if no explain. Please provide a copy of the original acceptance with full names and dates.**

3. **Does the electrical contractor have current records to ensure all employees have been trained in NFPA 70e Standard for Electrical Safety in the Workplace requirements? Are the records current within the last three years? Yes or No, if no explain. Please provide a copy of the original records with full names and dates to also include the employee's classification, i.e. journeyman, apprentice or other.**

4. **Are all the electrical contractor's direct hire employees considered "Qualified Person(s)" per NFPA 70 & 70e? Yes or No, if no explain. Provide the on-site employee list to indicate who is considered Qualified and who is considered Non-qualified.**

5. **Does the electrical contractor have an energized work permit template that complies with NFPA 70e requirements? If so, will it be utilized to complete energized tasks for the project? Yes or No, if no explain.**

6. **Has the electrical contractor provided the necessary training, PPE, insulated tools, and testing equipment for the employees who will be required to work in potentially energized conditions? Yes or No, if no explain.**

7. **Is the electrical contractor and employees willing to participate in a risk hazard analysis with the owner and received concurrence prior to completing energized testing, switching or entry into energized or potentially energized electrical equipment? Yes or no, if no explain.**

8. **If subcontracting to another electrical contractor, please provide the documented control parameters that will be utilized to ensure all NFPA requirements are fully adhered to. Submit all the required documentation and appropriate responses to the above questions 1-7 for each subcontractor.**

SECTION 00410.07 – GROUND IMPROVEMENT SUPPLIER QUESTIONNAIRE

The Bidder shall submit with its Bid a copy of this Ground Improvement Supplier Questionnaire completed by Bidder's intended Ground Improvement Supplier. Owner will review and evaluate the information before award of the Contract. Failure to furnish all information requested or entering more than one contractor's name in this Questionnaire may be cause for rejection of the Bid. The required information is in coordination with Section 31 66 12 of the technical specifications.

1. Professional Engineer responsible for design of ground improvement
    a. Name of Company or Individual _____
    b. Missouri PE Number _____
    c. Address _____
    d. Phone Number _____
    e. email _____
2. Ground Improvement Contractor
    a. Name _____
    b. Address _____
    c. Phone Number _____
    d. email _____

3. Provide experience qualifications as follows:
    a. Evidence that the Ground Improvement Contractor has experience in this type of ground improvement.
    b. A list of previously completed projects of similar scope and purpose for review by the Owner. The list shall include a description of the project, relative size, and contact person with current phone number.
    c. Resumes of the project manager, superintendent, engineer, and other related key personnel, for review by the Owner.

4. Provide a description of the type of ground improvement method proposed for this project.

CREO KC INSTRUCTIONS

FOR CONSTRUCTION CONTRACTS

PART A. ECONOMIC EQUITY & INCLUSION GOALS--MBE/WBE PROGRAM

I. City's Economic Equity & Inclusion Goals--MBE/WBE Program.

A. The City has adopted an Economic Equity & Inclusion Goals--Minority/Women Business Enterprise ("MBE/WBE") Program (Sections 3-421 through 3-469, Code of Ordinances) (the "Program") to implement the City's policy of supporting the fullest possible participation in City contracts and change orders of firms owned and controlled by minorities and women. Each construction contract may have an MBE and/or WBE goal for participation. An MBE or WBE goal is a numerical objective the City has set for the contract that may be awarded pursuant to these bid specifications. Goals are stated as a percentage of contract dollars. For example, if an MBE goal for a contract is 10% and a Bidder submits a bid of $100,000, the goal for MBE participation would equal $10,000. The specific MBE/WBE goals on this contract are set forth elsewhere in the bid specifications.

B. These Civil Rights & Equal Opportunity Department ("CREO KC") Forms & Instructions are part of the BIDDING DOCUMENTS and CONTRACT DOCUMENTS as defined in the General Conditions. By submitting a Bid, the Bidder agrees, as a material term of the contract, to carry out the City's MBE/WBE Program by making good faith efforts to include certified MBE/WBEs in the contract work to the extent of the goals listed for the contract and to the fullest extent consistent with submitting the lowest and best bid to the City. Bidder agrees that the Program is incorporated into this document and agrees to follow the Program. Although it is not a requirement that a Bidder in fact meet or exceed both the MBE and WBE Goals, it is a requirement for approval of the Bid that a Bidder objectively demonstrate to the City that good faith efforts have been made to meet the Goals. Bidders must attempt to meet both the MBE and WBE goals and request a waiver if either is not met.

C. The following CREO KC Forms are attached and must be used for MBE/WBE submittals:

1. Contractor Utilization Plan/Request for Waiver (CREO KC Form 8); and
2. Letter of Intent to Subcontract (CREO KC Form 00450.01); and
3. Timetable for MBE/WBE Utilization (CREO KC Form 10); and
4. Request for Modification or Substitution (CREO KC Form 11); and
5. Contractor Affidavit for Final Payment (Form 01290.14); and
6. Subcontractor Affidavit for Final Payment (Form 01290.15).

Warning: The City only gives MBE/WBE credit for a Bidder's use of City certified MBE/WBEs. A certified MBE/WBE firm is a firm that has been certified by the City's Civil Rights & Equal Opportunity Department as such. An MBE/WBE firm must be certified before the date on which the contractor utilization plan is due. Certified MBEs and WBEs are listed in the M/W/DBE Kansas City Mo. Online Directory, which is available on the City's website at www.kcmo.org. Before a Bidder submits a bid, Bidder

should contact CREO KC and consult the directory to make sure any firm proposed for use for MBE/WBE participation has been certified.

II. Required Submissions Following Bid Opening.

A. Bidder must submit the following documents within forty-eight (48) hours of bid opening:

1. **Contractor Utilization Plan/Request for Waiver (CREO KC Form 8).** This form states a Bidder's plan to use specific certified MBE/WBEs in the performance of the contract and includes the following:

   a. The work to be performed by each MBE/WBE and the amounts each is to be paid for the work; and

   b. The name, address, race or ethnic origin, gender and employer identification number or social security number of each MBE/WBE that will perform the work.

   c. An automatic request for waiver in the event Bidder has not met or exceeded the MBE and/or WBE goals for the contract but believes that it has made good faith efforts to meet or exceed the goals and desires a waiver of the goals. If a waiver is requested, CREO KC will examine the Bidder's documentation of good faith efforts and make a recommendation to grant or deny the waiver. CREO KC will recommend a waiver be granted only if the Bidder has made good faith efforts to obtain MBE/WBE participation.

2. **Letter(s) of Intent to Subcontract (CREO KC Form 00450.01)**. A letter must be provided from each MBE/WBE listed on the Contractor Utilization Plan. These letters verify that the MBE/WBE has agreed to execute a formal agreement for the work and indicate the scope of work to be performed and the price agreed upon for the work.

III. Required Submission when Requested by City.

A. Bidder must submit the following documents when requested by City:

1. **Timetable for MBE/WBE Utilization (CREO KC Form 10).**

2. **Documentation of good faith efforts.**

IV. Required Monthly Submissions during term of Contract.

A. Bidder must submit the following report on a monthly basis if awarded the contract:

1. **M/WBE Monthly Utilization Report.** This report must be submitted to the Director by the 15th of each month. Failure to submit timely reports may result in delays in processing of current and future contract approvals and payment applications. The method of submission of this report is through the B2GNow Diversity Management System (B2GNow).

V. Required Submittals for Final Contract Payment.

A. Contractor must submit the following documents with its request for final payment under

the contract:

1. **Contractor Affidavit for Final Payment (Form 01290.14)**
2. **Subcontractor Affidavit(s) for Final Payment (Form 01290.15)**
3. **Final B2GNow Monthly Contract Audit Report with all payment audits confirmed.**

VI. Additional Submittals.

A. Contractor may be required to make additional submittals during the term of the Contract, including **Request for Modification or Substitution (CREO KC Form 11)**. Refer to Section IX, Modification of the Contractor Utilization Plan or Substitution of an MBE/WBE, for additional instructions on when this form must be submitted.

VII. MBE/WBE Participation Credit.

A. The following shall be credited towards achieving the goals:

1. The total contract dollar amount that a prime contractor has paid or is obligated to pay to a subcontractor that is a certified MBE or WBE, except as otherwise expressly provided for herein.
2. The total contract dollar amount that a prime contractor that is a certified MBE or WBE performed itself.
3. Sixty percent (60%) of the total dollar amount paid or to be paid by a prime contractor to obtain supplies or goods from a supplier who is a certified MBE or WBE.
4. Ten percent (10%) of the total dollar amount paid or to be paid by a prime contractor to obtain supplies or goods from a supply broker who is a certified MBE or WBE.
5. One hundred percent (100%) of the total dollar amount paid or to be paid by a prime contractor to a manufacturer of construction supplies who is a certified MBE or WBE.
6. Subcontractor participation with a lower tier MBE/WBE subcontractor using one of the above methods of participation.

B. **NO CREDIT**, however, will be given for the following:

1. Participation in a contract by a MBE or WBE that does not perform a commercially useful function as defined by the Program; and
2. Any portion of the value of the contract that an MBE or WBE subcontractor subcontracts back to the prime contractor or any other contractor who is not a qualified MBE/WBE; and
3. Materials and supplies used on the contract unless the MBE/WBE is responsible for negotiating the price, determining quality and quantity, ordering the materials and installing (where applicable) and paying for material itself; and
4. Work performed by an MBE or WBE in a scope of work other than that in which the MBE or WBE is currently certified.

VIII. Methods for Securing Participation of MBE/WBEs and Good Faith Efforts.

A. A bidder is required to make good faith efforts to achieve the MBE/WBE goals. Good faith efforts are efforts that, given all relevant circumstances, a Bidder actively and aggressively seeking to meet the goals can reasonably be expected to make. Good faith efforts must be made before the Bidder submits a Contractor Utilization Plan, in other words, within 48 hours of bid opening. However, efforts made to increase participation of MBEs and WBEs following submission of the CUP can be considered as evidence of good faith efforts to meet the goals.

B. In evaluating good faith efforts, the Director of CREO KC will consider whether the Bidder has performed the following, along with any other relevant factors:

1. Advertised for at least 15 calendar days prior to the bid or proposal due date opportunities to participate in the contract in general circulation media, trade and professional association publications, small and minority business media, and publications of minority and women's business organizations which are included in a list along with their current contact information identified on the directory as the list of publications available to publish such advertisements, which list shall be updated by CREO KC no less than every three (3) month.

2. Sent written notices at least fifteen (15) calendar days prior to the bid or proposal due date containing the information required in section (9) below, by certified mail, e-mail, or facsimile, to at least 80% of MBEs and WBEs which are included in a list along with their contact information identified on the directory as the list of organizations available to receive such notices, which list shall be updated by CREO KC no less than every three (3) months.

3. Sent written notices, containing the information required by section (9) below, by certified mail, e-mail or facsimile, to at least 80% of MBEs and WBEs listed on the directory certified in the applicable scopes of work for the particular bid soliciting their participation in the contract at least 15 calendar days prior to the bid or proposal due date.

4. Attempted to identify portions of the work for qualified MBE and/or WBE participation in order to increase the likelihood of meeting the goals, including breaking down contracts into economically feasible units that take into consideration the capacity of available MBE/WBEs appearing on the CREO KC directory.

5. At any time prior to submission of the CUP or submittal of a request for modification of a CUP, requested assistance in achieving the goals from the Director and acted on the Director's recommendations.

6. Conferred with certified MBEs and WBEs which inquired about or responded to the bid solicitation and explained to such MBEs and WBEs the scope and requirements of the work for which their bids or proposals were solicited, and if not all certified MBEs and WBEs in the particular scopes listed on the directory have inquired about or responded to the bid solicitation for each scope of work, then contact by certified mail, e-mail or telephone the greater of ten (10) or 80% of additional certified MBEs and WBEs in the particular scopes of work listed on the directory and offer to confer with such MBEs and WBEs for such particular scope of work and request such MBEs

and WBEs to submit a proposal.

7. Attempted to negotiate in good faith with certified MBEs and WBEs which responded to the bid solicitation or those certified MBEs and WBEs that were conferred with as contemplated in section (6) above, and other qualified MBEs and WBEs, at the option of the bidder, proposer, or contractor, as applicable, to perform specific subcontracts, not rejecting them as unqualified without sound reasons based on a thorough investigation of their capabilities by the bidder, proposer, or contractor; in the event an MBE or WBE is the low bid, but rejected as unqualified, the bidder, proposer, or contractor and the director or board, as applicable, shall provide sound reasons for rejecting such MBE or WBE.
8. Attended pre-bid meeting when such meetings were indicated in the solicitation of bids or otherwise by the bidder, proposer, or contractor, as applicable or by the director provided the director provides written direction to the bidder, proposer, or contractor at the time the goals are recommended.
9. Written notices and advertisements to be provided pursuant to sections (1), (2) and (3) above shall include the following information:
    a. The bid due date;
    b. The name of the project;
    c. The address or general location of the project;
    d. The location of plans and specifications for viewing;
    e. Contact information of the prime contractor;
    f. A general description of the scopes of work that are the subject of the solicitation;
    g. The goals established for the applicable contract, and if the goals are still subject to board approval, then a statement that the goals as stated are preliminary and are subject to board approval;
    h. If the project or any portion of the project is subject to prevailing wage then a statement that all or a portion of the project will be subject to prevailing wage, as applicable; and if only a portion of the scopes are subject to prevailing wage, then identification of such scopes provided that such scopes are known as of the time of bid solicitation;
    i. The date and time of any pre-bid meeting(s), if any, which have been scheduled by the bidder, proposer, contractor or developer as of the bid solicitation; and

    Any other information deemed relevant by the bidder, proposer, contractor or developer, as applicable, or the director to the extent the director provides written direction to the bidder, proposer, contractor or developer of such additional information at the time the goals are recommended by the director. 8. Within five (5) working days after drawing the bid specifications, sent certified letters, verifiable e-mails or proof of facsimiles to certified MBEs and WBEs listed in the M/W/DBE Kansas City Mo. Online Directory.

C. A Bidder may be required to give the City documentation to prove that it made good faith efforts. The Bidder will be contacted by the City with further instructions about when this documentation must be submitted.

IX. Modification of the Contractor Utilization Plan or Substitution of an MBE/WBE.

A. After bid opening, a Bidder or Contractor may need to substitute an MBE and/or WBE or request that the amount of MBE/WBE participation listed in its Contractor Utilization Plan be modified. Bidder or Contractor must file a **Request for Modification or Substitution (CREO KC Form 11) prior to actual substitution and within a reasonable time after learning that a modification or substitution is necessary.** The Director may approve substitutions or modifications and upon approval, the modifications and substitutions will become an amendment to the Contractor Utilization Plan. Modifications or substitutions may be approved when:

1. The Director finds that the Bidder or Contractor made and provided evidence of good faith efforts to substitute the MBE/WBE listed on the Contractor Utilization Plan with other certified MBE/WBEs for the scope of work or any other scope of work in the contract; and
2. The Bidder or Contractor has not attempted intentionally to evade the requirements of the program and it is in the best interests of the City to allow a modification or substitution; and
3. The Director also finds one of the following:
    a. The listed MBE/WBE is non-responsive or cannot perform; or
    b. The listed MBE/WBE has increased its previously quoted price to the bidder, proposer or contractor without a corresponding change in the scope of the work; or
    c. The listed MBE/WBE has committed a material default or breach of its contract with the contractor; or
    d. Requirements of the scope of work of the contract have changed and render subcontracting not feasible or not feasible at the levels required by the goals established for the contract; or
    e. The listed MBE/WBE is unacceptable to the contracting department; or
    f. The listed MBE/WBE thereafter had its certification revoked; or

B. A modification shall not be made unless the modification or substitution has first been requested and approved by the Director. Once a modification has been made, a Construction Contractor Employee Identification Report (CREO KC Form 0485.04) for the newly approved subcontractor must be submitted at least ten (10) days prior to the approved subcontractor commencing work on a City contract.

X. Appeals.

A. In conformance with the Act, appeals may be made to the City Fairness in Construction Board or Fairness in Professional Services and Goods Board on the following:

1. The grant or denial of a Request for Waiver;
2. Substitution for an MBE/WBE listed on a Contractor Utilization Plan;
3. Modification of the percentage of MBE/WBE participation on a Contractor Utilization Plan;
4. Liquidated Damages;
5. The amount of MBE/WBE credit the Contractor may receive for MBE/WBE participation identified in the contractor utilization plan.

B. Any appeal must be filed in writing with the Director within fifteen (15) calendar days of notice of the determination. Mailing, faxing, personal delivery or posting at CREO KC of determinations shall constitute notice. The appeal shall state with specificity why the Bidder or Contractor believes the determination is incorrect

C. Failure to file a timely appeal shall constitute a waiver of a Bidder's or Contractor's right to appeal such determination and such person shall be estopped to deny the validity of any determination which could have been timely appealed.

XI. Access to Documents and Records.

A. By submitting a Bid, each Bidder agrees to permit the City, its duly authorized agents or employees, access at all reasonable times to all books and business records of Bidder as may be necessary to ascertain compliance with the requirements of this document and the Act, within ten (10) calendar days of the date of the written request.

B. All Bidders agree to cooperate with the contracting department and CREO KC in studies and surveys regarding the MBE/WBE program.

XII. Miscellaneous.

A. A Bidder or Contractor shall bear the burden of proof with regard to all issues on appeal.

B. In the event of any conflict between this document and the Program, the provisions of the Program shall control. The terms used in this document are defined in the Program.

C. Oral representations are not binding on the City.

D. The City Council may waive the requirements of this document and the Program and award the contract to the lowest and best bidder if the City Council determines a waiver is in the best interests of the City.

E. The Director may grant extensions of time to Bidders to submit Letters of Intent to Subcontract (CREO KC Form 00450.01).

XIII. Liquidated Damages – Economic Equity & Inclusion Goals--MBE/WBE Program.

A. If Contractor fails to achieve the MBE/WBE goals stated in its Contractor Utilization Plan, as amended, the City will sustain damages, the exact extent of which would be difficult or impossible to ascertain. Therefore, in order to liquidate those damages, the monetary difference between either (1) the amount of the MBE/WBE goals set forth in the Contractor Utilization Plan, as amended, or (2) the goals established (whichever is lower) and the amount actually paid to qualified MBEs and WBEs for performing a commercially useful function will be deducted from the Contractor's payments as

liquidated damages. In determining the amount actually paid to qualified MBEs and WBEs, no credit will be given for the portion of participation that was not approved by the Director, unless the Director determines that the Contractor acted in good faith. No deduction for liquidated damages will be made when, for reasons beyond the control of the Contractor, the MBE/WBE participation stated in the Contractor Utilization Plan, as amended and approved by the Director is not met.

PART B. CONSTRUCTION EMPLOYMENT PROGRAM REQUIREMENTS

IMPORTANT: This Part B is applicable to City construction contracts estimated by the City prior to solicitation as: (1) requiring more than 800 construction labor hours and (2) valued in excess of $300,000.00. This program is distinguished from the M/WBE Program in that it is based on workforce hours of the Bidder and *all* its participating subcontractors rather than the actual contract value of work. The instructions herein detail the specifics related to this program. This program is in *addition* to the M/WBE program.

I. City's Construction Employment Program.

A. The City has adopted a Construction Employment Program (Sections 3-501 through 3-525, Code of Ordinances) (the "Workforce Program" or "Program") to implement the City's policy of supporting the fullest possible utilization of minority and women workers in the construction industry.

B. The minimum workforce goals are currently set by ordinance at 10% for minorities and 2% for women. These goals are separate from M/WBE goals. Public recognition may be provided if the bidder achieves at least twice the minimum participation.

C. Construction contracts subject to the Workforce Program and the company-wide and project-specific workforce goals ("workforce goals") are those contracts to construct, reconstruct, improve, enlarge or alter any fixed work that is estimated by the City prior to solicitation to: (1) require more than 800 construction labor hours, (2) has estimated costs that exceed $300,000.00, and (3) involve the expenditure of public funds.

D. The successful bidder may meet company-wide goals by counting the bidder's utilization of minorities and women throughout the Kansas City metropolitan statistical area. In addition, the successful Bidder is responsible to ensure that it and its subcontractors cumulatively make good faith efforts to meet project-specific goals for utilization of minorities and women.

E. These Civil Rights & Equal Opportunity Department ("CREO KC") Forms & Instructions are part of the BIDDING DOCUMENTS and CONTRACT DOCUMENTS as defined in the General Conditions. By submitting a Bid, the Bidder agrees, as a material term of the contract, to carry out the City's Construction Employment Program by making good faith efforts to utilize minority and women workers to the fullest extent consistent with submitting the lowest and best bid to the City. Bidder agrees that the Program is incorporated into this document and agrees to follow the Program. Although it is not a requirement that a Bidder in fact meet or exceed the construction employment goals to receive approval from CREO KC, a Bidder not doing so is required to

objectively demonstrate to CREO KC that good faith efforts have been made.

F. The following reports are to be used for Construction Employment Program submittals:

1. Project Workforce Monthly Report
2. Company-Wide Workforce Monthly Report

II. Required Submissions.

A. Within forty-eight (48) hours after bid opening, the construction contractor shall submit the **Construction Employee Identification Report** (CREO KC Form 00485.04) and shall include: the name, home address, job title, sex and race/ethnicity of each person working for the Prime. The individuals to be listed on the form are those which the construction contractor *anticipates* will be performing construction labor hours creditable towards the minimum workforce goals applicable to the construction contractor individually.

The following circumstances also require the submission of a Construction Employee Identification Report:

a. Prior to contract execution for those City construction contracts awarded pursuant to a request for proposals (RFP), the construction contractor shall submit a **Construction Employee Identification Report** (CREO KC Form 00485.04).

b. At least ten (10) days prior to the date upon which any subcontractor is to commence work under a City construction contract, the Prime shall submit a **Construction Employee Identification Report** (CREO KC Form 00485.04) for the subcontractor.

B. The CREO KC Director has established the B2GNow Diversity Management System ("B2GNOW") (an online reporting tool) as the preferred method for fulfilling reporting requirements of the Workforce Program. The CREO KC Director will allow paper submission in lieu of on-line submission if the on-line submission process presents a hardship to the contractor.

C. Bidder must submit the following documents through B2GNow on a monthly basis if awarded the contract:

1. **Project Workforce Monthly Report.** This report is contract specific. This report must be submitted to the Director by the 15th of each month for the Contractor and each subcontractor. It will be utilized to report the Contractor's own workforce compliance data with regard to the City's construction contract. Failure to submit timely reports may result in delays in processing of current and future contract approvals and payment applications.

2. **Company-Wide Workforce Monthly Report.** This report is not contract specific; it is used to report on the utilization of women and minorities, by trade, company-wide. This report must be submitted to the Director by the 15th of each month. It will be utilized to report the Contractor's own workforce compliance data with regard to

every contract (both privately and publicly funded) that the Contractor has in progress throughout the Kansas City Metropolitan Statistical Area. Failure to submit timely reports may result in delays in processing of current and future contract approvals and payment applications.

III. Submittal Required for Final Contract Payment.

A. The final Project Workforce Monthly Report(s) and Company-Wide Workforce Monthly Report must be submitted before final payment will be made and/or retainage released. Contractor shall note the submittal of the final reports by notation in the box entitled "Final Report"

IV. Methods for Securing Workforce Participation and Good Faith Efforts.

A. A bidder is required to make good faith efforts to achieve the construction employment goals and ensure its subcontractors are making good faith efforts to achieve the construction employment goals. If a Bidder or its subcontractors will be unable to secure enough minority and female participation to meet or exceed the construction employment goals, a bidder must, within a reasonable time after so learning, request a waiver or modification of the goals by the Director of CREO KC. The Director will request evidence of the Bidder's and its' subcontractors' good faith efforts to meet the goals. The Director will examine the Bidder's request and the Bidder's documentation of good faith efforts for itself and its subcontractors. The Director will examine the Bidder's request and the Bidder's documentation of good faith efforts and grant or deny a waiver or modification. The Director will grant a waiver or modification only if the Bidder has made good faith efforts to secure minority and female participation.

IMPORTANT: The Bidder's subcontractors on a city construction contract must meet the workforce goals collectively. The bidder is responsible to ensure the subcontractors make good faith efforts to meet the workforce goals. Bidders are required to include language in its subcontracts that ensure the subcontractors make good faith efforts to meet or exceed the workforce goals.

B. In evaluating good faith efforts, the Director will consider whether the Bidder and its subcontractors have performed the following:

1. For those bidders that are not signatories to a collective bargaining agreement with organized labor:

    a. Requested in writing the assistance of the Director with respect to efforts to promote the utilization of minorities and women in the workforce and acted upon the Director's recommendations; and

    b. Advertised in minority or women trade association newsletters and/or minority or women owned media at least 15 calendar days prior to the utilization of any construction services on the city construction contract and used terminology that sufficiently describes the work available, the pay scale, the application process, and anything else that one might reasonably be expected to be informed of relevant to the position being advertised; and

    c. Maintained copies of each advertisement and a log identifying the publication and date of publication; and

d. Conducted real and substantial recruitment efforts, both oral and written, targeting resident, minority and women community-based organization, schools with a significant minority student population, and training organizations serving the recruitment area; and

e. Established and maintained a current list of resident, minority and women recruitment sources, providing written notification to the recruitment sources of available employment opportunities, and maintained records of the notices submitted to the organizations and any responses thereto; and

f. Maintained a current file for the time period of the city construction contract with the name, address, and telephone number of each resident, minority and woman job applicant, the source of the referral, whether or not the person was hired, and in the event that the applicant was not hired, the reason therefore; and

g. Promoted the retention of minorities and women in its workforce with the goals of achieving sufficient annual hours for minorities and women to qualify for applicable benefits; and

h. Required by written contract that all subcontractors comply with the above efforts.

2. For those bidders that are signatories to collective bargaining agreements with organized labor:

a. Requested in writing from each labor union representing crafts to be employed that:

i. the labor union make efforts to promote the utilization of residents of the City, minorities and women in the workforce; and

ii. the labor union identify any residents of the City, minorities and women in its membership eligible for employment; and

b. Collaborated with labor unions in promoting mentoring programs for journeypersons intended to assist minorities and women in increasing retention with the goals of achieving sufficient annual hours to qualify for applicable benefits; and

c. Maintained a current file with the name, address, and telephone number of each resident, minority and women worker identified by the labor union, whether or not the person was hired, and in the event the person was not hired, the reason therefore.

d. To the extent the good-faith efforts applicable to bidders that are signatories to collective bargaining agreements with organized labor conflict with the procedures implemented by the bidder in order to comply with the relevant bargaining agreement, the bidder shall substitute other procedures as may be approved by the Director in writing, in order to accomplish the purpose and intent of this section.

C. In the event workforce goals are not met or there is anticipation that goals will not be

met, a Bidder will be required to give the City documentation to prove that it and/or it's subcontractors made good faith efforts. The Bidder will be contacted by the City with further instructions about when this documentation must be submitted.

V. Access to Documents and Records.

A. By submitting a Bid, each Bidder agrees to permit the City, its duly authorized agents or employees, access at all reasonable times to all books and business records of Bidder as may be necessary to ascertain compliance with the requirements of this document and the Program, within ten (10) days of the date of the written request. Each bidder further agrees to require, if awarded the contract, that every subcontractor permit the City the same access to documents and records.

B. All Bidders agree to cooperate with the contracting department and CREO KC in studies and surveys regarding the construction employment program.

VI. Appeals.

A. In conformance with the Program, appeals may be made to the Construction Workforce Board on the following:

1. Determinations by the Director that a contractor did not meet the construction employment goals and did not make a good faith effort to meet the goals;
2. Recommendations by the Director to assess liquidated damages;
3. Recommendation by the Director that a contractor be declared ineligible to receive any city construction contract for a period of time up to one year.

B. Any appeal must be filed in writing with the Director within ten (10) working days of notice of the recommendation or determination. The appeal shall state with specificity why the Bidder or Contractor believes the recommendation or determination is incorrect.

C. Failure to file a timely appeal shall constitute a waiver of a Bidder's or Contractor's right to appeal such determination or recommendation and such person shall be estopped to deny the validity of any order, determination, recommendation or action of CREO KC which could have been timely appealed.

VII. Miscellaneous.

A. A Bidder or Contractor shall bear the burden of proof with regard to all issues on appeal.

B. The successful bidder may be required to meet with the Director of CREO KC or the Director's designee for the purpose of discussing the construction employment program, the bidder's efforts to realize the goals, and any other problems and/or issues affecting the realization of the goals or the program in general.

C. In the event of any conflict between this document and the Program, the provisions of the Program shall control. The terms used in this document are defined in the Program.

D. Oral representations are not binding on the City.

VIII. Failure to Meet Workforce Goals

A. If Contractor or its subcontractors fail to achieve the construction employment goals or make good faith efforts to achieve those goals without having previously obtained a

waiver or modification of those goals, the City will sustain damages, the exact extent of which would be difficult or impossible to ascertain. These damages are magnified if the failure to abide by the requirements of the Workforce Program is recurring. Therefore, if the directory finds that the contractor or subcontractor have not met, or made good faith efforts to meet, the construction employment goals for any quarter, the director may:

1. Assess liquidated damages against the construction contractor, as specified in the city construction contract;
2. Require the contractor to attend mandatory training, as specified in the construction contract;
3. Declare the contractor ineligible to receive any city construction contract or participate as a subcontractor under any city construction contract for a period of time up to six months, as specified in the construction contract.

IX. First Source Program

A. The City has established a labor force recruiting program intended to assist contractors in identifying, interviewing and hiring qualified job applicants residing in Kansas City, Missouri. While the contractor awarded a City construction contract is not prohibited from hiring persons residing outside Kansas City, Missouri, the recruiting resource provided for herein (the "First Source Program") must be utilized by the contractor subject to the construction employment goals as set forth in this **PART B, CONSTRUCTION EMPLOYMENT PROGRAM REQUIREMENTS**.

B. The City utilizes the services of the Full Employment Council, Inc., to administer the First Source Program. The contractor shall contact the Full Employment Council within 48 hours of contract award, regardless of whether the contractor has any hiring needs at that time, and within 48 hours following any job vacancy which the contractor reasonably anticipates filling during the term of the City construction contract. The contractor shall comply with the First Source Program requirements as implemented by the Full Employment Council unless otherwise excused in writing by the Director of CREO KC for good cause shown. To ensure compliance with the First Source Program, the contractor shall contact those persons at the Full Employment Council responsible for administering the program, which may be identified by visiting their website at www.feckc.org and clicking on the link for KCMO First Source Hiring Program. The contractor shall not hire any individual to provide construction services on a City construction contract unless the contractor has met the requirements of the First Source Program.

C. The contractor shall require that its subcontractors utilize the First Source Program to the same extent that the contractor is required to do so, and shall incorporate the requirements of this Section IX into every subcontract. Every subcontractor shall be required to contact the Full Employment Council within 48 hours of subcontract award, regardless of whether the subcontractor has any hiring needs at that time, and within 48 hours following any job vacancy which the subcontractor reasonably anticipates filling during the term of their subcontract on a City construction project.

CREO KC MONTHLY REPORTING INSTRUCTIONS

M/WBE Monthly Utilization Report Instructions

1. MBE/WBE Reporting applies to Contracts that have approved MBE/WBE goals assigned.
2. The City will utilize a web-based MBE/WBE Reporting System in the administration of this Contract. This web-based application database is a collaboration tool selected and provided by the City, which will allow Contractors and Consultants/Subcontractors and Subconsultants to enter data and report on compliance.

Prevailing Wage Certified Payroll Report Instructions

1. Prevailing Wage Certified Payroll Report applies to Contracts that include Prevailing Wage or Davis Bacon Provisions.
2. This web-based application database is provided by the City for reporting certified payrolls and other related prevailing wage data.
3. Computer Requirements: Minimum Intel Pentium® 4 Processor 2.4 GHz or equivalent processor with 512MB of RAM; recommended Centrino Duo® Processors 1.6 GHz or equivalent with 2GB of RAM, or higher.
    a. Computer Operation System: Windows XP, Windows Vista, or Windows 7
    b. Web Browser: Google Chrome
    c. Connection Speed/Minimum Bandwidth: DSL, ADSL or T1 Line for transferring a minimum of 3 Mbps Downstream and 512 Kbps Upstream
4. City will assist Contractor in providing training of personnel and Subcontractor's personnel.
5. Contractor and Subcontractors shall have the responsibility for visiting the web site and entering data in on timely basis, and as necessary to be in compliance with Prevailing Wage Requirements included in their contracts.

Workforce Monthly Report Instructions

1. Workforce Monthly Reporting only applies to Construction Contracts greater than $300,000 and greater than 800 projected labor hours.
2. The City will utilize a web-based Reporting System in the administration of this Contract. This web-based application database is a collaboration tool selected and provided by the City, which will allow Contractors and Subcontractors to enter data and report on Workforce compliance.

Narrative:

Report Submitted By: _____ **Date** _____

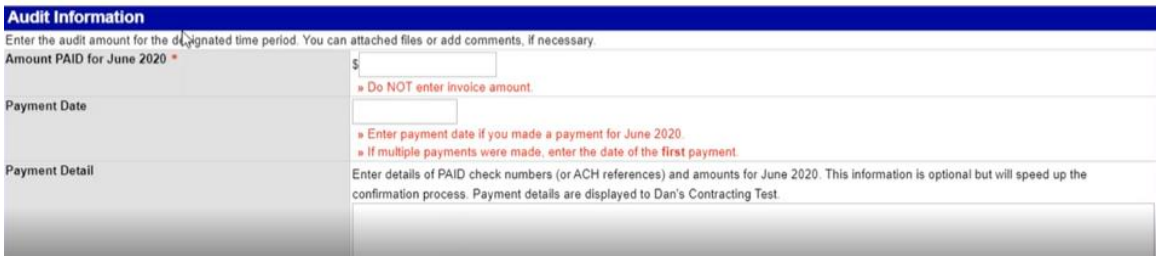
REMINDER: CONTRACTOR is responsible for meeting or exceeding the the D/M/WBE participation amounts in its Contractor Utilization Plan (CUP) as amended by any previously approved Request for Modification/Substitution. Any Change Orders or amendements modifying the amount CONTRACTOR is to be compensated will have correspondingly impacted the amount of compensation due D/M/WBEs for purposes of meeting or exceeding the Bidder/Proposer participation. CONTRACTOR is again advised to consider the effect of any Change Order or amendment, and to submit a Request for Modification/Substitution if appropriate.

M/WBE Monthly Compliance Audit Online Reporting Instructions

PRIME INSTRUCTIONS:

The Prime's responsibility is to report payments made to subcontractors for the prior month.

1. Log into B2GNow Diversity Management System (B2GNow)
2. On the Dashboard, click Contract Audits.
3. Select the specific audit that needs to be completed. Any and all money that changed hands during the month of the audit must be reported to the specific audit month.
4. To complete audit select Report 1 Subcontractor Payment. Under the actions column, select Submit Response for the specific subcontractor that needs reporting or select the Submit ALL Incomplete Records button to go to all the subcontractors to report amounts. Under the audit information answer the following questions:

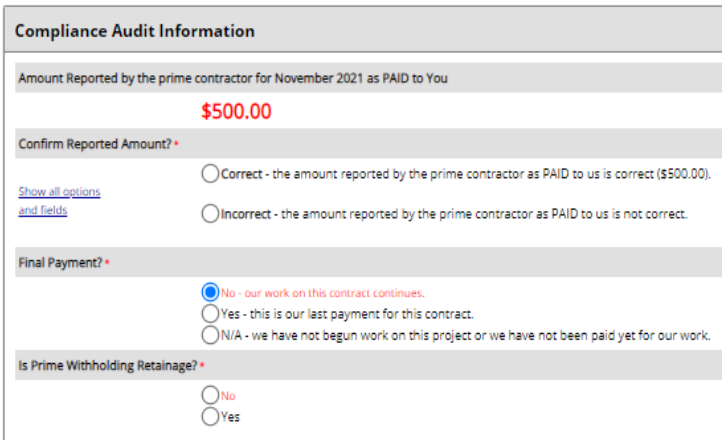


Once information has been entered, select review and save. Complete same steps for all subcontractors. If there were subcontractors that did not receive a payment for the specific audit month, click the Mark Remaining Subcontractors as Zero button to mark remaining subcontractors as 0.

SUBCONTRACTOR INSTRUCTIONS:

The responsibility of the Subcontractor is to confirm payment received for specific audit month.

1. Log in to B2GNow Diversity Management System (B2GNow)
2. On the Dashboard, select Contract Audits.
3. Select the specific audit that needs to be completed.
4. To complete audit, select Confirm Payment Received. There will be two options: correct or incorrect. Select correct if payment was in fact received OR if payment was not received or amount was different select incorrect. Answer all questions and select save to complete.



NOTE: Complete one M/WBE report per project.

An email notice will be sent from our organization monthly to notify Prime & Subcontractor users of incomplete audits.

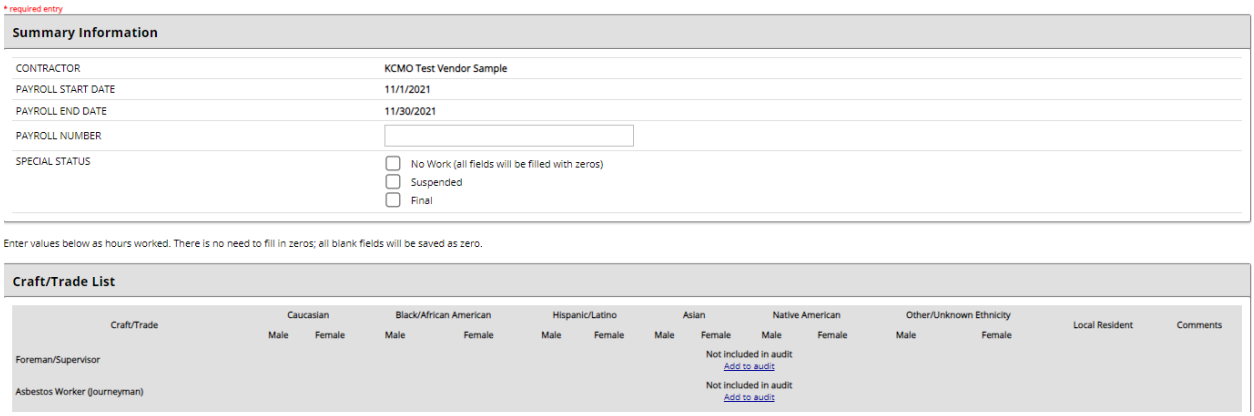
Workforce Monthly Report Forms only apply to Construction Contracts greater than $300,000.00 with greater than 800 projected labor hours.

Workforce Monthly Report Instructions

(Instructions for online reporting)

Completing a Workforce Audit:
To report your workforce hours:
1. Log into B2GNow Diversity Management System (B2GNow)
2. Click on the red underlined number of 'Incomplete audits' under Workforce Audits
3. Click View for the incomplete audit that needs to be completed.
4. Click Fill in Audit
5. Complete the form including the Payroll Number. Select Add to Audit to report hours worked for specific Craft/Trade.



* required entry

Summary Information

CONTRACTOR	KCMO Test Vendor Sample
PAYROLL START DATE	11/1/2021
PAYROLL END DATE	11/30/2021
PAYROLL NUMBER	
SPECIAL STATUS	☐ No Work (all fields will be filled with zeros) ☐ Suspended ☐ Final

Enter values below as hours worked. There is no need to fill in zeros; all blank fields will be saved as zero.

Craft/Trade List

Craft/Trade	Caucasian		Black/African American		Hispanic/Latino		Asian		Native American		Other/Unknown Ethnicity		Local Resident	Comments
	Male	Female	Male	Female	Male	Female	Male	Female	Male	Female	Male	Female		
Foreman/Supervisor								Not included in audit Add to audit						
Asbestos Worker (Journeyman)								Not included in audit Add to audit						

6. Scroll down and select review once hours have been reported.
7. Save and Certify to submit OR Save but Certify Later (to save a draft of your audit response). Audit must be certified for the workforce audit to be submitted for review. If there is an audit where no work was performed, and have 0 hours to report, select the Mark as No Work Audit button on step 4 to report 0 hours for all your employees. Select Certify & Release to Organization to complete. Mark Final for Special Status if the audit being completed is the last month of work, this will notify the system to stop generating monthly audits.

NOTE: If subcontractor has completed Workforce Audit, Prime MUST either accept audit and release to the organization or reject audit back to Subcontractor for correction.

An email notice will be sent from our organization monthly to notify Prime & Subcontractor users of incomplete audits.

Report Submitted By: _____

Date: _____

City of Kansas City, Missouri
Civil Rights & Equal Opportunity Department
Construction Contractor Employee Identification Report

Company Name: _____ **Prime's Name:** _____

Company Address: _____ **KCMO Project Name:** _____

Company City, State, Zip: _____ **KCMO Project Number:** _____

Name of Person Completing Report: _____ **Today's Date:** _____

Phone Number: _____

Email: _____ **City Department:** _____

Instructions:

1) Each applicable Prime Contractors **must complete this form for its company within 48 hours of bid opening**
2) The Civil Rights & Equal Opportunity Department strongly recommends usage of the electronic version of this form. This form may be obtained by visiting www.kcmo.gov website. The website is enabled with a "search" function on the Home page on the right corner. Select the magnifying glass and type in the search field "Contract Central". Select the first result, then click on the link to Standard City Contract Forms. Scroll down to Construction Contractor Employee Identification Report and click the link to open this document. Complete the fields in the Employee section; the Official Use Only section will automatically populate. NOTE: This form can be printed and attached to other required Bid documents.
3) All subcontractors shall be required to complete this form and submit to the Prime Contractor. For each subcontractor, the Prime must submit this form to City at least at least (10) days prior to the date the subcontractor shall commence work under a city construction contract.
4) Complete this form if you are the Prime contractor on a City construction project estimated over **$300,000 & over 800 man hours.**
5) Complete this form with data from your **current construction workforce** (no office personnel).
6) Prime contractor is responsible to ensure subcontractor completes this form as required in #3 above.

Civil Rights and Equal Opportunity Department
Civil Rights and Wage Assurances

Non-discrimination in Employment. Contractor shall not discriminate against any employee or candidate for employment on the basis of an individual's race, hair texture or hair style associated with an individual's race, color, sex, religion, national origin, or ancestry, disability, sexual orientation, gender identity, age, or in any other manner prohibited by Chapter 38 of the City Code. Contractor shall not engage in any discrimination as prohibited by Chapter 3 of the City Code.

Ban the Box in Hiring and Promotion.

(a) Pursuant to Section 38-104, City Code Ordinances, Contractor shall not base a hiring or promotional decision on an applicant's criminal history or sentence related thereto, unless the employer can demonstrate that the employment-related decision was based on all information available including consideration of the frequency, recentness and severity of a criminal record and that the record was reasonably related to the duties and responsibilities of the position.

(b) Notwithstanding subsection (a), Contractor may inquire about an applicant's criminal history after it has been determined that the individual is otherwise qualified for the position, and only after the applicant has been interviewed for the position. Any such inquiry may be made of all applicants who are within the final selection pool of candidates from which a job will be filled.

(c) This provision shall not apply to positions where employers are required to exclude applicants with certain criminal convictions from employment due to local, state or federal law or regulation.

Title VI of the Civil Rights Act of 1964. Title VI of the Civil Rights Act of 1964 requires that no person in the United States shall, on the grounds of race, color, or national or origin (including limited English proficient individuals), be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any program or activity receiving federal financial assistance. The City of Kansas City, Missouri requires compliance with the requirements of Title VI in all of its programs and activities regardless of the funding source.
Contractor shall not discriminate on the grounds of race, color, or national or origin (including limited English proficient individuals).

Quality Services Assurance Act. If this Contract exceeds $160,000.00, Contractor certifies Contractor will pay all employees who will work on this Contract in the city limits of Kansas City, Missouri at least $15.00 per hour in compliance with the City's Quality Services Assurance Act,

Section 3-66, Code of Ordinances or City has granted Contractor an exemption pursuant to the Quality Services Assurance Act.

Anti-Discrimination Against Israel. If this Contract exceeds $100,000.00 and Contractor employs at least ten employees, pursuant to Section 34.600, RSMo., by executing this Contract, Contractor certifies it is not currently engaged in and shall not, for the duration of this contract, engage in a boycott of goods or services from the State of Israel; companies doing business in or with Israel or authorized by, licensed by, or organized under the laws of the State of Israel; or persons or entities doing business in the State of Israel.

Affirmative Action. If this Contract exceeds $300,000.00 and Contractor employs fifty (50) or more people, Contractor shall comply with City's Affirmative Action requirements in accordance with the provisions of Chapter 38 of City's Code, the rules and regulations relating to those sections, and any additions or amendments thereto; in executing any Contract subject to said provisions, Contractor warrants that it has an affirmative action program in place and will maintain the affirmative action program in place for the duration of the Contract. Contractor shall not discriminate against any employee or applicant for employment because of race, color, sex, religion, national origin or ancestry, disability, sexual orientation, gender identity or age in a manner prohibited by Chapter 38 of City's Code. Contractor shall:

(a) Execute and submit the City of Kansas City, Missouri CREO Affirmative Action Program Affidavit warranting that the Contractor has an affirmative action program in place and will maintain the affirmative action program in place for the duration of the Contract.

(b) Submit, in print or electronic format, a copy of Contractor's current certificate of compliance to the City's Civil Rights and Equal Opportunity Department (CREO) prior to receiving the first payment under the Contract, unless a copy has already been submitted to CREO at any point within the previous two (2) calendar years. If, and only if, Contractor does not possess a current certification of compliance, Contractor shall submit, in print or electronic format, a copy of its affirmative action program to CREO prior to receiving the first payment under the Contract, unless a copy has already been submitted to CREO at any point within the previous two (2) calendar years.

(c) Require any Subcontractor awarded a subcontract exceeding $300,000.00 to affirm that Subcontractor has an affirmative action program in place and will maintain the affirmative action program in place for the duration of the subcontract.

(d) Obtain from any Subcontractor awarded a subcontract exceeding $300,000.00 a copy of the Subcontractor's current certificate of compliance and tender a copy of the same, in print or electronic format, to CREO within thirty (30) days from the date the subcontract is executed. If, and only if, Subcontractor does not possess a current certificate of compliance, Contractor shall obtain a copy of the Subcontractor's affirmative action program and tender a copy of the same, in print or electronic format, to CREO within thirty (30) days from the date the subcontract is executed.

City has the right to take action as directed by City's Civil Rights and Equal Opportunity Department to enforce this provision. If Contractor fails, refuses or neglects to comply with the provisions of Chapter 38 of City's Code, then such failure shall be deemed a total breach of this Contract and this Contract may be terminated, cancelled or suspended, in whole or in part, and Contractor may be declared ineligible for any further contracts funded by City for a period of one (1) year. This is a material term of this Contract.

Compliance with Laws. Contractor shall comply with all federal, state and local laws, ordinances and regulations applicable to the work and this Agreement. Contractor shall maintain in effect all the licenses, permissions, authorizations, consents and permits that it needs to carry out its obligations under this Agreement.

Prevailing Wage. If the Agreement exceeds $75,000.00 and any of the Services performed by Contractor includes construction, reconstruction, improvement, enlargement, alteration, painting and decorating, or major repair, that is subject to the Missouri Prevailing Wage Law (Section 290.210, RSMo – 290.340, RSMo), Contractor shall immediately notify the City prior to performing Services so the parties can execute an agreement that incorporates, the appropriate Wage Order. Contractor shall comply with all requirements of Section 290.210, RSMo – 290.340, RSMo even if Contractor fails to notify
the City.

  Workers' Compensation and Employers' Liability
  Commercial Automobile Liability
  Railroad Protective Liability
  Environmental Liability
  Asbestos Liability
  Longshoremen's Insurance
  Property Insurance

- ☐ List the NAIC Number (National Association of Insurance Commissioners) or A.M. Best Number for each Insurer listed on the Certificate of Insurance.

- ☐ Certificate "Kansas City, Missouri" must named as an Additional Insured.

- ☐ Check the insurance requirements of the Contract. If Contract Documents require that other entities be included as additional insureds, each entity shall be listed on the certificate(s).

- ☐ Description of Operations must include Project/Contract Number and Project/Contract Title/Description as contained in the Contract Documents. The Certificate Holder and address block shall be completed as follows:

  Kansas City, Missouri
  Water Services Department
  Marzella Newman-Buckner
  4800 E 63rd St
  Kansas City, Missouri 64130

- ☐ If your insurance agent prepares an ACORD form, the automobile insurance must be "any auto" or better for acceptance by the City.

AFFIRMATIVE ACTION REQUIREMENTS

- ☐ Proposed Affirmative Action Program or a copy of a Certificate of Affirmative Action Compliance – One copy.

PRE-CONTRACT BIDDER'S CERTIFICATION (Prevailing Wage Contracts; Form provided)

- ☐ Submit form 00490 - Bidder's Pre-Contract Certification (provided).

HEALTH AND SAFETY PLAN (If applicable)

- ☐ Bidder's Health and Safety Plan – One copy.

EMPLOYEE ELIGIBILITY VERIFICATION AFFIDAVIT

(Required for any contract with the City of Kansas City, Missouri in excess of $5,000.00)

STATE OF _____)
) ss
COUNTY OF _____)

On this _____ day of _____, 20___, before me appeared _____, personally known by me or otherwise proven to be the person whose name is subscribed on this affidavit and who, being duly sworn, stated as follows:

I am of sound mind, capable of making this affidavit, and personally swear or affirm that the statements made herein are truthful to the best of my knowledge. I am the _____ (title) of _____ (business entity) and I am duly authorized, directed or empowered to act with full authority on behalf of the business entity in making this affidavit.

I hereby swear or affirm that the business entity does not knowingly employ any person in connection with the contracted services who does not have the legal right or authorization under federal law to work in the United States as defined in 8 U.S.C. § 1324a(h)(3).

I hereby additionally swear or affirm that the business entity is enrolled in an electronic verification of work program operated by the United States Department of Homeland Security (E-Verify) or an equivalent federal work authorization program operated by the United States Department of Homeland Security to verify information of newly hired employees, under the Immigration Reform and Control Act of 1986, and that the business entity will participate in said program with respect to any person hired by the business entity to perform any work in connection with the contracted services. I have attached hereto documentation sufficient to establish the business entity's enrollment and participation in the required electronic verification of work program.

I am aware and recognize that unless certain contractual requirements are satisfied and affidavits obtained as provided in Section 285.530, RSMo, the business entity may face liability for violations committed by its subcontractors, notwithstanding the fact that the business entity may itself be compliant.

I acknowledge that I am signing this affidavit as the free act and deed of the business entity and that I am not doing so under duress.

THE E-VERIFY
MEMORANDUM OF UNDERSTANDING
FOR EMPLOYERS

ARTICLE I
PURPOSE AND AUTHORITY

The parties to this agreement are the Department of Homeland Security (DHS) and the _____ (Employer). The purpose of this agreement is to set forth terms and conditions which the Employer will follow while participating in E-Verify.

E-Verify is a program that electronically confirms an employee's eligibility to work in the United States after completion of Form I-9, Employment Eligibility Verification (Form I-9). This Memorandum of Understanding (MOU) explains certain features of the E-Verify program and describes specific responsibilities of the Employer, the Social Security Administration (SSA), and DHS.

Authority for the E-Verify program is found in Title IV, Subtitle A, of the Illegal Immigration Reform and Immigrant Responsibility Act of 1996 (IIRIRA), Pub. L. 104-208, 110 Stat. 3009, as amended (8 U.S.C. § 1324a note). The Federal Acquisition Regulation (FAR) Subpart 22.18, "Employment Eligibility Verification" and Executive Order 12989, as amended, provide authority for Federal contractors and subcontractors (Federal contractor) to use E-Verify to verify the employment eligibility of certain employees working on Federal contracts.

ARTICLE II
RESPONSIBILITIES

A. RESPONSIBILITIES OF THE EMPLOYER

1. The Employer agrees to display the following notices supplied by DHS in a prominent place that is clearly visible to prospective employees and all employees who are to be verified through the system:

   a. Notice of E-Verify Participation

   b. Notice of Right to Work

2. The Employer agrees to provide to the SSA and DHS the names, titles, addresses, and telephone numbers of the Employer representatives to be contacted about E-Verify. The Employer also agrees to keep such information current by providing updated information to SSA and DHS whenever the representatives' contact information changes.

3. The Employer agrees to grant E-Verify access only to current employees who need E-Verify access. Employers must promptly terminate an employee's E-Verify access if the employer is separated from the company or no longer needs access to E-Verify.

4. The Employer agrees to become familiar with and comply with the most recent version of the E-Verify User Manual.

5. The Employer agrees that any Employer Representative who will create E-Verify cases will complete the E-Verify Tutorial before that individual creates any cases.

a. The Employer agrees that all Employer representatives will take the refresher tutorials when prompted by E-Verify in order to continue using E-Verify. Failure to complete a refresher tutorial will prevent the Employer Representative from continued use of E-Verify.

6. The Employer agrees to comply with current Form I-9 procedures, with two exceptions:

a. If an employee presents a "List B" identity document, the Employer agrees to only accept "List B" documents that contain a photo. (List B documents identified in 8 C.F.R. § 274a.2(b)(1)(B)) can be presented during the Form I-9 process to establish identity.) If an employee objects to the photo requirement for religious reasons, the Employer should contact E-Verify at 888-464-4218.

b. If an employee presents a DHS Form I-551 (Permanent Resident Card), Form I-766 (Employment Authorization Document), or U.S. Passport or Passport Card to complete Form I-9, the Employer agrees to make a photocopy of the document and to retain the photocopy with the employee's Form I-9. The Employer will use the photocopy to verify the photo and to assist DHS with its review of photo mismatches that employees contest. DHS may in the future designate other documents that activate the photo screening tool.

Note: Subject only to the exceptions noted previously in this paragraph, employees still retain the right to present any List A, or List B and List C, document(s) to complete the Form I-9.

7. The Employer agrees to record the case verification number on the employee's Form I-9 or to print the screen containing the case verification number and attach it to the employee's Form I-9.

8. The Employer agrees that, although it participates in E-Verify, the Employer has a responsibility to complete, retain, and make available for inspection Forms I-9 that relate to its employees, or from other requirements of applicable regulations or laws, including the obligation to comply with the antidiscrimination requirements of section 274B of the INA with respect to Form I-9 procedures.

a. The following modified requirements are the only exceptions to an Employer's obligation to not employ unauthorized workers and comply with the anti-discrimination provision of the INA: (1) List B identity documents must have photos, as described in paragraph 6 above; (2) When an Employer confirms the identity and employment eligibility of newly hired employee using E-Verify procedures, the Employer establishes a rebuttable presumption that it has not violated section 274A(a)(1)(A) of the Immigration and Nationality Act (INA) with respect to the hiring of that employee; (3) If the Employer receives a final nonconfirmation for an employee, but continues to employ that person, the Employer must notify DHS and the Employer is subject to a civil money penalty between $550 and $1,100 for each failure to notify DHS of continued employment following a final nonconfirmation; (4) If the Employer continues to employ an employee after receiving a final nonconfirmation, then the Employer is subject to a rebuttable presumption that it has knowingly

employed an unauthorized alien in violation of section 274A(a)(1)(A); and (5) no E-Verify participant is civilly or criminally liable under any law for any action taken in good faith based on information provided through the E-Verify.

b. DHS reserves the right to conduct Form I-9 compliance inspections, as well as any other enforcement or compliance activity authorized by law, including site visits, to ensure proper use of E-Verify.

9. The Employer is strictly prohibited from creating an E-Verify case before the employee has been hired, meaning that a firm offer of employment was extended and accepted and Form I-9 was completed. The Employer agrees to create an E-Verify case for new employees within three Employer business days after each employee has been hired (after both Sections 1 and 2 of Form I-9 have been completed), and to complete as many steps of the E-Verify process as are necessary according to the E-Verify User Manual. If E-Verify is temporarily unavailable, the three-day time period will be extended until it is again operational in order to accommodate the Employer's attempting, in good faith, to make inquiries during the period of unavailability.

10. The Employer agrees not to use E-Verify for pre-employment screening of job applicants, in support of any unlawful employment practice, or for any other use that this MOU or the E-Verify User Manual does not authorize.

11. The Employer must use E-Verify for all new employees. The Employer will not verify selectively and will not verify employees hired before the effective date of this MOU. Employers who are Federal contractors may qualify for exceptions to this requirement as described in Article II.B of this MOU.

12. The Employer agrees to follow appropriate procedures (see Article III below) regarding tentative nonconfirmations. The Employer must promptly notify employees in private of the finding and provide them with the notice and letter containing information specific to the employee's E-Verify case. The Employer agrees to provide both the English and the translated notice and letter for employees with limited English proficiency to employees. The Employer agrees to provide written referral instructions to employees and instruct affected employees to bring the English copy of the letter to the SSA. The Employer must allow employees to contest the finding, and not take adverse action against employees if they choose to contest the finding, while their case is still pending. Further, when employees contest a tentative nonconfirmation based upon a photo mismatch, the Employer must take additional steps (see Article III.B. below) to contact DHS with information necessary to resolve the challenge.

13. The Employer agrees not to take any adverse action against an employee based upon the employee's perceived employment eligibility status while SSA or DHS is processing the verification request unless the Employer obtains knowledge (as defined in 8 C.F.R. § 274a.1(l)) that the employee is not work authorized. The Employer understands that an initial inability of the SSA or DHS automated verification system to verify work authorization, a tentative nonconfirmation, a case in continuance (indicating the need for additional time for the government to resolve a case), or the finding of a photo mismatch, does not establish, and should not be interpreted as, evidence that the employee is not work authorized. In any of such cases, the employee must be provided a full and fair opportunity to contest the finding, and if he or she does so, the employee may not be terminated or suffer any adverse employment consequences based upon the employee's perceived employment eligibility status

(including denying, reducing, or extending work hours, delaying or preventing training, requiring an employee to work in poorer conditions, withholding pay, refusing to assign the employee to a Federal contract or other assignment, or otherwise assuming that he or she is unauthorized to work) until and unless secondary verification by SSA or DHS has been completed and a final nonconfirmation has been issued. If the employee does not choose to contest a tentative nonconfirmation or a photo mismatch or if a secondary verification is completed and a final nonconfirmation is issued, then the Employer can find the employee is not work authorized and terminate the employee's employment. Employers or employees with questions about a final nonconfirmation may call E-Verify at 1-888-464-4218 (customer service) or 1-888-897-7781 (worker hotline).

14. The Employer agrees to comply with Title VII of the Civil Rights Act of 1964 and section 274B of the INA as applicable by not discriminating unlawfully against any individual in hiring, firing, employment eligibility verification, or recruitment or referral practices because of his or her national origin or citizenship status, or by committing discriminatory documentary practices. The Employer understands that such illegal practices can include selective verification or use of E-Verify except as provided in part D below, or discharging or refusing to hire employees because they appear or sound "foreign" or have received tentative nonconfirmations. The Employer further understands that any violation of the immigration-related unfair employment practices provisions in section 274B of the INA could subject the Employer to civil penalties, back pay awards, and other sanctions, and violations of Title VII could subject the Employer to back pay awards, compensatory and punitive damages. Violations of either section 274B of the INA or Title VII may also lead to the termination of its participation in E-Verify. If the Employer has any questions relating to the anti-discrimination provision, it should contact OSC at 1-800-255-8155 or 1-800-237-2515 (TDD).

15. The Employer agrees that it will use the information it receives from E-Verify only to confirm the employment eligibility of employees as authorized by this MOU. The Employer agrees that it will safeguard this information, and means of access to it (such as PINS and passwords), to ensure that it is not used for any other purpose and as necessary to protect its confidentiality, including ensuring that it is not disseminated to any person other than employees of the Employer who are authorized to perform the Employer's responsibilities under this MOU, except for such dissemination as may be authorized in advance by SSA or DHS for legitimate purposes.

16. The Employer agrees to notify DHS immediately in the event of a breach of personal information. Breaches are defined as loss of control or unauthorized access to E-Verify personal data. All suspected or confirmed breaches should be reported by calling 1-888-464-4218 or via email at E-Verify@dhs.gov. Please use "Privacy Incident – Password" in the subject line of your email when sending a breach report to E-Verify.

17. The Employer acknowledges that the information it receives from SSA is governed by the Privacy Act (5 U.S.C. § 552a(i)(1) and (3)) and the Social Security Act (42 U.S.C. 1306(a)). Any person who obtains this information under false pretenses or uses it for any purpose other than as provided for in this MOU may be subject to criminal penalties.

18. The Employer agrees to cooperate with DHS and SSA in their compliance monitoring and evaluation of E-Verify, which includes permitting DHS, SSA, their contractors and other agents, upon

reasonable notice, to review Forms I-9 and other employment records and to interview it and its employees regarding the Employer's use of E-Verify, and to respond in a prompt and accurate manner to DHS requests for information relating to their participation in E-Verify.

19. The Employer shall not make any false or unauthorized claims or references about its participation in E-Verify on its website, in advertising materials, or other media. The Employer shall not describe its services as federally-approved, federally-certified, or federally-recognized, or use language with a similar intent on its website or other materials provided to the public. Entering into this MOU does not mean that E-Verify endorses or authorizes your E-Verify services and any claim to that effect is false.

20. The Employer shall not state in its website or other public documents that any language used therein has been provided or approved by DHS, USCIS or the Verification Division, without first obtaining the prior written consent of DHS.

21. The Employer agrees that E-Verify trademarks and logos may be used only under license by DHS/USCIS (see M-795 (Web)) and, other than pursuant to the specific terms of such license, may not be used in any manner that might imply that the Employer's services, products, websites, or publications are sponsored by, endorsed by, licensed by, or affiliated with DHS, USCIS, or E-Verify.

22. The Employer understands that if it uses E-Verify procedures for any purpose other than as authorized by this MOU, the Employer may be subject to appropriate legal action and termination of its participation in E-Verify according to this MOU.

B. RESPONSIBILITIES OF FEDERAL CONTRACTORS

1. If the Employer is a Federal contractor with the FAR E-Verify clause subject to the employment verification terms in Subpart 22.18 of the FAR, it will become familiar with and comply with the most current version of the E-Verify User Manual for Federal Contractors as well as the E-Verify Supplemental Guide for Federal Contractors.

2. In addition to the responsibilities of every employer outlined in this MOU, the Employer understands that if it is a Federal contractor subject to the employment verification terms in Subpart 22.18 of the FAR it must verify the employment eligibility of any "employee assigned to the contract" (as defined in FAR 22.1801). Once an employee has been verified through E-Verify by the Employer, the Employer may not create a second case for the employee through E-Verify.

a. An Employer that is not enrolled in E-Verify as a Federal contractor at the time of a contract award must enroll as a Federal contractor in the E-Verify program within 30 calendar days of contract award and, within 90 days of enrollment, begin to verify employment eligibility of new hires using E-Verify. The Employer must verify those employees who are working in the United States, whether or not they are assigned to the contract. Once the Employer begins verifying new hires, such verification of new hires must be initiated within three business days after the hire date. Once enrolled in E-Verify as a Federal contractor, the Employer must begin verification of employees assigned to the contract within 90 calendar days after the date of enrollment or within 30 days of an employee's assignment to the contract, whichever date is later.

b. Employers enrolled in E-Verify as a Federal contractor for 90 days or more at the time of a contract award must use E-Verify to begin verification of employment eligibility for new hires of the Employer who are working in the United States, whether or not assigned to the contract, within three business days after the date of hire. If the Employer is enrolled in E-Verify as a Federal contractor for 90 calendar days or less at the time of contract award, the Employer must, within 90 days of enrollment, begin to use E-Verify to initiate verification of new hires of the contractor who are working in the United States, whether or not assigned to the contract. Such verification of new hires must be initiated within three business days after the date of hire. An Employer enrolled as a Federal contractor in E-Verify must begin verification of each employee assigned to the contract within 90 calendar days after date of contract award or within 30 days after assignment to the contract, whichever is later.

c. Federal contractors that are institutions of higher education (as defined at 20 U.S.C. 1001(a)), state or local governments, governments of Federally recognized Indian tribes, or sureties performing under a takeover agreement entered into with a Federal agency under a performance bond may choose to only verify new and existing employees assigned to the Federal contract. Such Federal contractors may, however, elect to verify all new hires, and/or all existing employees hired after November 6, 1986. Employers in this category must begin verification of employees assigned to the contract within 90 calendar days after the date of enrollment or within 30 days of an employee's assignment to the contract, whichever date is later.

d. Upon enrollment, Employers who are Federal contractors may elect to verify employment eligibility of all existing employees working in the United States who were hired after November 6, 1986, instead of verifying only those employees assigned to a covered Federal contract. After enrollment, Employers must elect to verify existing staff following DHS procedures and begin E-Verify verification of all existing employees within 180 days after the election.

e. The Employer may use a previously completed Form I-9 as the basis for creating an E-Verify case for an employee assigned to a contract as long as:

i. That Form I-9 is complete (including the SSN) and complies with Article II.A.6,

ii. The employee's work authorization has not expired, and

iii. The Employer has reviewed the Form I-9 information either in person or in communications with the employee to ensure that the employee's Section 1, Form I-9 attestation has not changed (including, but not limited to, a lawful permanent resident alien having become a naturalized U.S. citizen).

f. The Employer shall complete a new Form I-9 consistent with Article II.A.6 or update the previous Form I-9 to provide the necessary information if:

i. The Employer cannot determine that Form I-9 complies with Article II.A.6,

ii. The employee's basis for work authorization as attested in Section 1 has expired or changed, or

iii. The Form I-9 contains no SSN or is otherwise incomplete.

Note: If Section 1 of Form I-9 is otherwise valid and up-to-date and the form otherwise complies with

Article II.C.5, but reflects documentation (such as a U.S. passport or Form I-551) that expired after completing Form I-9, the Employer shall not require the production of additional documentation, or use the photo screening tool described in Article II.A.5, subject to any additional or superseding instructions that may be provided on this subject in the E-Verify User Manual.

g. The Employer agrees not to require a second verification using E-Verify of any assigned employee who has previously been verified as a newly hired employee under this MOU or to authorize verification of any existing employee by any Employer that is not a Federal contractor based on this Article.

3. The Employer understands that if it is a Federal contractor, its compliance with this MOU is a performance requirement under the terms of the Federal contract or subcontract, and the Employer consents to the release of information relating to compliance with its verification responsibilities under this MOU to contracting officers or other officials authorized to review the Employer's compliance with Federal contracting requirements.

C. RESPONSIBILITIES OF SSA

1. SSA agrees to allow DHS to compare data provided by the Employer against SSA's database. SSA sends DHS confirmation that the data sent either matches or does not match the information in SSA's database.

2. SSA agrees to safeguard the information the Employer provides through E-Verify procedures. SSA also agrees to limit access to such information, as is appropriate by law, to individuals responsible for the verification of Social Security numbers or responsible for evaluation of E-Verify or such other persons or entities who may be authorized by SSA as governed by the Privacy Act (5 U.S.C. § 552a), the Social Security Act (42 U.S.C. 1306(a)), and SSA regulations (20 CFR Part 401).

3. SSA agrees to provide case results from its database within three Federal Government work days of the initial inquiry. E-Verify provides the information to the Employer.

4. SSA agrees to update SSA records as necessary if the employee who contests the SSA tentative nonconfirmation visits an SSA field office and provides the required evidence. If the employee visits an SSA field office within the eight Federal Government work days from the date of referral to SSA, SSA agrees to update SSA records, if appropriate, within the eight-day period unless SSA determines that more than eight days may be necessary. In such cases, SSA will provide additional instructions to the employee. If the employee does not visit SSA in the time allowed, E-Verify may provide a final nonconfirmation to the employer.

Note: If an Employer experiences technical problems, or has a policy question, the employer should contact E-Verify at 1-888-464-4218.

D. RESPONSIBILITIES OF DHS

1. DHS agrees to provide the Employer with selected data from DHS databases to enable the Employer to conduct, to the extent authorized by this MOU:

a. Automated verification checks on alien employees by electronic means, and

b. Photo verification checks (when available) on employees.

2. DHS agrees to assist the Employer with operational problems associated with the Employer's participation in E-Verify. DHS agrees to provide the Employer names, titles, addresses, and telephone numbers of DHS representatives to be contacted during the E-Verify process.

3. DHS agrees to provide to the Employer with access to E-Verify training materials as well as an E-Verify User Manual that contain instructions on E-Verify policies, procedures, and requirements for both SSA and DHS, including restrictions on the use of E-Verify.

4. DHS agrees to train Employers on all important changes made to E-Verify through the use of mandatory refresher tutorials and updates to the E-Verify User Manual. Even without changes to E-Verify, DHS reserves the right to require employers to take mandatory refresher tutorials.

5. DHS agrees to provide to the Employer a notice, which indicates the Employer's participation in E-Verify. DHS also agrees to provide to the Employer anti-discrimination notices issued by the Office of Special Counsel for Immigration-Related Unfair Employment Practices (OSC), Civil Rights Division, U.S. Department of Justice.

6. DHS agrees to issue each of the Employer's E-Verify users a unique user identification number and password that permits them to log in to E-Verify.

7. DHS agrees to safeguard the information the Employer provides, and to limit access to such information to individuals responsible for the verification process, for evaluation of E-Verify, or to such other persons or entities as may be authorized by applicable law. Information will be used only to verify the accuracy of Social Security numbers and employment eligibility, to enforce the INA and Federal criminal laws, and to administer Federal contracting requirements.

8. DHS agrees to provide a means of automated verification that provides (in conjunction with SSA verification procedures) confirmation or tentative nonconfirmation of employees' employment eligibility within three Federal Government work days of the initial inquiry.

9. DHS agrees to provide a means of secondary verification (including updating DHS records) for employees who contest DHS tentative nonconfirmations and photo mismatch tentative nonconfirmations. This provides final confirmation or nonconfirmation of the employees' employment eligibility within 10 Federal Government work days of the date of referral to DHS, unless DHS determines that more than 10 days may be necessary. In such cases, DHS will provide additional verification instructions.

ARTICLE III

REFERRAL OF INDIVIDUALS TO SSA AND DHS

A. REFERRAL TO SSA

1. If the Employer receives a tentative nonconfirmation issued by SSA, the Employer must print the notice as directed by E-Verify. The Employer must promptly notify employees in private of the finding and provide them with the notice and letter containing information specific to the employee's E-Verify

case. The Employer also agrees to provide both the English and the translated notice and letter for employees with limited English proficiency to employees. The Employer agrees to provide written referral instructions to employees and instruct affected employees to bring the English copy of the letter to the SSA. The Employer must allow employees to contest the finding, and not take adverse action against employees if they choose to contest the finding, while their case is still pending.

2. The Employer agrees to obtain the employee's response about whether he or she will contest the tentative nonconfirmation as soon as possible after the Employer receives the tentative nonconfirmation. Only the employee may determine whether he or she will contest the tentative nonconfirmation.

3. After a tentative nonconfirmation, the Employer will refer employees to SSA field offices only as directed by E-Verify. The Employer must record the case verification number, review the employee information submitted to E-Verify to identify any errors, and find out whether the employee contests the tentative nonconfirmation. The Employer will transmit the Social Security number, or any other corrected employee information that SSA requests, to SSA for verification again if this review indicates a need to do so.

4. The Employer will instruct the employee to visit an SSA office within eight Federal Government work days. SSA will electronically transmit the result of the referral to the Employer within 10 Federal Government work days of the referral unless it determines that more than 10 days is necessary.

5. While waiting for case results, the Employer agrees to check the E-Verify system regularly for case updates.

6. The Employer agrees not to ask the employee to obtain a printout from the Social Security Administration number database (the Numident) or other written verification of the SSN from the SSA.

B. REFERRAL TO DHS

1. If the Employer receives a tentative nonconfirmation issued by DHS, the Employer must promptly notify employees in private of the finding and provide them with the notice and letter containing information specific to the employee's E-Verify case. The Employer also agrees to provide both the English and the translated notice and letter for employees with limited English proficiency to employees. The Employer must allow employees to contest the finding, and not take adverse action against employees if they choose to contest the finding, while their case is still pending.

2. The Employer agrees to obtain the employee's response about whether he or she will contest the tentative nonconfirmation as soon as possible after the Employer receives the tentative nonconfirmation. Only the employee may determine whether he or she will contest the tentative nonconfirmation.

3. The Employer agrees to refer individuals to DHS only when the employee chooses to contest a tentative nonconfirmation.

4. If the employee contests a tentative nonconfirmation issued by DHS, the Employer will instruct the

employee to contact DHS through its toll-free hotline (as found on the referral letter) within eight Federal Government work days.

5. If the Employer finds a photo mismatch, the Employer must provide the photo mismatch tentative nonconfirmation notice and follow the instructions outlined in paragraph 1 of this section for tentative nonconfirmations, generally.

6. The Employer agrees that if an employee contests a tentative nonconfirmation based upon a photo mismatch, the Employer will send a copy of the employee's Form I-551, Form I-766, U.S. Passport, or passport card to DHS for review by:

a. Scanning and uploading the document, or

b. Sending a photocopy of the document by express mail (furnished and paid for by the employer).

7. The Employer understands that if it cannot determine whether there is a photo match/mismatch, the Employer must forward the employee's documentation to DHS as described in the preceding paragraph. The Employer agrees to resolve the case as specified by the DHS representative who will determine the photo match or mismatch.

8. DHS will electronically transmit the result of the referral to the Employer within 10 Federal Government work days of the referral unless it determines that more than 10 days is necessary.

9. While waiting for case results, the Employer agrees to check the E-Verify system regularly for case updates.

ARTICLE IV
SERVICE PROVISIONS

A. NO SERVICE FEES

1. SSA and DHS will not charge the Employer for verification services performed under this MOU. The Employer is responsible for providing equipment needed to make inquiries. To access E-Verify, an Employer will need a personal computer with Internet access.

ARTICLE V
MODIFICATION AND TERMINATION

A. MODIFICATION

1. This MOU is effective upon the signature of all parties and shall continue in effect for as long as the SSA and DHS operates the E-Verify program unless modified in writing by the mutual consent of all parties.

2. Any and all E-Verify system enhancements by DHS or SSA, including but not limited to E-Verify checking against additional data sources and instituting new verification policies or procedures, will be covered under this MOU and will not cause the need for a supplemental MOU that outlines these changes.

B. TERMINATION

1. The Employer may terminate this MOU and its participation in E-Verify at any time upon 30 days prior written notice to the other parties.

2. Notwithstanding Article V, part A of this MOU, DHS may terminate this MOU, and thereby the Employer's participation in E-Verify, with or without notice at any time if deemed necessary because of the requirements of law or policy, or upon a determination by SSA or DHS that there has been a breach of system integrity or security by the Employer, or a failure on the part of the Employer to comply with established E-Verify procedures and/or legal requirements. The Employer understands that if it is a Federal contractor, termination of this MOU by any party for any reason may negatively affect the performance of its contractual responsibilities. Similarly, the Employer understands that if it is in a state where E-Verify is mandatory, termination of this by any party MOU may negatively affect the Employer's business.

3. An Employer that is a Federal contractor may terminate this MOU when the Federal contract that requires its participation in E-Verify is terminated or completed. In such cases, the Federal contractor must provide written notice to DHS. If an Employer that is a Federal contractor fails to provide such notice, then that Employer will remain an E-Verify participant, will remain bound by the terms of this MOU that apply to non-Federal contractor participants, and will be required to use the E-Verify procedures to verify the employment eligibility of all newly hired employees.

4. The Employer agrees that E-Verify is not liable for any losses, financial or otherwise, if the Employer is terminated from E-Verify.

ARTICLE VI
PARTIES

A. Some or all SSA and DHS responsibilities under this MOU may be performed by contractor(s), and SSA and DHS may adjust verification responsibilities between each other as necessary. By separate agreement with DHS, SSA has agreed to perform its responsibilities as described in this MOU.

B. Nothing in this MOU is intended, or should be construed, to create any right or benefit, substantive or procedural, enforceable at law by any third party against the United States, its agencies, officers, or employees, or against the Employer, its agents, officers, or employees.

C. The Employer may not assign, directly or indirectly, whether by operation of law, change of control or merger, all or any part of its rights or obligations under this MOU without the prior written consent of DHS, which consent shall not be unreasonably withheld or delayed. Any attempt to sublicense, assign, or transfer any of the rights, duties, or obligations herein is void.

D. Each party shall be solely responsible for defending any claim or action against it arising out of or related to E-Verify or this MOU, whether civil or criminal, and for any liability wherefrom, including (but not limited to) any dispute between the Employer and any other person or entity regarding the applicability of Section 403(d) of IIRIRA to any action taken or allegedly taken by the Employer.

E. The Employer understands that its participation in E-Verify is not confidential information and may be disclosed as authorized or required by law and DHS or SSA policy, including but not limited to,

Congressional oversight, E-Verify publicity and media inquiries, determinations of compliance with Federal contractual requirements, and responses to inquiries under the Freedom of Information Act (FOIA).

F. The individuals whose signatures appear below represent that they are authorized to enter into this MOU on behalf of the Employer and DHS respectively. The Employer understands that any inaccurate statement, representation, data or other information provided to DHS may subject the Employer, its subcontractors, its employees, or its representatives to: (1) prosecution for false statements pursuant to 18 U.S.C. 1001 and/or; (2) immediate termination of its MOU and/or; (3) possible debarment or suspension.

G. The foregoing constitutes the full agreement on this subject between DHS and the Employer.

To be accepted as an E-Verify participant, you should only sign the Employer's Section of the signature page. If you have any questions, contact E-Verify at 1-888-464-4218.

State of Missouri

EXEMPTION FROM MISSOURI SALES AND USE TAX ON PURCHASES

Issued to:

CITY OF KANSAS CITY
414 E 12TH ST 3RD FLOOR
KANSAS CITY MO 64106

Missouri Tax ID Number: 12490466

Effective Date: 07/11/2002

Your application for sales/use tax exempt status has been approved pursuant to Section 144.030.1, RSMo. This letter is issued as documentation of your exempt status.

Purchases by your Agency are not subject to sales or use tax if within the conduct of your Agency's exempt functions and activities. When purchasing with this exemption, furnish all sellers or vendors a copy of this letter. This exemption may not be used by individuals making personal purchases.

A contractor may purchase and pay for construction materials exempt from sales tax when fulfilling a contract with your Agency only if your Agency issues a project exemption certificate and the contractor makes purchases in compliance with the provisions of Section 144.062, RSMo.

Sales by your Agency are subject to all applicable state and local sales taxes. If you engage in the business of selling tangible personal property or taxable services at retail, you must obtain a Missouri Retail Sales Tax License and collect and remit sales tax.

This is a continuing exemption subject to legislative changes and review by the Director of Revenue. If your Agency ceases to qualify as an exempt entity, this exemption will cease to be valid. This exemption is not assignable or transferable. It is an exemption from sales and use taxes only and is not an exemption from real or personal property tax.

Any alteration to this exemption letter renders it invalid.

If you have any questions regarding the use of this letter, please contact the Division of Taxation and Collection, P.O. Box 3300, Jefferson City, MO 65105-3300, phone 573-751-2836.

PERFORMANCE AND MAINTENANCE BOND

Project/Contract Numbers: 81000927/1698

Project Title: Todd Creek WWTP Expansion & Major Upgrade

KNOW ALL MEN BY THESE PRESENTS: That _____, as PRINCIPAL (CONTRACTOR), and _____, (SURETY), licensed to do business as such in the State of Missouri, hereby bind themselves and their respective heirs, executors, administrators, successors, and assigns unto Kansas City, Missouri, a constitutionally chartered municipal corporation, (OWNER), as obligee, in the penal sum of _____ Dollars ($ _____) for the payment whereof CONTRACTOR and SURETY bind themselves, their heirs, executors, administrators, successors and assigns, jointly and severally, firmly by these presents.

WHEREAS,

CONTRACTOR has entered into a Contract with OWNER for Project/Contract Numbers 81000927/1698, Todd Creek WWTP Expansion & Major Upgrade, which Contract, including any present or future amendment thereto, is incorporated herein by reference and is hereinafter referred to as the Contract.

NOW, THEREFORE, THE CONDITION OF THIS OBLIGATION is such that, if CONTRACTOR shall promptly and faithfully perform said Contract including all duly authorized changes thereto, and including any maintenance requirements contained therein, according to all the terms thereof, including those under which CONTRACTOR agrees to pay legally required wage rates including the prevailing hourly rate of wages in the locality, as determined by the Department of Labor and Industrial Relations or by final judicial determination, for each craft or type of workman required to execute the Contract and, further, shall defend, indemnify, and hold harmless OWNER from all damages, including but not limited to, liquidated damages, loss and expense occasioned by any failure whatsoever of said CONTRACTOR and SURETY to fully comply with and carry out each and every requirement of the Contract, then this obligation shall be void; otherwise, it shall remain in full force and effect.

WAIVER. That SURETY, for value received, hereby expressly agrees that no change, extension of time, alteration or addition to the terms of the Contract or to the Work to be performed thereunder, shall in any way affect the obligations of this Bond; and it does hereby waive notice of any such change, extension of time, or alteration or addition to the terms of the Contract or the Work to be performed thereunder.

IN WITNESS WHEREOF, the above parties have executed this instrument the ____ day of _____, 20__.

KNOW ALL MEN BY THESE PRESENTS: That _____, as PRINCIPAL (CONTRACTOR), and_____, (SURETY), licensed to do business as such in the State of Missouri, hereby bind themselves and their respective heirs, executors, administrators, successors, and assigns unto Kansas City, Missouri, a constitutionally chartered municipal corporation, (OWNER), as obligee, in the penal sum of _____ Dollars ($_____) for the payment whereof CONTRACTOR and SURETY bind themselves, their heirs, executors, administrators, successors and assigns, jointly and severally, firmly by these presents.

WHEREAS,

CONTRACTOR has entered into a contract with OWNER for Project/Contract Numbers 81000927/1698, Todd Creek WWTP Expansion & Major Upgrade, which Contract, including any present or future amendment thereto, is incorporated herein by reference and is hereinafter referred to as the Contract.

NOW, THEREFORE, THE CONDITION OF THIS OBLIGATION is such that, if in connection with the Contract, including all duly authorized modifications thereto, prompt payment shall be made to all laborers, subcontractors, teamsters, truck drivers, owners or other suppliers or for equipment employed on the job, and other claimants, for all labor performed in such work whether done for CONTRACTOR, a subcontractor, SURETY, a completion contractor or otherwise (at the full wage rates required by any law of the United States or of the State of Missouri, where applicable), for services furnished and consumed, for repairs on machinery, for equipment, tools, materials, lubricants, oil, gasoline, water, gas, power, light, heat, oil, telephone service, grain, hay, feed, coal, coke, groceries and foodstuffs, either consumed, rented, used or reasonably required for use in connection with the construction of the work or in the performance of the Contract and all insurance premiums, both for compensation and for all other kinds of insurance on the work, for sales taxes and for royalties in connection with, or incidental to, the completion of the Contract, in all instances whether the claim be directly against CONTRACTOR, against SURETY or its completion contractor, through a subcontractor or otherwise, and, further, if CONTRACTOR shall defend, indemnify and hold harmless OWNER from all such claims, demands or suits by any such person or entity, then this obligation shall be void; otherwise, it shall remain in full force and effect.

Any conditions legally required to be included in a Payment Bond on this Contract, including but not limited to those set out in §107.170 RSMo.are included herein by reference.

SURETY agrees that, in the event that CONTRACTOR fails to make payment of the obligations covered by this Bond, it will do so and, further, that within forty-five (45) days of receiving, at the address given below, a claim hereunder stating the amount claimed and the basis for the claim in reasonable detail, it (a) will send an answer to the claimant, with a copy to OWNER stating the amounts that are undisputed and the basis for challenging any amounts that are disputed, and (b) will pay any amounts that are undisputed. The amount of this Bond shall be reduced by and to the extent of any payment or payments made in good faith hereunder.

While this Bond is in force, it may be sued on at the instance of any party to whom any such payment is due, in the name of OWNER to the use for such party. OWNER shall not be liable for the payment of any costs or expenses of any such suit.

No suit shall be commenced or pursued hereunder other than in a state court of competent jurisdiction in Jackson, Clay or Platte County, Missouri, or in the United States District Court for the Western District of Missouri.

WAIVER. That SURETY, for value received, hereby expressly agrees that no change, extension of time, alteration or addition to the terms of the Contract or to the Work to be performed thereunder, shall in any way affect the obligations of this Bond; and it does hereby waive notice of any such change, extension of time, or alteration or addition to the terms of the Contract or the Work to be performed thereunder.

IN WITNESS WHEREOF, the above parties have executed this instrument the _____ day of_____ _____, 20____.

17.01 Giving Notice
17.02 Computation of Times
17.03 Cumulative Remedies
17.04 Survival of Obligations
17.05 Controlling Law

ARTICLE 1 DEFINITIONS AND TERMINOLOGY

1.01 Defined Terms

A. Wherever used in these General Conditions or in the other Contract Documents, the following terms have the meanings indicated which are applicable to both the singular and plural thereof:

1. Addenda - Written or graphic instruments issued prior to the opening of Bids that clarify, correct or change the Bidding Requirements or the Contract Documents.

2. Agreement—The written Contract between CITY and CONTRACTOR governing the Work to be performed; other Contract Documents are attached to the Agreement and made a part thereof as provided therein.

3. Application for Payment—The form accepted by CITY's Representative which is to be used by CONTRACTOR in requesting progress or final payments and which is to be accompanied by such supporting documentation as is required by the Contract Documents.

4. Asbestos - Any material that contains more than one percent (1%) Asbestos and is friable or is releasing Asbestos fibers into the air above current action levels established by the United States Occupational Safety and Health Administration.

5. Bid- The offer or proposal of the Bidder submitted on the Bid Form/Contract setting forth the prices for the Work to be performed. A Bidder's Bid becomes a Contract with CITY if the CITY executes the Bid Form/Contract submitted by Bidder. If the CITY executes the Bid Form/Contract submitted by Bidder, the term "Bidder" shall mean CONTRACTOR.

6. Bidder- One who submits a Bid directly to CITY, as distinct from a sub-bidder who submits a bid to a Bidder. If the CITY executes the Bid Form/Contract submitted by Bidder, the term "Bidder" shall mean CONTRACTOR in both the Bidding Documents and Contract Documents unless the context clearly indicates otherwise.

7. Bidding Documents- The advertisement or Invitation to Bid, Instructions to Bidders, the Bid Form/Contract, and the proposed Contract Documents (including all Addenda issued prior to receipt of Bids).

8. Bidding Requirements- The advertisement or invitation to bid, Instructions to Bidders, Bid security, and the Bid Form/Contract with any supplements.

9. Bonds- Payment Bond and Performance and Maintenance Bond and other instruments of security.

10. Calendar Day- Any day shown on the calendar, including Saturdays, Sundays, and holidays.

11. Change Order- A written document issued by CITY that authorizes an addition, deletion or revision in the Work, or an adjustment in the Contract Price or the Contract Times, issued on or after the Effective Date of the Contract.

12. CITY/OWNER- Kansas City, Missouri, a constitutionally chartered municipal corporation, with which CONTRACTOR has entered into the Contract and for whom the Work is to be provided**.**

13. CITY's Representative- Person or agency designated to act for the Director as provided in these Contract Documents.

14. Consultant- Person, firm or corporation having a contract with CITY or DESIGN PROFESSIONAL to furnish services as an independent professional associate or Consultant with respect to the Project and who's identified as such in the Supplementary Conditions.

The Consultant(s) is identified and their seals affixed on the Certification Page(s). The certifications describe the respective responsibilities for the Drawings and Specifications prepared by the Consultant(s) and are incorporated into this Contract.

15. Contract- The entire and integrated written agreement between CITY and CONTRACTOR concerning the Work that incorporates all Contract Documents. The Bid Form/Contract submitted by Bidder is the Contract between CITY and CONTRACTOR upon execution by CITY. The Contract supersedes prior negotiations, representations, or agreements, whether written or oral.

16. Contract Documents- The Contract Documents establish the rights and obligations of the parties and include the Contract, Addenda (which pertain to the Contract Documents), CONTRACTOR's Bid Form/Contract (including documentation accompanying the Bid and any post Bid documentation submitted prior to the Notice of Intent to Contract), the Construction Project Instructions, the Contractor's Utilization Plan/Request for Waiver, the Notice to Proceed, the Bonds, these General Conditions, the Supplementary Conditions, the Specifications and the Drawings as the same are more specifically identified in the Project Manual and the certification page(s) of the DESIGN PROFESSIONAL and Consultant(s), together with approved project baseline schedule and amendments thereto and all Written Amendments, Change Orders, Work Change Directives, and DESIGN PROFESSIONAL's written interpretations and clarifications issued on or after the Effective Date of the Contract, and approved Shop Drawings. Reports and drawings of subsurface and physical conditions are not Contract Documents. Only printed or hard copies of the items listed in this Paragraph are Contract Documents. Files in electronic media format of text, data, graphics, and the like that may be furnished by CITY to CONTRACTOR are not Contract Documents, except project schedules submitted by CONTRACTOR and approved by CITY.

17. Contract Price- The money payable by CITY to CONTRACTOR for completion of the Work in accordance with the Contract Documents as stated in the Agreement.

18. Contract Times- The number of days or the dates stated in the Supplementary Conditions: (a) to achieve Substantial Completion, and (b) to complete the Work so that it is ready for final payment as evidenced by CITY's Representative's written recommendation of final payment.

19. CONTRACTOR- The person, firm, partnership, company, corporation or association licensed or otherwise authorized by law to do business in Missouri, with whom CITY has entered into the Agreement.

20. Day– Shall constitute a Calendar Day.

21. DESIGN PROFESSIONAL- Architect, Engineer or other licensed professional who is either employed by or has contracted with CITY to serve in a design capacity and whose Consultants, members, partners, employees or agents have prepared and sealed the Drawings and Specifications.

The DESIGN PROFESSIONAL(s) is identified and their seals affixed on the Certification Page(s). The certifications describe the respective responsibilities for the Drawings and Specifications prepared by the DESIGN PROFESSIONAL and are incorporated into this Contract.

22. DESIGN PROFESSIONAL's Project Representative- The authorized representative of DESIGN PROFESSIONAL who may be assigned to the Site or any part thereof.

23. Director- The term Director shall mean the duly appointed executive officer of a department of City who is empowered by the City Charter or by the City Council to enter into a contract on behalf of City, or to grant a permit for improvements to land owned by City. A Director is authorized to delegate this authority to a City employee so designated in writing.

24. Drawings- The drawings which graphically show the scope, extent and character of the Work to be furnished and performed by CONTRACTOR and which have been prepared by DESIGN PROFESSIONAL and are included in the Contract Documents. Shop Drawings are not Drawings as so defined.

25. Effective Date of the Contract- The date indicated in the Contract on which it becomes effective, but if no such date is indicated it means the date on which the Contract is fully executed by CITY.

26. General Requirements- Sections of Division 1 of the Specifications. The General Requirements pertain to all sections of the Specifications.

27. Hazardous Environmental Condition- The presence at the Site of Asbestos, Lead-Based Paint, PCBs, Petroleum, Hazardous Waste, or Radioactive Material in such quantities or circumstances that may present a substantial danger to persons or property exposed thereto in connection with the Work.

28. Hazardous Waste- The term Hazardous Waste shall have the meaning provided in Section 1004 of the Solid Waste Disposal Act (42 USC Section 6903) as amended from time to time.

29. Laws or Regulations- Any and all applicable laws, rules, regulations, ordinances, codes and orders of any and all governmental bodies, agencies, authorities and courts having jurisdiction.

30. Lead-Based Paint- Any paint, varnish, stain, or other applied coating that has one (1) mg or more of lead per square centimeter. The terms “leaded paint” and “lead-containing paint” are synonymous with Lead-Based Paint.

31. Liens- Liens, charges, security interests or encumbrances upon real property or personal property.

32. Milestone- A principal event specified in the Contract Documents relating to an intermediate completion date or time prior to Substantial Completion of all the Work.

33. Notice of Intent to Contract- The written notice by CITY to the apparent successful Bidder stating that upon compliance by that apparent successful Bidder with the conditions in the Bid Documents enumerated, within the time specified, and upon enactment of an appropriate ordinance or resolution, CITY will sign and deliver the Contract.

34. Notice to Proceed- A written notice given by CITY to CONTRACTOR fixing the date on which the Contract Times will commence to run and on which CONTRACTOR shall start to perform CONTRACTOR’s obligations under the Contract Documents.

35. Partial Utilization- Use by CITY of a substantially completed part of the Work for the purpose for which it is intended (or a related purpose) prior to Substantial Completion of all the Work.

36. PCBs- Polychlorinated biphenyls.

37. Petroleum- Petroleum, including crude oil or any fraction thereof which is liquid at standard conditions of temperature and pressure (60 degrees Fahrenheit and 14.7 pounds per square inch absolute), such as oil, petroleum, fuel oil, oil sludge, oil refuse, gasoline, kerosene, and oil mixed with other non-Hazardous Wastes and crude oils.

38. Project- The total construction of which the Work to be provided under the Contract Documents may be the whole, or a part as indicated elsewhere in the Contract Documents.

39. Project Manual- The documentary information prepared for bidding and constructing the Work. A listing of the contents of the Project Manual may be issued in one or more volumes and is contained in the table(s) of contents.

40. Radioactive Material- Source, special nuclear, or byproduct material as defined by the Atomic Energy Act of 1954 (42 USC Section 2011 et seq.) as amended from time to time.

41. Samples- Physical examples of materials, equipment, or workmanship that are representative of some portion of the Work and which establish the standards by which such portion of the Work will be judged.

42. Shop Drawings- All drawings, diagrams, illustrations, schedules and other data or information which are specifically prepared or assembled by or for CONTRACTOR and submitted by CONTRACTOR to illustrate some portion of the Work.

43. Site- Lands or areas indicated in the Contract Documents as being furnished by CITY upon which the Work is to be performed, including rights-of-way and easements for access thereto, and such other lands furnished by CITY which are designated for the use of CONTRACTOR.

44. Specifications- Those portions of the Contract Documents consisting of written technical descriptions of materials, equipment, construction systems, standards and workmanship as applied to the Work and certain administrative details applicable thereto.

45. Subcontractor- Any individual, firm, partnership, company, corporation or association licensed or otherwise authorized by law to do business in Missouri, to whom CONTRACTOR, with written notification to CITY, has entered into an agreement to perform a part of the Work.

46. Substantial Completion- When Work (or a specified part thereof) has progressed to the point where, in the opinion of DESIGN PROFESSIONAL as evidenced by DESIGN PROFESSIONAL's definitive certificate of Substantial Completion, it is sufficiently complete, in accordance with the Contract Documents, so that the Work (or specified part) can be utilized for the purposes for which it is intended. The terms "substantially complete" and "substantially completed" as applied to all or part of the Work refer to Substantial Completion thereof.

47. Supplementary Conditions- The part of the Contract Documents which amends and/or supplements these General Conditions.

48. Supplier- A manufacturer, fabricator, supplier, distributor, materialman or vendor having a direct contract with CONTRACTOR or with any Subcontractor to furnish materials or equipment to be incorporated into the Work by CONTRACTOR or any Subcontractor.

49. Underground Facilities- All pipelines, conduits, ducts, cables, wires, manholes, vaults, tanks, tunnels or other such facilities or attachments, and any encasements containing such facilities which have been installed underground to furnish any of the following services or materials: electricity, gases, steam, liquid petroleum products, telephone or other communications, cable television, water, wastewater, storm water, other liquids or chemicals, or traffic or other control systems.

50. Unit Price Work- Work to be paid for on the basis of unit prices.

51. Work- The entire completed construction or the various separately identifiable parts thereof required to be furnished under the Contract Documents. Work includes and is the result of performing or furnishing labor, and furnishing and incorporating material and equipment into the construction, and furnishing documents, all as required by the Contract Documents.

52. Work Change Directive- A written directive to CONTRACTOR, issued on or after the Effective Date of the Contract, signed by CITY and recommended by DESIGN PROFESSIONAL, ordering an addition, deletion or revision in the Work, or responding to differing or unforeseen subsurface or physical conditions under which the Work is to be performed, or to emergencies. A Work Change Directive will not change the Contract Price or the Contract Times, but is evidence that the parties expect that the change directed or

documented by a Work Change Directive will be incorporated in a subsequently issued Change Order following negotiations by the parties as to its effect, if any, on the Contract Price or Contract Times.

53. Work Day - Any day during which the CONTRACTOR is able to work a period of six (6) hours or more. Days that are not Work Days are days during which the CONTRACTOR is unable to work for a period of six (6) hours by reason of strikes, boycotts, labor disputes, embargoes, unusual delays in transportation or shortage of material, acts of God, acts of the public enemy, acts of superior governmental authority, weather conditions, riots, rebellion, sabotage, or any other circumstances for which CONTRACTOR is not responsible or which is not within its control. Saturdays, Sundays, and holidays on which the CONTRACTOR's forces engage in Work requiring the presence of an inspector, will be considered as Work Days.

54. Written Amendment- A written statement modifying the Contract Documents, signed by CITY and CONTRACTOR on or after the Effective Date of the Contract and normally dealing with the non-engineering or non-technical rather than strictly construction-related aspects of the Contract Documents.

1.02 Terminology

A. Intent of Certain Terms or Adjectives

1. Whenever in the Contract Documents the terms "as ordered," "as directed," "as required," "as allowed," "as approved," or terms of like effect or import are used, or the adjectives "reasonable," "suitable," "acceptable," "proper" or "satisfactory" or adjectives of like effect or import are used to describe a requirement, direction, review or judgment of DESIGN PROFESSIONAL as to the Work, it is intended that such requirement, direction, review or judgment will be solely to evaluate, in general, the completed Work for compliance with the requirements of and information in the Contract Documents and conformance with the design concept of the completed Project as a functioning whole as shown or indicated in the Contract Documents (unless there is a specific statement indicating otherwise). The use of any such term or adjective shall not be effective to assign to DESIGN PROFESSIONAL any duty or authority to supervise or direct the furnishing or performance of the Work or any duty or authority to undertake responsibility contrary to the provisions of Paragraph 9.08 or any other provision of the Contract Documents.

B. Defective

1. The word "defective," when modifying the word "Work," refers to Work that is unsatisfactory, faulty or deficient, in that it does not conform to the Contract Documents, or does not meet the requirements of any inspection, reference standard, test or approval referred to in the Contract Documents, or has been damaged prior to CITY 's Representative's recommendation of final payment (unless responsibility for the protection thereof has been assumed by CITY at Substantial Completion in accordance with Paragraph 14.04 or 14.05).

C. Furnish, Install, Perform, Provide

1. The word "furnish," when used in connection with services, materials, or equipment, shall mean to supply and deliver said services, materials, or equipment to the Site (or some other specified location) ready for use or installation and in usable or operable condition.

2. The word "install," when used in connection with services, materials, or equipment, shall mean to put into use or place in final position said services, materials, or equipment complete and ready for intended use.

3. The words "perform" or "provide," when used in connection with services, materials, or equipment, shall mean to furnish and install said services, materials, or equipment complete and ready for intended use.

4. When “furnish,” “install,” “perform,” or “provide” is not used in connection with services, materials, or equipment in a context clearly requiring an obligation of CONTRACTOR, “provide” is implied.

D. Unless stated otherwise in the Contract Documents, words and phrases which have a well-known technical or construction industry or trade meanings are used in the Contract Documents in accordance with such recognized meaning.

ARTICLE 2 PRELIMINARY MATTERS

2.01 Delivery of Bonds

A. CONTRACTOR shall deliver to CITY such Bonds as CONTRACTOR may be required to furnish.

2.02 Evidence of Insurance

A. CONTRACTOR shall deliver to CITY certificates of insurance or other evidence of insurance that CITY may request, which CONTRACTOR is required to purchase and maintain in accordance with Article 5 or any other applicable provision in the Contract Documents.

2.03 Copies of Documents

A. CITY shall furnish to CONTRACTOR one (1) copy of the Drawings and Specifications, including addenda.

2.04 Commencement of Contract Times; Notice to Proceed

A. The Contract Times will commence to run on the date indicated in the Notice to Proceed.

2.05 Starting the Work

A. CONTRACTOR shall start to perform the Work on the date when the Contract Times commence to run, but no Work shall be done at the Site prior to the date on which the Contract Times commence to run, unless otherwise indicated in the Notice to Proceed.

2.06 Before Starting Construction

A. CONTRACTOR's Review of Contract Documents: Before undertaking each part of the Work, CONTRACTOR shall carefully study and compare the Contract Documents and check and verify pertinent figures shown thereon and all applicable field measurements. CONTRACTOR shall promptly report in writing to DESIGN PROFESSIONAL any conflict, error, ambiguity or discrepancy which CONTRACTOR may discover and shall obtain a written interpretation or clarification from DESIGN PROFESSIONAL before proceeding with any Work affected thereby. CONTRACTOR shall not be liable to CITY or DESIGN PROFESSIONAL for failure to report any conflict, error, ambiguity or discrepancy in the Contract Documents, unless CONTRACTOR knew or reasonably should have known thereof.

B. Preliminary Schedules: Within ten (10) days after the Effective Date of the Contract, or on such later date as CITY's Representative shall provide in writing, CONTRACTOR shall submit to CITY's Representative for review:

1. Preliminary Project Schedule: CONTRACTOR shall submit a proposed project schedule for CITY’s acceptance. The proposed project schedule shall include a detailed and comprehensive construction schedule utilizing a critical path method diagram network that (a) shows all major procurement and construction elements and phases of the Project; (b) breaks down each element or phase by trade; (c) shows early and late starts so that all float time will be accurately identified; (d) all other activities necessary for the timely completion of the Project in accordance with the scheduled dates for Substantial and Final Completion; and (e) highlights the project’s critical path. CITY’s acceptance is expressly limited to CITY’s acknowledgement that, based upon CITY’s limited review, the dates of Substantial

Completion and Milestone dates are acceptable. After final acceptance of the preliminary project schedule by the CITY, it shall be considered the project baseline schedule pursuant to Paragraph 2.07(B).

2. Preliminary schedule of Shop Drawings and Sample submittals which will list each required submittal and the times for submitting, reviewing and processing such submittal; and

3. Preliminary 01290.02 Schedule of Values for all of the Work which will include quantities and prices of items which when added together equals the Contract Price and will subdivide the Work into component parts in sufficient detail to serve as the basis for progress payments during performance of the Work. Such prices will include an appropriate amount of overhead and profit applicable to each item of Work.

C. Preconstruction Conference: Before any Work at the Site may be started, a conference attended by CONTRACTOR, DESIGN PROFESSIONAL and others, as appropriate, will be scheduled by CITY's Representative to establish a working understanding among the parties as to the Work and to discuss the schedules referred to in Paragraph 2.06 B, procedures for handling Shop Drawings and other submittals, processing Applications for Payment, maintaining required records, Claims process, dispute resolution or any other applicable provisions of the Contract Documents.

2.07 Acceptable Schedules

A. Acceptable schedule: The Contractor shall update and submit to the CITY for review the preliminary schedule within seven (7) Calendar Days after the Notice to Proceed.

1. The CITY shall review and make any necessary comments and/or adjustments to the updated preliminary schedule. The Contractor shall incorporate the CITY's comments and resubmit the updated preliminary schedule within seven (7) Calendar Days from receipt of the CITY's comments.

B. Project Baseline Schedule: The accepted updated preliminary schedule shall be considered the project baseline schedule and shall be used by the CONTRACTOR for planning, scheduling, managing, and executing the Work. The project baseline schedule shall not be changed without the written consent of CITY. The project baseline schedule may be further modified by the Supplemental Conditions.

C. CONTRACTOR's schedule of values will be acceptable to CITY's Representative as to form and substance if it provides a reasonable allocation of the Contract Price to component parts of the Work.

ARTICLE 3 CONTRACT DOCUMENTS : INTENT, AMENDING, REUSE

3.01 Intent

A. The Contract Documents comprise the entire Contract between CITY and CONTRACTOR concerning the Work.

B. It is the intent of the Contract Documents to describe a functionally complete Project (or part thereof) to be constructed in accordance with the Contract Documents. Any Work, materials or equipment that may reasonably be inferred from the Contract Documents or from prevailing custom or trade usage as being required to produce the intended result will be furnished and performed whether or not specifically called for at no additional cost to CITY. Clarifications and interpretations of the Contract Documents shall be issued by DESIGN PROFESSIONAL as provided in Paragraph 9.03.

C. Correlation and intent of documents: The Drawings and Specifications are intended to supplement each other. Any Work shown on the Drawings and not mentioned in the Specifications (or vice versa) shall be as binding and shall be completed the same as if mentioned or shown on both. In the event of conflicts or discrepancies among the Contract Documents, interpretations will be based on the following priorities:

1. Change Orders and Written Amendments
2. Project Baseline Schedule Requirements
3. Approved Shop Drawings
4 Addenda, with those of later date having precedence over those of earlier date
5. The Supplementary Conditions
6. The General Conditions
7. Drawings and Specifications

D. In the case of an inconsistency between Drawings and Specifications, the requirements of the Specifications shall govern. If Drawings are in conflict, larger scale details shall govern over smaller or no-scale Drawings. If Specification sections are in conflict with each other, the conflict shall be resolved by DESIGN PROFESSIONAL in accordance with reasonable interpretation of such documents.

E. The general character of the detailed Work is shown on the Drawings, but minor modifications may be made in the full size or scale details. Where the word “similar” occurs on the Drawings, it shall be used in its general sense and not as meaning identical, and all details shall be worked out in relation to their location and their connection to the other parts of the Work. Where on any Drawings a portion of the Work is drawn out and the remainder is indicated in outline, the parts drawn out shall apply also to all other like portions of the Work. Where ornaments or other details are indicated by starting only, such details shall be continued throughout the courses or parts in which they occur and shall also apply to all other similar parts in the Work, unless otherwise indicated.

3.02 Reference to Standards and Specifications of Technical Societies

A. Reference to standards, specifications, manuals or codes of any technical society, organization or association, or to Laws or Regulations, whether such reference be specific or by implication, shall mean the latest standard, specification, manual, code or Laws or Regulations in effect at the time of opening of Bids (or on the date of CONTRACTOR’s proposal if there are no Bids), except as may be otherwise specifically stated in the Contract Documents.

1. No provision of any such standard, specification, manual, code or instruction of Supplier shall be effective to change the duties or responsibilities of CITY, CONTRACTOR or DESIGN PROFESSIONAL, or any of their Subcontractors, Consultants, agents, or employees from those set forth in the Contract Documents, nor shall it be effective to assign to CITY or DESIGN PROFESSIONAL or any of their Consultants, agents or employees any duty or authority to supervise or direct the furnishing or performance of the Work or any duty or authority to undertake responsibility inconsistent with the provisions of the Contract Documents.

3.03 Reporting and Resolving Discrepancies

A. Reporting Discrepancies: If, during the performance of the Work, CONTRACTOR discovers any conflict, error, ambiguity or discrepancy within the Contract Documents or between the Contract Documents and any provision of any Laws or Regulations applicable to the performance of the Work or of any standard, specification, manual, code or any instruction of any Supplier referred to in Paragraph 6.07, CONTRACTOR shall report it immediately to DESIGN PROFESSIONAL in writing. CONTRACTOR shall not proceed with the Work affected thereby (except in an emergency as authorized by Paragraph 6.17) until an amendment or supplement to the Contract Documents has been issued by one of the methods indicated in Paragraph 3.04; provided, however, that CONTRACTOR shall not be liable to CITY or DESIGN PROFESSIONAL for failure to report any such conflict, error, ambiguity or discrepancy unless CONTRACTOR knew or reasonably should have known thereof.

B. Resolving Discrepancies. The provisions of the Contract Documents shall take precedence in resolving any conflict, error, ambiguity or discrepancy between the provisions of the Contract Documents and:

1. the provisions of any standard, specification, manual, code or instruction (whether or not specifically incorporated by reference in the Contract Documents); or

2. the provisions of any Laws or Regulations applicable to the performance of the Work.

3.04 Amending and Supplementing Contract Documents

A. The Contract Documents may be amended to provide for additions, deletions and revisions in the Work or to modify the terms and conditions thereof in one or more of the following ways:

1. a Written Amendment or

2. a Change Order (pursuant to Article 10), whether pursuant to a Work Change Directive or otherwise.

B. The requirements of the Contract Documents may be supplemented and minor variations and deviations in the Work may be authorized, in one or more of the following ways

1. DESIGN PROFESSIONAL's approval of a Shop Drawing or Sample (pursuant to Paragraph 6.18), or

2. DESIGN PROFESSIONAL's written interpretation or clarification (pursuant to Paragraph 9.03).

3.05 Reuse of Documents

A. CONTRACTOR and any Subcontractor or Supplier or other person or organization performing or furnishing any of the Work under this Contract:

1. shall not have or acquire any title to or ownership rights in any of the Drawings, Specifications or other documents (or copies of any thereof) prepared by or bearing the seal of DESIGN PROFESSIONAL or Consultant, and

2. shall not reuse any of such Drawings, Specifications, other documents or copies thereof on extensions of the Project or any other project without written consent of CITY, and of DESIGN PROFESSIONAL or Consultant, as applicable, and specific written verification or adaptation by DESIGN PROFESSIONAL or Consultant.

This prohibition will survive final payment, completion, and acceptance of the Work, or termination or completion of the Contract. Nothing herein shall preclude CONTRACTOR from retaining copies of the Contract Documents for record purposes.

ARTICLE 4 AVAILABILITY OF LANDS; SUBSURFACE AND PHYSICAL CONDITIONS; REFERENCE POINTS

4.01 Availability of Lands

A. CITY shall furnish the Site. CITY shall identify any encumbrances or restrictions not of general application but specifically related to use of lands so furnished with which CONTRACTOR will have to comply in performing the Work. Easements for permanent structures or permanent changes in existing facilities will be obtained and paid for by CITY, unless otherwise provided in the Contract Documents. If CONTRACTOR and CITY are unable to agree on entitlement to or the amount or extent of any adjustments in the Contract Price or the Contract Times or both as a result of any delay in CITY's furnishing these lands, rights-of-way or easements, CONTRACTOR may make a Claim as provided in Article 16. CONTRACTOR shall provide for all additional lands and access thereto that may be required for temporary construction facilities or storage of materials and equipment.

4.02 Subsurface and Physical Conditions

A. Reports and Drawings: Reference is made to the Supplementary Conditions for identification of:

1. Subsurface Conditions: Those reports of explorations and tests of subsurface conditions at or contiguous to the Site that have been utilized by DESIGN PROFESSIONAL in preparing the Contract Documents; and

2. Physical Conditions: Those drawings of physical conditions in or relating to existing surface or subsurface structures at or contiguous to the Site (except Underground Facilities) that have been utilized by DESIGN PROFESSIONAL in preparing the Contract Documents.

B. Limited Reliance by CONTRACTOR on Technical Data Authorized: CONTRACTOR may rely upon the general accuracy of the technical data contained in reports and drawings of subsurface or physical conditions, but such reports and drawings are not Contract Documents. The technical data is identified in the Supplementary Conditions. Except for reliance on such technical data, CONTRACTOR may not rely upon or make any Claim against CITY, DESIGN PROFESSIONAL or any Consultant with respect to:

1. the completeness of such reports and drawings for CONTRACTOR's purposes, including, but not limited to, any aspects of the means, methods, techniques, sequences and procedures of construction to be employed by CONTRACTOR and safety precautions and programs incident thereto; or

2. other data, interpretations, opinions and information contained in such reports or shown or indicated in such drawings, or

3. any CONTRACTOR interpretation of or conclusion drawn from any technical data or any such other data, interpretations, opinions or information.

4.03 Differing Subsurface or Physical Conditions

A. Notice of Differing Subsurface or Physical Conditions. If CONTRACTOR believes that any subsurface or physical condition at or contiguous to the Site that is uncovered or revealed either:

1. is of such a nature as to establish that any technical data on which CONTRACTOR is entitled to rely as provided in Paragraphs 4.02 A and 4.02 B is materially inaccurate; or

2. is of such a nature as to require a change in the Contract Documents; or

3. differs materially from that shown or indicated in the Contract Documents; or

4. is of an unusual nature, and differs materially from conditions ordinarily encountered and generally recognized as inherent in work of the character provided for in the Contract Documents; then CONTRACTOR shall, promptly after becoming aware thereof and before further disturbing the subsurface or physical conditions or performing any Work in connection therewith (except in an emergency as required by Paragraph 6.17), notify CITY and DESIGN PROFESSIONAL in writing about such condition(s). CONTRACTOR shall not further disturb such conditions or perform any Work in connection therewith (except as aforesaid) until receipt of written order to do so.

B. DESIGN PROFESSIONAL's Review: After receipt of notice as required by Paragraph 4.03 A, DESIGN PROFESSIONAL will promptly review the pertinent conditions, determine the necessity for CITY to obtain additional exploration or tests with respect thereto and notify CITY in writing (with a copy to CONTRACTOR) of DESIGN PROFESSIONAL's findings and conclusions.

C. Possible Contract Documents Change: If CITY concludes that a change in the Contract Documents is required as a result of a condition that meets one or more of the categories in Paragraph 4.03 A, a Work Change Directive or a Change Order will be issued as provided in Article 10 to reflect and document the consequences of such change.

D. Possible Price or Times Adjustments: An equitable adjustment in the Contract Price or in the Contract Times, or both, will be allowed to the extent that the existence of a subsurface or physical condition causes an increase or decrease in CONTRACTOR's cost of, or time required for, performance of the Work; subject, however, to the following:

1. the condition must meet any one or more of the categories described in Paragraphs 4.03 A.1 through 4.03 A.4, inclusive;

2. a change in the Contract Documents pursuant to Paragraph 4.03 C will not be an automatic authorization of, nor a condition precedent to, entitlement to any such adjustments;

3. with respect to Work that is paid for on a unit price basis, any adjustment in Contract Price will be subject to the provisions of Paragraphs 9.06 and 11.04; and

4. CONTRACTOR shall not be entitled to any adjustment in the Contract Price or Contract Times if;

a. CONTRACTOR knew, or by the exercise of ordinary care could have known, of such conditions at the time CONTRACTOR made a final commitment to CITY with respect to Contract Price and Contract Times by the submission of a Bid; or

b. the existence of such condition could reasonably have been discovered or revealed as a result of any examination, investigation, exploration, test or study of the Site and contiguous areas required by the Bidding Requirements or Contract Documents to be conducted by or for CONTRACTOR prior to CONTRACTOR's making such final commitment; or

c. CONTRACTOR failed to give the written notice as required by Paragraph 4.03 A.

E. If CITY and CONTRACTOR are unable to agree on entitlement to, or magnitude of, an equitable adjustment in the Contract Price pursuant to Article 11 and/or Contract Times pursuant to Article 12, a Claim may be made therefore as provided in Article 16. However, CITY, DESIGN PROFESSIONAL and Consultants shall not be liable to CONTRACTOR for any costs, losses or damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all other dispute resolution costs) sustained by CONTRACTOR on or in connection with any other project or anticipated project.

4.04. Physical Conditions – Underground Facilities

A. Shown or Indicated: The information and data shown or indicated in the Contract Documents with respect to existing Underground Facilities at or contiguous to the Site is based on information and data furnished to CITY or DESIGN PROFESSIONAL by the owners of such Underground Facilities or by others.

1**.** CITY and DESIGN PROFESSIONAL shall not be responsible for the accuracy or completeness of any such information or data; and

2. The cost of all of the following will be included in the Contract Price and CONTRACTOR shall have full responsibility for:

a. reviewing and checking all such information and data,

b. locating all Underground Facilities shown or indicated in the Contract Documents,

c. coordination of the Work with the owners of such Underground Facilities during construction, and

d. the safety and protection of all such Underground Facilities as provided in Paragraph 6.14 and repairing any damage thereto resulting from the Work.

B. Not Shown or Indicated: If an Underground Facility is uncovered or revealed at or contiguous to the Site, and was not shown or indicated in the Contract Documents, or was

shown or indicated incorrectly in the Contract Documents, CONTRACTOR shall, promptly after becoming aware thereof and before further disturbing conditions affected thereby or performing any Work in connection therewith (except in an emergency as required by Paragraph 6.17), identify the owner of such Underground Facility and give written notice to that owner and to CITY and DESIGN PROFESSIONAL.

C. DESIGN PROFESSIONAL's Review: After receipt of notice as required by Paragraph 4.04 B, DESIGN PROFESSIONAL will promptly review the consequences of the existence of the Underground Facility and notify CITY in writing (with a copy to CONTRACTOR) of DESIGN PROFESSIONAL's findings and conclusions.

D. Possible Contract Documents Change: If CITY concludes that a change in the Contract Documents is required as a result of the existence of an Underground Facility that either was not shown, or was shown incorrectly, in the Contract Documents, a Work Change Directive or Change Order will be issued as provided in Article 10 to reflect and document the consequences of such change.

E. Possible Price or Times Adjustments: An equitable adjustment in the Contract Price or in the Contract Times, or both, will be allowed to the extent that the existence of the Underground Facility causes an increase or decrease in CONTRACTOR's cost of, or time required for, performance of the Work; subject, however, to the following:

1. a change in the Contract documents pursuant to Paragraph 4.04 D will not be an automatic authorization of, nor a condition precedent to, entitlement to any such adjustments;

2. with respect to Work that is paid for on a unit price basis, any adjustment in Contract Price will be subject to the provisions of Paragraphs 9.06 and 11.04; and

3. CONTRACTOR shall not be entitled to any adjustment in the Contract Price or Contract Times if;

a. CONTRACTOR knew, or by the exercise of ordinary care could have known, of the existence of the Underground Facility at the time CONTRACTOR made a final commitment to CITY with respect to Contract Price and Contract Times by the submission of a Bid; or

b. the existence of the Underground Facility could reasonably have been discovered or revealed as a result of any examination, investigation, exploration, test or study of the Site and contiguous areas required by the Bidding Requirements or Contract Documents to be conducted by or for CONTRACTOR prior to CONTRACTOR's making such final commitment; or

c. CONTRACTOR failed to give the written notice as required by Paragraph 4.04 B.

F. If CITY and CONTRACTOR are unable to agree on entitlement to, or magnitude of, an equitable adjustment in the Contract Price pursuant to Article 11 and/or Contract Times pursuant Article 12, a Claim may be made therefore as provided in Article 16. However, CITY, DESIGN PROFESSIONAL and Consultants shall not be liable to CONTRACTOR for any costs, losses or damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all other dispute resolution costs) sustained by CONTRACTOR on or in connection with any other project or anticipated project.

4.05 Reference Points

A. CITY shall provide engineering surveys to establish reference points for construction that in DESIGN PROFESSIONAL's judgment are necessary to enable CONTRACTOR to proceed with the Work. CONTRACTOR shall be responsible for laying out the Work, shall protect and preserve the established reference points and property monuments, and shall make no changes or relocations without the prior written approval of CITY. CONTRACTOR shall report to DESIGN PROFESSIONAL whenever any reference point or property monument is lost or destroyed or requires relocation because of necessary changes in grades or locations, and shall be

responsible for the accurate replacement or relocation of such reference points or property monuments by professionally qualified personnel.

4.06 Asbestos, Lead-Based Paint, PCBs, Petroleum, Hazardous Waste or Radioactive Material

A. Reports and Drawings: Reference is made to the Supplementary Conditions for the identification of those reports and drawings relating to a Hazardous Environmental Condition identified at the Site, if any, that have been utilized by the DESIGN PROFESSIONAL in the preparation of the Contract Documents.

B. Limited Reliance by CONTRACTOR on Technical Data Authorized: CONTRACTOR may rely upon the general accuracy of the technical data contained in reports and drawings relating to a Hazardous Environmental Condition at the Site, but such reports and drawings are not Contract Documents. Such technical data is identified in the Supplementary Conditions. Except for such reliance on such technical data, CONTRACTOR may not rely upon or make any Claim against CITY, DESIGN PROFESSIONAL or any Consultant with respect to:

1. the completeness of such reports and drawings for CONTRACTOR's purposes, including, but not limited to, any aspects of the means, methods, techniques, sequences and procedures of construction to be employed by CONTRACTOR and safety precautions and programs incident thereto; or

2. other data, interpretations, opinions and information contained in such reports or shown or indicated in such drawings; or

3. any CONTRACTOR interpretation of or conclusion drawn from any technical data or any such other data, interpretations, opinions or information.

C. CONTRACTOR shall not be responsible for any Hazardous Environmental Condition uncovered or revealed at the Site which was not shown or indicated in Drawings or Specifications or identified in the Contract Documents to be within the scope of the Work. CONTRACTOR shall be responsible for all Hazardous Environmental Conditions created with any materials brought to the Site by CONTRACTOR, Subcontractors, Suppliers, or anyone else for whom CONTRACTOR is responsible. CONTRACTOR shall not be entitled to an extension of the Contract Times or an increase in the Contract Price if CONTRACTOR, Subcontractor, Supplier or anyone for whom CONTRACTOR is responsible created any Hazardous Environmental Condition at the Site or in connection with the Work.

D. If CONTRACTOR encounters a Hazardous Environmental Condition at the Site or if CONTRACTOR or anyone for whom CONTRACTOR is responsible creates a Hazardous Environmental Condition at the Site, CONTRACTOR shall immediately:

1. secure or otherwise isolate such condition;

2. stop all Work in connection with such condition and in any area affected thereby (except in an emergency as required by Paragraph 6. 15); and

3. notify CITY and DESIGN PROFESSIONAL (and promptly thereafter confirm such notice in writing). CITY shall promptly consult with DESIGN PROFESSIONAL concerning the necessity for CITY to retain a qualified expert to evaluate such condition or take corrective action, if any.

E. CONTRACTOR shall neither resume Work nor be required to resume Work in connection with such condition or in any affected area until after CITY has obtained any required permits related thereto and delivered to CONTRACTOR written notice:

1. specifying that such condition and any affected area is or has been rendered safe for the resumption of Work; or

2. specifying any special conditions under which such Work may be resumed safely. If CITY and CONTRACTOR cannot agree as to entitlement to or on the amount or extent, if any, of any adjustment in Contract Price pursuant to Article 11and/or Contract Times to

pursuant to Article 12 as a result of such Work stoppage or such special conditions under which Work is agreed to be resumed by CONTRACTOR, a Claim may be made therefore as provided in Article 16.

F. If after receipt of written notice as required in Paragraph 4.06 E, CONTRACTOR does not agree to resume Work based on a reasonable belief it is unsafe, or does not agree to resume such Work under special conditions specified in the notice, then CITY may order the portion of the Work that is in the area affected by such condition to be deleted from the Work. If CITY and CONTRACTOR cannot agree as to entitlement to or magnitude of an equitable adjustment in Contract Price pursuant to Article 11and/or Contract Times pursuant to Article 12 as a result of deleting such portion of the Work, then a Claim may be made therefore as provided in Article 16. CITY may have such deleted portion of the Work performed by CITY's own forces or others in accordance with Article 7.

G. The provisions of Paragraphs 4.02, 4.03, and 4.04 are not intended to apply to a Hazardous Environmental Condition uncovered or revealed at the Site.

H. All materials used, whether new or salvaged, shall be asbestos-free materials. CONTRACTOR shall immediately call to the attention of the CITY's Representative any specified material or product which the CONTRACTOR knows or suspects to contain asbestos, whether new or salvaged.

ARTICLE 5 BONDS AND INSURANCE

5.01 Performance, Payment and Other Bonds

A. CONTRACTOR shall furnish Performance and Maintenance and Payment Bonds, each in an amount at least equal to the Contract Price, as set out in the Contract Documents, as security for the faithful performance and payment of all CONTRACTOR's obligations under the Contract Documents. These Bonds shall remain in effect at least until one (1) year after the date when final payment of the Contract becomes due, except as provided otherwise by Laws or Regulations or by the Contract Documents. CONTRACTOR shall also furnish such other Bonds as are required by the Supplementary Conditions.

B. All Bonds shall be in the form prescribed by the Contract Documents except as provided otherwise by Laws or Regulations. A certified copy of the agent's authority to act must accompany all Bonds signed by an agent.

C. If the surety on any Bond furnished by CONTRACTOR is declared bankrupt or becomes insolvent, or its right to do business is terminated in any state where any part of the Project is located or it ceases to meet the requirement of Paragraph 5.01 B, CONTRACTOR shall within twenty (20) days thereafter substitute another Bond and surety, both of which must be acceptable to CITY.

5.02 Licensed Sureties and Insurers

A. All Bonds and insurance required by the Contract Documents to be purchased and maintained by CITY or CONTRACTOR shall be obtained from surety or insurance companies that are duly licensed in the State of Missouri and in the jurisdiction in which the Project is located, if not in Missouri, to issue Bonds or insurance policies for the limits and coverages so required. All surety and insurance companies shall hold an A.M. Best rating of A-, V, or better.

5.03 Certificates of Insurance

A. CONTRACTOR shall deliver to CITY and DESIGN PROFESSIONAL, prior to the start of any Work at the Project Site, properly completed certificates of insurance or other evidence that the required insurance is in full force and effect, in a form acceptable to CITY. The receipt or acceptance of a certificate of insurance that does not incorporate the required terms and coverage shall not constitute a waiver by the City of the insurance requirements contained in the Contract Documents.

B. All policies of insurance (and the certificates or other evidence thereof) required to be purchased and maintained by CONTRACTOR in accordance with Paragraphs 5.04 and 5.06 will contain waiver provisions in accordance with Paragraph 5.07 A. The certificates of insurance will contain a provision stating that should any of the policies described in the certificate be cancelled before the expiration date thereof, notice will be delivered in accordance with the policy provisions.

C. If the coverage afforded is cancelled or changed or its renewal is refused, CONTRACTOR shall give at least thirty (30) days prior written notice to CITY and to each other additional insured to whom a certificate of insurance has been issued.

5.04 CONTRACTOR's Liability Insurance

A. CONTRACTOR shall purchase and maintain such liability and other insurance as is appropriate for the Work being performed and furnished, and will provide protection from claims set forth below which may arise out of or result from CONTRACTOR's performance and furnishing of the Work and CONTRACTOR's other obligations under the Contract Documents, whether it is to be performed or furnished by CONTRACTOR, any Subcontractor or Supplier, or by anyone directly or indirectly employed by any of them to perform or furnish any of the Work, or by anyone for whose acts any of them may be liable:

1. claims under workers' compensation, disability benefits and other similar employee benefit acts;

2. claims for damages because of bodily injury, occupational sickness or disease, or death of CONTRACTOR's employees;

3. claims for damages because of bodily injury, sickness or disease, or death of any person other than CONTRACTOR's employees;

4. claims for damages insured by customary personal injury liability coverage;

5. claims for damages, other than to the Work itself, because of injury to or destruction of tangible property wherever located, including loss of use resulting therefore; and

6. claims for damages because of bodily injury or death of any person or property damage arising out of the ownership, maintenance or use of any motor vehicle.

B. The policies of insurance so required by Paragraph 5.04 A, to be purchased and maintained shall:

1. with respect to insurance required by Paragraphs 5.04 A.3 through 5.04 A.5 inclusive, include as additional insureds (subject to any customary exclusion for professional liability) CITY, DESIGN PROFESSIONAL, Consultants and any other individuals or entities identified in the Supplementary Conditions to be listed as additional insureds, and include coverage for the respective officers, directors, partners, employees, agents, and other consultants and subcontractors of each and any of all such additional insureds, and the insurance afforded to these additional insureds shall provide primary coverage for all claims covered thereby;

2. include at least the specific coverages and be written for not less than the limits of liability provided in Paragraph 5.04 C or required by Laws or Regulations, whichever is greater;

3. include completed operations insurance;

4. include contractual liability insurance covering CONTRACTOR's indemnity obligations;

5. remain in effect at least until final payment and at all times thereafter when CONTRACTOR may be correcting, removing or replacing defective Work in accordance with Paragraphs 13.06 and 13.07;

6. with respect to completed operations insurance, and any insurance coverage written on a claims-made basis, remain in effect for at least two (2) years after final payment (and CONTRACTOR shall furnish CITY and each other additional insured identified in the Supplementary Conditions to whom a certificate of insurance has been issued evidence satisfactory to CITY and any such additional insured of continuation of such insurance);

7. contain a cross-liability or severability of interest clause or endorsement. Insurance covering the specified additional insureds shall be primary insurance, and all other insurance carried by the additional insureds shall be excess insurance;

8. with respect to commercial automobile liability, commercial general liability, and umbrella liability insurance, CONTRACTOR shall require its insurance carrier(s) to waive all rights of subrogation against CITY, and CITY's officers, directors, partners, employees and agents; and

9. contain a provision or endorsement that the costs of providing the insureds a defense and appeal, including attorneys' fees, as insureds, shall be supplementary and shall not be included as part of the policy limits but shall remain the insurer's responsibility.

C. Specific policies of insurance required by this Paragraph 5.04 shall include:

1. Workers' Compensation and Employers' Liability Insurance. This insurance shall protect CONTRACTOR against all claims under applicable state workers''' compensation laws, including coverage as necessary for the benefits provided under the United States Longshoremen's and Harbor Workers' Act and the Jones Act. CONTRACTOR shall also be protected against claims for injury, disease, or death of employees which, for any reason, may not fall within the provisions of workers' compensation laws. This policy shall include an "all states" or "other states" endorsement. The liability limits shall be not less than:

Workers' Compensation: Statutory

Employers' liability: $1,000,000 each occurrence

2. Commercial Automobile Liability Insurance. This insurance shall be occurrence type written in comprehensive form and shall protect CONTRACTOR, and CITY, DESIGN PROFESSIONAL and Consultants against all claims for injuries to members of the public and damage to property of others arising from the use of motor vehicles, either on or off the Project Site, whether they are owned, non-owned, or hired.

   The liability limits shall be not less than: $2,000,000

3. Commercial General Liability Insurance. This insurance shall be occurrence type written in comprehensive form acceptable to CITY. This insurance shall protect CONTRACTOR, and CITY, DESIGN PROFESSIONAL and Consultants as additional insureds, against claims arising from injuries, sickness, disease, or death of any person or damage to property arising out of performance of the Work. The policy shall also include coverage for personal injury liability; contractual liability; completed operations and products liability; and for blasting, explosion, and collapse of buildings; and damage to underground property. The liability limits for bodily injury and property damage shall be not less than:

$2,000,000 combined single limit for each occurrence

$2,000,000 general aggregate.

4. The insurer's costs of providing the insureds a defense and appeal as additional insureds, including attorney's fees, shall be supplementary and shall not be included as part of the policy limits but shall remain the insurer's separate responsibility.

5.05 CITY's Liability Insurance

A. In addition to the insurance required to be provided by CONTRACTOR under Paragraph 5.04, CITY, at CITY's option, may purchase and maintain at CITY's expense liability insurance

that will protect CITY against claims which may arise from operations under the Contract Documents.

5.06 Property Insurance

A. Unless otherwise provided in the Supplementary Conditions, CONTRACTOR shall purchase and maintain property insurance on the Work at the Site in the amount of the full replacement cost thereof (subject to such deductible amounts as may be provided in the Supplementary Conditions or required by Laws or Regulations). This insurance shall:

1. include the interests of CITY, CONTRACTOR, Subcontractors, and any other persons or entities identified in the Supplementary Conditions, each of whom is deemed to have an insurable interest and shall be listed as an insured or additional insured;

2. be written on a Builder's Risk "all-risk" or open peril or special causes of loss policy form that shall at least include insurance for physical loss or damage to the Work, temporary buildings, falsework and materials and equipment in transit, and shall insure against at least the following perils or causes of loss: fire, lightning, extended coverage, theft, vandalism and malicious mischief, earthquake, tornado, collapse, debris removal, demolition occasioned by enforcement of Laws or Regulations, water damage, damage caused by frost and freezing, and acts of God;

3. be maintained in effect until final payment is made unless otherwise agreed to in writing by CITY with thirty (30) days written notice to each other additional insured to whom a certificate of insurance has been issued.

B. CITY shall not be responsible for purchasing and maintaining any property insurance to protect the interests of CONTRACTOR, Subcontractors or others involved in the Work to the extent of any deductible amounts. The risk of loss within the deductible amounts will be borne by CONTRACTOR, Subcontractor or others suffering any such loss and if any of them wishes property insurance coverage within the limits of such amounts, each may purchase and maintain it at the purchaser's own expense.

5.07 Waiver of Rights

A. CITY and CONTRACTOR intend that all policies purchased in accordance with Paragraphs 5.04 and 5.06 will protect CITY, CONTRACTOR, DESIGN PROFESSIONAL Consultants, Subcontractors, and all other persons or entities identified in the Supplementary Conditions to be listed as insureds or additional insureds in such policies and will provide primary coverage for all losses and damages caused by the perils covered thereby. All such policies shall contain provisions to the effect that in the event of payment of any loss or damage the insurers will have no rights of recovery against any of the insureds or additional insureds thereunder. CITY and CONTRACTOR waive all rights against each other and their respective officers, directors, partners, employees and agents for all losses and damages caused by, arising out of or resulting from any of the perils covered by such policies and any other property insurance applicable to the Work, but only to the extent of insurance coverage; and, in addition, waive all such rights against DESIGN PROFESSIONAL, Consultants, Subcontractors, and all other persons or entities identified in the Supplementary Conditions to be listed as insureds or additional insureds (and the officers, directors, partners, employees, agents, and other consultants and subcontractors of any and each of them) under such policies for losses and damages so caused and covered by insurance. None of the above waivers shall extend to the rights that any party making such waiver may have to the proceeds of insurance held by CITY as trustee or otherwise payable under any policy so issued. None of the above waivers shall apply if specifically in conflict with Laws and Regulations.

5.08 Receipt and Application of Insurance Proceeds

A. Any insured loss under the property insurance will be adjusted with CITY and made payable to CITY as fiduciary for the insureds, as their interests may appear, subject to the requirements of any indentures of indebtedness entered into by CITY.

B. CITY as fiduciary shall have power to adjust and settle any loss with the insurers unless one of the parties in interest shall object to CITY's exercise of this power in writing within fifteen (15) days after the occurrence of loss. If such objection is made, CITY as fiduciary shall make settlement with the insurers in accordance with such agreement as the parties in interest may reach. If no such agreement among the parties in interest is reached, CITY as fiduciary shall adjust and settle the loss with the insurers.

5.09 Partial Utilization – Property Insurance

A. If CITY finds it necessary to occupy or use a portion or portions of the Work prior to Substantial Completion of all the Work, such use or occupancy may be accomplished in accordance with Paragraph 14.05; provided that no such use or occupancy shall commence before the insurers providing the property insurance have acknowledged notice thereof and in writing effected any changes in coverage necessitated thereby. The insurers providing the property insurance shall consent by endorsement on the policy or policies, but the property insurance shall not be canceled or permitted to lapse on account of any such partial use or occupancy.

ARTICLE 6 CONTRACTOR'S RESPONSIBILITIES

6.01 Indemnification

A. For purposes of this Paragraph 6.01 only, the following terms shall have the meanings listed:

1. Claims means all claims, damages, liability, losses, costs and expenses, including court costs and reasonable attorneys'" fees, including attorney's fees incurred by the City in the enforcement of this indemnity obligation.

2. CONTRACTOR'S Agents means CONTRACTOR's officers, employees, sub-consultants, subcontractors, successors, assigns, invitees, and other agents.

3. CITY means CITY, its Program Manager/Construction Advisor and any of their agents, officials, officers, employees and program managers or construction advisors.

B. CONTRACTOR's obligations under this Paragraph with respect to indemnification for acts or omissions, including negligence, of CITY, shall be limited to the coverage and limits of insurance that CONTRACTOR is required to procure and maintain under this Contract. CONTRACTOR affirms that it has had the opportunity to recover the costs of the liability insurance required in this Contract in its contract price.

C. CONTRACTOR shall defend, indemnify and hold harmless CITY from and against all Claims arising out of or resulting from all acts or omissions in connection with this Contract caused in whole or in part by CONTRACTOR or CONTRACTOR's Agents, regardless of whether or not caused in part by any act or omission, including negligence, of OWNER.

D. In any and all Claims against CITY, DESIGN PROFESSIONAL, CONSULTANT, or any of their respective agents, officers, directors or employees by any employee (or the survivor or personal representative of such employee) of CONTRACTOR, any Subcontractor, any Supplier, any person or organization directly or indirectly employed by any of them to perform or furnish any of the Work, or anyone for whose acts any of them may be liable, the indemnification obligation under Paragraph 6.01 C shall not be limited in any way by any limitation on the amount or type of damages, compensation or benefits payable by or for CONTRACTOR or any such Subcontractor, Supplier or other person or organization under workers' compensation acts, disability benefit acts or other employee benefit acts.

E. The indemnification obligations of CONTRACTOR under Paragraph 6.01 C shall not extend to liability arising out of, resulting from, or caused by the professional negligence, errors or omissions of DESIGN PROFESSIONAL, CONSULTANT, or any of their respective agents, officers, directors or employees.

6.02 Supervision and Superintendence

A. CONTRACTOR shall supervise, inspect and direct the Work competently and efficiently, devoting such attention thereto and applying such skills and expertise as may be necessary to perform the Work in accordance with the Contract Documents. CONTRACTOR shall be solely responsible for the means, methods, techniques, sequences and procedures of construction, but CONTRACTOR shall not be responsible for the negligence of others in the design or specification of a specific means, method, technique, sequence or procedure of construction which is shown or indicated in and expressly required by the Contract Documents. CONTRACTOR shall be responsible to see that the completed Work complies accurately with the Contract Documents.

B. At all times during the progress of the Work, CONTRACTOR shall assign a competent resident superintendent of the Work, who shall not be replaced without written request to and approval by CITY except under extraordinary circumstances. The superintendent will be CONTRACTOR's representative at the Site and shall have authority to act on behalf of CONTRACTOR. All communications given to or received from the superintendent shall be binding on CONTRACTOR.

C. If it is determined to be in the best interest of the Work, CONTRACTOR shall replace the project manager, resident superintendent or any other employee of the CONTRACTOR, Subcontractors, Suppliers or other persons or organizations performing or furnishing any of the Work on the project upon written request by the CITY.

6.03 Services, Working Hours, Labor, Materials and Equipment

A. CONTRACTOR shall provide competent, suitably qualified personnel to survey, lay out and construct or perform the Work as required by the Contract Documents. CONTRACTOR shall at all times maintain good discipline and order at the Site. Except as otherwise required for the safety or protection of persons or the Work or property at the Site or adjacent thereto, and except as otherwise indicated in the Contract Documents, all Work at the Site shall be performed during regular working hours. CONTRACTOR shall not permit overtime work or the performance of Work on Saturday, Sunday or any legal holiday without CITY's written consent given after prior written notice to DESIGN PROFESSIONAL.

B. Unless otherwise specified in Division 1, General Requirements, CONTRACTOR shall furnish and assume full responsibility for all services, materials, equipment, labor, transportation, construction equipment and machinery, tools, appliances, fuel, power, light, heat, telephone, water, sanitary facilities, temporary facilities and all other facilities and incidentals necessary for the furnishing, performance, testing, start-up and completion of the Work.

C. All materials and equipment shall be of good quality and new, except as otherwise provided in the Contract Documents. All warranties and guarantees specifically called for by the Specifications shall expressly run to the benefit of CITY. If required by DESIGN PROFESSIONAL, CONTRACTOR shall furnish satisfactory evidence (including reports of required tests) as to the source, kind, and quality of materials and equipment. All materials and equipment shall be stored, applied, installed, connected, erected, used, cleaned and conditioned in accordance with instructions of the applicable Supplier, except as otherwise provided in the Contract Documents.

D. It is the policy of the CITY that any manufactured goods or commodities used or supplied in the performance of this Contract and any subcontract hereto shall be manufactured or produced in the United States whenever possible.

6.04 Progress Schedule

A. CONTRACTOR shall adhere to the progress schedule established in accordance with Article 2 as it may be adjusted from time to time as provided below:

1. CONTRACTOR shall provide, at least once every thirty (30) calendar days, updated information on the project schedule, including thirty (30) day look ahead schedules, projected variances per event category and per Subcontractor, identification of all variances and calculation of the number of Days difference between the as-built critical path and the project schedule critical path

2. CONTRACTOR shall, with each application for payment, provide completed monthly updated status report for the previous month on the project schedule and updated information indicating as-built and as-planned conditions. The updated information on the project schedule shall not modify any Milestone dates in the project schedule that CITY has previously approved. The updated information required is a condition precedent to payment pursuant to paragraph 14.02 and shall include at a minimum:

a. a concise statement of the outlook for meeting project schedule dates and the reasons for any change in outlook from the previous report;

b. a review of any significant technical problems encountered during the month;

c. an explanation of any corrective action taken or proposed; and

d. a summary of any Claims anticipated by CONTRACTOR with respect to the Work, including the anticipated costs and schedule impacts of any such Claims.

6.05 Recovery Schedules

A. If the CONTRACTOR should:

1. fail, refuse or neglect to supply a sufficient number of workers or to deliver the materials or equipment with such promptness as to prevent the delay in the progress of the Work;

2. fail in any respect to commence and diligently prosecute the Work in accordance with the approved baseline project schedule in order to achieve substantial completion;

3. fail to commence, prosecute, finish, deliver or install the different portions of the Work on time as specified in the approved baseline project schedule; or

4. fail in the performance of any of the material covenants of the Contract Documents;

CITY shall have the right to direct the CONTRACTOR, upon seven (7) calendar days notice, to prepare a written recovery plan, for CITY's approval, to accelerate the Work in order to conform to the approved baseline project schedule, including, without limitation, providing additional labor or expediting delivery of materials, performing overtime or re-sequencing the Work without adjustments to the Contract value. Upon CITY's approval of the recovery plan, CONTRACTOR shall accelerate the Work in accordance with the plan.

B. Proposed recovery schedules shall be submitted to the CITY as a separate project plan for review and approval by CITY prior to incorporation into the approved baseline schedule. The recovery schedule shall be submitted in a format compatible with the baseline schedule format. Each proposed revision shall be submitted as a separate schedule, with the following minimum requirements:

1. A critical path method diagram showing revised and affected activities or Milestones.

2. An activity report for all revised and affected activities or Milestones.

C. Upon acceptance of the recovery schedule by CITY, data shall be added or revised for all new or revised activities and incorporated into the approved baseline project schedule.

6.06 Substitutes and "Or-Equal" Items

A. Materials or equipment: Whenever an item of material or equipment is specified or described in the Contract Documents by using the name of a proprietary item or the name of a particular Supplier, the specification or description is intended to establish the type, function, appearance and quality required. Unless the specification or description contains, or is followed by, words reading that no like, equivalent or "or-equal" item or no substitution is permitted, other items of material or equipment or material or equipment of other Suppliers may be submitted to CITY for review by CITY's Representative under the following circumstances:

1. "Or-Equal": If, prior to receipt of Bids, Bidder proposes an item of material or equipment as functionally equal to that named and sufficiently similar so that no change in related Work will be required, CITY's Representative may request DESIGN PROFESSIONAL to consider it as an "or-equal" item. DESIGN PROFESSIONAL will review and recommend the acceptance, or rejection, of the proposed item to the CITY's Representative. For the purposes of this Paragraph, a proposed item of material or equipment will be considered functionally equal to an item so named if:

a. in the exercise of reasonable judgment DESIGN PROFESSIONAL determines that:

(1) it is at least equal in quality, durability, appearance, strength, and design characteristics; and

(2) it will reliably perform at least equally well the function imposed by the design concept of the completed Project as a functioning whole; and

b. Bidder certifies that:

(1) there is no increase in cost to the CITY; and

(2) it will conform substantially, even with deviations, to the detailed requirements of the item named in the Contract Documents.

If the CITY's Representative approves the proposed item, it may be accepted by CITY.

2. Substitute Items: If CONTRACTOR proposes an item of material or equipment as a substitute item, then CONTRACTOR shall submit sufficient information as provided below to allow CITY's Representative to determine that the item of material or equipment proposed is essentially equivalent to that named and an acceptable substitute therefore. The procedure for review by the CITY's Representative will include the following as supplemented in the General Requirements and as CITY's Representative may determine is appropriate under the circumstances:

a. Requests for review of proposed substitute items of material or equipment will not be accepted by CITY's Representative from anyone other than CONTRACTOR.

b. If CONTRACTOR wishes to furnish or use a substitute item of material or equipment, CONTRACTOR shall first make written application to CITY's Representative for acceptance thereof.

c. In the application, CONTRACTOR shall certify that the proposed substitute will perform adequately the functions and achieve the results called for by the general design, be similar in substance to that specified and be suited to the same use as that specified. The application will state the extent, if any, to which the evaluation and acceptance of the proposed substitute will impact CONTRACTOR's achievement of Substantial Completion, whether or not acceptance of the substitute for use in the Work will require a change in any of the Contract Documents (or in the provisions of any other direct contract with CITY for work on the Project) to adapt the design to the proposed substitute and whether or not incorporation or use of the substitute in connection with the Work is subject to payment of any license fee or royalty.

d. All variations of the proposed substitute from that specified will be identified in the application and available maintenance, repair and replacement service will be indicated. The application will also contain an itemized estimate of all costs or credits that will result directly or indirectly from acceptance of such substitute, including costs of redesign and claims of other contractors affected by the resulting change, all of which will be considered by CITY's Representative in evaluating the proposed substitute. CITY's Representative may require CONTRACTOR to furnish additional data about the proposed substitute.

If the CITY's Representative approves the proposed item, CITY may accept it.

B. Substitute Construction Methods or Procedures: If a specific means, method, technique, sequence or procedure of construction is shown or indicated in and expressly required by the Contract Documents, CONTRACTOR may furnish or utilize a substitute means, method, technique, sequence or procedure of construction acceptable to DESIGN PROFESSIONAL. CONTRACTOR shall notify CITY and submit sufficient information to allow DESIGN PROFESSIONAL, in DESIGN PROFESSIONAL's sole discretion, to determine that the substitute proposed is equivalent to that expressly called for by the Contract Documents.

C. Expenses: Bidder shall provide all data in support of any "or equal" at Bidder's expense, and CONTRACTOR shall provide all data in support of any proposed substitute at CONTRACTOR's expense.

D. Evaluation: DESIGN PROFESSIONAL and CITY's Representative will be allowed a reasonable time within which to evaluate each proposal or submittal made pursuant to Paragraphs 6.06 A, and 6.06 B. CITY will be the sole judge of acceptability. No "or-equal" or substitute will be ordered, installed or utilized without CITY's prior written acceptance which will be evidenced by either a Change Order or an approved Shop Drawing. CITY may require CONTRACTOR to furnish at CONTRACTOR's expense, a special performance guarantee or other surety with respect to any "or-equal' substitute. DESIGN PROFESSIONAL will record time required by DESIGN PROFESSIONAL and Consultants in evaluating substitutes proposed or submitted by CONTRACTOR pursuant to Paragraphs 6.06 A and 6.06 B and in making changes in the Contract Documents (or in the provisions of any other direct contract with CITY for work on the Project) occasioned thereby. Whether or not CITY accepts a substitute so proposed or submitted by CONTRACTOR, CONTRACTOR shall reimburse CITY for the reasonable charges of DESIGN PROFESSIONAL and Consultants for evaluating each such proposed substitute.

6.07 Concerning Subcontractors, Suppliers and Others

A. CONTRACTOR shall not employ or retain any Subcontractor, Supplier or other person or organization (including those acceptable to CITY as indicated in Paragraph 6.07 B), whether initially or as a substitute, against whom CITY has a reasonable objection, including but not limited to debarment by City or another governmental entity or decertification of the Subcontractor from the City's Minority and Women's Business Enterprise Program as a result of the Subcontractor's failure to comply with any of the requirements of the provisions of Chapter 3 of the City's Code as determined by the Director of the Civil Rights and Equal Opportunity Department. Contractor shall insert this provision in any subcontractor agreement associated with this Contract. CONTRACTOR shall not be required to employ any Subcontractor, Supplier or other person or organization to furnish or perform any of the Work against whom CONTRACTOR has reasonable objection. CONTRACTOR shall submit required information for all Subcontractors on Form 01290.09 - Subcontractor and Major Material Suppliers List, provided in these Contract Documents, prior to Subcontractor beginning Work at the Site.

B. The Supplementary Conditions require the identity of certain Subcontractors, Suppliers or other persons or organizations (including those who are to furnish the principal items of materials or equipment) to be submitted to CITY on or before the date specified in the Supplementary Conditions, for acceptance by CITY. If CONTRACTOR has submitted a list

thereof in accordance with the Supplementary Conditions, CITY may accept (either in writing or by failing to make written objection thereto by the date indicated for acceptance or objection in the Contract Documents) any such Subcontractor, Supplier or other person or organization so identified, or may reject same on the basis of reasonable objection after due investigation, in which case CONTRACTOR shall submit an acceptable replacement for the rejected Subcontractor, Supplier or other person or organization. The Contract Price will be adjusted by the difference in the cost occasioned by such substitution, and an appropriate Change Order will be issued or Written Amendment signed. No acceptance by CITY of any such Subcontractor, Supplier or other person or organization shall constitute a waiver of any right of CITY or DESIGN PROFESSIONAL to reject defective Work.

C. CONTRACTOR shall be fully responsible to CITY for all acts and omissions of the Subcontractors, Suppliers and other persons and organizations performing or furnishing any of the Work under a direct or indirect contract with CONTRACTOR just as CONTRACTOR is responsible for CONTRACTOR's own acts and omissions. Nothing in the Contract Documents shall create for the benefit of any such Subcontractor, Supplier or other person or organization any contractual relationship between CITY or DESIGN PROFESSIONAL and any such Subcontractor, Supplier or other person or organization, nor shall it create any obligation on the part of CITY or DESIGN PROFESSIONAL to pay or to see to the payment of any moneys due any such Subcontractor, Supplier or other person or organization except as may otherwise be required by Laws or Regulations.

D. CONTRACTOR shall be solely responsible for scheduling and coordinating the Work of Subcontractors, Suppliers and other persons and organizations performing or furnishing any of the Work under a direct or indirect contract with CONTRACTOR.

E. CONTRACTOR shall contractually require all Subcontractors, Suppliers and such other persons and organizations performing or furnishing any of the Work to communicate with CITY and DESIGN PROFESSIONAL through CONTRACTOR.

F. The divisions and sections of the Specifications and the identifications of any Drawings shall not control CONTRACTOR in dividing the Work among Subcontractors or Suppliers or delineating the Work to be performed by any specific trade.

G. All Work performed for CONTRACTOR by a Subcontractor or Supplier shall be pursuant to an appropriate written agreement between CONTRACTOR and the Subcontractor or Supplier that specifically binds the Subcontractor or Supplier to the applicable terms and conditions of the Contract Documents for the benefit of CITY. Whenever any such agreement is with a Subcontractor or Supplier who is listed as an additional insured on the property insurance provided in Paragraph 5.06, the agreement between the CONTRACTOR and the Subcontractor or Supplier will contain provisions whereby the Subcontractor or Supplier waives all rights against CITY, CONTRACTOR, DESIGN PROFESSIONAL, Consultants and all other additional insureds for all losses and damages caused by, arising out of or resulting from any perils, to the extent covered by such policies and any other property insurance applicable to the Work. If the insurers on any such policies require separate waiver forms to be signed by any Subcontractor or Supplier, CONTRACTOR will obtain the same.

H. Except as otherwise provided in this subsection H and in accordance with the provisions of subsection C hereof, the agreement between CONTRACTOR and the Subcontractor or Supplier referred to in subsection G, shall provide that the CONTRACTOR and the Subcontractor or Supplier agree not to request CITY or CITY's Representative to intervene in or facilitate the resolution of claims or contract disputes arising out of or related to the agreement between CONTRACTOR and the Subcontractor or Supplier. Furthermore, the Contracts between CONTRACTOR and Subcontractors or Suppliers shall provide that all unresolved claims and disputes between CONTRACTOR and the Subcontractor or Supplier that remain unresolved after thirty (30) calendar days from the notice of claim, shall be subject to mediation as a condition precedent to the institution of legal proceedings by either party. Any such mediation shall be conducted in accordance with the CITY's Code Section 3-467.

I. CONTRACTOR shall not insert any provision in any subcontractor agreement associated with this Contract that explicitly states or implies that the subcontractor shall only be paid for work performed if or when the general CONTRACTOR is paid by the CITY . Contractor's compliance with this provision is a material term of this Contract.

J. CONTRACTORS shall not deny any Subcontractor subcontracting opportunities solely because the Subcontractor is not a signatory to collective bargaining agreements with organized labor.

6.08 Patent Fees and Royalties

A. CONTRACTOR shall pay all license fees and royalties and assume all costs incident to the use in the performance of the Work or the incorporation into the Work of any invention, design, process, product or device which is the subject of patent rights or copyrights held by others. If a particular invention, design, process, product or device is specified in the Contract Documents for use in the performance of the Work, and if to the actual knowledge of CITY or DESIGN PROFESSIONAL its use is subject to patent rights or copyrights calling for the payment of any license fee or royalty to others, the existence of such rights shall be disclosed by CITY in the Contract Documents. To the fullest extent permitted by Laws or Regulations, CONTRACTOR shall defend, indemnify and hold harmless CITY, DESIGN PROFESSIONAL, Consultants and the officers, directors, employees, agents and other consultants of each and any of them from and against all claims, costs, losses and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) arising out of or resulting from any infringement of patent rights or copyrights incident to the use in the performance of the Work or resulting from the incorporation into the Work of any invention, design, process, product or device not specified in the Contract Documents.

6.09 Permits

A. Unless otherwise provided in the Supplementary Conditions, CONTRACTOR shall obtain and pay for all construction permits and licenses. CITY shall assist CONTRACTOR, when necessary, in obtaining such permits and licenses. CONTRACTOR shall pay all governmental charges and inspection fees necessary for the prosecution of the Work, which are applicable at the time of opening of Bids, or, if there are no Bids, on the Effective Date of the Contract. CONTRACTOR shall pay all charges of utility owners for connections to the Work.

B. CONTRACTOR, at its own expense, shall comply with all Federal, State and local laws and regulations, including, but not limited to the Missouri Clean Water Law (Chapter 644 RSMo) together with any accompanying regulation(s) contained in the Missouri Code of State Regulations (CSR Title 10), as well as any implementing permits, together with any CITY Provisions during the life of this Contract including but not limited to:

1. Approvals and permits as required for construction or land disturbance activities.

2. Compliance with the State of Missouri – Department of Natural Resources ("MDNR") Missouri State Operating Permit ("Land Disturbance Permit"), MO-R100006 for all construction or land disturbance activity.

3. Development and implementation of a Storm Water Pollution Prevention Plan (SWPPP).

(a) Contractor shall not commence land disturbance activity until the initial SWPPP has been finalized.

(b) Preparation and submittal of all applications, documentation and exhibits required to obtain MDNR approvals for uninterrupted Work at the Site.

(c) Amending/Updating SWPPP.

(d) Site Inspections and submittal of Inspection Reports

(e) Proper Operation and Maintenance to achieve compliance with the terms of the Permit.

(f) Maintenance of required records in accordance with MDNR requirements and requirements included in Article 6 of these Contract Documents.

4. In addition to requirements of Article 6, Contractor shall also provide record access to Missouri Department of Natural Resources (MDNR).

5. Failure to control erosion and water pollution is a permit violation. CONTRACTOR shall have 24 hours after receiving notice of the violation to correct the problem. If the CONTRACTOR fails to correct the problem after the time prescribed, the City will hire a remediation expert to fix the problem. In such an event, the CONTRACTOR shall be liable to the City for the remediation costs plus a 10% mark-up of the total contract price. If the CONTRACTOR receives three (3) notices of violation of the erosion control plan and the City's MS4 permit, the Director may issue a stop work order and delay any payment until control measures are properly functioning and stream damage has been mitigated. In such an event, any delay to the project schedule will result in liquidated damages assessed against the CONTRACTOR.

6.10 Compliance with Laws and Regulations

A. CONTRACTOR shall comply with all federal, state and local laws, ordinances and regulations applicable to the work and this Contract. CONTRACTOR shall give all notices and comply with all Laws or Regulations applicable to furnishing and performing the Work. Except where otherwise expressly required by applicable Laws or Regulations, neither CITY nor DESIGN PROFESSIONAL shall be responsible for monitoring CONTRACTOR's compliance with any Laws or Regulations. The Laws or Regulations included in this Paragraph shall include, but not be limited to, those set forth in the Supplementary Conditions.

B. **Failure to Comply**. If CONTRACTOR performs any Work in violation of applicable Laws or Regulations, CONTRACTOR shall bear all claims, costs, losses and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) caused by, arising out of or resulting therefrom; however, it shall not be CONTRACTOR's primary responsibility to make certain that the Specifications and Drawings are in accordance with Laws or Regulations, but this shall not relieve CONTRACTOR of CONTRACTOR's obligations under Paragraph 3.03.

C. **Conflicts of Interest**. The provisions of City's Code Sections 2-2001 and 3-301, prohibiting City officers and employees from having a financial or personal interest in any contract with City, and Code Sections 3-307, and 3-309, imposing sanctions for violations, shall apply to this Contract. CONTRACTOR certifies that no officer or employee of City has, or will have, a direct or indirect financial or personal interest in this Contract, and that no officer or employee of City, or member of such officer's or employee's immediate family, either has negotiated, or has or will have an arrangement concerning employment to perform services on behalf of CONTRACTOR on this Contract.

D. **Licenses and Permits**. CONTRACTOR, at its own expense, shall secure or cause to be secured all licenses and permits from public or private sources necessary for the fulfillment of its obligations under this Contract. All references in this Contract to the "Code" shall mean City's Code of Ordinances, including any amendments thereto or re-codification thereof unless the context clearly indicates otherwise. CONTRACTOR shall obtain copies of all necessary licenses and permits from Subcontractors required for the Work before Subcontractors begin Work at the Site. CONTRACTOR shall retain such evidence in its files and make available to CITY within ten (10) days after CITY's written request.

E. Americans with Disabilities Act. CONTRACTOR agrees to comply, during the course of this Contract, with all provisions of Title II of the 2010 ADA Standards for Accessible Design as amended from time to time.

F. Affirmative Action. If the Contract Price exceeds $300,000.00 and CONTRACTOR employs fifty (50) or more people, CONTRACTOR shall comply with City's Affirmative Action requirements in accordance with the provisions of Chapter 3 of City's Code, the rules and regulations relating to those sections, and any additions or amendments thereto. CONTRACTOR shall not discriminate against any employee or applicant for employment because of race, color, sex, religion, national origin or ancestry, disability, sexual orientation, gender identity or age in a manner prohibited by Chapter 3 of City's Code.

CONTRACTOR shall:

1. Submit, in print or electronic format, a copy of CONTRACTOR'S current certificate of compliance to the City's Civil Rights and Equal Opportunity Department (CREO) prior to receiving the first payment under the contract, unless a copy has already been submitted to CREO at any point within the previous two calendar years. If, and only if, CONTRACTOR does not possess a current certification of compliance, CONTRACTOR shall submit, in print or electronic format, a copy of its affirmative action program to CREO prior to receiving the first payment under the contract, unless a copy has already been submitted to CREO at any point within the previous two calendar years.

2. Require any Subcontractor awarded a subcontract exceeding $300,000.00 to affirm that Subcontractor has an affirmative action program in place and will maintain the affirmative action program in place for the duration of the subcontract.

3. Obtain from any Subcontractor awarded a subcontract exceeding $300,000.00 a copy of the Subcontractor's current certificate of compliance and tender a copy of the same, in print or electronic format, to CREO within thirty (30) days from the date the subcontract is executed. If, and only if, Subcontractor does not possess a current certificate of compliance, CONTRACTOR shall obtain a copy of the Subcontractor's affirmative action program and tender a copy of the same, in print or electronic format, to CREO within thirty (30) days from the date the subcontract is executed.

City has the right to take action as directed by City's Civil Rights and Equal Opportunity Department to enforce this provision. If CONTRACTOR fails, refuses or neglects to comply with the provisions of Chapter 3 of City's Code, then such failure shall be deemed a total breach of this Contract and this Contract may be terminated, canceled or suspended, in whole or in part, and CONTRACTOR may be declared ineligible for any further contracts funded by City for a period of one (1) year. This is a material term of this Contract.

G. **Minority and Women Business Enterprises and Workforce**. City is committed to ensuring that minorities and women participate to the maximum extent possible in the performance of City's construction contracts. If minority and women business enterprise (M/WBE) goals have been set for this Contract, CONTRACTOR agrees to comply with all requirements of City's Minority and Women's Business Enterprise Program as enacted in City's Code, Sections 3-421 through 3-469 and as hereinafter amended. CONTRACTOR shall meet or exceed both the MBE and WBE goals set forth in its Contractor Utilization Plan/Request for Waiver. If workforce utilization goals are applicable to this Contract, CONTRACTOR agrees to comply with all requirements of City's Construction Employment Program as enacted in City's Code, Sections 3-501 through 3-527 and as hereinafter amended. CONTRACTOR shall meet or exceed the construction employment goals unless the same shall have been waived in the manner provided by law. CONTRACTOR's compliance with this provision is a material part of this Contract.

H. **Records.**

1. For purposes of this section:

(a) "City" shall mean the City Auditor, the City's Internal Auditor, the City's Director of Civil Rights and Equal Opportunity, the City Manager, the City department administering this Contract and their delegates and agents.

(b) “Record” shall mean any document, book, paper, photograph, map, sound recordings or other material, regardless of physical form or characteristics, made or received in connection with this Contract and all Contract amendments and renewals.

2. CONTRACTOR shall maintain and retain all Records for a term of five (5) years that shall begin after the expiration or termination of this Contract and all Contract amendments. City shall have a right to examine or audit all Records and CONTRACTOR shall provide access to City of all records upon ten (10) days written notice from the City.

I. **Prevailing Wage.**

1. CONTRACTOR shall comply and require its Subcontractors to comply with;

a. sections 290.210 to 290.340, RSMO the State of Missouri Prevailing Wage Law (the “Law”); and

b. 8 CSR 30-3.010 to 8 CSR 30-3.060, the Prevailing Wage Law Rules (the “Rules”); and

c. the Annual Wage Order (Wage Order) issued by the State of Missouri’s Department of Labor and Industrial Relations; and

d. any applicable Annual Incremental Wage Increase (Wage Increase) to the Annual Wage Order.

2. The Law, Rules, Annual Wage Order and any Wage Increase are incorporated into and made part hereof this Contract and shall be collectively referred to in this Section as the “Prevailing Wage Requirements.”

3. CONTRACTOR shall pay and require its Subcontractors to pay to all workers performing work under this Contract not less than the prevailing hourly rate of wages for the class or type of work performed by the worker in accordance with the Law, Rules, Wage Order and any applicable Wage Increase. CONTRACTOR shall take whatever steps are necessary to insure that the prevailing hourly wage rates are paid and that all workers for CONTRACTOR and each of its Subcontractors are paid for the class or type of work performed by the worker in accordance with the Prevailing Wage Requirements. If CONTRACTOR shall fail to start to perform CONTRACTOR’s obligations under the Contract Documents within sixty (60) days from the Effective Date of the Contract, CONTRACTOR and each of its subcontractors shall be obligated to pay all workers in accordance with any new Wage Order, as subsequently amended by any applicable Wage Increase, issued by the Department of Labor and Industrial Relations within the aforementioned sixty (60) day period. The new Wage Order and any applicable Wage Increase shall govern notwithstanding the fact that the Wage Order being replaced might be physically attached or incorporated in the Contract Documents.

4. Prior to each of its Subcontractors beginning Work on the Site, CONTRACTOR shall require each Subcontractor to complete CITY’s Form 00490 entitled “Pre-contract Certification” that sets forth the Subcontractor’s prevailing wage and tax compliance history for the two (2) years prior to the bid. CONTRACTOR shall retain one (1) year and make the Pre-contract Certifications available to CITY within five (5) days after written request.

5. CONTRACTOR shall:

a. Keep and require each of its Subcontractors engaged in the construction of public works in performance of the Contract to keep full and accurate records on City’s “Daily Labor Force Report” Form indicating the worker’s name, occupational title or classification group & skill and the workers’ hours. City shall furnish blank copies of the Daily Labor Force Report Form to Contractor for its use and for distribution to Subcontractors. Contractor shall submit its and its Subcontractors Daily Labor Force Reports to City each day; and

b. Submit, and require each of its Subcontractors engaged in the construction of public works in performance of the Contract to submit electronically, in a format prescribed by the City, Certified Payroll Report Information indicating the worker's name, address, social security number, occupation(s), craft(s) of every worker employed in connection with the public work together with the number of hours worked by each worker and the actual wages paid in connection with the Project and other pertinent information as requested by the City; and

c. Submit, and require each of its Subcontractors engaged in the construction of public works in performance of the Contract to submit, electronically, in format prescribed by the City, a Payroll Certification. The Payroll Certification must be signed by the employee or agent who pays or supervises the payment of the workers employed under the Contract for the Contractor and each Subcontractor; and

d. The Daily Labor Force Report, documents used to compile information for the Certified Payroll Report, and Payroll Certification are collectively referred to in this Section as the "Records."

6. CONTRACTOR shall submit its and its Subcontractors Daily Labor Force Reports to CITY each day. CONTRACTOR shall make all of CONTRACTOR's and Subcontractors' Records open to inspection by any authorized representatives of OWNER and the Missouri Department of Labor and Industrial Relations at any reasonable time and as often as they may be necessary and such Records shall not be destroyed or removed from the State of Missouri for a period of one (1) year following the completion of the public work in connection with which the Records are made. CONTRACTOR shall have its and its Subcontractors Certified Payroll Reports and Payroll Certifications available at the CONTRACTOR's office and shall provide the Records to the City electronically at City's sole discretion. In addition, all Records shall be considered a public record and CONTRACTOR shall provide the Records to the CITY in the format required by the CITY within three (3) working days of any request by CITY at the CONTRACTOR's cost. CITY, in its sole discretion, may require CONTRACTOR to send any of the Records directly to the person who requested the Record at CONTRACTOR's expense.

7. CONTRACTOR shall post and keep posted a clearly legible statement of all prevailing hourly wage rates to be paid to all workers employed by CONTRACTOR and each of its Subcontractors in the performance of this Contract in a prominent and easily accessible place at the Site of the Work by all workers.

8. If the Contract Price exceeds $250,000.00, CONTRACTOR shall and shall require each Subcontractor engaged in any construction of public works to have its name, acceptable abbreviation or recognizable logo and the name of the city and state of the mailing address of the principal office of the company, on each motor vehicle and motorized self-propelled piece of equipment which is used in connection with the Project during the time the CONTRACTOR or Subcontractor is engaged on the project. The sign shall be legible from a distance of twenty (20') feet, but the size of the lettering need not be larger than two (2") inches. In cases where equipment is leased or where affixing a legible sign to the equipment is impractical, the CONTRACTOR may place a temporary stationary sign, with the information required pursuant to this section, at the main entrance of the Project in place of affixing the required information on the equipment so long as such sign is not in violation of any state or federal statute, rule or regulation. Motor vehicles which are required to have similar information affixed thereto pursuant to requirements of a regulatory agency of the state or federal government are exempt from the provisions of this subsection.

9. CONTRACTOR must correct any errors in CONTRACTOR's or any Subcontractors' Records, or CONTRACTOR's or any Subcontractors' violations of the Law, Rules, Annual Wage Order and any Wage Increase within fourteen (14) calendar days after notice from CITY.

10. CONTRACTOR shall and shall require its Subcontractors to cooperate with the CITY and the Department of Labor and Industrial Relations in the enforcement of this Section, the Law, Rules, Annual Wage Order and any Wage Increase. Contractor shall and shall require its Subcontractors to permit CITY and the Department of Labor and Industrial Relations to interview any and all workers during working hours on the Project at CONTRACTOR's sole cost and expense.

11. CONTRACTOR shall file with CITY, upon completion of the Project and prior to final payment therefore, affidavits from CONTRACTOR and each of its Subcontractors, stating that each has fully complied with the provisions and requirements of the Missouri Prevailing Wage Law. CITY shall not make final payment until the affidavits, in proper form and order, from CONTRACTOR and each of its Subcontractors, are filed by CONTRACTOR.

12. CONTRACTOR shall forfeit as a statutory penalty to the CITY one hundred dollars ($100.00) for each worker employed, for each calendar day, or portion thereof, such worker is paid less than the prevailing hourly rates for any work done under this Contract, by CONTRACTOR or by any of CONTRACTOR's Subcontractors. If CONTRACTOR or any of its Subcontractors have violated any section(s) of 290.210 to 290.340, RSMo, in the course of the execution of the Contract, CITY shall when making payments to the CONTRACTOR becoming due under this Contract, withhold and retain therefrom all sums and amounts due and owing as a result of any violation of sections 290.210 to 290.340, RSMo.

J. **Prevailing Wage Damages**. CONTRACTOR acknowledges and agrees that, based on the experience of CITY, violations of the Missouri Prevailing Wage Act, whether by CONTRACTOR or its Subcontractors, commonly result in additional costs to CITY. CONTRACTOR agrees that additional costs to CITY for any particular violation are difficult to establish and include but are not limited to: costs of construction delays, additional work for CITY, additional interest expenses, investigations, and the cost of establishing and maintaining a special division working under the City Manager to monitor prevailing wage compliance.

1. In the event of the failure by CONTRACTOR or any of its Subcontractors to pay wages as provided in the Missouri Prevailing Wage Act, CITY shall be entitled to deduct from the Contract Price, and shall retain as liquidated damages, one hundred dollars ($100.00) per day, per worker who is paid less than the prevailing hourly rate of wages, to approximate the additional costs. The sum shall be deducted, paid or owed whether or not the Contract Times have expired.

2. CITY shall give written notice to CONTRACTOR setting forth the workers, who have been underpaid, the amount of the statutory penalty and the amount of the liquidated damages as provided for in this Subparagraph J**.** CONTRACTOR shall have fourteen (14) calendar days to respond, which time may be extended by CITY upon written request. If CONTRACTOR fails to respond within the specified time, the CITY's original notice shall be deemed final. If CONTRACTOR responds to CITY's notice, CITY will furnish CONTRACTOR a final decision in writing within five (5) days of completing any investigation.

K. **Missouri Secretary of State Business Entity Registration**. CONTRACTOR shall obtain from all Subcontractors for the Project, a copy of their current certificate of good standing or fictitious name registration from the Missouri Secretary of State before they begin work on the Site. CONTRACTOR shall retain such documents in its files and make available to CITY within ten (10) days after written request.

L. **Tropical Hardwoods**. The provisions of Code Section 2-1872, restricting the use of tropical hardwoods, shall apply to this Contract.

M. **Preference for Missouri Products**. Pursuant to Section 71.140 RSMo., preference shall be given to materials, products, supplies and all other articles produced, manufactured, made or grown within the State of Missouri.

N. **Guidelines for Open Excavations**.

1. CONTRACTOR shall restore required excavations to the level of the adjacent surfaces as soon as practicable. Unsupervised open excavations on public properties are discouraged at all times. If CONTRACTOR, in performance of the Work, makes or causes to be made any excavation in, upon, under, through or adjoining any street, sidewalk, alley, park, boulevard, parkway or any other public properties, and shall leave any part or portion thereof open, CONTRACTOR shall provide effective protection to the public.

2. CONTRACTOR shall protect and secure all excavations in roadways in compliance with existing federal, state and local codes and standards, including, but not limited to the most current edition of the Manual of Uniform Traffic Control Devices. CONTRACTOR shall protect and secure all unsupervised excavations not within roadways, either by covering or fencing.

a. Covering. A protective cover that can sustain the weight of persons or of objects that are placed upon it may be installed over an unsupervised excavation. The cover shall be secured to the ground to prevent movement. Protective covers shall have no opening(s) or protuberance(s) of sufficient size to cause a fall and/or injury. Advance warning devices shall be installed as necessary.

b. Fencing. Fencing to prevent entry may be installed surrounding an unsupervised excavation not protectively covered in its entirety. The fencing shall be a minimum of 42" in height. The fencing shall be constructed in such a manner that it is adequately secured and will remain upright at all times under normal Site conditions. All protective coverings and fences over and around excavations shall be inspected at least daily to assure integrity. Protective coverings and/or fences in heavily trafficked areas shall be inspected more often as necessary.

O. **Notification of Utilities**. CONTRACTOR shall adhere to the provisions of Sections 319.010 et seq., RSMo., which requires that a person or firm making an excavation in any public street, road or alley, right of way dedicated to public use, utility easement of record, or within any private street or private property do so only after giving notice to, and obtaining information from, owners of Underground Facilities. The 24-hour, toll-free accident prevention hotline number in Missouri is 1-800-344-7483 (1-800-Digrite).

P. Employee Eligibility Verification. CONTRACTOR shall adhere to the provisions of Sections 285.525 et seq., RSMo., which requires that for any contract exceeding five thousand dollars ($5,000.00), CONTRACTOR shall execute and submit an affidavit, in a form prescribed by CITY, affirming that CONTRACTOR does not knowingly employ any person in connection with the contracted services who does not have the legal right or authorization under federal law to work in the United States as defined in 8 U.S.C.§ 1324a(h)(3). CONTRACTOR shall attach to the affidavit documentation sufficient to establish CONTRACTOR'S enrollment and participation in an electronic verification of work program operated by the United States Department of Homeland Security (E-Verify) or an equivalent federal work authorization program operated by the United States Department of Homeland Security to verify information of newly hired employees, under the Immigration Reform and Control Act of 1986. CONTRACTOR may obtain additional information about E-Verify and enroll at https://e-verify.uscis.gov/enroll/StartPage.aspx?JS=YES. For those Contractors enrolled in E-Verify, the first and last pages of the E-Verify Memorandum of Understanding that CONTRACTOR will obtain upon successfully enrolling in the program shall constitute sufficient documentation for purposes of complying with this Section. CONTRACTOR shall submit the affidavit and attachments to CITY prior to execution of the Contract, or at any point during the term of the Contract if requested by City.

Q. **OSHA 10-Hour Training Requirement**. CONTRACTOR and any subcontractor working under this Contract shall require every employee on the Site to complete a ten-hour construction safety program which meets the requirements of Section 292.675, RSMo, except for those employees who shall have previously completed the required program and hold documentation to that effect. CONTRACTOR shall remove or require the removal of any

person from the Site who is subject to this requirement and who does not complete or is unable to produce documentation of their successful completion of the required program within the time limitations prescribed by Section 292.675, RSMo. CONTRACTOR shall forfeit the sum of two thousand five hundred dollars ($2,500.00), in addition to one hundred dollars ($100.00) per employee each calendar day, or portion thereof, the employee(s) shall continue to be employed without having completed the required program within the time limitations prescribed by Section 292.675, RSMo. CITY shall be entitled to withhold and retain any amounts due and owing hereunder when making payment to CONTRACTOR.

R. Clean Air Act and Clean Water Act. CONTRACTOR shall comply with requirements of the Clean Air Act (42 U.S.C. 7401 *et seq*.); Clean Water Act (33 U.S.C. 1251 *et seq*.), Missouri Clean Water Law (Chapter 644 RSMo), Code of Federal regulations (Title 40: Protection of Environment, Title 33: Navigation and Navigable Waters) and the rules of the Missouri Code of State Regulations (CSR Title 10).

S. Contract information Management System. If applicable, CONTRACTOR shall comply with CITY's Contract Information Management System requirements. CONTRACTOR shall use CITY's Internet web based Contract Information Management System/Project Management Communications Tool provided by CITY and protocols included in that software during the term of this Contract. CONTRACTOR shall maintain user applications to CITY's provided system for all personnel, subcontractors or suppliers as applicable and shall require subcontractors/subconsultants to maintain same.

T. Anti-Discrimination Against Israel. If this Contract exceeds $100,000.00 and CONTRACTOR employs at least ten employees, pursuant to Section 34.600, RSMo., by executing this Contract, CONTRACTOR certifies it is not currently engaged in and shall not, for the duration of this contract, engage in a boycott of goods or services from the State of Israel; companies doing business in or with Israel or authorized by, licensed by, or organized under the laws of the State of Israel; or persons or entities doing business in the State of Israel.

U. Ban the Box in Hiring and Promotion

a. Pursuant to Section 38-104, City Code Ordinances, CONTRACTOR shall not base a hiring or promotional decision on an applicant's criminal history or sentence related thereto, unless the employer can demonstrate that the employment-related decision was based on all information available including consideration of the frequency, recentness and severity of a criminal record and that the record was reasonably related to the duties and responsibilities of the position.

b. Notwithstanding subsection (a), CONTRACTOR may inquire about an applicant's criminal history after it has been determined that the individual is otherwise qualified for the position, and only after the applicant has been interviewed for the position. Any such inquiry may be made of all applicants who are within the final selection pool of candidates from which a job will be filled.

c. This provision shall not apply to positions where employers are required to exclude applicants with certain criminal convictions from employment due to local, state or federal law or regulation.

V. Title VI of the Civil Rights Act of 1964

a. Title VI of the Civil Rights Act of 1964 requires that no person in the United States shall, on the grounds of race, color, or national or origin (including limited English proficient individuals), be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any program or activity receiving federal financial assistance. The City of Kansas City, Missouri requires compliance with the requirements of Title VI in all of its programs and activities regardless of the funding source.

b. CONTRACTOR shall not discriminate on the grounds of race, color, or national or origin (including limited English proficient individuals).

W. Non-discrimination in Employment

CONTRACTOR shall not discriminate against any employee or candidate for employment on the basis of an individual's race, hair texture or hair style associated with an individual's race, color, sex, religion, national origin, or ancestry, disability, sexual orientation, gender identity or age in a manner prohibited by Chapter 38 of the City Code. CONTRACTOR shall not engage in any discrimination as prohibited by Chapter 3 of the City Code.

X. Quality Services Assurance Act

If this Contract exceeds $160,000.00, CONTRACTOR certifies that CONTRACTOR will pay all employees who will work on this Contract in the city limits of Kansas City, Missouri at least $15.00 per hour in compliance with the City's Quality Services Assurance Act, Section 3-66, Code of Ordinances unless City has granted CONTRACTOR an exemption pursuant to the Quality Services Assurance Act.

6.11 Taxes

A. CONTRACTOR shall pay all sales, consumer, use and other similar taxes required to be paid by CONTRACTOR in accordance with the Laws or Regulations of the place of the Project which are applicable during the performance of the Work.

B. **Tax Compliance**.

1. As a condition precedent to CITY making its first payment to CONTRACTOR under this Contract, CONTRACTOR shall furnish to CITY sufficient proof from City's Commissioner of Revenue, dated not more than one (1) year prior to the date provided to CITY, verifying that CONTRACTOR is in compliance with the license and tax ordinances administered by City's Revenue Division of the Finance Department.

2. As a condition precedent to Subcontractors performing any Work under this Contract, CONTRACTOR shall obtain from Subcontractor sufficient proof from City's Commissioner of Revenue, dated not more than one (1) year before the date Subcontractor begins Work, verifying that the Subcontractor is in compliance with the license and tax ordinances administered by City's Revenue Division of the Finance Department. CONTRACTOR shall retain such documentation in its files and make available to CITY within ten (10) days after a written request.

3. As a condition precedent to CITY making final payment under this Contract, if this Contract is longer than one (1) year and exceeds the dollar threshold established by ordinance and included in the Supplementary Conditions, CONTRACTOR shall furnish to CITY sufficient proof from City's Commissioner of Revenue, dated not more than one (1) year before the filing of a final Application for Payment, verifying that CONTRACTOR is in compliance with the license and tax ordinances administered by City's Revenue Division of the Finance Department.

4. If this Contract is longer than one (1) year and exceeds the dollar threshold established by ordinance and included in the Supplementary Conditions, CONTRACTOR shall obtain from Subcontractors sufficient proof from City's Commissioner of Revenue, dated not more than one (1) year before the date of CONTRACTOR's final payment to the Subcontractor, that the Subcontractor was or is in compliance with the license and tax ordinances administered by City's Revenue Division of the Finance Department. CONTRACTOR shall retain such documentation in its files and make available to CITY within ten (10) days after written request.

5. If, at the time of final payment to CONTRACTOR, CONTRACTOR is unable to obtain from all its Subcontractors, if any, and furnish to CITY sufficient proof from City's Commissioner of Revenue that all its Subcontractors are in compliance with the license and tax ordinances administered by City's Revenue Division of the Finance Department, CITY may approve final payment to CONTRACTOR if CITY determines that CONTRACTOR has made a good faith effort to furnish evidence or that there are other extenuating circumstances which make it impossible for CONTRACTOR to furnish sufficient proof.

C. **Missouri Sales Tax Exemption**. Pursuant to Section 144.062, RSMo, CITY is a Missouri exempt entity and tangible personal property to be incorporated or consumed in the construction of this Project may be purchased without sales tax. CITY shall furnish CONTRACTOR a Missouri Project Exemption Certificate for Sales Tax at the time of issuance of the Notice to Proceed.

6.12 Use of Site and Other Areas

A. CONTRACTOR shall confine construction equipment, the storage of materials and equipment, and the operations of workers to the Site and other areas identified in and permitted by the Contract Documents and other areas permitted by Laws or Regulations. CONTRACTOR shall not unreasonably encumber the Site and the other areas with construction equipment or other materials or equipment. CONTRACTOR shall assume full responsibility for any damage to the Site or the other areas, or to the owner or occupant thereof, or of any adjacent land or areas, resulting from the performance of the Work.

B. Should any claim be made by any such owner or occupant because of the performance of the Work, CONTRACTOR shall promptly settle with such other party by negotiation or otherwise resolve the claim by arbitration or other dispute resolution proceeding or at law. In case of a failure on the part of the CONTRACTOR to restore such property or to make good such damage or injuries, the CITY may, upon forty-eight (48) hours written notice to the CONTRACTOR, repair, rebuild or otherwise restore such property as the CITY may deem necessary, and the cost thereof will be deducted from any moneys due or which may become due the CONTRACTOR under this Contract.

C. CONTRACTOR shall, to the fullest extent permitted by Laws or Regulations, defend, indemnify and hold harmless CITY, DESIGN PROFESSIONAL, Consultants and the officers, directors, employees, agents and other consultants of each and any of them from and against all claims, costs, losses and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) arising out of or resulting from any claim or action, legal or equitable, brought by any such owner or occupant against CITY, DESIGN PROFESSIONAL or any other party indemnified hereunder to the extent caused by or based upon CONTRACTOR's performance of the Work.

D. During the progress of the Work, CONTRACTOR shall keep the Site and the other areas free from accumulations of waste materials, rubbish and other debris resulting from the Work. At the completion of the Work CONTRACTOR shall remove all waste materials, rubbish and debris from Site and other areas as well as all tools, appliances, construction equipment and machinery and surplus materials. CONTRACTOR shall leave the Site clean and ready for utilization or occupancy by CITY at Substantial Completion of the Work. CONTRACTOR shall restore to all property not designated for alteration by the Contract Documents to its pre-Work condition.

E. CONTRACTOR shall not load nor permit any part of any structure to be loaded in any manner that will endanger the structure, nor shall CONTRACTOR subject any part of the Work or adjacent property to stresses or pressures that will endanger it.

6.13 Record Documents

A. CONTRACTOR shall maintain in a safe place at the Site one record copy of all Drawings, Specifications, Addenda, the Contract, Written Amendments, Change Orders, Work

Change Directives, and written interpretations and clarifications in good order and annotated to show all changes made during construction. These record documents, together with all approved Samples and a counterpart of all approved Shop Drawings, will be available to CITY and DESIGN PROFESSIONAL for reference. Upon completion of the Work, these record documents, Samples and Shop Drawings will be delivered to DESIGN PROFESSIONAL for CITY.

6.14 Safety and Protection

A. CONTRACTOR shall be solely responsible for initiating, maintaining and supervising all safety precautions and programs in connection with the Work. CONTRACTOR shall comply with all applicable Laws or Regulations relating to the safety of persons or property to protect them from damage, injury or loss; and shall erect and maintain all necessary safeguards for safety and protection. CONTRACTOR shall deliver to CITY a copy of CONTRACTOR'S Health and Safety Plan as provided in the Notice of Intent to Contract.

B. CONTRACTOR shall notify owners of adjacent property and of Underground Facilities and other utility owners when prosecution of the Work may affect them, and shall cooperate with them in the protection, removal, relocation and replacement of their property. All damage, injury or loss to any property referred to in Paragraph 6.14 B.2 or 6.14 B.3 caused, directly or indirectly, in whole or in part, by CONTRACTOR, any Subcontractor, Supplier or any other person or organization directly or indirectly employed by any of them to perform or furnish any of the Work or anyone for whose acts any of them may be liable, shall be remedied by CONTRACTOR (except damage or loss attributable to the fault of Drawings or Specifications or to the acts or omissions of CITY, DESIGN PROFESSIONAL, Consultant, or anyone employed by any of them or anyone for whose acts any of them may be liable, and not attributable, directly or indirectly, in whole or in part, to the fault or negligence of CONTRACTOR, Subcontractor, Supplier or other person or organization directly or indirectly employed by any of them). CONTRACTOR's duties and responsibilities for safety and for protection of the Work shall continue until such time as all the Work is completed and DESIGN PROFESSIONAL has issued a notice to CONTRACTOR in accordance with Paragraph 14.07 that the Work is acceptable (except as otherwise expressly provided in connection with Substantial Completion). CONTRACTOR shall take all necessary precautions for the safety of, and shall provide the necessary protection to prevent damage, injury or loss to:

1. all persons on the Site or who may be affected by the Work;

2. all the Work and materials and equipment to be incorporated therein, whether in storage on or off the Site; and

3. other property at the Site or adjacent thereto, including trees, shrubs, lawns, walks, pavements, roadways, structures, utilities and Underground Facilities not designated for removal, relocation or replacement in the course of the Work.

6.15 Safety Representative

A. In accordance with OSHA standards, CONTRACTOR shall designate a qualified and experienced safety representative whose duties and responsibilities shall be the prevention of accidents and the maintaining and supervising of safety precautions and programs. CONTRACTOR's safety representative shall remain at the Site whenever there is Work in progress and shall immediately notify CITY of any emergencies or accidents occurring at the Site

6.16 Hazard Communication Programs

A. CONTRACTOR shall be responsible for coordinating any exchange of material safety data sheets or other hazard communication information required to be made available to or exchanged between or among employers at the Site in accordance with Laws or Regulations.

6.17 Emergencies

A. In emergencies affecting the safety or protection of persons or the Work or property at the Site or adjacent thereto, CONTRACTOR, without special instruction or authorization from CITY or DESIGN PROFESSIONAL, is obligated to act to prevent threatened damage, injury or loss. CONTRACTOR shall give CITY and DESIGN PROFESSIONAL prompt written notice if CONTRACTOR believes that any significant changes in the Work or variations from the Contract Documents have been caused thereby or are required as a result thereof. If CITY determines that a change in the Contract Documents is required because of the action taken by CONTRACTOR in response to an emergency, a Work Change Directive or Change Order will be issued.

B. A change in the Contract Documents pursuant to Paragraph 6.15 A will not be an automatic authorization of, nor a condition precedent to, entitlement to adjustment in the Contract Price or Contract Times. If CITY and CONTRACTOR are unable to agree on entitlement to, or magnitude of, an equitable adjustment in the Contract Price or Contract Times, a Claim may be made therefore as provided in Article 16. However, OWNER, DESIGN PROFESSIONAL and Consultants shall not be liable to CONTRACTOR for any costs, losses or damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all other dispute resolution costs) sustained by CONTRACTOR on or in connection with any other project or anticipated project.

6.18 Shop Drawings and Samples

A. CONTRACTOR shall submit Shop Drawings to DESIGN PROFESSIONAL for review and approval in accordance with the accepted schedule of Shop Drawings and Sample submittals (see Paragraph 2.07). All submittals shall be identified as DESIGN PROFESSIONAL may require and in the number of copies specified in the General Requirements. The data shown on the Shop Drawings shall be complete with respect to quantities, dimensions, specified performance and design criteria, materials and similar data to show DESIGN PROFESSIONAL the services, materials and equipment CONTRACTOR proposes to provide and to enable DESIGN PROFESSIONAL to review the information for the limited purposes required by Paragraph 6.18 D.

B. CONTRACTOR shall also submit Samples to DESIGN PROFESSIONAL for review and approval in accordance with said accepted schedule of Shop Drawings and Sample submittals. Each Sample shall be identified clearly as to material, Supplier, pertinent data such as catalog numbers and the use for which intended and otherwise as DESIGN PROFESSIONAL may require to enable DESIGN PROFESSIONAL to review the submittal for the limited purposes required by Paragraph 6.18 D. The numbers of each Sample to be submitted will be as specified in the Specifications.

C. **Submittal Procedures**:

1. Before submitting each Shop Drawing or Sample, CONTRACTOR shall have determined and verified:

a. all field measurements, quantities, dimensions, specified performance criteria, installation requirements, materials, catalog numbers and similar information with respect thereto;

b. all materials with respect to intended use, fabrication, shipping, handling, storage, assembly and installation pertaining to the performance of the Work;

c. all information relative to means, methods, techniques, sequences and procedures of construction and safety precautions and programs incident thereto; and

d. CONTRACTOR shall also have reviewed and coordinated each Shop Drawing or Sample with other Shop Drawings and Samples and with the requirements of the Work and the Contract Documents.

2. Each submittal shall bear a stamp or specific written indication that CONTRACTOR has satisfied CONTRACTOR's obligations under the Contract Documents with respect to CONTRACTOR's review and approval of that submittal.

3. At the time of each submission, CONTRACTOR shall give DESIGN PROFESSIONAL specific written notice of such variations, if any, that the Shop Drawing or Sample submitted may have from the requirements of the Contract Documents, the notice to be in a written communication separate from the submittal, and, in addition, shall cause a specific notation to be made on each Shop Drawing and Sample submitted to DESIGN PROFESSIONAL for review and approval of each such variation.

D. **DESIGN PROFESSIONAL's Review**:

1. DESIGN PROFESSIONAL will review and approve Shop Drawings and Samples in accordance with the schedule of Shop Drawings and Sample submittals accepted by DESIGN PROFESSIONAL as required by Paragraph 2.06. DESIGN PROFESSIONAL's review and approval will be only to determine if the items covered by the submittals will, after installation or incorporation into the Work, conform to the information given in the Contract Documents and be compatible with the design concept of the completed Project as a functioning whole as indicated by the Contract Documents.

2. DESIGN PROFESSIONAL's review and approval will not extend to means, methods, techniques, sequences or procedures of construction (except where a particular means, method, technique, sequence or procedure of construction is specifically and expressly called for by the Contract Documents) or to safety precautions or programs incident thereto. The review and approval of a separate item as such will not indicate approval of the assembly in which the item functions.

3. DESIGN PROFESSIONAL's review and approval of Shop Drawings or Samples shall not relieve CONTRACTOR from responsibility for any variation from the requirements of the Contract Documents unless CONTRACTOR has in writing called DESIGN PROFESSIONAL's attention to each such variation at the time of submission as required by Paragraph 6.18 C.3, and DESIGN PROFESSIONAL has given written approval of each such variation by specific written notation thereof incorporated into or accompanying the Shop Drawing or Sample approval; nor will any approval by DESIGN PROFESSIONAL relieve CONTRACTOR from responsibility for complying with the requirements of Paragraph 6.18 C.1.

E. Where a Shop Drawing or Sample is required by the Contract Documents or the schedule of Shop Drawings and Sample submissions accepted by DESIGN PROFESSIONAL as required by Paragraph 2.06, any related Work performed prior to DESIGN PROFESSIONAL's review and approval of the pertinent submittal will be at the sole expense and responsibility of CONTRACTOR.

F. CONTRACTOR shall make corrections required by DESIGN PROFESSIONAL and shall return the required number of corrected copies of Shop Drawings and submit as required new Samples for review and approval. CONTRACTOR shall direct specific attention in writing to revisions other than the corrections called for by DESIGN PROFESSIONAL on previous submittals.

6.19 Continuing the Work

A. CONTRACTOR shall carry on the Work and adhere to the progress schedule during all disputes or disagreements with CITY No Work shall be delayed or postponed pending resolution of any disputes or disagreements, except as permitted by Paragraph 15.04 or as CITY and CONTRACTOR may otherwise agree in writing.

6.20 CONTRACTOR's General Warranty and Guarantee

A. CONTRACTOR warrants and guarantees to CITY, DESIGN PROFESSIONAL and Consultants that all Work will be in accordance with the Contract Documents and will not be

defective. CONTRACTOR's warranty and guarantee hereunder excludes defects or damage caused by:

1. abuse, modification or improper maintenance or operation by persons other than CONTRACTOR, Subcontractors, Suppliers or any other individual or entity for whom CONTRACTOR is responsible; or

2. normal wear and tear under normal usage.

B. CONTRACTOR's obligation to perform and complete the Work in accordance with the Contract Documents shall be absolute. None of the following will constitute an acceptance of Work that is not in accordance with the Contract Documents or a release of CONTRACTOR's obligation to perform the Work in accordance with the Contract Documents:

1. observations by DESIGN PROFESSIONAL;

2. recommendation of any progress or final payment by DESIGN PROFESSIONAL;

3. the issuance of a certificate of Substantial Completion or any payment related thereto by CITY to CONTRACTOR;

4. use or occupancy of the Work or any part thereof by OWNER;

5. any review and approval of a Shop Drawing or Sample submittal or the issuance of a notice of acceptability by DESIGN PROFESSIONAL;

6. any inspection, test or approval by others; or

7. any correction of defective Work by CITY.

C. Nonconforming Work is rejected unless expressly accepted in writing by the CITY's Representative.

ARTICLE 7 OTHER WORK

7.01 Related Work at Site

A. CITY may perform other work related to the Project at the Site by CITY's own forces, or let other direct contracts therefore, or have other work performed by utility owners. If such other work is to be performed and such fact was not noted in the Contract Documents, then:

1. Written notice thereof will be given to CONTRACTOR prior to starting any such other work, and

2. CONTRACTOR may make a Claim therefore as provided in Article 16 if CONTRACTOR believes that such performance involves additional expense to CONTRACTOR or requires additional time and the parties are unable to agree as to the amount or extent thereof.

B. CONTRACTOR shall afford each other contractor who is a party to such a direct contract, and each utility owner (and CITY, if CITY is performing the additional work with CITY's employees) proper and safe access to the Site and a reasonable opportunity for the introduction and storage of materials and equipment and the execution of such other work and shall properly connect and coordinate the Work with theirs. Unless otherwise provided in the Contract Documents, CONTRACTOR shall do all cutting, fitting and patching of the Work that may be required to properly connect or otherwise make its several parts come together and properly integrate with such other work. CONTRACTOR shall not endanger any work of others by cutting, excavating or otherwise altering their work and will only cut or alter their work with the written consent of CITY and the others whose work will be affected. The duties and responsibilities of CONTRACTOR under this Paragraph are for the benefit of such utility owners and other contractors to the extent that there are comparable provisions for the benefit of CONTRACTOR in said direct contracts between CITY and such utility owners and other contractors.

C. If the proper execution or results of any part of CONTRACTOR's Work depends upon work performed by others under this Article 7, CONTRACTOR shall inspect such other work and promptly report to CITY and DESIGN PROFESSIONAL in writing any delays, defects or deficiencies in such other work that render it unavailable or unsuitable for the proper execution or results of CONTRACTOR's Work. CONTRACTOR's failure to report same will constitute an acceptance of such other work as fit and proper for integration with CONTRACTOR's Work, except for latent or non-apparent defects and deficiencies in such other work.

7.02 Coordination

A. If CITY contracts with others for the performance of other work on the Project at the Site, the following will be set forth in Supplementary Conditions:

1. the person, firm or corporation who will have authority and responsibility for coordination of the activities among the various prime contractors will be identified;
2. the specific matters to be covered by such authority and responsibility will be itemized; and
3. the extent of such authority and responsibilities will be provided.

B. Unless otherwise provided in the Supplementary Conditions, CITY shall have sole authority and responsibility in respect of such coordination.

ARTICLE 8 CITY'S RESPONSIBILITIES

8.01 Communications to CONTRACTOR

A. Except as otherwise provided in these General Conditions, CITY shall issue all communications to CONTRACTOR.

8.02 Replacement of DESIGN PROFESSIONAL

A. In case of termination of the employment of DESIGN PROFESSIONAL, CITY shall appoint a DESIGN PROFESSIONAL whose status under the Contract Documents shall be that of the former DESIGN PROFESSIONAL.

8.03 Furnish Data and Prompt Payment

A. CITY shall promptly furnish the data required of OWNER under the Contract Documents and shall make payments to CONTRACTOR when they are due.

8.04 Lands and Easements; Reports and Tests

A. CITY's duties in respect of providing lands and easements and providing engineering surveys to establish reference points are set forth in Paragraphs 4.01 and 4.05. Paragraph 4.02 refers to CITY's duty to identify and make available to CONTRACTOR copies of reports of explorations and tests of subsurface conditions at the Site and drawings of physical conditions in existing structures at or contiguous to the Site that have been utilized by DESIGN PROFESSIONAL in preparing the Contract Documents.

8.05 Insurance

A. CITY's responsibilities, if any, for purchasing and maintaining liability and property insurance are set forth in Article 5 and the Supplementary Conditions.

8.06 Change Orders

A. CITY is obligated to execute Change Orders as indicated in Paragraph 10.03.

8.07 Inspections, Tests and Approvals

A. CITY's responsibility for certain inspections, tests and approvals is set forth in Paragraph 13.02 F.

8.08 Limitations on CITY's Responsibilities

A. The CITY shall not supervise, direct or have control or authority over, nor be responsible for, CONTRACTOR's means, methods, techniques, sequences or procedures of construction, or the safety precautions and programs incident thereto, or for any failure of CONTRACTOR to comply with Laws or Regulations applicable to the furnishing or performance of the Work. CITY will not be responsible for CONTRACTOR's failure to perform or furnish the Work in accordance with the Contract Documents.

8.09 Undisclosed Hazardous Environmental Condition

A. CITY's responsibility for an undisclosed Hazardous Environmental Condition uncovered or revealed at the Site is set forth in Paragraph 4.06.

8.10 Evidence of Financial Arrangements

A. CITY will furnish CONTRACTOR reasonable evidence that financial arrangements have been made to satisfy OWNER's obligations under the Contract.

8.11 CITY's Representative

A. CITY will provide a representative during the construction period. The duties, responsibilities and the limitations of authority of the CITY '"s Representative during construction are set forth in the Contract Documents.

8.12 Visits to Site

A. CITY's Representative will make visits to the Site at intervals appropriate to the various stages of construction as CITY's Representative deems necessary in order to observe the progress that has been made and the quality of the various aspects of CONTRACTOR's executed Work. Based on information obtained during such visits and observations, CITY's Representative will endeavor to determine, in general, if the Work is proceeding in accordance with the Contract Documents. CITY's Representative will not be required to make exhaustive or continuous on-Site inspections to check the quality or quantity of the Work.

ARTICLE 9 DESIGN PROFESSIONAL's STATUS DURING CONSTRUCTION

9.01 General Scope of DESIGN PROFESSIONAL's Duties

A. DESIGN PROFESSIONAL's efforts will be directed toward providing for CITY a greater degree of confidence that the completed Work will conform generally to the Contract Documents. On the basis of visits to the Site and on-Site observations, DESIGN PROFESSIONAL will keep CITY informed of the progress of the Work and will endeavor to guard CITY against defective Work. DESIGN PROFESSIONAL's visits to the Site and on-Site observations are subject to all the limitations on DESIGN PROFESSIONAL's authority and responsibility set forth in Paragraph 9.08.

9.02 Resident Project Representative

A. If CITY and DESIGN PROFESSIONAL agree, DESIGN PROFESSIONAL will furnish a resident Project representative to assist DESIGN PROFESSIONAL in providing more extensive observation of the Work. The responsibilities, authority and limitations thereon of any such resident Project representative and assistants will be as provided in Paragraph 9.08 and in the Supplementary Conditions.

9.03 Clarifications and Interpretations

A. DESIGN PROFESSIONAL will issue with reasonable promptness written clarifications or interpretations (which may be in the form of Drawings) of the requirements of the Drawings and Specifications prepared by the DESIGN PROFESSIONAL as DESIGN PROFESSIONAL may determine necessary, which shall be consistent with the intent of and reasonably inferable from the Contract Documents. Such written clarifications and interpretations will be binding on CITY and CONTRACTOR. If CITY or CONTRACTOR believes that a written clarification or

interpretation justifies an adjustment in the Contract Price pursuant to Article 11 and/ or the Contract Times pursuant to Article 12 and the parties are unable to agree to the amount or extent thereof, if any, a Claim may be made therefore as provided in Article 16.

9.04 Rejecting Defective Work

A. DESIGN PROFESSIONAL will have authority to disapprove or reject Work which DESIGN PROFESSIONAL believes to be defective, that DESIGN PROFESSIONAL believes will not produce a completed Project that conforms to the Contract Documents, or that will prejudice the integrity of the design concept of the completed Project as a functioning whole as indicated by the Contract Documents. DESIGN PROFESSIONAL will also have authority to require special inspection or testing of the Work as provided in Paragraph 13.04 B, whether or not the Work is fabricated, installed or completed.

9.05 Shop Drawings, Change Orders and Payments

A. In connection with DESIGN PROFESSIONAL's authority as to Shop Drawings and Samples, see Paragraph 6.18.

B. In connection with DESIGN PROFESSIONAL's authority as to Change Orders, see Article 10.

C. In connection with DESIGN PROFESSIONAL's authority as to Applications for Payment, see Article 14.

9.06 Determinations for Unit Prices

A. DESIGN PROFESSIONAL will initially determine the actual quantities and classifications of Unit Price Work performed by CONTRACTOR. DESIGN PROFESSIONAL will review with CONTRACTOR the DESIGN PROFESSIONAL's preliminary determinations on such matters before rendering a written opinion thereon (by recommendation of an Application for Payment or otherwise to the CITY). CITY reserves the right to make a final determination of the actual quantities and classifications of Unit Price Work in reviewing an Application for Payment. Within ten (10) days after the date of receipt of any such decision, CONTRACTOR may deliver to CITY and to DESIGN PROFESSIONAL written notice of intention to appeal CITY's decision pursuant to Article 16.

9.07 Decisions on Requirements of Contract Documents and Acceptability of Work

A. DESIGN PROFESSIONAL will be the initial interpreter of the requirements of the Drawings and Specifications prepared by DESIGN PROFESSIONAL and judge of the acceptability of the Work thereunder.

B. When functioning as interpreter and judge under this Paragraph 9.07, DESIGN PROFESSIONAL will not show partiality to OWNER or CONTRACTOR.

C. Claims, disputes and other matters relating to the acceptability of the Work, quantities and classifications of Unit Price Work, or the interpretation of the requirements of the Contract Documents pertaining to the performance and furnishing of the Work will be referred initially to CITY's Representative in writing with a request for a formal decision in accordance with Article 16.

9.08 Limitations on DESIGN PROFESSIONAL's Authority and Responsibilities

A. Neither DESIGN PROFESSIONAL's authority or responsibility under this Article 9 or under any other provision of the Contract Documents nor any decision made by DESIGN PROFESSIONAL in good faith either to exercise or not exercise such authority or responsibility or the undertaking, exercise or performance of any authority or responsibility by DESIGN PROFESSIONAL shall create, impose or give rise to any duty owed by DESIGN PROFESSIONAL to CONTRACTOR, any Subcontractor, any Supplier, any other person or organization, or to any surety for or employee or agent of any of them.

B. DESIGN PROFESSIONAL will not supervise, direct, control or have authority over or be responsible for CONTRACTOR's means, methods, techniques, sequences or procedures of construction, or the safety precautions and programs incident thereto, or for any failure of CONTRACTOR to comply with Laws or Regulations applicable to the furnishing or performance of the Work. DESIGN PROFESSIONAL will not be responsible for CONTRACTOR's failure to perform or furnish the Work in accordance with the Contract Documents.

C. DESIGN PROFESSIONAL will not be responsible for the acts or omissions of CONTRACTOR or of any Subcontractor, any Supplier, or of any other person or organization performing or furnishing any of the Work.

D. DESIGN PROFESSIONAL's review of the final Application for Payment and accompanying documentation, and all maintenance and operating instructions, schedules, guarantees, Bonds and certificates of inspection, tests and approvals and other documentation required to be delivered by Paragraph 14.07 will only be to determine generally that their content complies with the requirements of, and in the case of certificates of inspections, tests and approvals, that the results certified indicate compliance with, the Contract Documents.

E. The limitations upon authority and responsibility set forth in this Paragraph 9.08 shall also apply to DESIGN PROFESSIONAL's Consultants, resident Project representative and assistants as identified in the Supplementary Conditions.

ARTICLE 10 CHANGES IN THE WORK

10.01 Authorized Changes in the Work

A. Without invalidating the Contract and without notice to any surety, CITY may, at any time or from time to time, order additions, deletions or revisions in the Work. Such additions, deletions or revisions will be authorized by a Written Amendment, a Change Order, or a Work Change Directive. Upon receipt of any such document, CONTRACTOR shall promptly proceed with the Work involved that will be performed under the applicable conditions of the Contract Documents (except as otherwise specifically provided).

B. If CITY and CONTRACTOR are unable to agree on entitlement to, or on the amount or extent, if any, of an adjustment in the Contract Price pursuant to Article 11 or an adjustment of the Contract Times pursuant to Article 12 or both that should be allowed as a result of a Work Change Directive, a Claim may be made therefore as provided in Article 16.

10.02 Unauthorized Changes in the Work

A. CONTRACTOR shall not be entitled to an increase in the Contract Price or an extension of the Contract Times with respect to any work performed that is not required by the Contract Documents as amended, modified or supplemented as provided in Paragraph 3.04, except in the case of an emergency as provided in Paragraph 6.17 or in the case of uncovering Work as provided in Paragraph 13.04.

10.03 Signing of Change Orders

A. CITY and CONTRACTOR, and DESIGN PROFESSIONAL shall sign appropriate Change Orders covering:

1. changes in the Work which are:

   a. ordered by CITY pursuant to Paragraph 10.01 A; or

   b. required because of acceptance of defective Work under Paragraph 13.08 or correcting defective Work under Paragraph 13.09; or

   c. agreed to by the parties;

2. changes in the Contract Price or Contract Times or both which are agreed to by the parties, including any undisputed sum or amount of time for Work actually performed in accordance with a Work Change Directive; and

3. changes in the Contract Price or Contract Times or both which embody the substance of any written decision recommended by DESIGN PROFESSIONAL and approved by CITY pursuant to Paragraph 9.06, provided that, in lieu of signing any such Change Order, an appeal may be taken from any such decision in accordance with the provisions of the Contract Documents and applicable Laws or Regulations, but during any such appeal, CONTRACTOR shall carry on the Work and adhere to the progress schedule as provided in Paragraph 6.19.

10.04 Notification to Surety

A. If notice of any change affecting the general scope of the Work or the provisions of the Contract Documents (including, but not limited to, Contract Price or Contract Times or both) is required by the provisions of any Bond to be given to a surety, the giving of any such notice will be CONTRACTOR's responsibility, and the amount of each applicable Bond will be adjusted accordingly.

ARTICLE 11 CHANGE OF CONTRACT PRICE

11.01 Change of Contract Price

A. The Contract Price constitutes the total compensation (subject to authorized adjustments) payable to CONTRACTOR for performing the Work. All duties, responsibilities and obligations assigned to or undertaken by CONTRACTOR shall be at CONTRACTOR's expense without change in the Contract Price.

B. The Contract Price may only be changed by a Change Order. Any request for an adjustment in the Contract Price shall be based on written notice delivered within fourteen (14) calendar days after occurrence of the event giving rise to the request or within fourteen (14) calendar days after first recognition of the conditions giving rise to the request. Prior notice is not required for requests or claims relating to an emergency endangering life or property as described in Paragraph 6.16. Thereafter, the CONTRACTOR shall submit written documentation of its request, including appropriate supporting documentation, within ten (10) calendar days after giving notice, unless the CITY grants an extension based on good cause shown by the CONTRACTOR that such additional time is warranted.

C. The value of any Work covered by a Change Order or of any request for an adjustment in the Contract Price will be determined as follows:

1. where the Work involved is covered by Unit Prices contained in the Contract Documents, by application of such Unit Prices to the quantities of the items involved (subject to the provisions of Paragraph 11.04); or

2. where the Work involved is not covered by Unit Prices contained in the Contract Documents, by a mutually agreed lump sum; or

3. where the Work involved is not covered by Unit Prices contained in the Contract Documents and agreement to a lump sum is not reached under Paragraph 11.01 C.2, on the basis of the Cost of the Work (determined as provided in Paragraphs 11.02 A and B) plus a CONTRACTOR's fee for overhead and profit (determined as provided in Paragraph 11.01 D).

D. The CONTRACTOR's fee allowed to CONTRACTOR for overhead and profit shall be determined as follows:

1. a mutually acceptable fixed fee; or

2. if a fixed fee is not agreed upon, then a fee based on the following percentages of the various portions of the Cost of the Work:

a. for costs incurred under Paragraphs 11.02 A.1 and 11.02 A.2, the CONTRACTOR's fee shall be ten percent (10%);

b. for costs incurred under Paragraph 11.02 A.3, the CONTRACTOR's fee shall be five percent (5%);

c. where one or more tiers of subcontracts are on the basis of the Cost of the Work plus a fee and no fixed fee is agreed upon, the intent of Paragraphs 11.01 D.2 and 11.02 A.1 through A.3 is that the Subcontractor who actually performs or furnishes the Work, at whatever tier, will be a paid a fee of ten percent (10%) of the costs incurred by such Subcontractor under Paragraphs 11.02 A.1 and 11.02 A.2 and that any higher tier Subcontractor and CONTRACTOR will each be paid a fee of five percent (5%) of the amount paid to the next lower tier Subcontractor;

d. no fee shall be payable on the basis of costs itemized under Paragraphs 11.02 A.4, 11.02 A.5 and 11.02 B;

e. the amount of credit to be allowed by CONTRACTOR to CITY for any change which results in a net decrease in cost will be the amount of the actual net decrease in costs plus a deduction in CONTRACTOR's fee by an amount equal to five percent (5%) of such net decrease; and

f. when both additions and credits are involved in any one change, the adjustment in CONTRACTOR's fee shall be computed on the basis of the net change in accordance with Paragraphs 11.01 D.2.a through 11.01 D.2.e, inclusive.

E. Whenever the Cost of the Work is to be determined pursuant to Paragraphs 11.02 A and B, CONTRACTOR shall establish and maintain records thereof in accordance with generally accepted accounting practices and submit in form acceptable to CITY an itemized cost breakdown together with supporting data.

11.02 Cost of the Work

A. The term "Cost of the Work" means the sum of all costs necessarily incurred and paid by CONTRACTOR in the proper performance of the Work. When the value of any Work covered by a Change Order or when a request for an adjustment in Contract Price is determined on the basis of Cost of the Work, the costs to be reimbursed to CONTRACTOR will be only those additional or incremental costs required because of the change in the Work or because of the event giving rise to the request. Except as otherwise agreed to in writing by CITY, costs covered by Change Orders or requests shall be in amounts no higher than those prevailing in the locality of the Project, shall include only the following items and shall not include any costs itemized in 11.02 B:

1. Payroll costs for employees in the direct employ of CONTRACTOR in the performance of the Work, using occupational titles and job classifications agreed upon by CITY and CONTRACTOR. Such employees shall include, without limitation, job Site superintendents, foremen and other personnel employed full time at the Site. Payroll costs for employees not employed full time on the Work shall be apportioned on the basis of their time spent on the Work. Payroll costs shall include, but not be limited to, salaries and wages plus the cost of fringe benefits which shall include social security contributions, unemployment, excise and payroll taxes, workers'" compensation, health and retirement benefits, bonuses, sick leave, vacation and holiday pay applicable thereto. The expenses of performing the Work after regular working hours, on Saturdays, Sundays or legal holidays, shall be included in the above to the extent authorized by OWNER.

2. Cost of all materials and equipment furnished and incorporated into the Work, including costs of transportation and storage thereof, and Suppliers' field services required in connection therewith. All cash discounts shall accrue to CONTRACTOR unless CITY deposits funds with CONTRACTOR with which to make payments, in which case the cash discounts shall accrue to CITY. All trade discounts, rebates and refunds and returns from sale of surplus materials and equipment shall accrue to CITY, and CONTRACTOR shall make provisions so that they may be obtained.

3. Payments made by CONTRACTOR to Subcontractors for Work performed or furnished by Subcontractors. If required by CITY, CONTRACTOR shall obtain competitive bids from Subcontractors acceptable to OWNER and CONTRACTOR and shall deliver such bids to CITY who will then determine, with the advice of DESIGN PROFESSIONAL, which bids, if any, will be accepted. If any subcontract provides that the Subcontractor is to be paid on the basis of the Cost of the Work plus a fee, the Subcontractor's Cost of the Work and fee shall be determined in the same manner as CONTRACTOR's Cost of the Work and fee as provided in Paragraphs 11.01 D and E and 11.02 A and B. All subcontracts shall be subject to the other provisions of the Contract Documents insofar as applicable.

4. Costs of special consultants (including but not limited to engineers, architects, testing laboratories, surveyors, attorneys and accountants) employed for services specifically related to the Work when such services are approved in advance by CITY in writing.

5. Other costs including the following:

a. The proportion of necessary transportation, travel and subsistence expenses of CONTRACTOR's employees incurred in discharge of duties connected with the Work.

b. Cost, including transportation and maintenance, of all materials, supplies, equipment, machinery, appliances, office and temporary facilities at the Site and hand tools not owned by the workers, which are consumed in the performance of the Work, and cost, less market value of such items used but not consumed which remain the property of CONTRACTOR.

c. Rentals of all construction equipment and machinery and the parts thereof whether rented from CONTRACTOR or others in accordance with rental agreements approved by CITY with the advice of DESIGN PROFESSIONAL, and the costs of transportation, loading, unloading, installation, assembly, dismantling and removal thereof, all in accordance with the terms of said rental agreements. The rental of any such equipment, machinery or parts shall cease when the use thereof is no longer necessary for the Work.

d. Applicable sales, consumer, use or similar taxes related to the Work**,** and for which CONTRACTOR is liable, imposed by Laws or Regulations.

e. Deposits lost for causes other than negligence of CONTRACTOR, any Subcontractor or anyone directly or indirectly employed by any of them or for whose acts any of them may be liable, and royalty payments and fees for permits and licenses required to perform the Work.

f. Losses and damages (and related expenses) caused by damage to the Work**,** not compensated by insurance or otherwise, sustained by CONTRACTOR in connection with the performance and furnishing of the Work (except losses and damages within the deductible amounts of property insurance established by CITY in accordance with Article 5), provided they have resulted from causes other than the negligence of CONTRACTOR, any Subcontractor, or anyone directly or indirectly employed by any of them or for whose acts any of them may be liable. Such losses shall include settlements made with the written consent and approval of CITY. No such losses, damages and expenses shall be included in the Cost of the Work for the purpose of determining CONTRACTOR's fee. If, however, any such loss or damage requires reconstruction and CONTRACTOR is placed in charge thereof, CONTRACTOR shall be paid for those services a fee proportionate to that stated in Paragraph 11.01 D.2.

g. The cost of utilities, fuel and sanitary facilities at the Site.

h. Minor expenses such as telegrams, long distance telephone calls, telephone service at the Site, expressage and similar petty cash items in connection with the Work.

i. Cost of premiums for additional or increased Bonds, or for insurance required because of approved changes in the Work.

B. Costs excluded: The term “Cost of the Work” shall not include any of the following:

1. Payroll costs and other compensation of CONTRACTOR’s officers, executives, principals (of partnership and sole proprietorships), general managers, engineers, architects, estimators, attorneys, auditors, accountants, purchasing and contracting agents, expediters, timekeepers, clerks and other personnel employed by CONTRACTOR whether at the Site or in CONTRACTOR’s principal or a branch office for general administration of the Work (if not specifically included in the agreed upon occupational titles and job classifications referred to in Paragraph 11.02 A.1 or specifically covered by Paragraph 11.02 A.4), all of which are to be considered administrative costs covered by the CONTRACTOR’s fee.

2. Expenses of CONTRACTOR’s principal and branch offices other than CONTRACTOR’s office at the Site.

3. Any part of CONTRACTOR’s capital expenses, including interest on CONTRACTOR’s capital employed for the Work and charges against CONTRACTOR for delinquent payments.

4. Costs due to the negligence of CONTRACTOR, any Subcontractor, or anyone directly or indirectly employed by any of them or for whose acts any of them may be liable, including but not limited to, the correction of defective Work, disposal of materials, or equipment wrongly supplied, and making good any damage to property.

5. Other overhead or general expense costs of any kind and the costs of any item not specifically and expressly included in Paragraph 11.02 A.

11.03 Cash Allowances

A. It is understood that CONTRACTOR has included in the Contract Price all allowances so named in the Contract Documents and shall cause the Work so covered to be furnished and performed for such sums as may be acceptable to CITY. CONTRACTOR agrees that:

1. the allowances include the cost to CONTRACTOR (less any applicable trade discounts) of materials and equipment required by the allowances to be delivered at the Site, and all applicable taxes; and

2. CONTRACTOR’s costs for unloading and handling on the Site, labor, installation costs, overhead, profit and other expenses contemplated for the allowances have been included in the Contract Price and not in the allowances, and no demand for additional payment on account of any of the foregoing will be valid.

B. Prior to final payment, an appropriate Change Order will be issued by CITY to reflect actual amounts due CONTRACTOR on account of Work covered by allowances, and the Contract Price shall be correspondingly adjusted.

11.04 Unit Price Work

A. Where the Contract Documents provide that all or part of the Work is to be Unit Price Work, initially the Contract Price will be deemed to include for all Unit Price Work an amount equal to the sum of the established unit price for each separately identified item of Unit Price Work times the estimated quantity of each item as indicated in the Contract. The estimated quantities of items of Unit Price Work are not guaranteed and are solely for the purpose of comparison of Bids and determining an initial Contract Price. Determinations of the actual quantities and classifications of Unit Price Work performed by CONTRACTOR will be made in accordance with Paragraph 9.06.

B. Each unit price will be deemed to include an amount considered by CONTRACTOR to be adequate to cover CONTRACTOR’s overhead and profit for each separately identified item.

C. CITY or CONTRACTOR may negotiate an adjustment of the price per unit of Unit Price Work stated in the Contract if:

1. the quantity of any item of Unit Price Work performed by CONTRACTOR differs by twenty percent (20%) or more from the estimated quantity of such item indicated in the Contract; and

2. there is no corresponding adjustment with respect to any other item of Work; and

3. CONTRACTOR believes that CONTRACTOR is entitled to an increase in Contract Price as a result of having incurred additional expense or CITY believes that CITY is entitled to a decrease in Contract Price.

11.05 Dispute Resolution

A. If CITY and CONTRACTOR are unable to agree on entitlement to, or magnitude of, an equitable adjustment in the Contract Price in accordance with Article 11 within fourteen (14) calendar days from the receipt of supporting documentation of the request pursuant to 11.01.B., unless the CITY grants an extension based on good cause shown by the CONTRACTOR that such additional time is warranted, then a Claim for such adjustment may be made pursuant to Article 16.

ARTICLE 12 CONTRACT TIMES

12.01 Time of the Essence

A. All times stated in the Contract Documents are of the essence of the Contract.

12.02 Change of Contract Times

A. The Contract Times (or Milestones) may only be changed by a Change Order. Any request for an adjustment in the Contract Times shall be based on written notice delivered within fourteen (14) calendar days after occurrence of the event giving rise to the request or within fourteen (14) calendar days after first recognition of the conditions giving rise to the request. Thereafter, the CONTRACTOR shall submit written documentation of its requests, including appropriate supporting documentation, within ten (10) days after giving notice, unless the CITY grants an extension based on good cause shown by the CONTRACTOR that such additional time is warranted.

12.03 Proof Required To Justify an Extension of Time For Excusable and Compensable Delays

A. In support of any request for an extension of the Contract Times pursuant to this Article, CONTRACTOR must demonstrate to the reasonable satisfaction of the CITY that the critical path of the approved baseline project schedule was delayed. CONTRACTOR shall be entitled to an increase in contract time for the number of days that the critical path was delayed solely as a result of the compensable or excusable event. A compensable or excusable event includes, but is not limited to:

1. unreasonable delay of issuance of Notice to Proceed by CITY;
2. CITY's unreasonable delay of delivery furnished materials, equipment, or work;
3. unreasonable delay responding to shop drawings and submittals;
4. CITY's unreasonable delay in issuing a Change Order;
5. an order by the CITY to stop the Work where the CONTRACTOR was not at fault; and
6. other reasonable grounds as determined by the City in its sole discretion.

B. CONTRACTOR shall compare the critical path of the approved baseline project schedule to the actual critical path of the Work, identifying the specific impact of the compensable or excusable event.

C. CONTRACTOR shall submit to the CITY a written time impact analysis illustrating the influence of each compensable or excusable event on the date of Substantial Completion. The

time impact analysis shall demonstrate the time impact based on the date of the delay in time and the event time computations or all affected activities.

D. If the critical path of the Work is delayed by "Force Majeure", the CONTRACTOR shall be entitled only to an extension of the Contract Times for the number of days of delay to the critical path. For purposes of this paragraph, "Force Majeure" shall mean fire, tornado, flood, earthquake, war, act of terrorism, civil disturbance, or labor strikes away from the project site.

E. Extensions of contract time pursuant to the this section will be granted only to the extent that the time adjustments exceed the total float time available when the event causing the delay occurred.

12.04 Delays Within CONTRACTOR's Control

A. The Contract Times (or Milestones) will not be extended due to delays within the control of CONTRACTOR. Delays attributable to and within the control of a Subcontractor or Supplier shall be deemed to be delays within the control of CONTRACTOR.

12.05 Delays Beyond the CITY's and CONTRACTOR's Control

A. Where CONTRACTOR is prevented from completing any part of the Work within the Contract Times (or Milestones) due to delay beyond the control of both CITY and CONTRACTOR, an extension of the Contract Times (or Milestones) in an amount equal to the time lost due to such delay shall be CONTRACTOR's sole and exclusive remedy for such delay.

12.06 Delay Damages

A. In no event shall CITY be liable to CONTRACTOR, any Subcontractor, any Supplier, any other person or organization, or to any surety for or employee or agent of any of them, for damages arising out of or resulting from:

1. delays caused by or within the control of CONTRACTOR, or

2. delays beyond the control of CITY or CONTRACTOR including but not limited to fires, floods, epidemics, abnormal weather conditions, acts of God or acts or neglect by utility owners or other contractors performing other work as contemplated by Article 7.

B. Nothing in this Paragraph 12.06 bars a change in Contract Price pursuant to this Article 12 to compensate CONTRACTOR due to delay, interference, or disruption directly attributable to actions or inaction of CITY, DESIGN PROFESSIONAL, Consultant or anyone for whom CITY, DESIGN PROFESSIONAL or Consultant is responsible.

12.07 Dispute Resolution

A. If CITY and CONTRACTOR are unable to agree on entitlement to, or magnitude of, an equitable adjustment in the Contract Time in accordance with Article 12 within fourteen (14) calendar days from the receipt of supporting documentation of the request pursuant to 12.02, unless the CITY grants an extension based on good cause shown by the CONTRACTOR that such additional time is warranted, then a Claim for such adjustment may be made pursuant to Article 16.

ARTICLE 13 TESTS AND INSPECTIONS; CORRECTION, REMOVAL OR ACCEPTANCE OF DEFECTIVE WORK

13.01 Access to Work

A. CITY, DESIGN PROFESSIONAL, Consultants, other representatives and personnel of CITY, independent testing laboratories and governmental agencies with jurisdictional interests will have access to the Site and Work at reasonable times for their observation, inspecting and testing. CONTRACTOR shall provide them proper and safe conditions for such access and advise them of CONTRACTOR's Site safety procedures and programs so that they may comply therewith as applicable.

13.02 Tests and Inspections

A. CONTRACTOR shall give DESIGN PROFESSIONAL and CITY's Representative timely notice of readiness of the Work for all required inspections, tests or approvals, and shall cooperate with inspection and testing personnel to facilitate required inspections or tests.

B. If any Work (or the work of others at the Site) that is to be inspected, tested or approved is covered by CONTRACTOR without written approval required by Paragraphs 13.02 D or 13.02 E, it must, if requested by CITY's Representative, be uncovered for observation.

C. Uncovering Work as provided in Paragraph 13.02 B, shall be at CONTRACTOR's expense unless CONTRACTOR has given DESIGN PROFESSIONAL and CITY's Representative timely notice of CONTRACTOR's intention to cover the same and DESIGN PROFESSIONAL and CITY's Representative have not acted with reasonable promptness in response to such notice.

D. If Laws or Regulations of any public body (including City) having jurisdiction require any Work (or part thereof) specifically to be inspected, tested or approved by an employee or other representative of such public body, CONTRACTOR shall assume full responsibility for arranging and obtaining such inspections, tests or approvals, pay all costs in connection therewith, and furnish DESIGN PROFESSIONAL and CITY's Representative the required certificates of inspection or approval.

E. CONTRACTOR shall be responsible for arranging and obtaining and shall pay all costs in connection with any inspections, tests or approvals required for CITY's and DESIGN PROFESSIONAL's acceptance of materials or equipment to be incorporated into the Work, or acceptance of materials, mix designs, or equipment submitted for approval prior to CONTRACTOR's purchase thereof for incorporation into the Work. Such inspections, tests, or approvals shall be performed by organizations acceptable to CITY and DESIGN PROFESSIONAL.

F. CITY shall employ and pay for the services of an independent testing laboratory to perform all inspections, tests, or approvals required by the Contract Documents except:

1. for inspections, tests or approvals covered by Paragraph 13.02 D and E;

2. that costs incurred in connection with tests or inspections conducted pursuant to Paragraph 13.04 B shall be paid as provided in said Paragraph 13.04 B; and

3. as otherwise specifically provided in the Contract Documents.

13.03 Notice of Defects

A. Prompt notice of all defective Work of which either CITY or DESIGN PROFESSIONAL has actual knowledge will be given to CONTRACTOR. Defective Work may be rejected, corrected or accepted as provided in this Article 13.

13.04 Uncovering Work

A. If any Work (or the work of others at the Site) is covered contrary to the written request of DESIGN PROFESSIONAL or CITY's Representative, it must, if requested by CITY's Representative, be uncovered for DESIGN PROFESSIONAL's or CITY's Representative's observation and replaced at CONTRACTOR's expense.

B. If CITY considers it necessary or advisable that covered Work be observed by DESIGN PROFESSIONAL or CITY's Representative or be inspected or tested by others, CONTRACTOR, at CITY's request, shall uncover, expose or otherwise make available for observation, inspection or testing as may be required, that portion of the Work in question, furnishing all necessary labor, material and equipment. If it is found that such Work is defective, CONTRACTOR shall pay all costs, losses and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) caused by, arising out of or resulting from such uncovering, exposure, observation, inspection and testing and of satisfactory replacement or reconstruction

(including but not limited to all costs of repair or replacement of work of others); and CITY shall be entitled to an appropriate decrease in the Contract Price. If the parties are unable to agree as to the amount thereof, CITY may make a Claim therefore as provided in Article 16. If, however, such Work is not found to be defective, CONTRACTOR shall be allowed an increase in the Contract Price or an extension of the Contract Times (or Milestones), or both, directly attributable to such uncovering, exposure, observation, inspection, testing, replacement and reconstruction. If the parties are unable to agree as to the amount or extent thereof, CONTRACTOR may make a Claim therefore as provided in Article 16.

13.05 CITY May Stop the Work

A. If the Work is defective, or CONTRACTOR fails to supply sufficient skilled workers or suitable materials or equipment, or fails to furnish or perform the Work in such a way that the completed Work will conform to the Contract Documents, CITY may order CONTRACTOR to stop the Work, or any portion thereof, until the cause for such order has been eliminated; however, this right of CITY to stop the Work shall not give rise to any duty on the part of CITY to exercise this right for the benefit of CONTRACTOR, any Subcontractor, Supplier, other individual or entity or any surety or employee or agent of any of them.

13.06 Correction or Removal of Defective Work

A. If required by CITY, CONTRACTOR shall promptly, as directed, either correct all defective Work, whether or not fabricated, installed or completed, or, if the Work has been rejected by either DESIGN PROFESSIONAL or CITY's Representative, remove it and replace it with Work that is not defective. CONTRACTOR shall pay all costs, losses and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) caused by or resulting from such correction or removal (including but not limited to all costs of repair or replacement of work of others).

13.07 Correction Period

A. If within one (1) year after the date of Substantial Completion, or such longer period of time as may be prescribed by Laws or Regulations, by the terms of any applicable special guarantee required by the Contract Documents, or by any specific provision of the Contract Documents, any Work is found to be defective, or if the repair of any damages to the land or areas made available for CONTRACTOR's use by CITY or permitted by Laws and Regulations as contemplated in Paragraph 6.10 is found to be defective, CONTRACTOR shall promptly, without cost to CITY and in accordance with CITY's written instructions:

1. correct the repair of damages to such land or areas; or

2. correct such defective Work, or if it has been rejected by CITY, remove it from the Site and replace it with Work that is not defective; and

3. satisfactorily correct or remove and replace any damage to other Work or to the work of others or damage to other lands or areas resulting therefrom. If CONTRACTOR does not promptly comply with the terms of such instructions, or in the event of an emergency where delay by CONTRACTOR would cause serious risk of loss or damage, CITY may have the defective Work corrected or the rejected Work removed and replaced, and all costs, losses and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) caused by or resulting from such removal and replacement (including but not limited to all costs of repair or replacement of work of others) will be paid by CONTRACTOR.

B. In special circumstances where a particular item of equipment is placed in continuous service before Substantial Completion of all the Work, the correction period for that item may start to run from an earlier date if so provided in the Specifications or by Written Amendment.

C. Where defective Work (and damage to other Work resulting therefrom) has been corrected or removed and replaced under this Paragraph 13.07, the correction period hereunder

with respect to such Work will be extended for an additional period of one (1) year, or such longer period of time as may be prescribed within Paragraph 13.07 A, after such correction or removal and replacement has been satisfactorily completed.

D. CONTRACTOR's obligations under this Paragraph 13.07 are in addition to any other obligation or warranty. The provisions of this Paragraph 13.07 shall not be construed as a substitute for or waiver of the provisions of any applicable statute of limitation or repose.

13.08 Acceptance of Defective Work

A. If, instead of requiring correction or removal and replacement of defective Work, CITY prefers to accept it, CITY may do so. CONTRACTOR shall pay all costs, losses and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) attributable to CITY's evaluation of and determination to accept such defective Work and shall pay OWNER for the diminished value of the Work. If any such acceptance occurs prior to DESIGN PROFESSIONAL's recommendation of final payment, a Change Order will be issued incorporating the necessary revisions into the Contract Documents with respect to the Work and, due to the diminished value of the Work, CITY shall be entitled to an appropriate decrease in the Contract Price. If the parties are unable to agree as to the amount thereof, CITY may make a Claim therefore as provided in Article 16. If the acceptance of defective Work occurs after such recommendation, an appropriate amount shall be paid by CONTRACTOR to CITY.

13.09 CITY May Correct Defective Work

A. If CONTRACTOR fails within a reasonable time after written notice from DESIGN PROFESSIONAL or CITY's Representative to correct defective Work or to remove and replace rejected Work as required by CITY in accordance with Paragraph 13.06, or if CONTRACTOR fails to perform the Work in accordance with the Contract Documents, or if CONTRACTOR fails to comply with any other provision of the Contract Documents, CITY may, after seven (7) days written notice to CONTRACTOR, correct and remedy any such deficiency.

B. CITY shall proceed expeditiously when exercising the rights and remedies under this Paragraph 13.09. In connection with such corrective and remedial action, CITY may exclude CONTRACTOR from all or part of the Site; take possession of all or part of the Work and suspend CONTRACTOR's services related thereto; take possession of CONTRACTOR's tools, appliances, construction equipment and machinery at the Site; and incorporate into the Work all materials and equipment stored at the Site or for which CITY has paid CONTRACTOR but which are stored elsewhere. CONTRACTOR shall allow CITY, CITY's Representative, agents and employees, CITY's other contractors, DESIGN PROFESSIONAL and Consultants access to the Site to enable CITY to exercise the rights and remedies under this Paragraph 13.09.

C. All costs, losses and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) incurred or sustained by CITY in exercising such rights and remedies will be charged against CONTRACTOR and a Change Order will be issued incorporating the necessary revisions into the Contract Documents with respect to the Work; and CITY shall be entitled to an appropriate decrease in the Contract Price. If CITY and CONTRACTOR are unable to agree as to the amount thereof, CITY may make a Claim therefore as provided in Article 16. Such Claims for costs, losses and damages will include but not be limited to all costs of repair or replacement of work of others destroyed or damaged by correction, removal and replacement of CONTRACTOR's defective or rejected Work.

D. CONTRACTOR shall not be allowed an extension of the Contract Times (or Milestones) because of any delay in the performance of the Work attributable to the exercise by CITY of CITY's rights and remedies under Paragraphs 13.06 and 13.09.

ARTICLE 14 PAYMENTS TO CONTRACTOR AND COMPLETION

14.01 Schedule of Values

A. 01290.02 Schedule of Values established as provided in Article 2 will serve as the basis for progress payments and will be incorporated into form 01290.01 Application for Payment acceptable to DESIGN PROFESSIONAL and CITY. Progress payments for Unit Price Work will be based on the number of units completed.

14.02 Application for Progress Payments

A. Application for Payment

1. At least twenty (20) days before the date stipulated in the Supplementary Conditions for each progress payment (but not more often than once a month), CONTRACTOR shall submit to DESIGN PROFESSIONAL for review an Application for Payment filled out and signed by CONTRACTOR covering the Work completed as of the date of the Application and accompanied by such supporting documentation as is required by the Contract Documents. If payment is requested on the basis of materials and equipment not incorporated into the Work but delivered and suitably stored at the Site or at another location agreed to in writing, the Application for Payment shall also be accompanied by a bill of sale, paid invoice or other documentation warranting that CITY has received the materials and equipment free and clear of all Liens and evidence that the materials and equipment are covered by appropriate property insurance and other arrangements to protect CITY'''s interest therein, all of which will be subject to CITY's approval.

2. Beginning with the second Application for Payment, each Application shall include:

a. an affidavit of CONTRACTOR stating that all previous progress payments received for the Work have been applied to discharge CONTRACTOR's legitimate obligations associated with prior Applications for Payment, and

b. a copy of the most recent 00485.01 M/WBE Monthly Utilization Report CONTRACTOR has submitted to the CITY's Civil Rights and Equal Opportunity Department.

c. a copy of the most recent 00485.02 Project Workforce Monthly Report and 00485.03 Company-Wide Workforce Monthly Report CONTRACTOR has submitted to the OWNER's Civil Rights and Equal Opportunity Department.

d. an update to the approved schedule pursuant to paragraphs 6.04 and 6.05.

3. The amount of retainage with respect to progress payments will be stated in the Supplementary Conditions.

B. Review of Applications

1. DESIGN PROFESSIONAL will, within ten (10) days after receipt of each Application for Payment, either indicate in writing a recommendation of payment and present the Application to CITY, or return the Application to CONTRACTOR indicating in writing DESIGN PROFESSIONAL's reasons for refusing to recommend payment. In the latter case, CONTRACTOR shall make the necessary corrections and resubmit the Application.

a. After presentation of the Application for Payment to CITY, and if CITY's Representative agrees with DESIGN PROFESSIONAL's recommendation, the amount recommended will (subject to the provisions of Paragraph 14.02 B.4) become due and will be paid by CITY to CONTRACTOR, subject to the provisions of Laws or Regulations.

b. No payment shall be approved until the CONTRACTOR has submitted with the Application accompanying documentation as required by the Contract Documents, including, but not limited to, the documentation required by paragraphs 6.04 and 6.05.

2. DESIGN PROFESSIONAL's recommendation of any payment requested in an Application for Payment will constitute a representation by DESIGN PROFESSIONAL to CITY, based on DESIGN PROFESSIONAL's observations of the executed Work as an experienced and qualified DESIGN PROFESSIONAL and on DESIGN PROFESSIONAL's

review of the Application for Payment and the accompanying data and schedules, that to the best of DESIGN PROFESSIONAL's knowledge, information and belief:

a. the Work has progressed to the point indicated;

b. the quality of the Work is generally in accordance with the Contract Documents (subject to an evaluation of the Work as a functioning whole prior to or upon Substantial Completion, to the results of any subsequent tests called for in the Contract Documents, to a final determination of quantities and classifications for Unit Price Work under Paragraph 9.06, and to any other qualifications stated in the recommendation); and

c. the conditions precedent to CONTRACTOR being entitled to such payment appear to have been fulfilled in so far as it is DESIGN PROFESSIONAL's responsibility to observe the Work.

3. DESIGN PROFESSIONAL's recommendation of any payment, including final payment, shall not mean that DESIGN PROFESSIONAL is responsible for CONTRACTOR's means, methods, techniques, sequence or procedures of construction, safety precautions and programs incident thereto, or any failure of CONTRACTOR to comply with Laws or Regulations applicable to the furnishing or performance of Work.

4. DESIGN PROFESSIONAL may refuse to recommend the whole or any part of any payment if, in DESIGN PROFESSIONAL's opinion, it would be incorrect to make the representations to CITY referred to in Paragraph 14.02 B.2. DESIGN PROFESSIONAL may also refuse to recommend any such payment or, because of subsequently discovered evidence or the results of subsequent inspections or tests, nullify any such payment previously recommended, to such extent as may be necessary in DESIGN PROFESSIONAL's opinion to protect CITY from loss because:

a. the Work is defective, or completed Work has been damaged requiring correction or replacement;

b. the Contract Price has been reduced by Written Amendment or Change Orders;

c. CITY has been required to correct defective Work or complete Work in accordance with Paragraph 13.09; or

d. DESIGN PROFESSIONAL has actual knowledge of the occurrence of any of the events enumerated in Paragraph 15.02.

C. Reduction in Payment

1. CITY may refuse to make payment of the full amount recommended by DESIGN PROFESSIONAL because:

a. Claims have been made by third parties against CITY on account of CONTRACTOR's performance or furnishing of the Work; or

b. Claims have been made by CITY against CONTRACTOR in connection with the Work, except where CONTRACTOR has delivered a specific Bond satisfactory to CITY to secure the satisfaction and discharge of such Claims;

c. there are other items entitling CITY to a set-off against the amount recommended; or

d. CITY has actual knowledge of the occurrence of any of the events enumerated in Paragraphs 14.02 B.4.a through c or 15.02 A.1 through 4; but CITY must give CONTRACTOR written notice (with a copy to DESIGN PROFESSIONAL) stating the reasons for such action and promptly pay CONTRACTOR the amount so withheld, or any adjustment thereto agreed to by CITY and CONTRACTOR, when CONTRACTOR corrects to CITY's satisfaction the reasons for such action; or

e. CITY has made a different determination of the actual quantities and classifications of Unit Price Work.

14.03 CONTRACTOR's Warranty of Title

A. CONTRACTOR warrants and guarantees that title to all Work, materials and equipment covered by any Application for Payment, whether incorporated into the Project or not, will pass to CITY no later than the time of payment, free and clear of all Liens.

14.04 Substantial Completion

A. When CONTRACTOR considers the entire Work ready for its intended use CONTRACTOR shall notify CITY and DESIGN PROFESSIONAL in writing that the entire Work is substantially complete (except for items specifically listed by CONTRACTOR as incomplete) and request that CITY issue a certificate of Substantial Completion. Within a reasonable time thereafter, CITY, together with CONTRACTOR and DESIGN PROFESSIONAL, shall make an inspection of the Work to determine the status of completion. If DESIGN PROFESSIONAL does not consider the Work substantially complete, DESIGN PROFESSIONAL will notify CONTRACTOR and CITY in writing giving the reasons therefore. If DESIGN PROFESSIONAL considers the Work substantially complete, DESIGN PROFESSIONAL will prepare and deliver to CITY a recommended certificate of Substantial Completion that shall establish the date of Substantial Completion. There shall be attached to the certificate a tentative list of items to be completed or corrected before final payment. CITY shall have seven (7) days after receipt of the recommended certificate during which to make written objection to DESIGN PROFESSIONAL as to any provisions of the certificate or attached list. At the time of delivery of the recommended certificate of Substantial Completion, DESIGN PROFESSIONAL will deliver to CITY and CONTRACTOR a written recommendation as to division of responsibilities pending final payment between CITY and CONTRACTOR with respect to security, operation, safety, protection of the Work, maintenance, heat, utilities, insurance and warranties and guarantees.

B. CITY shall have the right to exclude CONTRACTOR from the Site after the date of Substantial Completion, but CITY shall allow CONTRACTOR reasonable access to complete or correct items on the tentative list.

14.05 Partial Utilization

A. Use by CITY at CITY's option of any substantially completed part of the Work which has specifically been identified in the Contract Documents, or which CITY, DESIGN PROFESSIONAL and CONTRACTOR agree constitutes a separately functioning and usable part of the Work that can be used by CITY for its intended purpose without significant interference with CONTRACTOR's performance of the remainder of the Work, may be accomplished prior to Substantial Completion of all the Work subject to the following:

1. CITY at any time may request CONTRACTOR in writing to permit CITY to use any such part of the Work which CITY believes to be ready for its intended use and substantially complete. If CONTRACTOR agrees that such part of the Work is substantially complete, CONTRACTOR will certify to CITY and DESIGN PROFESSIONAL that such part of the Work is substantially complete and request CITY to issue a certificate of Substantial Completion for that part of the Work. CONTRACTOR at any time may notify CITY and DESIGN PROFESSIONAL in writing that CONTRACTOR considers any such part of the Work ready for its intended use and substantially complete and request CITY to issue a certificate of Substantial Completion for that part of the Work. Within a reasonable time after either such request, CITY, together with CONTRACTOR and DESIGN PROFESSIONAL, shall make an inspection of that part of the Work to determine its status of completion. If DESIGN PROFESSIONAL does not consider that part of the Work to be substantially complete, DESIGN PROFESSIONAL will notify CITY and CONTRACTOR in writing, giving the reasons therefore. If DESIGN PROFESSIONAL considers that part of the Work to be substantially complete, the provisions of Paragraph 14.04 will apply with respect to certification of Substantial Completion of that part of the Work and the division of responsibility in respect thereof and access thereto.

2. No occupancy or separate operation of part of the Work will be accomplished prior to compliance with the requirements of Paragraph 5.09 with respect to property insurance.

14.06 Final Inspection

A. Upon written notice from CONTRACTOR that the entire Work or an agreed portion thereof is complete, DESIGN PROFESSIONAL will make a final inspection with CITY and CONTRACTOR and will notify CONTRACTOR in writing of all particulars in which this inspection reveals that the Work is incomplete or defective. CONTRACTOR shall immediately take such measures as are necessary to complete such Work or remedy such deficiencies.

14.07 Final Payment

A. Application for Payment

1. After CONTRACTOR has completed all corrections required by Paragraph 14.06 to the satisfaction of DESIGN PROFESSIONAL and CITY's Representative and delivered in accordance with the Contract Documents all maintenance and operating instructions, schedules, guarantees, Bonds, certificates or other evidence of insurance required by Paragraph 5.04, certificates of inspection, marked-up record documents (as provided in Paragraph 6.13) and other documents, CONTRACTOR may make application for final payment following the procedure for progress payments.

2. The final Application for Payment shall be accompanied (except as previously delivered) by:

a. all documentation required by the Contract Documents, including but not limited to the evidence of insurance required by Subparagraph 5.04 B.7; and

b. 01290.14 "Contractor Affidavit for Final Payment" from CONTRACTOR and 01290.15 "Subcontractor Affidavit for Final Payment" from all Subcontractors, regardless of tier.

B. Review of Application and Acceptance

1. If, on the basis of DESIGN PROFESSIONAL's and CITY's Representative's observation of the Work during construction and final inspection, and DESIGN PROFESSIONAL's and CITY's Representative's review of the final Application for Payment and accompanying documentation as required by the Contract Documents, DESIGN PROFESSIONAL and CITY's Representative are satisfied that the Work has been completed and CONTRACTOR's other obligations under the Contract Documents have been fulfilled, DESIGN PROFESSIONAL will, within ten (10) days after receipt of the final Application for Payment, indicate in writing DESIGN PROFESSIONAL's and CITY's Representative's recommendation of payment and present the Application to CITY for payment. At the same time DESIGN PROFESSIONAL will also give written notice to CITY and CONTRACTOR that the Work is acceptable subject to the provisions of Paragraph 14.09.

2. Otherwise, DESIGN PROFESSIONAL will return the Application to CONTRACTOR, indicating in writing the reasons for refusing to recommend final payment, in which case CONTRACTOR shall make the necessary corrections and resubmit the Application to DESIGN PROFESSIONAL. After the presentation to CITY of the Application and accompanying documentation, in appropriate form and substance, including applicable federal and state prevailing wage provisions, and with DESIGN PROFESSIONAL's recommendation and notice of acceptability, the amount recommended by DESIGN PROFESSIONAL will become due and will be paid by CITY to CONTRACTOR in accordance with Laws and Regulations.

14.08 Final Completion Delayed

A. If, through no fault of CONTRACTOR, final completion of the Work is significantly delayed and if DESIGN PROFESSIONAL so recommends and CITY concurs, CITY shall, upon

receipt of CONTRACTOR's final Application for Payment and recommendation of DESIGN PROFESSIONAL, and without terminating the Contract, make payment of the balance due for that portion of the Work fully completed and accepted. If the remaining balance to be held by CITY for Work not fully completed or corrected is less than the retainage stipulated in the Supplementary Conditions, and if Bonds have been furnished as required in Paragraph 5.01, the written consent of the surety to the payment of the balance due for that portion of the Work fully completed and accepted shall be submitted by CONTRACTOR to DESIGN PROFESSIONAL with the Application for Payment. Payment shall be made under the terms and conditions governing final payment, except that it shall not constitute a waiver of Claims.

14.09 Waiver of Claims

A. The making and acceptance of final payment will constitute:

1. a waiver of all claims by CITY against CONTRACTOR, except claims previously made in writing and still unsettled, or claims arising from defective Work appearing after final inspection pursuant to Paragraph 14.06, from failure to comply with the Contract Documents or the terms of any special guarantees specified therein, or from CONTRACTOR's continuing obligations under the Contract Documents; and

2. a waiver of all Claims by CONTRACTOR against CITY other than those previously made in writing pursuant to Paragraphs 16.02 and 16.03 and still unsettled.

14.10 Completion of Work by CITY

A. If CITY must complete the Work, all costs and charges incurred by CITY, together with the cost of completing the Work under the Contract, will be deducted from any monies due or which may become due CONTRACTOR. If such expense exceeds the sum which would have been payable under the Contract, then CONTRACTOR and the surety shall be liable and shall pay to CITY the amount of such excess.

ARTICLE 15 SUSPENSION OF WORK AND TERMINATION

15.01 CITY May Suspend Work

A. Notwithstanding any other provision of this Contract, at any time and without cause, and at is sole and absolute discretion, CITY, may suspend the Work or any portion of the Work by written notice to CONTRACTOR, which will initially fix the date on which Work will be resumed. CONTRACTOR shall resume the Work on the date so fixed in the notice unless the date is changed by a subsequent written notice from CITY. CONTRACTOR may be allowed an adjustment in the Contract Price or an extension of the Contract Times, or both, directly attributable to any suspension if CONTRACTOR makes a Claim therefore in accordance with Article 16.

B. CONTRACTOR will not be allowed an adjustment in the Contract Price or an extension of the Contract Times if CITY suspends the Work because CONTRACTOR's acts or omissions create or cause an emergency that CITY believes affects the safety or protection of persons, the Work, or property at the Site or adjacent thereto. CITY may order CONTRACTOR to stop the Work, or any portion thereof, until the cause for such order has been adequately addressed by CONTRACTOR; however, this right of CITY to stop the Work shall not give rise to any duty on the part of CITY to exercise this right for the benefit of CONTRACTOR, any Subcontractor, Supplier, other individual or entity or any surety or employee or agent of any of them.

15.02 CITY May Terminate for Default

A. CONTRACTOR may be deemed in default and CITY may terminate the services of CONTRACTOR upon the occurrence of any one or more of the following events:

1. CONTRACTOR fails to perform the Work in accordance with the Contract Documents (including, but not limited to, failure to supply sufficient skilled workers or suitable materials or equipment or failure to adhere to the progress schedule established under Paragraph 2.06 and 2.07 as adjusted from time to time pursuant to Paragraphs 6.04, 6.05, 12.02 and 12.03);

2. CONTRACTOR abandons the Work or declares its intention to abandon the Work;

3. CONTRACTOR assigns or attempts to assign its rights or obligations under this Contract or any part thereof to any third party without the prior written consent of CITY;

4. CONTRACTOR fails to make prompt payment duly owing to any subcontractor for Work completed in accordance to the Contract Documents or material supplier for materials delivered for incorporation into the Work within thirty (30) calendar days after payment was due;

5. CONTRACTOR fails to achieve the required dates of substantial and final completion;

6. CONTRACTOR disregards Laws or Regulations of any public body having jurisdiction;

7. CONTRACTOR disregards the authority of DESIGN PROFESSIONAL or OWNER; or

8. CONTRACTOR otherwise violates in any substantial way any provisions of the Contract Documents.

B. CITY may, after giving CONTRACTOR (and the surety) seven (7) days written notice and to the extent permitted by Laws or Regulations, terminate the services of CONTRACTOR, exclude CONTRACTOR from the Site and take possession of the Work and of all CONTRACTOR's tools, appliances, construction equipment and machinery at the Site and use the same to the full extent they could be used by CONTRACTOR (without liability to CONTRACTOR for trespass or conversion), incorporate into the Work all materials and equipment stored at the Site or for which CITY has paid CONTRACTOR but which are stored elsewhere, and finish the Work as CITY may deem expedient. In such case, CONTRACTOR shall not be entitled to receive any further payment until the Work is finished. If the unpaid balance of the Contract Price exceeds all costs, losses and damages (including but not limited to all fees and charges of engineers, architects, attorneys, and other professionals and all court or arbitration or other dispute resolution costs) sustained by CITY arising out of or resulting from completing the Work, such excess may be paid to CONTRACTOR. If such costs, losses and damages exceed such unpaid balance, CONTRACTOR shall pay the difference to CITY within fourteen (14) calendar days of CITY'S demand for payment. When exercising any rights or remedies under this Paragraph CITY shall not be required to competitively bid this work unless required by law.

C. Where CONTRACTOR's services have been so terminated by CITY, the termination will not affect any rights or remedies of CITY against CONTRACTOR then existing or which may thereafter accrue. Any retention or payment of moneys due CONTRACTOR by CITY will not release CONTRACTOR from liability.

D. If, after a default termination, it is determined that the CONTRACTOR was not in default, the rights and obligations of the parties shall be the same as if the termination had been issued for the convenience of the CITY. The CITY shall then be liable to CONTRACTOR for only those costs enumerated in paragraph 15.03.

15.03 CITY May Terminate for Convenience

A. Notwithstanding any other provision of this Contract, upon seven (7) calendar days written notice to CONTRACTOR, CITY may, at its sole and absolute discretion, without cause and without prejudice to any other right or remedy of CITY, elect to terminate the Contract. In such case, CONTRACTOR shall, with thirty (30) calendar days of receiving notice of termination under this paragraph, submit to CITY its statement of costs and expenses and shall be paid:

1. for completed and acceptable Work executed in accordance with the Contract Documents prior to the effective date of termination, including fair and reasonable sums for overhead and profit on such Work;

2. for expenses sustained prior to the effective date of termination in performing services and furnishing labor, materials or equipment as required by the Contract Documents in connection with uncompleted Work, plus fair and reasonable sums for overhead and profit on such expenses;

3. for all costs, losses and damages incurred in settlement of terminated contracts with Subcontractors, Suppliers and others; and

4. for reasonable expenses directly attributable to termination if approved in advance by CITY.

B. CONTRACTOR shall not be paid on account of loss of anticipated profits or revenue or other economic loss arising out of or resulting from such termination.

C. CONTRACTOR waives any costs not submitted to CITY pursuant to paragraph 15.03.A.

D. CITY shall, within thirty (30) calendar days after receipt of CONTRACTOR's statement, pay CONTRACTOR all amounts it determines are properly determined.

ARTICLE 16 CLAIMS AND DISPUTES

16.01 Definition

A. A Claim is a demand or assertion by the CONTRACTOR seeking, as a matter of right, the adjustment of Contract price and/or times with respect to the terms of the Contract.

16.02 Written Notice and Burden of Proof

A. Claims must be made by written notice pursuant to Paragraph 17.01. The written notice shall clearly indicate that the CONTRACTOR is making a claim. The responsibility to substantiate Claims shall rest with the CONTRACTOR. No Claim may be made under this Contract except as provided in this Article.

B. Certification of Claim: The written notice of Claim shall include the following statement signed by the CONTRACTOR's representative: "The CONTRACTOR certifies that all statements made and the facts set out in this claim are true and correct and that no false records have been submitted in support of this claim." **Strict compliance with this paragraph shall be a condition precedent to the creation, existence or validity of any Claim**.

16.03 Time Limits on Claims

A. The CONTRACTOR must give notice to the CITY within fourteen (14) calendar days after the denial of a request for or failure to reach an agreement on a change in Contract Price and/or change in Contract Time pursuant to Article 11 and Article 12 respectively. After the fourteen (14) day period for making Claims has expired, the Claim shall be considered waived.

B. The CONTRACTOR shall submit the Claim to the CITY's Representative.

16.04 Continuing Contract Performance

A. Pending final resolution of a Claim, unless otherwise agreed in writing, the CONTRACTOR shall proceed diligently with performance of the Work and the CITY shall continue to make payments in accordance with the Contract Documents. The CITY may, but is not obligated to, notify the Surety of the nature and amount of the Claim.

16.05 Injury or Damage to Person or Property

A. If either party to the Contract suffers injury or damage to person or property because of an act or omission of the other party, of any of the other party's employees or agents, or of others for whose acts that party is legally liable, written notice of the injury or damage, whether or not insured, shall be given to the other party within a reasonable time not exceeding thirty (30) days after first observance. The notice shall provide sufficient detail to enable the other party to investigate the matter.

16.06 Initial Resolution of Claims and Disputes

A. After the CONTRACTOR has submitted the Claim to the CITY's Representative, the CITY'S Representative and CONTRACTOR'S Representative shall conduct a settlement conference within fourteen (14) calendar days from the date of receipt of the Claim. If the Claim is not settled within seven (7) calendar days following the date of the settlement conference, the CITY'S Representative and the CONTRACTOR's Representative shall state, in writing, following the conclusion of the seven (7) calendar day period, their respective position as to the matters in dispute.

B. The CITY'S and CONTRACTOR'S statement of positions shall state all known factual grounds for each party's position. If the dispute remains unresolved at the end of the seven (7) calendar days from submission of the parties' written position statements, the CONTRACTOR shall have the right to proceed with the pursuit of Claims pursuant to paragraph 16.07.

C. If a Claim has been resolved, the OWNER will prepare or obtain appropriate documentation.

16.07 Final Resolution of Claims and Disputes

A. All administrative procedures set forth in this contract must first be exhausted before suit is filed.

B. If the CITY'S Representative and the CONTRACTOR'S Representative are unable to resolve the dispute pursuant to 16.06, the parties must submit their statements of position to the Director, who shall review the Claim and make a decision within fourteen (14) calendar days.

C. Absent fraud, gross mistake or bad faith, the Director's decision shall be final and binding on CITY and CONTRACTOR within fourteen (14) calendar days after issuance. The CONTRACTOR shall give written notice to the CITY stating its intent to submit its Claim to a court of law pursuant to paragraph 17.05.A. within thirty (30) calendar days after notice of Director's decision.

D. The time frames for the Director's decision and for CONTRACTOR'S written notice of intent may be tolled by participation in voluntary mediation. Mediator selection and the procedures to be employed in voluntary mediation shall be mutually acceptable to the parties. Costs of the mediator shall be shared equally among the parties participating in the mediation. In no event shall any time frame be tolled more than 30 days for mediation. However, mediation may be employed at any time at the discretion and mutual agreement of the parties.

E. If the dispute is not resolved during voluntary mediation, The CONTRACTOR agrees that it will file no suit based on facts or evidentiary materials that were not presented for consideration to the CITY during the mediation process or of which the CONTRACTOR had knowledge and failed to present during the administrative procedures.

ARTICLE 17 MISCELLANEOUS

17.01 Giving Notice

A. Whenever any provision of the Contract Documents requires the giving of written notice, it will be given by personal delivery, by registered or certified mail, postage prepaid, to the last business address known to the giver of the notice or by confirmed electronic facsimile transmission. Notice is effective on the date of personal delivery, deposit of registered or certified mail, postage prepaid, or confirmed electronic facsimile transmission.

17.02 Computation of Times

A. When any period of time is referred to in the Contract Documents by days, it will be computed to exclude the first and include the last calendar day of such period. If the last day of such period falls on a Saturday or Sunday or on a day made a legal holiday by the law of the applicable jurisdiction, such day will be omitted from the computation.

17.03 Cumulative Remedies

A. The duties and obligations imposed by these General Conditions and the rights and remedies available hereunder to the parties hereto, and, in particular but without limitation, the

warranties, guarantees and obligations imposed upon CONTRACTOR and all of the rights and remedies available to CITY and DESIGN PROFESSIONAL hereunder are in addition to, and are not to be construed in any way as a limitation of, any rights and remedies available to any or all of them which are otherwise imposed or available by Laws or Regulations, by special warranty or guarantee or by other provisions of the Contract Documents, and the provisions of this Paragraph will be as effective as if repeated specifically in the Contract Documents in connection with each particular duty, obligation, right and remedy to which they apply.

17.04 Survival of Obligations

A. All representations, indemnifications, warranties, and guarantees made in, required by, or given in accordance with the Contract Documents, as well as all continuing obligations indicated in the Contract Documents will survive final payment, completion, and acceptance of the Work or termination or completion of the Contract.

17.05 Controlling Law

A. This Contract shall be construed and governed in accordance with the laws of the State of Missouri without giving effect to Missouri's choice of law provisions. The CITY and CONTRACTOR: (1) shall submit exclusively to the jurisdiction of the state and federal courts located in Jackson County, Missouri and no other; (2) shall waive any and all objections to jurisdiction and venue; and (3) shall not raise forum non conveniens as an objection to the location of any litigation.

CITY OF FOUNTAINS
HEART OF THE NATION

KANSAS CITY
MISSOURI

SUPPLEMENTARY CONDITIONS

Project Number 81000927/1698

Project Title Todd Creek WWTP Expansion & Major Upgrade

These Supplementary Conditions amend or supplement the General Conditions of the Construction Contract and other provisions of the Contract Documents as indicated below. All provisions that are not so amended or supplemented remain in full force and effect.

SC-2.03 A. Article 2, Paragraph 2.03, Copies of Documents, is amended by deleting Paragraph 2.03 A and replacing it with the following:

A. CITY shall furnish to CONTRACTOR up to three (3) copies of the Drawings and Specifications, including Addenda.

SC-4.02 Article 4, Paragraph 4.02, Subsurface and Physical Conditions; Subparagraphs A and B are supplemented as follows:

In the preparation of the Contract Documents, the following reports of explorations and tests of subsurface conditions at or contiguous to the Site of the Work were utilized:

1. Phase 1 Environmental Site Assessment Report – Alternate Site, January 2024, which may be reviewed at https://www.kcwater.us/todd-creek/.
2. Cultural Resources Investigation Report, May 2024, which may be reviewed at https://www.kcwater.us/todd-creek/.
3. Report dated May 28, 2024, prepared by TSI Geotechnical, Inc.; entitled Report of Subsurface Exploration and Geotechnical Engineering Evaluation, which may be reviewed at https://www.kcwater.us/todd-creek/. The technical data contained in such report upon which CONTRACTOR may rely is: boring logs at their specific location.

In the preparation of the Contract Documents, the following drawings of physical conditions in or relating to existing surface or subsurface structures (except Underground Facilities) which are at or contiguous to the Site of the Work were utilized:

4. Drawings dated as listed below and prepared as listed below, which may be reviewed upon request. The technical data contained in such drawings upon which CONTRACTOR may rely is general arrangement and location of infrastructure. Exact location, dimensions, and condition are to be field verified by CONTRACTOR.

Item No	Name/Title	Year	Produced By
1	D-1072.03 Todd Creek Original Plant 1968	1968	Black & Veatch
2	D-1072.05 Todd Creek Expansion 1990	1990	E.T. Archer
3	D-1072.13 Todd Creek WWTP Effluent Disinfection 2013	2013	CH2MHill
4	Todd Creek Polishing Lagoon Contract 105	1971	Black & Veatch

SC-4.06 Article 4, Paragraph 4.06, Asbestos, Lead-Based Paint, PCBs, Petroleum Waste or Radioactive Material, Subparagraphs A and B are supplemented as follows:

In the preparation of the Contract Documents, the following reports and drawings relating to a Hazardous Environmental Condition identified at the Site of the Work were utilized:

1. Report dated March 31, 2023 prepared by Burns & McDonnel; entitled Asbestos, Lead Paint, and Hazardous Materials Survey, which can be provided upon request. The technical data contained in such report upon which CONTRACTOR may rely is Results and Recommendations.

SC- 5.01 A. Article 5, Paragraph 5.01, Performance, Payment and Other Bonds, Subparagraph A, second sentence, is revised as follows:

These Bonds shall remain in effect at least until three (3) years after the date when final payment becomes due, except as provided otherwise by Laws or Regulations or by the Contract Documents.

SC-5.03 A. Article 5, Paragraph 5.03 Certificates of Insurance, Subparagraph A is amended by adding the following Subparagraph 1:

1. CONTRACTOR shall obtain evidence that all Subcontractors have in force the required coverage in the amounts required by these Contract Documents, and evidence that each is current on its unemployment insurance payments before Subcontractors begin Work at the Site. CONTRACTOR shall retain such evidence in its files and make available to CITY within ten (10) days after written request.

SC-5.04 C. Article 5, Paragraph 5.04, CONTRACTOR's Liability Insurance, Subparagraph C is amended as follows:

The following additional policies of insurance are required:

6. Environmental Liability Insurance. This insurance shall protect CONTRACTOR, and CITY, DESIGN PROFESSIONAL and Consultants as additional insureds, against claims for injuries to members of the public and damage to the property of others resulting from environmental impairment. The liability limits of the environmental policy shall not be less than $2,000,000.

7. Asbestos Liability Insurance. This insurance shall be an "occurrence" policy and shall protect CONTRACTOR, and CITY, DESIGN PROFESSIONAL and Consultants as additional insureds, against all claims arising from bodily injury, sickness, disease or death of any person other than the CONTRACTOR's employees arising out of any act related to asbestos abatement work. The liability limits for bodily injury and property damage shall be not less than:

   $1,000,000 each occurrence
   $2,000,000 general aggregate

If CONTRACTOR provides Environmental or Asbestos Liability Insurance through a Subcontractor, CONTRACTOR shall contractually require the Subcontractor to include CITY, Design Professional and Consultants as additional insureds in the Subcontractor's policy. CONTRACTOR shall deliver to CITY, prior to the start of any Work at the Project Site, properly completed certificates of insurance or other evidence that the required insurance is in full force and effect, in a form acceptable to CITY. CONTRACTOR shall contractually require its Subcontractor to defend, indemnify and hold harmless CITY from and against all Claims arising out of or resulting from all acts or omissions in connection with this Contract caused in whole or

in part by Subcontractor or Subcontractor's agents, regardless of whether or not caused in part by any act or omission, including negligence, of CITY. CONTRACTOR must provide evidence that this requirement has been complied in accordance with the provisions of Paragraphs 6.01 B and 6.06 G.

SC-6.06 A.1 Article 6, Paragraph 6.06 Substitutes and "Or-Equal" Items, Paragraph A is amended by adding the following at the end of Paragraph A.1:

Proposed "or-equal" items must be submitted to CITY at least 14 days prior to Bid date at the following address: shawn.cross@kcmo.org.

Only Bidders may submit proposed "or-equal" items and such items must require no change in related Work. Acceptance by CITY of any proposed "or-equal" items will be made by Addendum only.

SC-6.06 A.2. Article 6, Paragraph 6.06 Substitutes and "Or-Equal" Items, Paragraph A is amended by adding the following at the end of Paragraph A.2:

Proposed substitute items must be submitted to CITY's Representative not later than 60 days prior to the time the item is to be incorporated into the Work. Only CONTRACTOR may submit proposed substitute items, and such items must be submitted to CITY's Representative on the standard City form 01630 - Substitution Request. Acceptance by CITY of any proposed substitute item will be made by Change Order.

SC-6.07 J Article 6, Paragraph 6.07, concerning Subcontractors, Suppliers and Others, is supplemented by adding the following at the end of Subparagraph J as follows:

CONTRACTOR shall perform with its own organization Work amounting to not less than 35% of the total Contract Price. “Its own organization” shall be construed to include only workers employed and paid by the CONTRACTOR and equipment owned or rented by the CONTRACTOR, with or without operators. Such term does not include employees or equipment of a subcontractor, assignee, or agent of the CONTRACTOR.

SC-6.10. Article 6, Paragraph 6.10, Compliance with Laws and Regulations, is amended by adding the following new Subparagraphs immediately following Subparagraph 6.10 I 2:

a. CONTRACTOR will be required to comply with wage rates as follows:

County –Platte

Work Type:	Federal –	Heavy
	Federal –	Building
	State -	Heavy
	State –	Building

Article 6, Paragraph 6.10, Compliance with Laws and Regulations, is amended by adding the following new Subparagraph 6.10 T:

Contract Information Management System. CONTRACTOR shall comply with CITY’s Contract Information Management System requirements. CONTRACTOR shall use CITY’s Internet web based Contract Information Management System/Project Management Communications Tool provided by CITY and protocols included in that software during the term of this Contract. CONTRACTOR shall maintain user applications to CITY’s provided system for all personnel, subcontractors or suppliers as applicable.

SC-6.11. Article 6, Paragraph 6.11, Taxes, is amended by adding the following sentence to Subparagraph 6.11 B:

B. Tax Compliance. The following subparagraphs apply if the Contract is over $150,000.00.

SC-12.01 Article 12, Paragraph 12.01, Time of the Essence is amended by adding the following new Subparagraphs immediately following Subparagraph 12.01 A:

B. Starting and Completion

1. The Work to be performed under this Contract shall begin on the date specified in the written Notice to Proceed issued by the Director of Water Services, and the Work shall be substantially complete, in accordance with Paragraph 14.04, on or before within one thousand, thirty five (1,035) Calendar Days thereafter. Once the Work starts, CONTRACTOR shall continuously pursue completion of the Work.

2. The Work shall be completed and ready for final payment in accordance with Paragraph 14.07 within 60 Calendar Days after the date of Substantial Completion of the Work.

C. Liquidated Damages

1. If the Work is not substantially completed, in accordance with Paragraph 14.04, within the period stated in Paragraph 12.01 B.1, CONTRACTOR shall pay to CITY the amount of ***three thousand dollars*** ($ 3000.000) as liquidated damages and not as a penalty for each Calendar Day until the Work is substantially complete. The amount of liquidated damages shall be deducted from any payments due or to become due CONTRACTOR.

SC-13.07 Article 13, Paragraph 13.07, Correction Period, Subparagraph A is amended as follows:

The correction period set forth in Paragraph 13.07 A shall be _three_ (3) years instead of one (1) year, which longer period of time shall also be applicable to the correction period set forth in Paragraph 13.07 C. All other provisions of Paragraph 13.07 remain unchanged except as necessary to accommodate the revised length of the correction period.

SC-14.02 A. Article 14, Paragraph 14.02, Application for Progress Payments, Subparagraph A is amended by deleting Item 3 and adding the following:

3. CITY shall make payments to CONTRACTOR monthly on or about the 10th day of each month. Payments to CONTRACTOR will be made on the basis of ninety-five percent (95%) of the value of the Work satisfactorily completed plus ninety-five percent (95%) of the value of properly stored and insured, unused materials on hand on the Site of the Work. CITY shall retain five percent (5%) of each partial payment until completion and acceptance of the Work covered by the Contract and final payment is due. All Work covered by a payment becomes CITY's property, provided that the Work paid for remains the sole responsibility of CONTRACTOR until all terms and conditions of the Contract have been met.

SC-14.04. Article 14, Paragraph 14.04, Substantial Completion, Subparagraph A is supplemented as follows:

A. To be considered substantially complete, the following items of the Work must be operational and ready for CITY's continuous use as intended:
   a. All structures, mechanical and electrical Work required for successful and continuous operation of the new treatment system, including instrumentation and control systems.

b. Tie-ins and interconnections to the existing sanitary sewer and treatment facilities.
c. Process control and laboratory space within the Administration Building
d. Physical and cyber-security elements of the project
e. Roads, parking areas and gutters per the contract documents
f. Signage to interior and exterior spaces
g. Demolition work for the bridge, sludge holding cells, and existing WWTP

SC-14.05 Article 14, Paragraph 14.05, Partial Utilization is amended by adding the following new Subparagraph A.3. immediately following Subparagraph 14.05 A.2:

3. CITY at any time may make a written request to CONTRACTOR to permit CITY to take over operation of any part of the Work although it is not substantially complete. A copy of the request will be sent to DESIGN PROFESSIONAL, and within a reasonable time thereafter CITY, CONTRACTOR and DESIGN PROFESSIONAL shall make an inspection of that part of the Work to determine its status of completion and will prepare a list of the items remaining to be completed or corrected thereon before final payment. If CONTRACTOR does not make written objection to CITY and DESIGN PROFESSIONAL that such part of the Work is not ready for separate operation by CITY, DESIGN PROFESSIONAL will finalize the list of items to be completed or corrected and will deliver such lists to CITY and CONTRACTOR. DESIGN PROFESSIONAL will also make a written recommendation as to the division of responsibilities pending final payment between CITY and CONTRACTOR with respect to security, operation, safety, maintenance, utilities, insurance, warranties and guarantees for that part of the Work, which recommendation will become binding upon CITY and CONTRACTOR at the time when CITY takes over such operation (unless they shall have otherwise agreed in writing and so informed DESIGN PROFESSIONAL). During such operation and prior to Substantial Completion of such part of the Work, CITY shall allow CONTRACTOR reasonable access to complete or correct items on said list and to complete other related Work.

SECTION 00830

PREVAILING WAGE

1. Annual Wage Order No. 32 – Platte County
2. **0830.03 Division of Labor Standards Rules & Regulations** are incorporated into and made part of this Contract and are available at http://s1.sos.mo.gov/cmsimages/adrules/csr/current/8csr/8c30-3.pdf

Missouri
Division of Labor Standards
WAGE AND HOUR SECTION

MIKE KEHOE, Governor

Annual Wage Order No. 32

Section 083
PLATTE COUNTY

In accordance with Section 290.262 RSMo 2000, within thirty (30) days after a certified copy of this Annual Wage Order has been filed with the Secretary of State as indicated below, any person who may be affected by this Annual Wage Order may object by filing an objection in triplicate with the Labor and Industrial Relations Commission, P.O. Box 599, Jefferson City, MO 65102-0599. Such objections must set forth in writing the specific grounds of objection. Each objection shall certify that a copy has been furnished to the Division of Labor Standards, P.O. Box 449, Jefferson City, MO 65102-0449 pursuant to 8 CSR 20-5.010(1). A certified copy of the Annual Wage Order has been filed with the Secretary of State of Missouri.

Use Heavy Construction Rates on Highway and Heavy construction in accordance with the classifications of construction work established in 8 CSR 30-3.040(3).

Use Building Construction Rates on Building construction in accordance with the classifications of construction work established in 8 CSR 30-3.040(2).

If a worker is performing work on a heavy construction project within an occupational title that is not listed on the Heavy Construction Rate Sheet, use the rate for that occupational title as shown on the Building Construction Rate Sheet.

*The Division of Labor Standards received fewer than 1,000 reportable hours for this occupational title. Public works contracting minimum wage is established for this occupational title using data provided by Missouri Economic Research and Information Center.

**The Prevailing Hourly Rate includes any applicable fringe benefit amounts for each occupational title.

OVERTIME
and
HOLIDAYS

OVERTIME

For all work performed on a Sunday or a holiday, not less than twice (2x) the prevailing hourly rate of wages for work of a similar character in the locality in which the work is performed or the public works contracting minimum wage, whichever is applicable, shall be paid to all workers employed by or on behalf of any public body engaged in the construction of public works, exclusive of maintenance work.

For all overtime work performed, not less than one and one-half (1½) the prevailing hourly rate of wages for work of a similar character in the locality in which the work is performed or the public works contracting minimum wage, whichever is applicable, shall be paid to all workers employed by or on behalf of any public body engaged in the construction of public works, exclusive of maintenance work or contractual obligation. For purposes of this subdivision, **"overtime work"** shall include work that exceeds ten hours in one day and work in excess of forty hours in one calendar week; and

A thirty-minute lunch period on each calendar day shall be allowed for each worker on a public works project, provided that such time shall not be considered as time worked.

HOLIDAYS

January first;
The last Monday in May;
July fourth;
The first Monday in September;
November eleventh;
The fourth Thursday in November; and
December twenty-fifth;

If any holiday falls on a Sunday, the following Monday shall be considered a holiday.

Superseded General Decision Number: MO20240001

State: Missouri

Construction Types: Heavy and Highway

Counties: Missouri Statewide.

HEAVY AND HIGHWAY CONSTRUCTION PROJECTS

Note: Contracts subject to the Davis-Bacon Act are generally required to pay at least the applicable minimum wage rate required under Executive Order 14026 or Executive Order 13658. Please note that these Executive Orders apply to covered contracts entered into by the federal government that are subject to the Davis-Bacon Act itself, but do not apply to contracts subject only to the Davis-Bacon Related Acts, including those set forth at 29 CFR 5.1(a)(1).

If the contract is entered into on or after January 30, 2022, or the contract is renewed or extended (e.g., an option is exercised) on or after January 30, 2022:	. Executive Order 14026 generally applies to the contract. . The contractor must pay all covered workers at least $17.75 per hour (or the applicable wage rate listed on this wage determination, if it is higher) for all hours spent performing on the contract in 2025.
If the contract was awarded on or between January 1, 2015 and January 29, 2022, and the contract is not renewed or extended on or after January 30, 2022:	. Executive Order 13658 generally applies to the contract. . The contractor must pay all covered workers at least $13.30 per hour (or the applicable wage rate listed on this wage determination, if it is higher) for all hours spent performing on that contract in 2025.

The applicable Executive Order minimum wage rate will be adjusted annually. If this contract is covered by one of the

Executive Orders and a classification considered necessary for performance of work on the contract does not appear on this wage determination, the contractor must still submit a conformance request.

Additional information on contractor requirements and worker protections under the Executive Orders is available at http://www.dol.gov/whd/govcontracts.

POWER EQUIPMENT OPERATORS CLASSIFICATIONS

GROUP 1: Asphalt roller operator, finish; asphalt paver and spreader; asphalt plant operator; auto grader or trimmer or sub-grader; backhoe; blade operator (all types); boilers - 2; booster pump on dredge; bulldozer operator; boring machine (truck or crane mounted); clamshell operator; concrete mixer paver; concrete plant operator; concrete pump operator; crane operator; derrick or derrick trucks; ditching machine; dragline operator; dredge engineman; dredge operator; drill cat with compressor mounted (self-contained) or similar type self- propelled rotary drill (not air tract); drilling or boring machine (rotary-self-propelled); finishing machine operator; greaser; high loader-fork lift-skid loader (all types); hoisting engineer (2 active drums); locomotive operator (standard guage); mechanics and welders (field and plants); mucking machine operator; pile drive operator; pitman crane or boom truck (all types); push cat; quad track; scraper operators (all types); shovel operator; sideboom cats; side discharge spreader; skimmer scoop operators; slip form paver operator (CMI, Rex, Gomeco or equal); la tourneau rooter (all tiller types); tow boat operator; truck crane; wood and log chippers (all types).

GROUP 2: A-frame truck operator; articulated dump truck; back filler operator; boilers (1); chip spreader; churn drill operator; compressor; concrete mixer operator, skip loader; concrete saws (self-propelled); conveyor operator; crusher operator; distributor operator; elevating grader operator; farm tractor (all attachments); fireman rig; float operator; form grade operator; hoisting engine (one drum); maintenance operator; multiple compactor; pavement breaker, self-propelled hydra-hammer (or similar type); paymill operator; power shield; pumps; roller operator (with or without blades); screening and washing plant; self-propelled street broom or sweeper; siphons and jets; straw blower; stump cutting machine; siphons and jets; tank car heater operator (combination boiler and booster); welding machine; vibrating machine operator (not hand held); welding machine.

GROUP 3: (a) Oiler;

(b) Oiiler driver
(c) Mechanic.

HOURLY PREMIUMS:
THE FOLLOWING CLASSIFICATIONS SHALL RECEIVE ($ .25) ABOVE GROUP 1 RATE: Dragline operator - 3 yds. & over; shovel 3 yds. & over; clamshell 3 yds. & over; Crane, rigs or piledrivers, 100' of boom or over (incl. jib.), hoist - each additional active drum over 2 drums

THE FOLLOWING CLASSIFICATIONS SHALL RECEIVE ($ .50) ABOVE GROUP 1 RATE: Tandem scoop operator; crane, rigs or piledrivers 150' to 200' of boom (incl. jib.)

THE FOLLOWING CLASSIFICATIONS SHALL RECEIVE ($ .75) ABOVE GROUP 1 RATE: Crane rigs, or piledrivers 200 ft. of boom or over (including jib.)

POWER EQUIPMENT OPERATORS CLASSIFICATIONS

GROUP 1: Backhoe, Cable; Backhoe, Hydraulic (2 cu yds bucket and under regardless of attachment, one oiler for 2 or 3, two oilers for 4 through 6); Backhoe, Hydraulic over 2 cu yds; Cableway; Crane, Crawler or Truck; Crane, Hydraulic - Truck or Cruiser mounted, 16 tons and over; Crane, Locomotive; crane with boom including jib over 100 ft from pin to pin; Crane using rock socket tool; Derrick, Steam; Derrick Car and Derrick Boat; Dragline, 7 cu yds and over; Dredge; Gradall, Crawler or tire mounted; Locomotive, Gas,

Steam & other powers; Pile Driver, Land or Floating; Scoop, Skimmer; Shovel, Power (Electric, Gas, Steam or other powers); Shovel, Power (7 cu yds and over); Switch Boat; Whirley; Air Tugger with air compressor; Anchor Placing Barge; Asphalt Spreaker; Athey Force Feeder Loader, self-propelled; Backfilling Machine; Boat Operator - Push Boat or Tow Boat (job site); Boiler, High Pressure Breaking in Period; Boom Truck, Placing or Erecting; Boring Machine, Footing Foundation; Bullfloat; Cherry Picker; Combination Concrete Hoist and Mixer (such as Mixermobile); Compressor, Two 125 CFM and under; Compressor, Two through Four over 125 CFM; Compressor when operator runs throttle; Concrete Breaker (Truck or Tractor mounted); Concrete Pump (such as Pumpcrete machine); Concrete Saw (self-propelled); Concrete Spreader; Conveyor, Large (not selfpropelled) hoisting or moving brick and concrete into, or into and on floor level, one or both; Crane, Cimbing (such as Linden); Crane, Hydraulic - Rough Terrain, self-propelled; Crane, Hydraulic - Truck or Cruiser mounted - under 16 tons; Drilling machine - Self-powered, used for earth or rock drilling or boring (wagon drills and any hand drills obtaining power from other souces including concrete breakers, jackhammers and Barco equipmnet no engineer required); Elevating Grader; Engine Man, Dredge; Excavator or Powerbelt Machine; Finishing Machine, self- propelled oscillating screed; Forklift; Generators, Two through Six 30 KW or over; Grader, Road with power blade; Greaser; Highlift; Hoist, Concrete and Brick (Brick cages or concrete skips operating or on tower, Towermobile, or similar equipment); Hoist, Three or more drums in use; Hoist, Stack; Hydro-Hammer; Lad-A-Vator, hoisting brick or concrete; Loading Machine such as Barber-Greene; Mechanic on job site

GROUP 2: Air Tugger with plant air; Boiler (for power or heating shell of building or temporary enclosures in connection with construction work); Boiler, Temporary; Compressor, One over 125 CFM; Compressor, truck mounted; Conveyor, Large (not self- propelled); Conveyor, Large (not self- propelled) moving brick and concrete (distributing) on floor level; Curb Finishing Machine; Ditch Paving Machine; Elevator (outside); Endless Chain Hoist; Fireman (as required); Form Grader; Hoist, One Drum regardless of size (except brick or concrete); Lad-A-Vator, other hoisting; Manlift; Mixer, Asphalt, over 8 cu ft capacity; Mixer, one bag capacity or less; Mixer, without side loader, two bag capacity or more; Mixer, with side loader, regardless of size, not Paver; Mud Jack (where mud jack is used in conjenction with an air compressor, operator shall be paid $ .55 per hour in addition to his basic hourly rate for covering both operations); Pug Mill operator; Pump,

Sump - self powered, automatic controlled over 2""; Scissor Lift (used for hoisting); Skid Steer Loader; Sweeper, Street; Tractor, small wheel type 50 HP and under with grader blade and similar equipment; Welding Machine, One over 400 amp; Winch, operating from truck

GROUP 3: Boat operator - outboard motor, job site; Conveyors (such as Con-Vay-It) regardless of how used; Elevator (inside); Heater operator, 2 through 6; Sweeper, Floor

GROUP 4: Crane type

HOURLY PREMIUMS:

Backhoe, Hydraulic 2 cu yds or less without oiler - $2.00;
Crane,climbing (such as Linden) - $.50;
Crane, Pile Driving and Extracting - $ .50
Crane with boom (including job) over
100 ft from pin to pin - add $.01 per foot
to maximum of $4.00);
Crane, using rock socket tool - $ .50;
Derrick, diesel, gas or electric hoisting material
and erecting steel (150 ft or more above ground) - $ .50;
Dragline, 7 cu yds and over - $ .50;
Hoist, Three or more drums in use - $ .50;
Scoop, Tandem - $.50;
Shovel, Power - 7 cu yds and over - $ .50;
Tractor, Tandem Crawler - $ .50;
Tunnel, man assigned to work in tunnel or
tunnel shaft - $ .50;
Wrecking, when machines are working on
second floor or higher - $ .50

GROUP 1 - Pick-up trucks; forklift, single axle; flatbed trucks; job site ambulance, and trucks or trailers of a water level capacity of 11.99 cu. yds. or less

GROUP 2 - Trucks or trailers of a water level capacity of 12.0 cu yds. up to 22.0 cu yds. including euclids, speedace and similar equipment of same capacity and compressors

GROUP 3 - Trucks or trailers of a water level capacity of 22.0 cu. yds & over including euclids, speedace & all floats, flatbed trailers, boom trucks, winch trucks, including small trailers, farm wagons tilt-top trailers, field offices, tool trailers, concrete pumps, concrete conveyors & gasoline tank trailers and truck mounted mobile concrete mixers

FOOTNOTE FOR TRUCK DRIVERS:

c. PAID HOLIDAYS: Christmas Day, Independence Day, Labor Day, Memorial Day, Veterans Day, New Years Day, Thanksgiving Day

d. PAID VACATION: 3 days paid vacation for 600 hours of service in any one contract year; 4 days paid vacation for 800 hours of service in any one contract year; 5 days paid vacation for 1,000 hours of service in any one contract year. When such an employee has completed 3 years of continuous employment with the same employer and then works the above required number of hours, he shall receive double the number of days of vacation specified above. When such an employee has completed 10 years of continuous employment with the same employer and then works the above required number of hours, he shall receive triple the number of days

of vacation specified above. When such an employee has completed 15 years of continuous employment with the same employer and then works the above required number of hours, he shall receive 4 times the number of days of vacation specified above.

WELDERS - Receive rate prescribed for craft performing operation to which welding is incidental.

==========

Note: Executive Order (EO) 13706, Establishing Paid Sick Leave for Federal Contractors applies to all contracts subject to the Davis-Bacon Act for which the contract is awarded (and any solicitation was issued) on or after January 1, 2017. If this contract is covered by the EO, the contractor must provide employees with 1 hour of paid sick leave for every 30 hours they work, up to 56 hours of paid sick leave each year. Employees must be permitted to use paid sick leave for their own illness, injury or other health-related needs, including preventive care; to assist a family member (or person who is like family to the employee) who is ill, injured, or has other health-related needs, including preventive care; or for reasons resulting from, or to assist a family member (or person who is like family to the employee) who is a victim of, domestic violence, sexual assault, or stalking. Additional information on contractor requirements and worker protections under the EO is available at https://www.dol.gov/agencies/whd/government-contracts.

Unlisted classifications needed for work not included within the scope of the classifications listed may be added after award only as provided in the labor standards contract clauses (29CFR 5.5 (a) (1) (iii)).

The body of each wage determination lists the classifications and wage rates that have been found to be prevailing for the type(s) of construction and geographic area covered by the wage determination. The classifications are listed in alphabetical order under rate identifiers indicating whether the particular rate is a union rate (current union negotiated rate), a survey rate, a weighted union average rate, a state adopted rate, or a supplemental classification rate.

Union Rate Identifiers

A four-letter identifier beginning with characters other than ""SU"", ""UAVG"", ?SA?, or ?SC? denotes that a union rate was prevailing for that classification in the survey. Example: PLUM0198-005 07/01/2024. PLUM is an identifier of the union whose collectively bargained rate prevailed in the survey for this classification, which in this example would be Plumbers. 0198 indicates the local union number or district council number where applicable, i.e., Plumbers Local 0198. The next number, 005 in the example, is an internal number used in processing the wage determination. The date, 07/01/2024 in the example, is the effective date of the most current negotiated rate.

Union prevailing wage rates are updated to reflect all changes over time that are reported to WHD in the rates in the collective bargaining agreement (CBA) governing the classification.

Union Average Rate Identifiers

The UAVG identifier indicates that no single rate prevailed for those classifications, but that 100% of the data reported for the classifications reflected union rates. EXAMPLE: UAVG-OH-0010 01/01/2024. UAVG indicates that the rate is a weighted union average rate. OH indicates the State of Ohio. The next number, 0010 in the example, is an internal number used in producing the wage determination. The date, 01/01/2024 in the example, indicates the date the wage determination was updated to reflect the most current union average rate.

A UAVG rate will be updated once a year, usually in January, to reflect a weighted average of the current rates in the collective bargaining agreements on which the rate is based.

Survey Rate Identifiers

The ""SU"" identifier indicates that either a single non-union rate prevailed (as defined in 29 CFR 1.2) for this classification in the survey or that the rate was derived by computing a weighted average rate based on all the rates reported in the survey for that classification. As a weighted average rate includes all rates reported in the survey, it may include both union and non-union rates. Example: SUFL2022-007 6/27/2024. SU indicates the rate is a single non-union prevailing rate or a weighted average of survey data for that classification. FL indicates the State of Florida. 2022 is the year of the survey on which these classifications and rates are based. The next number, 007 in the example, is an internal number used in producing the wage determination. The date,

6/27/2024 in the example, indicates the survey completion date for the classifications and rates under that identifier.

?SU? wage rates typically remain in effect until a new survey is conducted. However, the Wage and Hour Division (WHD) has the discretion to update such rates under 29 CFR 1.6(c)(1).

State Adopted Rate Identifiers

The ""SA"" identifier indicates that the classifications and prevailing wage rates set by a state (or local) government were adopted under 29 C.F.R 1.3(g)-(h). Example: SAME2023-007 01/03/2024. SA reflects that the rates are state adopted. ME refers to the State of Maine. 2023 is the year during which the state completed the survey on which the listed classifications and rates are based. The next number, 007 in the example, is an internal number used in producing the wage determination. The date, 01/03/2024 in the example, reflects the date on which the classifications and rates under the ?SA? identifier took effect under state law in the state from which the rates were adopted.

WAGE DETERMINATION APPEALS PROCESS

1) Has there been an initial decision in the matter? This can be:

a) a survey underlying a wage determination
b) an existing published wage determination
c) an initial WHD letter setting forth a position on a wage determination matter
d) an initial conformance (additional classification and rate) determination

On survey related matters, initial contact, including requests for summaries of surveys, should be directed to the WHD Branch of Wage Surveys. Requests can be submitted via email to davisbaconinfo@dol.gov or by mail to:

Branch of Wage Surveys
Wage and Hour Division
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

Regarding any other wage determination matter such as conformance decisions, requests for initial decisions should be directed to the WHD Branch of Construction Wage Determinations.

Requests can be submitted via email to BCWD-Office@dol.gov or by mail to:

Branch of Construction Wage Determinations
Wage and Hour Division
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

2) If an initial decision has been issued, then any interested party (those affected by the action) that disagrees with the decision can request review and reconsideration from the Wage and Hour Administrator (See 29 CFR Part 1.8 and 29 CFR Part 7). Requests for review and reconsideration can be submitted via email to dba.reconsideration@dol.gov or by mail to:

Wage and Hour Administrator
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

The request should be accompanied by a full statement of the interested party's position and any information (wage payment data, project description, area practice material, etc.) that the requestor considers relevant to the issue.

3) If the decision of the Administrator is not favorable, an interested party may appeal directly to the Administrative Review Board (formerly the Wage Appeals Board). Write to:

Administrative Review Board
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210.

==========

END OF GENERAL DECISION"

"General Decision Number: MO20250079 11/21/2025

Superseded General Decision Number: MO20240079

State: Missouri

Construction Type: Building

County: Platte County in Missouri.

BUILDING CONSTRUCTION PROJECTS (does not include single family homes or apartments up to and including 4 stories).

Note: Contracts subject to the Davis-Bacon Act are generally required to pay at least the applicable minimum wage rate required under Executive Order 14026 or Executive Order 13658. Please note that these Executive Orders apply to covered contracts entered into by the federal government that are subject to the Davis-Bacon Act itself, but do not apply to contracts subject only to the Davis-Bacon Related Acts, including those set forth at 29 CFR 5.1(a)(1).

If the contract is entered into on or after January 30, 2022, or the contract is renewed or extended (e.g., an option is exercised) on or after January 30, 2022:	· Executive Order 14026 generally applies to the contract. · The contractor must pay all covered workers at least $17.75 per hour (or the applicable wage rate listed on this wage determination, if it is higher) for all hours spent performing on the contract in 2025.
If the contract was awarded on or between January 1, 2015 and January 29, 2022, and the contract is not renewed or extended on or after January 30, 2022:	· Executive Order 13658 generally applies to the contract. · The contractor must pay all covered workers at least $13.30 per hour (or the applicable wage rate listed on this wage determination, if it is higher) for all hours performing on that contract in 2025.

The applicable Executive Order minimum wage rate will be

adjusted annually. If this contract is covered by one of the Executive Orders and a classification considered necessary for performance of work on the contract does not appear on this wage determination, the contractor must still submit a conformance request.

Additional information on contractor requirements and worker protections under the Executive Orders is available at http://www.dol.gov/whd/govcontracts.

==========

Note: Executive Order (EO) 13706, Establishing Paid Sick Leave for Federal Contractors applies to all contracts subject to the Davis-Bacon Act for which the contract is awarded (and any solicitation was issued) on or after January 1, 2017. If this contract is covered by the EO, the contractor must provide employees with 1 hour of paid sick leave for every 30 hours they work, up to 56 hours of paid sick leave each year. Employees must be permitted to use paid sick leave for their own illness, injury or other health-related needs, including preventive care; to assist a family member (or person who is like family to the employee) who is ill, injured, or has other health-related needs, including preventive care; or for reasons resulting from, or to assist a family member (or person who is like family to the employee) who is a victim of, domestic violence, sexual assault, or stalking. Additional information on contractor requirements and worker protections under the EO is available at https://www.dol.gov/agencies/whd/government-contracts.

Unlisted classifications needed for work not included within the scope of the classifications listed may be added after award only as provided in the labor standards contract clauses (29CFR 5.5 (a) (1) (iii)).

The body of each wage determination lists the classifications and wage rates that have been found to be prevailing for the type(s) of construction and geographic area covered by the wage determination. The classifications are listed in alphabetical order under rate identifiers indicating whether the particular rate is a union rate (current union negotiated rate), a survey rate, a weighted union average rate, a state adopted rate, or a supplemental classification rate.

Union Rate Identifiers

A four-letter identifier beginning with characters other than ""SU"", ""UAVG"", ?SA?, or ?SC? denotes that a union rate was prevailing for that classification in the survey. Example: PLUM0198-005 07/01/2024. PLUM is an identifier of the union whose collectively bargained rate prevailed in the survey for this classification, which in this example would be Plumbers. 0198 indicates the local union number or district council number where applicable, i.e., Plumbers Local 0198. The next number, 005 in the example, is an internal number used in processing the wage determination. The date, 07/01/2024 in the

example, is the effective date of the most current negotiated rate.

Union prevailing wage rates are updated to reflect all changes over time that are reported to WHD in the rates in the collective bargaining agreement (CBA) governing the classification.

Union Average Rate Identifiers

The UAVG identifier indicates that no single rate prevailed for those classifications, but that 100% of the data reported for the classifications reflected union rates. EXAMPLE: UAVG-OH-0010 01/01/2024. UAVG indicates that the rate is a weighted union average rate. OH indicates the State of Ohio. The next number, 0010 in the example, is an internal number used in producing the wage determination. The date, 01/01/2024 in the example, indicates the date the wage determination was updated to reflect the most current union average rate.

A UAVG rate will be updated once a year, usually in January, to reflect a weighted average of the current rates in the collective bargaining agreements on which the rate is based.

Survey Rate Identifiers

The ""SU"" identifier indicates that either a single non-union rate prevailed (as defined in 29 CFR 1.2) for this classification in the survey or that the rate was derived by computing a weighted average rate based on all the rates reported in the survey for that classification. As a weighted average rate includes all rates reported in the survey, it may include both union and non-union rates. Example: SUFL2022-007 6/27/2024. SU indicates the rate is a single non-union prevailing rate or a weighted average of survey data for that classification. FL indicates the State of Florida. 2022 is the year of the survey on which these classifications and rates are based. The next number, 007 in the example, is an internal number used in producing the wage determination. The date, 6/27/2024 in the example, indicates the survey completion date for the classifications and rates under that identifier.

?SU? wage rates typically remain in effect until a new survey is conducted. However, the Wage and Hour Division (WHD) has the discretion to update such rates under 29 CFR 1.6(c)(1).

State Adopted Rate Identifiers

The ""SA"" identifier indicates that the classifications and prevailing wage rates set by a state (or local) government were

adopted under 29 C.F.R 1.3(g)-(h). Example: SAME2023-007 01/03/2024. SA reflects that the rates are state adopted. ME refers to the State of Maine. 2023 is the year during which the state completed the survey on which the listed classifications and rates are based. The next number, 007 in the example, is an internal number used in producing the wage determination. The date, 01/03/2024 in the example, reflects the date on which the classifications and rates under the ?SA? identifier took effect under state law in the state from which the rates were adopted.

WAGE DETERMINATION APPEALS PROCESS

1) Has there been an initial decision in the matter? This can be:

a) a survey underlying a wage determination
b) an existing published wage determination
c) an initial WHD letter setting forth a position on a wage determination matter
d) an initial conformance (additional classification and rate) determination

On survey related matters, initial contact, including requests for summaries of surveys, should be directed to the WHD Branch of Wage Surveys. Requests can be submitted via email to davisbaconinfo@dol.gov or by mail to:

Branch of Wage Surveys
Wage and Hour Division
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

Regarding any other wage determination matter such as conformance decisions, requests for initial decisions should be directed to the WHD Branch of Construction Wage Determinations. Requests can be submitted via email to BCWD-Office@dol.gov or by mail to:

Branch of Construction Wage Determinations
Wage and Hour Division
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

2) If an initial decision has been issued, then any interested party (those affected by the action) that disagrees with the

decision can request review and reconsideration from the Wage and Hour Administrator (See 29 CFR Part 1.8 and 29 CFR Part 7). Requests for review and reconsideration can be submitted via email to dba.reconsideration@dol.gov or by mail to:

Wage and Hour Administrator
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

The request should be accompanied by a full statement of the interested party's position and any information (wage payment data, project description, area practice material, etc.) that the requestor considers relevant to the issue.

3) If the decision of the Administrator is not favorable, an interested party may appeal directly to the Administrative Review Board (formerly the Wage Appeals Board). Write to:

Administrative Review Board
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210.

1.0 INTRODUCTION

This report summarizes the results of a survey for asbestos-containing materials (ACM), lead-containing paint (LCP), and other miscellaneous hazardous materials at the Todd Creek Wastewater Treatment Plant (TC WTP) which is scheduled for demolition. The survey was completed by Burns & McDonnell on February 21, 2023.

1.1 Inspector Credentials

This survey was conducted by Burns & McDonnell employee Mr. Matt Crawford who is an asbestos inspector accredited by the U.S. Environmental Protection Agency (EPA) and certified by the Missouri Department of Natural Resources (MDNR).

1.2 Locations Included in Survey

The inspector identified, located, and sampled suspect homogenous materials from functional spaces, which are used for a specific purpose and are specifically included in the scope of work. Interior and exterior spaces of the following structures were included in this survey:

- Administration Building,
- Clarifying basins and associated piping,
- Sludge Pumping Building,
- Ultraviolet (UV) Building.

The Headworks/Influent Pump Station was not included in this survey.

1.3 Historical Records Review

No information was provided to Burns & McDonnell concerning any previous inspections for ACM, LCP, or hazardous materials in the locations covered by this survey.

1.4 Limitations of Survey

The survey was limited to the structures identified in Section 1.2. Professional judgment was used to determine survey methods, procedures, and report format, particularly regarding the location and number of collected samples, with procedures described in the following chapters. Although efforts were made to follow customary practices of environmental and/or industrial hygiene sciences to identify all suspect hazardous materials, no guarantee or warranty is provided regarding the existence or absence of such materials, and a possibility remains for the presence of additional suspect materials that were inaccessible, including above ceilings, roofs, behind walls and mirrors, underground, etc. Therefore, prior to renovation

or demolition activities, contractors must first verify locations and amounts of materials identified in this report, then be alert to isolate any newly discovered, ACM, LCP, and/or other suspect hazardous materials and promptly communicate the discovery to the owner, manager, and/or general contractor as appropriate. In addition, the contractor should seek further direction to properly protect occupants, workers, and the public. Semi-destructive sampling methods were used, causing unavoidable blemishes or damage to facility structures and finishes. Findings in this report are based on conditions at the time of the survey and results rely on third-party laboratory analyses.

In addition, this survey was limited as follows:

1. This asbestos survey is considered a project design survey, following the EPA National Emission Standards for Hazardous Air Pollutants (NESHAP) prior to demolition or renovation, and the Occupational Safety and Health Administration (OSHA) directives to identify asbestos in the workplace vs. an Asbestos Hazard Emergency Response Act (AHERA) inspection, which would also require assessing friable asbestos among other aspects.

2. Lead and other hazardous materials were identified according to the OSHA directives to identify hazards, and this is not considered a detailed lead inspection according to requirements of EPA and Department of Housing and Urban Development (HUD) for child-occupied, target housing.

3. Additional suspect materials may be inaccessible and not discovered until building demolition.

* * * * *

2.0 ASBESTOS SURVEY PROCEDURES

The purpose of this asbestos survey was to identify whether ACM is present in areas that may be disturbed by anticipated renovation or demolition activities.

2.1 Asbestos Requirements

This survey was based on the EPA NESHAP for asbestos in 40 Code of Federal Regulations (CFR) 61, Subpart M, combined with applicable portions of the Occupational OSHA asbestos standard 29 CFR 1926.1101 for Construction, or 29 CFR 1910.1001 for General Industry. NESHAP requires the owner to "thoroughly inspect" for the presence of asbestos prior to demolition or renovation of a structure, installation or building, and OSHA requires building owners to determine the presence, location, and quantity of ACM at the work site, as well as to protect workers from over-exposure to asbestos.

Other guidelines, including the American Standards and Testing Methods (ASTM) E2356-18, *Standard Practice for Comprehensive Building Asbestos Surveys*, were reviewed and utilized as applicable and noted in this report, but were not followed as the basis of this survey.

An inspector can group suspect materials from various areas into homogeneous areas that are uniform in color, texture, and apparent or known date of installation, as defined by ASTM.

Suspect materials are commonly grouped into one of three classifications:

- Thermal-system insulation (TSI);
- Surfacing materials; and
- Miscellaneous materials.

ASTM defines non-suspect materials to include fiberglass, foam glass, rubber, glass, steel, concrete, porcelain, and wood. In addition, natural stone and bare metal were not considered suspect. Typically, an accredited inspector is not required to sample non-suspect materials, unless they are observed to have a suspect layer, mastic, or coating.

NESHAP and OSHA consider materials to be ACM if they contain greater than one percent (1%) asbestos, and NESHAP requires the inspector to categorize ACM as either:

- Friable (when dry, can be crumbled, pulverized, or reduced to powder by hand pressure);
- Category I non-friable (packings, gaskets, resilient floor covering, and asphalt roofing products); and EPA has a letter of interpretation to include mastics; or

- Category II non-friable (any other non-friable ACM).

OSHA states in an April 17, 1997, letter of interpretation that a material containing trace amounts of asbestos, i.e. less than 1%, are regulated as "unclassified" asbestos. Though not considered "ACM" by OSHA or EPA NESHAP definition, unclassified asbestos-work operations require that the employer follow OSHA asbestos requirements for engineering, work practice, and protective equipment controls to limit worker exposure.

According to OSHA, certain materials can be considered as "Presumed Asbestos Containing Material." These materials include TSI and surfacing materials found in buildings constructed prior to 1981. In addition, an inspector can "assume" a suspect material is ACM even if no sampling or analysis are performed, but the inspector cannot assume a suspect material to be asbestos-free without sampling results. Assumed asbestos is typically limited to materials on live or energized systems, and suspect materials not safe or not accessible for sampling. OSHA also considers asphalt and vinyl flooring material installed prior to 1981 to be asbestos-containing unless proven otherwise.

2.2 State & City Asbestos Regulations

The Health Department of Kansas City, Missouri Air Quality Program (Department) administers asbestos projects within the City. Follow asbestos regulations in City of Kansas City Ordinance 8, Air Quality Control Code, particularly notification and abatement work practices required in Section 8-9. An asbestos project notification form must be submitted at least 20-working days prior to an asbestos project. A demolition notification must also be submitted. Missouri regulates disposal of asbestos. The record of asbestos inspection must be kept within internal project files for the purpose of identifying asbestos and eliminating worker exposures. Depending on the type or category of the ACM identified from the inspection and the forces that will eventually act upon them during demolition or renovation, the materials may or may not be regulated. In order to determine the applicability of the City's asbestos requirements, the ACM must first be determined whether or not it meets their definition of regulated asbestos-containing materials (RACM). RACM includes:

- Friable;
- Category I non-friable that have become or will become friable, or have been subject to sanding, grinding, cutting, burning, or abrading; and
- Category II non-friable that have a high probability of becoming, or have become, crumbled, pulverized or reduced to powder by the work practices used during the course of demolition or renovation.

Asbestos removal projects are involving at least 10-square feet, or 16 linear feet of RACM are regulated by the Department. Asbestos waste from regulated projects involving threshold quantities of RACM must be handled in strict accordance with the Department and MDNR's requirements for asbestos waste disposal. Wastes from these projects must be transferred to an approved sanitary landfill or transfer station by registered asbestos abatement contractors, who are trained in the provisions for proper waste disposal. Non-friable asbestos can go to a construction/demolition (C&D) landfill if the landfill provides pre-approval. Friable asbestos must be disposed in a regulated landfill.

2.3 Asbestos Sampling Methods

According to OSHA 29 CFR 1926.1101(K)(5)(B), which for bulk sampling refers to 40 CFR 763.86, and EPA-MAP bulk sampling methods, the inspector(s) collected a sample(s) from each homogeneous area. An exception from the standard bulk sampling methods is the use of 'convenience sampling' vs. 'randomly distributed' sampling, allowed under the EPA-MAP in non-school buildings, particularly for TSI.

An effort was made to collect at least the minimum required number of samples representing each suspect, homogeneous area. For suspect, non-friable homogeneous areas, the accredited inspector determined the appropriate number of samples to characterize the material, as allowed under 40 CFR 763.86(d). Per ASTM E2356, 6.4.6.3, a single sample may suffice for small, manufactured items such as heating, ventilation, and air conditioning vibration dampeners, gaskets, and friction products. Also, where it was not feasible to collect multiple samples and for non-regulated or non-suspect materials that were sampled for verification, one sample can be adequate, depending on the situation.

Sampling did not include 'live' systems such as cloth-like casing of electric wiring, which, if found, may be assumed positive; however, none of that type of wiring was observed during the survey.

Burns & McDonnell conducted the survey of suspect asbestos materials. At a minimum, amended water spray was used during sample collection to control dust and fiber release, with additional controls used by the inspector(s) if necessary. Wetted bulk samples were placed into individual, sealable containers, and retained by the sampler until delivered to the laboratory for analysis.

Samples were delivered for asbestos analysis to Environmental Hazards Services Laboratory (EHS), located in Richmond, Virginia. This laboratory is accredited by the American Industrial Hygiene Association (AIHA) and is also certified for bulk asbestos analysis through the National Voluntary Laboratory Accreditation Program under the National Institute for Standards & Technology program, respective laboratory numbers #100420 and #101882-0.

Bulk samples were analyzed using polarized light microscopy (PLM) by EPA Method 600/R-93/116. The laboratory provided approximate percentage of asbestos fibers in the sample and identified the crystal form of the asbestos. In cases where collected samples had two or more layers (i.e., material with adhesive, or drywall and joint compound), all layers were analyzed. Federal regulations require that each layer of suspect material be analyzed separately for asbestos content. In addition, federal regulations state that if any sample from a homogeneous area contains asbestos, then the entire homogeneous area must be considered asbestos-containing, regardless of the results from the remaining samples from that area.

Under certain conditions, the EPA recommends subsequent confirmation analysis, in addition to PLM, using transmission electron microscopy (TEM). TEM is recommended by the EPA for materials with trace levels of asbestos up to 10%, and/or for non-friable organically bound materials that consist of fibers and other particulate matter embedded in a solid matrix of asphaltic, vinyl or other organic substances, such as floor tile. If used, the TEM method is typically the New York State ELAP Method #198.4. EPA states that if either TEM or PLM analysis provide results greater than 1% asbestos, then the material must be considered ACM.

* * * * *

3.0 LEAD PAINT SURVEY PROCEDURES

The purpose of this lead survey was to identify whether lead is present in the paint coatings in the areas that may be disturbed by anticipated renovation or demolition activities.

3.1 Lead Paint Requirements

Since trace levels of lead can be detected by the laboratory, the following definitions are provided for consistency of terms:

- LBP is dried paint having a lead content exceeding 1 milligram per square centimeter (mg/cm^2) by x-ray fluorescence analysis, or a lead concentration exceeding 0.5%, or 5,000 parts per million (ppm) by mass, using paint-chip collection and laboratory analysis, per ASTM, EPA, and HUD.
- LCP: Paint or other similar surface coating materials exceeding 0.06% by mass (which is approximately >600 ppm total lead or >0.7 mg/cm^2) of dried paint film as defined by ASTM.
- The Consumer Product Safety Commission, 16 CFR 1303, has set a limit for LCP in consumer products at 0.009% (90 ppm) by weight of dried paint film, as of August 14, 2009, reduced from previously limit set at 600 ppm.
- OSHA states that their 29 CFR 1926.62 lead-in-construction regulation was intended to apply to any detectable concentration of lead in paint, including trace lead levels, per a March 1, 1999, letter of interpretation.

EPA and HUD define a lead inspection as a surface-by-surface investigation to determine the presence of LBP in target (pre-1978) housing and child-occupied facilities. Since this facility is not target housing or child-occupied, the lead survey conducted on this project is not required to adhere to the EPA/HUD lead 'inspection' method but was modified and limited, the lead survey conducted is better described as an 'assessment' or 'survey' conducted primarily to obtain information to pass along to employers to protect their workers from lead exposure.

OSHA regulates worker lead exposure under the lead-in-construction standard, 29 CFR 1926.62. If the lead disturbance is a result of on-staff maintenance work, then the OSHA lead-in-general industry standard would apply, per 29 CFR 1910.1025. When detectable lead and metal concentrations are found at a worksite, contractors and workers must be provided with a copy of the sample results so they can make proper decisions on engineering, work practice, and personal protective equipment controls. When planning to disturb lead coatings and materials, the employer must develop a written lead compliance program for worker protection.

The EPA's National Ambient Air Quality Standards NAAQS regulation includes lead. NAAQS requires certain controls to prevent lead contamination into the environment, including the directive to have 'no visible emissions' into the environment from a lead activity.

Waste disposal options for lead materials may vary based on state and local regulations. A determination of whether a material is hazardous waste due to lead, cadmium, or chromium and other metal content can be made by sending representative samples of waste streams to an accredited laboratory for toxicity characteristic leaching procedure (TCLP) analysis. The material is considered to be hazardous waste if the leachable content of the waste exceeds 5.0 ppm for lead, as well as exceeding applicable hazardous limits for other metals.

In lieu of laboratory waste analysis, it is acceptable to employ "Use of Knowledge," which means analyzing the waste using existing information. A generally accepted approach is the "Rule of Twenty" which states that if a waste is 100% solid, as defined by the TCLP method, then the results of the total constituent analysis may be divided by twenty to convert the total results into the maximum leachable concentration. This factor is derived from the 20:1 liquid-to-solid ratio employed in the TCLP method and is conservative.

3.2 State Lead Regulations

Follow OSHA lead regulations 29 CFR 1926.62 or 1910.1025 to protect workers from lead exposure.

The Missouri Department of Natural Resources (MDNR) has requirements and guidance for disposal of lead waste, including the MDNR Fact Sheet #2002, titled "Disposal of Demolition Waste Contaminated with Lead or Other Heavy Metals". If the paint is no longer attached to the substrate (painted metal, wood, etc.) and is in the form of paint chips or dust, the paint is subject to hazardous waste determination testing by the Owner, or contractor [i.e. TCLP for toxic lead, cadmium, and chromium]. This fact sheet assumes that the lead waste originates in Missouri and, if found to be non-hazardous, is also disposed in Missouri.

However, if the leachable content [TCLP] exceeds the hazardous waste limits for either of the metals, the waste must be transported by a hazardous waste transporter to a hazardous waste landfill (which may be out of state) or, if allowed by MDNR, to a recycling company. If the lead material is not hazardous waste, it can be disposed in a Subtitle D, municipal solid waste landfill; however, the landfill must be notified of the lead content of the waste and has the opportunity to determine whether to accept the waste. If paint with lead stays on a building material, there is no need for further testing prior to disposal (e.g.

TCLP not required), but landfill notification is still necessary based on screening results from this lead assessment (bulk paint-chip).

3.3 Paint Sampling Methods

Field sampling of paint coatings for laboratory analysis was used to provide information on concentrations of lead in paint to meet OSHA requirements for worker protection and to provide information to meet EPA NESHAP and/or waste disposal requirements during future demolition. Bulk paint-chip samples were placed into containers for shipment to the laboratory for analysis. Hand tools, cleaned prior to each sample collection, were used to remove the paint-chips.

For this assessment, paint coatings were observed and grouped together by similar color, substrate, and painting history (if known). Then from each unique paint-substrate combination, approximately one location was sampled. Approximate locations of samples were noted, and each sample number was logged onto a chain-of-custody (COC) form. Bulk paint-chip samples were sent to EHS in Richmond, Virginia and were analyzed for percent lead by weight and/or ppm using atomic absorption spectroscopic analysis per EPA Method SW846 7000B. This laboratory is recognized under EPA's National Lead Laboratory Accreditation Program and is accredited by AIHA.

In addition to paint-chip sampling, visual observations were made to determine whether other suspect, lead-containing materials were readily observable; however, no such materials were found.

* * * * *

4.0 HAZARDOUS MATERIAL INVENTORY

The Burns & McDonnell inspectors walked through the areas included in this survey and conducted visual observations to identify and catalogue other suspect, miscellaneous hazardous materials. Proper handling and disposal or recycling during renovation or demolition for any such hazardous materials will need to be accounted for. No sampling occurred for these miscellaneous hazardous materials. The quantity and locations of visible materials were noted. Safety Data Sheets (SDS) were not provided, so certain assumptions were made regarding these materials. If SDSs become available in the future, they should be reviewed, and product knowledge applied. No analytical sampling was performed on any materials or units for purposes of determining hazardous characteristics or presence of hazardous constituents for disposal.

Miscellaneous materials, such as small quantity commercial container chemicals typically stored in a designated chemical cabinet or storage area, were not included in the inventory.

4.1 Mercury

Efforts were made to visually identify mercury-containing items in the areas to be impacted by the planned demolition in or on the buildings. Electrical lamps including fluorescent tubes, neon, compact fluorescent lamps, high-pressure sodium, mercury vapor, metal halide, and high-intensity discharge lamps may contain mercury at levels classifying tube disposal as hazardous waste according to the EPA. However, no sampling occurred.

4.2 PCBs

PCBs are no longer commercially produced in the United States. However, PCBs are still present in products where PCBs have been used including electrical transformers, electrical lamp ballasts, hydraulic fluids, etc. Each building was inspected for the potential presence of such materials. According to the EPA, suspect materials, including transformers and lighting ballasts, must be considered positive for PCBs unless the product is clearly marked with a label stating “NO PCBs” in the product.

5.0 RESULTS

Results of the surveys are representative of conditions on the days of sampling. There is a possibility that other materials may be discovered during future activities or demolition.

Appendix A provides summary tables of results, with Table 1 providing a listing of all suspect materials and homogenous areas that were sampled for asbestos. Table 2 provides a summary of the location, amount, type, and NESHAP category of ACM found during this survey. Table 3 provides a summary of all the paint samples and lead concentration results. Table 4 provides a summary of the major components reported to have LCP coatings.

Photos of the buildings are in Appendix B. Inspector credentials can be found in Appendix C, and all laboratory reports and COC forms are in Appendix D.

5.1 Asbestos Results

ACM was identified in the following homogenous materials/areas (HAs):

- HA#13 - Black lab counter tops located within the Administration Building lab room were labeled as ACM and are assumed to be Category II non-friable.

Additionally, the drywall/joint compound system (HA#11) was found to contain <1% asbestos and is considered unclassified.

5.2 Lead Paint Results

Sample results are summarized in Tables 3 and 4. As indicated in Table 3 and 4, all paint coatings with the exception of the gray paint on the concrete sludge pumping building, black/red paint on Basin 1 piping, blue paint on Administration Building door frames were found to contain concentrations of lead in the paint.

5.3 Mercury Results

Ceiling light fixtures were observed to be 3-foot fluorescent tubes. All fluorescent light tubes and metal-halide lamps were noted to contain mercury. Fluorescent bulbs and metal-halide lamps contain a low-pressure mercury vapor. Please note, there is a possibility that there are light fixtures or thermostats within the building that were not visually observed.

5.4 PCB Results

Light ballasts were observed as fluorescent ballasts which are not expected to contain PCB; however, there is a possibility that light ballasts containing PCBs may be present that were not visually observed.

* * * * *

6.0 RECOMMENDATIONS

Provide a copy of this report to contractors in bid documents and/or contractors planning to conduct renovation/demolition at the facility to review prior to starting work.

Retain a copy of this survey report for future reference and update by the building owner.

Contractors and employers must identify, characterize, and profile potentially hazardous materials prior to demolition and disposal/recycling and handle materials in accordance with applicable local, state, and federal guidelines

6.1 Asbestos Recommendations

This survey has identified the presence of approximately 80 square feet of black laboratory countertop, Category II non-friable ACM. If removal of this ACM can be conducted using manual methods that prevent the countertops from being rendered friable, then it is not regulated by the Department, MDNR, or NESHAP. However, OSHA asbestos regulations still apply and the waste material must be handled and disposed as asbestos waste. Therefore, using a Missouri-licensed asbestos abatement contractor is the best approach for removing the ACM. If the countertops will be rendered friable during removal, then the Department must be notify at least 20-working days prior to start of abatement and abatement must be conducted by a Missouri-licensed asbestos abatement contractor.

Additionally, drywall/joint compound system was found to contain <1% asbestos. Materials containing <1% asbestos are not considered “ACM” by OSHA or EPA NESHAP definition and are therefore not regulated by the Department, MDNR, or NESHAP. However, work operations disturbing materials containing asbestos require that the employer follow OSHA asbestos requirements for engineering, work practice, and protective equipment controls to limit worker exposure and the waste material must be handled and disposed as asbestos waste. As a result, the best approach would be removing the drywall/joint compound from the structure prior to gross demolition activities utilizing methods that would leave the materials substantially intact. Removal activities should be conducted by asbestos trained workers under the supervision of an asbestos competent person.

While not regulated, non-friable ACM that is not rendered friable during abatement or demolition activities and materials containing <1% asbestos must be properly disposed in an approved landfill in accordance with solid waste laws. The disposal facility should be contacted prior to disposal for information on packaging and delivery requirements.

Recommend contacting the Department prior to disturbing asbestos to confirm removal methods will not generate friable ACM that might require notification and Department/NESHAP regulation requirements. If additional suspect materials are identified prior to demolition activities, they need to be isolated and sampled for asbestos content.

6.2 Lead Paint Recommendations

A number of paint coatings contain lead; however, in most cases there does not appear to be an exposure hazard to occupants since no loose paint chips in the immediate working/walking areas were observed and most of the lead paint was observed to be in good condition. When conducting renovation/demolition work that disturbs paint containing lead, follow OSHA's lead regulations, 29 CFR 1926.62 for Construction, or 1910.1025 for General Industry, and allow "no visible emissions" into the environment for demolition activities.

Construction/demolition contractors should follow applicable OSHA and EPA lead regulations, use lead-trained personnel, and develop a lead compliance program. The lead compliance plan should include exposure monitoring for lead during demolition that impacts lead paint, in compliance with OSHA's 29 CFR 1926.62, especially if there is a reasonable possibility that employees may be exposed to lead at or above the OSHA action level of 30 micrograms per cubic meter. Prior to disturbing LCP such as by scraping, sanding, blasting, welding, cutting, torching, etc., make an initial written determination as to whether portions of the paint coating(s) require pre-removal and of expected employee exposures, based on intended means and methods of disturbing LCP. Whether LCP is required to be removed prior to renovation/demolition depends on the construction methods and exposure controls, which must be described in the written lead compliance program. In general, any required pre-removed LCP, as well as LCP in poor condition that no longer adheres to building material substrates should be removed managed as loose LCP chips as detailed below.

Follow OSHA and EPA regulations and use lead-trained personnel. Building materials with intact lead paint may be eligible for disposal at a recycling facility, or a construction and demolition (C&D) or municipal solid waste (MSW) pending landfill notification and pre-approval by the facility accepting the lead-containing waste.

Loose LCP chips and materials contaminated with loose LCP chips (i.e., personal protective equipment (PPE) and plastic sheathing, etc.) will need to be collected for hazardous waste determination. TCLP testing must be performed on the material to determine if the waste is hazardous. If the waste is hazardous, the waste will be required to be containerized and disposed as hazardous waste.

6.3 Mercury Recommendations

Assume all fluorescent light tubes and metal-halide lamps throughout the buildings to be mercury-containing, even at low concentrations. Fluorescent bulbs and metal-halide lamps contain a low-pressure mercury vapor which should be handled and disposed of appropriately. If lamp removal is necessary as part of demolition, remove and handle the lamps carefully, without breaking, and pack and dispose of the lamps as universal waste. Any additional mercury items that may be discovered during demolition, such as mercury vials in wall-mounted thermostats must also be removed and handled as universal waste without breaking. Mercury vials in thermostats are classified as universal waste by federal universal waste regulations set forth in 40 CFR.273 and should be recycled appropriately. Contractor should have a mercury spill kit with trained personnel available in the event that a light tube or vial breaks.

6.4 PCB Recommendations

During removal of light fixtures, check the label on each lighting ballast. If the ballast was manufactured prior to 1979 and is not labeled as “non-PCB”, it should be segregated from the non-PCB electronic ballasts and sent to a reputable recycler for disposal as PCB-containing waste.

According to the EPA, suspect materials, including transformers and lighting ballasts (unless they are electronic), must be considered positive for PCBs unless the product is clearly marked with a label stating, “NO PCBs.”

Table 4
Lead Paint Summary
Todd Creek Wastewater Treatment Plant
Sampling Date: 2/21/2023

Notes:

1. Typically for disposal, if the paint is no longer attached to the substrate (painted metal, wood, etc.) and is in the form of paint chips or dust, the paint is subject to hazardous waste determination testing by the Owner, or contractor [i.e. TCLP for toxic lead and other metals].

2. Paint listed as "poor" may no longer be attached to the substrate and is subject to hazardous waste determination testing.

2. 0-10% of paint listed as "fair" may no longer be attached to the substrate and is subject to hazardous waste determination testing.

5. When hot cutting methods are used, such as cutting with a heat torch, lead paint debris generated is subject to hazardous waste determination sampling.

6. The maximum leachable concentration is defined by the "Rule of Twenty" which states that if a waste is 100% solid, as defined by the TCLP method, then the results of the total constituent analysis may be divided by twenty to convert the total results into the maximum concentration. This factor is derived from the 20:1 liquid-to-solid ratio employed in the TCLP method and is conservative.

7. The material is considered to be hazardous waste if the maximum leachable concentration of the waste exceeds 5.0 ppm for lead.

**Sample analyzed using EPA SW846 TCLP methodology. Concentration result is the analytically determined leachable concentration and is presented in milligrams per liter = ppm.*

^Insufficient sample mass to analyze for total lead; however, paint assumed to contain lead.

APPENDIX D – LABORATORY REPORTS

AmeriSci Richmond
13635 GENITO ROAD
MIDLOTHIAN, VIRGINIA 23112
TEL: 8047631200 FAX: 8047631800

March 20, 2023

Environmental Hazards Services, Inc.
Attn: Howard Varner
7469 Whitepine Road
Richmond, VA 23237

RE: Environmental Hazards Services, Inc.
Job Number 123031592
P.O. #23-03-02400
26-3514; 125460; KCMO/Todd Creek WTP; EHS# 23-02-03939

Dear Howard Varner:

Enclosed are the results of Asbestos Analysis - Bulk TEM Protocol of the following Environmental Hazards Services, Inc. samples, received at AmeriSci on Wednesday, March 15, 2023, for a 3 day turnaround:

9A, 9B, 9C

The 6 samples, placed in zip lock bag, were shipped to AmeriSci via Hand Delivered. Environmental Hazards Services, Inc. requested TEM Bulk (Semi-quantitative) analysis of these samples.

The EPA/600/R-93/116 method was used to prepare (Sec 2.3) and analyze (Sec 2.5) using the Semi-Quantitative TEM quantification procedure (previously refered to as the similar Chatfield VAT method, SOP-1988-02). After gravimetric matrix reduction the total percent asbestos present is determined by visual area estimation calibrated against standards with known weight percentages of asbestos. This report relates ONLY to the TEM analysis and matrix reduction processes expressed as percent by weight and percent asbestos material. This report must not be used to claim product endorsement or approval by AmeriSci, NVLAP, ELAP or any other associated AmeriSci certifying agency. The National Institute of Standards and Technology accreditation requirements, mandate that this report must not be reproduced, except in full without the approval of the laboratory.

AmeriSci appreciates this opportunity to serve your organization. Please contact us for any further assistance or with any questions.

Sincerely,

Glenn F. Massey

QA Manager | Authorized Signatory

These results are based on a comparative visual estimate. The condition of the samples analyzed was acceptable upon receipt per laboratory protocol unless otherwise noted on this report. Each distinct component in an inhomogeneous sample was analyzed separately and reported as a composite. Results represent the analysis of samples submitted by the client. Sample location, description, area, volume, etc., was provided by the client. This report cannot be used by the client to claim product endorsement by NVLAP or any agency of the U.S. Government. This report shall not be reproduced except in full, without the written consent of the Environmental Hazards Service, L.L.C. California Certification #2319 NY ELAP #11714 NVLAP #101882-0 VELAP 460172. All information concerning sampling location, date, and time can be found on Chain-of-Custody. Environmental Hazards Services, L.L.C. does not perform any sample collection.

Environmental Hazards Services, L.L.C. recommends reanalysis by point count (for more accurate quantification) or Transmission Electron Microscopy (TEM), (for enhanced detection capabilities) for materials regulated by EPA NESHAP (National Emission Standards for Hazardous Air Pollutants) and found to contain less than ten percent (<10%) asbestos by polarized light microscopy (PLM). Both services are available for an additional fee.

400 Point Count Analysis, where noted, performed per EPA Method 600/R-93/116 with a Reporting Limit of 0.25%.

* All California samples analyzed by Polarized Light Microscopy, EPA Method 600/M4-82-020, Dec. 1982.

PROJECT: Todd Creek WTP
REPORT NO. B-80506

Enclosed please find results for bulk samples submitted to our laboratory for asbestos analysis from the above referenced project.

The asbestos analysis was performed using Polarized Light Microscopy (PLM) with dispersion staining in accordance with the required EPA Interim Method for the Determination of Asbestos in Bulk Insulation Samples, as found in 40 CFR, Part 763, Subpart E, Appendix E.
The asbestos fiber type and percentage are reported.The method of measurement is based on calibrated visual estimation. The data provided herein is related only to those samples submitted for analysis. Samples comprised of **greater than one percent (1%) asbestos** are to be considered an asbestos containing material.

Verification by PLM point counting is available upon request. Due to limitations of the PLM microscope and the matrix of floor tile, any floor tile sample found to contain NO asbestos may be verified by TEM analysis upon the client's request. An additional fee will apply.

If samples submitted are not homogeneous, sub-samples of the components are analyzed separately as layers. A composite result may be requested.

This report may not be used by the client to claim product endorsement by NIST, NVLAP or any agency of the U.S. Government. This report shall not be reproduced, except in full, without the written approval of ACT.

If you have any questions, please contact me at 913-492-1337.

Respectfully submitted,

Tami Van

INSTRUCTIONS TO BIDDERS

Project Number: 81000927/1698

Project Title: Todd Creek WWTP Expansion & Major Upgrade (DBE)

1. Sealed Bids for the ***Todd Creek WWTP Expansion & Major Upgrade*** project will be received by the General Services Department at 4800 E 63rd Street, Kansas City, Missouri 64130 **until 2:00 P.M., February 3rd, 2026,** at which time bidding will be closed.

   a. All Bids will be opened and read aloud. The Bid Envelope must contain all required submissions to be included with the Bid. No Bid may be withdrawn for a period of ninety (90) days after the Bid is opened. Bid security shall likewise continue for the same ninety (90) days unless earlier released by the City. The successful Bidder shall comply with all Bidding and contract requirements. Bids, once opened and read, may not be withdrawn without forfeiture of the Bid security.

   b. All Bids shall be addressed to *the Senior Officer off Procurement Services Marzella N. Buckner*, shall state on the outside of the sealed Bid envelope "Bid Enclosed", title and Project number, and shall be deposited in the locked Bid box. All Bids must comply with the Bidding Requirements of Kansas City, Missouri (CITY).

2. Consideration of Bids

   a. The City will determine the lowest, responsive and responsible Bid. The City may reject any or all bids. If the City rejects all Bids, the City may: (1) resolicit Bids following the City's normal solicitation procedure; or (2) solicit Bids only from those Bidders that submitted a Bid pursuant to the original solicitation; or (3) use an expedited Bid submission schedule with or without readvertising or issuing any other public notice when the City determines that the delay from the normal City solicitation procedure would not be in the City's best interests.

   b. Alternates. If this solicitation includes Bid Alternates, the City, in its sole discretion, may include any, all or none of the Alternates in determining the lowest, responsive and responsible Bid. In determining lowest, responsive and responsible Bid, the City may include the Alternates in any combination and in any order or priority or choose none of the Alternates. The City may make this determination at any time after Bid Closing and prior to Contract award. The City will act in the best interest of the City in determining whether to include any, all or none of the Alternates and the combination and priority of any Alternates selected. If additional funding becomes available after Contract award, City may add any or all of the Alternates to the Contract by change order.

3. Evidence of Competency to Perform. Each bidder shall furnish with the bid satisfactory evidence of Bidder's competency to perform the proposed work. Such evidence of competency shall consist of the following:

   a. Completed Form 00410.01 Experience Reference Summary for three projects of similar scope performed within the past 5 years including the name, address and telephone number of the contact person having knowledge of the project and the dollar value of the project.

   b. Statement that, during the three (3) years immediately preceding the date of the Bid, Bidder has received no written notices of violations of any federal or state prevailing wage statute in which prevailing wage penalties were assessed against the Bidder or Bidder has been found in such but has made restitution to affected workmen and complied with any statutory penalty; and a

statement that Bidder is current on payment of Federal and State income tax withholdings and unemployment insurance payments

c. Statement that Bidder participates in a training program that facilitates entry into the construction industry and which may include an on-the-job or in-house training program. By submitting its Bid, Bidder is agreeing to timely submit during the 48 hours after Bid opening an affidavit of describing such program and Bidder's participation.

d. Identify the following Key Personnel proposed for the Project. (**NOTE:** Key Personnel must be committed to the Project for its duration and may not be removed or substituted without the City's prior written consent.)

   (1) GC Project Manager

   (2) On-Site Field Superintendent

   (3) QC/QA Manager

   (4) Safety Officer

e. For each of the Key Personnel, provide the following background information.

   (1) Years of employment with current employer

   (2) City of residence

   (3) Identify any other projects this person will be involved with concurrently with the Project, and state the time commitment for the Project and each other project

   (4) Discuss professional registrations, education, certifications, and credentials held by this person that are applicable to the Project

f. Discuss generally the tasks involved in the Project.

g. Illustrate clearly and concisely Bidder's understanding of the technical elements that must be addressed for successful completion of the Project.

h. Submit a bid schedule with anticipated milestones for the Project using Microsoft Project 2007 or later format.

i. Describe key issues that might affect the Project schedule and how Bidder proposes to address them.

j. Summary of the Project Safety Plan for the Project.

   (1) Describe how Bidder proposes to address any unique safety issues for the Project

   (2) Describe your safety record and environmental compliance record along with your Firm's OSHA reportable accident rates on recent comparable size projects

   (3) Statement of Bidder's Experience Modification Ratio (EMR)

k. Discuss Bidder's understanding of the traffic control required for the Project, if applicable, and how traffic control will impact the Project schedule. Discuss any major traffic control issues that need to be addressed and Bidder's proposed solutions.

l. Identify any other special issues or problems that are likely to be encountered. Outline the manner in which Bidder suggests resolving them.

m. Outline key community relations issues and how they might be resolved.

n. Describe any difficulties Bidder anticipates encountering in serving the City, in light of the City's status as a municipality and public entity. Explain how Bidder plans to manage them.

o. Summary of Bidder's Quality Assurance/Quality Control Plan for this project

p. Statement regarding all work performed two (2) years immediately preceding the date of the Bid, that contains either (a) a contract by contract listing of any written notices of violations of any

federal, state or local DBE/MBE/WBE Program and any damages assessed; or (b) a statement that there have been no such written notices of violations or such penalties assessed; and a statement that Program requirements have been met.

q. Statement that the Bidder has not been rescinded or debarred from any bidding, contractual, procurement, or other such programs by federal, state or local entities.

r. Statement that Bidder is current on payment of Federal and State income tax withholdings and unemployment insurance payments

s. Statement of Bidder's litigation and/or arbitration history over the past five (5) years including final ruling.

t. Statement of Bidder's bond history over the past five (5) years including any incidences of failure to perform.

u. MBE / WBE past project performance and compliance with participation goals in comparable size commercial projects

v. Other.

4. Waiver of Bid Requirements The City Manager or his delegate at any time may waive any requirements imposed by this solicitation or by any City regulation when failure to grant the waiver will result in an increased cost to the City and the requirement waived would be waived for all Bidders for this solicitation and it is in the best interest of the City to grant the waiver. The City Council at any time may waive any requirements imposed in this solicitation by the City's Code of Ordinances when it finds failure to grant the waiver will result in an increased cost to the City and the waived requirement would be waived for all Bidders for this solicitation and it is in the best interest of the City to grant the waiver. The City reserves the right to waive any irregularities and/or formalities as deemed appropriate.

5. Late Bids Bids and modifications of Bids received after the exact hour and date specified for receipt will not be considered unless: (1) the Bid is sent via the U.S. Postal Service, common carrier or contract carrier, by a delivery method that guarantees the Bid will be delivered to the City prior to the submission deadline; or (2) if the Bid is submitted by mail, common carrier or contract carrier it is determined by the City that the late receipt was due solely to an error by the U.S Postal Service, common carrier or contract carrier; or (3) the Bid is timely delivered to the City but is at a different City location than that specified in this IFB; or (4) the City extends the time after the deadline for a force majeure event that could potentially affect any or all Bidders meeting the deadline.

6. Interpretations and Addenda All questions about the meaning or intent of the Bidding Documents may be directed to the Project Manager listed at the end of these Instructions to Bidders. Interpretations or clarifications considered necessary by the Project Manager in response to such questions will be issued by Addenda to all parties recorded as having received the Bidding Documents. Questions received less than ten (10) days prior to the date for opening of Bids may not be answered. Only answers issued by formal written Addenda will be binding. Oral and other interpretations or clarifications will be without legal effect. Addenda may also be issued to modify the Bidding Documents as deemed advisable by the City.

7. Bid Security Requirements All Bids submitted must be accompanied by a Bid deposit in the amount of five percent (5%) of the base Bid which shall be in the form of a Bid Bond (on the form provided in these Bidding Documents), Cashier's Check, Letter of Credit, Certificate of Deposit or other instrument approved in advance by the City. Prior to submittal of the Bid the City Treasurer must approve both the financial institution and text of a Letter of Credit. A Cashier's Check or a Certificate of Deposit shall be payable to the City Treasurer.

8. Forfeiture of Security If a Bidder fails or refuses to execute the Contract when requested by the City, any Bid security given to the City shall immediately become due and payable and forfeited to the City as liquidated damages.

9. Mistake in Bid Security By submitting a Bid, Bidder agrees to correct any mistakes on a Bid security submission when requested by the City. When such a mistake occurs and a Bidder fails or refuses to

correct the mistake or execute the Contract when requested by the City, any Bid security shall be forfeited to the City and the Bidder shall also be subject to debarment and damages.

10. Bids that Exceed the Engineer's Estimate The City may offer the apparent lowest, responsive and responsible Bidders the option of performing the Work for the Engineer's estimate for the Project with no changes to the Bid requirements or scope of the Project if the Bid is not more than five percent higher than the Engineer's estimate.

11. Post Bid Required Submissions The successful Bidder will be required to submit the following documents with the signed copies of the Bid Form/Contract or within the timeframes specified in the Notice of Intent to Contract letter. Copies of the City's forms that the successful Bidder will be required to sign are bound into this Project Manual for information:

a. Properly signed, dated, and sealed Performance and Maintenance Bond and Payment Bond;

b. Properly completed certificates of insurance;

c. Copies of licenses required by the City to do the Work;

d. A copy of CONTRACTOR's current Certificate of Good Standing or Fictitious Name Registration from the Missouri Secretary of State, or other acceptable proof; and

12. Indemnification – City of Kansas City. The contract documents contains a requirement that Contractor shall indemnify, defend and hold harmless the City and any of its agencies, officials, officers, or employees from and against all claims, damages, liability, losses, costs, and expenses, including reasonable attorneys' fees, arising out of or resulting from any acts or omissions in connection with the contract, caused in whole or in part by Contractor, its employees, agents, or Subcontractors, or caused by others for whom Contractor is liable, including negligent acts or omissions of the City, its agencies, officials, officers, or employees. The contract requires Contractor to obtain specified limits of insurance to insure the indemnity obligation. Contractor has the opportunity to recover the cost of the required insurance in the Contract Price by including the cost of that insurance in the Bid amount.

13. City's Buy American and Missouri Preference Policies It is the policy of the City that any manufactured goods or commodities used or supplied in the performance of any City contract or any subcontract thereto shall be manufactured or produced in the United States whenever possible. When Bids offer quality, price, conformity with specifications, term of delivery and other conditions imposed in the specifications that are equal, the City shall select the Bid that uses manufactured goods or commodities that are manufactured or produced in the United States. The City shall give preference to all commodities manufactured, produced, or grown within the State of Missouri and to all firms, corporations, or individuals doing business as Missouri firms, corporations or individuals, when quality is equal or better and delivered price is the same or less. It is the bidder's responsibility to claim these preferences.

14. Affirmative Action It is the policy of the City that any person or entity entering into a contract with the City, will employ applicants and treat employees equally without regard to their race, color, sex, religion, national origin or ancestry, disability, sexual orientation, gender identity or age. Bidder will be required to comply with the City's Affirmative Action ordinance if Bidder is awarded a contract from the City totaling more than $300,000.00. If you have any questions regarding the City's Affirmative Action requirements, please contact CREO KC at (816) 513-1836 or visit the City's website at www.kcmo.gov.

15. Tax Clearance Bidder will be required to furnish to CITY sufficient proof from City's Commissioner of Revenue, verifying that Bidder is in compliance with the license and tax ordinances administered by City's Revenue Division as a precondition to CITY making its first payment under any CONTRACT over $160,000.00. Bidder will also be required to obtain proof of City tax compliance from all of its Subcontractors prior to the Subcontractors performing any Work.

16. Substitutions or "Or-Equal" Items The procedure for submission of substitutions or "or-equal" items is set forth in the General Conditions and Supplementary Conditions.

17. Prevailing Wage Requirements The successful Bidder shall pay the prevailing hourly rate of wages as determined by the Missouri Annual Wage Order and/or Federal Wage Determination set forth in the Project Manual. In case of a conflict between Missouri and Federal wage rates, the higher rate shall apply.

Successful Bidder shall be required to use City's Internet web based Prevailing Wage Reporting System provided by City and protocols included in that software during the term of this Contract. When requested by the City, Bidder shall submit user applications to City's provided Prevailing Wage Reporting System for all applicable personnel and shall require subcontractors to submit same.

18. Contract Information Management System Successful Bidder shall be required to use City's Internet web-based Contract Information Management System/Project Management Communications Tool provided by City and protocols included in that software during the term of this Contract. Bidder/Proposer shall submit user applications to City's provided Contract Information Management System for all personnel, subcontractors or suppliers as applicable.

19. Disadvantaged Business Statement The Kansas City Water Services Department is an Equal Opportunity Employer and invites the submission of bids from Disadvantaged Business Enterprises.

20. Forfeiture of Bid Bonds for Failure to Make DBE Submission: By submitting its Bid, Bidders is agreeing to following the (1) Bidder has made by Bid opening a good faith effort to meet the DBE requirements established for the Project; or Bidder will continue to make during the **48 hours** after Bid opening a good faith effort to meet the DBE requirements. Established for the Project: and a timely submitting its **00990.01** attachment form for the DBE Missouri requirements.

21. DBE Program Requirements City desires that Disadvantaged Business Enterprises (DBE) have a maximum opportunity to participate in the performance of City contracts. Program specifics are available in Section 00990 Clean Water State Revolving Funds Specification Requirements.

22. Workforce Program Requirements City desires that minorities and women have a maximum opportunity to practice their trades on city construction projects. The minimum company-wide goals are a ten percent (10%) minority workforce and two percent (2%) women workforce. The City's CREO KC Forms and CREO KC Instructions for Construction Projects are incorporated into these Bidding Documents and the Contract Documents.

Successful Bidder shall be required to use City's Internet web-based Workforce Program Reporting System provided by City and protocols included in that software during the term of this Contract. When requested by the City, Bidder shall submit user applications to City's provided Workforce Program Reporting System for all applicable personnel and shall require subcontractors to submit same.

23. Subcontractors, Suppliers and Others

a. If the Contract Documents require the identity of certain Subcontractors, Suppliers and other persons and organizations (including those who are to furnish the principal items of material and equipment) to be submitted to City, the apparent lowest, responsive and responsible Bidder, and any other Bidder so requested, shall submit to City a list of all such Subcontractors, Suppliers and other persons and organizations proposed for those portions of the Work for which such identification is required. An experience statement shall accompany such list with pertinent information regarding similar projects and other evidence of qualification for each such Subcontractor, Supplier or organization if requested by City. If City has reasonable objection to any proposed Subcontractor, Supplier or other person or organization, City may request the apparent lowest, responsive and responsible Bidder to submit an acceptable substitute without an increase in Bid price.

b. By submitting its Bid, Bidder agrees that it has read and understands all the provisions of General Condition No. 6.07, Concerning Subcontractors, Suppliers and Others, and that it will comply with all those provisions including but not limited to mandatory mediation of disputes and the prohibition against paid-if-paid and paid-when-paid contract clauses. It is the City's expectation that all Subcontractors and Suppliers will be treated fairly and in good faith by the successful Bidders and that the successful Bidder will make all reasonable efforts to resolve contract disputes with a Subcontractor or Supplier in a prompt and fair manner. If the City is notified by a Subcontractor or Supplier of a contract claim with the successful Bidder, City will notify the successful Bidder and will request prompt resolution of the claim. City will provide any such Subcontractor or Supplier information regarding mandatory mediation as well as a copy of the Payment Bond. City may notify the Surety that City has taken cognizance of such claim.

c. In accordance with the Missouri Prompt Payment Act, City reserves the right to withhold payment(s) in good faith from the successful Bidder due to: i)the successful Bidder's failure to comply with any

material provision of the contract; ii)third party claims filed or reasonable evidence that a claim will be filed; iii)the successful Bidder's failure to make timely payments for labor, equipment or materials; or iv)for damage to a Subcontractor or Supplier.

d. By submitting its Bid, Bidder agrees it will not deny any Subcontractor subcontracting opportunities solely because the Subcontractor is not a signatory to collective bargaining agreements with organized labor.

e. The provisions of GC 6.07 are a material term of the Contract with the City and failure by the successful Bidder to comply with the provisions of this section will be taken into consideration by City in making the determination of lowest, responsive and responsible bidder in any subsequent City contracts.

24. Pre-Bid Conference The Water Services Department will hold a pre-Bid conference on January 15th, 2026, at 2:00 PM on Microsoft Teams and in-person at Kansas City Water Services Department. Contact the Project Manager prior to the meeting for the link to attend. Attendance at the pre-Bid conference is mandatory for all Bidders on this Project. For this Project, the City shall not contract with a Bidder who has not attended the entire pre-Bid conference for this Project.

25. On-Site Inspection The Project Site will be available for inspection by Bidders. Bidders visiting the Project Site shall be responsible for their own safety. The Project Site shall be available for inspection by appointment from 8 AM to 3 PM each day Monday through Friday (holidays excepted). Bidders may contact the following individual from the Water Services Department for an appointment.

26. Signatures Each copy of the Bid Form/Contract must be signed and properly dated by the following, as applicable:

Limited Liability Company:

□ a member of the limited liability Company authorized to sign on behalf of the company.

Partnership:

□ a partner authorized to sign on behalf of the partnership.

Sole Proprietor:

□ the proprietor.

Joint Venture:

□ the parties to the Joint Venture authorized to sign on behalf of each party to the Joint Venture, or a person authorized by each party to the Joint Venture to sign on behalf of all parties to the Joint Venture.

Corporation:

□ a corporate office authorized to sign on behalf of the corporation. Corporation's seal must be attached to the signature.

27. SRF Statement This project is being financed through the Missouri State Revolving Fund, by the Water and Wastewater Loan Revolving Fund and federal Capitalization Grants to Missouri.

28. Forward all questions in writing to the following Project Manager and Contract Administrator. Questions received less than three (3) days prior to the Bid Date may not be answered. Interpretations or clarifications considered necessary by the Project Manager in response to such questions will be issued by Addenda to all Bidders. Oral or other interpretations or clarifications shall be without legal effect, even if made at a Pre-Bid Meeting.

26 29 13 Enclosed Controllers
26 29 23 Variable-Frequency Motor Controllers
26 33 53 Static Uninterruptible Power Supply
26 43 13 Surge Protection Devices for Low Voltage Electrical Power Equipment
26 50 00 Lighting

DIVISION 27 NOT USED

DIVISION 28 – ELECTRONIC SAFETY AND SECURITY
28 10 00 Electronic Access Control and Intrusion Detection
28 15 23 Video Intercom Entry Systems
28 20 00 Video Surveillance System
28 31 00 Addressable Fire Alarm Systems

DIVISION 29 THRU 30 NOT USED

DIVISION 31 – EARTHWORK
31 11 00 Clearing and Grubbing
31 20 50 Site Preparation and Earthwork
31 23 33 Trenching & Backfilling for Open-Cut Construction
31 66 12 Subsurface Improvement

DIVISION 32 – EXTERIOR IMPROVEMENTS
32 12 17 Hot Mix Asphaltic-Concrete Pavement
32 15 00 Aggregate Surface Course
32 16 00 Curb, Gutter, Sidewalk, Median, and Paved Drainage
32 31 13 Chain Link Fence
32 92 00.10 Native Grasses
32 93 00 Trees and Shrubs
32 93 13 Ground Cover and Plants

DIVISION 33 – UTILITIES
33 01 30.19 Temporary Bypass Pumping Systems for Sewer Pipelines
33 11 00 Pressure Pipe
33 12 16 Utility Valves and Accessories
33 12 41 Vertical Turbine Pumps
33 31 50 Pipe Installation
33 32 22 Submersible Pumps
33 33 11 Gravity Piping

DIVISION 34 NOT USED

DIVISION 35 – WATERWAY AND MARINE CONSTRUCTION
35 20 16 Slide Gates

DIVISION 36 THRU 39 NOT USED

DIVISION 40 – PROCESS INTEGRATION
40 60 00 Process Control and Instrumentation - General Requirements
40 61 96 Process Control Software Programming and Reports
40 61 96A IO List
40 62 00 Computer System Hardware and Ancillaries
40 66 00 Process Control Networks
40 67 00 Process Control Panels and Hardware
40 68 00 Process Control Software
40 70 00 Instrument for Process Systems
40 70 00A Instrument List
40 71 90 Parshall Flume Liner

DIVISION 41 – MATERIAL PROCESSING AND HANDLING EQUIPMENT
41 22 00 Cranes and Hoists

DIVISION 42 NOT USED

DIVISION 43 – PROCESS INTEGRATION
43 11 38 Positive Displacement Blowers
43 23 57 Progressive Cavity Pumps
43 23 58 Rotary Lobe Pumps

DIVISION 44 – POLLUTION AND WASTE CONTROL EQUIPMENT
44 31 19 Odor Control System

DIVISION 46 – WATER AND WASTEWATER EQUIPMENT
46 05 13 Common Motor Requirements for Water and Wastewater Equipment
46 21 13 Coarse Screening Equipment
46 21 16 Screening Equipment
46 23 00 Grit Removal and Treatment Equipment
46 33 33 Polymer Blending and Feed Equipment
46 42 57 Large Bubble Mixing System
46 51 21 Medium Bubble Membrane Diffuser
46 53 60 Granular Sludge Biological Treatment Package
46 66 00 Ultraviolet Light Disinfection Equipment
46 71 33 Rotary Drum Thickener

APPENDIX A
Grit Removal System Pre-Selection Information

APPENDIX B
AGS System Preselection Information

APPENDIX C

Asbestos, Lead-Containing Paint, & Hazardous Materials Survey Report

APPENDIX D
Report of Subsurface Exploration & Geotechnical Engineering Evaluation
(To be provided upon request to Project Manager)

APPENDIX E

ADDENDUM NUMBER 2

Project/Contract Number: 81000927/1698

Project Title: Todd Creek WWTP Expansion & Major Upgrade

ISSUE DATE: **1/20/2026**

Bidders are hereby notified that the Bidding and Contract Documents for the above project, for which Bids are to be received on **February 3rd, 2026**, are amended as follows:

The Bid date for this Project stated in Document 00130 - Invitation to Bid shall be changed to: 2:00 PM, on **February 24th, 2026.**

Information to Bidders The following is provided to Bidders for information only:

1. DBE Partnering Session In-Person Attendance List
2. DBE Partnering Session Online Attendance List
3. Pre-Bid Meeting PowerPoint Slides
4. Pre-Bid Meeting In-Person Attendance List
5. Pre-Bid Meeting Online Attendance List

Q1.	There is a note that all stormwater pipe should be RCP Cl3. Polypropylene is approved by KCMO for any application including ROW. Would polypropylene pipe be acceptable for use on this project.
A1.	**Yes, dual wall and triple wall polypropylene storm sewer pipe is acceptable per Kansas City, Missouri Water Services Department standard specification section 02630 – Stormwater Pipe and Structures.**
Q2.	• KCMO provided the quote and Set Price for the AGS System by Aqua-Aerobics. Within this quote there are Payment Terms already noted by Aqua-Aerobic, does KCMO agree to these payment terms? o 10% of total purchase price at order execution. o 30% of total purchase price at our transmittal of engineer's submittal data. o 50% of total purchase price at shipment of goods. o 5% of total purchase price at completion of Start-up and Training. o 5% of total purchase price at completion of final process checkout.
A2.	**Yes, KCMO does agree to those terms.**
Q3.	The specifications provide both Building and Heavy wage rates. Please confirm which one should be used for this project.
A3.	**Both wage rates will be required for the work on this project dependent on what is being completed.**
Q4.	The Equipment Questionnaire calls for Rammed Aggregate Piles spec 31 66 13.13 - There is no specification for this. However there is a specification for 31 66 12 Cast-In-Place Ground Improvements. Please clarify.

A4.	**The spec for Cast-In-Place Ground Improvements should be used. Rammed Aggregate Piles should not have been included in the questionnaire and will be removed with this addendum.**
Q5.	Can Hoover Forcemain be shutdown for tie-in? If not - where is the bypass supposed to pull from?
A5.	**Yes, the Hoover Heights forcemain can be shut down for a tie-in. We have updated SECTION 01140 – WORK RESTRICTIONS to include this work.**
Q6.	Is the contractor responsible for the cost of the building permit fees? The Valuation and the Plan Check Fee?
A6.	**Yes, the contractor will be responsible for the building permit fees, valuation fees, and plan check fee.**
Q7.	Who is responsible for the cost of the in-field testing? Concrete testing, earthwork, etc.
A7.	**The contractor will be responsible for the cost of in-field testing, concrete testing, earthwork and other forms of testing.**
Q8.	Spec 01210 Admin Building Furniture allowance section 1.03 B and 1.03 C both state labor, installation, testing and finishing. Can you please clarifier if the labor to install the furniture will be paid out of the allowance?
A8.	**Yes, the labor to install the furniture will be paid out of the allowance.**

Bidding Requirements

1. Delete and replace the following section(s):
    a. Delete Drawing C128 – Note 1:

       "ALL STORM SEWER PIPE SHALL BE
       TYPE III RCP."

       and replace with the following Drawing C128 – Note 1:

       "ALL STORM SEWER PIPE SHALL BE TYPE III RCP OR DUAL/TRIPLE WALL POLYPROPYLENE."

    b. Delete Drawing C129 – Note 1:

       "ALL STORM SEWER PIPE SHALL BE
       TYPE III RCP."

       and replace with the following Drawing C128 – Note 1:

       "ALL STORM SEWER PIPE SHALL BE TYPE III RCP OR DUAL/TRIPLE WALL POLYPROPYLENE."

    c. Delete Drawing C130 – Note 1:

       "ALL STORM SEWER PIPE SHALL BE
       TYPE III RCP."

       and replace with the following Drawing C128 – Note 1:

"ALL STORM SEWER PIPE SHALL BE TYPE III RCP OR DUAL/TRIPLE WALL POLYPROPYLENE."

d. Delete Drawing C131 – Note 1:

"ALL STORM SEWER PIPE SHALL BE
TYPE III RCP."

and replace with the following Drawing C128 – Note 1:

"ALL STORM SEWER PIPE SHALL BE TYPE III RCP OR DUAL/TRIPLE WALL POLYPROPYLENE."

e. Delete Drawing C132 – Note 1:

"ALL STORM SEWER PIPE SHALL BE
TYPE III RCP."

and replace with the following Drawing C128 – Note 1:

"ALL STORM SEWER PIPE SHALL BE TYPE III RCP OR DUAL/TRIPLE WALL POLYPROPYLENE."

f. Delete Drawing C133 – Note 1:

"ALL STORM SEWER PIPE SHALL BE
TYPE III RCP."

and replace with the following Drawing C128 – Note 1:

"ALL STORM SEWER PIPE SHALL BE TYPE III RCP OR DUAL/TRIPLE WALL POLYPROPYLENE."

2. Add the following section(s):
   a. Document, Section 33 33 11, Part 2 – Products, Subsection 2.09 Polypropylene Pipe – Stormwater (PP), Paragraph A:

   "Specified in KC Water Standard Specifications Section 02630 – Stormwater Pipe and Structures."

   b. Document, Section 33 33 11, Part 3 – Execution, Subsection 3.08 Polypropylene Pipe – Stormwater (PP), Paragraph A:

   "Specified in KC Water Standard Specifications Section 02630 – Stormwater Pipe and Structures."

Contracting Requirements

1. Delete the following section(s):
    a. Document, Section 00130 – Invitation to Bid, Page 1, Paragraph 1:

        "The General Services Department of Kansas City, Missouri will receive sealed Bids until 2:00 PM, on February 3, 2026 at 4800 E 63rd Street, Kansas City, Missouri 64130, for Project No. 81000927/Contract No. 1698, Todd Creek WWTP Expansion & Major Upgrades. Bids will be opened after that time at the same Location."

    b. Document, Section 00130 – Invitation to Bid, Page 1, Paragraph 2, Sentence 2:

        "City desires that Disadvantaged Business Enterprises (DBE) have an opportunity to participate in the performance of City contracts. The goals for this specific Project are stated in the Missouri State Revolving Fund Procedures for Implementation."

    c. Document, Section 00210 - Instruction to Bidders, Section 22 – Workforce Program Requirements, Paragraph 1, Sentence 2:

        "The minimum company-wide goals are a ten percent (10%) minority workforce and two percent (2%) women workforce."

2. Add the following section(s):
    a. Document, Section 00130 – Invitation to Bid, Page 1, Paragraph 1:

        "The General Services Department of Kansas City, Missouri will receive sealed Bids until 2:00 PM, on February 24, 2026 at 4800 E 63rd Street, Kansas City, Missouri 64130, for Project No. 81000927/Contract No. 1698, Todd Creek WWTP Expansion & Major Upgrades. Bids will be opened after that time at the same Location."

    b. Document, Document, Section 00130 – Invitation to Bid, Page 1, Paragraph 2, Sentence 2:

        "The goals for this specific Project are stated in the Missouri State Revolving Fund Procedures for Implementation and are (10%) MBE, (5%) WBE. See Section 00990 for further instructions."

    c. Document, Section 00210 - Instruction to Bidders, Section 22 – Workforce Program Requirements, Paragraph 1, Sentence 2:

        "The minimum company-wide goals are (12.7%) minority workforce and (6.9%) women workforce."

d. Document, Section 00990 CSSRF Drop-In Specifications, Section Standard Federal Equal Employment Opportunity Construction Contract Specifications (Executive Order 11246), Page 4, Section 2, Table Column "Goals for Minority Participation for Each Trade, Row 2:

"12.7%"

Specifications:

1. Delete and replace the following section(s):
    a. Delete Document, DIV 00, Section 00410.04 – Equipment Questionnaire, and replace with the following DIV 00, Section 00410.04 – Equipment Questionnaire
    b. Delete Document, DIV 01, Section 01140 – Work Restrictions, and replace with the following DIV 01, Section 01140 – Work Restrictions
2. Delete the following section(s):
    a. Document DIV 00, Section 00440 – CREO KC Form 5

Drawings: Re-issue the drawings listed below.

1. D116 - POTABLE WATER PROFILES - SHEET 2
2. E393 - HEADWORKS ELECTRICAL CABLE TAG SCHEDULE SHEET 3
3. Y407 - AERATION BLOWERS NO. 1, NO. 2 AND NO. 3 PROCESS & INSTRUMENTATION DIAGRAM
4. Y704 - THICKENED SLUDGE HOLDING AND LOADOUT PROCESS & INSTRUMENTATION DIAGRAM
5. Y706 - THICKENED SLUDGE TANK MIXING AIR COMPRESSORS AND RECEIVING TANK PROCESS & INSTRUMENTATION DIAGRAM

NOTE: Bidders must acknowledge receipt of this Addendum by listing the number and date, where provided, on the Bid Form - Document 00410.

Potential Bidders

Pre-Proposal Meeting

Todd Creek WWTP Expansion & Major Upgrade – Project Team

KC Water

- ❑ Interim Chief Engineering Officer: David Poirier
- ❑ Facilities & Plants Engineering Division Head: Blake Anderson
- ❑ Facilities & Plants Engineering Section Head: Kevin White
- ❑ Project Manager: Shawn Cross
- ❑ Assistant Project Manager: Conner Hanlon
- ❑ Contract Administrator: Marzella Newman-Buckner

Todd Creek WWTP Expansion & Major Upgrade – Project Team

Project Manager: Shawn Cross
Phone Number: (816) 513-0442
E-Mail: Shawn.Cross@kcmo.org

Assistant Project Manager: Conner Hanlon
Phone Number: (816)-513-0526
E-Mail: Conner.Hanlon@kcmo.org

Contract Administrator: Marzella Newman-Buckner
Phone Number: (816) 513-0319
E-Mail: Marzella.Newman-Buckner@kcmo.org

Disadvantaged Business Enterprise Requirements (DBE)

DBE Goals: 10% MBE and 5% WBE

Work Force Goals: 12.7 MBE 6.9% WBE

MBE/WBE Compliance Inquiries:

Alvaro Ontiveros
alvaro.ontiveros@kcmo.org

Workforce Compliance Inquiries:

Valerie Johnson
Phone (816) 513-1406
Valerie.Johnson@kcmo.org

Note: All DBE forms in Attachment 1 must be included with your bid

Bidder Instructions

Sealed Bids Due Thursday, February 3rd, 2026, by 2:00 PM

Outside of each envelope/package must include:

Bidder's Name and Address

Project No. 81000927 / Contract No. 1698

Invitation For Bid – Construction Submittal for Project No. 81000927

Deliver to:

Marzella Newman-Buckner, Senior Procurement Officer

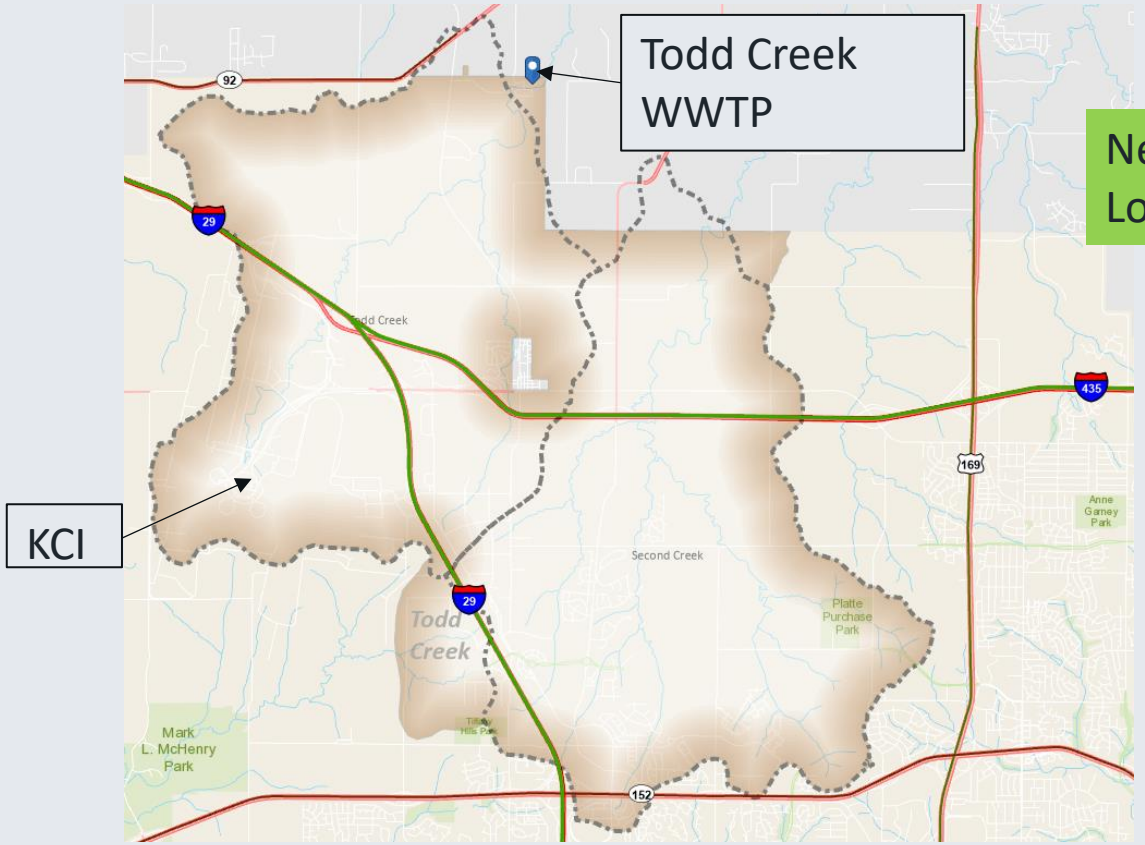
4800 E. 63rd Kansas City,

Kansas City, MO 64130

Project Information & Details

Todd Creek WWTP Expansion & Major Upgrade

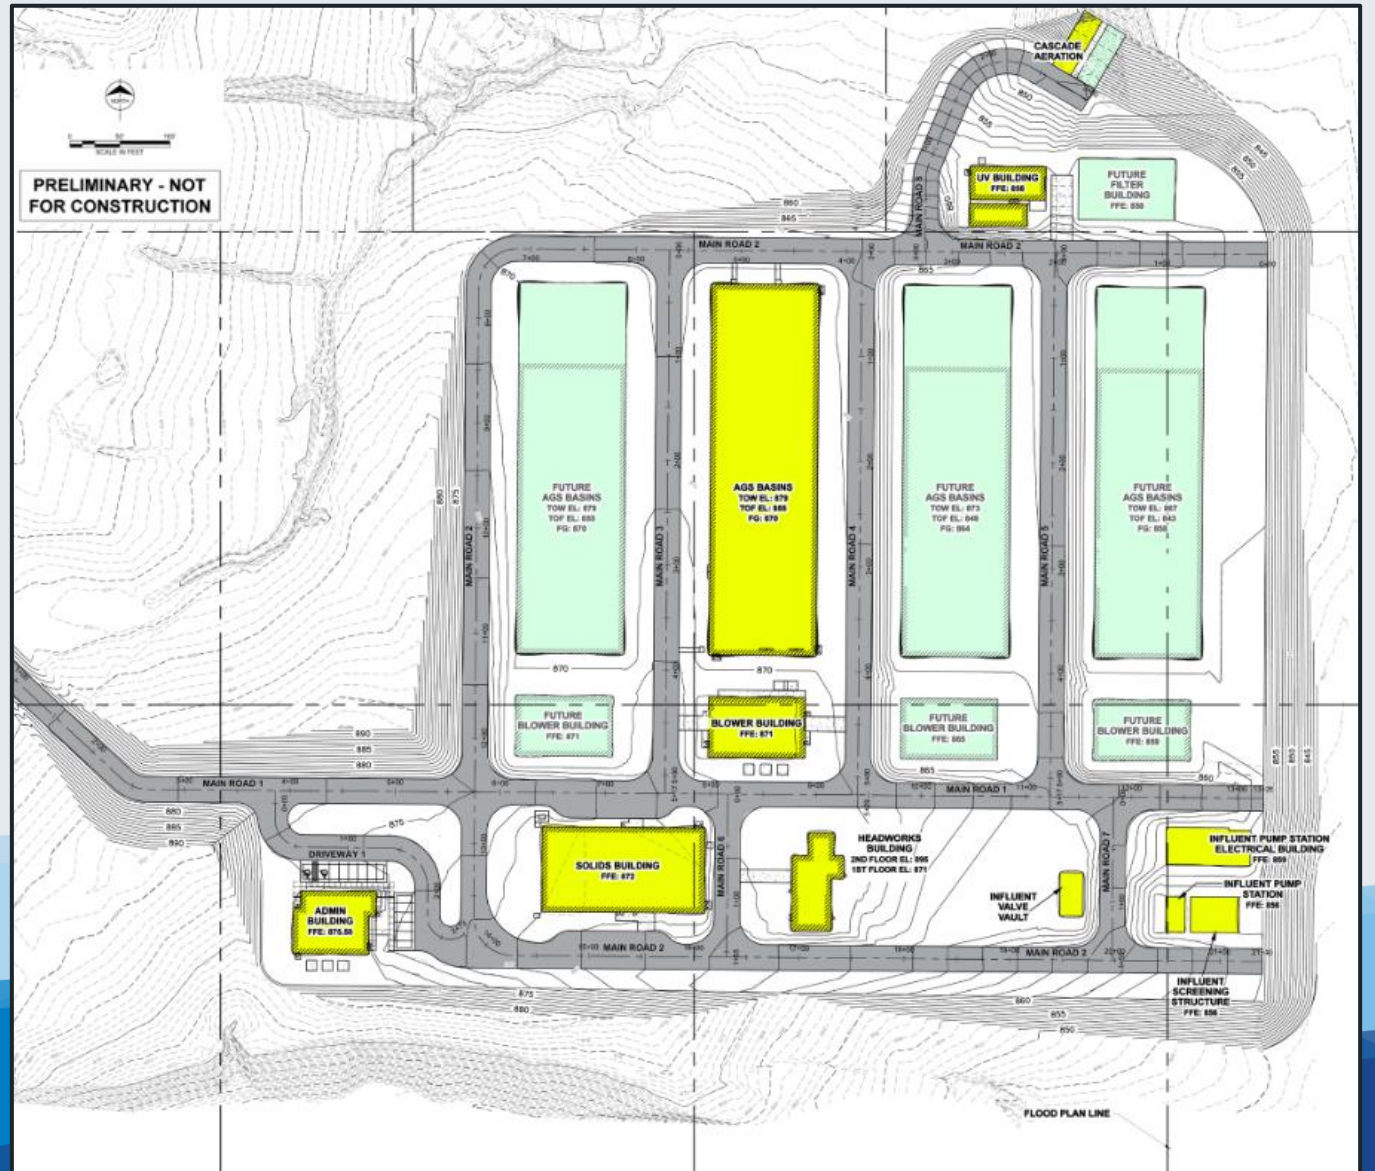
Project Location



Project Overview

- Greenfield Site
- New Treatment Technology (Aerobic Granular Sludge)
- Modular Design, Expand as Necessary
- 4.6 MGD

Plant Layout and Processes

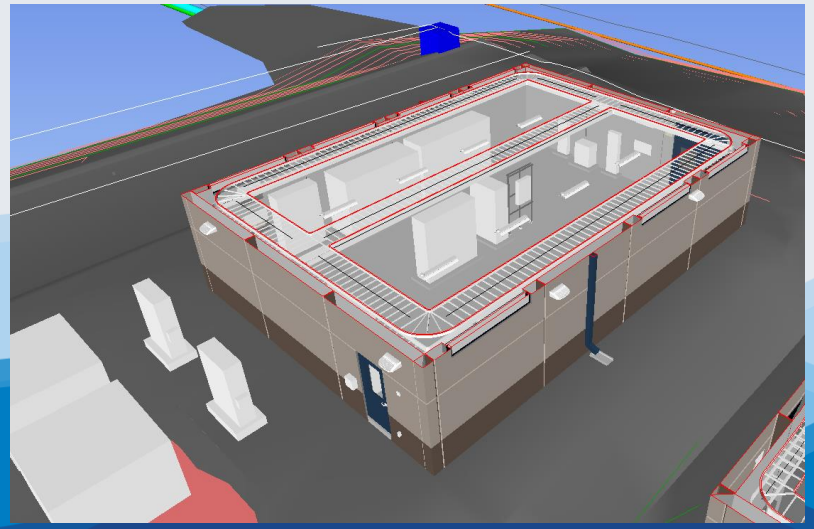


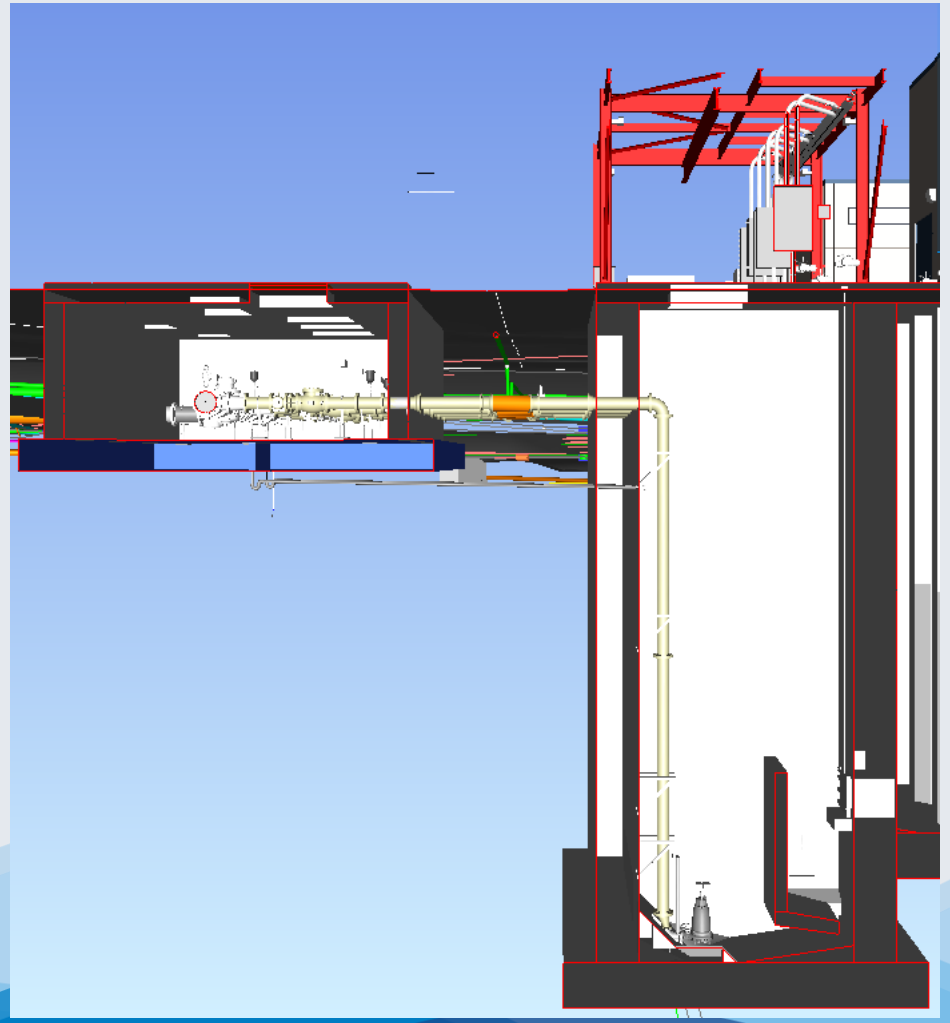
Coarse Screening

- (3) Channels
- (2) Screens
- Electrical Room
- Ozone injected in channels
- Hydrogen Peroxide Injected Upstream
- Channel Depth ~42’

Influent Pump Station & Electrical Room

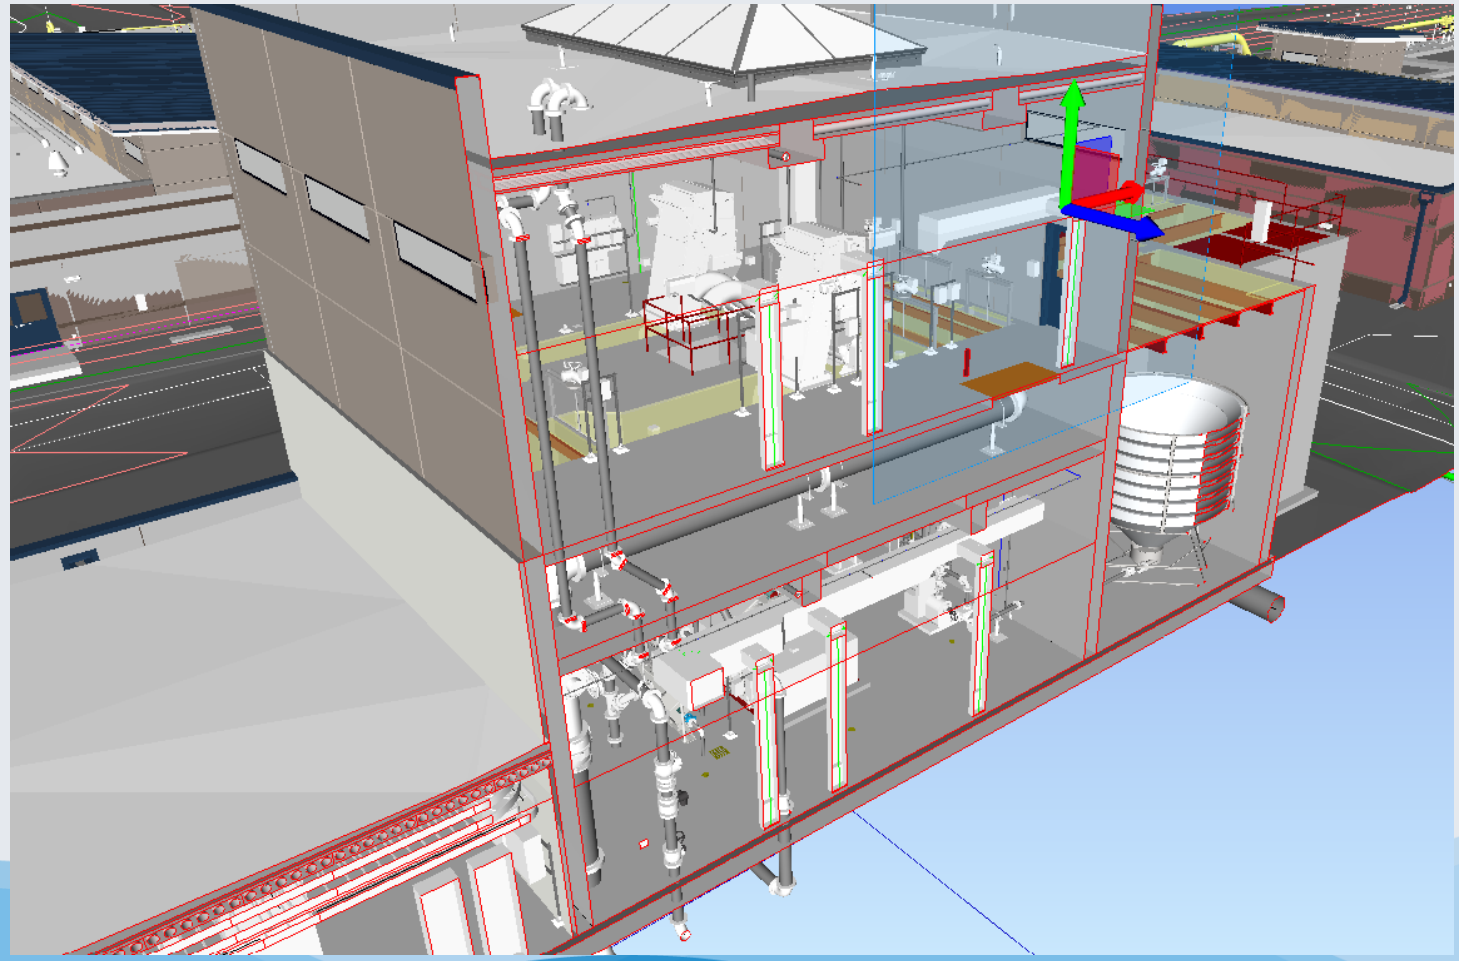
- (5) Pumps
  - (3) 150 HP
  - (2) 50 HP
- (1) Future Pump
- Electrical Building (Utility Entrance)



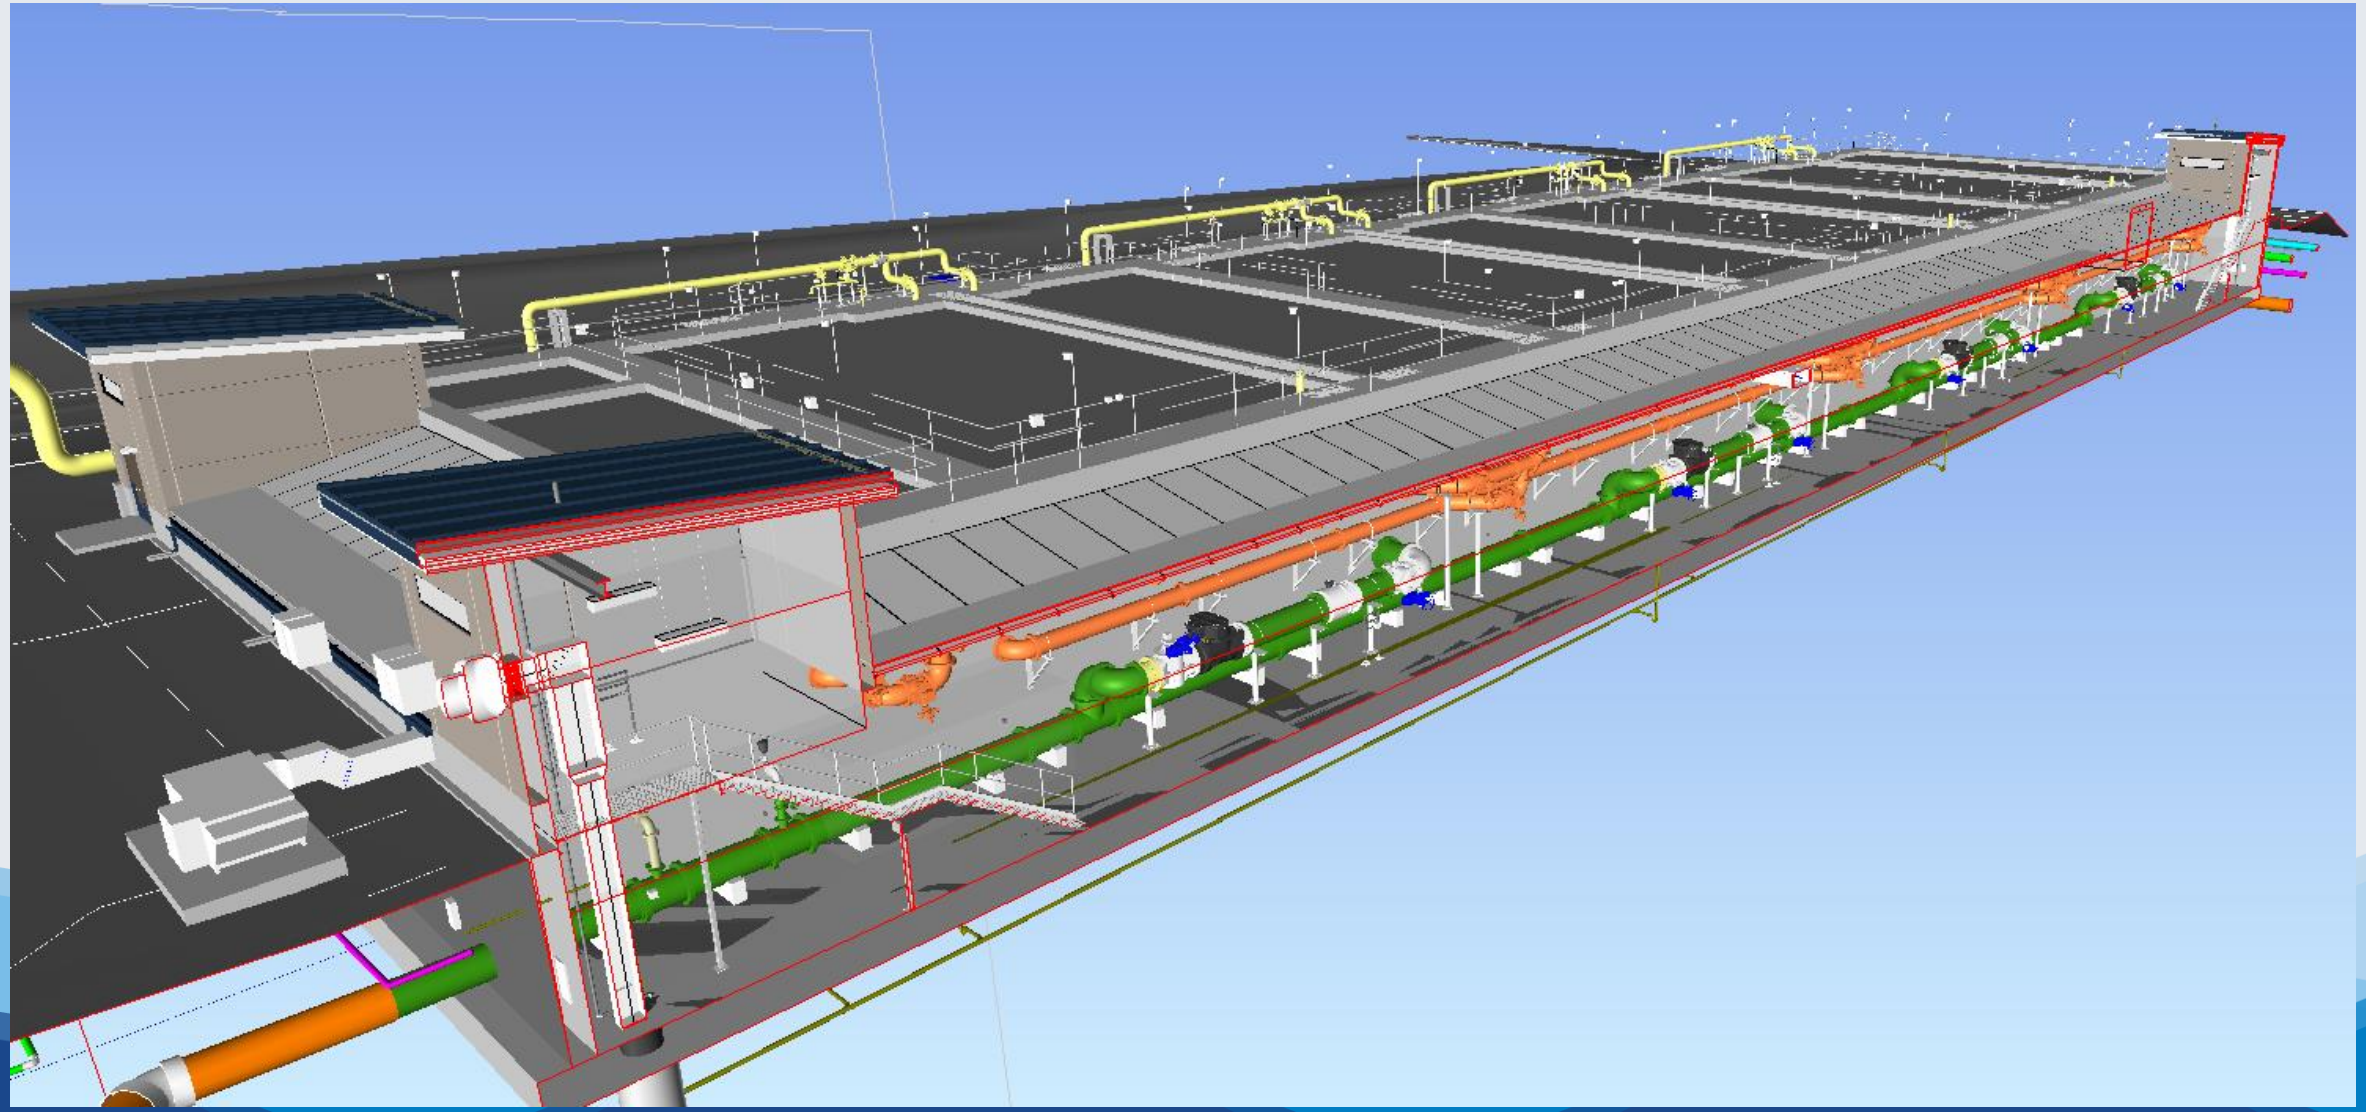


Headworks Building & Electrical Room

- (2) 6mm Screens
- (1) Headcell Grit Removal
- Separate Electrical Room
- Designed for Future Growth

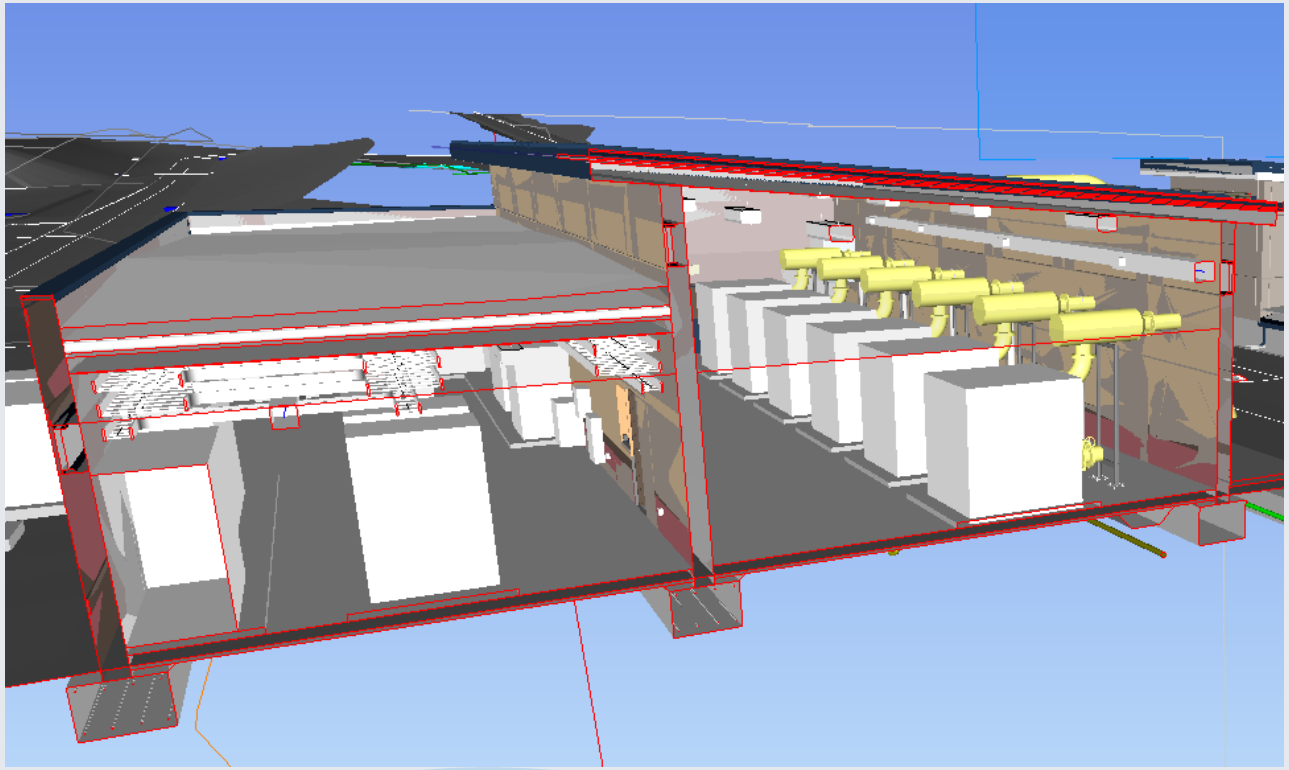


AGS Basin



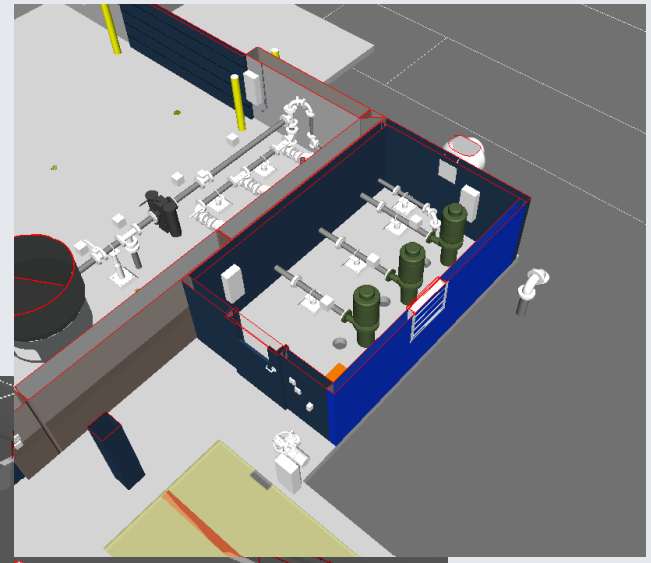
Blower Building

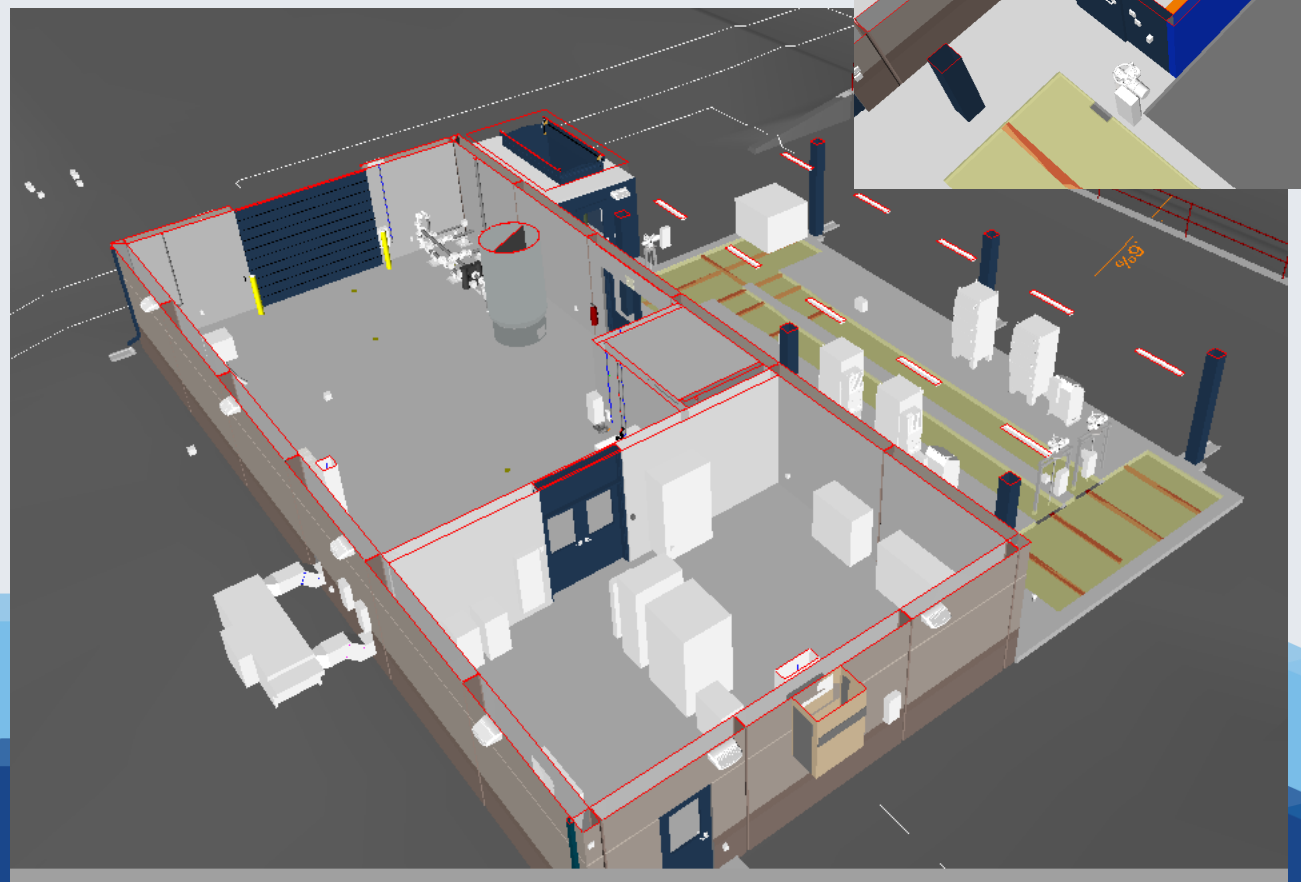
- (5) PD Blowers
  - (2) Future
- Electrical Room for Blower Building and AGS System
- Utility Entrance



Disinfection Building

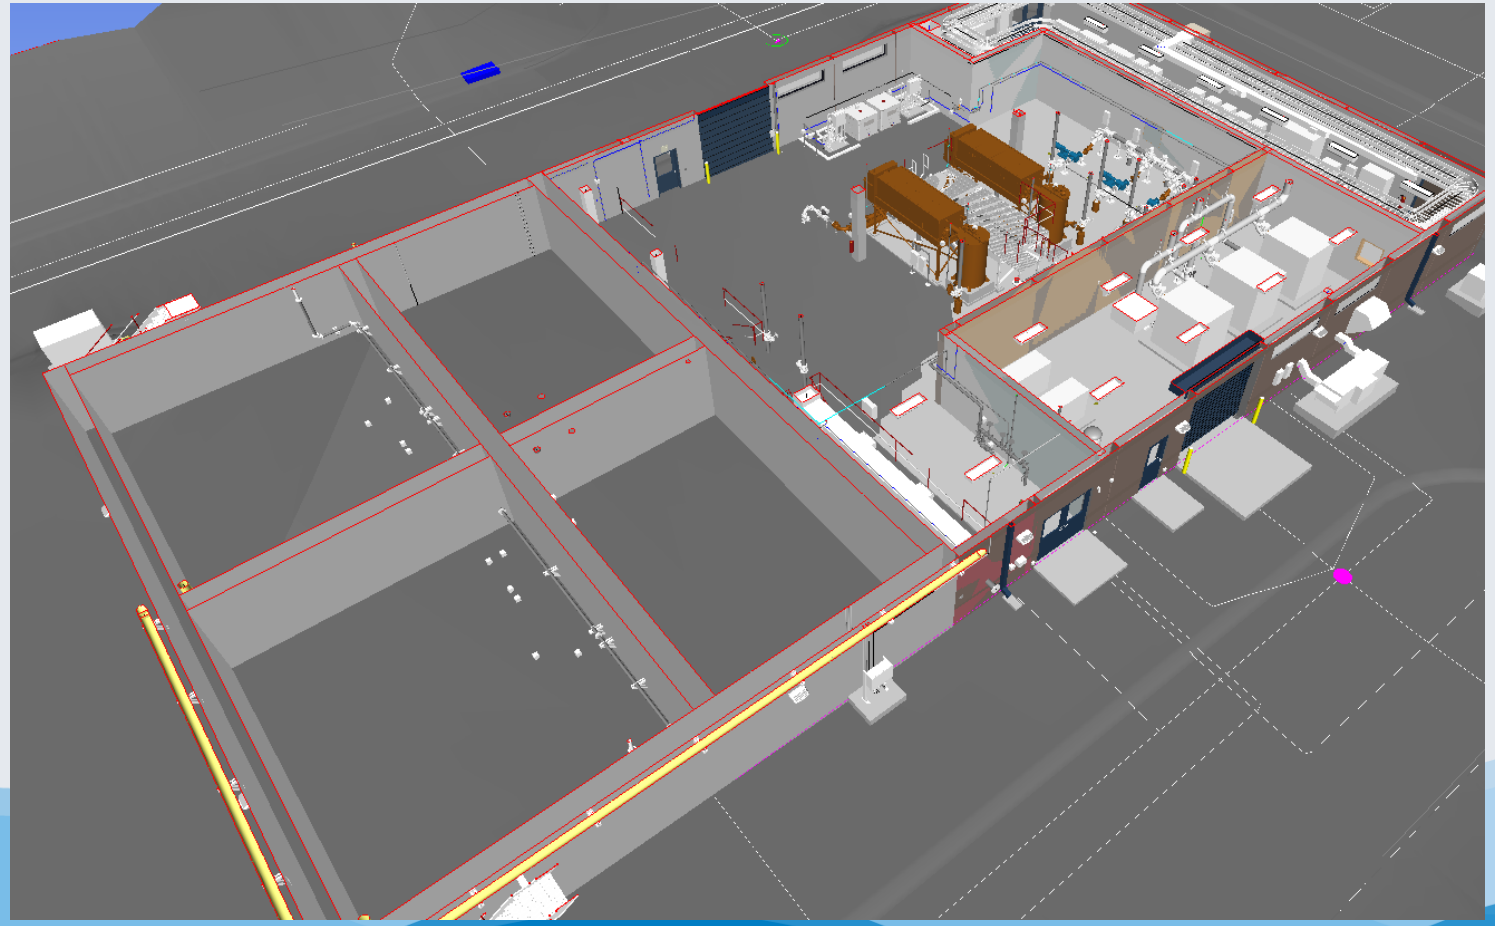
- (2) UV Channels
  - Accommodates future growth
  - Discharges to cascading aeration structure
- Electrical Room
- Storage Space
- Process Water Pump Station





Solids Handling Building

- (2) Rotary Drum Thickeners
  - (1) Future
- Electrical Room
- (3) PD Blowers
- Holding Tanks
  - Thin Sludge (Uncovered, Medium Bubble Diffusers)
  - Thick Sludge (Covered, Large Bubble Diffusers)



Admin Building

- Laboratory
- Incoming Electrical Utilities
- Electrical Room
- Office Space
- Conference Room

Old Facility Demolition

- Sludge Holding Cell Closure Plan
- Return Site to Natural Conditions

Final Reminders

Questions are due February 2nd, 2026, by 2pm

Sealed Bids are due February 3rd, 2026, by 2pm

Deliver to:

Marzella Newman-Buckner, Senior Procurement Officer
4800 E. 63rd Kansas City,
Kansas City, MO 64130

SECTION 00410.04 – EQUIPMENT QUESTIONNAIRE

The Bidder shall enter in the spaces provided the names of the manufacturers of equipment which Bidder proposes to furnish and shall submit this Equipment Questionnaire with its Bid. Owner will review and evaluate the information before award of the Contract.

Only one manufacturer's name shall be listed for each item of equipment. Upon award of a contract, the named equipment shall be furnished. Substitutions will be permitted only if named equipment does not meet the requirements of the Contract Documents, the manufacturer is unable to meet the delivery requirements of the construction schedule, or the manufacturer is dilatory in complying with the requirements of the Contract Documents. Substitutions shall be subject to concurrence of Owner and shall be confirmed by Change Order.

Preliminary acceptance of equipment listed by manufacturer's name shall not in any way constitute a waiver of the specifications covering such equipment; final acceptance will be based on full conformity with the Contract Documents.

Failure to furnish all information requested or entering more than one manufacturer's name for any item in this Equipment Questionnaire may be cause for rejection of the Bid.

SECTION 01140 – WORK RESTRICTIONS

PART 1 – GENERAL

1.01 SUMMARY

A. Section includes: Requirements for sequencing and scheduling the Work affected by existing site and facility; work restrictions; and coordination between construction operations and plant operations.

1.02 SUBMITTALS

A. Baseline Schedule with OCCP tasks.
B. Operational Change Control Plan (OCCP) Form.
C. Progress Schedule with OCCP tasks.

1.03 GENERAL CONSTRAINTS ON SEQUENCE AND SCHEDULING OF WORK

A. Wastewater projects:
    1. The Todd Creek Wastewater Treatment Plant is the City's only means of treating sewage for the designated service area prior to discharging to the Missouri River. Impairing the operational capabilities of this treatment plant will result in serious environmental damage and monetary fines.
    2. Conduct Work in a manner that will not impair the operational capabilities of essential elements of the treatment process or reduce the capacity of the entire treatment plant below levels sufficient to treat the quality of raw wastewater to the water quality limitations specified in the discharge permit. 3. Conduct commissioning and process start-up activities as specified in Section 01757 - Commissioning in a manner that will not impair the operational capabilities of essential elements of the treatment process or reduce the capacity of the entire existing treatment plant below levels sufficient to treat the quality of raw wastewater to the water quality limitations specified in the discharge permit.
    3. The status of the new treatment plant shall be defined as "operational" when it is capable of treating the entire quantity of wastewater received at the Todd Creek WWTP to the water quality limits specified in the discharge permit.
B. Work sequence and constraints:
    1. Utilize description of critical events in work sequence in this Section as a guideline for scheduling and undertaking the Work.
    2. Work sequence and constraints presented do not include all items affecting completion of the Work, but are intended to describe critical events necessary to minimize disruption of the existing facilities and to ensure compliance with National Pollutant Discharge Elimination System (NPDES) permit requirements.
C. Instrumentation and controls process performance testing:
    1. After the Process Operational Period, test PCIS system as specified in Section 01757 - Commissioning.

1.04 SHUTDOWN AND CONSTRUCTION CONSTRAINTS

A. Normal working hours:
    1. Construction will take place during normal working hours as defined:
        a. 7AM to 6PM Monday through Friday.

b. Refer to 0700 General Conditions Section 6.03 for further restrictions.

B. Construction Operations and Safety Constraints
   1. In recognition of nearby property owners concerns with construction activities, the following restrictions shall be adhered to unless otherwise accepted by the Owner in writing:
      a. Vehicle access for the demolition of the existing plant shall be through NW 144th Street. Access shall not be permitted off of Todd Creek Road.
      b. Vehicle and motorized equipment on site shall include backup/reverse alarms that utilize a "white noise" system rather than the more typical "beeper" system. The system should be in compliance with OSHA requirements for this type of safety device.

C. General shutdown constraints:
   1. Execute the Work while the existing facility is in operation.
   2. Some activities may be accomplished without a shutdown.
   3. Apply to activities of construction regardless of process or work area.
   4. Activities that disrupt plant or utilities operations must comply with these shutdown constraints.
   5. Organize work to be completed in a minimum number of shutdowns.
   6. Provide thorough advanced planning, including having required equipment, materials, and labor on hand at time of shutdown.
   7. Notify the City at least 30 days in advance of any tasks that will require dewatering and cleaning to allow the City the appropriate amount of time to conduct the work.
   8. Where required to minimize treatment process interruptions while complying with specified sequencing constraints, provide temporary pumping, power, lighting, controls, instrumentation, and safety devices.
   9. Final determination of the permitting of shutdowns will be the sole judgment of the Owner.
   10. Owner maintains the ability to abort on the day of the scheduled shutdown or to hold at any hold point.

D. Hoover Heights force main shutdown constraints:
   1. The Hoover Heights force main should not be shutdown for more than 8 hours at a time.
   2. There should be no rain in the area for at least 48 hours prior to the work taking place.
   3. Notify the City at least 14 days in advance of any tasks that will require the Hoover Heights force main to be shutdown.
   4. Coordinate all work that will require a shutdown with the Owner.
   5. Final determination of the permitting of shutdowns will be the sole judgment of the Owner.
   6. Owner maintains the ability to abort on the day of the scheduled shutdown or to hold at any hold point.

E. Unit process availability work limitations:
   1. Shutdowns and tie-ins or other activities that disrupt plant operations shall not occur if the following conditions exist unless approved by the OWNER in writing, or specified in 01140.01 Process and System Shutdown Constraints Schedule:
      a. Rainfall has occurred in the 2 days preceding the shutdown.
      b. Rainfall is forecast for more than 3 of the first 14 days of the shutdown period.

F. Shutdown activities:
   1. Scheduling:
      a. Perform between the hours of 10 p.m and 4 a.m. unless otherwise specified herein or as approved by Owner.

2. Unplanned shutdowns due to emergencies are not defined in this Section.

G. Dewatering of existing process and disposal of residue:
    1. When the Owner has turned the process unit over to the Contractor for modification or temporary use, the Contractor is responsible for costs and procedures required to dewater and dispose of liquid, solids, etc. in the process unit unless the Owner has made prior arrangements.
        a. Drainage and disposal of process unit liquids, solids, etc. into another treatment process unit on the plant site may be allowed if approved in advance by the Engineer and Owner and is conducted in accordance with the Project requirements.
        b. Costs for dewatering, disposal of solids and residuals, and preparation of surfaces for the Work are Contractor's responsibility.
            (1) Includes tipping fees for the removal and disposal of the grit/debris.
        c. Dewatering of grit/debris to meet landfill requirements is the responsibility of the Contractor.
        d. Contractor shall provide adequate time in schedules for draining and cleanup of basins and channels.

H. Refer to the Process and System Shutdown Constraints Schedule in Section 01140.01 for additional requirements.

1.05 OPERATIONAL CHANGE CONTROL PLAN (OCCP)

A. Refer to Section 01140.02 - Operational Change Control Plan (OCCP) Documents for additional requirements.
B. Submit Baseline Schedule, as specified in Section 01320 – Construction Progress Documentation.
C. No consideration will be given to claims of additional time and cost associated to preparing OCCPs required by the Owner and Engineer to complete this work in a manner that facilitates proper operation of the facility and compliance with effluent discharge criteria.
D. Where required to minimize treatment process interruptions while complying with specified sequencing constraints, provide temporary pumping, power, lighting, controls, instrumentation, and safety devices.
E. OCCPs are required whenever an existing asset or a new asset that could affect treatment or conveyance are modified including but not limited to set points and operational modes.

1.06 COMPLIANCE WITH NATIONAL POLLUTANT DISCHARGE ELIMINATION SYSTEM (NPDES) PERMIT

A. The existing facility is operating under the terms of a NPDES permit issued by the State of Missouri. This permit specifies the water quality limits that the plant must meet prior to discharge of effluent. A copy of the existing permit (Missouri State Operating Permit No. MO-0024961) is on file for review at the Administration Building at the Todd Creek WWTP. The facility includes a biological process that may require extended periods of acclimation after a shutdown or other impact before it can reasonably be expected to perform as intended. Contractor will include adequate acclimation time as a part of any construction activity.
B. Perform work in a manner that will not prevent the existing facility from achieving the finished water quality requirements established by regulations.
C. Bear the cost of penalties imposed on the Owner for discharge violations caused by actions of the Contractor.

1.07 REQUIREMENTS FOR OPERATION OF PLANT AND MAINTAINING CONTINUOUS OPERATION OF EXISTING FACILITIES

A. Facilities or conditions required to keep the existing plant operational include, but are not limited to, the following:
    1. Influent gravity sewer
    2. Influent screening and pumping
    3. Blowers
    4. Aeration basins and clarifiers
    5. RAS/WAS pump station
    6. UV disinfection system
    7. Existing outfall
B. Contractor shall protect existing grating with steel traffic plate or other Engineer approved means when moving equipment or supplies over grating.
C. Maximum allowable superimposed live load on any existing grating or walkway shall be 50 psf. If higher loads are proposed, provide detailed calculations demonstrating adequacy of grating or walkway system for higher loads. The calculations shall be sealed and signed by a registered professional engineer and submitted to the Engineer for review and acceptance.

1.08 OPERATION AND MAINTENANCE ACCESS

A. Provide safe, continuous access to process control equipment for plant operations personnel.

1.09 COORDINATION OF THE WORK

A. Maintain overall coordination of the Work.
B. Obtain construction schedules from subcontractors and suppliers and assume responsibility for correctness.
C. Incorporate schedules from subcontractors and suppliers into Progress Schedule to plan for and comply with sequencing constraints.

1.10 WORK BY OTHERS

A. Where proper execution of the Work depends upon work by others, inspect and promptly report discrepancies and defects.

1.11 UTILITIES

A. Provide advance notice to request and utilize services of the Missouri One Call System (www.mo1call.com or 1-800-344-7483 (DIG-RITE)) for location and marking of underground utilities operated by utility agencies other than the Owner.
B. Maintain electrical, telephone, water, gas, sanitary facilities, and other utilities within existing facilities in service. Provide temporary utilities when necessary.
C. New yard utilities were designed using existing facility drawings.
    1. Field verification of utilities locations was not performed during design.
    2. Services crossed or located nearby new yard utilities may require relocation and possible shutdowns.

PART 2 - PRODUCTS (NOT USED)

PART 3 – EXECUTION

3.01 PROCESS AND SYSTEM SHUTDOWN CONSTRAINTS SCHEDULE

A. Refer to the Process and System Shutdown Constraints Schedule in Section 01140.01 for constraints on process and system shutdowns.
B. Requests for variance from any part of this schedule must be approved in writing by the OWNER.
C. The planned date of shutdown as listed on the Operational Change Control Plan (OCCP) form shall be considered the start date for the shutdown and used for calculating the actual shutdown duration, unless approved in writing by the OWNER. In the event that the OWNER can shut down a system or process prior to the planned date of shutdown and the CONTRACTOR agrees to commence work at that earlier date, the date that the CONTRACTOR commences work on the associated process or system shall be considered the start date for the shutdown and for calculating the actual shutdown duration.
D. These constraints are intended to supplement the demolition, modification, tie-in, and construction activities and constraints described in Article 1.12 of this Section.

OFFSITE SLUDGE HAULING

GENERAL NOTES:

1. ALL INSTRUMENT TAGS ON THIS SHEET ARE PRECEDED BY LEVELS 5 AND 6 TAG CODES "SOL-SCIN" UNLESS OTHERWISE INDICATED. ALL OTHER EQUIPMENT TAGS ARE PRECEDED BY LEVEL 5 CODE "SOL."
2. SCIN-VLV-111, SCIN-VLV-112, SCIN-VLV-113, SCIN-VLV-211, SCIN-VLV-212, AND SCIN-VLV-213 SHALL BE FULL-PORT STYLE PLUG VALVE.

KEYED NOTES:

1. I/O POINTS ASSOCIATED WITH VENDOR-SUPPLIED SYSTEM EQUIPMENT WILL BE COMMUNICATED OVER ETHERNET NETWORK.
2. VALVE PANELS, DOWNSTREAM DROP PIPES AND LARGE BUBBLE MIXING GRIDS PROVIDED BY EQUIPMENT VENDOR. VENDOR SUPPLY INCLUDES ONE VALVE PANEL PER TANK WITH THREE (3) POPPET VALVES, THREE (3) DROP PIPES, AND THREE (3) LARGE-BUBBLE DIFFUSER GRID ASSEMBLIES.
3. TEMPERATURE RELAY SUPPLIED BY PUMP SKID MANUFACTURER AND INSTALLED WITHIN THE VFD ENCLOSURE.
4. MOTOR OPERATOR FIELD DEVICES AND I/O FOR THE INDICATED MODULATING VALVE ARE NOT SHOWN FOR CLARITY. REFER TO VLV-112 THIS SHEET FOR TYPICAL FIELD DEVICES AND I/O. REFER TO CONTROL SCHEMATICS AND I/O LIST FOR ADDITIONAL DETAILS.
5. THE INDICATED FLOW METER DISPLAY IS LOCATED ON THE EXTERIOR OF THE SOLIDS PROCESSING BUILDING, ADJACENT TO THE ASSOCIATED CONTROL STATION.

ADDENDUM NUMBER 003

Project/Contract Number: 81000927/1698

Project Title: Todd Creek WWTP Expansion & Major Upgrade

ISSUE DATE: **1/22/2026**

Bidders are hereby notified that the Bidding and Contract Documents for the above project, for which Bids are to be received on **February 24, 2026**, are amended as follows:

Information to Bidders The following is provided to Bidders for information only:

1. All tree removal shall be limited to occur between November 1 and March 31, during bat inactive season. Note 12 added to revision 1 of L000 conveying as such.
2. Energy code analysis compliance certificate updated for Administration Building. Drawing ECA-1 revision 1 conveying as such.
3. Blower Building electrical room equipment pads revised sizing. Drawing S415 revision 003 conveying as such.
4. IPS-VLV-102 callout on D202 is revised to 20 inches. Drawing D202 revision 1 conveying as such.
5. IPS-GATE-001 and IPS-GATE-101 on D206 are revised. Tags on Section A and B have been revised. Drawing D206 revision 1 conveying as such.
6. Keyed valve 14 on D303 is revised to PSEW-VLV-103. Drawing D303 revision 1 conveying as such.
7. Removed unnecessary details from D411 and D412. Drawings revised as such.
8. AGS-VLV-112 callout on D413 is revised to 4 inches. Drawing D413 revision 1 conveying as such.
9. Keyed valve names 16 and 24 on D703 are revised to STH-VLV-101 and STH-VLV-201, respectively. Keyed valve 29 has been revised to STH-VLV-232. Drawing D703 revision 1 conveying as such.
10. Valve tag WAS-VLV-307 on D707 is revised. Drawing D707 revision 1 conveying as such.
11. Added instruments to Y402 and Y403.
12. Reducers and line size revisions were added on drawing Y702. Drawing Y702 revision 1 conveying as such.
13. Added I/O points for four (4) AGS basin nitrate probes, eight (8) analytical controllers, and revised probe tags on Specification Section 40 61 96A – I/O List.
14. Added four (4) AGS basin nitrate probes, eight (8) analytical controllers, six (6) alarm horns, and seven (7) alarm strobes, and revised probe tags on Specification Section 40 70 00A – Instrument List
15. Drawing E001includes general note edits and symbol notes added.
16. Drawing E007 includes clarifications for flex cable connections to pump motors and horse powers updated. Motor detail A note added.
17. Drawing E011 includes edit to thread rod size.
18. Drawing E012 includes edited note.
19. Drawing E015 includes clarification for conduit seal detail.

20. Drawing E020 includes relocated cable tray and hanger rod details moved to E025 and E026
21. Drawings E025, E026 include added cable tray installation details
22. Drawing E043 includes added nitrate probes, analytical controllers, and associated interconnections
23. Drawing E051 includes added ventilation alarm equipment for the AGS Basins.
24. Drawing E114 includes sign labeled.
25. Drawing E116 includes clarification for roadway handhole requirements.
26. Drawing E118: Revised note for Lighting Controller Coordinates.
27. Drawing E119: Clarification for site ground cable route added. Revised notes.
28. Drawing E120: No fence grounding on this sheet so related notes deleted.
29. Drawing E131: Section A updated schedule.
30. Drawing E132: Section F1 sheet number updated.
31. Drawing E134: Sections Q and R updated schedule.
32. Drawing E135: Sections S and T updated schedule.
33. Drawings E201, E202, E204, E205, E206: Circuit changes clouded.
34. Drawings E211, E212: Additional ground ring connections to equipment clouded.
35. Drawing E221: Circuit changes and note changes clouded.
36. Drawing E222: Circuit changes and panel moves clouded.
37. Drawing E231: Revised Note.
38. Drawing E251: Relocated control panel IPS-LWCO-001
39. Drawing E291: Circuit changes clouded.
40. Drawings E301, E302, E303: Circuit changes clouded.
41. Drawings E311, E312: Additional ground ring connections to equipment clouded.
42. Drawing E321: Circuit changes and note changes clouded. Deleted three VFDs.
43. Drawing E322: Showed Water Heater and note changes clouded.
44. Drawings E331, E332: Revised symbols and note changes.
45. Drawing E351: Corrected floor plan for Headworks Building
46. Drawings E391, E401, E402, E403, E404, E405: Circuit changes clouded.
47. Drawings E411, E412, E413: Additional ground ring connections to equipment clouded.
48. Drawing E421: Revised receptacles, circuits and tag locations.
49. Drawing E422 : Added AITs to120V circuits.
50. Drawing E423: Light switches removed. Added AITs to 120V circuits. Moved circuit tags.
51. Drawing E441: Revised equipment pads in the electrical room
52. Drawing E442: Added ventilation alarm horns and strobes, nitrate probes, and analytical controllers at the AGS Basins
53. Drawing E443: Added ventilation alarm horns and strobes, nitrate probes, and analytical controllers at the AGS Basins
54. Drawing E451: Revised equipment pads in the electrical room
55. Drawing E491: Circuit changes clouded.
56. Drawing E493: Added cables for ventilation alarms, nitrate probes, and analytical controllers
57. Drawing E494: Existing cables from the previous sheet were relocated to this sheet
58. Drawings E601, E602, E603: Circuit changes clouded.
59. Drawings E611, E612: Additional ground ring connections to equipment clouded. Added notes.
60. Drawings E621, E622: Circuit changes clouded and note revisions clouded.
61. Drawing E641: Corrected the north arrow for the Parshall flume structure and revised the underground duct bank route

62. Drawings E691, E701, E702, E703, E704: Circuit changes clouded.
63. Drawings E711, E712: Additional ground ring connections to equipment clouded and notes clouded.
64. Drawings E721, E722: Circuit changes and additions, notes and tag changes clouded.
65. Drawings E791, E801, E802, E803: Circuit changes clouded.
66. Drawing E811: Revised ground ring connections to equipment clouded and notes clouded.
67. Drawing E821: VAV circuits added and clouded. Circuit changes, device relocations, tag and new notes clouded.
68. Drawing E831: Added missing Keyed Note 1.
69. Drawing E891: Circuit changes clouded.
70. Drawing M002: Air unit schedule updated to show equipment revisions.

71. Section 46 53 60 – Granular Sludge Biological Treatment System
    a. Subparagraph 2.10.C.5.a.
        i. Change item (12) to the following:

(12) Basin No. 1 Analytical Transmitter AGS-AIT-120:
(a) Transmitter/controller for monitoring the following basin probes:
i) Analytical element AGS-AE-121 for measuring pH/Temperature.
ii) Analytical element AGS-AE-122 for measuring dissolved oxygen (DO).

        ii. Insert the following item (13) after item (12):

(13) Basin No. 1 Analytical Transmitter AGS-AIT-130:
(a) Transmitter/controller for monitoring the following basin probes:
i) Analytical element AGS-AE-131 for measuring total suspended solids (TSS).
ii) Analytical element AGS-AE-132 for measuring oxidation-reduction potential (ORP).

        iii. Insert the following item (14) after item (13):

(14) Basin No. 1 Analytical Transmitter AGS-AIT-140
(a) Transmitter/controller for monitoring the following basin probes:
i) Analytical Elements AGS-AE-141 for measuring nitrates.

    b. Subparagraph 2.10.C.5.b.
        i. Change item (12) to the following:

(12) Basin No. 2 Analytical Transmitter AGS-AIT-220:
(a) Transmitter/controller for monitoring the following basin probes:
i) Analytical element AGS-AE-221 for measuring pH/Temperature.
ii) Analytical element AGS-AE-222 for measuring DO.

        ii. Insert the following item (13) after item (12):

(13) Basin No. 2 Analytical Transmitter AGS-AIT-230
(a) Transmitter/controller for monitoring the following basin probes:
i) Analytical element AGS-AE-231 for measuring TSS.

ii) Analytical element AGS-AE-232 for measuring ORP.

iii. Insert the following item (14) after item (13):

(14) Basin No. 2 Analytical Transmitter AGS-AIT-240
(a) Transmitter/controller for monitoring the following basin probes:
i) Analytical Elements AGS-AE-241 for measuring nitrates.

c. Subparagraph 2.10.C.5.c.

iv. Change item (12) to the following:

(12) Basin No. 3 Analytical Transmitter AGS-AIT-320:
(a) Transmitter/controller for monitoring the following basin probes:
i) Analytical element AGS-AE-321 for measuring pH/Temperature.
ii) Analytical element AGS-AE-322 for measuring DO.

v. Insert the following item (13) after item (12):

(13) Basin No. 3 Analytical Transmitter AGS-AIT-330
i) Analytical element AGS-AE-331 for measuring TSS.
ii) Analytical element AGS-AE-332 for measuring ORP.

vi. Insert the following item (14) after item (13):

(14) Basin No. 3 Analytical Transmitter AGS-AIT-340
(a) Transmitter/controller for monitoring the following basin probes:
i) Analytical Elements AGS-AE-341 for measuring nitrates.

d. Subparagraph 2.10.C.5.d.

vii. Change item (12) to the following:

(12) Basin No. 4 Analytical Transmitter AGS-AIT-420:
(a) Transmitter/controller for monitoring the following basin probes:
i) Analytical element AGS-AE-421 for measuring pH/Temperature.
ii) Analytical element AGS-AE-422 for measuring DO.

viii. Insert the following item (13) after item (12):

(13) Basin No. 4 Analytical Transmitter AGS-AIT-430
(a) Transmitter/controller for monitoring the following basin probes:
i) Analytical element AGS-AE-431 for measuring TSS.
ii) Analytical element AGS-AE-432 for measuring ORP.

ix. Insert the following item (14) after item (13):

(14) Basin No. 4 Analytical Transmitter AGS-AIT-440
(a) Transmitter/controller for monitoring the following basin probes:
i) Analytical Elements AGS-AE-441 for measuring nitrates.

e. Subparagraph 2.11.C.

i. Insert the following item (4) after item (3):

(4) The probe shall be suitable for installation within a Class I, Division 2 area.

f. Subparagraph 2.11.D
   i. Insert the following item (4) after item (3):

(4) The probe shall be suitable for installation within a Class I, Division 2 area.

g. Subparagraph 2.11.F
   i. Insert the following item (5) after item (4):

(5) The probe shall be suitable for installation within a Class I, Division 2 area.

h. Subparagraph 2.11.G.
   i. Item 1. shall have the following changes:
      a. In the second sentence replace the text "*nitrate"* with the text "*ammonium*".
   ii. Item 2. shall have the following changes:
      a. Replace the text "*analyzer"* with the text "*probe*".
   iii. Insert the following item 5. after item 4.:

5. The probe shall be suitable for installation within a Class I, Division 2 area.

   iv. Insert the following paragraph 2.11.H after paragraph 2.11G:

H. Nitrate Probe:
1. Function: Continuously measure, indicate, and transmit the nitrate concentration of the liquid in the AGS Basins. Each nitrate probe shall be integrated with the Equipment Supplier PLC for monitoring, data recording, and process control.
2. Prove one Nitrate Probe per basin.
3. Nitrate probe shall be Nitratax 2 mm path length, as manufactured by Hach. Probe shall utilize UV absorption technology, and shall provide reagent-free operation. Sensor shall include self-cleaning device.
4. Nitrate probe shall be provided with pole mount assembly and handrail support. Equipment Supplier shall provide complete mounting and support assembly.
5. The probe shall be suitable for installation within a Class I, Division 2 area.

i. Subparagraphs 2.11.H-M
   i. With the insertion of a new paragraph 2.11.H, the subsequent paragraphs shall be renumbered as the following:

I. Orthophosphate Analyzer:
J. Total Suspended Solids Probe:
K. Universal Controller Probe Modules:
L. Universal Controller Probe Modules – Horiba
M. Air Flow Meter:

j. Subparagraph 2.11.J
   i. Insert the following item 6. after item 5.:

6. The probe shall be suitable for installation within a Class I, Division 2 area.

k. Subparagraph 2.11.K
   ii. Item 1.a shall have the following changes:

a. Replace the text “One (1) Hach SC1000” with the text “Three (3) Hach SC4500.

iii. Delete item 1.b and replace with the following:

b. Each basin controller shall be rated for use with Class I, Division 2 rated probes. All accessories to achieve C1D2 probe rating shall be provided.

72. Section 33 12 16 – Utility Valves and Accessories
    b. Table 3: Plug Valves Provided by Contractor
        i. Tag IPS-VLV-101 size changed from 20” to 24”
        ii. Tag WAS-VLV-305A size changed from 6” to 4”
        iii. Tag WAS-VLV-305B size changed from 6” to 4”
        iv. Tag WAS-VLV-306A size changed from 6” to 4”
        v. Tag WAS-VLV-306B size changed from 6” to 4”

73. Section 40 61 96A – I/O List
    c. Updated I/O point information shown clouded.

74. Section 40 70 00A – Instrument List
    d. Updated instrument information shown clouded.

75. Section 46 71 33 – Rotary Drum Thickener Equipment
    e. Subparagraph 2.03.B
        i. Insert after Design Criteria “(for each Rotary Drum Thickener unit)”

Bidding Requirements: N/A

Contracting Requirements: N/A

Specifications:

1. Delete and replace the following section(s):
    a. Delete Section 33 12 16 - UTILITY VALVES AND ACCESSORIES and replace with the following Document, 33 12 16 - UTILITY VALVES AND ACCESSORIES
    b. Delete 40 61 96A - IO LIST and replace with the following Document, 40 61 96A - IO LIST
    c. Delete Section 40 70 00A - INSTRUMENT LIST and replace with the following Document, 40 70 00A - INSTRUMENT LIST
    d. Delete Section 46 53 60 - GRANULAR SLUDGE BIOLOGICAL TREATMENT PACKAGE and replace with the following Document, 46 53 60 - GRANULAR SLUDGE BIOLOGICAL TREATMENT PACKAGE
    e. Delete Section 46 71 33 - ROTARY DRUM THICKENER EQUIPMENT and replace with the following Document, 46 71 33 - ROTARY DRUM THICKENER EQUIPMENT

SECTION 33 12 16 - UTILITY VALVES AND ACCESSORIES

PART 1 - GENERAL

1.01 SUMMARY:

A. This Section includes all valves and accessories.

B. Related Work Specified Elsewhere:

1. Section 09 90 00 - Protective Coatings.
2. Section 33 31 50 - Pipe Installation.

1.02 REFERENCES:

A. Applicable Standards:

1. American National Standards Institute (ANSI):
   a. B16.1 - Cast-Iron Pipe Flanges and Flanged Fittings, Class 25, 125, 250 and 800.
2. ASTM International (ASTM):
   a. A126 - Gray Iron Castings for Valves, Flanges and Pipe Fittings.
   b. A276 - Stainless and Heat Resisting Steel Bars and Shapes.
   c. A536 - Ductile Iron Castings.
   d. A564 - Hot-Rolled and Cold-Finished Age-Hardening Stainless and Heat Resisting Steel Bars and Shapes.
3. American Water Works Association (AWWA):
   a. C111 - Rubber-Gasket Joints for Ductile-Iron Pressure Pipe and Fittings.
   b. C207 - Steel Pipe Flanges for Waterworks Service - Sizes 4 Inch Through 144 Inch.
   c. C500 - Metal-Seated Gate Valves for Water Supply Service.
   d. C502 - Dry-Barrel Fire Hydrants.
   e. C504 - Rubber-Seated Butterfly Valves.
   f. C507 - Ball Valves, 6 Inch Through 48 Inch.
   g. C508 - Swing-Check Valves for Waterworks Service, 2 Inch through 24 Inch NPS.
   h. C509 - Resilient-Seated Gate Valves for Water Supply Service.
   i. C512 - Air-Release, Air/Vacuum, and Combination Air Valves for Waterworks Service.
   j. C540 - Power-Actuating Devices for Valves and Sluice Gates.
   k. C550 - Protective Epoxy Interior Coatings for Valves and Hydrants.
   l. C600 - Installation of Ductile-Iron Water Mains and Their Appurtenances.
   m. C606 - Grooved and Shouldered Joints.
4. National Fire Protection Association (NFPA):
   a. 1963 - Screw Threads and Gaskets, Fire Hose Connections.

1.03 SUBMITTALS:

A. Submit as specified in Division 1.

B. Include, but not limited to, the following:

1. Catalog data or illustrations showing principal dimensions, parts, and materials.
2. Spare parts list referenced to illustration of parts.
3. Assembly and disassembly or repair instructions.
4. Dimensions of the clearance required for butterfly valve discs.

C. Certificates and Affidavits: Furnish prior to shipment. Include the following:

1. Test certificates.
2. Affidavit of compliance with applicable AWWA Standard.

1.04 QUALITY ASSURANCE:

A. Manufacturers shall be experienced in the design and manufacture of specific valves and accessories.

1.05 DELIVERY, STORAGE, AND HANDLING:

A. Deliver, store, and handle equipment and materials as specified in Division 1.

1.06 RESPONSIBILITY:

A. Actuators, their controls, and accessories shall be the responsibility of the valve manufacturer for sizing, assembly, certification, field testing, and any adjustments necessary to operate the valve as specified.

PART 2 - PRODUCTS

2.01 BUTTERFLY VALVES:

A. Acceptable Manufacturers for process related valves (See Table 1 and Table 2 below for process butterfly valves):
   1. DeZURIK/Sartell - Model BAW
   2. Henry Pratt Company
   3. Val-matic

B. Acceptable Manufacturers for utility related valves (See Civil Drawings for utilities valves):
   1. SPX/DeZurik – Style BOS.
   2. Tyco-Keystone – Figure AR2.

C. Design:
   1. Conform to AWWA C504, AWWA C540, and as specified.
   2. Suitable for type of installation specified.
   3. Conform to criteria indicated in Design Data and Valve Schedule.
   4. All valve end flanges shall conform to the following:
      a. ANSI B16.1, Class 125 for cast-iron body, Class 25A through Class 150B valves.
      b. AWWA C207, Class D with ANSI B16.1 Class 125 drilling for steel body, Class 25A through Class 150B valves.
      c. ANSI B16.1, Class 250 for ductile-iron body, Class 250 valves.
      d. AWWA C207, Class E for steel body, Class 250 valves.
   5. Mechanical or push-on type rubber-gasket joint ends shall conform to AWWA C111.
   6. Valves with a stop or lug cast integrally or mechanically secured to the body for the purpose of limiting disc travel will not be acceptable.

D. Design Data: Refer to Drawings for Valve Schedule.

E. Materials and Construction:
   1. Body shall be of cast iron for Class 25A through Class 150B valves and ductile iron for Class 250 valves or fabricated steel, as indicated in the Valve Schedule.
   2. Shafts shall be ASTM A276 Type 304 or 316 stainless steel for Class 25A through Class 150B valves and ASTM 564 Type 630 stainless steel for Class 250 valves. Design velocity for Class 250 valves shall be 16 fps.
   3. Disc shall be cast or ductile iron for Class 25A through Class 150B valves and ductile iron for Class 250 valves or steel for fabricated steel valves.
   4. Seats shall be synthetic rubber and be body mounted. Provide field replaceable and adjustable seat accessible from down-pressure side of valve for sizes 30-inch and larger. Mating seat surface shall be stainless steel or Monel. Sprayed or plated mating surfaces are not acceptable.

5. Shaft seals shall be designed for use of standard self-adjusting split-V-type packing or standard O-ring seals. Pull-down packing is not acceptable.

F. Actuators:
   1. Manual Actuators:
      a. All valves shall open counterclockwise.
      b. Provide indicators to show position of disc except on buried actuators. Provide handwheels with raised cast arrow and word OPEN on rim oriented to specified opening direction.
      c. Actuators shall be oil or grease-lubricated, totally-enclosed compound lever, traveling nut type to provide characterized closure. Actuator shall be self-locking at all variable opening positions.
      d. Travel limiting stop nuts or collars installed in the actuating mechanisms shall be field adjustable and shall be locked in position by means of a removable roll pin, cotter pin, or other positive locking device. Clamps or setscrews are not acceptable.
      e. Actuators and handwheels shall be located in positions indicated or as otherwise determined when manufacturer's drawings are submitted.
      f. Furnish actuators with AWWA operating nuts for all buried installations unless otherwise scheduled.
      g. Exposed buried actuator case, supports, and connection to the valve shall be cast iron.
      h. Exposed, buried service actuator shafting, bolts, and fastening hardware shall be stainless steel.
      i. Hand chains shall be cadmium plated or stainless steel.
   2. Motor Actuators:
      a. Provide electric motor actuators as specified in sub-section 2.12 ELECTRIC MOTOR ACTUATORS herein.

G. Valve Controls:
   1. Operate valve actuator to perform control function required.
      a. Open or close valve.
      b. Modulating.
   2. Include all pilot valves, needle valves, strainers, interconnecting piping, fittings, positioners, solenoid valves, limit switches, and other accessories essential to valve function factory-assembled on valve body or actuator.
      a. Small control valves shall be bronze or brass; and piping shall be copper.
      b. Provide solenoid valves, limit switches, positioners, and other accessories as required for proper operation.
   3. Equip actuators with heavy-duty, screw type terminal strip assemblies, designed to accept ring-tongue terminals for minimum size number 14 AWG wire.

H. Testing: Furnish certified copies of results of performance, leakage, and hydrostatic tests performed in compliance with Section 5, AWWA C504.

I. Shop Painting: Paint exterior surface of valves in compliance with AWWA C504 for installation as noted. Apply interior coating conforming to AWWA C550 to exposed ferrous metal surfaces. Provide affidavit or certificate of compliance per AWWA C550.

2.02 ECCENTRIC PLUG VALVES:

A. Acceptable Manufacturers:
   1. DeZurik
   2. Nordstrom
   3. Walworth
   4. Henry Pratt Company

B. Design:
   1. Quarter-turn nonlubricated eccentric type with resilient faced plug. Valves with vane type seat rings are not acceptable. Shutoff up to scheduled rating with pressure in reverse direction where scheduled.
   2. Conform to criteria indicated in Valve Schedule table.
   3. Flanged valve ends shall be faced and drilled to conform to ANSI B16.1, Class 125 for thickness and drilling.
   4. Mechanical or push-on type rubber-gasketed joint ends shall conform to AWWA C111.
   5. Port areas for valves through 500 mm 20-inch shall be at least 80% of full pipe area. Port areas of 24-inch and larger valves shall be at least 70% of full pipe area.
      a. Valves specified as “Full Port”: Bodies shall be Cast Iron ASTM A126 Class B. Ports shall be rectangular and 100% Port Area. The valve port area shall meet or exceed standard pipe area per ASME/ANSI B36.10M.
   6. Plugs shall be eccentric type with no backing ring or frame.
   7. Valve body cavity shall be smooth without protrusions or baffles.
   8. Design velocity for valves shall be 12 fps.

C. Materials and Construction:
   1. Bodies shall be of ASTM A126, Class B cast iron.
   2. Valve plug shall be ASTM A126, Class B cast iron or ASTM A536 ductile iron. Resilient plug facing or replaceable style body seats shall be synthetic rubber, neoprene, or Buna N compound suitable for use with water and wastewater applications.
   3. Seat rings shall be threaded or welded of corrosion-resistant 18-8 stainless steel, nickel, or Monel conforming to AWWA C504. Sprayed or plated mating seat surfaces are not acceptable.
   4. Bearings shall be replaceable. Sleeve type and thrust bearings in the upper and lower journals shall be corrosion-resistant stainless steel or bronze.
   5. Shaft seals shall be multiple O-ring, self-adjusting U-cup or chevron type packing conforming to AWWA C504. Pull-down packing is not acceptable.
   6. Shaft seals shall be field adjustable or replaceable without valve disassembly.
   7. All exposed fastening hardware shall be zinc plated or stainless steel. Provide stainless steel for buried service.

D. Actuators:
   1. Manual Actuators:
      a. All valves shall open counterclockwise.
      b. Provide indicators to show position of plug except on buried actuators.
      c. Nut operators shall be AWWA 2-inch size for operation by valve key, wrench head lever, or a chain lever. Furnish one lever for each valve.
      d. Hand chains shall be cadmium plated or stainless steel.
      e. Worm gear actuators shall be totally enclosed, grease sealed, gear type furnished with AWWA nut, crank, handwheel, or chainwheel. All buried valves shall be provided with worm gear actuators, AWWA nut, and enclosed cover plate. All

valves with reverse pressure capacity requirement shall be provided with worm gear actuators. Worm gear actuators shall be self-locking at all variable opening positions and sized to meet the torque ratings of AWWA C504. The shaft in a worm gear actuator shall have a nonmetallic or bronze sleeve type bearing. Submit manufacturer's parts and materials drawings.

f. Handwheels shall be located in positions indicated or as otherwise determined when manufacturer's drawings are submitted.

2. Motor Actuators:
   a. Provide electric motor actuators as specified in sub-section 2.12 ELECTRIC MOTOR ACTUATORS herein.

E. Valve Controls:
1. Operate valve actuator to perform control function required.
   a. Open or close valve.
   b. Modulating.
2. Include all pilot valves, needle valves, strainers, interconnecting piping, fittings, positioners, solenoid valves, limit switches, and other accessories essential to valve function factory-assembled on valve body or operator.
   a. Small control valves shall be bronze or brass; piping shall be copper.
   b. Provide solenoid valves, limit switches, positioners, and other accessories as required for proper operation.
3. Equip actuators with heavy-duty, screw type terminal strip assemblies, designed to accept ring tongue terminals for minimum size number 14 AWG wire.

F. Testing: Furnish certified copies of results of tests prior to shipment. All valves shall be subjected to an AWWA C504 procedure cycle life and pressure leak test at 150 psi and a body hydrostatic test at 300 psi. Valves shall be capable of providing drip-tight shutoff up to the full leak test rating. Certify reverse pressure capacity.

G. Shop Painting: Apply interior coating conforming to AWWA C550 to exposed ferrous metal surfaces. Provide affidavit or certificate of compliance per AWWA C550.

H. Valve Schedule:

2.03 STANDARD SWING CHECK VALVES:

A. Acceptable Manufacturers less than 4-inches in diameter:
   1. Crane Valve Company - Model: Number 36
   2. Lunkenheimer Company - Model: Figure 554Y

B. Acceptable Manufacturers 4-inches and greater in diameter:
   1. Kennedy Valve Company – Model: 159
   2. M&H – Model 159
   3. Mueller Company – Model A-2600
   4. Apco Willamette Valve and Primer Corporation – Model 250

C. Design:
   1. Conform to AWWA C508 and as specified.
   2. Iron body, bronze mounted, full opening.
   3. Extended stainless steel hinge pin with outside lever and weight.
   4. Design velocity shall be 12 fps.

D. Materials and Construction:
   1. Body and cover shall be cast iron. Flanges shall be ANSI B16.1, Class 125.
   2. Valve disc shall be bronze faced cast iron.
   3. Rubber faced discs or disc rings shall be Buna N for liquid applications and Viton for compressed air applications.
   4. Suitable for listed operating pressure.

E. Valve Schedule:

2.04 BALL VALVES:

A. Acceptable Manufacturers for Ball Valves less than 6-inches in diameter:
   1. Conbraco Industries, Inc. – Apollo Valves.
   2. Metso Automation/Jamesbury.
   3. NIBCO, Inc.
   4. Flow-Tek, Inc.

B. Operational Requirements:
   1. Suitable for isolation service.
   2. Operation of the valve will be continuous.
   3. Operational pressures will be as follows:
      a. Normal system range 0 to 200 psi.

C. Design: Conform to AWWA C507, AWWA C540 and as specified.
   1. Valves shall consist of essentially three main parts:
      a. Body with full unrestricted circular inlet and outlet with diameter equal to rated size of valve.
      b. A moveable plug having a full, unobstructed circular waterway opening equal to valve body opening.
      c. A totally-enclosed operating mechanism mounted on and attached to valve body.
   2. Seats shall consist of flexible metal on the ball or resilient rubber on the body and rigid stainless steel seats opposite and located on both ends of valve.
   3. Shaft seals shall be self-adjusting split-V-type or rubber O-ring type designed for replacement under line pressure.
   4. Valve body shall have flanged ends. Flanges shall be ANSI B16.1, Class 125.

D. Materials and Construction:
   1. Valve body and plug shall match or be compatible with pipe material.
   2. Valve shall be furnished complete with operating mechanism and accessories suitable for accomplishing specified operations.

E. Valve Operating Mechanism:
   1. Valve shall be equipped with a traveling cross-head type operator and shall operate plug by means of a cross-head linked to a rotator lever.
   2. Rotator lever shall impart rotary motion to plug shaft.
   3. Provide an indicator to show position of plug with respect to body opening.

F. Actuators:
   1. Manual Actuators:
      a. Valve shall open counterclockwise.
      b. Provide non-rising stem mechanism self-locking in all positions.

G. Testing: Furnish certified copies of results of tests performed in compliance with Section 13, AWWA C507.

H. Valve Schedule: Refer to Drawings for Valve Schedule.

I. Shop Painting: Apply interior epoxy coating conforming to AWWA C550 and NSF to exposed ferrous metal surfaces. Provide affidavit or certificate of compliance per AWWA C550 and NSF.

2.05 PINCH VALVES:

A. Acceptable Manufacturers:
   1. Onyx Valve Company.
   2. Red Valve Company.
   3. RF Valves.

B. Design:
   1. Valves shall be full cast metal body mechanical pinch type with integral flanges on body and flexible sleeve.
   2. All internal metal parts are to be isolated from the process fluid by the flexible rubber sleeve.

C. Materials and Construction:
   1. Valve body shall be ductile iron, stem and pinch bar shall be stainless steel, and sleeve shall be rubber.
   2. Suitable for 150 psi operating pressure.
   3. Valve body shall have flanged ends. Flanges shall be ANSI B16.1, Class 125.

D. Valve Operating Mechanism:
   1. The steel mechanism shall be double acting with pinching of the sleeve trim occurring equally from two sides.
   2. Rotating the handle counterclockwise shall lower a pinch bar above the sleeve, while raising a pinch bar below the sleeve, pinching the sleeve closed at the center of the valve.

E. Actuators:
   1. Manual Actuators:
      a. Valve shall open counterclockwise.
      b. Provide non-rising stem mechanism.
   2. Motor Actuators:
      a. Provide electric motor actuators as specified in sub-section 2.12 ELECTRIC MOTOR ACTUATORS herein.

F. Testing: Furnish certified copies of results of tests prior to shipment.

G. Valve List:

Parameter	**GRSC-VLV-312**	**GRSC-VLV-314**
Size, (in)	4”	4”
Max P (psig)	15	15
Max T (deg F)	100	100
Full Port?	Yes	Yes
Media	Grit Slurry	Grit Slurry
Valve Ends	FLG x FLG	FLG x FLG
Actuator Type	Handwheel	Motor Actuator
Actuator Shaft Position	Horizontal	Horizontal
System Pipe	DIP Vertical	DIP Vertical
Service	Open/Close	Open/Close
PID	Y302	Y302
Installation	Headworks Building Interior Above Grade	Headworks Building Interior Above Grade

2.06 PRESSURE REDUCING VALVES:

A. Provided as indicated on Contract Drawings.

B. Acceptable Manufacturers less than 3-inches in diameter:
   1. Watts Automatic Control Valve Company – Model 500 Series LF223
   2. Wilkins – Model 500 Series
   3. Engineer-approved equal.

C. Acceptable Manufacturers 3-inches and larger in diameter:
   1. Watts Automatic Control Valve Company – Model ACV Series 115
   2. Cla-Val Company – Model 90-01
   3. Engineer-approved equal.

D. Design:
   1. Valves shall be of flanged globe body type.
   2. Inlet flange shall be ANSI B16.1, Class 125. Outlet flange shall be ANSI B16.1, Class 125.
   3. Suitable for operation as follows:
      a. Maximum flow rate condition: 215 GPM.
      b. Normal system inlet pressure: 75 psi to 135 psi.
      c. Regulate downstream pressure at Headworks: 85 psi.
      d. Regulate downstream pressure at Solids Handling Building: 85 psi.
   4. Such that internal main valve assembly can be dismantled without removing valve body from pipeline.

E. Materials and Construction:
   1. Body shall be cast iron, ductile iron, or stainless steel.
   2. Trim shall be bronze or stainless steel.
   3. Seats shall be leather or other resilient material and shall be replaceable.

F. Operational Requirements:
   1. Suitable for pressure-reducing service.
   2. Operation of the valve will be frequent.
   3. Cushioned to permit operation without causing shock or water hammer.
   4. Operate without continuous waste of water.
   5. Provide tight closure when shut and full pipeline opening when open.
   6. The valve shall maintain accurate control of the downstream pressure regardless of fluctuation in flow or upstream pressure.
   7. Adjustable for speed of open and close operation and control pressure.

G. Valve Controls:
   1. Control Function:
      a. Pressure regulation - maintain preadjusted downstream pressure for varying rates of flow and upstream pressure.
      b. Open and close according to downstream pressure transmitter indication.
   2. Include all pilot valves, needle valves, strainers, interconnecting piping, fittings, cylinders, positioners, solenoid valves, limit switches, and other accessories essential to valve function factory assembled on valve body.
      a. Pilot shall be self-cleaning and self-flushing by locating the outlet in the bottom of the pilot ninety degrees to the inlet
      b. Small control valves shall be bronze or brass; pilot tubing shall be stainless steel braided with Teflon lining. Copper/brass fittings and pilot.

2.07 PRESSURE SAFETY VALVES:

A. Provided as indicated on Contract Drawings.

B. Acceptable Manufacturers:
   1. Watts Automatic Control Valve Company – Model ACV Series 116
   2. Cla-Val Company - Model 50-01
   3. Engineer-approved equal.

C. Design:
   1. Valves shall be of flanged globe body pattern.
   2. Inlet and outlet flanges shall be 6-inch ASME B16.1 Class 125.
   1. Valves shall be external pilot actuated with spring to adjust pressure setting.
   2. Provide indicator rod to show position of opening of the piston or diaphragm.
   3. Suitable for operation as follows:
      a. Pump shutoff head 360-460 feet (155-200 psi).
      b. Normal system operating pressure 75 psi to 150 psi.
      c. Open at 160 psi.
   4. Such that internal main valve assembly can be dismantled without removing valve body from pipeline.
   5. Provide shutoff cocks and Y-strainers on control tubing.
   6. Valve shall have a protective fusion bonded epoxy coating internally and externally. The coating shall conform to AWWA C116.

B. Materials and Construction:
   1. Body shall be cast iron, ductile iron, or stainless steel.
   2. Trim shall be bronze or stainless steel.
   3. Seats shall be EPDM rubber and shall be replaceable.

D. Operational Requirements:
   1. Suitable for pressure-reducing service.
   2. Operation of the valve will be intermittent.
   3. Cushioned to permit operation without causing shock or water hammer.
   4. Operate without continuous waste of water.
   5. Provide tight closure when shut and full pipeline opening when open.
   6. Adjustable for speed of open and close operation and control pressure.

E. Valve Controls:
   1. Control Function:
      a. Open when line pressure exceeds preset value.
   2. Include all pilot valves, needle valves, strainers, interconnecting piping, fittings, cylinders, positioners, solenoid valves, limit switches, and other accessories essential to valve function factory assembled on valve body.
      a. Small control valves shall be bronze or brass; piping shall be copper.
      b. Provide orifice plate assembly for flow control function.

2.08 TELESCOPING VALVES:

A. Telescoping Valves shall be specified herein and have the characteristics and dimensions as shown in the drawings

B. Acceptable Manufactures
   1. Watermann Valves
   2. Whipps, Inc
   3. Troy Valve

C. Design

1. The valve shall utilize a low friction seal to mount to engage the slip tube and mount to the flange of the receiving pipe.
2. All welds shall be performed by welders with AWS certification.
3. Finish: Mill finish on stainless steel. Welds shall be sandblasted to remove weld burn and scale.

D. Slip Tube and Bail
1. The slip tube shall be constructed of Schedule 10 minimum thickness stainless steel pipe. The the overflow end slip tube shall be fitted with a V-notch weir and shall be Schedule 10 stainless steel.
2. The bail shall be constructed of stainless steel and shall be bolted to the stem and welded to the slip tube. The bail style shall be comptible for v-notch weir slipe tube.
3. The maximum travel distance of the slip tube shall be 48 inches. The maximum depth of slip tube shall extend more than 12 inches past the center line of the receiving flange into the recieving pipe at a travel distance of 0 inches.
4. Slip tubes shall be equipped with a grease fitting to allow the operator to apply grease to the slip tube from the operator level.

E. Seal Flange
1. The telescoping valve shall be provided with a self-adjusting seal system to restrict leakage between the slip tube and the receiving pipe.
2. If a neoprene seal and separate companion flange is provided, the neoprene seal shall have a minimum thickness of 1/4-inch and the companion flange shall be stainless steel and shall have a minimum thickness of 3/8-inch.
3. The slipe tube gasket shall be replaceable without the rmeoval of the slip tube assmbly from the reciver pipe, or actuator.
4. The companion flange shall be provided with a bolt pattern suitable for attachment to the flange on the receiving pipe.

F. Stem
1. A threaded operating stem shall be utilized to connect the operating mechanism to the bail which in turn is attached to the slip tube. The threaded portion of the rising stem valves shall engage the operating nut in the manual operator and shall provide autmoatic self-locking, infinite valve positioning.
2. The threaded portion of the stem shall have a minimum outside diameter of 1-1/2 inches. Stem extension pipes are not acceptable.
3. The stem shall be constructed of solid stainless steel bar for the entire length, the metal having a tensile strength of not less than 75,000 psi.
4. Maximum L/R ratio for the unsupported part of the stem shall not exceed 200.
5. In compression, the stem shall be designed for a critical buckling load caused by a 40 lb effort on the handwheel with a safety factor of 2, using the Euler column formula.
6. The stem shall be designed to withstand the tension load caused by the application of a 40 lb effort on the handwheel without exceeding 1/5 of the ultimate tensile strength of the stem material.
7. The threaded portion of the stem shall have machine rolled double lead threads of the full Acme type with a 16 microinch finish or better. Stub threads are not acceptable.
8. Stems shall be provided with adjustable stop collars to prevent over travel.

G. Stem Guides
1. Stem guide shall be provided when necessary to ensure that the maximum L/R ratio for the unsupported part of the stem is 200 or less.
2. Stem guide brackets shall be fabricated of stainless steel and shall be outfitted with UHMW or bronze bushings.

3. Adjustable in two directions.

H. Anchor Bolts
1. Anchor bolts shall be provided by the valve manufacturer for mounting the pedestal and appurtenances.
2. Quantity and location shall be determined by the valve manufacturer.

I. Materials of Construction
1. Slip tube and bail shall be stainless steel, Type 304L
2. Stem shall be stainless steel, Type 304L
3. Anchor Studs, Fasteners and Nuts shall be stainless steel, Type 316
4. Seal shall be Urethane, Neoprene or Buna-N
5. Lift Nuts shall be stainless stainless steel, Type 304.
6. Pedestals and wall bracks shall be stainless steel, Type 304L
7. Operator Housing shall be cast aluminum
8. Stem cover shall be a clear plastic Butyrate
9. Companion flange shall be cast iron

J. Valve Operator
1. Valves shall be operated by a manual handwheel. The operator shall be mounted on a pedestal
2. The valve manufacturer shall select the proper gear ratio to ensure that the valve can be operated with no more than a 40 lb effort.
3. An arrow with the word "OPEN" shall be permanently attached or cast onto the operator to indicate the direction or rotation to open the valve
4. Handwheel operators shall be fully enclosed and shall have a cast aluminum housing.
5. The handwheel shall be removable. Pedestals shall be constructed of stainless steel. Aluminum pedestals are not acceptable.
6. The pedestal height shall be such that the handwheel is located approximately 36-in above the top of the tank walls.
7. Operators shall be equipped with fracture-resistant clear butyrate.
   a. The top of the stem cover shall be closed.
   b. The bottom end of the stem cover shall be mounted in a housing or adapter for easy field mounting.
   c. Stem covers shall be complete with a mylar strip type position indicator, calibrated in ¼ inch increments to illustrate valve position. The mylar strip, provided by the manufacturer, will be affixed by the CONTRACTOR after installation to provide a true and accurate indication of the tube elevation by comparing it to the top of the rising stem.
8. Valve Schedule:

Parameter	**WAS-VLV-001**	**WAS-VLV-002**
Size, (in)	6”	6”
Max T (deg F)	100	100
Media	Thin Sludge Decant	Thin Sludge Decant
Actuator Type	Manual, Handwheel	Manual, Handwheel
System Pipe	DIP Vertical	DIP Vertical
Service	Open/Close	Open/Close
PID	Y401	Y401
Installation	Exterior-Exposed	Exterior-Exposed

2.09 TAPPING SADDLES:

A. Provide tapping saddles for services as indicated on the Contract Drawings.
B. Acceptable Manufacturers:
   1. A.Y. McDonald 73805
   2. Ford S90-xxx-NL
   3. Mueller
      a. H-13000 Series
      b. H-13400 Series
      c. S-13000 Series
   4. Engineer approved equal.

2.10 CORPORATION STOPS:

A. Provide corporation stops for service reactivations as indicated on the Contract Drawings.
B. Acceptable Manufacturers:
   1. A.Y. McDonald 74701
   2. Cambridge Brass 302NL Series
   3. Ford FB-600-x-NL
   4. Mueller B25000N
   5. Engineer approved equal.

2.11 SAMPLE/DRAIN TAPS:

A. Provide sample/drain taps on all suction and discharge pump connections and on all common pump headers after last pump connection to main header.
B. Connecting fittings and pipe shall of the same material as the receiving pipe and rated for 150 psi service.
C. Sample/drain taps shall be 1 inch and connected through corporation stops.
D. Isolation valves shall be provided with all sample/drain taps and shall be Crane bronze ball valves or Engineer-approved equal.

2.12 ELECTRIC MOTOR ACTUATORS:

A. Provide factory-mounted electric motor actuators conforming to AWWA C540 for open-close and modulating service to operate on 480V, 3 phase, 60-hertz, ac supply. Motor and control compartment enclosure shall be totally enclosed rated NEMA 4X.
C. For valves installed in Class 1, Division 1 or Class 1, Division 2 areas, motor and control compartment enclosures shall be explosionproof and listed for the classification of the area. Refer to Contract Drawings' Hazardous Area Classification Site Plan for requirements.
D. Motor shall be AC induction type, TEFC, rated 460V.
E. Duration for actuator to move from fully-open to fully-closed position, or reverse as indicated:
   1. Approximately 30 Seconds for eccentric plug valves.
   2. Approximately 5 seconds per diameter inch, but not less than 20 seconds for air service butterfly valves.
F. Equipped with a direct position readout at the valve by means of a mechanical dial-position indicator showing percent of valve opening.
G. Provide with manual handwheel operator and lockable de-clutch mechanism. Handwheel shall not rotate when electrically driven.
H. Provide the following integral accessories:
   1. Integral reversing motor starter.

2. Separate non-fused disconnects. Disconnects shall be operable from outside the enclosure and shall be integral to the assembly. Disconnect enclosure rating shall conform to the valve enclosure rating.
3. Local/Off/Remote (LOR) selector switch with auxiliary remote status contact.
4. Open/Close pushbuttons to operate actuator when LOR is in "Local".
5. Hard-wired I/O points as indicated on the Contract Drawings' Control Diagrams and Section 40 61 96A - I/O List. Discrete outputs shall be provided by dry contacts, rated minimum 2A at 120Vac.
6. Butterfly valves:
   a. Internal 480V to 24VDC power supply (PS).
      (1) PS shall be sized to operate starter, local indicating lights, internal heating systems, and provide sufficient volt-amperes to field power two digital inputs and two digital outputs to PLC.
7. Eccentric plug valves:
   a. Internal 480V to 120VAC control power transformer (CPT).
      (1) CPT shall be sized to operate starter, local indicating lights, internal heating systems, and provide sufficient volt-amperes to field power two digital inputs and two digital outputs to PLC.
8. Modulating Valves:
   a. Shall accept a 4-20mA input signal for position control.
   b. Shall provide an isolated 4-20mA isolated output signal (with integral power supply) for position indication.
9. Open/Close Valves:
   a. Provide with two indicating lights in limit switch compartment cover.
      (1) One red light indicating valve is fully open.
      (2) One green light indicating valve is fully closed.
      (3) Both lights shall be on while valve is in travel
   b. Provide 4 train mechanically driven limit switches and overtorque switches.
   c. Switches shall be gear driven from the actuator gear train, electronic switches with battery pack shall not be allowed.
10. Internal heater to prevent condensation.

I. Products of the following manufacturers shall be acceptable:
   a. Auma Actuators, Inc.
   b. Limitorque Corporation.
   C. Rotork Controls, Incorporated.

2.13 COMBINATION AIR VALVES:

A. Acceptable Manufacturers:
   1. Multiplex Manufacturing Co. Model: Crispin SA Series.
   2. Valve and Primer Corp., DeZurik/APCO Model: Series 401.

B. Design: Conform to AWWA C512 and as specified.
   1. Valve shall be heavy-duty combination air release, water style.
   2. Body and cover shall be cast or ductile iron.
   3. Float shall be stainless steel.
   4. All internal parts shall be stainless steel.

C. Operation:
   1. Release air when filling line.
   2. Admit air when emptying line.
   3. Release accumulated air while pipeline is full and operating under pressure.

D. Connection:
   1. Connect air valves 2 inches and smaller to pipeline through corporation stops.
   2. Connecting fittings and pipe shall be bronze, brass, or copper rated for 250 psi service.
   3. Isolation valves shall be provided for all air valves and shall be bronze gate valves for sizes 3 inches and smaller unless otherwise noted.
      a. Acceptable Manufacturers:
         (1) Crane Model: Figure 431.
         (2) Jenkins Model: Figure 47.
         (3) Lunkenheimer Co. Model: Figure 2151.
   4. Couplings or unions indicated between pipeline and air valve piping shall be insulated style.

2.14 FIRE HYDRANTS:

A. Acceptable Manufacturers:
   1. American Flow Control.
   2. Mueller Company, model Centurion.
   3. Engineer Approved Equal

B. Design:
   1. Conform to AWWA C502 and as specified.
   2. Provide compression type main valve designed to open against pressure. Valve facings shall be of nontoxic materials suitable for potable water service.
   3. Provide internal main valve seat opening of not less than 5 inches diameter.
   4. Design to open counterclockwise.
   5. Provide dry-type bonnet with lubricant reservoir protected by O- or Quad-ring seals.
   6. Provide mechanical joint bell on shoe.
   7. Furnish for minimum bury depth of 3.5 feet. Include extensions as required for blow-offs.
   8. Furnish with two 2-1/2-inch hose nozzles and one 4-1/2-inch pumper nozzle with NFPA 1963 standard threads. Nozzle caps shall be chained to hydrant.
   9. Provide traffic break-off joint located above and near ground surface designed to minimize accident repairs.

C. Shop Painting:
   1. Shop paint exterior of hydrants red.
   2. Interior Coating:
      a. Conform to AWWA C550.
      b. Apply to exposed interior ferrous metal surfaces.

2.15 CORPORATION STOPS:

A. Provide corporation stops as specified to isolate air valves or as manual air release or inlet valves.

B. Mueller Company Style H-10003, H-10013, or H-10045 or Engineer-approved equal as applicable.

2.16 CURB STOPS:

A. Provide curb stops for service isolation.

B. Acceptable Manufacturers:
   1. A.Y. McDonald 74701.
   2. Cambridge Brass 302NL Series.
   3. Ford FB-600-x-NL.

4. Mueller B25000N.

2.17 VALVE BOXES:

A. Acceptable Manufacturers:
   1. Clay and Bailey Manufacturing Company.
   2. Dresser Industries, Inc.
   3. Mueller Company.
   4. Neenah Foundry Company.
   5. Tyler Company.
   6. Engineer Approved Equal
B. Provide for all buried valves.
C. Design:
   1. Boxes shall consist of a cast-iron cover, lid, and base castings with 6-inch cast-iron pipe shaft.
   2. Provide extension stem to bring operating nut within 2 feet of valve box top.
   3. Drop cover shall be marked for the appropriate system (i.e., "WATER", “SEWER”).

2.18 CURB STOP SERVICE BOXES:

A. Provide curb stops and service boxes for all curb stops installed.
B. Acceptable Manufacturers:
   1. Tyler Union, Star Pipe, Castings – SB94ES, SB95ES.

2.19 VALVE IDENTIFICATION TAGS:

A. Exposed interior or exterior valves: Provide heavy duty, permanent plastic ID tags with valve number printed on tag using indelible ink and contrasting colors. Minimum tag size shall be 2"x3" and minimum letter height shall be 1". Tag shall be easily removable and shall be mounted so as not to interfere with normal valve operations. Valve ID shall be as identified in the valve schedule.
B. Vault or Pit Installed Valves: Provide a cast bronze floor plate to be anchored into the top concrete slab of pit or valve adjacent to the floor box or floor stand. Plate shall be minimum of 4"x3"x 3/16". Valve number shall be engraved in plate with minimum letter height of 1 1/2". Plate shall be anchored into concrete using threaded lugs with split stud anchor or other suitable anchoring device. Valve number shall be as identified in the valve schedule.

2.20 VALVE ACCESSORIES:

A. Post Indicator:

2.21 SHOP PAINTING:

A. Prepare surfaces and paint or coat all valves, fire hydrants, floor stands, valve boxes, corporation stops, and all related accessories standard of the manufacturer unless otherwise specified herein.
B. Paint and coatings shall be suitable for the service intended.
C. Submit type of paint or coating proposed with drawings and data for Engineer approval prior to fabrication.

PART 3 - EXECUTION

3.01 INSTALLATION:

A. Comply with provisions of AWWA C600 and as specified.

B. Thoroughly clean and remove all shipping materials prior to setting. Operate all valves from fully opened to totally closed.
C. Install eccentric plug valves in reverse position, flow and pressure against the plug face when closed, in lines with solids or stringy materials. When installed horizontally with shaft in the horizontal, the plug shall rotate open to the top recess of the valve body.
D. Install double-door wafer check valves with hinge pin in the vertical position for horizontal flow applications.
E. Install single-door wafer swing check valves with hinge pin in the horizontal position for horizontal flow applications.
F. Equip with anchorage where indicated.
G. Set fire hydrants with lowest nozzle 18 inches above finished grade. Check and fill stem bonnet lubricant reservoir.

3.02 FIELD TESTING:

A. Perform on piping and valves as specified in Section 33 31 50 - Pipe Installation and for the following:
    1. Gate valves.
    2. Butterfly valves.
    3. Check valves.
    4. Eccentric plug valves.
    5. Ball valves.
    6. Air and air/vacuum valves.
    7. Fire hydrants.

TODD CREEK
WWTP
I/O LIST

NOTES:

1. "SYSTEM" - POWER FROM ASSOCIATED PANEL. "FIELD" - POWER FROM OTHER SOURCE INDICATED ELSEWHERE.

2. PROVIDE SURGE PROTECTION DEVICE (SPD) FOR I/O POINT.

3. PROVIDE TEMPERATURE SWITCH INSTALLED IN THE PLC CABINET. SEE SPECIFICATIONS FOR REQUIREMENTS.

4. RANGE SHALL BE COORDINATED WITH THE EQUIPMENT SUPPLIER.

5. PROVIDE 120VAC POWER SOURCE FROM PLC PANEL FOR INSTRUMENT.

6. INDICATED POINTS SHALL BE CONSUMED BY THE PLANT CONTROL SYSTEM FROM THE MANUFACTURER SUPPLIED PLC.

7. INDICATED POINTS SHALL BE CONSUMED BY THE MANUFACTURER SUPPLIED PLC FROM THE PLANT CONTROL SYSTEM.

8. PROVIDE INTRINSICALLY SAFE BARRIER FOR I/O POINT.

9. WHERE ETHERNET/IP COMMUNICIATIONS IS NOT AVAILABLE, COMMS TO PCS SHALL BE UTILIZE SIMPLE NETWORK MANAGEMENT PROTOCOL (SNMP). UTILIZE SNMP TO OPC GATEWAY SOFTWARE AS REQUIRED.

10. PROVIDE AN INTERPOSING RELAY TO CONSUME THE INDICATED I/O POINT. SUPPLY VOLTAGE SHALL BE 24VDC SOURCED FROM THE ASSOCIATED PCS PLC CABINET.

NOTES:

1. 120VAC POWER SOURCE FOR INSTRUMENT TRANSMITTER SHALL BE SUPPLIED FROM WITHIN THE ASSOCIATED PLC CABINET
2. PROVIDE SURGE PROTECTIVE DEVICE(S) (SPD) FOR INSTRUMENT.
3. RANGE INDICATED IS DESIGN BASIS. COORDINATE FINAL INSTRUMENT RANGE WITH ACTUAL TANK SUPPLIED
4. INSTALL INTRINSICALLY SAFE BARRIER (DISCRETE SIGNAL) IN THE ASSOCIATED CONTROL PANEL/PLC CABINET FOR THE INDICATED INSTRUMENT. POWER FOR INSTRINSICALLY SAFE BARRIER SHALL BE SUPPLIED FROM THE ASSOCIATED CABINE˙
5. SUPPLY INSTRUMENT WITH MANUFACTURER CABLE FOR CONNECTION OF ELEMENT TO TRANSMITTER AS SPECIFIED
6. INSTRUMENT IS SUPPLIED BY VENDOR OF THE PROCESS SYSTEM. RANGE/SETPOINT TO BE DETERMINED BY VENDOR.

SECTION 46 53 60 – GRANULAR SLUDGE BIOLOGICAL TREATMENT SYSTEM

PART 1 - GENERAL

1.01 SUMMARY:

A. This section contains the requirements to furnish the design and equipment for a Granular Sludge Biological Treatment System (Treatment System) for the treatment of domestic wastewater. This section also specifies the overall performance requirements of the supplied Treatment System and includes the procurement, installation and operation of the biological treatment system and related services from the Equipment Supplier in accordance with the information contained herein. The Supplier will be responsible for the confirmation of the design of the bioreactors and provide a performance warranty of the biological process to meet permit requirements.

B. Description of Overall Treatment Process:

1. The system is for use in treating wastewater at the Todd Creek Wastewater Treatment Plant (TCWWTP).
2. Raw wastewater enters the treatment process at the existing influent screening structure, which includes an automatically cleaned, 1/4-inch-spaced mechanical bar screen. Screened effluent is discharged into a new influent wet well and subsequently pumped to the new wastewater treatment plant site. Influent wastewater passes through 1/4-inch automatically cleaned perforated plate screens and a stacked tray grit removal system. Screened and degritted influent flows into a header that serves the Treatment System. The Treatment System consists of four AGS Basins operated in parallel, with influent fed to one reactor at a time. The Equipment Supplier shall provide all non-concrete tank internals, pumps, instrumentation, and automatic valves required for complete operation of the treatment system.
3. Each basin in the Treatment System shall be capable of operating independently of all other basins including influent flow, effluent discharge, sludge withdrawal, and water level correction withdrawal, as outlined in these Specifications and on the Contract Drawings. The basins shall be synchronized to prevent sludge withdrawal from simultaneously occurring in more than one basin.

C. Requirements and materials not specified herein shall be selected by the Equipment Supplier for specified performance requirements and environmental conditions based on standard practice. The Equipment Supplier shall provide the required major equipment components, including but not limited to:

1. Biological process design calculations to assure the Treatment System can meet all performance requirements listed in this specification. Any process equipment provided by Others shall be recommended and approved by the Equipment Supplier for use as a single point of responsibility of the performance guarantee.
2. All motor-actuated and/or automatic valves required for a complete functional system:
    a. Influent header motor-actuated plug valves for each reactor (1 duty / 1 standby for each basin, 8 total).
    b. Air header motor-actuated air flow control valves (1 per basin, 4 total).
    c. Small air supply motor-actuated valves (2 per basin, 8 total).
    d. Sludge withdrawal and water level correction motor-actuated plug valves for each reactor (2 per basin, 8 total).
    e. Motor-actuated plug valves for influent to each of two (2) Sludge Buffer Tanks (2 total).
3. All internal reactor piping and connections as coordinated with Design Engineer.
4. Fine bubble diffuser grids for each AGS Basin, including drop leg to top of reactor wall.

5. Sludge / liquid withdrawal piping grid for each AGS Basin with any required air piping connections to top of reactor wall.
6. Effluent overflow weir launder system for each AGS Basin.
7. Five (5) positive displacement blowers in a 4 duty / 1 standby configuration.
8. Intake silencers for installation interior of the Blower Building for each blower provided.
9. Intake filter / silencer assemblies for installation exterior of the Blower Building for each blower provided.
10. Pumps for sludge processing system:
    a. Three (3) Sludge Pumps.
    b. Three (3) Supernatant Pumps.
11. Two (2) Water Level Correction (WLC) Pumps.
12. Furnish a complete operations and instrumentation package to control the Treatment System. The package shall consist of the following at a minimum:
    a. Furnish packaged equipment and devices with instrumentation and controls as specified.
    b. Furnish all instruments, meters, gauges, switches, controllers, thermometers, indicators, and transmitters as required for a complete system.
    c. Furnish instrumentation as required to properly monitor and control the equipment supplied by this Contract in a fully automatic mode. Include instrumentation for all equipment operation including startup, normal and shutdown modes.
    d. Design, shop install, and test all skid-mounted instruments.
    e. Furnish all materials for complete installation of shipped-loose instrumentation. Coordinate the physical arrangement and mechanical connections with equipment and structures furnished in this Section with the Design Engineer.
    f. Furnish and program a Programmable Logic Controller and Operator Interface Terminal (OIT) as specified for proper control and operation of the system. Design and factory acceptance test the complete main control panel.
    g. Provide controls integration for the complete system.

D. Work by Others:
1. Concrete Treatment System Basins.
    a. Four (4) AGS Basins, including concrete center effluent trough.
    b. Two (2) Sludge Buffer Tanks.
    c. One (1) Water Level Correction Tank.
2. Utility corridor with influent, sludge, and water level correction piping and appurtenances as required, including the following components.
    a. Influent check valves.
    b. Influent flow meters.
    c. Influent wastewater TSS instrument.
3. Utility corridor for pumping systems including the following components:
    a. Check valves.
    b. Sludge, supernatant, and WLC flow meters.
4. Air piping between blowers and reactor, up to the top of interior basin wall.
5. Sludge and WLC piping exterior of the AGS Basins.
6. All manually-operated valves shall be provided by Contractor.
7. Motor control centers, motor starters, and variable frequency drives shall be provided by the Contractor for all equipment without integral control equipment.
8. Configuration of the plant control system network.

1.02 RELATED WORK SPECIFIED ELSEWHERE:

A. Section 01
B. Section 01433 – Manufacturers Field Services
C. Section 01664 - Training
D. Section 01757 – Commissioning
E. Section 09 90 00 – Protective Coatings.
F. Section 33 11 00 – Pressure Piping.
G. Section 33 12 16 – Utility Valves and Accessories.
H. Section 40 66 00 – Process Control Networks.
I. Section 40 67 00 – Process Control Panels and Hardware.
J. Section 40 70 00 – Instrumentation For Process Systems.
K. Section 43 11 33 – Positive Displacement Blowers.
L. Section 46 05 13 – Common Motor Requirements for Water and Wastewater Equipment.

1.03 EXCEPTIONS TO WORK SPECIFIED ELSWHERE:

A. Aqua Aerobics International standard training, commissioning, and startup services shall take precedent over Div 1.

1.04 REFERENCES:

A. Applicable Standards:
   1. American National Standards Institute (ANSI).
   2. American Water Works Association (AWWA).
   3. National Sanitation Foundation (NSF).

1.05 SUBMITTALS:

A. Furnish submittals in accordance with SECTION 01300 - SUBMITTALS.
B. Initial Design Deliverables shall be submitted according to the schedule provided in the Bid Form.
   1. Biological design information on the following at a minimum:
      a. Process Flow Diagram.
      b. Tank Configuration and Volumes.
      c. Equipment Confirmation and Sizing.
      d. Sludge, WLC withdrawal rates.
      e. Sludge, supernatant, and WLC design flow ranges.
      f. Oxygen Demand.
      g. Sludge Production.
      h. SRT/HRT.
      i. BioWin Model demonstrating treatment at maximum month design loading.
   2. Assembly and installation drawings including arrangement, layout, and dimensions of all basin/tank internal components. Provide plan elevation views of all major components and subsystems, detailing orientation of equipment, piping, fittings, and valves (including valve actuators) and necessary supports for the equipment.
   3. Three-dimensional models of all equipment. Electronic copies of all models shall be provided in Revit Version 2024 or compatible alternative.
   4. P&ID drawings clearly identifying the termination points for piping connections, and electrical connections on the P&ID drawings where interfacing of the Treatment System supplied equipment and Contractor supplied equipment and/or piping exists.

5. Complete Bill of Materials including quantity, manufacturer, and custom tag number referenced to the P&IDs. The custom tags shall be developed by the Design Engineer and Owner. The Equipment Supplier shall not create their own tagging system.
    a. Equipment Supplier shall provide literature and Engineering data and specifications including dimensions, materials, size, and weight of major components.
6. Hydraulic calculations for reactor influent distribution grids and sludge/WLC withdrawal grids across the range of anticipated flows in tabular form.
7. Detailed design specifications, design criteria, and design calculations for pumps, blowers, and other ancillary equipment.
8. Basin dimensional requirements.
9. Anchorage requirements and details for all supplied mechanical equipment, influent distribution grids, sludge/WLC withdrawal grids, and effluent launders.
10. Detailed control package summary including detailed control equipment cabinets layouts, associated cabinet wiring diagrams, I/O lists, alarms, control loops, and integration of associated ancillary equipment.
11. Detailed Control Narrative describing how the Treatment System operation works. The control narrative should describe the operation of the system in various operating modes including Hand and Auto.

C. Shop Drawings:
1. Provide setting drawings, templates for the installation of anchor bolts and other anchorage systems.
2. Final P&IDs, General Arrangement Drawings.
3. Complete power and control wiring diagrams and schematics with all field revisions.
4. Bill of Materials with Quantities for major electrical and control components like PLCs, OITs, Ethernet Switches etc.
5. Product Data: Submit the following for each type of product specified and included as minimum:
    a. Data sheets for all control panel components furnished.
6. PLC Control Panels: Provide the following as minimum:
    a. Fabrication drawings, front elevation, wiring diagrams, and bills of material for control panels.
    b. Electrical connection diagrams showing termination locations for all field wiring. External connection diagrams shall indicate cable number and wire color for field cables terminated at the panel.
    c. Engraving schedule and physical dimensions for nameplates.
    d. Provide heat dissipation calculations for all panels containing programmable logic controllers. Include calculation for ventilation fans if required.
7. Operator Interface Terminal (OIT) touch screen layouts (for each screen) subject to Owner and Engineer approval.
8. Testing Protocol. Submit to the Contractor and Owner, the Treatment System testing protocol as indicated below.
9. I/O list for SI programming of client SCADA system.
10. Final PLC program copy with complete documentation to be submitted after startup and acceptance of the system. The program shall be provided with the final O&M materials and stored on flash media.

D. Quality Control Submittals
1. Equipment Supplier’s Certificate of Proper Installation
2. Special shipping, storage and protection, and handling instructions for all components.
3. Equipment Supplier’s written/printed installation instructions.

4. Routine maintenance requirements prior to plant startup.
5. Two (2) hard copies and one (1) electronic copies of the Operation and Maintenance Manuals for the Treatment System and all associated equipment O&M Manuals. The Manuals shall include complete operations and maintenance manuals, maintenance procedures, spare parts lists, and field procedures according to SECTION 01300 – SUBMITTALS.
6. The Equipment Supplier's instructions for the handling, long and short-term storage, installation, maintenance, and cleaning of all provided equipment.
7. Maintenance procedures spare parts lists, and field procedures.

1.06 SITE CONDITIONS:

A. All Equipment provided as part of this system shall be rated for the temperature, seismic and elevations as specified in Section 01810 – Project Design Criteria and its appendices.

1.07 SYSTEM WARRANTIES:

A. A Process Performance Warranty shall be provided by Equipment Supplier for the Treatment System per the requirements outlined in Section 2.02 Treatment System Design Criteria, Section 3.03 Performance Test and Section 3.04 Monitored Test Period. This warranty shall include the required effluent values for BOD, TSS, TN, NH_3-N, and TP. The Process Performance Warranty shall be based on demonstrating the specified performance during a 60-day Performance Test, and maintenance of performance through the Monitored Test Period. The warranty shall include a protocol for provisions to make process adjustments, replace equipment and make any other modifications necessary to maintain plant performance through the warranty period.
   1. Equipment Supplier shall furnish a two-year, non-prorated, Process Performance Warranty. Required effluent values for BOD, TSS, TN, NH_3-N, and TP shall be met as long as Influent Wastewater Quality is maintained at or below the values listed in Section 2.02.
   2. The two-year warranty shall commence after the Performance Test has been successfully completed. The Equipment Supplier shall retroactively set the beginning of the warranty period at the date with which the process met and maintained the effluent requirements, up to a maximum of 60 days prior to the end of the Performance Test.

B. Equipment Supplier shall furnish a two-year, non-prorated, materials and workmanship warranty for all components comprising the Treatment System unless otherwise noted. Warranty shall be for two (2) years from the date of successful completion of commissioning activities as described in Section 3.02.

PART 2 - PRODUCTS

2.01 ACCEPTABLE TREATMENT SYSTEMS:

A. Aerated Granular Sludge (AGS) treatment system package, as provided by Aqua Nereda / Aqua Aerobics Systems, Inc.

2.02 TREATMENT SYSTEM DESIGN CRITERIA:

A. The Equipment Supplier shall provide the biological system design calculations to assure the Treatment System can meet all performance requirements listed in this specification.

B. Treatment System shall provide biological phosphorus removal without incorporation of a chemical phosphorus removal system.

C. The Treatment System shall be designed to remove phosphorus, biological oxygen demand, ammonia, and total nitrogen at a maximum month flow of 7.96 MGD. The biological system shall meet the following design criteria:
   1. Design Conditions:
      a. Average Day Flow (ADF): 4.59 MGD
      b. Maximum Month Flow (MMF): 7.96 MGD
      c. Peak Day Flow (PDF): 12.3 MGD
      d. Minimum Temperature: 10°C
      e. pH: 6.5-8.5
      f. Site Elevation: 915 ft
   2. Influent Wastewater Characteristics:

	Average Day	**Maximum Month**	**Peak Day**
BOD_5, lbs/d	7,200	13,300	16,800
TSS, lbs/d	7,600	15,400	23,500
TKN, lbs/d	1,600	2,230	3,180
TP, lbs/d	270	380	540

   3. Effluent Wastewater Quality Requirements:

Parameter, Units	**30-Day Avg**	**7-Day Avg**	**Daily Max**
pH, su	-	-	6.0-9.0
BOD_5, mg/L	15	15	-
TSS, mg/L	20	30	-
Oil and Grease, mg/L	10	-	15
Ammonia, mg/L	1.8 (Jan) 1.8 (Feb) 1.8 (Mar) 1.4 (Apr) 1.2 (May) 0.6 (June) 0.4 (July) 0.6 (Aug) 0.7 (Sept) 1.3 (Oct) 1.8 (Nov) 1.8 (Dec)	-	8.4 (Jan) 8.4 (Feb) 8.4 (Mar) 6.9 (Apr) 8.4 (May) 6.9 (June) 6.9 (July) 8.4 (Aug) 6.9 (Sept) 6.9 (Oct) 8.4 (Nov) 8.4 (Dec)
Total Phosphorus, mg/L	1.0	-	-
Total Nitrogen, mg/L	8.0	-	-

D. Include biological design information on the following, at a minimum:
   1. Process flow diagram.
   2. Tank configuration and volumes.
   3. Sludge and WLC withdrawal flows.
   4. Oxygen demand.
   5. Sludge production.
   6. SRT/HRT.

E. Treatment System shall be designed for four (4) AGS Basins, each with the dimensions below:

1. Reactor Width: 75 feet
2. Reactor Length: 80 feet
3. Maximum Sidewater Depth: 22 feet
4. Aeration Sidewater Depth: 21 feet
5. Top of Reactor Wall: 24 feet

F. Treatment System sludge processing system shall be designed for two (2) Sludge Buffer Tanks, each with the dimensions below:
1. Reactor Width: 20 feet
2. Reactor Length: 28 feet
3. Maximum Sidewater Depth: 14.2 feet
4. Top of Reactor Wall: 24 feet

G. Treatment System water level correction system shall be designed for one (1) WLC Tank with the dimensions below:
1. Reactor Width: 20 feet
2. Reactor Length: 20 feet
3. Maximum Sidewater Depth: 14.4 feet
4. Top of Reactor Wall: 24 feet

2.03 AERATION EQUIPMENT:

A. Equipment Supplier shall design aeration control system based on a common air discharge header with modulating control valves at each basin to balance air between basins as needed to meet process performance demands. A control system with blowers dedicated to individual basins shall not be acceptable.

B. Butterfly valves for air service:
1. All butterfly valves shall be provided with stainless steel disc, and FKM valve seat. All internal materials must be compatible with the highest anticipated blower discharge temperature and 25 degrees F safety factor.
2. Equipment Supplier shall provide four (4) electrically operated, modulating service butterfly valves for controlling airflow to each basin.
   a. Valves shall be 10-inch with lug-style or flanged connections.
   b. Electric motor actuators shall be 460V, 3ph, 60Hz service.
   c. Actuators shall include motor winding protection, integral disconnect switch (NEMA 4X), manual override and limit switch feedback to allow monitoring of valve position and whether valve is open or closed.
   d. Actuators shall include local controls, including push buttons for opening / closing, selector switches for placing actuator in hand or remote, and indicator lights to identify if valve is open / closed and if the valve is in a fault mode.
   e. Modulating electric motor actuator shall include the following control signals, at minimum:
      (1) Discrete outputs:
         (a) Dry contacts rated 5A, 120Vac.
         (b) Signals:
            i) Open limit switch.
            ii) Closed limit switch.
            iii) In-Remote status.
      (2) Discrete inputs:
            i) Open/Close.
      (3) Analog output:
         (a) 4-20mA range.

i) Position control.
ii) Position feedback.

3. Equipment Supplier shall provide eight (8) electrically operated, open/close service butterfly valves for use with the air supply at each basin.
   a. Valves shall be 4-inch with lug-style or flanged connection.
   b. Electric motor actuators shall be 460V, 3ph, 60Hz service.
   c. Actuators shall include motor winding protection, integral disconnect switch, manual override and limit switch feedback to allow determination whether valve is open or closed.
   d. Actuators shall include local controls, including push buttons for opening / closing, selector switches for placing actuator in hand or remote, and indicator lights to identify if valve is open / closed and if the valve is in a fault mode.
   e. Open/close electric motor actuator shall include the following control signals, at minimum:
      (1) Discrete outputs:
         (a) Dry contacts rated 5A, 120Vac.
         (b) Signals:
            i) Open limit switch.
            ii) Closed limit switch.
            iii) In-Remote status.
      (2) Discrete inputs:
            i) Open/Close.

C. Aeration Blowers:
   1. Equipment supplier shall provide blowers sized to accommodate projected peak day loadings into the WWTP, as indicated in Section 2.02C.1. The blowers shall be provided with a 4 Duty / 1 Standby arrangement. Other blower arrangements shall be subject to Design Engineer Approval.
   2. Aeration Blowers shall be positive displacement type and shall be as specified in Section 43 11 33 Positive Displacement Blowers.

D. Aeration Blower Intake Filter / Silencer Assemblies:
   1. Equipment supplier shall provide five (5) intake filter / silencer assemblies, as specified in Section 43 11 33 under Series 400 Blowers.

E. Aeration Blower Intake Silencer Assemblies:
   1. Equipment supplier shall provide five (5) intake silencer assemblies, as specificed in Section 43 11 33 under Series 400 Blowers.
   2. Equipment supplier shall coordinate connections to blower piping with Design Engineer.

F. Air Flowmeter:
   1. Function: Continuously measure, indicate, and transmit signals proportional to air flow being supplied to each AGS Basin. Each air flow meter shall be integrated with the Equipment Supplier PLC for monitoring, data recording, and process control.
   2. Provide one (1) air flowmeter for each AGS Basin as specified in Section 2.11.

2.04 AGS BASIN, SLUDGE BUFFER TANK, AND WLC TANK INTERNALS

A. Treatment System shall be provided with tank internals required for a complete system. All piping connections shall be within 48 inches of reactor wall, and shall be coordinated with Design Engineer.

B. Fixed Fine Bubble Diffuser System:
   1. Equipment Supplier shall provide a complete fine bubble membrane diffuser system for each AGS Basin, with flanged dropleg connection located at the top of the reactor wall

for transition to contractor provided piping. Equipment Supplier shall provide dropleg connection for each independent diffuser grid provided.

2. Dropleg shall be minimum SCH10 304L stainless steel with 150# flange connection at top of dropleg.
3. Provide a manifold for connection to the air distribution headers. Fabricate maximum 30 feet long manifolds with threaded union or flanged joints to connect manifold sections and to connect to the air distribution headers to prevent rotation and blow apart. Fabricate manifolds of Schedule 40 CPVC conforming to ASTM D1784, D1785 and D2466. Design piping, pipe joints and supports to resist expansion/contraction thrust forces of the air distribution headers over a temperature range of 250°F. CPVC components to be produced from CPVC compound with a minimum tensile strength of 7000 psi. Design manifolds to withstand 180° F mean wall temperature. CPVC components shall have minimum 1.5 percent titanium dioxide to minimize ultraviolet light degradation. Factory solvent weld all CPVC joints and diffuser holders.
4. Fabricate maximum 24 feet long air distribution headers with diffuser holders factory solvent welded to the crown of the pipe for positive air seal and strength. Fabricate minimum 4-inch diameter air distribution headers conforming to ASTM D3915 and D3034. Connect air distribution header sections with threaded union or flange joints to prevent blow apart and rotation. Design joints with mating halves factory solvent welded to the ends of the air distribution header. Design threaded union joints with spigot and socket ends joined with a threaded ring and sealed with an O-ring gasket. Design union joints with threads of a minimum of 0.013 square inches to provide adequate strength of the socket and retainer ring. Design flange joints with an angle face ring, follower flange with 150 lb drilling and stainless-steel hardware. Diffuser holders shall have a continuous contact area of 13 square inches minimum to ensure structural integrity. Air distribution headers and diffuser holders to resist a dead load of 200 lbs applied vertically to the outer edge of the diffuser holder. Provide end caps at the end of each air distribution header.
5. Provide complete pipe support system for entire manifold and header assembly, including dropleg connections along reactor wall. Support spacing to be limited to a maximum of 8 feet. Design all supports to allow for thermal expansion and contraction forces over a temperature range of 125° F and to minimize stress build up in the piping system. Design supports shall be adjustable without removing the air distribution header from the support. Design supports shall include hold down guide straps, support structure and two anchor bolts. Design guide straps with a 2-inch minimum width to eliminate point load on manifold and minimize binding. Design support for a total of 4-inch vertical adjustment for leveling of manifold within ¼ inch of a common plane.
6. Provide guide and fixed type supports for air distributors and manifolds to allow expansion/contraction. Design supports to include hold down straps, support structure, locating plate and single anchor bolt. To prevent improper installation, the locating plate shall be able to be installed in either of two directions relative to the support. Design support for a total of 3-inch vertical adjustment for leveling air distribution headers within 1/4-inch of a common plane. Guide straps shall have 1 1/2-inch wide top and bottom contoured bearing surface with chamfered edges to minimize binding and resistance to movement of air distributor under full buoyant uplift load. Design strap with 1/8-inch clearance around distributor so strap is self-limiting and cannot be over tightened.
7. All supports shall be 304 stainless steel construction.

8. Provide diffuser assemblies including diffuser, holder, retaining ring, and air flow control orifice. Incorporate integral check valve into the membrane diffuser.
    a. Test diffuser using primary sampling criteria outlined in Military Standard 105E. Manufacture circular membrane diffuser with integral O-ring of EPDM synthetic rubber compound with precision die formed slits. Add carbon black to the material for resistance to ultraviolet light. Design diffuser as one piece injection molded part with a minimum thickness of 0.080 inches for 9 inch diameter unit. Extractable oil content shall not exceed 10%. Limit the maximum tensile strength of the diffuser to 10 psi when operating at 2.4 SCFM/sq. ft. of material.
    b. Visual Uniformity: Observe diffusers for uniform air distribution across the active surface of the diffuser at 1.0 SCFM/diffuser and 2 inches submergence. Active surface shall be defined as the perforated horizontal projected area of the diffuser. Factory test diffusers for a dynamic wet pressure (DWP) of 12 inches ± 20% water column @ 1.0 SCFM/diffuser and 2 inches submergence.

C. Influent Distribution System:
1. Equipment Supplier shall provide one (1) influent distribution system for each AGS Basin. System shall consist of PVC and HDPE components.
2. Complete support system shall be provided, including anchors. All support components shall be of 304 stainless-steel construction.
3. Influent distribution system shall connect to 36” flange provided by Contractor. Connection shall be internal to the tank and within 48 inches of interior wall as shown in the CONTRACT DRAWINGS.

D. Solids / WLC Waste Assembly:
1. Equipment Supplier shall provide one (1) HDPE withdrawal manifold for each AGS Basin to facilitate removal of sludge and WLC during applicable operational cycles.
2. Complete support system shall be provided, including anchors. All support components shall be of 304 stainless steel construction.
3. Solids / WLC waste assembly shall connect to 24” flange provided by Contractor. Connection shall be internal to the tank and within 24 inches of interior wall as shown in the Contract Drawings.

E. Effluent Weir Assembly:
1. Furnish one (1) effluent weir system for each AGS Basin, consisting of maximum eight (8) finger weirs to be installed between basin exterior concrete walls and center concrete effluent trough.
2. Effluent weirs shall be 304 stainless steel.
3. Complete support system shall be provided, inlcuding anchors. All support compoenents shall be of 304 stainless steel construction.

F. Solids Buffer Tank Sludge Withdrawal Assembly:
1. Furnish one (1) solids withdrawal assembly for each Sludge Buffer Tank.
2. Manifold shall be of PVC and HDPE construction and shall be provided with 10” flanged connection internal to each tank for connection to Contractor piping connection.
3. Supply all required supports and anchors. Supports and anchors shall be 304 stainless steel construction.

G. Tank internals shall be installed by Contractor per Equipment Supplier instructions and guidelines.

2.05 UTILITY CORRIDOR VALVES:

A. Influent Header Control Valves:

1. Equipment Supplier shall provide two (2) electronically actuated 30-inch plug valves for each AGS Basin (total of 8 valves). The valves shall be intended for use in 1 Duty / 1 Standby service.
2. Valve construction shall conform to Section 33 12 16 – Utility Valves and Accessories.
3. Electric motor actuators shall be 460V, 3ph, 60Hz service.
4. Actuators shall include motor winding protection, integral disconnect switch (NEMA 4X), manual override and limit switch feedback to allow monitoring of valve position and whether valve is open or closed.
5. Actuators shall include local controls, including push buttons for opening / closing, selector switches for placing actuator in hand or remote, and indicator lights to identify if valve is open / closed and if the valve is in a fault mode.
6. Open/close electric motor actuator shall include the following control signals, at minimum:
    a. Discrete outputs:
        (1) Dry contacts rated 5A, 120Vac.
        (2) Signals:
            (a) Open limit switch.
            (b) Closed limit switch.
            (c) In-Remote status.
    b. Discrete inputs:
            (a) Open/Close.

B. Sludge and WLC Modulating Control Valves
1. Equipment supplier shall provide two (2) electronically actuated 20-inch plug valves for each AGS Basin (total of 8 valves). The valves shall be intended for modulating service.
2. Equipment Supplier shall provide two (2) electronically actuated 20-inch plug valves to serve the Sludge Buffer Tanks. The valves shall be intended for open / close service.
3. Valve construction shall conform to Section 33 12 16 – Utility Valves and Accessories.
4. Electric motor actuators shall be 460V, 3ph, 60Hz service.
5. Actuators shall include motor winding protection, integral disconnect switch (NEMA 4X), manual override and limit switch feedback to allow monitoring of valve position and whether valve is open or closed.
6. Actuators shall include local controls, including push buttons for opening / closing, selector switches for placing actuator in hand or remote, and indicator lights to identify if valve is open / closed and if the valve is in a fault mode.
7. Modulating electric motor actuators shall include the following control signals, at minimum:
    a. Discrete outputs:
        (1) Dry contacts rated 5A, 120Vac.
        (2) Signals:
            (a) Open limit switch.
            (b) Closed limit switch.
            (c) In-Remote status.
    b. Discrete inputs:
            (a) Open/Close.
    c. Analog output:
        (1) 4-20mA range.
            (a) Position control.
            (b) Position feedback.

2.06 HORIZONTAL END-SUCTION CENTRIFUGAL PUMPS:

A. Equipment supplier shall furnish the following horizontal end-suction centrifugal pumps for sludge, supernatant, and WLC service.

B. All pumps shall be manufactured by Gorman Rupp.

C. Materials of Construction:

1. Construct motor housing, pump casing, and major pump components of cast iron conforming to ASTM A48.
2. Casing:
   a. Designed to withstand a hydrostatic pressure of 150% of the shutoff head.
   b. Single-stage, single-suction, volute type.
   c. Provide flanged hand hole for inspection of casing interior.
   d. Inside face contoured to match volute.
   e. Bolted to casing.
   f. Provide with rigid mounting assembly to support motor weight, assure proper pump and motor alignment, and dampen vibration within the specific tolerance.
   g. Provide flanged suction and discharge flanges to match the connecting pipe flanges.
   h. Provided with casing vent and drain connections
3. Impeller:
   a. Open design with smooth water passages to prevent clogging.
   b. Balanced statically and dynamically to eliminate vibration and minimize hydraulic end thrust.
   c. Castings shall not have been repaired by plugging, welding, or other means.
   d. Securely fitted and keyed or screwed to the shaft
4. Shaft:
   a. Ample diameter to assure first critical speed will occur at not less than 150% of rated pump speed.
   b. Provide shaft with sleeves designed to prevent water leakage between shaft and sleeves. Adequately anchor sleeves to the shaft to prevent rotation relative to shaft.
   c. Completely encase shaft along its entire length within the pump by the impeller and sleeves.
   d. Proportioned to transmit all loads and torque without deflection or twisting.
5. Bearings:
   a. Bearings shall be permanently lubricated.
   b. Inboard bearings shall be roller, while outboard bearings may be ball or roller.
   c. Designed for all radial and thrust loads imposed by hydraulically unbalanced impellers.
   d. Have provisions for shaft and casing expansion movement.
   e. Designed for a minimum L-10 life of 100,000-hour minimum in accordance with ABMA standards.
6. Shaft Seals:
   a. Pump shall have a single self-contained mechanical seal.
7. Drive Coupling:
   a. Provide adequate spacer length to allow removal of end suction pump internals or mechanical seal from horizontal split-case pumps without disturbing casing.
   b. Rigidly fastened to the base plate. Guard shall be arranged to allow ease of disassembly or removal for access to the coupling.
   c. Prevent any thrust from being transmitted to the drive motor shaft under any operating condition.
   d. Rated for at least 150% of drive motor horsepower.

8. Base Plate:
   a. Provide each pumping unit with a separate base plate.
   b. Provide for rigid anchoring of pump, motor, coupling guard including all blocks and leveling plates.
   c. Have a raised drip lip around the perimeter with a threaded drain connection.
   d. Provide all necessary bolting to attach all components to the base plate.
   e. Cast-iron or steel base plates shall be designed rigid enough for no grout, but shall be suitable for field grouting under the entire plate.
9. Motors:
   a. Shall be in accordance with Section 46 05 13 and herein.
   b. All motors shall be of single-speed, premium-efficient, squirrel cage induction design.
   c. All motors shall be rated for 480V, 3-phase, 60-Hz operation with the service factor of 1.15. RPM rating shall be as required.
   d. Designed for operation with variable frequency drive.
   e. Provide two normally closed temperature switches embedded in each phase winding for high temperature protection. Switches shall be rated for use with 120Vac.
   f. Provide factory installed, maintenance free, circumferential, conductive micro fiber shaft grounding ring to discharge shaft currents to ground.
   g. Rated horsepower as required at 40° C ambient with Class F insulation.
   h. Comply with the applicable provision of NEMA with a minimum B-10 bearing life of 100,000 hours.
10. Materials:
   a. The materials specified below indicate a standard of quality. Substitutions may be made or recommended by Supplier upon approval of Purchaser, if deemed necessary due to quality of fluid being pumped, start-up system flushing chemical additives, or other reasons.
      (1) Base Plate: ASTM A36 structural steel or ASTM A48 cast iron.
      (2) Casing: Cast iron, cast steel, or ductile iron.
      (3) Impeller: ASTM A395 or ASTM A536 cast-ductile iron.
      (4) Shaft: AISI 1045 carbon steel or ASTM A322 Grade 4140.
      (5) Shaft Sleeve: ASTM A276 Type 416 Condition A.

D. Sludge Pumps:
1. Description of Service: Sludge pumps shall be used to transfer thickened sludge layer from Sludge Buffer Tanks to the Thin Sludge Tanks (provided by Others). Pumps shall be provided with one unit dedicated to each of two (2) Sludge Buffer Tanks, with a third pump available as a standby unit.
2. Number of Units: 3 Pumps (2 Duty / 1 Standby).
3. Design Capacity, each:
   a. Flow: 185 gpm.

E. Total Dynamic Head: 42.3 feet.
1. Maximum Motor Size: 7.5 HP.

F. Supernatant Pumps:
1. Description of Service: Supernatant pumps shall be used to transfer supernatant layer from Sludge Buffer Tanks following withdrawal of the thickened sludge layer. Supernatant shall be pumped to the AGS Influent Header (provided by Others). Pumps shall be provided with one unit dedicated to each of two (2) Sludge Buffer Tanks, with a third pump available as a standby unit.
2. Number of Units: 3 Pumps (2 Duty / 1 Standby).

3. Design Capacity, each:
   a. Flow: 740 gpm.
   b. Total Dynamic Head: 30 feet.
4. Maximum Motor Size: 15 HP.

G. WLC Pumps:
1. Description of Service: WLC pumps shall be used to transfer liquid from the WLC tank. WLC liquid shall be pumped to the AGS Influent Header (provided by Others). Pumps shall be provided in a 1 Duty / 1 Standby configuration.
2. Number of Units: 2 Pumps (1 Duty / 1 Standby).
3. Design Capacity, each:
   a. Flow: 485 gpm.
   b. Total Dynamic Head: 30 feet.
4. Maximum Motor Size: 15 HP.

2.07 ELECTRICAL:

A. Electrical material and equipment shall have UL listing wherever standards have been established by that agency.
B. Complete electrical assembly shall meet all requirements of the National Electrical Code, the National Electrical Manufactures Association (NEMA), the National Fire Protection Association (NFPA), all applicable state and local codes.
C. Three phase, 480V, 60 Hz power will be available for all Treatment System equipment, except instruments.
D. Unless specifically noted otherwise, all the power distribution equipment including the motor control center, variable frequency drives, motor starters and panelboards etc. for the Treatment System equipment shall be provided by Others.

2.08 PROCESS CONTROL PANEL:

A. Provide and program a Programmable Logic Controller (PLC) based system with an operator interface to control the operation of the Treatment System including all ancillary equipment as specified in this section.
B. Programmable Logic Controllers (PLC):
1. Refer to Section 40 67 00 – Process Control Panels and Hardware for all requirements of the AGS control system PLC.
2. Provide Allen-Bradley ControlLogix series PLC hardware as specified and required for application.
3. The PLC shall communicate with the Plant Control System over an EtherNet/IP communications network.
4. The PLC shall each include spare parts as well as memory sufficient to implement all application software plus 100% spare capacity as minimum.
5. The PLC should be capable of communicating and controlling the following treatment processes at the minimum in addition to the Treatment System.
   a. All automatic valves that are associated with the Treatment System.
   b. Aeration Blowers.
   c. Sludge Pumps.
   d. Supernatant Pumps.
   e. WLC Pumps.
   f. Instrumentation, sampling pumps, and sampling panels, as required.

C. PLC I/O:

1. Refer to the I/O List at the end of this Section for a list of I/O required to be provided for the AGS control system.
2. Refer to Section 40 67 00 for requirements of PLC input and output modules for the consumption of all AGS PLC I/O.

D. Main Control Panel (AGS-MCP-001):
1. Provide a Main Control Panel (MCP) to house the PLC and associated control panel components that conform to Section 40 67 00 – Process Control Panels and Hardware.
   a. The MCP shall operate from a 120 VAC, single phase, 60Hz power supply.
   b. MCP shall be NEMA 12 rated cabinet located in a dedicated electrical room in the Blower Building.
   c. Motor and valve controls shall be a combination of hardwired control and network controls via the plant control system connection. The communications shall be by EtherNet/IP protocols. Refer to plans and schematics for specific control cabling and communication requirements.
2. Provide and configure an Operator Interface Terminal (OIT) installed within the door of the Main Control Panel. The OIT shall be as specified in Section 40 67 00 – Process Control Panels and Hardware.
3. Provide and configure a panel mount managed Ethernet switch within the main control panel for connection of the Plant Control System and all applicable AGS equipment. The network switch shall be as specified in Section 40 66 00 Process Control Networks.
4. Spare Parts: In addition to the general spare parts defined by Section 40 70 00, the following shall be provided specifically for the supplied main control panel PLC.
   a. One spare ControlLogix PLC processor as specified in Section 40 67 00.
   b. One spare I/O module of each type used.

E. Process Control
1. Unless otherwise specified, all equipment shall be capable of being controlled at the OIT and local controls including push buttons and pilot devices with the following functionality as minimum:
   a. For each Aeration Blower:
      (1) Manual/Auto.
      (2) Start/Stop.
      (3) Alarm reset.
      (4) Speed adjustment.
   b. For each Pump:
      (1) Manual/Auto.
      (2) Start/Stop.
      (3) Alarm reset.
      (4) Speed adjustment.
   c. For each Motor-Actuated Valve:
      (1) Manual/Auto.
      (2) Open/Close.
      (3) Alarm reset.
      (4) Position adjustment (for modulating valves).
2. The PLC shall be capable of receiving initial run-time values for existing and proposed equipment. Initial run-time shall not automatically be assumed to be zero.
3. Unless otherwise specified, all flows and equipment run-times shall be totalized in the PLC and displayed on the HMI for current day, prior day, weekly, monthly, and annual totals.

F. HMI Screen Development:

1. Refer to Section 40 61 96 - Process Control Software Programming and Reports for requirements of HMI operator screen development.
2. HMI screens shall be developed for control interface and monitoring of AGS systems and related equipment.
3. The AGS System Supplier shall coordinate with the Systems Integrator to establish HMI development standards to ensure the HMI screens developed by the AGS supplier and the System Integrator share the same typical graphics, faceplates, and function blocks to meet the project standards.
4. The AGS System Supplier shall develop and provide a complete set of HMI screens with all system application files to the Systems Integrator. The screens shall be integrated into the Plant Control System HMI screen set.
5. The AGS System Supplier shall provide the necessary coordination with the Systems Integrator to ensure a fully functional application. Refer to Part 3 of this Section for minimum coordination requirements with the Systems Integrator.

2.09 AQUANEREDA SERVER:

A. Provide a Process System Server for monitoring, calculations, and modification of control system parameters.
B. The server shall communicate control system updates to the main control panel PLC over the Ethernet network.
C. The servers shall be rack mount design and provided with sliding rack rails. The server shall be installed in the plant control system network rack (by others). The server shall include the following as minimum.
   1. The processor shall be an Intel® Xeon E2334, 3.4GHz, 8MB Cache or greater.
   2. Provide 132.0 Gigabytes (minimum) of registered UDIMM.
   3. Provide a minimum of two fully rated power supplies for redundant operation.
   4. Provide with dual on-board 10/100/1000 Base-T network interface card. The dual NIC card shall be configurable to serve as a primary and secondary fail-over.
   5. Provide Dell Power Edge R250 Server or approved equal.
D. The graphics card shall be integrated with a minimum of 16 MB of video memory.
E. Disk Drives:
   1. Provide two (2) 1TB SATA Drives, 7200 rpm, 6Gbps, 3.5”.
   2. Provide C22, RAID 1 for S140 SATA.
F. Operating System and Software:
   1. Provide Microsoft Windows Server 2022 with five client access licenses (CAL’s) as necessary. Provide and install the latest service packs and patches available that are compatible with the supplied control software.
   2. The servers shall have a clean install of the operating system and hardware drivers. Non-essential applications, such as manufacturer provided trial software and utilities, shall not be loaded on the system.
   3. Provide Remote Desktop Services (RDS) client access licenses (CAL’s) as required.
   4. Provide one copy of the latest version of Microsoft Office Professional for each server.

2.10 DESCRIPTION OF OPERATIONS:

A. Equipment Supplier shall provide any additional automatic valves and instrumentation as required to provide a complete, functional system. Any additional items shall be coordinated with the Design Engineer and Contractor to be incorporated into this Section and Contract Drawings, including Process & Instrumentation Diagrams.

B. Equipment Supplier shall tag all provided equipment as specified herein, and as shown on the Contract Drawings and Section 40 70 00. Any additional items required by Equipment Supplier shall be coordinated with Design Engineer to develop appropriate tagging.

C. System Components and Functions:
   1. Equipment denoted with "*" symbols is to be provided by the Contractor / System Integrator. Refer to Section 40 61 96 and Section 40 70 00 for additional requirements.
   2. AGS Main Control Panel AGS-MCP-001.
      a. Equipment Supplier provided control panel for control of the Treatment System containing a PLC, operator interface, and other ancillaries necessary for control of the equipment.
   3. AGS Nereda Controller AGS-SVR-001.
      a. Equipment Supplier provided software-based controller running on a host server located in the Blower Building Electrical Room network rack.
   4. AGS Influent Header:
      a. *Influent Header Analytical Transmitter AGS-AIT-001 for the following*:
         (1) *Analytical element AGS-AE-001 for measuring influent total suspended solids*.
   5. AGS Basins:
      a. AGS Basin No. 1:
         (1) Basin No. 1 Influent Valve A AGS-VLV-101:
            (a) Motor actuated valve with open/close service.
         (2) Basin No. 1 Influent Valve B AGS-VLV-103:
            (a) Motor actuated valve with open/close service.
         (3) *Basin No. 1 Influent Flow Meter Transmitter AGS-FIT-101 for monitoring the following*:
            (a) *Basin No. 1 Influent Flow Meter AGS-FE-101*:
               i) Magnetic flow meter for measuring influent flow into the basin.
         (4) Basin No. 1 Thermal Mass Flow Meter AGS-FIT-101:
            (a) Measures process air flow to Basin No. 1.
         (5) Basin No. 1 Aeration Header Air Valve AGS-VLV-105 :
            (a) Motor actuated valve with modulating service.
         (6) Basin No. 1 Air Valve AGS-VLV-108:
            (a) Motor actuated valve with open/close service.
         (7) Basin No. 1 Air Valve AGS-VLV-109:
            (a) Motor actuated valve with open/close service.
         (8) Basin No. 1 Sludge Withdrawal Valve AGS-VLV-110:
            (a) Motor actuated valve with modulating service.
         (9) Basin No. 1 WLC Withdrawal Valve AGS-VLV-111:
            (a) Motor actuated valve with modulating service.
         (10) Basin No. 1 Level Indicating Transmitter AGS-LIT-101:
            (a) Submersible pressure transducers for measuring basin water level.
         (11) Basin No. 1 Analytical Transmitter AGS-AIT-110:
            (a) Transmitter/controller for monitoring the following basin probes:
               i) Analytical element AGS-AE-111 for measuring Ammonium (NH_4^+).
         (12) Basin No. 1 Analytical Transmitter AGS-AIT-120:
            (a) Transmitter/controller for monitoring the following basin probes:
               i) Analytical element AGS-AE-121 for measuring pH/Temperature.

ii) Analytical element AGS-AE-122 for measuring dissolved oxygen (DO).

(13) Basin No. 1 Analytical Transmitter AGS-AIT-130:
(a) Transmitter/controller for monitoring the following basin probes:
i) Analytical element AGS-AE-131 for measuring total suspended solids (TSS).
ii) Analytical element AGS-AE-132 for measuring oxidation-reduction potential (ORP).

(14) Basin No. 1 Analytical Transmitter AGS-AIT-140
(a) Transmitter/controller for monitoring the following basin probes:
i) Analytical Elements AGS-AE-141 for measuring nitrates.

b. AGS Basin No. 2:
(1) Basin No. 2 Influent Valve A AGS-VLV-201:
(a) Motor actuated valve with open/close service.
(2) Basin No. 2 Influent Valve B AGS-VLV-203:
(a) Motor actuated valve with open/close service.
(3) *Basin No. 2 Influent Flow Meter Transmitter AGS-FIT-201 for monitoring the following*:
(a) *Basin No. 2 Influent Flow Meter AGS-FE-201*:
i) Magnetic flow meter for measuring influent flow into the basin.
(4) Basin No. 2 Thermal Mass Flow Meter AGS-FIT-201:
(a) Measures process air flow to Basin No. 2.
(5) Basin No. 2 Aeration Header Air Valve AGS-VLV-205:
(a) Motor actuated valve with modulating service.
(6) Basin No. 2 Air Valve AGS-VLV-208:
(a) Motor actuated valve with open/close service.
(7) Basin No. 2 Air Valve AGS-VLV-209:
(a) Motor actuated valve with open/close service.
(8) Basin No. 2 Sludge Withdrawal Valve AGS-VLV-210:
(a) Motor actuated valve with modulating service.
(9) Basin No. 2 WLC Withdrawal Valve AGS-VLV-211:
(a) Motor actuated valve with modulating service.
(10) Basin No. 2 Level Indicating Transmitter AGS-LIT-201:
(a) Submersible pressure transducers for measuring basin water level.
(11) Basin No. 2 Analytical Transmitter AGS-AIT-210:
(a) Transmitter/controller for monitoring the following basin probes:
i) Analytical element AGS-AE-211 for measuring NH_4^+.
(12) Basin No. 2 Analytical Transmitter AGS-AIT-220:
(a) Transmitter/controller for monitoring the following basin probes:
i) Analytical element AGS-AE-221 for measuring pH/Temperature.
ii) Analytical element AGS-AE-222 for measuring DO.
(13) Basin No. 2 Analytical Transmitter AGS-AIT-230
(a) Transmitter/controller for monitoring the following basin probes:
i) Analytical element AGS-AE-231 for measuring TSS.
ii) Analytical element AGS-AE-232 for measuring ORP.
(14) Basin No. 2 Analytical Transmitter AGS-AIT-240
(a) Transmitter/controller for monitoring the following basin probes:
i) Analytical Elements AGS-AE-241 for measuring nitrates.

c. AGS Basin No. 3:

(1) Basin No. 3 Influent Valve A AGS-VLV-301:
(a) Motor actuated valve with open/close service.
(2) Basin No. 3 Influent Valve B AGS-VLV-303:
(a) Motor actuated valve with open/close service.
(3) *Basin No. 3 Influent Flow Meter Transmitter AGS-FIT-301 for monitoring the following*:
(a) *Basin No. 3 Influent Flow Meter AGS-FE-301*:
i) Magnetic flow meter for measuring influent flow into the basin.
(4) Basin No. 3 Thermal Mass Flow Meter AGS-FIT-301:
(a) Measures process air flow to Basin No. 3.
(5) Basin No. 3 Aeration Header Air Valve AGS-VLV-305:
(a) Motor actuated valve with modulating service.
(6) Basin No. 3 Air Valve AGS-VLV-308:
(a) Motor actuated valve with open/close service.
(7) Basin No. 3 Air Valve AGS-VLV-309:
(a) Motor actuated valve with open/close service.
(8) Basin No. 3 Sludge Withdrawal Valve AGS-VLV-310:
(a) Motor actuated valve with modulating service.
(9) Basin No. 3 WLC Withdrawal Valve AGS-VLV-311:
(a) Motor actuated valve with modulating service.
(10) Basin No. 3 Level Indicating Transmitter AGS-LIT-301:
(a) Submersible pressure transducers for measuring basin water level.
(11) Basin No. 3 Analytical Transmitter AGS-AIT-310:
(a) Transmitter/controller for monitoring the following basin probes:
i) Analytical element AGS-AE-311 for measuring NH_4^+.
(12) Basin No. 3 Analytical Transmitter AGS-AIT-320:
(a) Transmitter/controller for monitoring the following basin probes:
i) Analytical element AGS-AE-321 for measuring pH/Temperature.
ii) Analytical element AGS-AE-322 for measuring DO.
(13) Basin No. 3 Analytical Transmitter AGS-AIT-330
i) Analytical element AGS-AE-331 for measuring TSS.
ii) Analytical element AGS-AE-332 for measuring ORP.
(14) Basin No. 3 Analytical Transmitter AGS-AIT-340
(a) Transmitter/controller for monitoring the following basin probes:
i) Analytical Elements AGS-AE-341 for measuring nitrates.

d. AGS Basin No. 4:
(1) Basin No. 4 Influent Valve A AGS-VLV-401:
(a) Motor actuated valve with open/close service.
(2) Basin No. 4 Influent Valve B AGS-VLV-403:
(a) Motor actuated valve with open/close service.
(3) *Basin No. 4 Influent Flow Meter Transmitter AGS-FIT-401 for monitoring the following*:
(a) *Basin No. 4 Influent Flow Meter AGS-FE-401*:
i) Magnetic flow meter for measuring influent flow into the basin
(4) Basin No. 4 Thermal Mass Flow Meter AGS-FIT-401:
(a) Measures process air flow to Basin No. 4.
(5) Basin No. 4 Aeration Header Air Valve AGS-VLV-405 :
(a) Motor actuated valve with modulating service.
(6) Basin No. 4 Air Valve AGS-VLV-408:

(a) Motor actuated valve with open/close service.

(7) Basin No. 4 Air Valve AGS-VLV-409:
(a) Motor actuated valve with open/close service.

(8) Basin No. 4 Sludge Withdrawal Valve AGS-VLV-410:
(a) Motor actuated valve with modulating service.

(9) Basin No. 4 WLC Withdrawal Valve AGS-VLV-411:
(a) Motor actuated valve with modulating service.

(10) Basin No. 4 Level Indicating Transmitter AGS-LIT-401:
(a) Submersible pressure transducers for measuring basin water level.

(11) Basin No. 4 Analytical Transmitter AGS-AIT-410:
(a) Transmitter/controller for monitoring the following basin probes:
i) Analytical element AGS-AE-411 for measuring NH_4^+.

(12) Basin No. 4 Analytical Transmitter AGS-AIT-420:
(a) Transmitter/controller for monitoring the following basin probes:
i) Analytical element AGS-AE-421 for measuring pH/Temperature.
ii) Analytical element AGS-AE-422 for measuring DO.

(13) Basin No. 4 Analytical Transmitter AGS-AIT-430
(a) Transmitter/controller for monitoring the following basin probes:
i) Analytical element AGS-AE-431 for measuring TSS.
ii) Analytical element AGS-AE-432 for measuring ORP.

(14) Basin No. 4 Analytical Transmitter AGS-AIT-440
(a) Transmitter/controller for monitoring the following basin probes:
i) Analytical Elements AGS-AE-441 for measuring nitrates.

e. The AGS Basins receive and treat influent wastewater. The basins include Equipment Supplier provided instrumentation and all required tank internals for a complete functional system.

6. Sludge Buffer Tanks:
a. Sludge Buffer Tank No. 1:
(1) Waste Sludge Header Valve AGS-VLV-511
(a) Motor actuated valve with open/close service.
(2) Sludge Buffer Tank No. 1 Level Transmitter AGS-LIT-510.
(a) Submersible pressure transducers for measuring the Sludge Buffer Tank level.
(3) Sludge Buffer Tank No. 1 Level Switches AGS-LSLL-510, AGS-LSL-510, and AGS-LSH-510.
(a) Float level switches for tank level alarms and automatic shutoff of the Sludge Pumps and Supernatant Pumps in REMOTE AUTO.

b. Sludge Buffer Tank No. 2:
(1) Waste Sludge Header Valve AGS-VLV-521
(a) Motor actuated valve with open/close service.
(2) Sludge Buffer Tank No. 1 Level Transmitter AGS-LIT-520.
(a) Submersible pressure transducers for measuring the Sludge Buffer Tank level.
(3) Sludge Buffer Tank No. 1 Level Switches AGS-LSLL-520, AGS-LSL-520, and AGS-LSH-520.
(a) Float level switches for tank level alarms and automatic shutoff of the Sludge Pumps and Supernatant Pumps in REMOTE AUTO.

c. Sludge is wasted from the AGS Basins to the Sludge Buffer Tanks for gravity thickening and subsequent pumping of sludge and supernatant.

7. Supernatant Pumps:
    a. Supernatant Pump No. 1 AGS-PMP-610:
        (1) Horizontal centrifugal pump controlled by a VFD (by Others).
        (2) Associated with Sludge Buffer Tank No. 1.
    b. Supernatant Pump No. 2 AGS-PMP-620:
        (1) Horizontal centrifugal pump controlled by a VFD (by Others).
        (2) Associated with Sludge Buffer Tank No. 1 or Sludge Buffer Tank No. 2, dependent on position of manual pump valves and Operator selection at the Equipment Supplier HMI.
    c. Supernatant Pump No. 3 AGS-PMP-630:
        (1) Horizontal centrifugal pump controlled by a VFD (by Others).
        (2) Associated with Sludge Buffer Tank No. 2.
    d. *Supernatant Flow Transmitter AGS-FIT-601 for monitoring the following*:
        (1) *Supernatant Flow Meter AGS-FE-701*:
            (a) Magnetic flow meter for measuring supernatant flow from Sludge Buffer Tanks.
    e. Supernatant Pumps transfer supernatant from the Sludge Buffer Tanks to the AGS Influent Header after the sludge layer has been discharged to the Solids Processing Building.
8. Sludge Pumps:
    a. Sludge Pump No. 1 AGS-PMP-710:
        (1) Horizontal centrifugal pump controlled by a VFD (by Others).
        (2) Associated with Sludge Buffer Tank No. 1.
    b. Sludge Pump No. 2 AGS-PMP-720:
        (1) Horizontal centrifugal pump controlled by a VFD (by Others).
        (2) Associated with Sludge Buffer Tank No. 1 or Sludge Buffer Tank No. 2, dependent on position of manual pump valves and Operator selection at the Equipment Supplier HMI.
    c. Sludge Pump No. 3 AGS-PMP-730:
        (1) Horizontal centrifugal pump controlled by a VFD (by Others).
        (2) Associated with Sludge Buffer Tank No. 2.
    d. Sludge discharge header Analytical Transmitter AGS-AIT-701 for monitoring the following probes:
        (1) Sludge discharge header Analytical Element AGS-AE-701 for measuring TSS.
    e. *Sludge Flow Transmitter AGS-FIT-701 for monitoring the following*:
        (1) *Sludge Flow Meter AGS-FE-701*.
            (a) Magnetic flow meter for measuring waste sludge flow from Sludge Buffer Tanks.
    f. Sludge Pumps transfer thickened sludge from the Sludge Buffer Tanks to the Solids Processing Building.
9. Water Level Correction (WLC) Tank:
    a. WLC Tank Level Transmitter AGS-LIT-801.
        (1) Submersible pressure transducers for measuring the WLC Tank level.
    b. WLC Tank Level Switches AGS-LSLL-801, AGS-LSL-801, and AGS-LSH-801.
        (1) Float level switches for tank level alarms and low water cutoff of the WLC Pumps.
    c. WLC is transferred from the AGS Basins to the WLC Tank for reprocessing through the Treatment System.

10. WLC Pumps:
    a. WLC Pump No. 1 AGS-PMP-810:
        (1) Horizontal centrifugal pump controlled by a VFD (by Others).
    b. WLC Pump No. 2 AGS-PMP-820:
        (1) Horizontal centrifugal pump controlled by a VFD (by Others).
    c. *WLC Return Flow Transmitter AGS-FIT-801 for monitoring the following*:
        (1) *WLC Return Flow Meter AGS-FE-801*:
            (a) Magnetic flow meter for measuring WLC return from WLC Tank.
    d. WLC Pumps transfer liquid from the WLC Tank to the AGS Influent Header.
11. Aeration Blowers:
    a. Aeration Blower No. 1 AGS-BLOW-910.
        (1) Rotary lobe blower package controlled by a VFD (by Others).
    b. Aeration Blower No. 2 AGS BLOW-920.
        (1) Rotary lobe blower controlled by a VFD (by Others).
    c. Aeration Blower No. 3 AGS-BLOW-930.
        (1) Rotary lobe blower controlled by a VFD (by Others).
    d. Aeration Blower No. 4 AGS-BLOW-940.
        (1) Rotary lobe blower controlled by a VFD (by Others).
    e. Aeration Blower No. 5 AGS-BLOW-950.
        (1) Rotary lobe blower controlled by a VFD (by Others).
    f. Aeration Header Pressure Transmitter AGS-PIT-901:
        (1) Pressure transmitter used for monitoring common aeration header pressure.

D. Description of Operation:
1. Equipment Supplier shall provide complete control system for integrating all process equipment, instrumentation, and required control sequences for complete operation of the Treatment System. The following descriptions of operation are not intended to be complete. Equipment Supplier shall incorporate functionality described herein and coordinate with Design Engineer on any items that conflict with ability of Equipment Supplier control system to perform properly.
2. AGS Basin Feed System:
    a. Equipment Supplier shall develop operating sequences for controlling AGS Basin Influent Valves based on influent conditions and historical treatment performance.
    b. When transitioning influent feed to a subsequent AGS Basin, the programming shall not allow the previous AGS Basin Influent Valve to close until the current AGS Basin valve is confirmed. For example, if the control system is transitioning between AGS Basin No. 1 and AGS Basin No. 2, the following sequence shall be considered:
        (1) AGS Basin No. 2 Influent Valve A AGS-VLV-201 shall be called to open. Once confirmed open, AGS Basin No. 1 Influent Valve A AGS-VLV-101 shall be called to close.
    c. AGS Influent Valve Automatic Rotation
        (1) The two (2) AGS Influent Valves associated with each AGS Basin shall be programmed in a Duty and Standby configuration.
        (2) The Duty valve shall be automatically opened and closed as needed per the Equipment Supplier's control requirements.
        (3) The Duty valve shall operate as the control valve for an adjustable number of hours prior to automatic alternation of the Influent Valves. The timer shall be adjustable by the operator and initially set at 168 hours.

(4) The Influent Valves shall be rotated automatically by the Equipment Supplier control system. Manual rotation of the Influent Valves shall also be available to the plant operator at the Equipment Supplier operator workstation.
(a) When the rotation timer elapses, the control system shall queue the rotation of the valves and perform the transition during the next influent cycle when both valves are in the open position. At the end of that cycle, the previous Standby valve shall transition to the Duty valve and close as required.
(5) The Standby valve shall be maintained open at all times during normal operation.

3. AGS Basin Cycle Times:
a. Equipment Supplier shall develop operating sequence for controlling all cycle times, including fill/draw phase, react phase (including aerated and non-aerated operation, as necessary), and settle / decant phase.
b. Equipment Supplier shall provide operator adjustable setpoints for process inputs, including DO, ORP, pH, TSS or other parameters that are assocaited with automatic control of air flow, cycle time, or settling time.

4. AGS Basin Air Flow Control and Blower Control:
a. Equipment Supplier shall include air flow control process for a common aeration header serving all reactors. Each reactor shall utilize the dedicated modulating Aeration Header Valve to deliver air as needed.
b. Blower Control:
(1) Equipment Supplier shall provide complete control system for managing air flow to the AGS Basins.
(2) The Aeration Blowers shall be capable of being controlled at the associated blower VFD or remotely by the Equipment Supplier control system when the LOCAL/OFF/REMOTE switch is in REMOTE.
(3) Local Control:
(a) When the blowers are in LOCAL control, starting, stopping, and speed adjustment shall be controlled at the associated VFD.
(4) Remote Control:
(a) When the blowers are in REMOTE control, starting, stopping, and speed adjustment shall be controlled from the Equipment Supplier main control panel (AGS-MCP-001) PLC.
(b) When a run command associated with the blower is communicated to the VFD, the corresponding blower shall start and run. When a stop command associated with the pump is communicated to the VFD, the corresponding pump shall stop.
(c) HMI screens shall be developed to allow the operators to select from the following modes of operation:
(d) Remote Manual Control Mode:
i) Starting and stopper of each of the blowers is initiated by the operator at the MCP OIT.
ii) The operator shall set the speed as a percentage of full speed for each of the VFD controlled blowers.
(e) Remote Automatic Control Mode:
i) The control system shall automatically start, stop, and adjust the speed of the blowers based on DO, ORP, pH, ammonium, or other

parameters as required by the Equipment Supplier to maintain process performance.

ii) The blowers shall be configured in a four (4) Duty and one (1) Standby configuration. At Equipment Supplier's discretion, the blowers may be programmed to allow all five (5) blowers to operate simultaneously if recommended for process performance.

iii) The blowers shall be rotated automatically by the control system. All available blowers shall be assigned a sequential priority. After each blower stop cycle, the stopped blower shall automatically be moved to the last priority assignment, with remaining blowers moving up one priority assignment.

5. AGS Water Level Correction (WLC) and Sludge Withdrawal:
   a. Equipment Supplier shall provide programming to automatically open/close/modulate the WLC and sludge withdrawal automatic valves as needed during the settling phase of the biological process.
   b. Valve percent open setpoints shall be developed by Equipment Supplier during commissioning and startup.
6. Sludge Pump Control:
   a. Equipment Supplier shall provide complete control system for managing sludge withdrawal from the Sludge Buffer Tanks. All Sludge Pumps are configured to pump into a shared discharge header. Flow monitoring is available on the shared discharge header only.
   b. The sludge pumping system is provided with one (1) common TSS analytical element installed on the common sludge discharge header.
   c. The pumps shall be capable of being controlled at the associated pump VFD or remotely by the Equipment Supplier control system when the LOCAL/OFF/REMOTE switch is in REMOTE.
   d. Local Control:
      (1) When the pumps are in LOCAL control, starting, stopping, and speed adjustment shall be controlled at the associated VFD.
   e. Remote Control:
      (1) When the pumps are in REMOTE control, starting, stopping, and speed adjustment shall be controlled from the Equipment Supplier main control panel (AGS-MCP-001) PLC.
      (2) When a run command associated with the pump is communicated to the VFD, the corresponding pump shall start and run. When a stop command associated with the pump is communicated to the VFD, the corresponding pump shall stop.
      (3) HMI screens shall be developed to allow the operators to select from the following modes of operation:
      (4) Remote Manual Control Mode:
         (a) Starting and stopper of each of the pumps is initiated by the operator at the MCP OIT.
         (b) The operator shall set the speed as a percentage of full speed for each of the VFD controlled pumps.
      (5) Remote Automatic Control Mode:
         (a) The control system shall automatically start, stop, and adjust the speed of the pumps based on tank level, total suspended solids, and/or sludge discharge flow.

(b) No more than one (1) pump shall be called to run at a time.
(c) Sludge Pumps shall be shut off if low low level is reached in the associated Sludge Buffer Tank. Sludge Pump No. 2 shall shut off only if the tank it is assigned to reaches low low level.

(6) Sludge Pump No. 2 (AGS-PMP-720) operation:
(a) The HMI screen shall allow the operator to select the Sludge Buffer Tank with which the pump is associated. The allowable assignments shall be as previously defined in the System Components and Functions section above.
i) A warning pop-up shall be programmed to ensure the operator has confirmed the manual valve changes for the selected pump assignment. The pop-up shall read as follows:
a) "Warning: Pump assignment change requires operator confirmation of manual valve positions for intended usage! Are valve positions correct (YES) (NO)?"
b) If "YES" is selected the assignment change shall be executed. If "NO" is selected the assignment change shall be ignored and remain unchanged.
(b) When two (2) pumps are assigned to one (1) Sludge Buffer Tank, the following automatical controls shall be additionally applicable to other automatic operations:
i) The two (2) pumps shall be programmed in a Duty and Standby Configuration.
ii) The pumps shall be rotated automatically by the control system or manually by the operator. Selections shall be made available on the OIT for enabling and disabling this function.
a) If automatic rotation is enabled, the pumps shall rotate Duty and Standby assignment ater each pump stop cycle.
b) If automatic rotation is disabled, the pumps shall rotate Duty and Standby assignment manually by the operator.

7. Supernatant Pump Control:
a. Equipment Supplier shall provide complete control system for managing supernatant withdrawal from the Sludge Buffer Tanks. All Supernatant Pumps are configured to pump into a shared discharge header. Flow monitoring is available on the shared discharge header only.
b. The pumps shall be capable of being controlled at the associated pump VFD or remotely by the Equipment Supplier control system when the LOCAL/OFF/REMOTE switch is in REMOTE.
c. Local Control:
(1) When the pumps are in LOCAL control, starting, stopping, and speed adjustment shall be controlled at the associated VFD.
d. Remote Control:
(1) When the pumps are in REMOTE control, starting, stopping, and speed adjustment shall be controlled from the Equipment Supplier main control panel (AGS-MCP-001) PLC.
(2) When a run command associated with the pump is communicated to the VFD, the corresponding pump shall start and run. When a stop command associated with the pump is communicated to the VFD, the corresponding pump shall stop.

(3) HMI screens shall be developed to allow the operators to select from the following modes of operation:
(4) Remote Manual Control Mode:
(a) Starting and stopping of each of the pumps is initiated by the operator at the MCP OIT.
(b) The operator shall set the speed as a percentage of full speed for each of the VFD controlled pumps.
(5) Remote Automatic Control Mode:
(a) The control system shall automatically start, stop, and adjust the speed of the pumps based on tank level, and/or supernatant discharge flow.
(b) No more than one (1) pump shall be called to run at a time.
(c) Supernatant Pumps shall be shut off if low low level is reached in the associated Sludge Buffer Tank. Supernatant Pump No. 2 shall shut off only if the tank it is assigned to reaches low low level.
(6) Supernatant Pump No. 2 (AGS-PMP-620) operation:
(a) The HMI screen shall allow the operator to select the Sludge Buffer Tank with which the pump is associated. The allowable assignments shall be as previously defined in the System Components and Functions section above.
i) A warning pop-up shall be programmed to ensure the operator has confirmed the manual valve changes for the selected pump assignment. The pop-up shall read as follows:
a) "Warning: Pump assignment change requires operator confirmation of manual valve positions for intended usage! Are valve positions correct (YES) (NO)?"
b) If "YES" is selected the assignment change shall be executed. If "NO" is selected the assignment change shall be ignored and remain unchanged.
(b) When two (2) pumps are assigned to one (1) Sludge Buffer Tank, the following automatical controls shall be additionally applicable to other automatic operations:
i) The two (2) pumps shall be programmed in a Duty and Standby Configuration.
ii) The pumps shall be rotated autoatically by the control system or manually by the operator. Selections shall be made available on the OIT for enabling and disabling this function.
a) If automatic rotation is enabled, the pumps shall rotate Duty and Standby assignment ater each pump stop cycle.
b) If automatic rotation is disabled, the pumps shall rotate Duty and Standby assignment manually by the operator.

8. WLC Pump Control:
a. Equipment Supplier shall provide complete control system for managing liquid withdrawal from the WLC Tank. All WLC Pumps are configured to pump into a shared discharge header. Flow monitoring is available on the shared discharge header only.
b. The pumps shall be capable of being controlled at the associated pump VFD or remotely by the Equipment Supplier control system when the LOCAL/OFF/REMOTE switch is in REMOTE.

c. Level switches associated with the WLC Tank will be incorporated into an external low water cutoff (LWCO) system to shut the WLC Pumps off if the low low level is reached.
d. Local Control:
(1) When the pumps are in LOCAL control, starting, stopping, and speed adjustment shall be controlled at the associated VFD.
e. Remote Control:
(1) When the pumps are in REMOTE control, starting, stopping, and speed adjustment shall be controlled from the Equipment Supplier main control panel (AGS-MCP-001) PLC.
(2) When a run command associated with the pump is communicated to the VFD, the corresponding pump shall start and run. When a stop command associated with the pump is communicated to the VFD, the corresponding pump shall stop.
(3) HMI screens shall be developed to allow the operators to select from the following modes of operation:
(4) Remote Manual Control Mode:
(a) Starting and stopping of each of the pumps is initiated by the operator at the MCP OIT.
(b) The operator shall set the speed as a percentage of full speed for each of the VFD controlled pumps.
(5) Remote Automatic Control Mode:
(a) The control system shall automatically start, stop, and adjust the speed of the pumps based on tank level, and/or discharge flow.
(b) No more than one (1) pump shall be called to run at a time.
(c) The two (2) pumps shall be programmed in a Duty and Standby configuration.
i) The pumps shall be rotated autoatically by the control system or manually by the operator. Selections shall be made available on the OIT for enabling and disabling this function.
a) If automatic rotation is enabled, the pumps shall rotate Duty and Standby assignment ater each pump stop cycle.
b) If automatic rotation is disabled, the pumps shall rotate Duty and Standby assignment manually by the operator.

E. Setpoints and Ranges:
1. For air flow meters, level transmitters, and all analytical devices, Equipment Supplier shall provide a display of instrument range with measurement on HMI screens.

F. System Upsets and Procedures for Recovery:
1. If an abnormal system condition is detected, the control system shall alarm the operator via the operator workstation. Abnormal system conditions shall be as recommended by the Equipment Supplier and the following as minimum:
a. Analytical instrument measurement is out of normal operating range.
b. High level for each basin.
c. Low level for each basin.
d. Reverse flow.
e. Pump, valve, or blower failure.
2. System in Remote Automatic control mode:
a. If a low level is detected by either sludge buffer or water level correction basin level transmitter while the basin is in service, all associated pumps shall be called to stop

pumping. The associated pumps shall be allowed to run when the level rises above the pump run setpoint.

b. If a low-low level is detected by either sludge buffer or water level correction basin level switch while the basin is in service, all associated pumps shall be called to stop pumping. The associated pumps shall be allowed to run if the level switch returns to normal state and the alarm is cleared at the operator workstation.

c. In the event a Duty pump becomes unavailable, fails to start, or drops off-line, the Standby pump in the starting sequence shall be automatically selected to operate as the lead pump.

d. In the event an influent valve fails or becomes unavailable, the available valve shall close and the reactor operation shall stop. The AGS control system shall alarm the operator via the operator workstation. The reactor shall be allowed to resume automatic operation after the operator has acknowledged the following message: "Has the malfunctioning influent valve been manually opened and locked out?" If the operator selects "Yes", the available valve shall be selected as duty and the reactor processes shall restart. If the operator selects "No", the reactor shall remain out of operation.

3. Unless otherwise specified, all equipment shall automatically restart after a power failure utilizing adjustable start delay timers in PLC control logic. Unless otherwise specified, all PLC control strategies shall be based upon automatic restart after a power failure and shall return to a normal control mode upon restoration of power. Monitoring of power failure shall be through the plant control system network communications.

a. If operating prior to the power failure in automatic mode, the Aeration Blowers shall be sequentially restarted by the AGS control system. No more than one blower shall be started simultaneously. Operator adjustable time delays shall be programmed between the enabling of each blower to operate.

2.11 INSTRUMENTATION:

A. All instrumentation shall be as specified in Section 40 70 00. Provide instruments as specified herein and as shown on the AGS Instrument List provided as an Appendix to this Section.

B. All analytical instrumentation shall be manufactured by Hach, unless otherwise specified.

C. Temperature/pH Transmitter:

1. Function: Continuously, measure, indicate, and transmit water temperature and pH of AGS Basin. Each temperature/pH transmitter shall be integrated with the Equipment Supplier PLC for monitoring, data recording, and process control.

2. Provide one temperature / differential pH transmitter for each AGS Basin. The probe shall use two measuring electrodes to compare the process value to a stable internal reference. The sensor shall have a built-in preamplifier, and include an integral temperature sensor. The pH sensor shall automatically compensate measured values for changes in temperature.

3. Temperature/pH instrument shall be provided with pole mount assembly and handrail support attachments. Equipment Suppler shall provide complete mounting and support assembly.

4. The probe shall be suitable for installation within a Class I, Division 2 area.

D. Dissolved Oxygen Transmitter:

1. Function: Continuously, measure, indicate, and transmit dissolved oxygen (DO) concentration of AGS Basin. Each DO transmitter shall be integrated with the Equipment Supplier PLC for monitoring, data recording, and process control.

2. DO probe shall be a continuous-reading probe utilizing luminescent sensor technology, and shall provide electrolyte-free operation without requiring sample conditioning.
3. DO probe shall be provided with pole mount assembly and handrail support attachments. Equipment Suppler shall provide complete mounting and support assembly.
4. The probe shall be suitable for installation within a Class I, Division 2 area.

E. Level Transmitters/Switches:
1. Function: Continuously measure, indicate, and transmit the level of water in each AGS Basin, Sludge Buffer Tank, and WLC Tank.
2. Provide one (1) submersible pressure transducer for each reactor, sludge buffer basin, and water level correction basin as indicated. The transducers shall provide continuous level monitoring for each location
3. Provide the transducers and accessories as follows:
   a. Transducer body shall be constructed of stainless steel.
   b. Loop-powered, 4-20mA signal output.
   c. Transducer model shall be Keller Levelrat or Engineer-approved equal.
   d. Provide a local display indicator within a NEMA 4X 304 SST enclosure as a complete and pre-wired assembly.
   e. Provide moisture-excluding bellows supplied loose for installation in the display indicator enclosure. The Contractor shall install the bellows in the enclosure per manufacturer recommendations.
   f. All mounting and support materials shall be 304 stainless steel.
   g. Equipment Supplier shall provide complete mounting and support assembly per recommendations, unless otherwise indicated. The Contractor shall be responsible for installing the mounting and support assembly per manufacturer recommendations, Specifications, and Contract Drawings.
4. Provide level switches as follows and as indicated:.
   a. One (1) level switch for each reactor.
   b. Three (3) level switches for each sludge buffer basin.
   c. Four (4) level switches for each water level correction basin.
   d. Level switch shall be float-type as specified in Section 40 70 00. Provide with the indicated mounting brackets and weight kits for locations indicated. Suspending float switches from support masts shall not be allowed.

F. Oxidation-Reduction Potential Transmitter:
1. Function: Continuously measure, indicate, and transmit the ORP of the liquid in the AGS Basins. Each ORP transmitter shall be integrated with the Equipment Supplier PLC for monitoring, data recording, and process control.
2. Provide one ORP probe per AGS Basin.
3. ORP probe shall use two measuring electrodes to compare the process value to a stable internal reference. The sensor shall have a built-in preamplifier, and include an integral temperature sensor.
4. ORP probe shall be provided with pole mount assembly and handrail support attachments. Equipment Suppler shall provide complete mounting and support assembly.
5. The probe shall be suitable for installation within a Class I, Division 2 area.

G. Ammonium Probe:
1. Function: Continuously measure, indicate, and transmit the ammonia concentration of the liquid in the AGS Basins. Each ammonium probe shall be integrated with the Equipment Supplier PLC for monitoring, data recording, and process control.
2. Provide one Ammonium Probe per basin.

3. Ammonium probe shall be model HC-200NH, as manufactured by Horiba Process & Environmental.
4. Ammonium probe shall be provided with pole mount assembly and handrail support. Equipment Supplier shall provide complete mounting and support assembly.
5. The probe shall be suitable for installation within a Class I, Division 2 area.

H. Nitrate Probe:
1. Function: Continuously measure, indicate, and transmit the nitrate concentration of the liquid in the AGS Basins. Each nitrate probe shall be integrated with the Equipment Supplier PLC for monitoring, data recording, and process control.
2. Prove one Nitrate Probe per basin.
3. Nitrate probe shall be Nitratax 2 mm path length, as manufactured by Hach. Probe shall utilize UV absorption technology, and shall provide reagent-free operation. Sensor shall include self-cleaning device.
4. Nitrate probe shall be provided with pole mount assembly and handrail support. Equipment Supplier shall provide complete mounting and support assembly.
5. The probe shall be suitable for installation within a Class I, Division 2 area.

I. Orthophosphate Analyzer
1. Function: Provide routine measurement, indication, and transmittance of orthophosphate concentration of the liquid in a common AGS effluent location. Each orthophosphate analyzer shall be integrated with the Equipment Supplier PLC for monitoring, data recording, and process control.
2. Provide one Orthophosphate Analyzer to be installed in the UV Disinfection influent channel.
3. The analyzer shall be an Phosphax sc Orthophosphate Analyzer, as manufactured by Hach. The analyzer shall include an ASA UV-resistant, lockable housing, rated to IP55. It shall feature automatic cleaning and calibration, and adjustable extensive self-diagnostics.
4. Furnish one (1) Hach Filtrax sampling system to be installed for use with the Phosphax analyzer. The sampling system shall consist of a IP55 rated control unit with 120V power supply, submersible module holder and sample delivery hose. Sample hose shall be heated type that is powered from the control unit enclosure. Unit shall be provided with minimum 20 feet of heated suction tubing and 60 feet of heated discharge tubing.

J. Total Suspended Solids Probe:
1. Function: Provide routine measurement, indication, and transmittance of total suspended solids in each AGS Reactor and the discharge of the sludge pumping system. Each total solids probe shall be integrated with the Equipment Supplier PLC for monitoring, data recording, and process control.
2. Provide four (4) immersion-style total solids probes to be installed in AGS Basins No. 1 through No. 4, and one (1) pipe insertion-style total solids probe to be installed on the sludge discharge line.
3. The immersion-stype probes shall be Hach model TSS EX1 sc sensor. The insertion style probe shall be Hach model Solitax sc with wiper.
4. Each immersion-style probe shall be provided with pole mounting kit to be field mounted.
5. Each pipe-insertion-style probe shall be provided with installation armature and isolation valve to allow removal of probe from service. Equipment Supplier shall coordinate installation detail with Contractor.
6. The probe shall be suitable for installation within a Class I, Division 2 area.

K. Universal Controller Probe Modules:

1. AGS Basins:
    a. Three (3) Hach SC4500 Multi-Parameter Universal Controller Probe Module shall be provided for each AGS Basin. The probe modules shall receive inputs from all Hach instrument sensors provided in each basin.
    b. Each basin controller shall be rated for use with Class I, Division 2 rated probes. All accessories to achieve C1D2 probe rating shall be provided.
2. Sludge Pumping:
    a. One (1) Hach SC4500 Universal Controller Probe Module shall be provided for use with the Solitax sc inline probe adajcent to the Sludge Pumps.
3. Effluent Sampling:
    a. One (1) Hach SC4500 Universal Controller Probe Module shall be provided for use with the Phosphax analyzer mounted in the UV Disinfection Building.
    b. Provide all required accessories for connection of Phosphax instrument to SC4500 Controller, including power junction box.
4. An analog output (4-20mA) card in the probe module shall provide analytical instrumentation signals to the PLC. Quantity of analog outputs per module shall be as required by the instrument and I/O lists. The probe module shall be provided in IP65 enclosure with corrosion resistant finish. Probe module shall include internal 125 VAC power supply and EEPROM memory back-up.

L. Universal Controller Probe Modules – Horiba:
1. One (1) Horiba HD-200NH transmitter shall be provided for each AGS Reactor Basin. The probe module shall receive input from each Horiba instrument sensor.

M. Air Flow Meter:
1. Function: Continuously measure, indicate, and transmit signals proportional to air flow being supplied to each AGS Basin. Each air flow meter shall be integrated with the Equipment Supplier PLC for monitoring, data recording, and process control.
2. Provide one (1) air flowmeter for each AGS Basin.
3. Air flow meter shall be thermal dispersion type, with 1/2-inch compression fitting fabricated of stainless steel and appropriate for pipe insertion into a 14” SCH STD carbon steel pipe. Equipment Supplier shall coordinate appropriate length of insertion probe with Contractor to ensure flow meter manufacturer requirements are met.
4. Each air flow meter shall be provided with integral transmitter. Refer to Contract Drawings for location of meter and transmitter.
    a. Power supply to the transmitter shall be rated for 120Vac, single phase, 60Hz operation.
5. All cable fittings required for a complete installation to the transmitter shall be supplied.
6. Aeration piping design includes 24-feet of unobstructed straight pipe run upstream of flow meter and 12-feet of unobstructed straight pipe run downstream of flow meter. Flow conditioners shall not be used unless approved by Design Engineer.
7. Air flowmeter shall be Model ST51A as fabricated by Fluid Components International.
8. Air flowmeter shall be configured to allow mounting to sidewall of 14-inch aeration pipe.

2.12 SPECIAL TOOLS AND SPARE PARTS:

A. Provide the following spare parts at a minimum:
1. Refer to Section 43 11 13 for blower spare parts requirements.
2. Spare diffuser assemblies totaling a minimum of 3% of installed diffuser count.
3. Minimum ten (10) diffuser grid joint assemblies and couplings.
4. One (1) crimping tool.

5. One set of new and unused special tools required for installation, operation, and maintenance.
6. Provide electric motor actuator manufacturer recommended shelf spare parts to limit downtime following actuator failure.
7. One complete set of reagents/chemicals, calibration sets, and spare parts as specified for individual equipment items or instruments.
8. Provide one (1) spare, fully-programmed, and operation-ready PLC controller such that a malfunctioning controller may be replaced in-place and the AGS system will immediately resume operation.
9. Provide at least one (1) spare for each piece of PLC Equipment provided, including but not limited to:
    a. Power supply.
    b. Communications interface module.
10. Provide spare I/O cards in quantities corresponding to 10% (rounded up) of the total quantity of each type of card provided. At least one (1) spare shall be provided for each type of I/O card.
11. Two spare LED indicating lamps for each type and color used.
12. Two spare indicating light assemblies.
13. Provide ten (10) spare fuses of each type used including those used in power supplies, processor, and I/O cards.
14. Ethernet Switches: Provide one (1) spare of each type of switch used.

B. Provide a list of critical recommended and maintenance parts with pricing.
C. Provide prices for all replaceable parts associated with the Treatment System.
D. Guarantee availability of appropriate spare parts as listed above for a period no less than 20 years. If the company or product line no longer exists, the Supplier shall make provisions such that the Treatment System shall continue to operate at the spcified conditions using comparable equipment or products.

PART 3 - EXECUTION

3.01 INSTALLATION:

A. The installing Contractor shall install the Treatment System in strict accordance with Equipment Supplier's instructions and recommendations. Equipment Supplier shall provide written instructions with their submittal on installation requirements.
B. The Equipment Supplier shall provide to the Purchaser a listing of Goods that require protection. Special storage, protection, and handling instructions shall be provided.
C. The Equipment Supplier shall supply all necessary control system addresses, control logic, and OIT screens in order for the Owner's System Integrator to program the plant control system operator screens, database, trends, reports, and alarms, as applicable.
D. Equipment Supplier shall provide a Certificate of Proper Installation to the Owner following installation to certify that the system (inclusive of all equipment specified herein) has been installed correctly.
E. Equipment Supplier shall coordinate exchange of information to the Owner's System Integrator to allow for integration of Treatment System into client SCADA system.

3.02 COMMISSIONING:

A. Refer to SECTION 01757 for additional commissioning requirements.
B. Once written Certification of Proper Installation has been issued, the Equipment Supplier shall coordinate with the Purchaser to perform functional testing of the Treatment System. It will be

the responsibility of the Equipment Supplier to coordinate with the Contractor and Owner to arrange the times for testing and startup activities.

C. The Equipment Supplier shall check all valves, controls, and other devices to ensure they are functional and ready for performance testing.
D. The Equipment Supplier shall field calibrate all instruments and be responsible for integration with the Equipment Supplier software programming.
E. Commissioning shall not be considered complete until influent wastewater has been processed through the Treatment System and all equipment and instrumentation has been verified to be working properly.
F. The Equipment Supplier shall complete all commissoning to the satisfaction of the Contractor and Owner prior to commencing the Performance Test.
G. The purpose of commissioning shall be to demonstrate the effectiveness of the following AGS system components and features:
    1. Automatic flow control of the Treatment System, including proper transition between AGS Basins.
    2. Start and stop of air system, and modulation of air flow control valves to maintain operational parameters.
    3. Monitoring of operating data as allowed by Owner.
    4. All control functions.
    5. Operation of all monitoring instruments.
    6. Operation of all associated pumping systems for the sludge blend tank and water level correction tank.

3.03 PERFORMANCE TEST:

A. Following completion of commissioning, the installing Contractor shall conduct the Performance Test (PT) with supervision assistance provided by the Equipment Supplier.
B. Successful completion of the PT shall constitute Initial Acceptance and commence warranty.
C. The Equipment Supplier shall provide the IPT Report within 7 days of completion of the test period.
D. To perform the test, the Equipment Supplier shall assist with operation of the system continuously over a sixty (60) calendar day test period, and collect and summarize data to demonstrate that the system meets the performance test requirements as specified in the warranty.
E. Water quality sampling shall be completed by the Contractor for the PT period.
F. In all cases, compliance with the requirements of this specification shall be determined for each calendar day, and to successfully pass the test, the Treatment System must comply with the requirements for each of the 60 calendar days of the PT.
G. Successful completion of the PT shall be defined as 60 continuous calendar days of operation without a major failure in the system and demonstration that the Treatment System meets all performance requirements established herein. A major failure in the system is one that interrupts system operation for more than 1 hour.
H. If the Treatment System fails to successfully complete the PT, the Equipment Supplier shall have the option of repeating the test over a second 60-day period. All water quality testing during a second, or subsequent PT period shall be the responsibility of the Equipment Supplier. If the system fails to successfully complete the PT during the second test period, the Equipment Supplier shall prepare a written plan for modifying or supplementing the system to meet all test requirements. The Equipment Supplier shall submit the written plan within 7 calendar days after the second unsuccessful test period ends.

I. During the PT, the Owner shall have the option of collecting samples for independent analyses to confirm measurements and analyses conducted by the Equipment Supplier. The Contractor and Owner shall have the option of witnessing all testing performed by the Equipment Supplier. The Equipment Supplier shall notify the Contractor a minimum of two weeks in advance of testing.

3.04 MONITORED TEST PERIOD (MTP):

A. Compliance with the requirements for treatment capacity, and Treatment system effluent water quality use shall be determined during the Monitored Test Period (MTP).
B. The MTP shall begin immediately after successful completion of the PT.
C. Duration shall be 180 calendar days.
D. The Owner shall operate the plant during the MTP; however, the Equipment Supplier shall be allowed to provide onsite or remote assistance.
E. The Equipment Supplier is responsible for monitoring the operating conditions and performance during the MTP. The Owner shall be responsible for providing the Equipment Supplier access to plant data under agreed upon authorized window times. Additionally, the Owner shall be responsible for providing water quality testing data and transfer of logged process data to the Equipment Supplier.
F. The Equipment Supplier shall summarize the data at the end of the MTP and report the results in writing to the Contractor and Owner. The report shall include a narrative description, tables and graphs of influent and effluent water quality parameters, air flow, and flow rates for all monitored liquid streams to document the performance of the system. The Equipment Supplier shall submit the report within 30 days following the end of the MTP.
G. The Treatment System shall exhibit development of granulation by the end of the MTP. To be considered a granular sludge, ninety (90) percent of the sludge shall have a particle size greater than 200 um.
H. The Contractor and Owner may conduct their own monitoring and record-keeping during the MTP. Any monitoring and record-keeping data shall be provided to the Equipment Supplier if requested.
I. The following parameters shall be evaluated during the MTP to determine compliance with the Equipment Suppliers stated performance in the Bidding Documents and submittals. Penalties that shall be owed to the Owner by the Equipment Supplier are as described below.
    1. Effluent Water Quality and Treatment Capacity: If the system fails to comply with the requirements for effluent water quality and treatment capacity as shown in Section 2.02 Biological System Design Criteria, the Equipment Supplier shall provide to the Purchaser a written plan of modifications to the Treatment System (such as repairing damaged components, replacing seals, complete replacement of components, etc.) to achieve compliance with the requirements. Upon implementation of the plan of modifications, the MTP shall recommence in its entirety.

3.05 ONSITE SERVICES:

A. The Equipment Supplier shall furnish qualified field personnel to observe and guide the installation, testing and placement of the Treatment System into successful operation. Trips in excess of those described below, which are required for placement of the Treatment System into successful operation shall be at Equipment Supplier's sole expense. The field personnel shall demonstrate experience with installation, start-up, and operation of Treatment Systems of comparable size, application, and complexity.
B. Equipment Supplier's Representative: In addition to the time necessary to complete the requirements established elsewhere within these Specifications, the Equipment Supplier's

Representative shall also provide onsite services at times designated by the Owner, for the minimum person-days listed below. Equipment Supplier shall account for travel time outside of these days in their Proposal. The Equipment Supplier's Representative shall be a qualified individual who has previously provided onsite services for the installation, testing, and startup of identical unit processes at a minimum of one wastewater treatment plant of similar size.

1. Electrical/I&C
   a. 4 trips, 16 days. Includes 1 float trip.
   b. Approx. 3.5 days per reactor, 1 day for SB/WLC
   c. Includes:
      (1) Electrical/I&C checkout – aeration system, valves, instrumentation
   d. Electrical/I&C checkout – controller/PLC installation, wiring, phase checks
   e. Manufacture Standard SAT – Site Acceptance Testing – controller and PLC final checkout
2. Mechanical
   a. 4 trips, 16 days. Includes 1 float trip.
   b. Approx. 3.5 days per reactor, 1 day for SB/WLC
   c. Includes:
      (1) Mechanical checkout, dry – basin internal piping, aeration system, valves
      (2) Mechanical checkout – instrumentation
      (3) Mechanical checkout – clean water submerged
3. Process
   a. 4 trips, 16 days. Includes 1 float trip.
   b. Approx. 3.5 days per reactor, 1 day for SB/WLC
      (1) Includes:
      (2) Process startup, checkout
      (3) Process training, sampling, classroom & field instruction
      (4) Seeding – oversight, process optimization

3.06 COORDINATION WITH THE SYSTEM INTEGRATOR:

1. The HMI screens associated with the AGS system shall be developed by the AGS System supplier.
2. The AGS System supplier shall coordinate with the System Integrator to establish HMI development standards to ensure the HMI screens developed by the AGS supplier and the System Integrator share the same typical graphics, faceplates, and function blocks to meet the project standards.
3. The System Integrator and AGS supplier shall work together to ensure required control and monitoring signals are communicated correctly between the AGS PLC and the plant PLCs.
4. The AGS system "AquaNereda Controller" shall be supplied by the AGS System Supplier in the form of a rack mounted host server. The server shall be installed and connected to the network by the SI. The AGS supplier shall be responsible for programming and configuration of the server. Coordination shall be provided for this work as required.
5. The System Integrator shall work with the AGS system supplier to establish communication with the aeration drive VFDs.
6. As a minimum the AGS system supplier and System Integrator shall participate in three web conferences setup by the System Integrator and attended by the Engineer to determine programming standards, verify proper application of the standards and coordinate communicated signals.

a. The first web conference shall occur a minimum of one month prior to the System Integrator or AGS system supplier starting system development and shall serve to discuss development standards and develop an action item list for information needed to properly develop the systems.
b. The second web conference shall occur one week prior to the AGS system supplier starting system development and shall serve as the meeting to communicate development standards to all parties.
c. The third web conference shall occur after the oxidation system supplier has completed their initial screen development and PLC program and shall serve as a review meeting to verify that proper standards have been followed and proper points are being communicated.
d. Follow up conferences shall occur as required during development and after initial development is completed to ensure the agreed to standards are being followed, discuss progress, verify communicated points and address any outstanding communication questions.

3.07 TREATMENT SYSTEM TRAINING:

A. Refer to SECTION 01664 for additional training requirements.
B. Training for the AGS system will take place at Aqua-Aerobic Systems, Inc. (AASI) in Loves Park, IL.
C. On-site training will take place at the Four Rivers Sanitation Authority (FRSA) in Rockford, IL.
D. Training sessions at AASI and FRSA will not conform to the format and content requirements specified in SECTION 01664 and must be approved by the Owner.
E. The Equipment Supplier shall furnish the services of qualified field personnel for 10 person-days to formally instruct the Owner's personnel on proper operation, installation, sampling, cleaning, maintenance, and troubleshooting for the Treatment System. Time spent with the Owner's personnel during the functional testing and PT does not count toward the training requirements. The training provided by the Equipment Supplier shall be recorded by the Contractor (provide 2 DVD copies and 2 thumb drives containing video files) for further use by the Owner. Equipment Supplier shall cover the following topics at a minimum:
    1. Process Overview
        a. Provide introductory training on Treatment System including:
            (1) Definitions.
            (2) Advantages.
            (3) Limitations.
            (4) Required pretreatment.
        b. Discuss the performance criteria, including treatment capacity, and water quality.
        c. Provide a detailed overview of the entire process and the purpose of each process component.
        d. Describe independent processes in detail.
    2. Equipment and System Controls:
        a. OIT:
            (1) Provide training on the features and use of each OIT.
            (2) Summarize and demonstrate features provided on each control screen.
        b. Integration with plant controls:
            (1) Discuss fail-safe features, alarms, and integration of the Treatment System with other process equipment.

(2) Discuss integration with the remainder of plant controls. The Purchaser can assist with this portion of the training.

c. Local control:
   (1) Demonstrate/discuss use of local controls for each component.

d. Instrumentation maintenance/calibration:
   (1) Provide "hands-on" training and discuss maintenance requirements as defined in the O&M manual for each unique instrument provided as part of this Procurement Agreement Document.
   (2) Demonstrate calibration of each type of instrument.
   (3) Review/identify documentation provided in O&M manuals

3. Operation:
   a. System Startup/Shutdown Procedures:
      (1) Discuss startup of the Treatment System and level of automation.
      (2) Provide detailed procedures for inspection during and after startup.
      (3) Discuss appropriate shutdown procedures.
      (4) Discuss automated shutdown procedures.
   b. Normal operation:
      (1) Provide detailed sample control screens demonstrating 'normal operation', and displaying the position of each valve during normal operation.
      (2) Discuss operational activities that must be conducted during normal operation to ensure proper operation of the system.
   c. Manual operation:
      (1) Describe/demonstrate operation of any components equipped with manual features.
   d. Typical Treatment Cycle:
      (1) Describe purpose of each treatment cycle.
      (2) Discuss process variables and monitoring aspects of each cycle.
      (3) Conduct field observation of all system transitions.
4. Monitoring/Troubleshooting:
   a. Describe methods of troubleshooting process equipment.
   b. Discuss parameters considered critical when troubleshooting problems.
5. Inspection Procedures/Maintenance:
   a. Review inspection procedures for critical components
   b. Review routine maintenance requirements for the entire Treatment System and ancillary components.
6. Proper record keeping:
   a. Discuss the importance of record keeping.
   b. Discuss critical parameters to be monitored and recorded.
   c. Provide sample forms.
7. Interpretation of data relative to operation:
   a. Discuss methods for interpreting data and identifying operational problems based on recorded data. This shall include (but not be limited to) changes in the following parameters:
      (1) Sludge granule size.
      (2) Effluent total solids.
8. Discuss any deficiencies identified during PT.
9. Provide contact information (including the toll-free number) where Owner's personnel can obtain assistance with operation/maintenance issues that may arise.

3.08 LONG-TERM OPERATIONS ASSISTANCE:

A. Equipment Supplier shall provide monitoring and remote operations support for a period of one (1) year after successful commissioning of the Treatment System, at no cost to the Owner.

END OF SECTION 46 53 60

SECTION 46 71 33 – ROTARY DRUM THICKENER EQUIPMENT

PART 1 - GENERAL

1.01 SUMMARY:

A. This Section covers design calculations, process guarantee, labor, materials, equipment, and incidentals required for delivery to the project site ready for installation, testing and startup for two (2) complete rotary drum thickener systems, with components and accessories, as specified herein.

B. The equipment package shall include:
   1. Two complete rotary drum thickeners (RDTs) with motors, drives, flocculation tanks, spare parts, sludge hoppers, and special tools.
   2. Each complete RDT package shall include a dedicated main control panel and a remote OIT control panel.
   3. Any additional equipment accessories not specified but that are required to achieve the minimum specified performance.

C. The RDT system will be served by three (3) Thin Sludge Pumps. Pump No. 1 will be dedicated to RDT No. 1, and Pump No. 3 will be dedicated to RDT No. 2. Pump No. 2 will be a swing pump capable of feeding either RDT. Thin sludge will be transferred from aerated Thin Sludge Storage Tanks. The RDT will be located in the Solids Processing Building. Construction materials shall be as specified and as required for corrosion resistance.

D. The specified equipment furnished under this section shall be fabricated, assembled, and tested in full conformity with the Specifications, engineering data, instructions and recommendations of the equipment Manufacturer.

E. Related Work Elsewhere:
   1. Painting and Coating: Section 09 90 00.
   2. Pressure Piping: Section 33 11 00.
   3. Process Control Panels and Hardware: Section 40 67 00.
   4. Instrumentation for Process Systems Section 40 70 00.
   5. Progressive Cavity Pumps Section 43 23 57.
   6. Rotary Lobe Pumps: Section 43 23 58.
   7. Common Motor Requirements for Water and Wastewater Equipment: Section 46 05 13.
   8. Polymer Preparation and Feed System: Section 46 33 33.

H. Underwriters Laboratory (UL).
I. American Institute of Steel Construction (AISC).
J. Standard Methods for the Examination of Water and Wastewater.

1.03 SUBMITTALS:

A. Submit in accordance with Division 1.
B. All submittal data shall be labeled in English units. All Drawings shall be drawn to scale, and text shall be in English.
C. Submit contact names, addresses, and telephone numbers of at least two (2) similar municipal wastewater installations that have been in operation in North America for at least two (2) years. Referenced installations shall have RDT specifically designed for municipal thickening of waste activated sludge only (no primary or blended sludge).
D. Submit copies of process performance testing requirements and performance guarantee.
E. Manufacturer shall provide a statement indicating the Manufacturer's understanding of the warranty requirements.
F. Submittals shall include, but not limited to, the following:
1. Dimensional layout for RDT, flocculation tank, sludge hopper, bypass system components, and electrical components, including control panels.
2. Manufacturer's specifications.
3. Rated capacity for all components under anticipated operating conditions. Manufacturers that submit a RDT rated capacity not adequate per design requirements will not be accepted.
4. Fabrication and erection drawings.
5. Detailed equipment drawings.
6. Detailed equipment foundation drawing sealed by Missouri Licensed Engineer.
7. Parts listing.
8. Protective coating systems.
9. Electrical schematic control diagrams, wiring diagrams.
a. All diagrams shall be complete and have uniquely numbered terminals, wires and devices.
b. Control wiring diagram showing wiring terminations for all external connections.
c. External connection diagrams between plant and vendor control panels.
10. Process and instrumentation diagrams (P&IDs).
11. Control panel layout with devices and nameplates shown.
12. Motor nameplate data.
13. Performance Testing Program.
14. Operating weight of unit and load distribution.
15. Past performance test on sludge type being dewatered, that shows unit meeting performance requirement of this specification.
16. Bearing life calculations based on design load sealed by Missouri Licensed Engineer.

17. Catalog cut sheets for all electrical devices which completely indicate all electrical ratings.
18. Electronic and paper copy of the PLC operating program, control screens and complete documentation for approval and Owner's use in installation and integration with the plant control system.
19. Submit a complete list of all PLC I/O addresses used. Each address shall have description that completely identifies what the corresponding address represents, (i.e. "Drum Drive Speed") and what the status of this address corresponds to.
20. Written work plan for field erection.
21. Refer to Section 40 67 00 for additional submittal requirements pertaining to control panels.
22. Refer to Section 46 05 13 for additional submittal requirements pertaining to motors.

G. Operation and Maintenance Manuals.
   1. The manuals shall be prepared specifically for this installation and shall include all required catalog cuts, drawings, equipment lists, descriptions, and other information that is required to instruct operation and maintenance personnel unfamiliar with such equipment.
   2. Special shipping, storage, protection, and handling instructions including dimensions of each container or package shipped.
   3. Recommended unloading method at project site including implement (e.g., forklift, etc.) and maximum container or package weight.
   4. Manufacturer’s printed installation instructions.
   5. Descriptions of system components.
   6. Overview of RDT design that meet these Specifications, including, but not limited to:
      a. Feed capacity.
      b. Acceptable loading conditions.
      c. Design flow and total solids for thickener feed, filtrate, and thickened solids under design operating conditions.
      d. Typical polymer feed rates.
      e. Wash water supply requirements.
   7. Specific instructions for typical laboratory procedures for operation control testing or references to published sources of such instructions.
   8. Descriptions of process control systems.

H. Manufacturer’s Certificate of Proper Installation in accordance with Section 01757 - Commissioning.

I. Submit complete, signed report of results of field inspection, operation, adjustments, and tests. Include the Manufacturer’s certificate that, as a result of Manufacturer’s inspection(s), the Manufacturer’s equipment has been found to be ready for permanent operation and is installed in accordance with the Manufacturer’s instructions.

1.04 QUALITY ASSURANCE:

A. All items of equipment specified herein shall be furnished by one Manufacturer. This Manufacturer shall have the responsibility of providing the equipment, accessories, installation supervision, and testing services required to provide a functioning system.

B. Like items of equipment provided hereunder shall be the end products of one Manufacturer in order to achieve standardization for appearance, operation, maintenance, spare parts, and manufacturer's service.

1.05 DELIVERY:

A. Equipment shall be shipped pre-assembled to the degree that is practicable.

B. Manufacturer shall provide storage instructions indicating specific requirements to ensure there is no damage to or deterioration of components.

1.06 PERFORMANCE GUARANTEE:

A. Provide a written guarantee that the thickener shall meet the specified operating requirements described in PART 2.

B. The ability of the equipment to accomplish the results stipulated shall be determined by a performance testing program using laboratory tests by standard laboratory procedures as outlined in the latest edition of Standard Methods.

C. Performance testing program shall be as described in PART 3.

1.07 WARRANTY:

A. The manufacturer shall warrant that all Equipment shall be free of defects caused by faulty material or workmanship and shall replace those parts for at least a period of one (1) year from the date of start-up.

B. Multiple warranties for individual components shall not be acceptable.

PART 2 - PRODUCTS

2.01 MANUFACTURERS:

A. Materials, equipment, and accessories specified in this section shall be products of, or provided by:

1. FKC.
2. Parkson.
3. Andritz
4. JWC.

2.02 GENERAL:

A. The RDT shall thicken sludge by means of a rotating wedge-wire or perforated drum. The rotary drum thickener shall continuously receive and thicken sludge, passing filtrate through the openings in the drum. The thickened sludge shall be conveyed towards the discharge end of the drum. Thickened sludge will discharge at the end of the drum and be directed to an attached sludge hopper. The sludge hopper discharge shall consist of a 6-inch flanged connection.

B. Each rotary drum thickener shall be a complete thickening unit consisting of, but not limited to:

1. A structural frame, support structure.
2. A flocculation tank with variable speed mixer.
3. A thickening drum with variable speed drive.
4. An automatic drum wash system.
5. A drainage system.
6. Main Control Panel with PLC and OIT.
7. Remote Mounted OIT Control Panel.
8. All appurtenances required for the operation of the unit.

C. Primary control for the rotary drum thickner, and polymer preparation and metering system shall be through the rotary drum thickener control system. The RDT Control System will have

the ability to control all elements of the thickening process including: the Thin Sludge Pumps, flocculation tank, rotary drum thickener, polymer feed system, and wash water system.

1. The RDT Control System will interface with the polymer system local control panel for feed start/stop, system fail, metering pump feed rate, and polymer pacing rate via an Ethernet/IP communication link

D. All equipment shall be furnished by the manufacturer of the rotary drum thickener. The manufacturer shall provide a standard design, modified as necessary to meet the specifications herein.

E. The rotary drum thickener manufacturer shall be responsible for the proper operation and integration of all equipment provided under this Section.

F. The thickener shall be designed for disassembly of all components, including removal of rollers, and to provide accessibility for lubrication, inspection, mechanical adjustment, replacement of parts, and all other maintenance activities.

2.03 DESIGN AND PERFORMANCE CRITERIA:

A. Sludge Characteristics:

1. The wastewater treatment plant includes influent screening by 6 mm perforated plate screens, grit removal, and granular activated sludge biological treatment. Sludge from the biological treatment system is stored in the aerated Thin Sludge Holding Tanks prior to thickening.
    a. The rotary drum thickener system will be designed to receive waste sludge from the Thin Sludge Holding Tanks, with a total solids concentration between 0.5-2.0% wt.

B. Design Criteria (for each Rotary Drum Thickener unit):

1. Feed Sludge (Thin Sludge):
    a. Design Solids Loading: 1250 dry lbs/hr.
    b. Expected Feed Solids: 0.5-2.0%.
    c. Maximum Hydraulic Loading: 250 gpm.
    d. Minimum Thickener Solids Recovery: 95%.
    e. Minimum Thickened Solids Concentration: 5%.
2. Maximum Polymer Consumption: 14 lbs/dry ton solids based on 100% active product. Polymer consumption shall be determined by the quotient of the actual weight of polymer used/dry ton solids divided by the published % active product and the specific gravity of the emulsion.
3. Thickener Solids Recovery:
    a. Minimum 95% solids recovery with feed solids between 0.5-1.0% total solids.
    b. Minimum 97% solids recovery with feed solids between 1.0-2.0% total solids.
    c. Minimum 98% solids recovery with feed solids greater than 2.0% total solids.
4. Thickener shall be able to operate at a feed solids concentration up to 3.5% total solids at a reduced hydraulic loading rate.

2.04 MATERIALS OF CONSTRUCTION:

A. Materials used during manufacture of the RDT equipment shall be on the highest quality used in general commercial practice. Material shall be free from all defects and imperfections that may affect serviceability of the finished product. Used equipment, material, or parts will not be allowed.

B. Structural steel support members supplied by the rotary drum thickener manufacturer shall be 304L stainless steel.

C. Materials used shall conform to ASTM standards where such standards exist. Materials used shall be selected based on their continuous and successful use under similar service conditions.

D. Structural frames, plates, and shapes shall have a minimum thickness of 1/4-inch, unless otherwise specified. Bolts shall have a minimum diameter of 5/16-inch.
E. All wetted components, including, but not limited to, frames, flocculation tank, thickener cover, drain pans/trays, drain piping, wash piping, wash shower header and nozzles, and discharge hopper shall be fabricated of Type 304L stainless steel, or be of other, engineer-approved acceptable corrosion-resistant material.
F. All fasteners, pins, anchor bolts, washers and other hardware shall be Type 304L stainless steel.

2.05 SLUDGE CONDITIONING:

A. General:
1. The rotary drum thickener shall be furnished with a sludge conditioning system, designed to efficiently mix polymer with thickener feed sludge and to adequately condition the sludge for optimum thickener performance.
2. Sludge conditioning shall be initiated by injection of polymer through an injection ring located directly upstream of flocculation tank on the sludge feed piping. An additional polymer feed injection point is provided around 20-25-ft upstream of the flocculation tank. Sludge conditioning shall be completed in the flocculation tank upstream of the rotary drum thickener.
3. The manufacturer shall supply the polymer injection ring loose for installation by Contractor.
4. All wetted parts of the sludge conditioning system shall be constructed of 304L stainless steel.
   a. Aluminum shall not be acceptable.
5. All parts requiring regular maintenance, operational adjustment, lubrication or cleaning shall be readily accessible.
6. Components associated with polymer injection ring shall be hydrostatically tested by the manufacturer at the factory. Any components that associated with the polymer injection ring that exhibit leaking or decreases in pressure under field testing shall be repaired or replaced by the rotary drum thickener manufacturer at no additional cost to the Owner. Repaired systems shall be retested.

B. Polymer Injection Ring:
1. The injection ring shall have four separate injection points located 90 degress from each other for injection of polymer solution into the sludge feed piping.

C. Polymer Manifold:
1. The polymer manifold shall split the polymer feed line into four distinct injection lines for connection to the polymer injection ring.

D. Flocculation Tank:
1. The flocculation tank shall be constructed of 304L stainless steel throughout. The flocculation tank shall be self-supporting and shall have furnished stainless steel supports as required. The final dimensions of the concrete pad shall be coordinated during shop drawing review.
2. The flocculation tank will be designed for a hydraulic retention time of one (1) minute or greater under the design conditions specified herein.
3. The flocculation tank shall be equipped with a 6-inch flanged inlet connection located at or near the bottom of the tank, and a 6-inch outlet connection between the flocculation tank and rotary drum thickener. Final elevation of the inlet and oulet connection shall be coordinated during Submittal review.

4. The flocculation tank shall be supplied with a double vertical, flat blade impeller, mechanical mixer.
5. The mixer shall be equipped with a drive motor in accordance with Section 46 05 13.
   a. Provide two normally closed temperature switches embedded in each phase winding for high temperature protection. A high temperature detection shall be interlocked to prevent the VFD from powering the motor.
   b. Provide motor shaft grounding ring to discharge shaft currents to ground.
6. The mixer motor speed shall be adjustable with a manufacturer supplied VFD.
7. The top of the flocculation tank shall be covered with a removable, hinged access cover to allow regular inspection and maintenance. The access cover shall be facing south. Refer to drawings for orientation of floc tank.
8. Provide a point level switch with 2" NPT connection on tank lid for detection of high tank level. Manufacturer shall provide necessary equipment and recommendations for install to prevent false high level readings from splashing of liquid. Refer to Section 40 70 00 for other point level instrument requirements.Flocculation tank shall be connected to the rotary drum thickener in a manner that allows foul air to flow with the sludge to the hopper.

E. Thickener Distribution:
   1. The thickener inlet shall be designed to evenly distribute flow to the rotary drum thickener. Rods or bars that will trap stringy material shall not be used.

2.06 ROTARY DRUM THICKENER:

A. Main Structural Frame:
   1. The main structural frame shall be of electrical weld construction fabricated of 304 stainless steel structural members of sufficient design to support all components and accessories.
   2. The stainless steel frame shall be designed in accordance with the AISC Manual of Steel Construction, 15th Edition, ANSI/AISC 360-16, and AISC Design Guide 27 – Structural Stainless Steel, as applicable. Frame shall be designed for the loading from the equpiment under all possible opreations states, and for loadign as specified in ASCE 7-16.
   3. The structural frame shall be designed for installation on multiple 304L stainless steel legs anchored to a grout leveling pad with anchor bolts. The final dimensions of the stainless-steel support legs shall be coordinated during shop drawing review.
   4. Base frame disassembly shall not be required for removal of the drum or other mechanical components.
   5. No disassembled component, excluding the thickener frame, shall weigh more than 6,000 pounds. Lifting lugs shall be provided as necessary, but shall not restrict maintenance access points for the thickener.

B. Spray Shields/Cover:
   1. The drum shall be fully enclosed by removable spray shields located along each side of the thickener and a removable cover shall be mounted on the top. The cover hood shall be fabricated with handles to allow manual removal.
   2. The spray shields shall be designed to contain any fugitive spray and minimize mist emissions.
   3. The spray shields and cover shall be constructed of 304L stainless steel, with minimum 14-gauge thickness. Inspection doors shall be provided with neoprene seals around all openings to provide a water-tight fit. The thickener enclosure shall be equipped with a 6-inch diameter, flanged port on top of the cover to accommodate a future vent connection. A 6-inch blind flange and neoprene gasket shall be provided.

4. Manually removable doors or covers shall be equipped with handles and fastened with wing nuts, or another fastening system that allows for operator removal without special tools. If special tools are required for removal, manufacturer shall provide tools required for removal of doors or covers.

C. Rotary Drum System:
1. The drum shall be fabricated with a filter screen on the drum support structure, which rotates horizontally around a center feed assembly. The filter screen shall consist of stainless steel woven-wire mesh, wedge wire, or other filter material selected on the basis of porosity or percent openness, the opening size, and wire diameter used in the weaving process. The wire mesh, wedge wire, or other filter material shall be selected on the basis of maximizing flow and producing a high-quality filtrate.
2. The filter screen shall be changed from the drum support structure with simple tools. If special tools are required, manufacturer shall provide tools for complete disassembly of filter screen.
3. The rotary drum structure shall be constructed of 304L stainless steel.
4. The rotary system shall be equipped with internal mechanisms to influence shear, water release, and drainage rate independent of flow.
5. The inside of the drum shall have a series of angled flights welded to the interior to transport solids through the length of the drum.
6. Trunnion wheels, if required, shall be constructed of high-density polymer with an aluminum hub and dual-sealed, press fit steel tapered roller bearings. The bearings shall be lubricated by means of an external grease zerk and internal grease cavity located in the trunnion wheel shafts. The bearings shall remain sealed on the outer face with lubrication seals. Grease relief ports shall be provided to the exterior unit to confirm that proper lubrication of the bearing has been achieved.
7. The trunnion wheels shall be removable without the need for the drum to be removed from the unit. Cantilevered trunnion wheels shall not be allowed.
8. The drum may be constructed with a structural shaft along the centerline of the drum supported by pillow blocks and bearings on either end of the machine outside the process environment. The center shaft design shall not require internal trunnion wheels.
9. The rotary drum shall be equipped with a drive motor in accordance with Section 46 05 13.
    a. Provide two normally closed temperature switches embedded in each phase winding for high temperature protection. A high temperature shall prevent the VFD from powering the motor.
    b. Provide motor shaft grounding ring to discharge shaft currents to ground.
10. The rotary drum motor speed shall be adjustable with a manufacturer-supplied VFD.

D. Thickened Sludge Discharge Hopper:
1. Thickener manufacturer shall provide fully removable thickened sludge discharge hopper.
2. The thickened sludge hopper shall be constructed of minimum 14 gauge 304L stainless steel.
3. The structural design of the hopper, connections to the rotary drum thickener,and/or its floor supports shall be designed in accordance with the requirements for structural steel.
4. The hopper shall be designed to be supported off the rotary drum thickener frame, or with floor supports. At design conditions, the weight of the hopper and its contents shall not be transferred to the connected thickened sludge piping or pumps.

5. Hopper interior and exterior surfaces shall be smooth and free of sharp edges and burrs. All welds shall be ground smooth.
6. The discharge end of the thickener shall be supplied with covers which prevent splashing of thickened sludge outside of the hopper. The covers shall be hinged and gasketed to allow observation and inspection of the thickened sludge discharge.
7. The sludge discharge hopper shall be designed and fabricated by the thickener manufacturer. The discharge hopper shall be constructed with one (1) 6-inch diameter flanged connection at the bottom of the hopper to connect to the suction piping for thickened sludge pumps. The flanged connection at the bottom hopper shall be at an elevation approxiamtely 32 inches from finished floor. Final elevation shall be coordinated during Submittal review.
8. The discharge hopper shall be sized to provide adequate working volume for operating thickened sludge pumps without running dry.
9. At the top of discharge hopper, a conductive type point level switch for high sludge levels shall be provided. Manufacturer shall provide necessary equipment and recommendations for install to prevent false high level readings from splashing of sludge. During startup and commissioning, the switch on each hopper shall be field verified to function. Refer to Section 40 70 00 for other point level instrument requirements.
10. Thickener manufacturer shall provide one (1) minimum 2-inch flanged connections on discharge hopper for mouting of a hydrostatic pressure transducers. Manufacturer shall provide pressure transducer in accordance with requirements of Section 40 70 00.
11. Thickener manufacture shall provide one (1) 1 ½-inch NPT connection for a wash water connection on the discharge hopper.
12. Discharge hopper shall be designed to allow near-complete drainage through bottom flanged connections.
13. The final sizing and dimensions of the thickened sludge discharge hopper shall be coordinated during shop drawing submittal review.

E. Drum Wash System:
1. The washing system shall be designed to utilize:
    a. Process water (wastewater treatment plant effluent), supplied at a minimum pressure of 50 psig and maximum pressure of 75 psig.
    b. If wash water system requires a pressure greater than 75 psig, a booster pump shall be provided with the RDT system.
2. If necessary, design and supply for Contractor installation, a pressure reducing valve and 40 mesh strainer system.
    a. Pressure reducing valve shall be capable of reducing maximum potable water or plant service process water pressure to required pressure.
    b. Strainer shall be oversized to accommodate the flow equivalent to twice the normally required wash water flow. Strainer shall be easy to remove for inspection and maintenance cleaning.
3. The spray tube and nozzle assembly shall be readily removable.
4. Nozzle spacing and spray pattern shall be such that the spray patterns from adjacent nozzles overlap one another at the drum surface.
5. Wash water supply to the drum and sludge hopper shall each be automatically controlled with a dedicated manufacturer-supplied solenoid valve.
    a. Solenoid valve shall have minimum NEMA Type 4X enclosure, 120 VAC operation, and minimum Class F coil insulation.
    b. Solenoid valve shall be furnished with manual/bypass operators.

6. Spray header shall be fitted with stainless steel pressure gauge, liquid filled type with a 1/4-inch NPT back connection, 2-1/2 inches dial scaled at 0/160 psi.
7. Washing system shall include an adjustable flow or pressure switch that shall relay an alarm if the solenoid valves on the the wash water system fails and water can no longer be supplied to the spray header or sluge hopper.
8. All structrual components of the wash system shall be constructed of 304L stainless steel.

F. Filtrate Drainage:
1. A drainage pan shall be designed and attached to the structural frame underneath all elements of the rotary drum system and supporting frame. The pan shall be accessible for cleaning.
2. The drainage pan shall be constructed of 304L stailess steel. Drainage piping shall be corrosion resistant and rigidly secured to the frame.
3. Drainage pan shall be of adequate thickeness and have suitable reinforcement to not allow bending, creasing, or tearing from water loads during design conditions and from removing from the frame for service or access.
4. Delivery of collected filtrate water shall be by gravity through one 8-inch flanged pipe stub. Provide a 1-inch flange stub on the bottom of the filtrate drain pipe connection for sampling purposes.

G. Zero Speed Detection:
1. The rotary drive shall be provided with a zero-motion detector. In the event that movement is not detected, an alarm shall be relayed from the zero-motion detector.
2. The zero-motion detector shall be calibrated to operate between the minimum and maximum recommended speeds of the rotary drum system.

2.07 ROTARY DRUM THICKENER CONTROL PANELS:

A. Main Control Panel:
1. Two (2) main control panels shall be furnished in accordance with Section 40 67 00.
   a. Panel mounted combination main disconnect switch and circuit breaker shall be accessible without opening the door.
2. The control panels shall adhere to the following specifications:
   (1) Enclosure Rating: NEMA 12, painted steel, ventilated.
   (2) Voltage: 480 Volt.
   (3) Phase: 3 Phase.
   (4) Frequency: 60 Hz.
   (5) SCCR: 65 kA.
   (6) Mounting: Free Standing or Floor Mounted.
   (7) Logic: PLC.
3. Each Control panel shall contain all timers, starters, VFDs, switches, indicator lights, and other components necessary to operate the following equipment:
   (1) One (1) Flocculation Tank Mixer Motor.
   (2) One (1) RDT Drum Drive Motor.
   (3) One (1) Drum Wash System.
   (4) One (1) Hopper Flush Water System.
4. The point level switch control relays shall be installed within the associated main control panel.
5. Control panel shall be PLC based.
   a. PLC shall be Allen-Bradley CompactLogix according to Section 40 67 00.
6. The main control panel shall contain a door mounted OIT for local control.
   a. OIT shall be Allen-Bradley Panel View. Refer to Section 40 67 00.

b. All manufacturer supplied graphics and applications shall be developed with FactoryTalk View Machine Edition.
c. The screens developed shall utilize a "High Performance" design conforming to ISA 101.01 – Human Machine Interfaces for Process Automation Systems to provide situational awareness to the operator. HMI design and associated color schemes shall conform to those listed in Section 40 61 96 – 3.02 HMI STANDARDS AND SCREEN DEVELOPMENT.
d. In addition to controlling the Manufacturers equipment the supplied PLC and OIT shall be used for interfacing specified I/O with the Plant Control System screens.
(1) Coordinate with the Systems Integrator for exchange of the necessary I/O.
e. The RDT supplier shall provide a copy of the supplied OIT screens for use in the plant control system operator screens.
(1) Manufacturer shall provide the necessary coordination with the Systems Integrator to ensure a fully functional application for use in remote monitoring.

7. The RDT control panel PLC shall communicate with the plant control system PLC via an Ethernet/IP network, all controller I/O shall be accessible via the Ethernet network to the Plant Control System.
8. The control panel shall be supplied with a 480-120V control power transformer to provide power to 120V devices in the panel.
9. The control panel shall include provisions for connection of one (1) 120Vac, 20-Amp field supplied circuit and the internal derived 120Vac circuit from the specified 480V-120V CPT. The CPT derived circuit shall be used as "House" power for lights, fans, receptacles, etc. The field connected circuit shall be derived from the centralized UPS system and shall power all PLC, network, OIT, and control system related loads within the control panel.
10. The following devices shall also be provided in the control panel door at minimum.
a. Push-to-test Power On indicating light.
b. System Emergency Stop push button.

B. The control panel shall be supplied with applicable control relays and time delay relays with a minimum one extra normally closed and one extra normally opened contact is provided for each relay.

C. Remote OIT Enclosure:
1. Each RDT shall be supplied with a remote OIT enclosure for local control of the RDT equipment. The enclosure shall include the following as minimum:
a. Operator interface terminal mounted to the face of the enclosure.
b. Door mounted push-to-test control power indicating light.
c. Emergency stop push button.
d. Additional physical interfaces may be provided as recommended by the manufacturer.
e. Provide with the necessary 120Vac main circuit breaker, Power Supply, Terminal Blocks, OIT, and other internally mounted accessories as required.
f. Enclosure and all externally-mounted accessories shall be rated NEMA 4X SST. Refer to Section 40 67 00 - Process Control Panels and Hardware for enclosure requirements.

D. RDT System OIT:
2. All local operator interface with the rotary drum thickener shall be accomplished via an operator interface panel mounted in the face of the RDT Main Control Panel in

accordance with Section 40 67 00. Each RDT shall be provided with a Remote OIT Enclosure that can access the same functionality.

3. As a minimum, the following control functions shall be accessible via the OIT interface:
   a. System:
      (1) Alarm silence and reset.
      (2) Hand/Off/Auto selector switch.
      (3) Auto Start and Stop buttons.
      (4) System reset push button.
      (5) Emergency stopped indication.
      (6) Elapsed time meter.
   b. Washdown/Wash water System:
      (1) Hand/Off/Auto selector switch.
      (2) Cycle on indication.
      (3) Start and Stop (open) buttons.
      (4) Valve open indication.
      (5) Failure indication.
      (6) Low pressure alarm.
   c. Hopper water flush system:
      (1) Hand/Off/Auto selector switch.
      (2) Cycle on indication.
      (3) Start and Stop (open) buttons.
      (4) Valve open indication.
      (5) Failure indication.
   d. Rotary drum thickener:
      (1) Hand/Off/Auto selector switch.
      (2) Start and Stop buttons.
      (3) Speed adjustment.
      (4) Speed indication.
      (5) Thickener ready indicator.
   e. Flocculation tank:
      (1) Hand/Off/Auto selector switch.
      (2) Start and Stop buttons.
      (3) Running indication.
      (4) Speed adjustment.
      (5) Speed indication.
      (6) Alarm/failure indication.
   f. Polymer system:
      (1) Pump No. 1 selection.
      (2) Pump No. 2 selection.
      (3) Hand/Off/Auto selector switch.
      (4) Start and Stop push buttons.
      (5) Running indication.
      (6) Speed adjustment.
      (7) Speed indication (0-100%).
      (8) Alarm/failure.

E. The following I/O points will be read/write from others to the RDT control panel via an Ethernet/IP communication link. Each point shall be changeable via the OIT.
   a. Thickened Sludge Pumps:
      (1) Thickened Sludge Pump Remote Manual Start (Discrete).

(2) Thickened Sludge Pump Remote Auto Start (Discrete).
(3) Thickened Sludge Pump Off (Discrete).
(4) Thickened Sludge Pump Speed Control (Analog, 0-100%).

F. The following signal inputs will be provided by the RDT control panel to others via an Ethernet/IP communication link.
   a. System:
      (1) Emergency stopped indication (Discrete).
      (2) System failure (Discrete).
      (3) System Running In-Auto (Discrete).
   b. Washdown/Wash water System:
      (1) Low pressure alarm (Discrete).
   c. Discharge Hopper:
      (1) Level (Analog, 4-20mA)
      (2) High level alarm (Discrete).
   d. Rotary drum thickener:
      (1) In-Auto indication (Discrete).
      (2) Running indication (Discrete).
      (3) Common alarm (Discrete).
      (4) Zero speed alarm (Discrete).
      (5) Speed indication (Analog, 0-100%).
   e. Flocculation tank:
      (1) In-Auto indication (Discrete).
      (2) Running indication (Discrete).
      (3) Common alarm (Discrete).
      (4) High level alarm (Discrete).
      (5) Speed indication (Analog, 0-100%).
   f. Thin Sludge Feed:
      (1) Thin Sludge Pump Start/Stop (Discrete).
      (2) Thin Sludge Pump Speed Control (Analog, 0-100%).
   g. Polymer System:
      (1) Feed Pump No. 1 Start/Stop (Discrete).
      (2) Feed Pump No. 1 Speed Control (Analog, 0-100%).
      (3) Feed Pump No. 2 Start/Stop (Discrete).
      (4) Feed Pump No. 2 Speed Control (Analog, 0-100%).

G. The following signal inputs will be provided by others to the RDT control panel via an Ethernet/IP communication link.
   a. System:
      (1) System Inhibit.
         (a) Discrete signal which prevents all associated system equipment from running.
   b. Polymer system:
      (1) Feed pump run status.
      (2) Feed pump failure.
      (3) Feed pump in "AUTO" mode.
      (4) Feed pump motor overload.
   c. Thin Sludge Feed:
      (1) Thin Sludge Pump run status.
      (2) Thin Sludge Pump speed indication (0-100%).
      (3) Thin Sludge Pump failure.

(4) Thin Sludge Pump in "AUTO" mode.
(5) Thin Sludge Flow.
(6) Thin Sludge TS Concentration.

d. Thickened Sludge Feed:
(1) Thickened Sludge Pump run status.
(2) Thickened Sludge Pump speed indication (0-100%).
(3) Thickened Sludge Pump failure.
(4) Thickened Sludge Pump in "REMOTE" mode.
(5) Thickened Sludge Flow.
(6) Thickened Sludge TS Concentration.

H. The panel manufacturer shall provide a data/memory map to the project's systems integrator which includes all produced tags and coordinated IP addresses as required in order to enable communication between the control panel and the communication network.
1. The manufacturer shall be responsible for coordinating, programming, and verifying the IP Addresses, Subnet, and Default Gateways, when applicable, for all devices on the network.
2. The network IP addresses shall be defined based on the Ethernet Network TCP/IP addresses provided by the Systems Integrator.

2.08 RDT CONTROL SYSTEM DESCRIPTION OF OPERATION:

A. Each RDT control panel shall include a control system capable of independent operation.
B. Each rotary drum thickening system and associated components shall be started and stopped at the HMI by Hand/Off/Auto operation selection.
C. In general, each piece of equipment is provided with a Hand / Off / Auto switch. To operate the system from the Thickener HMI, all equipment should be placed in "AUTO". During normal operation, the switches will be left in the Auto position. There is a light indication for each item if it is running.
D. HAND Mode:
1. When any RDT equipment is in HAND control, starting and stopping of motors, the speed of motors, and opening and closing of valves shall be manually controlled at the control panel HMI.
E. AUTO Mode:
1. The following equipment shall be confirmed to be In-Auto before initiating the AUTO operation sequence:
a. Flocculation Tank Mixer Drive
b. Rotary Drum Thickener Drive
c. Wash Water Solenoid Valves
2. The following equipment shall be confirmed to be remotely available via the Plant Control System before initiating the AUTO operation sequence:
a. Thin Sludge Pumps
b. Polymer Feed System
c. Thickened Sludge Pumps
3. The rotary drum thickening control system AUTO mode shall be initiated at manufacturer control panel HMI.
4. Once the start sequence is activated, the Thin Sludge Pumps, Polymer Feed System, and the Flocculation Tank shall start.
a. The manufacturer provided PLC shall send a start command to Thin Sludge Pumps with the pump speed input selected via the PCS.

b. The manufacturer PLC shall send a start command the flocculation tank mixer. The flocculation tank speed is based on the user defined setpoint at the RDT control panel HMI.

c. The polymer feed system shall receive control signals from the RDT control panel via the PCS to initiate pump start and pump speed. The pump speed will be based on the user defined setpoint as a ratio of the sludge flow.

(1) When "Polymer Pacing Mode" is selected, the polymer pump speed shall be determined by the following equations to be included in the PLC:

(a) $$Neat\ Polymer\ Flow\ Rate\ (0-5gph) = Polymer\ Ratio\ \left(\frac{lbs\ active\ polymer}{DT\ of\ WAS}\right) * \frac{1DT}{2000\ lbs} * Influent\ Flow\ (gpm) * \frac{60\ minutes}{hour} * \frac{Influent\ Total\ Solids\ \left(\frac{mg}{L}\right)}{119826\ (conversion\ factor)} * \frac{1}{Specific\ Gravity * 8.34\frac{lbs}{gal}} * \frac{1}{Active\ Polymer\ Content\ (\%)}$$

(b) $$Polymer\ Pump\ Speed\ from\ RDT\ Control\ Panel\ (0\%-100\%) = \frac{Calculated\ Neat\ Polymer\ Flow\ Rate}{Pump\ Capacity\ at\ 100\%}$$

(c) $$Dilution\ Water\ Flow\ Rate\ (gpm) = Neat\ Polymer\ (gph) * \frac{1}{\%\ Polymer\ Diltuion} * \frac{1\ hr}{60\ minutes}$$

(2) In "Polymer Pacing Mode", the feed flow and total solids inputs into the control loops shall be relayed by 4-20 mA signals from the PCS to the RDT control system. There shall be an option in the RDT control system to manually input a total solids value (0-80,000 mg/L) for control rather than a communicated value from the PCS.

d. The rotary drum thickener shall start with the Thin Sludge Pumps, Polymer System, and Flocculation Tank. The speed of the thickener will be based on the user defined speed setpoint at the RDT control panel HMI.

e. The Thickened Sludge Pumps shall have the option to be operated independently from the rest of the system and shall operate based on level in the hopper. These pumps shall vary their speed to maintain the volume of solids in the discharge hopper based on the operator level setpoint.

f. The solenoid valve controlling wash water for rotary drum thickener shall open when the thickening is running.

5. The operator interface display shall have a readout of the following but not limited to:
   a. Neat Polymer feed rate (0-5 gph)
   b. % Speed of the rated capacity of the polymer feed pumps (0%-100%)
   c. Recommended dilution water flowrate for polymer feed system(gpm).
6. The submenu in the PLC shall have the following inputs but not limited to and shall be adjustable at the RDT control panel HMI:
   a. Active polymer ratio (0-14 lbs of active polymer / dry ton of solids)
   b. Polymer specific gravity (1.00-1.20)
   c. Active polymer content (0%-100%)
   d. Dilution water % (0-1%)
7. The rotary drum thickening control system and associated equipment shall have three options for shutdown, all of which are operator selected.
   a. Manual Shut-Off
      (1) The system shall stop when the "System Stop" is selected at the RDT control panel HMI.

b. Timed Shut-Off
   (1) The system shall stop after an operation timer has elapsed. Timer shall be adjustable from 0-24 hrs.
c. Totalized Flow Shut-Off
   (1) The system shall stop after an operator-adjustable, totalized thin sludge flow set point has been reached.

8. The normal shutdown sequence shall stop the sludge pump, polymer system and flocculation tank. The rotary drum thickener shall run for the additional time manually inputted and adjusted at the RDT control panel HMI (Thickener Shut-down Delay) and then set to off. The wash water solenoid valve for the rotary drum thickener shall automatically close when the thickener is off but shall remain on during the system clean out delay shutdown sequence. The thickened pump will continue to run until the volume in the hopper reaches the desired hopper level setpoint.
   a. When "Flush Mode" is enabled, the solenoid valve supplying wash water to the sludge hopper shall open after Thickener Shut-down Delay timer has elapsed.
   b. The solenoid valve shall close after an adjustable Flush Mode wash water timer has elapsed.

2.09 PAINTING:

A. All steel surfaces, excluding the structural frame and those specified to be stainless steel or galvanized, shall be completely painted in the shop with the protective coating normally recommended by the manufacturer for the service intended.
B. Provide field touch-up paint kit for each manufacturers coating system used.

2.10 SPARE PARTS:

A. Manufacturer shall provide a complete parts list, showing current price and anticipated delivery time for each part. Prices shall be held firm for at least one year after the date of equipment startup.
B. The manufacturer shall furnish recommended spare parts and special tools required to minimize rotary drum thickener system downtime. All tools and spare parts shall be packaged and labeled as to be clearly identified for their intended purpose and as labeled as spare parts.
C. One set (each) of any other parts recommended by manufacturer.
D. If specials tools are required for the service and maintenance of any component furnished by the rotary drum thickener system manufacturer, one complete set of special tools shall be provided.
E. All spare parts shall be in waterproof packages suitable for export service labeled with the description and parts number. Each item or set of parts expected to be installed at one time shall be individually packaged.
F. Furnish all required lubricants along with a maintenance schedule showing the required maintenance and frequency of maintenance for the first year of operation, including standard oils and grease, break-in lubricants, special lubricants, and required containers, pumps, hand pumps, or other devices necessary to store and apply the lubricants.

PART 3 - EXECUTION

3.01 INSTALLATION:

A. The rotary drum thickener and accessory equipment as specified herein shall be installed as recommended by the manufacturer. Any additional power, piping or accessories recommended

by the thickener manufacturer shall be provided by the Contractor and shall be the responsibility of the Contractor.

B. Equipment delivered to the site in advance of installation shall be stored in accordance with the manufacturer's requirements and in accordance with the requirements of Division 1.

C. Factory representative shall be present when rotary drum thickener are initially moved into the Sludge Process Building and shall provide a written certificate of no machine damage upon completion of the move. The manufacturer shall coordinate all PLC programming with the installing contractor for verification and checkout of all I/O addressing prior to equipment startup.

3.02 PERFORMANCE TESTING:

A. After installation and prior to performance testing, the rotary drum thickeners shall be completely tested functionally in both AUTOMATIC and HAND modes. Included in the testing shall be a complete test of the PLC and interlock functions.

B. Performance tests shall be run to ensure that each rotary drum thickener perform as specified for peak loading conditions.

C. Performance testing shall be conducted to simulate peak solids and hydraulic loading, as permitted by field conditions. The rotary drum thickener shall be run at the maximum hydraulic loading rate as specified in this specification.

D. Performance testing shall establish the peak hydraulic flow rate, up to the rated capacity of the feed pumps, through the rotary drum thickener without degrading the thickener performance.

E. During the testing period, the rotary drum thickener shall be operated by the Owner's personnel under the direction of the supplier's field representative.

F. Performance testing shall include selection of optimal polymer and determination of optimal polymer dosing rate.

G. Testing period shall begin only after the manufacturer's field representative has instructed the Owner's personnel on equipment operation and the field representative confirms that these personnel are qualified to operate the equipment.

H. Testing period shall begin after the rotary drum thickener is in full operation.

I. Performance Testing:

1. Testing program shall consist of tests taken during a consecutive two-day period of operation. Duration of test each day shall be four hours.
    a. Samples shall be grab samples taken hourly during working day.
    b. Locations of where samples are to be taken shall be determined by the Engineer at the beginning of the testing program.
2. Laboratory tests shall be done by an Engineer-approved independent testing laboratory. Engineer shall receive a copy of laboratory test results direct from laboratory.
3. Laboratory tests shall be those required to determine if the design requirements specified in PARTS 2 and 3 are met.
4. Solids concentrations shall be based on total solids.
5. Chemicals and power supplied by Owner. Any other costs associated with the performance testing will be the responsibility of the Contractor.

J. Submit four copies of a written report of the results to the Engineer within 10 days after completion of the testing program. Report shall include all data required to calculate unit performance.

K. If the results of the performance tests are unsatisfactory, the Contractor shall make the necessary modifications to comply with the requirements at no additional cost to the Owner. After the modifications are made, the performance tests shall be repeated at no

additional cost to the Owner up to three times in order to meet performance requirements. If the results of the performance tests are unsatisfactory after three trials the Owner may at his option keep all or part of the performance withholding.

L. If the equipment fails to meet the requirements of the performance tests, the Contractor may, at his option, install equipment of another manufacturer in order to meet the performance tests. Any equipment changes and additional performance testing shall be done at no additional cost to the Owner.

M. Unsatisfactory performance shall be determined by Engineer based on written report and laboratory data of performance testing, for minimum thickened solids concentration, minimum solids recovery and polymer requirements as specified in PART 2.

N. Compliance with the performance requirements of these specifications will not relieve the Contractor from his responsibilities to supply a rotary drum thickener with the structural, mechanical and operational characteristics specified.

3.03 MANUFACTURER'S FIELD SERVICE:

A. Field service shall be provided by experienced representatives of the equipment supplier.

B. Services are to be provided:

1. As required during installation to ensure proper installation of the equipment. To include, but not be limited to, four (4) 8-hour days.
2. As required to ensure proper start-up to include but not limited to two (2) 8-hour days.
3. During the full length of the performance testing period.
4. Training of Owner's personnel in operation and maintenance of equipment shall be prior to performance testing and shall be a minimum of one (1) 8-hour day.

END OF SECTION 46 71 33

CITY OF FOUNTAINS
HEART OF THE NATION

KANSAS CITY
MISSOURI

ADDENDUM NUMBER 004

Project/Contract Number: 81000927/1698

Project Title: Todd Creek WWTP Expansion & Major Upgrade

ISSUE DATE: **1/30/2026**

Bidders are hereby notified that the Bidding and Contract Documents for the above project, for which Bids are to be received on **February 24, 2026**, are amended as follows:

Information to Bidders The following is provided to Bidders for information only:

Specification Section 46 21 16 – COARSE SCREENING EQUIPMENT is changed as follows:

1. Section 46 21 16 – Coarse Screening Equipment
   a. Subparagraph 2.03.B.4
      i. Change the design screenings volume rate of 15 ft^3 per MG to "*minimum of 10 ft^3 per MG*".
   b. Subparagraph 2.04 Protective Coatings
      i. Subparagraph number 2.04 is duplicated and will be changed to "*2.05 PROTECTIVE COATINGS*".
   c. Subparagraph 2.05 Screen System Controls and Instrumentation
      i. Subparagraph number 2.05 is now duplicated with the change previously mentioned above and will be changed to "*2.06 SCREEN SYSTEM CONTROLS AND INSTRUMENTATION*".
   d. Subparagraph 2.06.K.
      i. There is no information listed and will be removed resulting in the following subparagraph numbering changes:
         1. 2.06.L Source Quality Control will change to "*2.06.K Source Quality Control*".
         2. 2.06.M Accessories will change to "*2.06.L Accessories*".

Q1.	Regarding Insurance section 5.08.B – We are requesting section 5.08.B's language be amended to the following "Any insured loss under the property insurance will be adjusted and settled with the named insured that purchased the policy. Such named insured shall act as fiduciary for the other insureds and give notice to such other insureds that adjustment and settlement of a claim is in progress."
A1.	**The City does not agree to amend this section. The language in Section 00700 – Construction General Conditions 5.08B already provides a way for a party in interest to object to the City negotiating with the insurer as long as notice is given within fifteen (15) days after the occurrence of loss, and the party in interest and the insurer can reach an agreement.**

Q2.	Please confirm whether bidding contractors are to select and pay for onsite field testing for concrete testing and soils testing or if the test lab will be selected and paid for by the Owner/Engineer.
A2.	**Contractors are required to pay for on-site field testing for concrete and soil testing.**
Q3.	Please confirm whether bidding contractors are to select and pay for onsite inspections or if the inspections will be provided by the Owner/Engineer
A3.	**The City will provide RPR services. This does not relieve the contractor from providing a QA/QC Manager and Quality Assurance/Quality Control Plan outlined in 00210 Instruction to Bidders.**
Q4.	Please confirm whether or not the Americal Iron Standard (AIS) or any BABA requirements will be required for the project
A4.	**This project is required to follow AIS but has been granted a waiver to follow any BABA requirements.**
Q5.	Please confirm the fence height will be 6ft and no barb wire per Sheet C136
A5.	**Fence mesh should be 8' with 12" of 3 strand barbed wire angled 30 to 45 above the horizon facing away from the facility. Specifications and drawings will be updated in a later addendum.**
Q6.	Please confirm the gate height is 7ft and no barb wire. This gate would be taller than the fence per Sheet C136
A6.	**Gates should match the fencing. Specification and drawings will be updated in a later addendum.**
Q7.	Please verify the Holdback post would not be in the center of closed position per Sheet C136
A7.	**Correct, holdback posts are for open position to prevent excessive gate swing. Include 2, one for each side of the gate per INTERURBAN ROAD GATE AND MONUMENT SIGN LOCATIONS enlarged view on C136.**
Q8.	Drawing C111 indicated 12 lockable gate. Please confirm this is a double swing gate 24ft
A8.	**Correct, double swing gate, 12' each side for total opening width of 24'.**
Q9.	Spec section 03300 3.09.E.1 references Spec Section 01480 for Water Leakage Testing. Section 01480 was not provided with project specifications, please provide if leak testing is required.
A9.	**01480 Water Leakage has been added to this addendum.**
Q10.	Sheet D204 shows 6 slide gates (IPS-GATE-011, 012, 021, 022, 031, 032). These are shown as 3x8' on the schedule. Looking at D207 and estimating the height of these from the difference between the channel wall top (832.00) and the floor (813.67), it looks like these would be around 15' high. Need clarification.
A10.	**Yes, those gates are 3'x8' as shown in the schedule. With the travel distance of this size of gate, the frame is approximately shown around 16-ft'; however, there is 18.33' between the top of the wall and the bottom of the channel to install the**

	framing as required by the supplier to install a 3' x 8' gate that can be raised the entire height of the gate to provide an 8' opening when fully raised.
Q11.	SECTION 13 34 23 - FIBERGLASS BUILDINGS AND ENCLOSURES Would a 3-sided shelter work? It would have a flange to attach to the host structure.
A11.	**No - The current set up has independent foundations systems that are placed at different bearing depths since the structure is sitting on top of a valve vault. The potential for differential settlement would be of concern.**
Q12.	SECTION 13 34 23 - FIBERGLASS BUILDINGS AND ENCLOSURES Can the roof slope down to 3 sides (not towards the host structure)?
A12.	**Yes**
Q13.	SECTION 13 34 23 - FIBERGLASS BUILDINGS AND ENCLOSURES What size is the roof hatch? 4’ x what? What is the Bilco part number for that size? Is the hatch powder-coated carbon steel?
A13.	**The proposed is based on all aluminum Bilco. Carbon steel is not allowed. It doesn't have to be from that manufacturer nor be aluminum. Architect will consider other materials especially if the enclosure manufacture has a hatch option.**
Q14.	SECTION 13 34 23 - FIBERGLASS BUILDINGS AND ENCLOSURES Sheet 123 calls for gutters and downspouts. We do not recommend gutters/downspouts for this construction. Can the gutters/downspouts be waived?
A14.	**Yes**
Q15.	SECTION 13 34 23 - FIBERGLASS BUILDINGS AND ENCLOSURES Door 603A appears to have a custom frame with electrical hardware. Is it your intention for the FRP shelter manufacturer only to provide a formed opening for the Kansas City contractor to provide and install the frame and door with electrical hardware? Door as specified is an FRP man door.
A15.	**It is acceptable to have a man door by the enclosure manufacturer. The characteristics must align with the specification, i.e. not steel, low-profile threshold. The door as spec'd will require a card reader. Changes can be discussed after bid.**
Q16.	SECTION 13 34 23 - FIBERGLASS BUILDINGS AND ENCLOSURES Sheet E651 shows the corner camera mounted 10’ AFF, but the wall height is only 8’. Should the camera bracket be mounted 7’-6” AFF? Bracket and camera are by others, correct?
A16.	**Correct, by others. Mounting at a lower wall height is acceptable.**
Q17	13 34 23 para. 1.06.A refers to welding certifications. Should this requirement be waived/deleted for an FRP structure?
A17.	**If no welding is required for a particular manufacturer then no submittal is required.**
Q18	13 34 23 para. 1.06.B calls for test reports. Test reports of what, exactly?
A18	**Can be omitted if manufacturer doesn’t provide test reports.**

Q19	13 34 23 para. 1.08.A calls for shrink wrap. Can shrink wrap be waived?
A19	**Can be revised to be protective coverings instead. Enclosure would generally need protection during shipping/transport.**
Q20	13 34 23 para. 1.010 calls for 1-year warranty. To provide the Owner with the best long-term value, we suggest all FRP surfaces have a minimum 10-year warranty on materials and workmanship.
A20	**10 year warranty is acceptable**
Q21	13 34 23 para. 2.03.A calls for high gloss. Is matte also acceptable?
A21	**Yes**
Q22	13 34 23 para. 2.03.A.4.a calls for stitch mat within anchoring flange. Can this be waived?
A22	**Yes**
Q23	Section 46 05 13 - Sub Section 2.01.B & 2.07D - Please excuse small HP motors from this shaft grounding ring requirement. Shaft grounding rings on small motors are unnecessary as well as very expensive custom add-ons that increase the lead time significantly.
A23	**An acceptable alternative to shaft grounding would be CoolBLUE inductive absorber rings in lieu of the shaft grounding rings. The CoolBLUE rings can be installed on the control panels rather than on the motors themselves. Simply omitting excessive current protection is not acceptable.**
Q24	Section 46 21 13 - Sub Section 2.03.B.4 - For a ¼-inch bar opening, WEF MOP 8 reports a typical screenings volume of approximately 10 ft^3 per MG. Please confirm this is acceptable.
A24	**That is acceptable.**
Q 25	To pass 15 MGD through each screen a downstream water level of 6' is required. Please confirm this is acceptable.
A25	**Yes – As long as allowable headloss at peak flow is less than 6" at 30% blinding.**
Q26	Section 46 21 13 – Sub Section 2.04.7 - The screen MOC is 304 SSTL. Please confirm that fasteners can be 304 SSTL.
A26	**Subsection 2.03D states the screen MOC is 304L SSTL, unless specified elsewhere. Several components are specified as 316 including the teardrop-shaped bars making up the screen (2.04.A.1 and 2.04.B.2.b), fasteners, bolts, and nuts (2.04.A.7), and chain links (2.04.B.3.a). Supplier shall abide by the MOC for the screen components as specified in each sub section.**
Q27	Section 46 21 13 – Sub Section 2.04.B.4.e- Staging scraper will be UHMW, thru bar scrapers will be stainless steel. Please confirm this is acceptable.
A27	**That is acceptable**
Q28	Section 46 21 13 – 2.04.B.10.c- Handles will be plastic. Please confirm this is acceptable.
A28	**No. Handles shall meet stated specification and shall be 304/L stainless steel.**

Q29	Section 46 21 13 – 2.05.C.1 - Controls for both bar screens will be located in the same panel. Please clarify this is acceptable.
A29	**This is not acceptable. Independent control panels are required for failure redundancy and maintenance.**

Bidding Requirements: N/A

Contracting Requirements: N/A

Specifications:

1. Delete and replace the following section(s):
    a. Delete Section 46 21 16 – COARSE SCREENING EQUIPMENT and replace with the following Section 46 21 16 – COARSE SCREENING EQUIPMENT
2. Add the following section(s):
    a. Document, Section 01480 WATER LEAKAGE TESTING

Drawings: N/A

NOTE: Bidders must acknowledge receipt of this Addendum by listing the number and date, where provided, on the Bid Form - Document 00410.

SECTION 46 21 13 – COARSE SCREENING EQUIPMENT

PART 1 - GENERAL

1.01 SUMMARY:

A. This Section includes the supply of two screens and all associated control systems as shown on the Drawings and specified herein. The treatment objective for the screens is to capture and remove particles from raw wastewater. The screenings are to be collected in a roll-off dumpster.

B. All equipment specified in this Section shall be suitable for installation in the structures as indicated. Any revisions necessary to accommodate the equipment furnished shall be the responsibility of the Supplier.

C. Related Work Specified Elsewhere:
   1. Contract Drawings.
   2. General Requirements: Division 1.
   3. Painting: Division 9.
   4. Section 40 66 00 – Process Control Networks
   5. Section 40 67 00 – Process Control Panels and Hardware
   6. Section 40 70 00 – Instrumentation for Process Systems
   7. Section 46 05 13 – Common Motor Requirements for Water and Wastewater Equipment

1.02 REFERENCES:

1.03 QUALITY ASSURANCE:

A. Refer to Division 01 for requirements.

1.04 SUPPLIER SUBMITTALS:

A. Submit as specified in DIVISION 01.

B. Includes, but is not limited to the following:
   1. Complete manufacturer's data, specifications, and detailed drawings for all equipment and materials which shall include complete descriptive data to define materials sizes, capacities, types, models, accessories, etc. Drawings and other information shall be suitable for erection and installation of equipment and materials.
   2. Recommended spare parts list.

3. Electric power requirements, wiring diagrams, and schematics for all electrical equipment and devices.
4. Control panel HMI screens.
5. All structural loads imparted to the structure.
6. Anchoring details.
7. Submit screen headloss calculations at peak and design flows. The calculations shall include clean screen 0% blinded and 30% of screen panel area blinded.
8. Manufacturer's surface preparation, shop priming, and machined metal surface rust inhibitive compound requirements.
9. List of installations, as described in Quality Assurance, including current Owner representative name, address, telephone number, and email.

C. Operation and Maintenance Manual includes, but not limited to, the following:
1. Special shipping, storage, protection, and handling instructions including dimensions of each container or package shipped.
2. Recommended unloading method at project site including implement (e.g., forklift, etc.) and maximum container or package weight.
3. Manufacturer’s printed installation instructions.
4. The manual shall be prepared specifically for this installation and shall include all required cuts, drawings, equipment lists, descriptions, etc. that are required to instruct operating and maintenance personnel unfamiliar with such equipment. The maintenance instructions shall include trouble shooting data, full preventative maintenance schedule and complete spare parts lists with order information. In addition, the manuals shall include the following at a minimum:
   a. Complete parts list cross-referenced to an exploded view assembly or equivalent drawing.
   b. Dimensional drawings of all provided equipment with component weights.
   c. Complete preventative maintenance procedures (including recommended intervals).
   d. Alignment, adjustment, and repair instructions.

1.05 DELIVERY, STORAGE, AND HANDLING:

A. Deliver, store and handle all equipment and materials in accordance with the requirements in Division 01.

1.06 WARRANTY:

A. Shall be as specified in DIVISION 01.

PART 2 - PRODUCTS

2.01 ACCEPTABLE SUPPLIERS:

A. Subject to compliance with the specifications, provide one of the following suppliers:
1. Screens:
   a. Duperon Corporation.
   b. Parkson Corporation.

2.02 SERVICE CONDITIONS:

A. The screening system shall be used to screen raw domestic wastewater gravity fed from the collection system and prior to influent pumping.
B. Screenings captured and collected from the screens are to be collected in a roll-off dumpster supplied by the Owner.
C. Equipment to be installed indoors in Kansas City, Missouri.

2.03 DESIGN AND PERFORMANCE REQUIREMENTS:

A. Screens:
   1. Number of units: 2.
   2. Maximum effective spacing: 1/4 inch.
   3. Angle of screen: 80 degrees from horizontal.

B. Design Flows and Screenings Load:
   1. Peak flow per screen: 15 MGD.
   2. Current average daily plant flow: 2.2 MGD.
   3. Design average daily plant flow: 4.6 MGD
   4. Minimum design screenings volume rate: 10 ft^3 per MG.

C. Dimensions and Elevations:
   1. Screen channel width: 3 feet.
   2. Screen channel depth: 42.33 feet (from screening structure floor to channel invert).
   3. Water level downstream at design average daily plant flow: 1.80 feet
   4. Water level downstream at peak flow: 2.75 feet.
   5. Maximum allowable hydraulic headloss at peak flow (at 30% blinding): 6 inches.
   6. Channel bottom elevation: 813.67 feet.
   7. Screen Room operating floor elevation: 856.0 feet. Screening equipment supports shall be mounted on 6-inch concrete bases.

D. All materials shall be 304L stainless steel unless otherwise specified.

2.04 MECHANICALLY CLEANED BAR SCREEN:

A. General:
   1. The mechanically cleaned screen shall be a stainless-steel link driven, front-cleaning, front-return type mechanically cleaned bar screen. The screen will be self-contained and shall capture and transport wastewater debris to the discharge point. The screen shall consist of 316SSTL teardrop shaped bars, spaced to create a fabricated and stiffened grid which is carried on supports spanning the channel. Back cleaned or rear-return type mechanically cleaned screens will not be acceptable.
   2. The screenings are mechanically cleaned from the bar rack by rakes with tine plates mounted on carriers attached to the links of the roller chains on each side of the screen. The complete screen is constructed such that it forms a strong and rigid integral structure which is secured to the support beams which span the width of the chamber.
   3. The mechanically cleaned screen shall clean continuously, from bottom to top, the entire width of the rake. The debris will be removed from the bar racks by the cleaning rakes, conveyed up the dead plate to the discharge point where the rakes will be cleaned by the rake wiper.
   4. The bar screen will include: cleaning rakes, rake wiper, links, shafts, bearings, drive unit complete with reducer, motor, side frames with lifting lugs, bar rack, dead plate, discharge chute, head section, side wall sealing plates, controls, and any other appurtenances required for a complete operating system.
   5. Wear parts requiring periodic inspection, maintenance, and replacement should be fully replaceable without having to remove the screen from the channel.
   6. The screen frame shall be supplied in one piece requiring no field assembly other than that necessitated by shipping requirements and protection of the equipment.
   7. All fasteners, bolts, and nuts shall be of AISI Type 316 stainless steel and furnished by the supplier. Anchor bolts shall be AISI Type 316 stainless steel and at least 1/2-inch diameter. Anchor bolts shall be provided by supplier.
   8. All non-corrosive materials shall be used in components traveling underwater.

9. The design shall be such to enable all maintenance to be accomplished at the operating floor level.

B. System Components:
   1. Side Frames:
      a. The side frames will be constructed of minimum 1/4 inch thick type 304 stainless steel plate and braced as required.
      b. The side frame will have a stainless steel guide system for both the carrying and return run of the screen chain. The guides will provide minimal clearance to prevent debris from coming in contact with the screen chains.
      c. Lower return guides shall allow for proper alignment of rakes as they engage the bar screen.
      d. Closures shall be provided to assure that there is no space wider than the opening between the bars, to prevent passage of larger solids, than allowed through the screen. Closures shall be incorporated into the side fabrication framework and return guides.
      e. Side wall seal plates with 1/4-inch thick neoprene strip will be furnished with the screen to close off the area between the side frames and channel walls. Stainless steel may be used in lieu of neoprene for closeout between side frame and channel wall as long as no opening greater the 1/4-inch is present. The seal plates will be not less than 14 gauge type 304L stainless steel and extend from the channel floor to at least 12-inches above maximum sewage depth.
      f. Lifting lugs or pick points will be provided on the side frames near the channel floor.
   2. Bar Screen:
      a. The bar rack will extend from the invert of the channel to the height indicated in Part 2.03.C where it will be connected to a dead plate on which the screenings will be lifted to the discharge apex prior to discharging into dumpster.
      b. The bar screen shall be of AISI Type 316 stainless steel and shall be spaced to maintain a 1/4 inch clear opening. The bar screen shall be able to withstand a 2 foot head differential.
      c. The bar screen anchors and fasteners shall be of stainless steel.
      d. Bars shall be removable from the bar rack assembly in individual bars or multiple bar subassemblies. Bars shall not be welded in place. Bar racks that use welded bars are not acceptable.
   3. Link System:
      a. The chain links shall be 316 stainless steel and shall be joined with stainless steel pins.
      b. The drive shaft will be stainless steel and be supported on each side by grease lubricated take-up bearing assemblies. The bearings may also be self-lubricating.
   4. Rakes:
      a. The rakes will be stainless steel, reinforced, and bolted to the stainless steel links on each side.
      b. The stainless steel rake tines shall penetrate into the screen bar spacing to such that screenings are completely cleared during each lifting operation. The rake tines shall be suitable shape to effectively clean the front and sides of the bars and shall have adequate stiffness and strength to cope with the specified duty cycle. The rake bar will be at least 1/4 inch thick stainless steel and shall be replaceable.
      c. Spacing between rakes shall be as determined by supplier to effectively remove the design screenings volume rate listed in part 2.03.D.
      d. The rake speed shall be as determined by the supplier to effectively remove the design screenings volume rate listed in part 2.03.D.

e. If scrapers are included, they shall be made of 1" thick wide UV resistant UHMW-PE and span the width of the bar rack. Scrapers shall have a serrated edge designed to clean the face of the bar rack. Units shall be provided with a stainless steel backing angle.

5. Dead Plate:
   a. Dead plate shall be at least 1/4 inch thick, AISI Type 304L stainless steel. Dead plate shall span the entire width of the screen and transition from bar rack to discharge point.
   b. The rake head teeth shall ride no closer than 1/16-inch from the dead plate and no further than ¼-inch from the dead plate.
6. Rake Wiper/Debris Blade:
   a. The wiper will be 304L stainless steel, pivoting and be easily adjustable.
   b. The wiper will have a replaceable UHMW Polyethylene blade.
   c. The design shall be such that the rack repositions the wiper mechanism. The wiper mechanism design shall allow the rake assembly to operate in reverse, through the wiper mechanism, without the need to manually lift the wiper assembly.
7. Discharge Chute:
   a. An enclosed discharge chute of minimum 11 gauge (1/8 inch) AISI Type 304 stainless steel shall be bolted or welded to the dead plate per supplier's recommendation and will discharge to the roll-off dumpster.
   b. The height of the discharge chute will be as required to accommodate roll-off dumpster as shown on Drawings.
8. Side Shields:
   a. Side shields shall be stainless steel 304L and shall be present from intermediate deck to operating deck.
9. Channel Bottom Plate:
   a. An AISI Type 304L stainless steel channel bottom plate shall be utilized as recommended by the supplier to fully engage rakes in the bar screen at the bottom of the channel.
   b. The channel bottom plate may require anchoring dependent upon site configuration and as recommended by the supplier.
10. Screen Enclosure:
    a. The portion of the screen above the top of operating level will have stainless steel guards.
    b. The guards will provide quick access panels for equipment maintenance.
    c. The panels shall be manufactured of 304L stainless steel held in place by latches. Each panel shall be provided with handles for panel removal/replacement. All handles and latches shall be 304L stainless steel.
11. Upper Bearings:
    a. Bearing shall be a non-lubricated no maintenance engineered polymer Thordon® or Vesconite® bearings and shall have a PV value that is less than the limiting PV value of the material. Bearings containing grease are not acceptable.
12. Drive Unit:
    a. Each mechanically cleaned screen unit shall operate independently and will have its own drive unit and driven components.
    b. The electric motor shall be TEFC, NEMA Design B with Class F insulation, rated for Class I, Division 2, Group D hazardous environment. The motor shall be no larger than 1 Hp, and run from a 460V, 3-phase, 60-hertz electrical supply.
    c. The enclosure shall be of weather protected design.

d. The drive unit speed reducer will be of the helical gear or spiral bevel type, fully housed, running in oil or grease, with anti-friction bearings throughout.
e. The drive unit will be assembled by the Supplier and shipped as a complete assembly to ensure proper assembly of all components.
f. Refer to the Drawings for orientation of drive units.

13. Spare Parts and Special Tools:
    a. Refer to 40 67 00
    b. One (1) wiper blade.
    c. Ten (10) retaining rings.
    d. Four (4) chain pins.
    e. Four (4) rake screws, nuts, and hardware.
    f. Four (4) scraper screws, nuts, and hardware.
    g. One (1) tube of Never Seez.
    h. Any additional recommended spare parts.

2.05 PROTECTIVE COATINGS:

A. Motor, gear reducer, and all metallic surfaces except aluminum and stainless steel shall be factory painted with the Supplier's standard coating equal to the 09 90 00 E-1 system and field touched-up.
B. Coatings other than those listed in 09 90 00, System E-1 may be submitted but must receive the approval of the Purchaser.
C. Provide field touch-up paint kit.

2.06 SCREEN SYSTEM CONTROLS AND INSTRUMENTATION:

A. The Screen System shall be supplied with a main system control panel designed to house all components required to control the screen system and associated equipment.
B. The screening equipment supplier shall provide all control components and instruments as specified herein.
C. System Components and Function:
    1. Screen System Main Control Panels: IPS-MCP-010, IPS-MCP-020.
        a. As described below.
    2. Bar Screens: IPS-SCR-010, IPS-SCR-020.
        a. Mechanical screen designed to remove solids and debris from the liquid stream
    3. Radar Level Transmitters as defined in the following table:

Bar Screen	Upstream Level Sensor	Downstream Level Sensor	Level Indicating Transmitter	High-Level Switch
IPS-SCR-010	IPS-LT-010A	IPS-LT-010B	IPS-LIT-010	IPS-LSH-010
IPS-SCR-020	IPS-LT-020A	IPS-LT-020B	IPS-LIT-010	IPS-LSH-020

D. Description of Operation
    1. The screening equipment shall be provided with a control panel equipped with a PLC and an operator interface for setpoint adjustment and monitoring.
    2. The system shall have control stations provided and mounted adjacent to the equipment to allow for local operation of the equipment.
    3. The supplier supplied control panel shall serve as the primary control point for the equipment and all controls described shall be available through an operator interface screen (HMI).

4. Bar Screens IPS-SCR-010 and IPS-SCR-020
   a. The screens shall be started and stopped at the HMI by Hand/Off/Auto operation selection. The functionality described below shall be per screen (i.e. each screen will have a dedicated differential measurement and control sequence)
      (1) In HAND mode, the equipment will run continuously until stopped by the operator.
      (2) In OFF mode the equipment will not run.
      (3) In AUTO mode, the equipment will be started and stopped by the screen system PLC. The PLC programming shall be as described below.
         (a) The screen shall be started and stopped by the system PLC based upon channel head differential across the screens as measured by the corresponding level transmitters.
         (b) The screen system shall start at normal speed when the upstream level reaches start level setpoint. An operator-adjustable start level setpoint shall be programmed.
         (c) The screen system shall run at high speed when the calculated differential level reaches differential level setpoint. An operator adjustable level differential setpoint shall be programmed.
         (d) The screen system shall operate continuously at high speed until the differential level falls below the differential level setpoint. The screen should then return to normal speed.
         (e) The screen system shall operate at normal speed until the upstream level falls below the start level setpoint. The screen system shall then operate for an operator adjustable length of time before stopping.
         (f) A backup timer shall be provided to operate the screens periodically and if a failure occurs with the level controls, the timer setpoint shall be adjustable through the operator interface mounted on the face of the main control panel.
         (g) The parameters for the upstream start level, channel head differential level, and cycle time between operations shall be set at the supplier provided operator interface on the main control panel.
         (h) A “CYCLE START” operator soft push button shall be provided on the face of the local control panel. If the CYCLE START push button is depressed, the PLC shall immediately initiate a screen cycle for the associated screen.
         (i) High Flow Mode and Remote Cycle:
            1) While in AUTO, the screen system shall accept a start signal from the plant control system for remote start capability.
   b. System Upsets and Procedures for Recovery:
      (1) If a screen failure occurs, the control system shall alarm the operator via the operator workstation.
      (2) If a power failure occurs, the equipment that was in operation prior to the power failure shall be automatically restarted by the manufacturer-provided control panel.
      (3) If a level transmitter signal is lost, the control system shall alarm the operator via the operator workstation.
      (4) If a jam or over-torque condition occurs in the screen that cannot be cleared by the system, the associated equipment shall automatically stop and initiate a failure alarm at the operator workstation.
      (5) Safety Devices:

(a) Emergency stop push buttons and pull cord switches, as applicable, shall be interlocked with the corresponding screen starting circuit.
(b) In the event of an emergency stop push activation, the corresponding equipment will shut down and alarm the operator. The emergency stops shall require a manual reset to restart the equipment.
(c) An emergency stop condition shall initiate an e-stop alarm at the operator workstation.

c. The upstream and downstream levels for each of the screens shall be available for display on the operator interface in units of feet. Operator adjustable upstream and differential level alarms shall be programmed for the screen.

E. Setpoints and Ranges:
1. Level Transmitters
a. All level transmitters shall be calibrated and configured to provide a range of measurement from the blanking distance of the transmitter to the bottom of the channel.
2. Screen System Operator Interface:
a. Screen Level Transmitters
(1) Display range measure value in feet for each level transmitter.
(2) High level alarm adjustable between 0-1 feet, initially set at 0.8 feet for the upstream level transmitter.
(3) Differential level setpoint adjustable between 0.25-2.00 feet, initially set at 0.5 feet for each screen.
b. Backup cycle timer adjustable between 0-30 minutes, initially set at 15 minutes.
3. System Upsets and Procedures for Recovery:
a. The system shall send an alarm for the screen to the Process Control System under any of the following conditions:
(1) Any motor or other component critical to the operation of the screens is faulted.
(2) If a level transmitter signal is lost.
(3) If a jam is not cleared.
b. If a power failure occurs, the screen shall be automatically restarted by the supplier provided main control panel without requiring a manual reset.
c. If a jam occurs in a screen, the screen control system shall automatically initiate the supplier standard reversing sequence and attempt to clear the jam. If the jam is not cleared, the control system shall initiate a failure alarm at the operator workstation.
d. If an overload occurs in the screen, the screen shall automatically stop and initiate and failure alarm at the operator workstation.
e. System in AUTO mode:
(1) If a level signal is lost, the screen shall operate on a timer. If the level signal is restored, the screen shall be returned to normal operation.
f. Safety Devices:
(1) Emergency stops shall be interlocked with all motor circuits in the screen.
(2) In the event of an emergency stop situation, the equipment will shut down and alarm the operator via the operator workstation.
(3) The system shall not restart until the operator clears the alarm from the equipment and/or the main control panel as applicable.
(a) The emergency stop pushbuttons require a manual reset to deactivate the alarm.

F. The screening equipment supplier shall provide all control components and instruments as specified herein.

G. Screen System Control Panel:
   1. Control panels and components shall conform to Section 40 67 00.
   2. The control panel shall be designed for installation within a conditioned electrical room.
   3. The control panel shall be a NEMA 12 rated enclosure with use of ventilation for thermal management as required.
   4. The control panel shall be equipped with an Allen-Bradley CompactLogix PLC to provide control and monitoring of the supplied equipment.
   5. The supplier supplied PLC shall be connected to the Plant Control System through an Ethernet network connection. Provide a network switch as required for communicating the Screen system data over an Ethernet/IP network as well as providing connectivity to the operator interface. The panel programmer shall provide a data/memory map to the project's systems integrator which includes all produced tags and assigned IP addresses as required to enable communication between the control panel and the communication network. Provide a network switch as required to provide a complete and functional system as specified in 40 66 00.
   6. IP address assigned to PLC for uplink to plant network shall be reconfigurable and on a separate subnet than the Screen System's local network.
   7. The enclosure width shall not exceed 3'-0".
   8. The control panel shall be powered from a single 480V, 3-phase power source.
   9. The control panel shall be supplied with a 480-120V control power transformer to provide power to 120V devices in the panel.
   10. The control panel shall include provisions for connection of one (1) 120Vac, 20-Amp field supplied circuit and the internal derived 120Vac circuit from the specified 480V-120V CPT. The CPT derived circuit shall be used as "House" power for lights, fans, receptacles, etc. The field connected circuit shall be derived from the centralized UPS system and shall power all PLC, network, OIT, and control system related loads within the control panel.
   11. The control panel shall contain all required components for complete control and monitoring of the screening units, level controls and other associated equipment. As a minimum, the following components shall be installed in the panel:
       a. Door interlocked main disconnect circuit breaker.
       b. Motor starters with solid state overloads and/or VFD's for the screen units.
       c. Control power transformer.
       d. Programmable Logic Controller (PLC).
       e. Operator interface touch screen.
       f. Required circuit breakers, control relays, power supplies, selector switches and indicating lights.
   12. Operator Interface Touch Screen:
       a. The control panel shall include a 15-inch operator interface touch screen.
       b. Provide an Allen-Bradley PanelView Plus as specified in Section 40 67 00.
       c. All supplier supplied graphics and applications shall be developed with FactoryTalk View Machine Edition.
       d. The screens developed shall utilize high performance graphic styles using gray scale color palettes for all equipment when possible.
       e. In addition to controlling the Suppliers equipment the supplied touch screen shall be used for interfacing with the Plant Control System. Supplier shall provide the developed screen system application files to the Systems Integrator to allow further development and addition of the screens.

f. Supplier shall provide the necessary coordination with the Systems Integrator to ensure a fully functional application.

13. All devices shall be factory installed, wired and tested. Terminal blocks shall be provided and labeled as required for power, control and instrumentation.
14. The Screen System Control Panel shall provide the following discrete signals for use by the Plant Control System. The signals shall be communicated via the Ethernet/IP network.
    a. Screen "Auto" Mode for both screens.
    b. Screen "Hand" Mode for both screens.
    c. Screen Run Status for both screens.
    d. Screen Emergency Stop for both screens.
    e. Screen Failure for both screens (Common alarm for all associated equipment with the associated screen).
15. The Screen System Control Panel shall provide the following analog values over the Ethernet/IP network for use by the Plant Control System.
    a. Screen Influent Level for both screens.
    b. Screen Effluent Level for both screens.
16. As a minimum the following functionality shall be available via the operator interface screen:
    a. Hand/Off/Auto switch position for each piece of equipment.
    b. Power On indication for each piece of equipment.
    c. Forward indication for each piece of equipment.
    d. Reverse indication for each screen.
    e. Fault or Failure indication for each piece of equipment.
    f. Motor overtemperature indication for each motor.
17. Additional status points and adjustment of set points and operating parameters shall be available via the operator interface screen. As a minimum, the following parameters and status points shall be viewable and/or adjustable via the operator interface screen:
    a. Upstream Start Level for each screen.
    b. Screen Head Differential for each screen.
    c. Screen Head Differential Set Point for each screen.
    d. Backup Timer Setting.
    e. Run Time.
    f. Run Status indication for all equipment.
    g. Identify cause of equipment Failure.

H. Screening Unit Local Control Station (one per screen):
1. Refer to Section 40 67 00 for control station requirements and component specifications.
2. The panel shall be a NEMA Type 4X 304 SST enclosure to be installed outside adjacent to each screen. All selector switches, pushbuttons, and indicators shall be hermetically sealed for installation in a Class I, Division 2, Group D area.
3. The panel shall contain all required components to implement the control functionality specified and allow for the electrical connection of the skid mounted equipment to the main control panel. As a minimum, the following components shall be installed in the face of the panel:
    a. Hand, Off, Auto selector switch
    b. Run/Stop indicating lights.
    c. Emergency stop pushbutton.
    d. Control Station Identification Label.
4. As a minimum the following shall be installed inside the panel.
    a. Terminal blocks for all field connections required.

I. Screen Level Sensors:
   1. The screening units shall be provided with radar level transmitters or laser level transmitters. The level transmitters shall initiate screen operation based on channel head differential and the parameters set in the operator interface.
      a. The PLC logic shall determine differential levels using signals from two separately mounted level transmitters.
      b. The first transmitter shall be installed upstream of the screen and measures the screen upstream head. The second transmitter shall be installed downstream of the screen and measures the downstream head of the screen.
      c. The head in front (upstream) of the screen shall be compared to the head downstream of the screen to determine the head differential.
   2. Level Transmitter IPS-LIT-010 and IPS-LIT-020:
      a. Provide a level transmitter mounted for each screening unit.
      b. The upstream and downstream sensors' 4-20mA level signal instrumentation cables shall terminate to the transmitter. The transmitter shall provide upstream and downstream levels to the main control panel via 4-20mA outputs. The transmitter shall display upstream, downstream, and differential level.
      c. The transmitter shall be rated for installation in a Class I, Division 2, Group D area. The transmitter shall provide intrinsically safe connections for the level transducers.
      d. Power for the level transmitter shall be provided from the main control panel via thermal magnetic circuit breaker.
   3. Level sensors shall be a 2-wire device and perform non-contacting liquid level measurements with signal outputs of 4-20mA to the screen system PLC.
   4. The level sensors shall be intrinsically safe and suitable for installation in a Class I, Division 2, Group D area. Required intrinsically safe barriers shall be installed in the main control panel if required for the indicating transmitter.
   5. Refer to Section 40 70 00 for level transmitter specifications. Provide quantity of sensors and transmitters as required with measurement ranges and blanking distances necessary for the measurement in the indicated screen channels.

J. High Level Probe:
   1. Provide a high-level conductivity probe for installation in each channel, upstream of each screen.
   2. The probes shall be intrinsically safe and suitable for installation in a Class I, Division 2, Group D area. Where required, provide and install intrinsically safe barriers in the main control panel.
   3. Provide and install an intrinsically safe control relay for each probe in the main control panel. Relay shall provide an alarm to the PLC via a N.O. and N.C. output contact upon high level detection by probe.
   4. Provide the necessary stainless steel hardware, mounting brackets or fittings, manufacturer cables, and strain relief for securing the probes in the channel. Installation shall be coordinated with the channel grating to allow access and removal.
   5. Refer to Section 40 70 00 – Instrumentation for Process Systems for conductivity probe specifications.

K. Source Quality Control:
   1. The Screen System and controller shall be factory tested to ensure satisfactory operation.

L. Accessories:
   1. Provide all templates and special wrenches or tools necessary for proper installation and maintenance of equipment.

PART 3 - EXECUTION

3.01 PREPARATION:

A. Motor, gear reducer, and all metallic surfaces except aluminum and stainless steel shall be factory painted for shipping purposes. Stainless steel and aluminum surfaces shall not be painted. Prepare surfaces in shop and finish all surfaces as specified in Division 9.
B. Store all Equipment as specified in Division 1 and as required to prevent damage.
C. Assemble and test drive units in factory.

3.02 INSTALLATION:

A. In accordance with manufacturer's instructions and as indicated.
B. Install all electrical conduits, wires, tubing, instrumentation and other appurtenances as required for satisfactory operation.
C. Prepare surface and paint or touch up all surfaces as specified herein and in Division 9.

3.03 FIELD QUALITY CONTROL AND ADJUSTMENTS:

A. Manufacturer's Field Services: Provide all services as specified in Division 1 and as follows:
B. The equipment suppliers shall furnish the services of a factory-trained representative on site for a period of no less than four days and two trips. The representative shall inspect, adjust, calibrate and place the system into operation. If additional services are required to produce a fully operational system, they shall be provided at no cost to the Owner.
C. Training:
    1. The on-site services provided by the factory-trained representative shall include training.
    2. The representative shall provide two complete training sessions to the Owner operating personnel in equipment operation and maintenance. Sessions shall be a minimum of two hours in length, or as required to complete the entire training.
    3. One of the sessions shall be video recorded, placed on a USB, and transmitted to Owner for use in training future personnel.
D. After installation and after all equipment and components are in operable condition, a field mechanical and electrical performance test shall be performed in the presence of the Engineer.
    1. Each piece of equipment shall be tested for normal start, stop, and emergency stop cycles.
    2. Each piece of equipment shall be field tested, and the equipment calibrated to demonstrate to the Engineer that all equipment will satisfactorily perform the functions and criteria specified.
    3. Furnish test forms and procedures for field testing and provide all test apparatus required at no additional cost to the Owner.
    4. Follow testing procedures recommended by the equipment manufacturer and approved by the Engineer.
    5. The equipment supplier shall modify or replace any equipment necessary to obtain satisfactory performance.
E. All labor, materials, and test apparatus necessary for conducting the above tests shall be furnished by the Contractor at no additional cost to the Owner, unless stated otherwise.

END OF SECTION 46 21 16

SECTION 01480 – WATER TIGHTNESS

PART 1 - GENERAL

1.01 SUMMARY

A. This Section includes hydrostatic leakage testing for concrete water-containing structures.

1.02 REFERENCES

A. Section 03 30 00 – Concrete
B. Section 31 20 50 – Site Preparation and Earthwork

1.03 DEFINITIONS

A. Damp spots: Surfaces where visible moisture can be picked up by a dry hand.
B. Containment structure, lined: Liquid-containing structure with barrier coating or membrane applied to the inside surfaces to prevent leaking of contents to the outside.
C. Containment structure, unlined: Liquid containing structure where only the concrete structure itself is used to prevent leaking of contents to the outside.

1.04 ADMINISTRATIVE REQUIREMENTS

A. Coordination.
B. Pre-installation meetings.
C. Sequencing.
D. Scheduling.

1.05 SUBMITTALS

A. Shop drawings:
    1. Description and details of each evaporation/precipitation-measuring device anticipated for use during the test.
B. Tests and evaluation reports:
    1. Results of water leakage test for each structure and for each portion of a structure designated for testing.
C. Special procedure submittals:
    1. Testing plan for each structure, or portion thereof, required to be tested.
        a. Describe methods of obtaining water for testing and of releasing water for disposal, including provisions for dechlorination if required.
        b. Include plans showing locations where measurements will be made and locations of evaporation/precipitation-measuring device.
        c. Indicate plans for filling and draining structure(s).
        d. Include schedule showing duration of test for each structure or cell to be tested, date and time for start of each test, dates and times of observations and measurements during the test, dates and times for closeout of testing procedures, and date for submittal of final results.
    2. Proposed procedures and products for repair of leaks.

PART 2 - PRODUCTS (NOT USED)

PART 3 – EXECUTION

3.01 GENERAL

A. Test structures and portions of structures listed in the following paragraphs for water leakage.
    1. Unless otherwise specified, the Contractor shall:
        a. Obtain all required permits for discharging testing water.
        b. Provide dechlorination of such water if required by the permits.
        c. Prepare and fill the structures.
        d. Provide access and equipment required for testing and for recording test results.
        e. Take measurements and make observations required for testing.
    2. At all times during testing, the Engineer shall have access to observe measurements by others or to make independent measurements.
B. Test the following concrete structures for water leakage:
    1. Influent Pump Station Wet Well
    2. Headworks Screening Channels.
    3. Grit Basin.
    4. Grit Basin Effluent Channel.
    5. Splitter Box between Headworks and AGS basins
    6. AGS basins
    7. UV channels
    8. TWAS basins
    9. WAS basins
C. Required preparation for testing is designated in this Section. Waiver of, or failure to complete preparations shall not change the testing criteria or approval criteria for the areas tested.
D. Retest structures and portions of structures until the evaluation criteria are satisfied.

3.02 TEST WATER SOURCE AND DISPOSAL

A. Water used for the first filling of the tank will be furnished by Owner.
    1. Contractor shall obtain water for leakage testing from:
        a. Disinfected effluent between April 1 and October 31.
        b. Secondary effluent between November 1 and March 31.
B. In the event that retesting is required, Contractor shall bear the cost of refilling the tank for subsequent tests.
C. After leakage testing is complete, Contractor shall dispose of water by discharging to Primary Treatment.

3.03 PREPARATION

A. For each structure to be tested, prepare and submit a plan showing schedule and sequence of activities, method of filling, and methods of disposing of test water.
B. Sequencing requirements:

1. Complete construction of concrete structure and cure concrete to obtain minimum specified 28-day compressive strength as specified in Section 03 30 00 - Concrete.
    a. Do not begin tests until all portions of structure are complete and have reached their minimum specified 28-day compressive strength.
    b. Do not begin tests until at least 14 days have passed since completion of the last concrete placement.
2. Complete tests before:
    a. Covering any surface of the structure with materials that might mask the location of leaks or obscure damp concrete surfaces. Such coverings include, but are not limited to basin bottom grout, masonry veneer, stucco, plaster, and other coatings.
    b. Installation of equipment, unless otherwise approved by the Engineer.
    c. Backfilling structures to elevations above the limits indicated in the following paragraphs.
3. Liners and coatings:
    a. Field-coated or installed liners and coatings shall be applied in strict conformance to manufacturer's standards.
    b. Install liners that are mechanically locked to the concrete surface during placement of plastic concrete and before leakage testing.
        (1) Examine liners for pinholes, tears, and partially fused splices, complete all required liner integrity testing, and make required repairs before commencing leakage testing.
    c. Unless otherwise specified, do not install surface-applied protective or decorative coatings and linings until leakage tests have been completed.

C. Weather requirements:
1. Tests on structures with tops open to the atmosphere shall not be scheduled for periods when the 10-day weather forecast indicates a substantial change in weather patterns.
2. Measurements of water surface levels in the structure shall not be scheduled for periods when the weather forecast indicates a difference of more than 35 degrees Fahrenheit between the ambient temperature readings at the times of initial and final measurements.
3. Tests shall not be scheduled for periods when the 10-day weather forecast indicates that the water surface may freeze before the test is complete.

D. Groundwater requirements:
1. Bring groundwater to a level not higher than 3 feet below the bottom of the structure and maintain at that level for the duration of the test.

E. Clean interior of structure:
1. Remove dirt, contaminants, and construction debris.
2. Flush floors and sumps to provide clean surfaces.
3. Remove standing water that would interfere with examination of surfaces, cracks, or joints.

F. Observe the structure, or portions of the structure being tested, for potential leak locations.
1. Give particular attention to cracks, open joints, voids, and honeycombed and repaired surfaces.
2. Visually observe openings, fitting, and pipe penetrations in the structure at both faces, if possible.
3. Repair potential leak locations in accordance with these Specifications and as approved by the Engineer.
4. Backfill excavations to the top of the structure foundation. Do not place backfill against water-bearing walls or over footings unless approved in advance by the Engineer.

a. If requesting backfilling of walls before testing, include a description of methods that will be used to detect leakage in the backfilled areas.
b. Engineer's approval of backfilling before testing shall not relieve Contractor of the responsibility to conduct leakage tests, to satisfy the leakage acceptance criteria for the structure, or to repair leaking portions of the structure, including those portions below or behind the backfill.

5. See Drawings and Section 31 20 50 - Site Preparation and Earthwork for requirements to provide wall stability before backfilling.

G. Inlets to/outlets from the structure:
1. Inlets to and outlets from the structure shall be watertight.
a. Include valves, sluice, and/or slide gate valves and temporary bulkheads as required.
b. Inlets and outlets not required to be operable may be temporarily sealed before testing the compartments to which they open.
c. Secure inlets used to fill the structure for testing to ensure that no water is entering or leaving the structure once it has been filled to the test level.
2. Adjustments to measured leakage at inlets and outlets based on manufacturers or Contractor's estimates will not be allowed.
a. Adjustments to measured leakage may be permitted by the Engineer, and, at their discretion, only when the Contractor makes specific measurements of leakage at each individual inlet and outlet using methods approved by the Engineer.

3.04 HYDROSTATIC LEAKAGE TEST FOR OPEN OR COVERED CONTAINMENT STRUCTURES

A. Isolate sections of water-holding structures that can be isolated in actual operation. Fill and test sections for leakage separately.
1. Fill structures and sections of structures scheduled for testing to the normal operating water level indicated on the Hydraulic Profile indicated on the Drawings.

B. Initial rate for filling of structures shall not exceed 8 feet in 24 hours.

C. HST-100 testing includes 2 parts, "Qualitative Testing," and "Quantitative Testing," as described in the following paragraphs:
1. HST-100, Part 1 - Qualitative Testing:
a. During the first 24 hours after structures are filled, examine exposed concrete surfaces for damp spots or flowing water.
(1) Make observations in early morning, at midday, and in late afternoon.
(2) Continue observations through the duration of the Quantitative Testing period.
(3) Pay particular attention to conditions at joints, honeycombed areas, cracks, and repaired portions of the structure.
b. Evaluation criteria:
(1) The structure shall be considered to have failed these Qualitative Testing requirements if any of the following conditions are observed.
(a) Water droplets or moist areas on an outside surface that could only have originated inside the structure.
(b) Water is flowing or seeping from joints, cracks, or surfaces.

(i) Exception: Dampness or wetness on top of a footing, in the absence of flowing water, shall not be considered as failure to meet this criterion.

(c) Moisture can be transferred to a dry hand from the outside surfaces of the filled area.

c. Repairs and retesting:

(1) Where damp spots or flowing water as described in the preceding paragraphs are observed, mark locations, provide repairs, and retest the structure as specified in subsequent paragraphs.

2. HST-100 - Part 2: Quantitative Testing:

a. If approved by the Engineer, Quantitative Testing may begin before repairs are made to areas failing Part 1 of this test; however:

(1) Adjustments to volume loss calculations of Quantitative Testing based on observed leakage will not be permitted.

(2) All defects identified for repair during Qualitative Testing shall be repaired to the satisfaction of the Engineer before approval of the structure.

b. Report the results of Quantitative Testing on "Leakage Test Report" included as Figure A at the end of this Section, or similar form prepared by the Contractor and containing at least the information included in Figure A.

c. Unlined concrete structures:

(1) Fill to the designated water surface elevation. Maintain that level for at least 72 hours before recording initial water levels for leakage test.

(2) Duration of test:

(a) Theoretical time required to lower the water surface in the structure by 3/8 inch when leakage is occurring at the maximum allowable rate specified in subsequent paragraphs of this Section.

(b) The duration ("D") of the test in days is determined by the following equation:

$$D = \frac{.375\ inches}{0.005\ in/in/day\ \times H\ ft\ \times 12\ in/ft}$$

$$Where\ H = Maximum\ Liquid\ Depth$$

(i) Round results upward to the next full 24-hour period (day).

(ii) Minimum duration of test: 24 hours (1 day).

(iii) Maximum duration of test: 120 hours (5 days).

d. Lined concrete structures and secondary containment areas:

(1) Fill to the designated water surface elevation. Recording of water levels for leakage tests may begin as soon as the designated water surface level is reached and the water surface is calm. 2) Duration of test: 72 hours (3 days).

e. Measurements: Water level:

(1) Record water levels at 24-hour intervals for the full duration of the test period.

(2) Measure water levels at not less than 2 locations on opposite ends of the structure, and preferably at 4 locations spaced equally around the structure. Mark locations on the structure and take measurements at the same locations throughout the duration of the test.

(3) Measure, to an accuracy of 1/16 inch, the vertical distance to the water surface from a fixed point on the structure above.

f. Measurements: Temperatures:
   (1) As part of the first and last sets of level measurements, record water temperature at a depth of 18 inches below the water surface. Measure temperature at the same locations where level measurements are taken.
   (2) Record ambient temperature at the time of each water level measurement.

g. Measurements: Evaporation and precipitation:
   (1) Measure evaporation and precipitation by floating pans inside the structures during testing.
      (a) For uncovered structures, measure both evaporation and precipitation.
      (b) For covered structures that are well ventilated, measure evaporation.
   (2) Measure using specially constructed clear containers:
      (a) Provide clear plastic, calibrated, open-top containers not less than 18 inches in diameter and 18-inches deep.
      (b) Partially fill containers with water and float inside the structure. Make provisions to hold containers in place at each measurement location, but away from structure walls and items passing overhead, such as beams or pipes.
      (c) Measure initial depth of water in each device. Measure changes in water level in each device at the same time measurements of the water level inside the structure are taken.

h. Restart of test:
   (1) The Engineer may order a restart of the test when, in the Engineer's opinion, measurements have become unreliable due to unusual precipitation or other factors.
   (2) If measurements or observed leakage during the testing period indicate that the allowable leakage requirements will be exceeded, the test may be terminated before completion of the full test period. Take appropriate actions to correct problems before restarting the test.

i. Calculations of leakage test results:
   (1) For each section of the structure tested, use water surface level records to calculate average loss of volume per 24-hour interval.
      (a) For each 24-hour interval during the test, calculate the average of all measured drops in water level around the structure.
      (b) Use the average drop thus determined to calculate an average loss of volume for each 24-hour interval.
   (2) Adjustments to leakage calculations:
      (a) For uncovered basins, calculations shall be corrected for precipitation added to the structure.
      (b) Calculations may be corrected for evaporation and water temperature.

j. Evaluation criteria:
   (1) Unless otherwise specified, the average loss of volume during any 24-hour interval shall not exceed the limits shown in Table A.

Table A - Loss of Volume Criteria for Leakage Tests	
Structure Type	**Maximum Loss of Water Volume**
• Structure fully lined prior to leakage test. • Secondary containment areas.	No measurable loss over 72-hour test period.
• Structure with monolithically placed membrane floor slab.	0.0125 percent of volume per 24-hour period.
• Concrete paved canals, drying beds, lagoons, and similar structures.	0.100 percent of volume per 24-hour period.
• Other containment structures.	0.050 percent of volume per 24-hour period.

k. Repairs and retesting:
   (1) Structures and portions of structures that have satisfied the qualitative requirements of HST-100, but have failed to satisfy the quantitative requirements of HST-100 may be immediately retested for volume loss.
      (a) If the structure fails the second test for volume loss, the structure shall be drained, and the Contractor shall observe the interior for probable areas of leakage.
      (b) The structure shall not be retested until repairs to the probable areas of leakage are complete.

3.05 REPAIRS FOR RETESTING

A. Locations showing damp spots or flowing water:
   1. Mark locations of visible leaks and damp spots.
   2. Drain structures for repair.
   3. Repair defects causing damp spots and flowing water using methods specified in Section 03 30 00 - ~~Cast-in-Place~~ Concrete and approved by the Engineer.
      a. Repair both interior and exterior surfaces and make structures watertight.
      b. Submit proposed repair products and procedures for Engineer's review.
      c. Refill structures for retesting.
   4. Repeat filling, observations, and repairs until no leaks or damp spots appear.
B. Structures for which loss of water volume loss exceeds the limits specified after adjustments for evaporation, and precipitation:
   1. Determine cause of volume loss.
   2. Drain structures of water.
   3. Repair defects causing loss of water volume using methods specified in Section 03 30 00 - ~~Cast-in-Place~~ Concrete and approved by the Engineer.
      a. Submit proposed repair products and procedures for Engineer's review.
   4. Refill water-holding structures.
   5. Repeat testing and repairs until volume loss does not exceed specified limits.

ADDENDUM NUMBER 005

Project/Contract Number: 81000927/1698

Project Title: Todd Creek WWTP Expansion & Major Upgrade

ISSUE DATE: **February 5, 2026**

Bidders are hereby notified that the Bidding and Contract Documents for the above project, for which Bids are to be received on **February 24, 2026**, are amended as follows:

Information to Bidders The following is provided to Bidders for information only:

Specification Changes:

Section 40 60 00 – Process Control and Instrumentation General Requirements

a. Add subparagraph 1.06.C.f

f. System Integrator shall possess an active and valid Rockwell Automation PlantPAx System Integrator Badge.

(1) Badge must be traceable and verifiable through the Rockwell Automation PartnerNetwork™ portal.

(2) Badge must correspond to the PlantPAx System Release used for the project (e.g., PlantPAx 5.0+).

(3) System Integrator shall have documented experience implementing Rockwell Automation PlantPAx process control systems.

(4) System Integrator shall have completed PlantPAx projects of similar size and complexity. Provide project resumes, including the following:

(a) Project name and owner

(b) Description of scope

(c) Quantity and type of controllers (ControlLogix, CompactLogix)

(d) HMI platforms

(e) I/O counts

(f) Process areas served (water, wastewater, etc.)

(5) Reference Standards:

(a) Rockwell Automation PlantPAx® System Release (latest version at time of bid).

(b) Rockwell Automation Library of Process Objects (latest version at time of bid).

(c) Rockwell Automation Product Compatibility and Download Center (PCDC).

2. Section 33 31 11 – Gravity Piping

a. Delete Subparagraph 2.03-A.1, Gravity Piping Schedule line 1, Class 150/SDR 26.

b. Replace with Subparagraph 2.03-A.1, Gravity Piping Schedule line 1, Class 150/DR-32.5.

Drawing Changes:

1. C106 – Added settlement plate marker location
2. C109 – Added settlement plate marker location
3. C110 – Added settlement plate marker location
4. C111 – Added settlement plate marker location
5. C137A – Added settlement plate marker location
6. C128 – Modified Note 1 to include double/triple wall polypropylene
7. C129 – Modified Note 1 to include double/triple wall polypropylene
8. C130 – Modified Note 1 to include double/triple wall polypropylene
9. C131 – Modified Note 1 to include double/triple wall polypropylene
10. C132 – Modified Note 1 to include double/triple wall polypropylene
11. C133 – Modified Note 1 to include double/triple wall polypropylene
12. E010 - Typical Electrical Details Sheet 4: Added clarification cable tray detail notes.
13. E131 - Electrical Duct Bank Sections Sheet 1: Site duct bank section schedule Site-EDB-001 added three 4-inch spare conduits, added three feeders.
14. E132 - Electrical Duct Bank Sections Sheet 2: Site duct bank section schedules UV-EDB-001 and UV-EDB-002, 15 conduits (some spare feeders) were added for Addendum 3 but not clouded. These are now clouded.
15. E221 - Influent Screening Building Electrical Power Plan: Added cloud to note that refers to conduit support detail.
16. E401 - AGS Electrical One-Line Diagram Service #3 Sheet 1 of 2: Added spare breakers for future equipment.
17. E412 - AGS Basin Electrical Grounding Plan Area: Added ground ring connections to stairs.
18. E413 - AGS Basin Electrical Grounding Plan Area B: Added ground ring connections to stairs.
19. E422 - AGS Basin Electrical Power Plan Area A: Added 120V circuit connection to the 8 AIT's added to AGS.
20. E423 - AGS Basin Electrical Power Plan Area B: Added 120V circuit connection to the 8 AIT's added to AGS.

21. E611 - UV Disinfection Electrical Grounding Plan: Added clarification for equipment rack location and grounding at plant sewer pump and VFD in electrical room.

22. E621 - UV Disinfection Building Electrical Power Plan: Clouded disconnect and conduit for future UV. These were part of Addendum 3 but not clouded.

23. E621 - UV Disinfection Building Electrical Power Plan: Added note and location for UV-VFD-110 that feeds AHU.

24. E711 - Solids Processing Building Electrical Grounding Plan 1 of 2: Added Unistrut rack locations to ground plan and ground connection to them.

25. E712 - Solids Processing Building Electrical Grounding Plan 2 of 2: Added ground connection to odor control Unistrut rack.

26. E721 - Solids Processing Building Electrical Power Plan 1 of 2: Added cloud to note 6 and related switch. This was in Addendum 3 but not clouded.

27. E721 - Solids Processing Building Electrical Power Plan 1 of 2: Added 120V to flow switch and toggle switch. Moved disconnects away from process pipe.

28. E811 - Admin Building Electrical Grounding Plan: Added two ground connections.

29. E821 - Admin Building Electrical Power Plan: Added clouds for notes 25 and 26 toggle switches. These were in Addendum 3 but not clouded.

30. E821 - Admin Building Electrical Power Plan: Added disconnect for air handling unit.

31. M003 - Mechanical Schedules: Exhaust fan model numbers revised.

32. P701 - Solids Processing Building Plumbing Plan: Modified domestic cold water piping and process water piping for coordination and obstructions.

33. P721 - Solids Processing Building Isometric Riser Diagram: Modified domestic cold water piping and process water piping for coordination and obstructions.

Q1.	Section 33 12 16 2.01 Butterfly Valves - Should the 36" MJ buried butterfly valves in the TABLE be per the KCMO 02641 - WATER VALVES standard for buried butterfly valves for the city?
A1.	**Follow the requirements in project specification 33 12 16 for any discrepancies between project document 33 12 16 and KCMO spec 02641.**
Q2.	Section 33 12 16 2.01 Butterfly Valves - The 4" butterfly valves shown in the TABLE call for a 190 psi leak test in the UV Building. Should these valves be Class 250B to meet the requirement? Do you want it to be an industrial lug butterfly valve instead for the leak requirement? AWWA C504 150B won't go to 190 psi.
A2.	**Yes, valves with design (max) pressure of 190 psi shall be class 250. Section 2.01.C.4.c as well as 2.01.E.1 allow for class 250 valves.**
Q3.	Section 40 70 00 2.17 Differential and Gauge Pressure Transmitters. -Onyx Valve has done these before for the city (as equal), so please confirm they are okay here if we

	follow design criteria and you have time to add them. Distributors/Contractors have asked us to inquire and confirm.
A3.	**Specification section 40 70 00 2.17.M.7 states Red Valve Co. Series 40 or Engineer-approved equal. Onyx Valve would be considered an equal as long as it meets the stated specification requirements. Specifications will not be revised to add specific additional vendors.**
Q4.	Drawing L110 – Overall Tree Preservation And Mitigation Plan, (Sheet 55 of 643), depicts existing trees to be removed along 'Main Road-1.' Per Addendum 03, "All tree removal shall be limited to occur between November 1 and March 31, during bat inactive season." It is presumed that the Owner will not have the Contract approved by council, issued to Contractor, executed by both parties, and issued a Notice To Proceed to the Contractor prior to the March 31 date. Would the Owner allow for and issue the awarded Contractor a limited/preliminary Notice To Proceed exclusively for felling of the designated trees to be removed, prior to the March 31st date allowing for construction to commence the 2nd quarter of 2026?
A4.	**No limited notice to proceed will not be given. City is obtaining temporary access easement for Contractor to access the site from the north/west that doesn't involve tree removal during early construction activity. Alternatively, if tree removal during April-October is necessary, Contractor can obtain a 3rd party bat habitat survey at the time of removal confirming no nesting habitats in the planned tree removal area before proceeding.**
Q5.	Drawing C135A, General Note #4 states, "Contractor shall install 4 settlement plates and 4 surface settlement markers to monitor amount and time rate of consolidation at locations indicated on the applicable drawing. Contractor shall install settlement plates while Owner's geotechnical representative is present." There does not appear to be any drawings that depict or provide the prescribed location of these settlement plates or settlement markers. Please clarify to the prospective Bidders the prescribed location where the settlement plates or settlement markers are to be installed or if they will be required.
A5.	**Drawings C106, C109, C110, C111, and C137A are revised to show general location of settlement plates & markers.**
Q6.	Section 46 42 57-2.04.B - Our valve module is a standardized product that has been custom designed internally to provide the form, fit and function needed. The enclosure, valves and manifold are designed to accommodate the pipe connections, and the internal components were selected based on durability and their specified temperature ranges to be able to handle the cold winters and the hot summer sun. Therefore, we exclude those from standard control panel specifications.
A6.	**Acceptable in reference to the coarse bubble diffusers.**
Q7.	Section 46 42 57-2.04.E - Our valve module comes standard with a hinged door equipped with quarter turn latches. Locking mechanisms are not included.
A7.	**Acceptable in reference to the coarse bubble diffusers.**
Q8.	Section 46 42 57-2.04.G - Our valve module does not contain any power components, therefore, the SCCR depends on the fuses used in the control power transformer upstream of the valve module.
A8.	**Noted for the coarse bubble diffusers.**

Q9.	Section 46 42 57-2.04.J - Regulators are no longer part of Enviromix's standard design due to many failures in the field. Each valve module will be equipped with a throttling valve for firing pressure control instead of a pressure regulator. There is a pressure gauge on the manifold inside the valve module to guide in adjusting the throttling valve.
A9.	**Noted**
Q10.	Section 46 42 57-2.04.K - Please replace Watts F603D with Parker 14F15BB
A10.	**Parker 14F15BB is an acceptable alternative**
Q11.	Section 46 42 57-2.04.L - The Zombie Valve Module (ZVM) is only provided with a pressure switch that will signal a hardwired alarm to SCADA if the pressure in the manifold drops below 30PSI. Valve fail to open alarms are not possible without a main control panel and we are unable to provide valve fail to close alarms since the valves do not have "closed" limit switches. The alarm beacon on top of the ZVM will illuminate when there is a low pressure alarm from the pressure switch.
A11.	**Acceptable**
Q12.	Section 46 42 57-2.06.C - particulate and oil removal filters are integrated into a single filter now.
A12.	**Acceptable**
Q13.	Section 46 42 57-2.06.D.2 - these compressors are factory made machines with very few available options. They are not customizable to project-specific specifications such as Section 46 05 13. Please remove reference to this specification section
A13.	**Exclusion accepted**
Q14.	Section 46 42 57-2.06.E - these compressors are factory made machines with very few available options. They are not customizable to project-specific specifications such as Section 40 67 00. Please remove reference to this specification section.
A14.	**Exclusion accepted**
Q15.	Section 46 42 57-2.06.E.2.c - these compressors are factory made machines with very few available options. They are not customizable to project-specific requirements. The SCCR rating of the compressor is 5 kA.
A15.	**If equipment SCCR rating is below the design stated in the specification section (65kA), Contractor to use the provided SKM model to run fault current studies. If equipment SCCR rating is below the study results fault current, fault-current-mitigating methods (isolating transformer or other means) shall be provided by the Supplier.**
Q16.	Section 46 42 57-2.06.E.2.e - delete differential pressure across fluid filter, differential separator, percent capacity, air filter as these features are not available with our offering.
A16.	**Acceptable**
Q17.	Section 46 42 57-2.06.E.2.g.2 - replace dirty filter warning with general warning
A17.	**Acceptable**

Q18.	Section 46 42 57-2.06.F.1.a.2 - change minimum temperature to 32 degF
A18.	**Minimum room temperature is actually 55°F. Specification updated.**
Q19.	Section 46 42 57-2.06.F.1.b.3 - change capacity at operating target pressure to 63 cfm. A larger compressor is required to ensure uniform mixing at the full design concentration range.
A19.	**Acceptable**
Q20.	Section 46 42 57-2.06.F.1.b.4 - change maximum motor size to 15 HP. A larger compressor is required to ensure uniform mixing at the full design concentration range. The compressor frame size does not change so there is adequate space. concentration range.
A20.	**Acceptable. Change could affect conduit, conductor, and breaker size that contractor is required to install. Contractor to take this into account during bid.**
Q21.	D701 - route compressed air piping from the receiver to each valve module inside the building as long as possible to minimize exposure to freezing temperatures which.
A21.	**noted**
Q22.	In order to confirm Rockwell PlantPax standards are properly applied and to ensure that PlantPax certification will be available upon project completion, vendor recommends that the below items be added to Specification Section 40 60 00, 1.06, C. System Integrator Qualifications: • System Integrator shall possess an active and valid Rockwell Automation PlantPAx System Integrator Badge at the time of bid. • Badge must be traceable and verifiable through the Rockwell Automation PartnerNetwork™ portal. • Badge must correspond to the PlantPAx System Release used for the project (e.g., PlantPAx 5.0+). • System Integrator shall have a minimum of five (5) years of documented experience implementing Rockwell Automation PlantPAx process control systems. • System Integrator shall have completed at least three (3) PlantPAx projects of similar size and complexity within the last five years. Provide project resumes including: 1. Project name and owner 2. Description of scope 3. Quantity and type of controllers (ControlLogix, CompactLogix) 4. HMI platforms 5. I/O counts 6. Process areas served (water, wastewater, etc.) Reference Standards • Rockwell Automation PlantPAx® System Release (latest version at time of bid). • Rockwell Automation Library of Process Objects (latest version at time of bid). • Rockwell Automation Product Compatibility and Download Center (PCDC).
A22.	**Spec 40 60 00 is revised and included in this addendum. Note that experience clauses are not allowed in SRF-funded projects and have been struck from the above request. Refer to the updated specification.**
Q23.	Can we please get clarification on the pipe material and class for the 36" EFFLUENT-1 and EFFLUENT-2 lines shown in the PVC Gravity Pipe Schedule in Section 33 31 11? a. In the schedule, these lines are identified as “DIP/PVC” with a class noted as “150/SDR 26.” Our understanding is that the DIP designation is intended for

	the portions of the lines that are underslab (requiring ductile iron), while the remaining portions can be PVC. b. However, the note above the table calls for C900 piping, while the class is listed as SDR 26. AWWA C900 pipe is not manufactured in SDR 26; it is typically available in DR 14, 18, 21, 25, 32.5, and 41. i. Can you please confirm: 1. Pipe material: Are these lines intended to be a combination of DIP under slab and PVC elsewhere, or a single material throughout? 2. Pipe standard: Is C900 actually required for the PVC portions, or is another standard (e.g., ASTM D3034, ASTM F679, etc.) intended? 3. Pressure/class designation: What is the correct DR/pressure class for the PVC pipe on these lines? c. Once clarified, we can ensure the correct material and class are used in procurement and installation.
A23.	**1. Intent is that Contractor has the option to install lines as either DIP or PVC. Drawings are based on the PVC option.** **2. Pipe shall be AWWA C900 with DR rating of 32.5 if constructed of PVC. Specification revised.** **3. See response 2.**
Q24.	Drawing S217-Influent Pump Station Backfill South Elevation, general excavation note #5 states, "Extents of excavation and backfill shall encompass all structures in this area as shown on S200 series drawings." Note #7 states, "Settlement monitoring is required for fill soils under the valve vault and electrical building. Construction of structure foundations may not commence until duration of settlement monitoring has elapsed." Drawing C135A Civil Details 3, Settlement Monitoring note #3 states, "After fill placement is complete, elevation readings shall be collected on settlement plates and markers for at least an additional 4 weeks after fill placement and until settlement rate is less than 1/10 inch per week to measure time rate of settlement." Per the prescribed excavation layout depicted on drawing S217, the existing soils will be removed including bedrock and shale layers, for the construction of the Wet Well and Coarse Screening Structures. It appears the structural backfill for this excavation could be placed in controlled, compacted, and tested lifts to the bottom of foundation for both the Valve Vault and Electrical Building in-lieu of placing backfill to design subgrade, installing settlement monitoring plates, surveying for 4-weeks, and subsequently excavating the compacted fill/embankment to bottom of foundation elevation. Please clarify to the prospective Bidders if it will be permissible for the Contractor to backfill the Wet Well and Coarse Screening structures excavation in controlled, compacted, and tested lifts to the bottom of foundation for both the Valve Vault and Electrical Building in-lieu of placing backfill to design subgrade, installing settlement monitoring plates, surveying for 4-weeks, and subsequently excavating the compacted fill/embankment to bottom of foundation elevation. This process would be the most economical for the project costs and overall construction duration.
A24.	**Prior to excavation for the IPS wet well and Coarse Screen Structure, filling to finished grade is NOT required. It is permissible to backfill structures as described above to the foundation subgrade for each structure. IPS Electrical Building does NOT need to be on ground improvements. The Valve Vault does need to be on ground improvements.**
Q25.	Specification section 00210-Instructions To Bidders, part 6 states, "Questions received less than ten (10) days prior to the date for opening of Bids may not be answered." Please confirm to the prospective Bidders that the new deadline for questions about the meaning or intent of the Bidding Documents will be 02/14, since the date for opening of Bids has been revised to 02/24.

A25.	**Deadline for questions is extended to Friday 2/13. Questions received after this date may not be answered.**
Q26.	Concerning The Thickened Sludge, Variable Speed, Pumps, SECTION 43 23 57. Normally the electrical contractor provides their control package SECTION 40 60 00. Please confirm if that is the intent on this project.
A26.	**Correct. Motor controllers are provided separately. Motor controllers are not expected to be provided by pump supplier. VFDs and RVSSs are provided by electrical contractor, not by pump supplier. The intent of the manufacturer's rep for start-up services as it is written in section 3.01-A.2 is for the rep to assist the electrical contractor regarding pump controls and be knowledgeable about VFD and RVSS pump control.**
Q27.	1. Will the trace amounts of asbestos joint compound and drywall be required to be removed by an abatement contractor prior to demolition of the admin building? Can you confirm who will be responsible for providing access to the entire structure and will the abatement contractor be responsible for removing contents to access areas? Please confirm if final air will be ran per OSHA, MDNR, EPA regulations for this work? 2. Can you confirm that there will need to be no lead abatement done on the project and that the demolition contractor can handle this assuming that there will be OSHA monitoring confirming that workers are not exposed to the PEL for an 8 hour shift while working? 3. Are there any quantities of universal wastes / HHW that can be released for bidding purposes on removal and disposal of these materials prior to demolition of the structures.
A27.	1. **Abatement shall be conducted by a licensed and competent contractor. Per the Asbestos, Lead-Containing Paint, & Hazardous Materials Survey Report Section 5.1 this is considered unclassified, which still requires adherence to specific OSHA engineering controls including wet methods, HEPA vacuuming, and proper disposal. The City will provide access to the structure. Contractor(s) are responsible for means of access (manlifts, etc) and removing contents that have not been removed prior by the City. The OHSA standards will apply for final air clearances.** 2. **The Asbestos, Lead-Containing Paint, & Hazardous Materials Survey Report is provided for reference only. No confirmation of accuracy or required lead abatement is given. OSHA monitoring of PEL shall be by Contractor as necessary.** 3. **No. Contractor can request a pre-bid walkthrough if needed.**
Q28.	Please provide the prospective Bidders with all as-built information available for the existing Todd Creek WWTP facility that is to be demolished as part of this contract.
A28.	**Please send a request to Shawn Cross at shawn.cross@kcmo.org and a drop box link will be sent where the drawings can be downloaded.**
Q29.	1. Please confirm the documents listed below are only what is due at bid time. If there are additional items needed, please indicate. 2. Please confirm these documents are due within 48 hours of bid opening, and not at time of bid.
A29.	**1. 00410 Construction Bid Form**

	00413- Allowance form **00430 Bid Bond** **Evidence of Competency to Perform- this is based on the 00210- Instruction to Bidder.** **00410.01 Experience reference form** **00410.02 Experience and Reference Summary- Current Project** **00410.03 List of Equipment and Staffing Available for projects.** **00910- Addenda** **00410.04- Equipment Questionnaire.** **00410.05- Instrumentation and Control system Supplier Questionnaire** **00990- CSSRF drop-in specs** **00990.01- Attachment 1 Missouri DBE Requirements.** **2. 00450- Contractor Utilization/Request for Waiver** **00450.01- Letter of Intent to Subcontractor** **00485.05 Affidavit of Training Program** **3. All other documents will be due when the city is ready for intent to contract.**

Bidder: _____

BID FORM/CONTRACT

Project Number: 81000927/1698

Project Title: Todd Creek WWTP Expansion & Major Upgrade

1. Bidder, having examined the Bidding Documents, related documents and the Site of the Work, and being familiar with all the conditions affecting the construction of the proposed Work, including Laws and Regulations and the availability of materials and supplies, agrees, if this Bid is selected by CITY, this Bid Form/Contract will become the Contract between Bidder and CITY for Bidder to furnish all labor and materials, equipment and services necessary for the proper completion of the Work in accordance with the Contract Documents, including general construction work at the price(s) stated below, which stated sums include fees and all other charges applicable to materials, appliances, labor and all things subject to and upon which other charges may be levied.
2. Bidder agrees the Contract Documents will comprise the entire agreement between CITY and Bidder. The Contract Documents are identified in the General Conditions and are incorporated into and made part hereof this Bid Form/Contract by reference.
3. Bidder agrees that if this Bid Form/Contract is executed by CITY, Bidder's offer is accepted and this Bid Form/Contract that incorporates all other Contract Documents shall constitute the Contract between the parties. Bidder authorizes the CITY to fill in the Contract Price on this Bid Form/Contract in accordance with Bidder's Bid. Bidder agrees that this Bid Form/Contract may be executed in one or more counterparts, each of which will be deemed an original copy of this Bid Form/Contract and all of which, when taken together, will be deemed to constitute one and the same Bid Form/Contract. This Bid Form/Contract shall be effective upon the execution of counterparts by both parties, notwithstanding that both parties may not sign the same counterpart. The parties' signatures transmitted by facsimile or by other electronic means shall be proof of the execution of this Bid Form/Contract and shall be acceptable in a court of law. A copy of this Bid Form/Contract shall constitute an original and shall be acceptable in a court of law.
4. The Bid Price(s) shall be shown in numeric figures only.

TOTAL BASE BID IN NUMERIC FIGURES	$_____
ALLOWANCE NO. 1 – Unknown Site Conditions	$250,000.00
ALLOWANCE NO. 2 – Admin Building Furnishings	$500,000.00
ALLOWANCE NO. 3 – Evergy Power Buildout	$4,250,000.00
Hydroxy Radical System Equipment	$_____
TOTAL BID IN NUMERIC FIGURES	$_____

5. The undersigned Bidder has given CITY'S Project Manager written notice of all conflicts, errors or discrepancies that it has discovered in the Contract Documents and the written resolution thereof by the Project Manager or by the DESIGN PROFESSIONAL is acceptable to Bidder.
6. The undersigned Bidder agrees that this Bid shall remain subject to selection by CITY, and may not be withdrawn for ninety (90) days after the day Bids are opened.
7. The undersigned Bidder certifies that this Bid contains no modifications, deviations, riders or qualifications.

8. Form(s) 00411 Itemized Prices, contain prices included in the Base Bid, and are incorporated into this Bid. Form(s) must be completed and returned with this Bid.
   a. The itemized prices provided for in this Bid Form shall apply only in the event of a Change Order providing for such increase or decrease in the quantities.
   b. The Contract Price will be subject to adjustment according to final measured, used, or delivered quantities, and the adjustment unit prices in the Bid will apply to such final quantities
9. The undersigned Bidder acknowledges receipt of the following addenda listed by number and date appearing on each addendum:

Addendum Number	Dated	Addendum Number	Dated
(_____)	(_____)	(_____)	(_____)
(_____)	(_____)	(_____)	(_____)
(_____)	(_____)	(_____)	(_____)

10. By submitting its bid, Bidder is agreeing to meet or exceed the minimum employment goals of 10% minority and 6.9% women during the term of its contract with the City, or request a waiver of the goals. If a waiver is requested, Bidder must establish good faith efforts towards meeting the goals as set forth in the CREO-KC Instructions for Construction Contracts and the City's Workforce Ordinance. Should Bidder fail to meet or exceed the minimum employment goals or otherwise establish that Bidder is entitled to a waiver under circumstances in which Bidder has previously failed to meet or exceed the goals on one or more occasions with the twenty-four month period immediately preceding the completion of the Work under this Bid Form/Contract, Bidder may be suspended from participating, either as a contractor or subcontractor, on any future contract with the City for a period ranging from thirty days to six months as further specified in the Contract Documents.
11. By submitting its bid, Bidder warrants that if its bid should exceed $300,000.00 and Bidder employs fifty (50) or more people, Bidder has an affirmative action program in place and will maintain the affirmative action program in place for the duration of its contract with the City. Bidder further warrants that it will comply with the affirmative action requirements contained in the General Conditions as incorporated by reference into this Bid Form/Contract.
12. Section 13 through Section 14 constitutes the Affidavit of Intended Utilization required to be submitted by Bidders.
13. By submitting its bid, Bidder is agreeing to the following: (1) Bidder has made by bid opening a good faith effort to meet the DBE goals established for the project; or Bidder will continue to make during the 48 hours after bid opening a good faith effort to meet the DBE goals established for the project; and (2) Bidder will timely submit its **Missouri State Revolving Fund Disadvantaged Business Enterprise Utilization Worksheet (found in Section 00990 Clean Water State Revolving Fund Requirements** for each DBE listed; and (3) Bidder will submit documentation of its good faith efforts to meet the DBE goals when requested by the City or State. Failure to meet these requirements in good faith will result in Bidder forfeiting its bid bond.

14. To the best of Bidder's knowledge, the following are names of certified DBEs with whom Bidder, or Bidder's subcontractors, presently intend to contract with if awarded the Contract on the above project:

A. Name of DBE Firm _____
Address _____
Telephone No. _____
I.R.S. No. _____
Area/Scope of work _____
Subcontract amount _____

B. Name of DBE Firm _____
Address _____
Telephone No. _____
I.R.S. No. _____
Area/Scope of work _____
Subcontract amount _____

C. Name of DBE Firm _____
Address _____
Telephone No. _____
I.R.S. No. _____
Area/Scope of work _____
Subcontract amount _____

D. Name of DBE Firm _____
Address _____
Telephone No. _____
I.R.S. No. _____
Area/Scope of work _____
Subcontract amount _____

E. Name of DBE Firm _____
Address _____
Telephone No. _____
I.R.S. No. _____
Area/Scope of work _____
Subcontract amount _____

F. Name of DBE Firm _____
Address _____
Telephone No. _____
I.R.S. No. _____
Area/Scope of work _____
Subcontract amount _____

ACCEPTANCE OF BID

CITY, by executing this Bid Form/Contract, hereby accepts Bidder's Bid and this Bid Form/Contract that incorporates all other Contract Documents shall constitute the Contract between the Parties.

CITY shall pay CONTRACTOR for completion of the Work in accordance with the Contract Documents a maximum amount of _____ Dollars, ($ _____). The Contract Price includes:

00411 Itemized Prices, included in the Bid, a copy of which is attached

00413 Allowances, included in the Bid, a copy of which is attached

By executing this Bid Form/Contract, CITY accepts Bidder's offer for the Contract Price stated above and this Bid Form/Contract that incorporates all other Contract Documents shall constitute the Contract between the parties

_____

City of Kansas City, Missouri (OWNER or City)

Approved as to form:

_____

Assistant City Attorney

I hereby certify that there is a balance, otherwise unencumbered, to the credit of the appropriation to which the foregoing expenditure is to be charged, and a cash balance, otherwise unencumbered, in the treasury, to the credit of the fund from which payment is to be made, each sufficient to meet the obligation hereby incurred.

SECTION 33 31 11 – GRAVITY PIPING

PART 1 - GENERAL

1.01 SUMMARY:

A. This Section includes all gravity pipe, fittings, and specials.

B. Related Work Specified Elsewhere:

1. Section 31 20 50 - Site Preparation and Earthwork.
2. Section 33 39 00 - Utility Structures.

1.02 REFERENCES:

A. Applicable Standards:

1. ASTM International (ASTM):
   a. C76 – Standard Specification for Reinforced Concrete Culvert, Storm Drain.
   b. D1248 – Polyethylene Plastics Molding and Extrusion Materials.
   c. D1784 – Rigid Poly(Vinyl Chloride) and Chlorinated Poly(Vinyl Chloride) Compounds.
   d. D2241 – Standard Specification for Poly(Vinyl Chloride) (PVC) Pressure-Rated Pipe (SDR Series).
   e. D2321- Standard Practice for Underground Installation of Thermoplastic Pipe for Sewers and Other Gravity-Flow Applications.
   f. D2412 – Standard Test Method for Determination of External Loading Characteristics of Plastic Pipe by Parallel-Plate Loading.
   g. D2683 – Standard Specification for Socket-Type Polyethylene Fittings for Outside Diameter-Controlled Polyethylene Pipe and Tubing.
   h. D2774 – Standard Practice for Underground Installation of Thermoplastic Pressure Piping.
   a. D3035 – Standard Specification for Polyethylene (PE) Plastic Pipe (SDR-PR) Based on Controlled Outside Diameter.
   i. D3212 – Joints for Drain and Sewer Plastic Pipes Using Flexible Elastomeric Seals.
   j. E3261 – Standard Specification for Butt Heat Fusion Polyethylene Plastic Fittings for Polyethylene (PE) Plastic Pipe and Tubing.
   k. D3350 – Standard Specification for PE Pipe & Fittings Material.
   l. F412 – Standard Terminology Relating to Plastic Piping Systems.
   m. F477 – Standard Specification for Elastomeric Seals (Gaskets) for Joining Plastic Pipe.
   n. F714 – Standard Specification for PE Pipe (DR-PR) Based on Outside Diameter.
   o. F1417 – Standard Practice for Installation Acceptance of Plastic Non-pressure Sewer Lines Using Low-Pressure Air.
   p. F1803 – Poly (Vinyl Chloride) (PVC) Closed Profile Gravity Pipe and Fittings Based on Controlled Inside Diameter.
   q. F2026 – Standard Practice for Heat Fusion Joining of Polyethylene Pipe and Fittings.
   r. F2206 – Standard Specification for Fabricated Fittings of Butt-Fused Polyethylene (PE).
   s. F2620 – Standard Practice for Heat Fusion Joining of Polyethylene Pipe and Fittings.
   t. F3124 – Standard Practice for Data Recording the Procedure Used to Produce Heat Butt Fusion Joints in Plastic Piping Systems or Fittings.
   u. F3183 – Standard Practice for Guided Side Bend Evaluation of Polyethylene Pipe Butt Fusion Joint.

v. F3190 - Standard Practice for Heat Fusion Equipment (HFE) Operator Qualification on Polyethylene (PE) and Polyamide (PA) Pipe and Fittings.

2. American Water Works Association (AWWA):
   a. C900 – Polyvinyl Chloride (PVC) Pressure Pipe and Fabricated Fittings, 4 In. Through 12 In. for Water Transmission and Distribution.
   b. C906 – Polyethylene (PE) Pressure Pipe & Tubing, 4-Inch Through 63-Inch for Waterworks.
   c. M23 – PVC Pipe-Design and Installation.
   d. M55 – Manual for the Design and Installation of Polyethylene Pipe in water Applications.
3. Plastic Pipes Institute (PPI):
   a. Handbook of Polyethylene Pipe (latest edition).
   b. MS-3 – HDPE Pipe and Fittings Specification for Buried Potable Water.
   c. TR-3 – Policies and Procedures for Developing Hydrostatic Design Basis (HDB), Pressure Design Basis (PDB), Strength Design Basis (SDB), and minimum Required Strength (MRS) Ratings for Thermoplastic Piping Materials or Pipe.
   d. TR-4 – HDB/SDB/PDB/MRS Listed Materials, PPI Listing of Hydrostatic Design Basis (HDB), Strength Design Basis (SDB), Pressure Design Basis (PDB), and Minimum Required Strength (MRS) Ratings for Thermoplastic Piping Materials or Pipe.
   e. TR-9 – Recommended Design Factors for Pressure Applications of Thermoplastic Pressure Pipe Materials.
   f. TR-33 – Generic Butt Fusion Joining Procedure for Field Joining of Polyethylene Pipe.
   g. TN-42 – Recommended Minimum Training Guidelines for PE Pipe Butt Fusion Joining Operators for Municipal and Industrial Projects.
4. Uni-Bell PVC Pipe Association:
   a. UNI-B-6-98 – Recommended Practice for Low-Pressure Air Testing of Installed Sewer Pipe.

1.03 SUBMITTALS:

A. Submit as specified in Division 1.
B. Submit the following for acceptance prior to fabrication:
   1. Pipe and joint details.
   2. Special, fitting, and coupling details.
   3. Laying and installation schedule.
   4. Specifications, data sheets, and affidavits of compliance for protective shop coatings and linings.
   5. Manufacturer's design calculations including, but not limited to, wall thickness and deflection under specified live and dead loads.
C. Certificates and Affidavits:
   1. Submit as specified in Division 1.
   2. Furnish the following prior to shipment:
      a. Affidavit of compliance with applicable standard.
      b. Test certificates.
D. Provide Manufacturer's Certification that the material was manufactured and tested in accordance with the specifications.
E. Qualifications:

1. Furnish prior to joint fusion:
   a. Fusion technician qualifications per ASTM F3190 from the pipe supplier for the size and type of fusible pipe being installed.

1.04 QUALITY ASSURANCE:

A. Manufacturer:
   1. Experienced in the design, manufacture, and commercial supply of the specific material.
   2. Experienced in the design, manufacture, and commercial supplying of the specific size of pipe.
   3. Certify to above minimum experience requirements.

1.05 DELIVERY, STORAGE AND HANDLING:

1. Deliver, store, and handle equipment and materials as specified in Division 1 and in accordance with the pipe manufacturer's recommendations.

PART 2 - PRODUCTS

2.01 PIPE REQUIREMENTS:

A. Furnish pipe of materials, joint types, sizes, and strength classes indicated or specified. Higher strengths may be furnished at Contractor's option. Furnish maximum pipe lengths produced by the manufacturer.

B. The pipeline manufacturer shall verify and attest to the fact that their pipe is good at all depths scheduled for installation.
   a. Shop drawings and pipe wall thickness calculations certifying that pipe is good at all depths scheduled for installation shall be submitted to the Engineer for review prior to pipe installation.

C. Pipe shall be designed to withstand all stresses resulting from external loads at depths shown on the Contract Drawings and H-20 live loadings in roadways.

D. Pipe Bedding: As specified.

E. Pipe Color: Pipe interior and exterior shall be green, blue pipe is not acceptable for PVC carrying untreated water.

F. Pipe Marking:
   1. All pipe, fittings and specials shall be marked conforming to the applicable standard specification under which the pipe is manufactured and as otherwise specified.
   2. Mark field location of fittings and specials by station.

G. Pipe Gaskets: All elastomeric gaskets and seals shall be synthetic rubber.

H. Each pipe or fitting shall have plainly and permanently marked on the pipe wall the pipe class and size, date of manufacturer, manufacturer's name or trade mark, and deflection angle for bends.

2.02 DUCTILE IRON PIPE:

A. For ductile iron gravity pipe, refer to Section 33 11 00 - Pressure Pipe.

2.03 PVC GRAVITY PIPE:

A. Design of Pipe: Design shall conform to AWWA C900 and as specified:
   1. External Loading:

GRAVITY PIPING SCHEDULE				
SIZE (in)	LINE	DESCRIPTION	MATERIAL	CLASS
36	EFFL	EFFLUENT-1, EFFLUENT-2	DIP/PVC	150/DR-32.5
36	EFFL	EFFLUENT-3	PVC	DR-32.5
48	INFL	INFLUENT	PVC	DR-32.5
36	SB	SCREEN BYPASS	PVC	DR-32.5

      a. Earth dead load cover at 120 pcf plus AASHTO H-20 live loads.
      b. 5% deflection limit.
      c. Bedding condition as indicated.
   2. Joints:
      a. Compression-type with the elastomeric ring gasket confined in the annular space between the bell end or socket and the spigot end of pipe.
      b. Elastomeric gasket ring joints shall conform to the requirements of ASTM D3212 or ASTM F477. Gaskets shall be neoprene or other synthetic rubber material.
      c. Must be water tight based on high head condition.
      d. Plain end of pipe shall be marked with a reference line to facilitate assembly inspections.
   3. Fittings:
      a. Fittings shall conform to AWWA C110 or AWWA C153
      b. Fittings shall be mechanical joint or push-on-type joint
      c. Fittings shall have pressure rating of not less than that specified for the pipe.
   4. Connections: Furnish any special flexible couplings required for manhole tie-ins or connections to other rigid structures.

B. Inspection and Testing:
   1. Primarily by manufacturer's testing laboratory and quality control personnel.
   2. Perform to avoid, insofar as possible, delivery of defective pipe.
   3. May be witnessed by Owner, Engineer, or approved independent testing laboratory.
      a. Independent testing laboratory, when used, shall be retained by Owner at no expense to Contractor.
      b. Contractor and manufacturer shall cooperate with Owner's inspection and test personnel. Permit unrestricted access, furnish reasonable space and facilities, and provide 5 working days advance notice of test schedule.
   4. Contractor shall provide 3 copies each of certified test reports to Engineer.
      a. Include stiffness and deflection, dimension, and hydrostatic joint tests per ASTM D3034, D3212, F679, F794, and F949.
      b. Furnish prior to delivery.

C. Handling and Delivery:
   1. Do not deliver until tests on representative specimens have been performed.
   2. Use equipment and methods adequate to preserve quality of pipe and to protect joint elements.

2.04 PVC SEWER PIPE:

A. Specified in KC Water Standard Specification Section 02624 – PVC Gravity Sewer Pipe

2.05 REINFORCED CONCRETE PIPE – STORMWATER PIPE (RCP):

A. Specified in KC Water Standard Specifications Section 02630 – Stormwater Pipe and Structures

2.06 GASKETS AND BOLTING MATERIALS:

A. Provide all gaskets, bolts, lubricant, and other accessories required to install pipe, fittings, and specials complete and ready for service.

2.07 TRACER WIRE:

A. Tracer wire shall be provided as indicated.
   1. Minimum AWG 10 solid copper
   2. 30 mils of green PE insulation

B. Tracer wire tape shall be as follows:
   1. 2-inch-wide vinyl plastic electrical tape
   2. 7 mils in thickness

C. Where connections to existing tracer wire are required or where connections to newly installed tracer wire (tees, end of rolls, etc.) are required, tracer wire shall be spliced with:
   1. DryConn Direct Bury Lug Aqua waterproof connector.
   2. Engineer Approved Equal.

2.08 WARNING TAPE:

B. Shall be at 6 inches in width.

C. Shall be green in color.

D. Shall have black lettering stating, “CAUTION BURIED SEWER BELOW.”
   1. Lettering shall be imprinted at 20 to 30-inch intervals.

PART 3 - EXECUTION

3.01 INSTALLATION - GENERAL:

A. Reference Section 33 31 50 - Pipe Installation for installation and testing procedures.

3.02 DUCTILE IRON PIPE INSTALLATION:

A. Install according to Section 33 11 00 - Pressure Pipe and Section 33 31 50 - Pipe Installation.

3.03 PVC SEWER PIPE INSTALLATION:

A. Install according to KC WATER Section 02624 – PVC Gravity Sewer Pipe

3.04 PVC PIPE INSTALLATION:

A. Install according to Section 33 31 50 - Pipe Installation.

3.05 REINFORCED CONCRETE PIPE (RCP) STORMWATER PIPE INSTALLATION:

A. Install according to KC Water Standard Specification Section 0230 – Stormwater Pipe and Structures

B. Prior to constructing new sewers, the Contractor shall physically locate all utilities within ten (10) feet of the proposed sewers. If there is a utility conflict with the proposed sewers, the Contractor shall notify the City/Design Professional and survey the existing service top

elevation and horizontal coordinates. Certified as-built redlines and the utility investigation surveying are the sole responsibility of the Contractor.

C. The Contractor is responsible for determining all conflicted crossings for the proposed storm sewer and submit their service-relocation shop drawings and/or certified sketches for the City/Design Professional's review and approval. (Contractor is also responsible for providing field electronic data such as the location coordinates and spot elevations for the City/Design Professional's use.) It shall be the responsibility of the Contractor to obtain necessary field information for aiding in determining the required minimum length of the existing sanitary or any other services necessary to clear for the construction of proposed sewers.

3.06 TRACER WIRE:

A. Install according to Section 33 31 50 - Pipe Installation.

3.07 WARNING TAPE:

A. Underground marking tape shall be installed at least 18 inches above utility.

END OF SECTION 33 33 11.

DIVISION 40 – PROCESS INTEGRATION

SECTION 40 60 00 – PROCESS CONTROLS AND INSTRUMENTATION – GENERAL REQUIREMENTS

PART 1 - GENERAL

1.01 RELATED DOCUMENTS:
- A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY:
- A. This Division includes instruments, control devices, control panels, computer hardware and system programming as specified in Sections 40 60 00 – 40 70 00.
- B. Related Work Specified Elsewhere:
  1. Interconnections and control of equipment: All applicable Divisions.

1.03 RELATED REQUIREMENTS:
- A. Division 26: All applicable Sections.

1.04 REFERENCE STANDARDS:
- A. National Fire Protection Association (NFPA):
  1. NFPA 70 – National Electrical Code (NEC).
- B. Other standards as specified in applicable Sections.

1.05 SUBMITTALS:
- A. Submit as specified in Division 01.
- B. Manufacturer with prime responsibility shall assume responsibility for all Compliance Submittals.
- C. Qualifications Submittal:
  1. Submit SI qualifications package with experience, resumes, and certifications for each member of the SI team responsible for the project.
- D. Additional submittals as specified in each applicable Section, this Division.

1.06 QUALITY ASSURANCE:
- A. General:
  1. The Contractor shall provide the services of a single pre-qualified System Integrator (SI), to provide the material, equipment, labor, and services specified in Sections 40 60 00 – 40 70 00. The SI shall be subcontracted and under the direct supervision of the Contractor.
- B. Acceptable System Integrators (SI):
  1. The communication, instrument and control systems may use Equipment of different manufacturers, but the System Integrator Subcontractor shall assume prime responsibility for the complete instrumentation and control system.
  2. No Bidder shall be required to employ any Subcontractor, other person, or organization against whom Bidder has reasonable objection.
  3. The SI shall be one of the following prequalified companies:
     a. R.E. Pedrotti Company, Inc
        (1) 5855 Beverly Ave, Suite A, Mission, KS 66202. Ph: 913.677.3366.
     b. Integrated Controls, Inc.

(1) 15707 Mahaffie St., Olathe, KS 66062. Ph: 913.782.9600.

c. Durkin, Inc.

(1) 2383 Chaffee Dr., St. Louis, MO 63146. Ph: 314.432.2040.

4. If Contractor wishes to utilize a System Integrator not listed, it shall submit qualification documentation for review and approval demonstrating the experience requirements of this article a minimum of two weeks prior to bid opening. As a minimum the following information shall be submitted:
   a. Evidence of sufficient financial resources to perform the required work. This evidence may be in the form of a certified financial report for the latest fiscal year.
   b. Verification of all items listed under the system integrator qualifications paragraph.
   c. Name the key project staff who will be responsible for office engineering and project management; software configuration; field testing, calibration and start-up; and operator instruction and maintenance training. Include an organization chart of key project staff and detail availability of each staff assigned.
   d. Provide resumes of proposed key project staff that demonstrate project experience with the control system products specified for the project.
   e. Provide references for at least five (5) projects where the following tasks were performed by personnel directly employed by the firm as a SI; system engineering and documentation including panel assembly, schematics, and wiring diagrams; software configuration and documentation; field testing, calibration, and start-up; and operating instructions and maintenance training. Project references shall include contact information for owners and consulting engineers.

C. System Integrator Qualifications:
   1. The instrumentation, control and communications system shall be furnished by a System Integrator (SI) who shall assume responsibility for the satisfactory performance of the entire plant control system. Only those SI who can demonstrate that they possess the prerequisite capabilities and experience shall be considered. The System Integrator subcontractor must meet the following minimum criteria:
      a. The SI Company shall have been in business performing SI work on water and wastewater treatment projects, and have control systems technicians with experience with installation, testing, calibrating and startup of industrial control and automation systems.
      b. The SI Company shall demonstrate the number of competent and experienced office staffing, field technicians, and service personnel are available to support this project.
      c. The SI Company shall have specific training and experience with the following:
         (1) Rockwell PlantPAx, FactoryTalk View SE, and associated system architecture.
         (2) Allen-Bradley ControlLogix and CompactLogix Programmable Automation Controllers and associated RSLogix 5000 programming software.
         (3) Ethernet network setup and configuration including managed switch configuration.
         (4) Instrumentation setup and calibration.
      d. The SI shall hold current certifications for the Rockwell software and hardware specified herein. Additional certifications for industrial and enterprise networks as specified in Section 40 66 00 – Process Control Networks.
      e. The SI shall be capable of providing control panels produced in a UL 508 authorized manufacturing facility and listed accordingly.

f. System Integrator shall possess an active and valid Rockwell Automation PlantPAx System Integrator Badge.
   (1) Badge must be traceable and verifiable through the Rockwell Automation PartnerNetwork™ portal.
   (2) Badge must correspond to the PlantPAx System Release used for the project (e.g., PlantPAx 5.0+).
   (3) System Integrator shall have documented experience implementing Rockwell Automation PlantPAx process control systems.
   (4) System Integrator shall have completed PlantPAx projects of similar size and complexity. Provide project resumes, including the following:
      (a) Project name and owner
      (b) Description of scope
      (c) Quantity and type of controllers (ControlLogix, CompactLogix)
      (d) HMI platforms
      (e) I/O counts
      (f) Process areas served (water, wastewater, etc.)
   (5) Reference Standards:
      (a) Rockwell Automation PlantPAx® System Release (latest version at time of bid).
      (b) Rockwell Automation Library of Process Objects (latest version at time of bid).
      (c) Rockwell Automation Product Compatibility and Download Center (PCDC).

1.07 SEQUENCING AND SCHEDULING:
A. Coordinate the installation of Equipment and Materials specified in this Division with construction schedule.

PART 2 - PRODUCTS

2.01 GENERAL:
A. Products as specified in Sections 40 60 00 – 40 70 00.

PART 3 - EXECUTION

3.01 EXAMINATION:
A. Verify site conditions are suitable for installation of equipment and systems specified in this Division.

3.02 INSTALLATION:
A. System Integrator shall be responsible for all cabling terminations at instruments, control panels and devices supplied by the System Integrator.
B. Refer to Section 26 05 19 – Low Voltage Cable for additional cable termination requirements.

3.03 FIELD QUALITY CONTROL:
A. Manufacturer's field services:
   1. As specified in each applicable Section, this Division.
B. Field Testing:

1. General Requirements:
    a. Conform to requirements as specified in Division 01.
    b. Conduct all tests in the presence of Engineer under the supervision of Equipment manufacturer's field engineer.
    c. Notify Engineer two weeks prior to the commencement of all tests.
    d. Include all tests recommended by the Equipment manufacturer unless specifically waived by Engineer.
    e. Include all additional tests recommended by Engineer that he deems necessary because of field conditions, to determine that Equipment and Materials and systems meet requirements of Contract Documents.
    f. Be responsible for all damage to Equipment and Materials due to improper test procedures or test apparatus handling.
2. Test Reports:
    a. Submit test reports as specified in Division 01.
    b. Maintain a written record of all tests showing date, personnel making tests, equipment or material tested, tests performed, and results.

3.04 TRAINING:

A. The System Integrator shall provide formal training for operators, maintenance, and service personnel.
B. A training schedule and log shall be developed. The training schedule shall identify scheduled dates and times for all training sessions specified in this Division. The training log shall identify dates for training and record training session attendees.
C. Training sessions shall be scheduled with the Owner a minimum of two weeks prior to occurrence and a training schedule shall be maintained and communicated to the Owner on a routine basis.
D. Contractor shall make digital video recordings of all on-Site training for training purposes. Any charges for this video recording shall be included.
E. Provide training as specified in each applicable Section, this Division.

TYPICAL CABLE TRAY AT ELECTRICAL ROOM ELEVATION
NOT TO SCALE

DETAIL KEYED NOTES:

1
1. 12"W x 4"D BASKET CABLE TRAY. IN BASKET CABLE TRAY INSTALL INSTRUMENTATION CABLE: 4 -20 mA CABLE AND CAT6 CABLE.
2. 3'W x 6"D LADDER CABLE TRAY. POWER CONDUCTORS AND CONTROL CABLES.

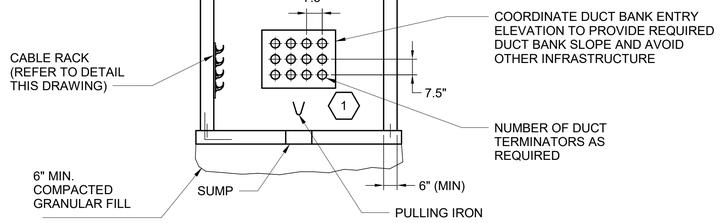
1
3. 4'W x 6"D LADDER CABLE TRAY WITH 12" DIVIDER. IN 12" SECTION INSTALL INSTRUMENTATION CABLE: 4 -20 mA CABLE AND CAT6 CABLE. POWER CONDUCTORS AND CONTROL CABLES IN 3' SECTIONS.

4. BOND CABLE TRAY TO ELECTRICAL ROOM GROUND BAR.
5. 2'W x 6"D LADDER CABLE TRAY. POWER CONDUCTORS AND CONTROL CABLES.

1
6. 3'W x 6"D LADDER CABLE TRAY WITH 12" DIVIDER. IN 12" SECTION INSTALL INSTRUMENTATION CABLE: 4 -20 mA CABLE AND CAT6 CABLE. POWER CONDUCTORS AND CONTROL CABLES IN 2' SECTION.
7. 4'W x 6"D LADDER CABLE TRAY. POWER CONDUCTORS AND CONTROL CABLES.

DETAIL NOTES:

1. COORDINATE TRAY LOCATIONS WITH EQUIPMENT, HVAC, AND LIGHTING TO AVOID INSTALLATION CONFLICTS.
2. REFER TO STRUCTURAL DRAWINGS AND CABLE TRAY SPEC. FOR INSTALLATION REQUIREMENTS FOR CABLE TRAY SYSTEM.
1
3. CABLE TRAY IN CENTERS OF ELECTRICAL ROOMS SHALL BE SIZED TO MATCH TRAYS INSTALLED ALONG WALLS. REFER TO PLANS FOR LAYOUT.



KEYED NOTES:

1 FOR LARGE DUCT BANKS, DUCTS MAY BE NEATLY BUNCHED AT HAND HOLE TO ALLOW PASS THROUGH WITHIN PRECAST OPENING. THIS IS ONLY APPLICABLE FOR HAND HOLES WHEN A SINGLE PRECAST OPENING IS PROVIDED IN LIEU OF INDIVIDUALLY CAST DUCT TERMINATORS.

NOTES:
* VALUE BASED UPON CURRENTLY SELECTED DESIGN BASIS EQUIPMENT. CONTRACTOR IS RESPONSIBLE FOR DESIGN CHANGES ASSOCIATED WITH SUBSTITUTIONS AND THEIR COSTS, EVEN THOSE BORNE BY OTHER TRADES.

OPTION 1: PROVIDE ALL ALUMINUM CONSTRUCTION WITH STAINLESS STEEL HARDWARE AND VFD-RATED SEVERE-DUTY MOTOR. VENTURA AND DRIVE PLATE FOR PROPELLER FANS MAY BE STEEL WITH BAKED EPOXY POWDER COATING.
OPTION 2: PROVIDE AMCA LEVEL-A SPARK-RESISTANT CONSTRUCTION.
OPTION 3: PROVIDE ALUMINUM BIRD SCREEN.
OPTION 4: PROVIDE ALUMINUM BACKDRAFT DAMPER.
OPTION 5: PROVIDE POLYETHYLENE INTAKE GRILL.
OPTION 6: PROVIDE ALUMINUM WALL VENT WITH BACKDRAFT DAMPER.
OPTION 7: PROVIDE ELECTRONIC SPEED CONTROLLER.
OPTION 8: PROVIDE OSHA INTAKE SAFETY CAGE.
OPTION 9: ALUMINUM DISCHARGE HOOD.
OPTION 10: FURNISH VFD FOR INSTALLATION BY ELECTRICAL CONTRACTOR. COORDINATE VFD SELECTION AND INSTALLATION WITH MECHANICAL INSTRUMENTATION CONTRACTOR.
OPTION 11: PROVIDE EQUIPMENT WITH SAIL SWITCH IN DUCTWORK, HONEYWELL MODEL S688A1007 5-INCH SAIL SWITCH. INSTALL PER MANUFACTURER'S INSTRUCTIONS. COORDINATE WITH INSTRUMENTATION AND CONTROLS TO PROVIDE FLOW DETECTION FOR SYSTEMS.

ADDENDUM NUMBER 006

Project/Contract Number: 81000927/1698

Project Title: Todd Creek WWTP Expansion & Major Upgrade

ISSUE DATE: **February 19, 2026**

Bidders are hereby notified that the Bidding and Contract Documents for the above project, for which Bids are to be received on **February 24, 2026**, are amended as follows:

Information to Bidders The following is provided to Bidders for information only:

Specification Changes:

1. 00005 Construction Certification Page – Architectural
    a. *Added section 07 13 00 and 07 14 16*

2. 03 15 50 – Vapor Retarder
    a. *Section 2.01-B.4.*
        i. *Delete:* Solids Handling Building
        ii. *Replace with:* Solids Handling Building and Solids Handling Basin

3. 07 13 00 – Sheet Applied Waterproofing
    a. *Add specification section*

4. 07 14 16 – Cold Fluid-Applied Waterproofing
    a. *Add specification section*

5. 07 16 00 – Bituminous Dampproofing
    a. *Section 1.02-A.1*
        i. Delete: Coal Tar-Epoxy dampproofing for all below grade exterior walls except those containing potable water. Refer to structural drawings.
        ii. Replace with:

            B. Coal Tar-Epoxy dampproofing for all below grade exterior walls with occupiable spaces, non-liquid-containing structures (vaults, manholes, etc..) and structures with interior protective coatings, including the following locations:
                1. AGS Basin – Pipe Gallery and Pump Room
                2. Solids Handling Building – Foundation, Pipe Trench and Sludge Holding Tanks
            C. Where below grade walls and slabs are exposed to groundwater, a waterproofing system, in lieu of dampproofing, shall be provided per Section 07 14 16 Cold Fluid-Applied Waterproofing and Section 07 13 00 Sheet Applied Waterproofing.
            D. Not to be used in areas in contact with potable water.

b. *Insert Section 3.01 - Examination and Renumber Sections 3.02 through 3.04:*

3.01 EXAMINATION:

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements and other conditions affecting performance.
B. Surface Condition: Before applying dampproofing materials, examine substrate conditions.
C. Proceed with installation once unsatisfactory conditions have been corrected.

c. *Insert 3.02-C and renumber Sections D through H:*

C. Formed Concrete Surfaces: Remove fins and projections. Fill voids, form-tie holes, and other defects greater than 1/4 inch (6 mm) in depth.

6. 09 90 00 – Protective Coatings
   a. *Section 2.04-F.1.b*
      i. Delete: Reference: Architectural and Process Drawings
      ii. Replace with: Reference: Process Drawings

   b. *Section 2.04-G*
      i. Delete: Item: Interior Chemical Containment Area: Polymer
      ii. *Replace with:* Item: Interior Chemical Containment Area: Polymer Concrete Containment

   c. *Section 2.04-G.1.b*
      i. *Delete:* Location: As indicated on drawings…
      ii. *Replace with:*
         b. Reference: Process Drawings
         c. Location: Polymer containment structure inside the Solids Handling Building; exposed concrete including curbing, floor, tank pads, sumps, and top of curb wall.

   d. *Section 2*.04-H
      i. *Delete*: Item: Influent Wet Well, Diversion Structure, Covered Sludge Holding Tank.
      ii. *Replace with*: Headworks Channels.

   e. *Section 2*.04-H.1.b
      i. *Delete*: Location: As indicated on drawings including the interior face of concrete wall, concrete floor, and top of concrete wall.
      ii. *Replace with*:
         b. Reference: Structural Drawings
         c. Location: All interior concrete channel surfaces exposed to wastewater.

   f. *Add Section 2.04-L*

L. Item: Influent Wet Well/Pump Station, Coarse Screening Structure, covered Thickened Sludge Holding Tanks. Concrete Immersion: Raw sewage and Ozone gas
   1. Provide the following Tnemec system or approved Sherwin Williams or Carboline equal meeting the design criteria listed below:
      a. Coating System:
         (1) Surface Preparation: Allow new cast-in-place concrete to cure a minimum of 28 days at 75°F (24°C). Verify concrete dryness and prepare concrete surfaces in accordance with NACE No. 6/SSPC-SP13 Joint Surface Preparation Standards and ICRI Technical Guidelines. Moisture vapor transmission should not exceed three lbs. per 1,000 sq. ft. in a 24-hour period. Relative humidity should not exceed 80%. Abrasive blast, shot-blast or mechanically abrade concrete surfaces to remove laitance, curing compounds, hardeners, sealers and other contaminants and to provide a minimum ICRI-CSP 5 or greater surface profile. Large cracks, voids and other surface imperfections should be filled with a recommended filler or surfacer.
         (2) Primer: Series 251SC @ 4.0-12.0 mils D.F.T.
         (3) Base Coat: Series 252SC Chembloc MCK System w/fiberglass mat reinforcement per manufacturer's direction @ 60.0 - 80.0 mils.
         (4) Saturant Coat: Series 252SC Chembloc @ 8.0-20.0 mils.
         (5) Top Coat: Series 252SC Chembloc @ 4.0-12.0 mils. System Total D.F.T. of 76.0-124.0 mils minimum.
      b. Location: All interior exposed concrete including face of concrete channel wall, concrete floor, concrete ceiling, and top of concrete wall.

7. 32 31 13 – Chain Link Fence and Gates
   a. *Section 2.02-C*
      i. *Delete:* Fence Fabric Height: 7-feet
      ii. *Replace with:*
         C. Total Fence Height: 9-feet
            1. Fence Fabric Height: 8-feet.
            2. Height of Barbed Wire: 1-foot.

   b. *Section 2.*04-A
      i. *Delete:* No. 9-gate, 2-inch diamond mesh chain-link fabric with PVC coated.
      ii. *Replace with:* No. 8-gage (9-gage core) 1-inch diamond mesh chain-link fabric with PVC coating.

   c. *Section 2.04*
      i. *Add:*
         E. Color: ASTM F934-Black

   d. *Add Section 2.06*

2.06 BARBED WIRE:
   A. 12-1/2 Gauge 4 point Class 3
   B. Number of Strands: 3
   C. Barbed Wire Height: 12-inches (Quantity 3 strands above fence fabric)
      1. Angled at 30 degree to 45 degree angle above horizon away from the facility.
      2. Vertical on sliding cantilevered gate.

Drawings Changes

1. A003 – Added callouts for high-temp waterproofing and nailer base to details 01, 02, 05, 06.
2. A410 – Showed extents of dampproofing
3. A600 – Rotated building viewport to correct orientation
4. A603 – Removed TPO roofing membrane callout and adjusted roof sloping for elimination of gutter
5. A701 – Corrected scale
6. A730 – Showed extents of dampproofing
7. C136 – Revised fence and gate details to 8’ high, added barbed wire, added mow strip detail
8. D703 – Added callout for chemical containment coating
9. D707 – Added callout for chemical containment coating
10. D404 – Added clarification on blower piping type
11. D413 – Added clarification on blower piping type
12. D414 – Added clarification on blower piping and insulation.
13. D415 – Added clarification on blower piping and insulation.
14. D416 – Added clarification on blower piping type
15. E202 – Revised circuit callouts
16. E291 – Revised circuit callouts
17. E612 – Added keyed notes
18. M002 - Revised GRSC-MAU-002 air unit schedule. Added option 3 note to provide spark resistant supply fan constructed in accordance with AMCA 99 for Type A or Type B spark resistance. Revised AIC ratings.
19. S202 – Added note 9 clarifying waterproofing
20. S207 – Added callouts clarifying waterproofing extents
21. S208 – Added vapor retarder callout and modified sections clarifying waterproofing and vapor retarder
22. S304 – Added keyed note 1 clarifying coatings
23. S308 – Added keyed note 1 clarifying coatings
24. S309 – Added keyed note 1 clarifying coatings
25. S702 – Revised grade beam extension (eliminated approximately 10’ of duplicated grade beam)

26. S703 – Revised grade beam extension (eliminated approximately 10’ of duplicated grade beam)
27. S704 – Revised grade beam extension (eliminated approximately 10’ of duplicated grade beam)
28. S707 – Revised grade beam extension (eliminated approximately 10’ of duplicated grade beam)
29. S709 – Revised grade beam extension (eliminated approximately 10’ of duplicated grade beam)

Q1.	Drawing No. M002 “Air Unit Schedule” Option 3 states: “Provide spark-resistant supply fans constructed in accordance with AMCA 99 for Type-A or Type-B compliance with motor circuit using methods and materials consistent with NEC Class-1 Group-D Division-2 Hazardous Locations.” Please confirm that Single Inlet Single Width Fans with motors and bearings out of the airstream and aluminum impeller and ring about the opening through which the shaft passes are required. Under this interpretation it would be assumed that standard Double Width Double Inlet Fans with aluminum wheel and cone and bearings/motors in the airstream are not acceptable.
A1.	**Fans shall be fabricated in accordance with Air Moving and Control Association (AMCA) Type A or Type B spark resistant construction where serving hazardous location per NFPA 820 9.2.3 per Note 3 on equipment schedule. It is the responsibility of the fan manufacturer to show that fan is fabricated as specified. This shall be indicated on equipment cut sheets. Drawing M002 revised.**
Q2.	In specification 41 22 00 - 2.02 - B - 4 - a It mentions that the pendant needs to be suspended from a cable reel on the trolley hoist. Usually, the pendant that hangs from the hoist does not hang from a cable reel unless there are multiple levels in which the operator will need to pull the pendant down like a curtain. Is this what KCMO wants?
A2.	**The hoist controls are intended to be used on multiple levels. The AGS has a platform at grade and the lower level where the equipment is located. The Influent PS will need to have access to controls to remove the motors at the bottom of the wet well. Another alternative that is acceptable in lieu of a cable reel is a torque reel/balancer.**
Q3.	In addendum No. 2 MBE and WBE goals were added. Can you please clarify which certifying agency will be used to determine MBE/WBE acceptance? Section 00990 referenced notes the state of Missouri MRCC directory however this is DBE only. Are we to utilize the KCMO MBE / WBE approved DBE list?
A3.	**MDNR is the certifying agency to determine MBE/WBE acceptance. We have approval from MDNR to use KCMO’s MBE/WBE as the DBE directories to fulfill the DBE requirements.**
Q4.	What is the width of the mow strip for the site fencing. Reference detail on Sheet C136
A4.	**Mow strip is nominally 12” wide. Detail added to revision 1 of C136 for clarity.**
Q5.	In specification 32 31 13 it calls the fence to be 7' in height however fence detail on C136 shows a 6' fence. Can you please verify the height wanted?

A5.	**As stated in amendment 4, fence shall be nominally 8' high with an additional 3 strand barbed wire approximately 12" high for a total height of 9'. Cantilevered entry gate shall be nominally 8' high with post height of 9'-6", fabric height of 7', and 3-strand barbed wire atop. Fence details are revised on sheet C136 and specification 32 31 13 is revised.**
Q6.	Does KC Water intend to spec/use any crystalline waterproofing and or antimicrobial admixtures for waterproofing the new underground structures such as the AGS Basin, Wet Wells, and Headworks?
A6.	**Specification 03 30 00 – Concrete did not include any admixtures for antimicrobial or waterproofing in the concrete for this project for these structures.**
Q7.	Regarding the pre-engineered canopy at the UV disinfection facility, the listed manufacturer Austin Mohawk cannot provide a product that exactly demonstrates what is being asked for in the specification section 10 73 16. In addition to that their canopy is not designed to have a TPO roof membrane system on top of it as is depicted on sheet A603. It is weather resistant without a TPO membrane roof. Austin Mohawk only provides an embossed deck pan that is designed to be exposed to the open air. Please confirm that this will be acceptable. If it is not, then please provide additional design information including cut sections to direct us in a path where real pricing can be obtained.
A7.	**This is acceptable. The note for a TPO roof membrane is removed from sheet A603 to reflect no TPO roofing necessary for the pre-engineered canopy.**
Q8.	The coiling door specification (08 33 23) lists explosion proof operators at listed locations. Will these be required?
A8.	**Overhead doors and operators will need to be explosion proof in Class I Div II building and are noted on the door schedules.**
Q9.	Please confirm if the lab equipment will be procured from the base bid or part of the furniture allowance.
A9.	**This is part of the furniture allowance**
Q10.	Are the interior 8" CMU walls at the admin building supposed to be filled with grout or perlite insulation?
A10.	**The CMU will need to be grouted per Structural drawings and specifications and the remaining cells will need to be filled with Perlite for sound transmission purposes.**
Q11.	The orientation of the UV building with true north is not square on sheet A603.
A11.	**It appears you are referring to the north arrow on A600 which is incorrectly pointing 'up' on the sheet. Viewport on sheet A600 is now rotated to show correct building orientation on revised drawing. The UV building is square. The building should be laid out on site per civil. Any slight rotation should be ignored.**
Q12.	Please review and confirm scale for the AGS basin in the architectural sheets (A410).
A12.	**Drawing is 3/64 scale. Drawing scale is corrected and sheet A410 is revised. Drawings shall not be scaled off of for accuracy. Please refer to dimensions.**

Q13.	Please review and confirm scale for the solids handling building in the architectural sheets (A701).
A13.	**Drawing is 1/8 scale. Drawing scale is corrected and sheet A701 is revised. Drawings shall not be scaled off of for accuracy. Please refer to dimensions.**
Q14.	Section 07 16 00 says to provide coal tar-epoxy dampproofing for all below grade exterior walls excepting those which contain potable water. However, the only place that show it being required in the drawings is on sheet A440 at the AGS basin and on sheet D202 at the influent pump station. Please confirm where this applies and if any structures besides the IPS and AGS basin will get dampproofing below grade.
A14.	**Dampproofing applies to all below-grade exterior walls with occupiable spaces, non-liquid-containing structures (such as vaults, manholes, etc…) and structures with interior protective coatings. Specification 07 16 00 is revised for location clarity. At the Influent Pump Station and Coarse Screen Channels, waterproofing is required since structures are partially below the water table. Specifications 07 13 00 – Sheet Applied Waterproofing and 07 14 16 – Cold Fluid Applied Waterproofing are added. Drawings A410, A730, S202, S207, S208, S304, S308, and S309 are revised to provide dampproofing and waterproofing clarity.**
Q15.	Regarding section 07 16 00, will all below grade walls get the dampproofing at the AGS basin or will it only be on the pipe gallery / utility corridor walls as shown in the drawings?
A15.	**Only the below-grade exterior walls that open to the pump room and pipe gallery (mainly the south and east walls with wraparound on the pump room west wall and pipe gallery north wall). Dampproofing should be extended slightly beyond to Basin 4 north wall and WLC tank west wall to prevent vapor migration through the concrete to the pump room or pipe gallery. Drawing A410 is revised to show dampproofing extents.**
Q16.	Regarding section 09 90 00 there are several coating systems listed that do not show up in the drawing sheets. a. 2.04 G - please confirm the room(s) that will receive the interior chemical containment coating. b. 2.04 H - please confirm the structures that will receive the concrete immersion raw sewage coating. Is it only the influent wet well, diversion structure, and covered sludge holding tank? Please advise. c. 2.04 I - will this resinous flooring system only be required at the Administration building? Please confirm. d. 2.04 K - what part of the project will receive this exterior secondary chemical containment coating? Please confirm.
A16.	**a. The interior chemical containment coating is located at the polymer feed chemical area in the Solids Processing Building. Reference drawing D701 for location. Drawings D703 and D707 are revised to call out chemical containment coating. Section 09 90 00-2.04-G revised to call out specific location.** **b. Tnemec G435 Perma-Glaze raw sewage coating shall be applied to the Influent Wet Well/Pump Station, Coarse Screening Structure, Covered Sludge Holding**

	Tanks, and Headworks influent screening channels and Headworks effluent channels. Specification section 2.04-H is revised to state this. **c. Yes** **d. The sodium hydroxide chemical containment area as shown on D205. Section 09 90 00-2.04-K revised to call out specific location.**
Q17.	Please provide the prospective Bidders with all as-built information available for the existing Todd Creek WWTP facility that is to be demolished as part of this contract.
A17.	**These are provided upon request for any contractors that wish to see the drawings.**
Q18.	Please clarify to the prospective Bidders who will be responsible for any required dewatering, sludge, or solids handling as part of the closure and demolition of the existing Todd Creek WWTP facility that is to be demolished as part of this contract.
A18.	**KCW on-call sludge contract would handle any cleaning/hauling. Contractor will need to coordinate with KCW and Engineer after lagoon closure plan is finalized and accepted by MDNR.**
Q19.	Are there any known or stipulated bid quantities of dewatering, sludge, or solids handling that is to be included as part of the Bidders base bid proposal as part of the closure and demolition of the existing Todd Creek WWTP facility that is to be demolished as part of this contract?
A19.	**No**
Q20.	Specification section 31 66 12 specifies 'cast-in-place ground improvement elements (CGEs)' and requires the Contractor to secure the services of a Professional Engineer licensed in Missouri to design CGEs and the load transfer platform (LTP) "delegated design." The geotechnical investigation report also references rammed aggregate piers (RAP). If the Contractor is responsible to provide an Engineered system, will there be consideration for alternative methods other than cast-in-place ground improvement elements (CGEs)? Based on the preliminary geotechnical investigation and provided soils data, aggregate piers may be viable option for ground improvements to satisfy the performance requirements at a more economical cost to the overall project.
A20.	**RAP is excluded due to poor past experiences and site characteristics at the discretion of the design Geotechnical Engineer.**
Q21.	Currently, there are no plan sheets, specification, geotechnical information that list, depict, or detail what structures are to receive the ground improvement elements, cast-in-place, rammed aggregate piers, or otherwise. Please provide the prospective Bidders with further clarification defining what specific structures are to receive the ground improvement elements, cast-in-place, rammed aggregate piers, or otherwise.
A21.	**Drawing D158 shows the requested information. Per addendum 006 answer 24, the IPS Electrical Building does NOT need to be on ground improvements.**
Q22.	Spec 3410 section 2.10 does not provide the thin brick manufacturer or the type/color of brick desired. Please specify the thin brick desired.
A22.	**Basis of design shown in public and private renderings is to be Sioux City Brick Fine Art Smooth Modular and will need to be approved by owner. Provide a full range of colors to be approved by owner/Architect.**

Q23.	Elevations say precast is to be panel with integral color. I cannot find a description of what color is desired in the spec. Please provide the desired color of the precast.
A23.	**Basis of design shown in public and private renderings is to be Sandstone and will need to be approved by owner. Provide a full range of Buff colors to be approved by owner/Architect.**
Q24.	We are not seeing drawing sheets Y407, Y704, Y706, or D116 included in Addendum 3 as instructed in a previous response. Please advise.
A24.	**These were included in Addendum 002.**
Q25.	Section 01 43 39 references mock-up requirements; however, the contract documents do not clearly define whether **in-place mock-ups** or **stand-alone mock-ups** are required. Please confirm the intended requirement. If **stand-alone mock-ups** are required, the Architect/Engineer must provide drawings and specifications defining the required size, scope, materials, and level of detail. Without this information, the mock-up requirements cannot be accurately priced or scheduled, and any additional scope, cost, or time impacts resulting from clarification will require adjustment to the Contract.
A25.	**Stand-alone mock-ups are required. Mockup drawing will be forthcoming.**
Q26.	The specifications reference BIM requirements under Section 01 34 00; however, the extent of the General Contractor's responsibilities is not clearly defined. Please clarify the GC's scope with respect to BIM. Specifically, confirm whether the GC is required to coordinate with an existing BIM model and/or record as-built information provided by the Owner/Engineer, or if the GC is responsible for developing and maintaining a complete BIM design model.
A26.	**BIM model will be developed by the Engineer/Designer. Contractor is to retain and provide any necessary BIM information from construction record documents to the Engineer/Designer at the level of detail stated in Section 01340 – Project BIM Coordination.**
Q27.	Who is responsible for the sludge holding cell closure plan?
A27.	**KCW's engineer of record will handle sludge holding cell closure plan with MDNR**

Bidding Requirements:

1. N/A

Contracting Requirements:

1. Delete and replace the following section(s):
    a. Delete Document, Section 00005 CONSTRUCTION CERTIFICATION PAGE and replace with the Following Document Section 00005 CONSTRUCTION CERTIFICATION PAGE

Specifications:

1. Delete and replace the following section(s):

    a. Delete Document, Section 03 15 50 – VAPOR RETARDER and replace with the Following Document Section 03 15 50 – VAPOR RETARDER
    b. Delete Document, Section 07 13 00 – SHEET APPLIED WATERPROOFING and replace with the Following Document Section 07 13 00 – SHEET APPLIED WATERPROOFING
    c. Delete Document, Section 07 14 16 – COLD FLUID-APPLIED WATERPROOFING and replace with the Following Document Section 07 14 16 – COLD FLUID-APPLIED WATERPROOFING
    d. Delete Document, Section 07 16 00 – BITUMINOUS DAMPPROOFING and replace with the Following Document Section 07 16 00 – BITUMINOUS DAMPPROOFING
    e. Delete Document, Section 09 90 00 – PROTECTIVE COATINGS and replace with the Following Document Section 09 90 00 – PROTECTIVE COATINGS
    f. Delete Document, Section 32 31 13 – CHAIN LINK FENCE AND GATES and replace with the Following Document Section 32 31 13 – CHAIN LINK FENCE AND GATES

Drawings:

1. Delete and replace the following drawings(s):
    a. Delete Drawing, A003 and Replace with the Following Drawings, A003
    b. Delete Drawing, A410 and Replace with the Following Drawings, A410
    c. Delete Drawing, A600 and Replace with the Following Drawings, A600
    d. Delete Drawing, A603and Replace with the Following Drawings, A603
    e. Delete Drawing, A701 and Replace with the Following Drawings, A701
    f. Delete Drawing, A730 and Replace with the Following Drawings, A730
    g. Delete Drawing, C136 and Replace with the Following Drawings, C136
    h. Delete Drawing, D703 and Replace with the Following Drawings, D703
    i. Delete Drawing, D707 and Replace with the Following Drawings, D707
    j. Delete Drawing, D404 and Replace with the Following Drawings, D404

9	CATCH ASSEMBLY	1 REQUIRED

CATILEVER GATE NOTES:

1. ALL FITTINGS STANDARDLY PROVIDED FOR 4" O.D. POSTS.
2. FENCE GATES, DETAILS AND FIGURES ARE BASED ON "TYMETAL CORPORATION" GATES AND SHOULD BE CONFIRMED WITH THE MANUFACTURER PRIOR TO START OF WORK.
3. AUTOMATED OPERATING DEVICE SHALL BE COMPATIBLE WITH EXISTING FACILITY EQUIPMENT AND SHALL BE INSTALLED PER MANUFACTURER'S DESIGN AND RECOMMENDATIONS.
4. AUTOMATIC OPERATING DEVICE DESIGN AND INSTALLATION SHALL BE COORDINATED WITH GATE MANUFACTURER'S DESIGN AND INTALLATION.
5. GATE EQUIPMENT SHALL CONFORM TO ASTM F1184.
6. GATE CONSTRUCTION:
   A. CONSTRUCT WITH FITTING OR BY WELDING.
   B. PROVIDE RIGID, WATERPROOF JOINTS.
   C. ASSURE RIGHT, NON-SAGGING, NON-TWIST GATE.
   D. COAT WELDS WITH RUST PREVENTATIVE PAINT, COLOR TO MATCH GATE MATERIAL.
7. ELECTRIC GATE OPERATOR TO BE INSTALLED IN ACCORDANCE WITH 2017 NEC. AND MANUFACTURER'S RECOMMENDATIONS. OPERATOR SHALL BE 208 VOLT, 1-PHASE. OPERATOR SHALL BE RATED TO OPERATE GATE WEIGHT. MOTOR STARTER AND OVERLOADS AND CONTROL SHALL BE PROVIDED BY GATE SUPPLIER IN NEMA 4X ENCLOSURE. EXTERIOR CONTROL WIRING BY CONTRACTOR.
8. OPERATOR SHALL BE PAD MOUNTED. PAN AND ANCHORAGE BY CONTRACTOR.
9. PROVIDE OWNER WITH 10 HANDHELD GATE ACCESS REMOTE CONTROL UNITS.

0 2' 4' 8'
SCALE IN FEET

NORTH

GENERAL NOTES:

1. PIPING WITHIN FOUR FEET OF FINISHED FLOOR SHALL BE SUPPORTED WITH SADDLE TYPE SUPPORT, UNLESS OTHERWISE SPECIFIED. SEE PS-1.
2. ALL PIPE SUPPORTS AT A MINIMUM, SHALL FOLLOW MSS-SP 69, UNLESS SPECIFIED ELSEWHERE.
3. ELEVATED AIR PIPING SHALL BE SUPPORTED WITH CLEVIS HANGER PIPE SUPPORT, UNLESS OTHERWISE SPECIFIED.
4. PIPE TRENCH GRATING NOT SHOWN FOR CLARITY. CONTRACTOR SHALL PROVIDE REMOVABLE GRATING IN SEGMENTS THAT ALLOW REMOVAL OF GRATING AROUND PIPE PENTRATIONS WITHOUT PIPE DISASSEMBLY.
5. CONTRACTOR SHALL FIELD ROUTE PVC DILUTED POLYMER FEED PIPING TO POLYMER INJECTION RING ASSEMBLY LOCATED UPSTREAM OF FLOCCULATION TANKS. REFER TO D706. CONTRACTOR SHALL PROVIDE TUBING AND MANIFOLD AS REQUIRED TO TRANSITION FROM 1-1/2" DILUTED POLYMER PIPING TO FOUR (4) TUBING CONNECTIONS ON POLYMER INJECTION RING. INSTALLATION SHALL BE COORDINATED WITH ROTARY DRUM THICKENER MANUFACTURER. PROCESS WATER PIPING SHOWN ON PLUMBING DRAWINGS.
6. CONTRACTOR SHALL FIELD ROUTE PROCESS WATER PROCESS WATER TO WASH CONNECTIONS AT THE ROTARY DRUM THICKENERS PER MANUFACTURER REQUIREMENTS.
7. DIMENSION SHOWN BETWEEN ROTARY DRUM THICKENER AND STRUCTURAL COLUMN IS APPROXIMATE. DIMENSION SHALL BE MINIMUM 3'-0". CONTRACTOR SHALL COORDINATE WITH DESIGN ENGINEER AS NEEDED IF SUPPLIED EQUIPMENT DOES NOT PERMIT THE MINIMUM DIMENSION TO BE MAINTAINED BASED ON LAYOUT SHOWN.
8. CONTRACTOR SHALL FIELD ROUTE PROCESS WATER (NON-POTABLE WATER) PIPE TO THE POLYMER FEED DILUTION WATER CONNECTION POINTS. REFER TO D707. FINAL SIZE OF PROCESS WATER PIPE FACILITING DILUTION TO EACH SKID SHALL BE COORDINATED WITH SELECTED POLYMER FEED MANUFACTURER.

OPTION 1: PROVIDE ALL STAINLESS STEEL OR ALUMINUM CONSTRUCTION WITH STAINLESS STEEL HARDWARE, VFD-RATED SEVERE-DUTY FAN MOTORS AND NEMA-4X OR BETTER ELECTRICAL ENCLOSURES.
OPTION 2: PROVIDE EQUIPMENT WITH SAIL SWITCH IN DUCTWORK, HONEYWELL MODEL S688A1007 5-INCH SAIL SWITCH. INSTALL PER MANUFACTURER'S INSTRUCTIONS. COORDINATE WITH INSTRUMENTATION AND CONTROLS TO PROVIDE FLOW DETECTION FOR SYSTEMS.
OPTION 3: PROVIDE SPARK-RESISTANT SUPPLY FANS CONSTRUCTED IN ACCORDANCE WITH AMCA 99 FOR TYPE-A OR TYPE-B COMPLIANCE WITH MOTOR CIRCUIT USING METHODS AND MATERIALS CONSISTENT WITH NEC CLASS-I GROUP-D DIVISION-2 HAZARDOUS LOCATIONS.
OPTION 4: PROVIDE ELECTRIC-RESISTANCE HEATER COIL WITH AIR-FLOW SWITCH, HIGH-TEMPERATURE TRIP, AND ALL OTHER SAFETIES REQUIRED FOR UL LISTING AND SAFE OPERATION.
OPTION 5: PROVIDE VFD RATED SUPPLY MOTORS.
OPTION 6: PROVIDE 100% OUTDOOR AIR UNIT.
OPTION 7: PROVIDE OUTDOOR/RETURN-AIR MIXING BOX WITH LOW-LEAKAGE OUTDOOR-AIR DAMPER, RETURN-AIR DAMPER, AND BAROMETRIC RELIEF-AIR DAMPER.
OPTION 8: PROVIDE MANUAL MINIMUM OUTDOOR-AIR DAMPER.
OPTION 9: PROVIDE AIR ECONOMIZER WITH RETURN-AIR DAMPER. MANUFACTURER'S ECONOMIZER CONTROLLER NOT REQUIRED AS ECONOMIZER AND RETURN-AIR DAMPER WILL BE CONTROLLED BY DDC TO MAINTAIN ROOM PRESSURIZATION.
OPTION 10: EXTERNAL PRESSURE RATINGS SHALL BE BASED UPON FILTER PRESSURE DROP AT DOUBLE ITS INITIAL VALUE.
OPTION 11: PROVIDE REFILLABLE ACTIVATED-CARBON PANEL RATED FOR THE AIR VELOCITY ENCOUNTERED AT SUPPLY FAN'S MAXIMUM AIR FLOW RATING. PROVIDE PLEATED AIR FILTER AFTER ACTIVATED-CARBON PANEL.
OPTION 12: PROVIDE 2-INCH FLANGE RETURN GRILLE.
OPTION 13: PROVIDE 2-INCH FLANGE SUPPLY GRILLE.
OPTION 14: FURNISH VFD FOR INSTALLATION BY ELECTRICAL CONTRACTOR. COORDINATE VFD SELECTION AND INSTALLATION WITH MECHANICAL INSTRUMENTATION CONTRACTOR.
OPTION 15: PROVIDE SYSTEM WITH FULL OUTDOOR AIR ECONOMIZER.
OPTION 16: PROVIDE UNIT WITH A MINIMUM SEER2 RATING OF 13.4 OR THAT MEETS THE MINIMUM PERFORMANCE REQUIREMENTS REQUIRED IN 2021 IECC 403.3.2.

CERTIFICATION PAGE

Project/Contract Numbers: 81000927/1698

Project Title: Todd Creek WWTP Expansion & Major Upgrades

I am responsible for the following specifications and drawings:

Drawings:

Specifications:

Sections:

07 13 00
07 14 16
07 16 00
09 90 00
41 22 00

_____ (SEAL)

I certify under penalty of law that the document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information submitted, and that the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

SECTION 03 15 50 – VAPOR RETARDER

PART 1 - GENERAL

1.01 RELATED DOCUMENTS:

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and DIVISION 01 Specification Sections, apply to this Section.

1.02 SUMMARY:

A. This Section includes vapor retarder under concrete slabs on grade.

1.03 RELATED WORK SPECIFIED ELSEWHERE:

A. Section 03 30 00 - Concrete.

1.04 REFERENCE STANDARDS:

A. Applicable Standards:
   1. American Concrete Institute (ACI):
      a. 302.1R- Guide to Concrete Floor and Slab Construction
      b. 302.2R - Guide for Slabs that Receive Moisture-Sensitive Flooring Materials
   2. American Society for Testing and Materials (ASTM):
      a. E96/E96M - Test Methods for Water Vapor Transmission of Materials.
      b. E154/E154M- Test Methods for Water Vapor Retarders Used in Contact with Earth Under Concrete Slabs, on Walls, or as Ground Cover.
      c. E1643- Standard Practice for Selection, Design, Installation, and Inspection of Water Vapor Retarders Used in Contact with Earth or Granular Fill Under Concrete Slabs
      d. E1745 - Plastic Water Vapor Retarders Used in Contact with Soil or Granular Fill Under Concrete Slabs.

1.05 SUBMITTALS:

A. Submit as specified in DIVISION 01.
B. Include, but not limited to, the following:
   1. Product specification and data.
   2. Installation instructions.

PART 2 - PRODUCTS

2.01 VAPOR RETARDER:

A. Flexible, preformed sheet membrane material conforming to ASTM E1745, Class A or B having a minimum thickness of 10 mils.
B. Use under concrete slabs as follows:
   1. Admin Building
   2. Headworks Building
   3. UV Disinfection Building
   4. Solids Handling Building and Solids Handling Basin
   5. Blower Building
   6. Influent Pump Station Electrical Building

PART 3 - EXECUTION

3.01 INSTALLATION:

A. Install in accordance with ASTM E1643 and the following.
B. Remove sharp edges, projecting materials, and roughness which might penetrate vapor retarder.
C. Level and tamp or roll granular base.
D. Place vapor retarder sheeting with the longest dimension parallel with the direction of the concrete pour.
E. Lap vapor retarder over footing or seal to foundation wall, or both, and seal around penetrations such as utilities and columns to create a monolithic membrane between the surface of the slab and moisture sources below the slab and at the slab perimeter.
F. Lap joints 6 inches, or as instructed by the manufacturer, and seal with the manufacturer's recommended adhesive or pressure sensitive tape, or both.
G. Take precaution to protect vapor retarder from damage during installation of reinforcing steel and utilities and during placement of concrete.
H. Use only concrete brick type reinforcing bar supports, or provide 6-inch by 6-inch protective pads of asphaltic hardboard or other material recommended by the vapor retarder manufacturer to protect the vapor retarder from puncture.
I. Do not drive stakes through the vapor retarder.
J. Repair vapor retarder damaged during placement of reinforcing or concrete as instructed by manufacturer.

END OF SECTION 03 15 50

DIVISION 07 - THERMAL AND MOISTURE PROTECTION

SECTION 07 13 00 – SHEET APPLIED WATERPROOFING

PART 1 - GENERAL

1.01 RELATED DOCUMENTS:

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

B. Section 07 14 16 “Cold Fluid-Applied Waterproofing” for waterproofing of vertical surfaces.

1.02 SUMMARY:

A. This Section includes:

1. Under Slab Sheet Waterproofing System:
    a. Sheet applied membrane waterproofing.

B. Provide waterproofing for under slabs exposed to groundwater including the following locations:

1. Coarse Screening Structure
2. Influent Wet Well/Pump Station

1.03 REFERENCE STANDARDS:

A. Publication Dates: Comply with standards in effect as of date of the Contract Documents unless otherwise indicated.

B. American Concrete Institute (ACI):

1. ACI 301 - Specification for Structural Concrete.

C. ASTM International:

1. ASTM C836 – Standard Test Methods for Crack Cycling
2. ASTM D412 - Standard Test Methods for Vulcanized Rubber and Thermoplastic Elastomers – Tension
3. ASTM D624 - Standard Test Method for Tear Strength of Conventional Vulcanized Rubber and Thermoplastic Elastomer
4. ASTM D903 - Standard Test Method for Peel or Stripping Strength of Adhesive Bonds
5. ASTM D3767 - Standard Practice for Rubber—Measurement of Dimensions
6. ASTM D1970 - Standard Specification for Self-Adhering Polymer Modified Bituminous Sheet Materials Used as Steep Roofing Underlayment for Ice Dam Protection
7. ASTM D4833 - Standard Test Method for Index Puncture Resistance of Geomembranes and Related Products
8. ASTM D5385/5385M - Standard Test Method for Hydrostatic Pressure Resistance of Waterproofing Membranes
9. ASTM E96/E 96M - Standard Test Methods for Water Vapor Transmission of Materials
10. ASTM D4068 - Standard Specification for Chlorinated Polyethylene (CPE) Sheeting for Concealed Water-Containment Membrane
11. ASTM D5385 - Standard Test Method for Hydrostatic Pressure Resistance of Waterproofing Membranes
12. ASTM D570 - Standard Test Method for Water Absorption of Plastics

D. National Roofing Contractors Association (NRCA):

1. The NRCA Waterproofing Manual. Rosemont, Ill: NRCA, 2005.

E. Sealant, Waterproofing Contractors Association:

1. Below Grade Waterproofing Manual. Kansas City, MO: SWRI, 2000.

1.04 PREINSTALLATION MEETINGS:

A. Preinstallation Conference: Conduct conference at Project Site.
   1. Review waterproofing requirements including, but not limited to, the following:
      a. Surface preparation specified in other sections.
      b. Minimum curing period.
      c. Forecasted weather conditions.
      d. Special details and sheet flashings.
      e. Repairs.

1.05 SUBMITTALS:

A. Submit as specified in DIVISION 01.
B. Product Data: For each type of product.
   1. Include construction details, material descriptions, and tested physical and performance properties of waterproofing.
   2. Include manufacturer's written instructions for evaluating, preparing, and treating substrate.
C. Shop Drawings:
   1. Show locations and extent of waterproofing.
   2. Include details for substrate joints and cracks, sheet flashings, penetrations, inside and outside corners, tie-ins with adjoining waterproofing, and other termination conditions.
D. Field quality-control reports.
E. Sample Warranties: For special warranties.

1.06 QUALITY ASSURANCE:

A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by waterproofing manufacturer.
B. Mockups: Build mockups to verify selections made under Sample submittals and to set quality standards for installation.

1.07 FIELD CONDITIONS:

A. Environmental Limitations: Apply waterproofing within the range of ambient and substrate temperatures recommended in writing by waterproofing manufacturer.
   1. Do not apply waterproofing to a damp or wet substrate, when relative humidity exceeds 85%, or when temperatures are less than 5ºF (3ºC) above dew point.
   2. Do not apply waterproofing in snow, rain, fog or mist, or when such weather conditions are imminent during application and curing period.
B. Maintain adequate ventilation during application and curing of waterproofing materials.

1.08 WARRANTY:

A. Manufacturer's Special Warranty: Manufacturer agrees to repair or replace waterproofing that fails in materials or workmanship within specified warranty period.
   1. Warranty Period: Ten (10) years from date of Substantial Completion.
B. Installer's Special Warranty: Specified form, signed by Installer, covering Work of this Section, for warranty period of one (1) years.
   1. Warranty includes removing and reinstalling protection board, drainage panels, insulation.
C. Warranties shall comply with the requirements of Section 01 78 36.

PART 2 - PRODUCTS

2.01 MATERIALS, GENERAL:

A. Source Limitations: Provide waterproofing system materials and accessory products from a single-source system manufacturer.

2.02 PERFORMANCE REQUIREMENTS:

A. General: Waterproofing system shall be capable of performing as a continuous watertight installation and as a moisture drainage plane transitioned to adjacent flashings and discharging water to the building exterior. Waterproofing shall accommodate normal substrate movement, construction material transitions, opening transitions, penetrations, and perimeter conditions without resultant moisture deterioration.

B. Compatibility: Provide waterproofing system materials that are compatible with adjacent materials under conditions of service and substrates on which product is applied, as recommended by waterproofing manufacturer based on testing and field experience

2.03 UNDER SLAB SHEET WATERPROOFING SYSTEM:

A. Multi-Layer Sheet Waterproofing: Composite membrane of 63 mils thickness consisting of an EPDM watertight barrier layer, a hydro-reactive polymer core layer, an EPDM derivative/polymer hydro-reactive layer, and a non-woven polyethylene geotextile facing.
   1. Products: Subject to compliance with requirements, provide the following:
      a. Basis of Design Product: Tremco, Inc., TREMproof Amphibia
   2. Physical Properties:
      a. Elongation, ASTM D412: 709%
      b. Tensile Strength, ASTM D 412: 927 psi
      c. Nail Sealability, ASTM D1970, sect. 7.9: Passed
      d. Low Temp Flexibility @ -20° F, ASTM D1970, sect. 7.6: Unaffected, passed
      e. Peel Adhesion to Concrete, ASTM D903: 7.7 lbs./in.
      f. Strength at Break, ASTM D624: 161.51 psi
      g. Permeance, ASTM E96 B:0.069 US Perms, 0.016 US Perms (BW - Inverted Wet Cup)
      h. Resistance to Hydrostatic Head, ASTM D5385: Pass at 231 ft.²
      i. Thickness, ASTM D3767: 63 mils, 1.6mm
      j. Crack Cycling @ -9.4° F, 100 cycles, ASTM C836: Unaffected, Pass
      k. Puncture Resistance of Geomembranes, ASTM D4833: 52.4 kg/M
      l. Hydrostatic Pressure Resistance, ASTM D4068: Pass at 40 hrs.
      m. Water Absorption, ASTM D570: 0.13%
      n. Installation Temperatures: 32 to 95°F (0 to 35° C)
      o. Freeze/Thaw Cycles: no effect before or after installation
      p. Life Expectancy: Indefinite
      q. Color: Black

B. Accessory Materials:
   1. General: Furnish accessory materials recommended by waterproofing manufacturer for intended use and compatible with sheet waterproofing.
   2. Tapes: Waterproofing manufacturer's recommended tape for joints between sheets, membranes, or panels.
   3. Safety Overlap Tape: butyl-hybrid adhesive tape with a fleece face.

4. Basis of Design Product: Tremco, Inc. Tremco BG Grip Tape
5. Waterstops: hydro-reactive, water swelling, single component elastic sealant.
   a. Basis of Design Product – Adeka ULTRASEAL P-201
6. Joint Sealants: Termination Seals:
   a. Single component, high performance, medium-modulus, low-VOC, UV-stable, non-sag polyurethane sealant.
   b. Basis of Design Product: Tremco Inc.; Dymonic 100.

PART 3 - EXECUTION

3.01 EXAMINATION:

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements and other conditions affecting performance.
B. Surface Condition: Before applying waterproofing materials, examine substrate conditions.
C. Proceed with installation once unsatisfactory conditions have been corrected.

3.02 INTERFACE WITH OTHER WORK:

A. Sequencing of Work: Coordinate sequencing of waterproofing installation with work of other sections that form portions of building envelope moisture control to ensure that flashings and transition materials can be properly installed and inspected.
B. Subsequent Work: Coordinate waterproofing installation with work of other sections installed subsequent to waterproofing to ensure complete inspection of installed waterproofing and sealing of waterproofing penetrations necessitated by subsequent work.

3.03 PREPARATION:

A. Clean, prepare, and treat substrates. Fill voids with cement grout as recommended by manufacturer.
B. Formed Concrete Surfaces: Remove fins and projections. Fill voids, form-tie holes, and other defects greater than 1/4 inch (6 mm) in depth.
C. Horizontal Concrete Surfaces: Remove standing water, debris, and substances that may impair bonding of patching materials or effectiveness of waterproofing. Fill voids and other defects greater than 1/4 inch (6 mm) in depth.
D. Excavation Support and Protection System: Fill minor gaps and spaces 1 (25 mm) wide or wider with appropriate filling material. Cover or fill large voids and crevices.

3.04 INSTALLATION, GENERAL:

A. Install waterproofing and accessories according to manufacturer's written instructions.
   1. Install a continuous layer of waterproofing membrane with ends and edges lapped a minimum of 2-4 inches (102 mm). Stagger end joints, seal laps and treat fastener penetrations in accordance with manufacturer’s written instructions.
   2. Apply hydro-reactive expandable sealant around penetrations in horizontal and vertical surfaces, construction joints in substrate, and penetrations.
   3. Apply Tremco 830 sealant between all overlaps and compress with a 2” x 2” steel seam roller using pressure sufficient to adequately flatten/spread the sealant bead.
   4. Seal all overlaps with Tremco BG Grip Tape centered on the adjacent sheet edge, adhering to the white, non-woven fleece fabric layer facing the installer and pressing or rolling down to ensure full adhesion.
B. Protect waterproofing from damage during construction. Repair punctures, tears, and cuts.

3.05 BELOW-SLAB WATERPROOFING INSTALLATION:

A. Below Structural Slabs-on-Grade: Apply waterproofing membrane with black EPDM side down, and white, fleece fabric side up.
   1. Install membrane sheets with the fleece fabric side up. Tape all seams where subject to displacement during concrete placement.
   2. Install under footings, grade beams, and pile caps; or continue waterproofing through key joints between footings and foundation walls, and extend a minimum of 8 inches (200 mm) up or beyond perimeter slab forms. Stagger seams minimum 12 inches (305 mm).
   3. Install under slabs starting at lowest point, install a continuous layer of waterproofing membrane, with ends and edges lapped a minimum of 4 inches (102 mm).
   4. Protect waterproofing from damage caused by reinforcing bar supports with sharp edges

3.06 FIELD QUALITY CONTROL:

A. Engage a full time site representative qualified by the waterproofing membrane manufacturer to inspect substrate conditions, surface preparation, and application of the membrane, flashings, protection, and drainage components; and to furnish daily reports to Architect.
B. Reporting: Forward written inspection reports to the Architect of the inspection and test being performed.
C. Correction: Correct deficient applications not passing tests and inspections, make necessary repairs, and retest as required to demonstrate compliance with requirements.

3.07 PROTECTION AND CLEANING:

A. Protect waterproofing membrane from damage prior to concrete placement.

END OF SECTION 07 13 00

SECTION 07 14 16 – COLD FLUID-APPLIED WATERPROOFING

PART 1 - GENERAL

1.01 RELATED DOCUMENTS:

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

B. Section 07 13 00 "Sheet Applied Waterproofing" for under-slab waterproofing systems.

1.02 SUMMARY:

A. This Section includes:

1. Below-Grade Wall Cold Fluid-Applied Waterproofing System:
    a. Single-component polyurethane waterproofing.
    b. Protection Mat.

B. Provide waterproofing for below-grade exterior walls exposed to groundwater, including the following locations:

1. Coarse Screening Structure
2. Influent Wet Well/Pump Station

1.03 REFERENCE STANDARDS:

A. Publication Dates: Comply with standards in effect as of date of the Contract Documents unless otherwise indicated.

B. American Concrete Institute (ACI):

1. ACI 301 - Specification for Structural Concrete.

C. ASTM International:

1. ASTM C 140 - Test Methods for Sampling and Testing Concrete and Masonry Units and Related Units.
2. ASTM C 272 - Test Method for Water Absorption of Core Materials for Structural Sandwich Constructions.
3. ASTM C 578 - Specification for Rigid, Cellular Polystyrene Thermal Insulation.
4. ASTM C 836/ C 836M - Specification for High Solids Content, Cold Liquid-Applied Elastomeric Waterproofing Membrane for Use with Separate Wearing Course.
5. ASTM C 898/C 898 - Guide for Use of High Solids Content, Cold Liquid-Applied Elastomeric Waterproof Membrane with Separate Wearing Course.
6. ASTM C 920 - Specification for Elastomeric Joint Sealants.
7. ASTM C 1193 - Guide for Use of Joint Sealants.
8. ASTM C 1471 - Guide for the Use of High Solids Content Cold Liquid-Applied Elastomeric Waterproofing Membrane on Vertical Surfaces.
9. ASTM D 1621 - Test Method for Compressive Properties of Rigid Cellular Plastics.
10. ASTM D 4258 - Practice for Surface Cleaning Concrete for Coating.
11. ASTM D 4259 - Practice for Abrading Concrete.
12. ASTM D 4263 - Test Method for Indicating Moisture in Concrete by the Plastic Sheet Method.
13. ASTM D 5385 - Test Method for Hydrostatic Pressure Resistance of Waterproofing Membranes.
14. ASTM D 5957 - Guide for Flood Testing Horizontal Waterproofing Installations.
15. ASTM D 6506 - Specification for Asphalt Based Protection Board for Below-Grade Waterproofing.

D. National Roofing Contractors Association (NRCA):

1. The NRCA Waterproofing Manual. Rosemont, Ill: NRCA, 2005.

E. Sealant, Waterproofing Contractors Association:

1. Below Grade Waterproofing Manual. Kansas City, MO: SWRI, 2000.

1.04 PREINSTALLATION MEETINGS:

A. Preinstallation Conference: Conduct conference at Project Site.
   1. Review waterproofing requirements including, but not limited to, the following:
      a. Surface preparation specified in other sections.
      b. Minimum curing period.
      c. Forecasted weather conditions.
      d. Special details and sheet flashings.
      e. Repairs.

1.05 SUBMITTALS:

A. Submit as specified in DIVISION 01.
B. Product Data: For each type of product.
   1. Include construction details, material descriptions, and tested physical and performance properties of waterproofing.
   2. Include manufacturer's written instructions for evaluating, preparing, and treating substrate.
C. Shop Drawings:
   1. Show locations and extent of waterproofing.
   2. Include details for substrate joints and cracks, sheet flashings, penetrations, inside and outside corners, tie-ins with adjoining waterproofing, and other termination conditions.
D. Field quality-control reports.
E. Sample Warranties: For special warranties.

1.06 QUALITY ASSURANCE:

A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by waterproofing manufacturer.
B. Mockups: Build mockups to verify selections made under Sample submittals and to set quality standards for installation.

1.07 FIELD CONDITIONS:

A. Environmental Limitations: Apply waterproofing within the range of ambient and substrate temperatures recommended in writing by waterproofing manufacturer.
   1. Do not apply waterproofing to a damp or wet substrate, when relative humidity exceeds 85%, or when temperatures are less than 5ºF (3ºC) above dew point.
   2. Do not apply waterproofing in snow, rain, fog or mist, or when such weather conditions are imminent during application and curing period.
B. Maintain adequate ventilation during application and curing of waterproofing materials.

1.08 WARRANTY:

A. Manufacturer's Special Warranty: Manufacturer agrees to repair or replace waterproofing that fails in materials or workmanship within specified warranty period.
   1. Warranty Period: Ten (10) years from date of Substantial Completion.
B. Installer's Special Warranty: Specified form, signed by Installer, covering Work of this Section, for warranty period of one (1) years.
   1. Warranty includes removing and reinstalling protection board, drainage panels, insulation.
C. Warranties shall comply with the requirements of Section 01 78 36.

PART 2 - PRODUCTS

2.01 MATERIALS, GENERAL:

A. Source Limitations: Provide waterproofing system materials and accessory products from a single-source system manufacturer.

2.02 PERFORMANCE REQUIREMENTS:

A. General: Waterproofing system shall be capable of performing as a continuous watertight installation and as a moisture drainage plane transitioned to adjacent flashings and discharging water to the building exterior. Waterproofing shall accommodate normal substrate movement, construction material transitions, opening transitions, penetrations, and perimeter conditions without resultant moisture deterioration.

B. Compatibility: Provide waterproofing system materials that are compatible with adjacent materials under conditions of service and substrates on which product is applied, as recommended by waterproofing manufacturer based on testing and field experience

2.03 BELOW-GRADE WALL COLD FLUID-APPLIED WATERPROOFING SYSTEM:

A. Single-Component Polyurethane Waterproofing:
   1. Single-Component, Modified Polyurethane Waterproofing: ASTM C836.
      a. Products: Subject to compliance with requirements, provide the following
         (1) TREMproof 250 GC @ 60 mils wet min.
         (2) Or Architect approved equal.

B. Auxiliary Materials:
   1. General: Provide auxiliary materials recommended in writing by waterproofing manufacturer for intended use and compatible with one another and with waterproofing.
      a. Furnish liquid-type auxiliary materials that comply with VOC limits of authorities having jurisdiction.
   2. Primer: Manufacturer's standard primer, sealer, or surface conditioner; factory-formulated acrylic latex, polyurethane, or epoxy.
   3. Sheet Flashing: 50-mil (1.3-mm) minimum, nonstaining, uncured sheet neoprene.
      a. Adhesive: Manufacturer's recommended contact adhesive.
   4. Joint Reinforcing Strip: Manufacturer's recommended fiberglass mesh or polyester fabric.
   5. Joint Sealant: Multicomponent polyurethane sealant, compatible with waterproofing; ASTM C920, Type M, Class 25 or greater; Grade NS for sloping and vertical applications. Use NT exposure and as recommended by manufacturer for substrate and joint conditions.
      a. Backer Rod: Closed-cell polyethylene foam.

2.04 PROTECTION COURSE:

A. Protection Mat:
   1. UV-resistant lightweight polyester mat.
      a. Basis of Design Product:
         (1) Tremco, Protection Mat.
         (2) Or Architect approved equal.

PART 3 - EXECUTION

3.01 EXAMINATION:

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements and other conditions affecting performance.
   1. Verify that concrete has cured and aged for minimum time period recommended by waterproofing manufacturer.
   2. Verify that substrate is visibly dry and free of moisture. Test for capillary moisture by plastic sheet method according to ASTM D4263.
   3. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 SURFACE PREPARATION:

A. Clean and prepare substrate according to manufacturer's written recommendations. Provide clean, dust-free, and dry substrate for waterproofing application.
B. Mask off adjoining surfaces not receiving waterproofing to prevent spillage or overspray affecting other construction.
C. Remove grease, oil, bitumen, form-release agents, paints, curing compounds, acid residues, and other penetrating contaminants or film-forming coatings from concrete.

3.03 PREPARATION AT TERMINATIONS AND PENETRATIONS:

A. Prime substrate unless otherwise instructed by waterproofing manufacturer.
B. Apply waterproofing in two separate applications, and embed a joint reinforcing strip in the first preparation coat when recommended by waterproofing manufacturer.
   1. Provide sealant cants around penetrations joints when recommended by waterproofing manufacturer.

3.04 JOINT AND CRACK TREATMENT:

A. Prepare, treat, rout, and fill joints and cracks in substrate according to ASTM C1471 and waterproofing manufacturer's written instructions. Remove dust and dirt from joints and cracks, complying with ASTM D4258, before coating surfaces.
   1. Comply with ASTM C1193 for joint-sealant installation.
   2. Apply bond breaker between sealant and preparation strip.
   3. Prime substrate and apply a single thickness of preparation strip extending a minimum of 3 inches (75 mm) along each side of joint. Apply waterproofing in two separate applications and embed a joint reinforcing strip in the first preparation coat.
B. Install sheet flashing and bond to wall substrates where indicated or required according to waterproofing manufacturer's written instructions.
   1. Extend sheet flashings onto perpendicular surfaces and other work penetrating substrate according to ASTM C898.

3.05 WATERPROOFING APPLICATION:

A. Apply waterproofing according to ASTM C1471 and manufacturer's written instructions.
B. Start installing waterproofing in presence of manufacturer's technical representative.
C. Apply primer over prepared substrate.
D. Unreinforced Waterproofing Applications: Mix materials and apply waterproofing by spray, roller, notched squeegee, trowel, or other application method suitable to slope of substrate.
   1. Apply one or more coats of waterproofing to obtain a seamless membrane free of entrapped gases, with an average dry film thickness of 60 mils (1.5 mm) and a minimum dry film thickness of 50 mils (1.3 mm) at any point.

2. Apply waterproofing to prepared wall terminations and vertical surfaces.
3. Verify wet film thickness of waterproofing every 100 sq. ft. (9.3 sq. m).

3.06 PROTECTION INSTALLATION:

A. Protection Course: Cover waterproofing with protection course following curing of waterproofing and prior to backfilling. Overlap protection course joints.

3.07 FIELD QUALITY CONTROL:

A. Engage a full time site representative qualified by the waterproofing membrane manufacturer to inspect substrate conditions, surface preparation, and application of the membrane, flashings, protection, and drainage components; and to furnish daily reports to Architect.
B. Flood Testing: Flood test each deck area for leaks, according to recommendations in ASTM D5957, after completing waterproofing but before overlaying construction is placed. Install temporary containment assemblies, plug or dam drains, and flood with potable water.
   1. Flood to an average depth of 2-1/2 inches (64 mm) with a minimum depth of 1 inch (25 mm) and not exceeding a depth of 4 inches (100 mm). Maintain 2 inches (50 mm) of clearance from top of sheet flashings.
   2. Flood each area for 24 hours.
   3. After flood testing, repair leaks, repeat flood tests, and make further repairs until waterproofing installation is watertight.

3.08 CURING, PROTECTION, AND CLEANING:

A. Cure waterproofing according to manufacturer's written recommendations, taking care to prevent contamination and damage during application stages and curing.
B. Protect waterproofing from damage and wear during remainder of construction period.
C. Protect installed insulation drainage panels from damage due to ultraviolet light, harmful weather exposures, physical abuse, and other causes. Immediately after installation, provide temporary coverings where insulation will be subject to abuse and cannot be concealed and protected by permanent construction.
D. Clean spillage and soiling from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

END OF SECTION 07 14 16

SECTION 07 16 00 - BITUMINOUS DAMPPROOFING

PART 1 - GENERAL

1.01 RELATED DOCUMENTS:

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and DIVISION 01 Specification Sections, apply to this Section.

1.02 SUMMARY:

A. This Section includes the following:

B. Coal Tar-Epoxy dampproofing for all below grade exterior walls with occupiable spaces, non-liquid-containing structures (vaults, manholes, etc..) and structures with interior protective coatings, including the following locations:

1. AGS Basin – Pipe Gallery and Pump Room
2. Solids Handling Building – Foundation, Sludge Loadout Pump Trench, and Sludge Holding Tanks

C. Where below grade walls and slabs are exposed to groundwater, a waterproofing system, in lieu of dampproofing, shall be provided per Section 07 14 16 Cold Fluid-Applied Waterproofing and Section 07 13 00 Sheet Applied Waterproofing.

D. Not to be used in areas in contact with potable water.

1.03 SUBMITTALS:

A. Submit as specified in DIVISION 01.

B. Product data for type of product specified, including data substantiating that materials comply with requirements for dampproofing material specified. Include recommended method of application, recommended primer, number of coats, coverage or thickness, and recommended protection course.

1. Certification by dampproofing manufacturer that products supplied comply with local regulations controlling use of volatile organic compounds (VOCs).

1.04 QUALITY ASSURANCE:

A. Installer Qualifications: Engage an experienced Installer who has complete bituminous dampproofing similar in material, design, and extent to that indicated for this Project and with a record of successful in-service performance.

B. Single-Source Responsibility: Obtain primary dampproofing materials and primers from one source and by a single manufacturer. Provide secondary materials only as recommended by manufacturer of primary materials.

1.05 PROJECT CONDITIONS

A. Substrate: Proceed with dampproofing only after substrate construction and penetrating work have been completed.

B. Weather Limitations: Proceed with dampproofing only when existing and forecasted weather conditions will permit work to be performed according to manufacturer’s recommendations and warranty requirements.

C. Ventilation: Provide adequate ventilation during application of dampproofing in enclosed spaces. Maintain ventilation until dampproofing has thoroughly cured.

1.06 DELIVERY, STORAGE, AND HANDLING:

A. Deliver materials in sealed containers or cartons bearing the manufacturer’s label.

B. Protect materials to keep clean, dry, and within manufacturer’s temperature limitations.

1.07 WARRANTY

A. The Manufacturer shall warrant that all material shall be free from defects caused by faulty material or workmanship for a minimum period of one (1) year from the date of Substantial Completion, unless otherwise specified.

B. Warranties shall comply with the requirements of Section 01 78 36.

PART 2 - PRODUCTS

2.01 MANUFACTURERS:

A. Manufacturers: Subject to compliance with requirements, provide products of one of the following:

1. Coal Tar-Epoxy Dampproofing:
   a. Tnemec Tneme-Tar Hi Build Series 46H-413; 16-20 mils DFT.
   b. Or engineer approved equal

2.02 BITUMINOUS DAMPPROOFING:

A. General: Provide products recommended by manufacturer for designated application and suitable for service intended.

B. Cold-Applied, Coal Tar-Epoxy Dampproofing: Roll or spray applied heavy-duty water-resistant epoxy coating made with pitch for protection of concrete from severe chemical fumes and corrosive vapors. Coating shall be suitable for buried or immersion conditions.

PART 3 - EXECUTION

3.01 EXAMINATION:

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements and other conditions affecting performance.

B. Surface Condition: Before applying dampproofing materials, examine substrate conditions.

C. Proceed with installation once unsatisfactory conditions have been corrected.

3.02 PREPARATION:

A. Clean substrate of projections and substances detrimental to Work; comply with recommendations of prime materials manufacturer. Remove oil, grease form release agents, laitance, loose materials, and slick surfaces.

B. Install cant strips and similar accessories as recommended by prime materials manufacturer even though not indicated.

C. Formed Concrete Surfaces: Remove fins and projections. Fill voids, form-tie holes, and other defects greater than 1/4 inch (6 mm) in depth.

D. Fill voids, seal joints, and apply bond breakers, if any, as recommended by prime materials manufactuer, with particular attention at construction joints.

E. Install separate flashings and corner protection stripping, as recommended by prime materials manufacturer, to precede application of dampproofing. Comply with manufacturer's recommendations. Pay particular attention to requirements at building expansion joints, if any.

F. Surface prep per manufacturer recommendations: including abrasive blasting all surfaces per SSPC-SP13/NACE 6; ICRI CSP 2-4 Surface Preparation of Concrete.

G. Prime substrate as recommended by prime materials manufacturer.

H. Protection of Other Work: Do not allow liquid and mastic compounds to enter and clog drains and conductors. Prevent spillage and migration onto other surfaes of work by masking or otherwise protecting adjoining work.

3.03 INSTALLATION, GENERAL:

A. Comply with manufacturer's recommendations except where more stringent requirements are indicated or specified and where Project conditions require extra precautions to ensure satisfactory performance of work.

B. Apply vertical dampproofing down walls from finished-grade line to top of footing, extend over top of footing, and down a minimum of 6 inches (150 mm) over outside face of footing. Extend 12 inches (300 mm) onto intersecting walls and footings, but do not extend onto surfaces exposed to view when the Project is completed.

3.04 PROTECTION AND CLEANING:

A. Protect exterior, below-grade dampproofing membrane from damage until backfill is completed. Remove overspray and spilled materials from surfaces not intended to receive dampproofing.

END OF SECTION 07 16 00

SECTION 09 90 00 – PROTECTIVE COATINGS

PART 1 - GENERAL

1.01 RELATED DOCUMENTS:

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and DIVISION 01 Specification Sections, apply to this Section.

1.02 SUMMARY:

A. This Section includes coating of exterior and interior surfaces throughout the Project and which are listed in PART 2, with systems specified on "coating system" sheets at the end of this Section.

B. Coating systems include surface preparation, prime coat (first coat), finish coats (second and third coats), inspection, cleaning, and touch-up of surfaces and equipment. Shop preparation, prime coat, and finish coats to be shop-applied, may be specified elsewhere or referenced to this Section so that a complete system is specified and coordinated.

1. Where surface preparation and first (prime) coat are specified in other Sections to be shop-applied, such as for structural steel, hollow metal doors or equipment, only the touch-up and finish coats are a part of field painting. Surface preparation is the required degree of preparation prior to application of first (prime) coat regardless if done in shop or field.
2. If materials are provided without shop primer such as miscellaneous steel or sheet metal, then surface preparation, first, second, and third coats are a part of field painting.

1.03 RELATED REQUIREMENTS:

A. Shop Painting and Coatings: All applicable Divisions.

B. Factory Prefinished Items: All applicable Divisions.

1.04 REFERENCE STANDARDS:

A. Applicable Standards:

1. American National Standards Institute (ANSI):
   a. A13.1 - Scheme for the Identification of Piping Systems.
   b. Z53.1 - Safety Color Code for Marking Physical Hazards.
2. American Society for Testing and Materials (ASTM):
   a. D4259 - Abrading Concrete.
3. Society for Protective Coatings (SSPC) Surface Preparation Specifications:
   a. SP1 - Solvent Cleaning: Removes oil, grease, soil, drawing and cutting compounds, and other soluble contaminants.
   b. SP2 - Hand Tool Cleaning: Remove loose material. Not intended to remove adherent mill scale, rust, and paint.
   c. SP3 - Power Tool Cleaning: Removes loose material. Not intended to remove all scale or rust.
   d. SP5 - White Metal Blast Cleaning: Removes all scale, rust, foreign matter. Leaves surface gray-white uniform metallic color.
   e. SP6 - Commercial Blast Cleaning: Two-thirds of every nine square inches free of all visible residues; remainder only light discoloration.
   f. SP10 - Near-White Blast Cleaning: At least 95% of every nine square inches shall be free of all visible residues.
   g. SP11 - Power Tool Cleaning to Bare Metal.
   h. SP13 – Surface Preparation of Concrete.

1.05 SUBMITTALS:

A. Submit as specified in DIVISION 1.

B. Includes, but not limited to, the following:

1. Schedule of products and paint systems to be used. Schedule shall include the following information:
   a. Surfaces for system to be applied.
   b. Surface preparation method and degree of cleanliness.
   c. Product manufacturer, name, and number.
   d. Method of application.
   e. Dry film mil thickness per coat of coating to be applied.
2. Color charts for selection and acceptance.
3. Technical and material safety data sheets.
4. Certification(s) by coating manufacturer(s) that all coatings are suitable for service intended as stated on each coating system sheet. If manufacturer has an equivalent product as that specified, and it is suitable for the intended purpose, Contractor shall submit the recommended product for approval at no increase in cost, and state reasons for substitution.
5. Contractor shall certify in writing to the Engineer/Architect that applicators have previously applied all the systems in this Specification and have the ability and equipment to prepare the surfaces and apply the coatings correctly.

C. Submittals for industrial maintenance coatings shall be prepared by, or have assistance in preparation of, a corrosion engineer or industrial coatings technical representative of the coating manufacturer.

1.06 QUALITY ASSURANCE:

A. Include on label of container:

1. Manufacturer's name, product name, and number.
2. Type of paint and generic name.
3. Color name and number.
4. Storage and temperature limits.
5. Mixing and application instructions, including requirements for precautions which must be taken.
6. Drying, recoat, or curing time.

B. A coating report shall be completed daily by Contractor at each phase of the coating system starting with surface preparation. These shall be submitted on the form attached at end of this Section.

C. In the event a problem occurs with coating system, surface preparation, or application, Contractor shall require coating applicator and coating manufacturer's technical representative to promptly investigate the problem and submit results to Engineer/Architect.

1.07 DELIVERY, STORAGE, AND HANDLING:

A. Delivery of Materials:

1. Deliver in sealed containers with labels and information legible and intact. Containers shall also have correct labels with required information.

1.08 REGULATORY REQUIREMENTS:

A. In addition to requirements specified elsewhere for environmental protection, provide coating materials that conform to the restrictions of the U.S. EPA and the local and regional

jurisdictions. Notify Engineer/Architect of any coating specified herein that fails to conform to the requirements for the location of the Project or location of application.

B. Lead Content: Use only coatings that are totally lead free.
C. Chromate Content: Do not use coatings containing zinc-chromate or strontium chromate.
D. Asbestos Content: Materials shall not contain asbestos.
E. Mercury Content: Materials shall not contain mercury or mercury compounds.

1.09 WARRANTY

A. The Manufacturer shall warrant that all protective coatings shall be free from defects caused by faulty material or workmanship for a minimum period of one (1) year from the date of Substantial Completion, unless otherwise specified.
B. Warranties shall comply with the requirements of Section 01 78 36.

PART 2 - PRODUCTS

2.01 ACCEPTABLE MANUFACTURERS:

A. Proprietary names and product numbers are specified in most systems for material identification from these manufacturers:
   1. Ameron Protective Coatings Systems Group, PPG.
   2. Carboline Company, Inc.
   3. Tnemec Company, Inc.
   4. Sherwin-Williams.

2.02 GENERAL:

A. Materials furnished for each coating system must be compatible to the substrate.
B. When unprimed surfaces are to be coated, entire coating system shall be by the same coating manufacturer to assure compatibility of coatings.
C. When shop-painted surfaces are to be coated, ascertain whether finish materials will be compatible with shop coating. Inform Engineer/Architect of any unsuitable substrate or coating conditions.

2.03 COATING SYSTEMS:

A. Specified on the "Protective Coating System" sheets at the end of this Section.

2.04 SURFACES TO BE COATED:

A. System A-5:
   1. Item: Steel Bollards and exterior exposed carbon steel
      a. Reference: DIVISION 05, Architectural, Civil and Structural Drawings
      b. Location: As indicated
B. System B-4:
   1. Item: New Galvanized Steel, Including: Doors and Frames, Veneer Lintels, and Hollowcore Support Angles.
      a. Reference: DIVISION 05, Architectural and Structural Drawings
      b. Location: As indicated
C. System E-1:
   1. Item: New Iron and Steel Process Piping, Valves, Motors, Pipe Supports, Pumps, Drains, Air Lines & Related Accessories. Interior Exposure, Exterior Surfaces & Non-Potable Liquid Immersion:
      a. Reference: DIVISION 22, 33, 41 & 46

b. Location: As indicated
2. Item: Misc. Non-galvanized Steel Interior Exposure, including interior structural steel:
   a. Reference: DIVISION 05 & drawings
   b. Location: As indicated
3. Item: Steel Hangers & Supports for Mechanical Equipment and Piping. Interior Exposure:
   a. Reference: DIVISION 05 & Mechanical Drawings
   b. Location: As indicated

D. System F-3:
1. Item: Interior CMU walls
   a. Reference: Architectural Drawings
   b. Location: As indicated

E. System J-2:
1. Item: Interior Gypsum Board
   a. Reference: Architecural Drawings
   b. Location: As indicated

F. Item: Blower Piping
1. Provide the following Tnemec system or engineer approved equal meeting the design criteria listed below:
   a. Coating System:
      (1) Fully protect, mask and seal off everything in the room that will not receive the coating system.
      (2) Surface preparation: New piping - SSPC-SP10 and profile depth of 1.5 to 2.5 mils
      (3) Prime with one coat of Tnemec Series 135 Chembuild @ 4.0-6.0 mils DFT.
      (4) Intermediate Coat(s): two coats Tnemec Series 971 Aerolon Acrylic at 30.0-50.0 mils DFT.
      (5) Topcoat with Tnemec series 1028-T Enduratone @ 2.0-3.0 mils DFT for a total of 66.0-109.0 mils DFT. Color as selected by the owner/engineer from all manufacturer's standard colors.
      (6) Thermal Conductivity of (ASTM C518 at 77°F): 0.0356 W/m-°K or 0.2468 BTU-in/ft²-hr-°F required.
   b. Reference: Process Drawings
   c. Location: As indicated

G. Item: Interior Chemical Containment Area: Polymer Concrete Containment
1. Provide the following Tnemec system or approved Sherwin Williams or Carboline equal meeting the design criteria listed below:
   a. Coating System:
      (1) Surface Preparation: Allow new cast-in-place concrete to cure a minimum of 28 days at 75°F (24°C). Verify concrete dryness and prepare concrete surfaces in accordance with NACE No. 6/SSPC-SP13 Joint Surface Preparation Standards and ICRI Technical Guidelines. Moisture vapor transmission should not exceed three lbs. per 1,000 sq. ft. in a 24-hour period. Relative humidity should not exceed 80%. Abrasive blast, shot-blast or mechanically abrade concrete surfaces to remove laitance, curing compounds, hardeners, sealers and other contaminants and to provide a minimum ICRI-CSP 5 or greater surface profile. Large cracks, voids and other surface imperfections should be filled with a recommended filler or surfacer.

(2) Primer: Series 251SC @ 6.0-8.0 mils D.F.T.
(3) Base Coat: Series 252SC Chembloc MCK System w/fiberglass mat reinforcement per manufacturer's direction @ 60.0 - 80.0 mils.
(4) Saturant Coat: Series 252SC Chembloc @ 6.0-8.0 mils.
(5) Top Coat: Series 252SC Chembloc @ 6.0-8.0 mils. System Total D.F.T. of 78.0-104.0 mils minimum.

b. Reference: Process Drawings
c. Location: Polymer containment structure inside the Solids Handling Building; exposed concrete including; interior concrete surfaces including walls, curbing, floor, tank pads, sumps, and top of wall.

H. Item: Influent Wet Well/Pump Station, Coarse Screening Structure, Covered Thickened Sludge Holding Tanks, Headworks Channels. Concrete Immersion: Raw sewage.
1. Provide the following Tnemec system or engineer approved equal meeting the design criteria listed below:
a. Coating System:
(1) Fully protect, mask and seal off everything in the space that will not receive the coating system.
(2) Surface Preparation: High pressure water blast all areas with a minimum 3000-5000 lbs. psi at the tip at a rate of 3-5 gallons/minute, utilizing an orbital tip and TSP detergent additive to remove chalk, loose paint and other contaminants, followed by a clean water rinse. ASTM D4258.
(3) Verify concrete dryness and prepare concrete surfaces in accordance with NACE No. 6/SSPC-SP13.
(4) Joint Surface Preparation Standards and ICRI Technical Guidelines. Moisture vapor transmission should not exceed three lbs. per 1,000 sq. ft. in a 24-hour period.
(5) Relative humidity should not exceed 80%.
(6) Abrasive blast, shot-blast or mechanically abrade concrete surfaces to remove laitance, curing compounds, hardeners, sealers and other contaminants and to provide a minimum ICRI-CSP 5 or greater surface profile.
(7) Large cracks, voids and other surface imperfections should be filled. Clean & Dry per ASTM D4258.
(8) Parge coat 1/16” - 1/4" thick with Tnemec Series 218
(9) Finish Coat: Apply one coat of Series G435 Perma-Glaze @ 30.0-40.0 mils DFT per coat for a total of 30.0-40.0 mils DFT. Color as selected by engineer from manufacturer’s standard colors.
(10) Field touch-up.
b. Reference: Structural Drawings, Process Drawings
c. Location: All interior concrete surfaces exposed to wastewater. Including, face of concrete wall, concrete floor, concrete ceiling, and top of concrete wall.
d. Top Coat Color: 31GR Slate Gray

I. Item: Resinous Floor and Base System
1. Provide the following Tnemec system or engineer approved equal meeting the design criteria listed below.
a. Provide resinous floor system 2’-0” by 2’-0” mock-up for approval before applying coating system.
b. Coating System:

(1) Fully protect, mask and seal off everything in the room that will not receive the coating system, including floor drains.
(2) Surface preparation: Prepare concrete surfaces in accordance with NACE No. 6/SSPC-SP13 Joint Surface Preparation Standards and ICRI Technical Guidelines. Abrasive blast, shot-blast, water jet or mechanically abrade concrete surfaces to remove laitance, curing compounds, hardeners, sealers and other contaminants to provide a minimum ICRI-CSP 4-5 surface profile. Large cracks, voids and other surface imperfections should be filled with a recommended filler or surfacer.
(3) Prime with Series 241 Ultra-Tread MVT @ 46.0-52.0 mils DFT w/first broadcast coat
(4) Coat with Series 222 Deco-Tread @ 1/16" minimum DFT w/ one broadcast application
(5) Topcoat with series 248 Everthane @ 2.0-3.0 mils DFT.
(6) Color as selected by the architect from manufacturer's full range of colors.

c. Physical Properties:
(1) Compressive Strength: Minimum 14,000 psi.
(2) Flexural Strength: Minimum 4,500 psi.
(3) Water Absorption: 0.2%.
(4) Chemical resistance of cured floor surfacing system as indicated below. Test to qualify coatings for chemical splash and fumes (NACE TM-01-74 Procedure B):
(5) No effect from the following: Acetic acid (100%), chromic acid (10%), citric acid (20%), formaldehyde (37%), heavy duty detergent, hydrochloric acid (37%), hydrogen peroxide (28%), lactic acid (85%), mineral spirits, nitric acid (40%), oleic acid, oxalic acid (10%), phosphoric acid (85%), potassium hydroxide (50%), sulfuric acid (75%), tannic acid (20%), tartaric acid (10%), urine.
(6) System Thickness: 1/8 inch (6.4 mm).
(7) Wearing surface: Anti-slip.
(8) Components:
(a) Primer.
(b) Chemical-resistant sealing or finish coats.

d. Reference: Architecural Drawings
e. Location: As indicated

J. Item: Resinous Wall System
1. Provide the following Tnemec system or approved equal meeting the design criteria listed below.
a. Provide resinous wall system 2'-0" by 2'-0" mock-up for approval before applying coating system.
b. Coating System:
(1) Coating system to be smooth with a glossy appearance.
(2) Fully protect, mask and seal off everything in the room that will not receive the coating system.
(3) Surface preparation: Prepare concrete surfaces in accordance with NACE No. 6/SSPC-SP13 Joint Surface Preparation Standards and ICRI Technical Guidelines. Abrasive blast, shot-blast, water jet or mechanically abrade concrete surfaces to remove laitance, curing compounds, hardeners, sealers and other contaminants to provide a minimum ICRI-CSP 2-3 surface profile.

Large cracks, voids and other surface imperfections should be filled with a recommended filler or surfacer.

(4) Surfacer: Tnemec Series215 and Series 211 as required. Fill all holes and grout lines smooth.

(5) Glass Mat: Tnemec Series273 mat

(6) Saturate: Tnemec Series 273

(7) Grout Coat: Tnemec Series 280

(8) Finish Coat: Tnemec Series 297

(9) Color as selected by the architect from manufacturer's full range of colors.

c. Reference: Architecural Drawings

d. Location: As indicated

K. Item: Exterior Concrete Secondary Chemical Containment, all interior concrete surfaces at Containment Structures including walls, curbing, floor, tank pads, sumps, and top of wall.

1. Provide the following Tnemec system or engineer approved equal meeting the design criteria listed below:

a. Coating System:

(1) Fully protect, mask and seal off everything that will not receive the coating system.

(2) Surface Preparation: Allow new cast-in-place concrete to cure a minimum of 28 days at 75°F (24°C). Verify concrete dryness and prepare concrete surfaces in accordance with NACE No. 6/SSPC-SP13 Joint Surface Preparation Standards and ICRI Technical Guidelines. Moisture vapor transmission should not exceed three lbs. per 1,000 sq. ft. in a 24-hour period. Relative humidity should not exceed 80%. Abrasive blast, shot-blast or mechanically abrade concrete surfaces to remove laitance, curing compounds, hardeners, sealers and other contaminants and to provide a minimum ICRI-CSP 5 or greater surface profile. Large cracks, voids and other surface imperfections should be filled with a recommended filler or surfacer.

(3) Primer: Series 251SC @ 6.0-8.0 mils D.F.T.

(4) Base Coat: Series 252SC Chembloc MCK System w/fiberglass mat reinforcement per manufacturer's direction @ 60.0 - 80.0 mils.

(5) Saturant Coat: Series 252SC Chembloc @ 6.0-8.0 mils.

(6) Top Coat: Series 252SC Chembloc @ 6.0-8.0 mils. System Total D.F.T. of 78.0-104.0 mils minimum.

(7) Outdoor Chemical Containment Basins Top Coat: Series 290 CRU Aliphatic Urethane @ 2.0-3.0 mils D.F.T.

(a) Reference: Process and Structural Drawings.

(b) Location: Hydrogen Peroxide containment structure exposed concrete, including walls, curbing, floor, tank pads, sumps, and top of curb wall.

(c) Top Coat Color: 31GR Slate Gray

2.05 SURFACES NOT TO BE COATED:

A. Do not field coat any of the following items unless specifically noted otherwise.

1. Copper, stainless steel, aluminum, FRP fabrications, Conduit, PVC piping.

2.06 COLOR CODING OF PIPING AND PHYSICAL HAZARDS:

A. Color Coding of Piping: Exterior and interior by color coding entire pipe.

1. General:
   a. Coat piping with solid colors as specified below for entire length of pipe in exposed finished and unfinished areas. Exclude areas in pipe chases and furred areas.
   b. Piping colors to be selected by Engineer/Architect.
   c. Coat all other piping in colors matching adjacent surfaces. If adjacent area is unfinished, paint in color determined by Engineer/Architect.
   d. After completion of finish coating, identify piping with band, legend and, arrows as specified below. Apply after completion of finish coating.
   e. For most pipe labeling, refer to section 22 05 53. Where not applicable, refer to pipe stenciling parameters below.
2. Color Scheme:

Description	Color	Notes
Potable	Dark Blue	Ref Plumbing/Process Drawings.
Process Non-Potable Water	Purple	Ref Process Drawings. Identification required: "CAUTION: NONPOTABLE WATER – DO NOT DRINK"
Drain	Dark Gray	Ref Process Drawings.
Influent	Gray	Ref Process Drawings
Blower Piping	Light Green	Ref Process Drawings
RAS	Tan	Ref Process Drawings.
WAS	Brown	Ref Process Drawings.
Clarified Effluent	Light Gray	Ref Process Drawings.
Filter Effluent	Light Gray	Ref Process Drawings.
Gas	Yellow	Ref Mechanical Drawings.
Plumbing Non-Potable Water	Purple	Ref Plumbing Drawings. Identification required: "CAUTION: NONPOTABLE WATER – DO NOT DRINK"

3. Location of Legends and Arrows:
   a. Place on piping near connections to Equipment, adjacent to valves or fittings, on both sides of walls penetrated, and at intervals not to exceed 50 feet (15 meters).
   b. Place arrows adjacent to or below legends depending upon visibility. Place arrows in direction of flow. For dual-flow piping, indicate both directions.
   c. Locate legends to be visible from normal line of vision above floor level. Legend locations subject to approval of Engineer/Architect.
4. Letter Size:
   a. Block-style letters, all capitals, conforming to ANSI A13.1.

Outside Diameter of Pipe or Covering	Width of Banding	Size of Letters and Arrows
Less than 3/4" (19 mm)	6" (150 mm)	Approved metal tag or band
3/4" to 1-1/4" (19 mm to 32 mm)	8" (200 mm)	1/2" (13 mm)
1-1/2" to 2" (38 mm to 50 mm)	10" (250 mm)	3/4" (19 mm)
2-1/2" to 6" (64 mm to 150 mm)	12" (300 mm)	1-1/4" (32 mm)

8" to 10" (200 mm to 250 mm)	24" (600 mm)	2-1/2" (64 mm)
Over 10" (250 mm)	32" (800 mm)	3-1/2" (89 mm)

B. Color Coding Physical Hazards: Exterior and interior.
   1. General:
      a. Paint areas indicated to identify physical hazard areas as required by ANSI Z53.1.
      b. All colors shall conform to Federal Safety Color Code requirements.

PART 3 - EXECUTION

3.01 SURFACE PREPARATION:

A. Prepare surfaces for each coating system conforming to SSPC or ASTM surface preparation specifications listed.
   1. If grease or oils are present, SSPC-SP1 shall precede any other method specified for metal substrates.
   2. Remove surface irregularities such as weld spatter, burrs, or sharp edges prior to specified surface preparation.

B. Depth of profile will be as specified or as recommended by the manufacturer for each system, but in no instance shall it exceed one-third of the total dry film thickness of complete system.

C. Prepare only those areas which will receive the first coat of the system on the same day.
   1. On steel substrates, apply coating before rust bloom forms.

3.02 APPLICATION:

A. Apply coatings in accordance with coating manufacturer's recommendations.

B. Use properly designed brushes, rollers, and spray equipment for all applications.

C. On unprimed surfaces apply first coat of the system the same day as surface preparation.

D. Dry film thickness of each system shall meet the minimum specified. Maximum dry film thickness shall not exceed the minimum more than 20% or coating manufacturer's requirements if less. Where a dry film thickness range is specified, the range shall not be less than or exceeded.

E. Shop and field painting shall remain 3 inches (75mm) away from unprepared surface of any substrate such as areas to be welded or bolted.

F. Environmental Conditions:
   1. Atmospheric temperature must be 50°F (10°C) or higher during application, unless otherwise approved by coating manufacturer. Do not apply coatings when inclement weather or freezing temperature may occur within coating recoat cure times.
   2. Wind velocities for exterior applications shall be at a minimum to prevent overspray or fallout and not greater than coating manufacturer's limits.
   3. Relative humidity must be less than 85%. The ambient temperature and the temperature of the surface to be painted must be at least 5°F (2.8°C) above the dew point.
   4. Provide adequate ventilation in all areas of application to ensure that at no time does the content of air exceed the Threshold Limit Value given on the manufacturer's Material Safety Data Sheets for the specific coatings being applied.

G. Recoat Time: In the event a coating, such as an epoxy, has exceeded its recoat time limit, prepare the applied coating in accordance with manufacturer's recommendations.

H. Protection:
   1. Cover or otherwise protect surfaces not to be painted. Remove protective materials when appropriate.
   2. Mask, remove, or otherwise protect finish hardware, machined surfaces, grilles, lighting fixtures, and prefinished units as necessary.

3. Provide cover or shields to prevent surface preparation media and coatings from entering orifices in electrical or mechanical Equipment. Where ventilation systems must be kept in operation at time of surface preparation, take precautions to shield intakes and exhausts to prevent the materials from entering system or being dispersed.
4. Provide signs to indicate fresh paint areas.
5. Provide daily cleanup of both storage and working areas and removal of all paint refuse, trash, rags, and thinners. Dispose of leftover containers, thinners, rags, brushes, and rollers which cannot be reused in accordance with applicable regulations.
6. Do not remove or paint over Equipment data plates, code stamps on piping, or UL fire-rating labels.

3.03 INSPECTION:

A. Contractor shall provide and use a wet film gauges to check each application approximately every 15 minutes in order to immediately correct film thickness under or over that specified.
B. Contractor shall provide and use a dry film gauge to check each coat mil (mm) thickness when dry, and the total system mil (mm) thickness when completed.
C. Use holiday or pinhole detector on systems over metal substrates to detect and correct voids when indicated on system sheet.
D. Check air temperature and temperature of the substrate at regular intervals to be certain surface is 5ºF (2.8ºC) or more above the dew point.

3.04 CLEANING AND REPAIRS:

A. Remove spilled, dripped, or splattered paint from surfaces.
B. Touch up and restore damaged finishes to original condition. This includes surface preparation and application of coatings specified.
C. Provide remainder of open paint cans to owner for touch ups.

BURNS McDONNELL	PROTECTIVE COATING SYSTEM **System: A-5**

SERVICE:	Steel - Moderate to Severe Exposure (Nonimmersion)
Surface Preparation:	Shop: SSPC-SP6 and profile depth 1.5 to 2.5 mils (38 to 63 microns). Field: SSPC-SP2/3. Clean and dry.
First Coat:	High solids polyamine or polyamide epoxy with minimum 67% solids by volume. Apply at 5.0 to 7.0 mils (125 to 175 microns) dry film thickness.
Second Coat:	High solids aliphatic acrylic polyurethane gloss enamel with minimum 52% solids by volume. Apply at 3.0 to 5.0 mils (75 to 125 microns) film thickness.
System Total:	Minimum 8.0 mils (200 microns) dry film thickness.
Volatile Organic Content:	Maximum 2.8 lb/gal (340 g/L)

.

COATING MANUFACTURER	PRODUCT DESIGNATION		
	FIRST COAT	**TOUCH UP**	**SECOND COAT**
PPG	Amerlock 2 or 400	Same as first coat	Amercoat 450 H

Sherwin-Williams	Macropoxy 646 B58-600/B58V600	Same as first coat	HS Polyurethane B65-300 Series

BURNS McDONNELL	PROTECTIVE COATING SYSTEM System: **B-4**

SERVICE:	Nonferrous & Galvanized Metal — Moderate to Severe Exposure Exterior or Interior (Including Galvanized Handrail)
Surface Preparation:	Shop or field first coat: Remove oil or soap film with neutral detergent or emulsion cleaner.
First Coat:	Pretreat and/or allow to weather as recommended by coating manufacturer.
Second Coat:	High build polyamide or polyamidoamine epoxy with minimum 65% solids by volume. Apply at 4.0 - 6.0 mils (100 -150 microns) dry film thickness.
Third Coat:	High solids aliphatic acrylic polyurethane gloss enamel with minimum 60% solids by volume. Apply at 2.0 – 3.0 mils (50 – 75 microns) dry film thickness.
System Total:	Minimum 6.0 mils (150 microns) dry film thickness in addition to galvanizing.
Volatile Organic Content:	Maximum 2.8 lb/gal (340 g/L).

SECTION 32 31 13 – CHAIN LINK FENCE AND GATES

PART 1 - GENERAL

1.01 SCOPE OF WORK

A. Furnish all labor, materials, equipment and incidentals required and install the chain link fence and gates as shown on the Drawings and as specified herein.
B. Installation of Temporary Security Fence

1.02 SUBMITTALS

A. Submit as specified in DIVISION 1.
B. Includes, but not limited to, the following:
    1. Plan layout.
    2. Details illustrating fence height, sizes of posts, rails, braces, gates, and hardware list.
    3. Erection procedures.

1.03 REFERENCE STANDARDS

Applicable Standards:

A. Federal Specifications (FS):
    1. FF-B-575 - Bolts, Hexagon, and Square.
    2. RR-F-191J/GEN - Fencing, Wire and Post, Metal (and Gates, Chain-Link Fence Fabric, and Accessories) (General Specification).
    3. RR-F-191/2 - Fencing Wire and Post, Metal (Chain-Link Fence Gates) (Detail Specification).
    4. RR-F-191/3 - Fencing Wire and Post, Metal (Chain-Link Fence Posts and Braces) (Detail Specification).
B. ASTM International (ASTM): Equivalent AASHTO standards may be substituted as approved.
    1. ASTM DI 784 – The Extruded product meet or exceed the standard.
    2. ASTM-F668 - Standard Specification for Polyvinyl Chloride (PVC),
    3. ASTM F2919, Specification for Welded Wire Mesh Fence Fabric (Metallic-Coated or Polymer Coated)

PART 2 - PRODUCTS

2.01 ACCEPTABLE MANUFACTURERS

A. Fences:
    1. Anchor Fence Division, Anchor Post Products Inc.
    2. U.S. Steel Supply Division, U.S. Steel Corp.
    3. Allied Tube & Conduit Corporation.
    4. Broski Fence
    5. Engineer approved equal.

2.02 GENERAL

A. Manufacturer's standard materials where such materials conform to these Specifications.
B. Conform to FS RR-F-191J/GEN except as indicated or specified otherwise.
C. Total Fence Height: 9-feet
    1. Fence Fabric Height: 8-feet.
    2. Height of Barbed Wire: 1-foot.
D. Finish for framework and appurtenances: Galvanized with minimum weight for zinc per square foot as follows:

1. Pipe: Conform to FS RR-F-191/3.
2. Square Tubing: 2.0 ounces.
3. H-Sections: 2.0 ounces.
4. C-Sections: 2.0 ounces.
5. Hardware and accessories: PVC Coated following ASTM DI784 or ASTM F668 specification

2.03 POSTS AND BRACES

Minimum size and weight as follows:

A. Posts:
   1. End, Corner or Pull Posts, Line Posts, and Gate Posts: Conform to FS RR-F-191/3 (Table I).
B. Post Bracing:
   1. Diagonal galvanized truss rods 3/8-inch in diameter equipped with truss tightener.
   2. Horizontal Braces: Size SP1 conforming to FS RR-F-191/3.
C. Stretcher Bars:
   1. One piece. Length to be 1 inch less than fabric height.
   2. 3/16-inch x 3/4-inch, galvanized.
D. Post Tops:
   1. Designed as a weathertight closure cap for tubular posts.
   2. Malleable iron or pressed steel, both galvanized.
   3. Attached to steel posts or intergrate with post top.
   4. Malleable iron or pressed steel, both galvanized.
E. Bolts:
   1. Zinc coated.
   2. Conform to FS FF-B-575.

2.04 FABRIC

A. No. 8-gage (9-gage core), 1-inch diamond mesh chain-link fabric with PVC coating. Minimum breaking strength of the wire shall be 1,200 pounds.
B. Both selvages twisted for fabric 6'-0" and over.
C. Top and bottom selvage knuckled for fabric 5'-0" and under.
D. Fabric fastenings of 9-gage galvanized wire ties.
E. Color: ASTM F934-Black

2.05 SLIDING CANTILEVERED GATE

A. Framing:
   1. Inverted channel track, roller ball-bearing truck assemblies, guides, stays, bracing, hardware, and accessories as required.
   2. Intermediate horizontal and vertical members for proper gate operation and for attachment of fabric, hardware, and accessories. Space so that frame members are not more than 8 ft. apart unless otherwise indicated.
   3. Frames assembled by welding or watertight galvanized steel rigid fittings.
   4. Diagonal cross bracing of 3/8 inch diameter adjustable truss rods to provide frame rigidity.
B. Slide Gate Motor Operator and Accessories:
   1. Motor Operator:
      a) Provide a heavy duty electric-motor operator for operating the sliding cantilevered gate. Operator shall be sized to operate gate specified and indicated.

b) Suitable for outdoor use with all parts suitably protected against corrosion and with lockable weather-resistant cover.
c) Operator shall be designed for either left or right hand mounting and shall be designed for pad mounting.
d) System designed to operate on a 240V, single-phase power supply.
e) Unit shall consist of instantly reversing motor with overload protection, magnetic brake, safety clutch, and automatic limit switch. Provide with releasing switch in case of power failure.
f) Provide with mounting channels. Operator enclosure shall be mounted on a concrete pad, size as required.
g) Flexible hinged connections to conduit, if required.

2. Safety Devices:
a) Provide gate edges with contact sensors to reverse the gate upon contact with an object.
b) Provide one loop detector: Used to sense exiting vehicle traffic and provide a request to exit to the gate access control system. Provide all cabling and components for complete installation.
c) Non-contact sensors, or contact sensors, or a combination thereof, shall be utilized to prevent persons from becoming entrapped in the gate system.
d) Provide units with adjustable entry and exit timers.
e) Provide for emergency vehicle entrance through gate via audible siren detector

2.06 BARBED WIRE:
A. 12-1/2 Gauge 4 point Class 3
B. Number of Strands: 3
C. Barbed Wire Height: 12-inches (Quantity 3 strands above fence fabric)
1. Angled at 30 degree to 45 degree angle above horizon away from the facility.
2. Vertical on sliding cantilevered gate.

PART 3 – EXECUTION

3.01 PREPARATION:
A. Perform final grading prior to installation of fence.
B. Follow general contour of ground and properly align fence. Install as indicated.

3.02 INSTALLATION – POSTS AND BRACES
A. Posts:
1. Set in concrete bases as indicated. Trowel finish tops of footings and dome to direct water away from posts.
2. Install plumb and in straight alignment.
3. Space 10 feet center-to-center maximum.
4. Install pull posts:
a. Every 300 feet.
b. At all abrupt changes in grade.
c. At all changes in direction of 15 degrees or more.
d. Temporarily brace until concrete in bases has set.

B. Post Bracing:
1. Install at each end, pull and gate post, and each side of each corner post.
2. Install after concrete in post bases has set.
3. Install so posts are plumb when diagonal rod is under tension.

C. Stretcher Bars:
    1. Thread through or clamp to fabric 4 inches oc.
    2. Secure to posts with metal bands spaced 14 inches oc maximum.
    3. Install at each gate, pull and end post, and each side of corner post.
D. Post Tops: Install on each gate post.

3.03 INSTALLATION - FABRIC:

A. Fabric:
    1. Stretch taut with equal tension on each side of line posts.
    2. Fasten to steel posts with wire ties.
    3. Space wire ties at 14 inches oc maximum on posts.
    4. Rolls of fabric shall be joined together by weaving a single strand into the end of the roll to form a continuous piece.

3.04 REPAIRING DAMAGED COATINGS

A. Repair any damaged coatings in the shop or field by recoating with compatible and similar coating.
B. Apply per manufacturer's recommendations.

3.05 MOTOR OPERATED GATES:

A. Install all hardware, tracks, framing, supports, electrical devices, wiring, loop controller, and appurtenances required for a complete system and satisfactory operation.
B. Install to conform to manufacturer’s instructions and as indicated.
C. Test and adjust system for smooth proper operation.

END OF SECTION 32 31 13

CITY OF FOUNTAINS
HEART OF THE NATION

KANSAS CITY
MISSOURI

ADDENDUM NUMBER 007

Project/Contract Number: 81000927/1698

Project Title: Todd Creek WWTP Expansion & Major Upgrade

ISSUE DATE: **February 23, 2026**

Bidders are hereby notified that the Bidding and Contract Documents for the above project, for which Bids are to be received on **February 24, 2026**, are amended as follows:

Information to Bidders The following is provided to Bidders for information only:

Contracting Changes:

1. Davis Bacon Wage Modification for construction types: Heavy and Highway has been updated from General Decision Number: MO20250001 Modification 11 Published 11/21/2025 to General Decision Number: MO20260001 Modification 1 Published on 01/09/2026. See specification 00830.1 FEDERAL PREVAILING WAGE - HEAVY for updated document.
2. Davis Bacon Wage Modification for construction types: Building has been updated from General Decision Number: MO20250079 Modification 11 Published 11/21/2025 to General Decision Number: MO20260079 Modification 1 Published on 01/30/2026. See specification 00830.2 FEDERAL PREVAILING WAGE - BUILDING for updated document.

Specification Changes:

1. Section 33 12 16 – Utility Valves and Accessories
    a. Table 3: Plug Valves Provided by Contractor
        i. Tag SCIN-VLV-111 – Full Port changed from No to Yes
        ii. Tag SCIN-VLV-211 – Full Port changed from No to Yes
        iii. Tag SCIN-VLV-112 – Full Port changed from No to Yes
        iv. Tag SCIN-VLV-212 – Full Port changed from No to Yes
        v. Tag SCIN-VLV-113 – Full Port changed from No to Yes
        vi. Tag SCIN-VLV-213 – Full Port changed from No to Yes
        vii.

Drawings Changes:

1. G005 – Added architectural mockup sheet
2. G006 – Added structural mockup foundation sheet
3. A210 – Updated room number and door number callouts
4. A280 – Updated door schedule
5. A380 – Updated door schedule
6. A481 – Updated door schedule
7. A780 – Updated door schedule
8. C102 – Updated scale

9. C123 – Updated scale
10. C127 – Updated scale
11. C138 – Updated scale
12. D108 – Updated sewer callouts
13. D116 – Original IFB drawing did not upload
14. D119 – Updated potable water material on profile
15. D128 – Updated Plant Sewer -2 Profile
16. D701 – Removed section callout
17. D702 – Removed section callout
18. D705 – Removed section callout; added (2) PS-3 to large bubble diffuser grid; modified general note 1
19. D709 – Added keyed note 5
20. D710 – Removed WAS line from iso view
21. D711 – added callouts to WAS line in iso view

Q1.	Door 200B in Influent Pump Station - Listed as door type "G" but no "G" type is specified... was this supposed to be type "C"? Please advise.
A1.	**Confusion is due to identical room and door numbers between the IPS electrical and coarse screening. The IPS electrical room number is revised to 210 on sheet A210. This in turn changes the doors to 210A and 210B on the plan and door schedule. 210B is changed to Type C. Sheets A210, A280, and A380 are revised.**
Q2.	Door 400A in Blower Building - Listed as door type "E" but no type "E" is specified. Please advise.
A2.	**Sheet A481 - Door 400A is revised to be C.**
Q3.	Door hardware set "B" or "C" are not in the specifications. Please advise.
A3.	**Sheet 780 - Changed B's to 2's and C's to 3's.**
Q4.	Door hardware specs call for Best IC Core in all locks, but hardware sets specifically call for standard cylinder type locks. Please advise.
A4.	**The specification calls for standard cylinders as opposed to high security. Standard cylinders still can be interchangeable or non-interchangeable. All cylinders need to be interchangeable matching the owner's BEST system used in their other facilities as specified.**
Q5.	Sheet D712 is not listed in the List of Drawings but is referenced on sheets D701, D702, and D705. Please advise if the detail should be referenced to another sheet or if the thickened sludge profile section will be added.
A5.	**Sheet D712 is not part of the drawing set. Revised sheets D701, D702, and D705 to remove section callout.**
Q6.	On the potable Water profiles, sheet 313 states 2" DIP which no one is manufacturing that size of DIP.
A6.	**Specification section 33 11 00-2.06 calls for copper piping for lines 2" and less. Use copper. Potable Water Profile 9 on drawing D119 (sheet 313 of 643) is revised.**
Q7.	Sheet no. 310 is missing from the plan package

A7.	**Sheet 310 is drawing D116. Drawing did not upload during initial advertisement on KC Planroom. Drawing is included in this addendum.**
Q8.	Scale on C102 and other Civils sheets showing the entire site seems to be wrong when checking against the Structural Sheets. For example on Sheet C102 the Influent Valve Vault scales at 26' X 14' however on the structural sheets it is called out to be 52' X 28'. Can you please verify?
A8.	**Sheets C102, C123, C127, and C138 are revised to show correct scale.**
Q9.	Can you confirm the blower piping material? The specifications call for carbon steel but some of the drawings call out both 304SS and carbon steel. Reference Sheet D413.
A9.	**Above grade air piping shall be carbon steel. Sheet D413, D414, D415, & D416 have been revised accordingly in addendum 6.**
Q10.	Given the potential impact of tariffs on materials and supplies, could you please share how the City plans to address these challenges? As equipment manufacturers and contractors do not have control over tariff-related cost fluctuations, there is a possibility that certain goods required for this project may be affected.
A10.	**Fixed-price public works contracts inherently allocate market risk to contractors.**
Q11.	Specification 46-21 16 – Screening Equipment, Section 2.04-B.4.g.1 specifies stainless steel chain rollers. Our standard material for chain rollers is polyamide. Can polyamide be approved as an acceptable alternative?
A11.	**Yes, polyamide is an acceptable alternative.**
Q12.	Specification 46-21 16 – Screening Equipment, Section 2.04-B.5.b requires stainless steel side plates for the chains. Please clarify whether this refers to the sealing elements between the filter elements and screen frame, or to the chain guides. If it refers to the sealing elements, would our standard reinforced fiberglass material be acceptable?
A12.	**Vendor standard sealing element material is acceptable. Chain guides are called out separately in Section 2.04-B.5.e.**
Q13.	Specification 46-21 16 – Screening Equipment, Section 2.05.1 specifies a VFD for the wash press. Our standard configuration uses an IEC reversing starter with overload protection. Would this be acceptable in lieu of a VFD?
A13.	**A reversing starter would be acceptable in lieu of a VFD, however this will require NEMA starter, not IEC.**
Q14.	Specification 46-21 16 – Screening Equipment, Section 2.07-B.4 requires a deflector drive. Our design incorporates both spray wash and a rotating brush, which eliminates the need for a deflector drive. Can this requirement be made optional?
A14.	**Yes, this is an acceptable arrangement.**
Q15.	Section 40 67 00: 2.08.D.6 requires an output filter for motor leads longer than 100 feet. The locations of GRSC-MCP-100 and GRSC-MCP-200 indicate that the motor leads are well under 100 feet. Can the output filters therefore be omitted from the controls scope?

A15.	**Yes, the VFD output filters may be omitted.**
Q16.	Section 46 21 16 does not reference Division 26 or Section 40 66 00. Do the spares and any other requirements listed in Division 26 and Section 40 66 00 need to be included within the scope of work under Section 46 21 16?
A16.	**Section 40 66 00 should be referenced for the requirements of network equipment as applicable (as required in 40 67 00, which is referenced in 46 21 16). However, the spares listed in 40 66 00 are not required for the screen system. Spares listed in division 26 are not required.**
Q17.	Section 46 21 16: 2.07.G.8 states that the control panel will include provisions to accept a 120VAC supply from the site's centralized UPS for powering the PLC, network switch, OIT, and related control system loads. Please confirm that the UPS is not provided by the screen manufacturer.
A17.	**Correct. The centralized UPS will not be provided with the screen system.**
Q18.	In specification 01480 it states the owner is furnishing water for the leakage testing from two different locations - "Disinfected Effluent" and "Secondary Effluent". Can you please clarify where these points are? Is the contractor responsible for transfer the water from these discharge points to the CIP basins as needed?
A18.	**Disinfected effluent and secondary effluent are at the existing Todd Creek WWTP site and would have to be trucked or pumped to the new site. Potable water or water for testing will not be available on site at the start of construction. The timeline for construction of the potable waterline is unknown at this time. Bidders shall include in their proposals the procurement and transportation of water from an off-site source for all construction purposes, including but not limited to pipe testing, dust control and other site water needs.**
Q19.	It appears that the Administration Building is the only structure in the drawings with a finish schedule, and it indicates that the interior precast walls will get painted. For the remaining process buildings on the site, there are no finish schedules in the drawings. Would you be able to clarify if the interior precast walls will get painted at those buildings? Also, will the interior floors at the process buildings get sealed concrete?
A19.	**The Administration Building is the only building or structure that receives painting on the interior precast walls. The Administration Building is the only building or structure that receives floor coating/sealing.**
Q20.	What material is the trench drain grating that is shown at the Influent Pump Station on sheet S207? Aluminum, galvanized, or other? Please advise.
A20.	**Per the schedule, the rating for the grates is specified, not the materials. For extra heavy-duty grates in this environment, we would want corrosive resistant material. So either galvanized steel or stainless steel would work best, as long as it meets the extra heavy-duty rating.**
Q21.	See sheet S205, keynote #2. What is the load capacity that will be required for the davit bases by OZ?
A21.	**Davit base shall be OZ Lifting Products part number OZSOC2. Load capacity not provided.**

Q22.	See sheet S205, keynote #6. What is the load capacity that will be required for the Thern model #4HS11M winch? How will it be actuated? What is the maximum distance of travel? What wire rope diameter is needed? Will it be used for vertical and horizontal line pulling? If necessary, please provide a specification to reference.
A22.	**The winch will be used to pull the dumpster into the IPS Screen Bldg. No specific load capacity given. Electric motor driven. Approximately 20' travel distance. ¾" rope.**
Q23.	Please confirm that the structural steel framing and monorail beam at the IPS on sheet S206 will be galvanized steel.
A23.	**Steel framing and monorail are galvanized.**
Q24.	Can more information be provided for the conduit support referenced on sheet S209 detail B? Please provide material and member sizing.
A24.	**Note calling out conduit support refers to detail on S206. See drawing S206.**
Q25.	It is our recommendation to avoid adverse generator interactions because of the low impedance source as well as with redundant/online spare capacity of active front end drives can lead to excessive capacitance inherent in active front end drives, leading to leading power factor that can cause failures throughout the system, including in the front end of the active front end drives. Is the 18 Pulse Drives acceptable for the 60HP and larger drives on this project?
A25.	**Refer to VFD spec section 26 29 23.2.02.B.2.a. – 18 pulse VFD's are an acceptable topology.**
Q26.	Please clarify to the prospective Bidders if it is permissible to perform installation and surveying of settlement monitoring plates by the Contractor's personnel in-lieu of a Licensed Professional Surveyor (PLS).
A26.	**Contractor may perform installation of monitoring plates and markers, but surveying shall be performed by a PLS in the State of the Project.**
Q27.	In the Supplementary Conditions section SC-14.04 A.g. demolitions work for the bridge, sludge holding cells, and existing WWTP is required to be completed in order to meet substantial completion? Since this work cannot occur until after the startup and commissioning of the new WWTP, can it be held outside of Substantial Completion? Also, since this scope of work will occur over 2.5 years after NTP will the owner carry an allowance for escalations on this work?
A27.	**Demolition work can be removed from Substantial Completion. Contractor to price escalation accordingly since demolition phasing is known. Contractor is best able to manage this risk rather than the City.**
Q28.	Plan sheet D103, has a note at 'POT 1' that states, "Future potable water connection (by others)." Please clarify to the prospective Bidders if they are to assume in their bid proposals the aforementioned permanent water line will be available for connection, to use for pipe testing and other site water needs, or should the Bidders include hauling water from offsite until a specified date when this connection will be provided by Others, outside of this contract?
A28.	**Potable water will not be available on site at the start of construction. The timeline for construction of the potable waterline is unknown at this time. Bidders shall include in their proposals the procurement and transportation of**

	water from an off-site source for all construction purposes, including but not limited to pipe testing, dust control and other site water needs.
Q29.	What are the additional permits and regulations required for the creek crossing to connect to the existing Hoover Heights Forcemain? Also do you have any satellite imagery that show this location for us to establish how much clearing would be required? According to the Stationing it looks like there would be 2 creek crossings not just one. Please Clarify.
A29.	**Impacts are anticipated to be under one-tenth of an acre. Construction can be performed under Nationwide Permit. City will document existing conditions and coordinate with USACE. Correct, there are 2 creek crossings. One crossing is shown on D150 between STA 0+34.80 and STA 1+11.49. Another crossing is shown on D161 between STA 12+02.88 and STA 14+79.14.**
Q30.	Is the existing access from Interurban Rd to where construction access connects on sheet C103 considered a gravel drive? Per note 10 on Sheet Y001 should we assume in our bid 8" of gravel restoration work of this approximate 2000 feet of road will required?
A30.	**Yes, this is a gravel drive. Yes, gravel restoration will likely be needed throughout and at project completion.**
Q31.	Per note 1.02 B-5a. in specification 01110 Summary of Work, Contractor to provide seed sludge for AGS basins, shall we assume enough sludge for seeding the basin is available at the existing plant and include this distance for hauling in our bid? Additionally are there any special requirements for sludge haulers to retain operators license, or special permits required to transport active sludge to the new plant?
A31.	**Yes, seeding from the existing Todd Creek plant is permissible. No additional special requirements, licenses, or permits are known requirements at this time since sludge is being transferred plant-to-plant, not a disposal site.**
Q32.	Per Appendix B system information was provided for the preselected AGS equipment, but no additional details have been provided that allow for a proper estimate to be completed. Will all details of basin AGS piping be provided? From our experience with these systems there can be multiple levels of equipment and associated supports and piping within each basin. Please advise if the details for the AGS equipment and basin equipment will be provided.
A32.	**Bidders had the opportunity to request additional information from the AGS equipment supplier and were instructed to do so in Addendum 1, Appendix B. Attn: All Bidders – Additional, proprietary information on the AquaNereda® system by Aqua-Aerobic Systems, Inc. can be obtained by contacting one of the following individuals. Disclosure of proprietary information requires execution of a non-disclosure agreement provided by AquaNereda®.** **Paul Koehler, OTC Industrial Technologies - JCI Industries, Inc.** **paul.koehler@otcindustrial.com** **816-525-3320** **Tatiana Mazzei** **Aqua-Aerobic Systems, Inc.**

	tmazzei@aqua-aerobic.com **815-639-4409**
Q33.	Per Section 01320 there is no note of including weather delays in baseline schedule. Are we to assume that weather delays as documented onsite with RPR will extend the substantial completion date 1 for 1 days?
A33.	**Only historically atypical weather delay days will be considered at the City's discretion.**
Q34.	Will new yard pipe manholes or new chemical manholes require any interior or exterior protective coatings?
A34.	**For new Yard Piping Manholes per current KC Water Services specifications, no interior or exterior protective coatings are specified. For all new manholes designated for chemical service, protective coatings are detailed in Section 09 90 00 – Protective Coatings of the project specifications.**
Q35.	If the monorail structural steel framing at the IPS is galvanized steel, will it still be required to get field painted?
A35.	**Steel framing is galvanized. No painting of the structural framing.**
Q36.	Per Specification 01480 Water Tightness the water for filling the tank will be furnished by Owner. Is contractor to assume all pumping and piping necessary for the filling will be provided by owner?
A36.	**No. Pumping, piping, and any other miscellaneous equipment is by Contractor.**
Q37.	Both Spec Section 03300.2.04 and Drawing Sheet S004 call out 4" PVC waterstop to be used in construction joints. It would be our recommendation to have this upgraded to a required 6" waterstop to provide better installation and protection.
A37.	**4" waterstop meets the hydrostatic pressure requirements anticipated in the basins. 6" is acceptable if bidders wish to use it.**
Q38.	Addendum 5 notes that Attachment 1 Missouri DBE Requirements (00990.01) must be included in the bid submittal. We only see an overview of the DBE program listed in Attachment 1 – we do not see any forms that we could fill out and submit at bid time. Please clarify what is needed at bid time to meet this requirement.
A38.	**Forms are included in specification book under section 00990 CSSRF drop-in specs. Forms include Notice of Requirement for Affirmative Action To Ensure Equal Employment Opportunity (Executive Order 11246); Missouri State Revolving Fund Disadvantaged Business Enterprise Utilization Worksheet; Certification Regarding Debarment and Suspension; U.S. Environmental Protection Agency Water Quality Office Certification of Nonsegregated Facilities; Domestic Products Procurement Act – RSMo 34.350 – 34.359 Certification; Business Entity Certification, Enrollment Documentation, and Affidavit of Work Authorization; USEPA Certification Regarding Lobbying; and American Iron and Steel Certification.**
Q39.	What is the concrete mix color and finish for the precast walls and are there any special admixtures such as a water repellent required?
A39.	**Basis of design shown in public and private renderings is to be Sandstone and will need to be approved by owner. Provide a full range of Buff colors to be**

	approved by owner/Architect. Acceptable admixtures for precast concrete are listed in specification 03 41 00 section 2.04-H. No other specific water repellent admixtures are required and would be at the discretion of the precast plant.
Q40.	Has the brick manufacturer for the precast walls been determined? Endicott is typically recommended.
A40.	**Basis of design shown in public and private renderings is to be Sioux City Brick Fine Art Smooth Modular and will need to be approved by owner. Provide a full range of colors to be approved by owner/Architect.**
Q41.	What is the requirement for electrical work associated with the precast walls? Are conduits required to be embedded in the walls or will they be allowed to be surface mounted?
A41.	**Conduit at all buildings except the Admin building can be surface mounted. The only location for conduit embedded in precast walls is indicated on Admin building power and lighting plans in the general notes. All conduit and boxes in the Admin building must be embedded into the precast concrete or CMU walls. No exposed conduits or boxes for electrical, data, access control, fire, etc. within the admin building except rooms 813 Mechanical and 816 Electrical. Details are provided to show how embed boxes are to be installed. Conduits on the ceiling in 816 Lab and 814 Hallway are to be attached to the hollow core and full coordinated with the Tectum attachments, so the conduit is not exposed to view.**
Q42.	Regarding the removal for formwork, Spec Section 03 10 00.3.02.A states that it is the responsibility of the contractor to make a determination when it is safe to remove forms, while paragraph D states that evidence that concrete has gained sufficient strength to permit removal of forms shall be determined by tests on control cylinders and Paragraph E impresses that a time element is in place. Is this a choice for the contractor to choose from or will one govern over the others?
A42.	**The forms are to be removed when the concrete reaches the strength specified in the spec. It is up to the contractor to determine when the concrete has attained sufficient strength to do so.**
Q43.	Please clarify to the prospective Bidders if it will be permissible for the Contractor to utilize any resultant grindings from the tree clearing as either an additional perimeter erosion control BMP measure or incorporate them with the topsoil placement? If this is not permissible, please clarify to the prospective Bidders that all grindings shall be removed from the project site.
A43.	**Yes, this would be permissible. Grindings do not need to be removed from Site.**
Q44.	Specification section 31 20 50 – Site Preparation And Earthwork, Part 3.08, E. states, "No shale particles, rock, gravel, or stone with any dimension greater than 2 inches shall be placed in the upper 18 inches of any fill or embankment. Rocks or stones within the allowable size limit may be incorporated in the remainder of fills and embankments, provided they are distributed so that they do not interfere with proper compaction." Please clarify the limits of the aforementioned "allowable size limit" (maximum size) for rocks or stones that may be incorporated in the remainder of fills and embankments.

A44.	**Refer to spec 31 20 50 section 2.01-A which states "Materials suitable for use in backfill, fill and embankment include job excavated or borrow material that is free of debris, roots, organic matter, frozen matter and shale particles/rock/stone or gravel with all dimensions less than 2 inches"**
Q45.	Specification section 31 66 12-Cast-In-Place Ground Improvement Elements, Part 1.01, C., 3. states, "Obtaining the applicable State and municipal permits (if required), and for conforming to all State and local regulations." Please clarify to the prospective Bidders what, if any, permits will be required to be obtained as part of the Cast-In-Place Ground Improvement Elements design, furnishing, or installation.
A45.	**Engineer is not aware of any specific CGE permits required, though this is ultimately the responsibility of the Contractor and selected CGE specialty designer/engineer/contractor to identify.**
Q46.	Drawing No. S217 depicts hatching for both Low-Density Cellular Concrete Fill and MoDOT Type 5 Aggregate Leveling Course between the lower slab of the influent pump station wet well at elevation 803.67 and the influent pump station channels at elevation 813.67. The influent pump station channels appear to bear on a 2'-0" MoDOT Type 5 Aggregate Leveling Course. Please clarify to the prospective Bidders that it will be permissible for the Contractor to backfill from the lower slab of the influent pump station wet well at elevation 803.67 to the influent pump station channels at elevation 807.67 with MoDOT Type 5 Aggregate Leveling Course in-lieu of Low-Density Cellular Concrete Fill. This would eliminate a secondary mobilization and setup for the Low-Density Cellular Concrete Fill contractor.
A46.	**That is acceptable. Remaining excavation is required to be backfilled with low-density cellular concrete as specified.**
Q47.	On Sheet D108 – 1" Plant Sewer – Note – Is this the correct note for this line, also is this a 1" Sanitary Line.
Q48.	**Note 1 and 1" plant sewer line are removed. Potable water to the odor control unit is shown on D705 and P701.**
Q49.	The 16" PVC Sanitary Line on Sheet D105, D108 is this PVC SDR-26 or SDR-35?
A49.	**SDR-26**
Q50.	The 6" Sanitary Line on shown on D108 is this Sch 40 or SDR-35"
A50.	**SDR-35**
Q51.	On Sheet C127 in Box Number 6 There is a note that States "Storm Line 17" that doesn't seem to point to anything. In Box 10 it calls out "Storm Line #17" which seems to match the Detail for "Storm Line 17" on sheet C132. Please clarify which is correct?
A51.	**The callout for "Storm Line 17" found in Area box 6 is incorrect and was intended to be deleted. The callout for "Storm Line 17" found in Area box 10 is correct as it points to the detention outfall line, which is shown in profile and labeled Storm Line 17 on sheet C132.**

Bidding Requirements

1. N/A

Contracting Requirements

1. Delete and replace the following section(s):
    a. Delete Document, Section 00130 INVITATION TO BID and replace with the Following Document Section 00130 INVITATION TO BID
    b. Delete Document, Section 00830.1 FEDERAL PREVAILING WAGE - HEAVY and replace with the Following Document Section 00830.1 FEDERAL PREVAILING WAGE - HEAVY.
    c. Delete Document, Section 00830.2 FEDERAL PREVAILING WAGE - BUILDING and replace with the Following Document Section 00830.1 FEDERAL PREVAILING WAGE - BUILDING

Specifications

1. Delete and replace the following section(s):

    a. Delete Document, Section 33 12 16 – UTILITY VALVES AND ACCESSORIES and replace with the Following Document Section 33 12 16 – UTILITY VALVES AND ACCESSORIES

Drawings:

1. Delete Drawing, G005 and Replace with the Following Drawings, G005

SECTION 33 12 16 - UTILITY VALVES AND ACCESSORIES

PART 1 - GENERAL

1.01 SUMMARY:

A. This Section includes all valves and accessories.

B. Related Work Specified Elsewhere:

1. Section 09 90 00 - Protective Coatings.
2. Section 33 31 50 - Pipe Installation.

1.02 REFERENCES:

A. Applicable Standards:

1. American National Standards Institute (ANSI):
   a. B16.1 - Cast-Iron Pipe Flanges and Flanged Fittings, Class 25, 125, 250 and 800.
2. ASTM International (ASTM):
   a. A126 - Gray Iron Castings for Valves, Flanges and Pipe Fittings.
   b. A276 - Stainless and Heat Resisting Steel Bars and Shapes.
   c. A536 - Ductile Iron Castings.
   d. A564 - Hot-Rolled and Cold-Finished Age-Hardening Stainless and Heat Resisting Steel Bars and Shapes.
3. American Water Works Association (AWWA):
   a. C111 - Rubber-Gasket Joints for Ductile-Iron Pressure Pipe and Fittings.
   b. C207 - Steel Pipe Flanges for Waterworks Service - Sizes 4 Inch Through 144 Inch.
   c. C500 - Metal-Seated Gate Valves for Water Supply Service.
   d. C502 - Dry-Barrel Fire Hydrants.
   e. C504 - Rubber-Seated Butterfly Valves.
   f. C507 - Ball Valves, 6 Inch Through 48 Inch.
   g. C508 - Swing-Check Valves for Waterworks Service, 2 Inch through 24 Inch NPS.
   h. C509 - Resilient-Seated Gate Valves for Water Supply Service.
   i. C512 - Air-Release, Air/Vacuum, and Combination Air Valves for Waterworks Service.
   j. C540 - Power-Actuating Devices for Valves and Sluice Gates.
   k. C550 - Protective Epoxy Interior Coatings for Valves and Hydrants.
   l. C600 - Installation of Ductile-Iron Water Mains and Their Appurtenances.
   m. C606 - Grooved and Shouldered Joints.
4. National Fire Protection Association (NFPA):
   a. 1963 - Screw Threads and Gaskets, Fire Hose Connections.

1.03 SUBMITTALS:

A. Submit as specified in Division 1.

B. Include, but not limited to, the following:

1. Catalog data or illustrations showing principal dimensions, parts, and materials.
2. Spare parts list referenced to illustration of parts.
3. Assembly and disassembly or repair instructions.
4. Dimensions of the clearance required for butterfly valve discs.

C. Certificates and Affidavits: Furnish prior to shipment. Include the following:

1. Test certificates.
2. Affidavit of compliance with applicable AWWA Standard.

1.04 QUALITY ASSURANCE:

A. Manufacturers shall be experienced in the design and manufacture of specific valves and accessories.

1.05 DELIVERY, STORAGE, AND HANDLING:

A. Deliver, store, and handle equipment and materials as specified in Division 1.

1.06 RESPONSIBILITY:

A. Actuators, their controls, and accessories shall be the responsibility of the valve manufacturer for sizing, assembly, certification, field testing, and any adjustments necessary to operate the valve as specified.

PART 2 - PRODUCTS

2.01 BUTTERFLY VALVES:

A. Acceptable Manufacturers for process related valves (See Table 1 and Table 2 below for process butterfly valves):
   1. DeZURIK/Sartell - Model BAW
   2. Henry Pratt Company
   3. Val-matic

B. Acceptable Manufacturers for utility related valves (See Civil Drawings for utilities valves):
   1. SPX/DeZurik – Style BOS.
   2. Tyco-Keystone – Figure AR2.

C. Design:
   1. Conform to AWWA C504, AWWA C540, and as specified.
   2. Suitable for type of installation specified.
   3. Conform to criteria indicated in Design Data and Valve Schedule.
   4. All valve end flanges shall conform to the following:
      a. ANSI B16.1, Class 125 for cast-iron body, Class 25A through Class 150B valves.
      b. AWWA C207, Class D with ANSI B16.1 Class 125 drilling for steel body, Class 25A through Class 150B valves.
      c. ANSI B16.1, Class 250 for ductile-iron body, Class 250 valves.
      d. AWWA C207, Class E for steel body, Class 250 valves.
   5. Mechanical or push-on type rubber-gasket joint ends shall conform to AWWA C111.
   6. Valves with a stop or lug cast integrally or mechanically secured to the body for the purpose of limiting disc travel will not be acceptable.

D. Design Data: Refer to Drawings for Valve Schedule.

E. Materials and Construction:
   1. Body shall be of cast iron for Class 25A through Class 150B valves and ductile iron for Class 250 valves or fabricated steel, as indicated in the Valve Schedule.
   2. Shafts shall be ASTM A276 Type 304 or 316 stainless steel for Class 25A through Class 150B valves and ASTM 564 Type 630 stainless steel for Class 250 valves. Design velocity for Class 250 valves shall be 16 fps.
   3. Disc shall be cast or ductile iron for Class 25A through Class 150B valves and ductile iron for Class 250 valves or steel for fabricated steel valves.
   4. Seats shall be synthetic rubber and be body mounted. Provide field replaceable and adjustable seat accessible from down-pressure side of valve for sizes 30-inch and larger. Mating seat surface shall be stainless steel or Monel. Sprayed or plated mating surfaces are not acceptable.

5. Shaft seals shall be designed for use of standard self-adjusting split-V-type packing or standard O-ring seals. Pull-down packing is not acceptable.

F. Actuators:
   1. Manual Actuators:
      a. All valves shall open counterclockwise.
      b. Provide indicators to show position of disc except on buried actuators. Provide handwheels with raised cast arrow and word OPEN on rim oriented to specified opening direction.
      c. Actuators shall be oil or grease-lubricated, totally-enclosed compound lever, traveling nut type to provide characterized closure. Actuator shall be self-locking at all variable opening positions.
      d. Travel limiting stop nuts or collars installed in the actuating mechanisms shall be field adjustable and shall be locked in position by means of a removable roll pin, cotter pin, or other positive locking device. Clamps or setscrews are not acceptable.
      e. Actuators and handwheels shall be located in positions indicated or as otherwise determined when manufacturer's drawings are submitted.
      f. Furnish actuators with AWWA operating nuts for all buried installations unless otherwise scheduled.
      g. Exposed buried actuator case, supports, and connection to the valve shall be cast iron.
      h. Exposed, buried service actuator shafting, bolts, and fastening hardware shall be stainless steel.
      i. Hand chains shall be cadmium plated or stainless steel.
   2. Motor Actuators:
      a. Provide electric motor actuators as specified in sub-section 2.12 ELECTRIC MOTOR ACTUATORS herein.

G. Valve Controls:
   1. Operate valve actuator to perform control function required.
      a. Open or close valve.
      b. Modulating.
   2. Include all pilot valves, needle valves, strainers, interconnecting piping, fittings, positioners, solenoid valves, limit switches, and other accessories essential to valve function factory-assembled on valve body or actuator.
      a. Small control valves shall be bronze or brass; and piping shall be copper.
      b. Provide solenoid valves, limit switches, positioners, and other accessories as required for proper operation.
   3. Equip actuators with heavy-duty, screw type terminal strip assemblies, designed to accept ring-tongue terminals for minimum size number 14 AWG wire.

H. Testing: Furnish certified copies of results of performance, leakage, and hydrostatic tests performed in compliance with Section 5, AWWA C504.

I. Shop Painting: Paint exterior surface of valves in compliance with AWWA C504 for installation as noted. Apply interior coating conforming to AWWA C550 to exposed ferrous metal surfaces. Provide affidavit or certificate of compliance per AWWA C550.

2.02 ECCENTRIC PLUG VALVES:

A. Acceptable Manufacturers:
   1. DeZurik
   2. Nordstrom
   3. Walworth
   4. Henry Pratt Company

B. Design:
   1. Quarter-turn nonlubricated eccentric type with resilient faced plug. Valves with vane type seat rings are not acceptable. Shutoff up to scheduled rating with pressure in reverse direction where scheduled.
   2. Conform to criteria indicated in Valve Schedule table.
   3. Flanged valve ends shall be faced and drilled to conform to ANSI B16.1, Class 125 for thickness and drilling.
   4. Mechanical or push-on type rubber-gasketed joint ends shall conform to AWWA C111.
   5. Port areas for valves through 500 mm 20-inch shall be at least 80% of full pipe area. Port areas of 24-inch and larger valves shall be at least 70% of full pipe area.
      a. Valves specified as “Full Port”: Bodies shall be Cast Iron ASTM A126 Class B. Ports shall be rectangular and 100% Port Area. The valve port area shall meet or exceed standard pipe area per ASME/ANSI B36.10M.
   6. Plugs shall be eccentric type with no backing ring or frame.
   7. Valve body cavity shall be smooth without protrusions or baffles.
   8. Design velocity for valves shall be 12 fps.

C. Materials and Construction:
   1. Bodies shall be of ASTM A126, Class B cast iron.
   2. Valve plug shall be ASTM A126, Class B cast iron or ASTM A536 ductile iron. Resilient plug facing or replaceable style body seats shall be synthetic rubber, neoprene, or Buna N compound suitable for use with water and wastewater applications.
   3. Seat rings shall be threaded or welded of corrosion-resistant 18-8 stainless steel, nickel, or Monel conforming to AWWA C504. Sprayed or plated mating seat surfaces are not acceptable.
   4. Bearings shall be replaceable. Sleeve type and thrust bearings in the upper and lower journals shall be corrosion-resistant stainless steel or bronze.
   5. Shaft seals shall be multiple O-ring, self-adjusting U-cup or chevron type packing conforming to AWWA C504. Pull-down packing is not acceptable.
   6. Shaft seals shall be field adjustable or replaceable without valve disassembly.
   7. All exposed fastening hardware shall be zinc plated or stainless steel. Provide stainless steel for buried service.

D. Actuators:
   1. Manual Actuators:
      a. All valves shall open counterclockwise.
      b. Provide indicators to show position of plug except on buried actuators.
      c. Nut operators shall be AWWA 2-inch size for operation by valve key, wrench head lever, or a chain lever. Furnish one lever for each valve.
      d. Hand chains shall be cadmium plated or stainless steel.
      e. Worm gear actuators shall be totally enclosed, grease sealed, gear type furnished with AWWA nut, crank, handwheel, or chainwheel. All buried valves shall be provided with worm gear actuators, AWWA nut, and enclosed cover plate. All

valves with reverse pressure capacity requirement shall be provided with worm gear actuators. Worm gear actuators shall be self-locking at all variable opening positions and sized to meet the torque ratings of AWWA C504. The shaft in a worm gear actuator shall have a nonmetallic or bronze sleeve type bearing. Submit manufacturer's parts and materials drawings.

f. Handwheels shall be located in positions indicated or as otherwise determined when manufacturer's drawings are submitted.

2. Motor Actuators:
   a. Provide electric motor actuators as specified in sub-section 2.12 ELECTRIC MOTOR ACTUATORS herein.

E. Valve Controls:
1. Operate valve actuator to perform control function required.
   a. Open or close valve.
   b. Modulating.
2. Include all pilot valves, needle valves, strainers, interconnecting piping, fittings, positioners, solenoid valves, limit switches, and other accessories essential to valve function factory-assembled on valve body or operator.
   a. Small control valves shall be bronze or brass; piping shall be copper.
   b. Provide solenoid valves, limit switches, positioners, and other accessories as required for proper operation.
3. Equip actuators with heavy-duty, screw type terminal strip assemblies, designed to accept ring tongue terminals for minimum size number 14 AWG wire.

F. Testing: Furnish certified copies of results of tests prior to shipment. All valves shall be subjected to an AWWA C504 procedure cycle life and pressure leak test at 150 psi and a body hydrostatic test at 300 psi. Valves shall be capable of providing drip-tight shutoff up to the full leak test rating. Certify reverse pressure capacity.

G. Shop Painting: Apply interior coating conforming to AWWA C550 to exposed ferrous metal surfaces. Provide affidavit or certificate of compliance per AWWA C550.

H. Valve Schedule:

2.03 STANDARD SWING CHECK VALVES:

A. Acceptable Manufacturers less than 4-inches in diameter:
   1. Crane Valve Company - Model: Number 36
   2. Lunkenheimer Company - Model: Figure 554Y

B. Acceptable Manufacturers 4-inches and greater in diameter:
   1. Kennedy Valve Company – Model: 159
   2. M&H – Model 159
   3. Mueller Company – Model A-2600
   4. Apco Willamette Valve and Primer Corporation – Model 250

C. Design:
   1. Conform to AWWA C508 and as specified.
   2. Iron body, bronze mounted, full opening.
   3. Extended stainless steel hinge pin with outside lever and weight.
   4. Design velocity shall be 12 fps.

D. Materials and Construction:
   1. Body and cover shall be cast iron. Flanges shall be ANSI B16.1, Class 125.
   2. Valve disc shall be bronze faced cast iron.
   3. Rubber faced discs or disc rings shall be Buna N for liquid applications and Viton for compressed air applications.
   4. Suitable for listed operating pressure.

E. Valve Schedule:

2.04 BALL VALVES:

A. Acceptable Manufacturers for Ball Valves less than 6-inches in diameter:
   1. Conbraco Industries, Inc. – Apollo Valves.
   2. Metso Automation/Jamesbury.
   3. NIBCO, Inc.
   4. Flow-Tek, Inc.

B. Operational Requirements:
   1. Suitable for isolation service.
   2. Operation of the valve will be continuous.
   3. Operational pressures will be as follows:
      a. Normal system range 0 to 200 psi.

C. Design: Conform to AWWA C507, AWWA C540 and as specified.
   1. Valves shall consist of essentially three main parts:
      a. Body with full unrestricted circular inlet and outlet with diameter equal to rated size of valve.
      b. A moveable plug having a full, unobstructed circular waterway opening equal to valve body opening.
      c. A totally-enclosed operating mechanism mounted on and attached to valve body.
   2. Seats shall consist of flexible metal on the ball or resilient rubber on the body and rigid stainless steel seats opposite and located on both ends of valve.
   3. Shaft seals shall be self-adjusting split-V-type or rubber O-ring type designed for replacement under line pressure.
   4. Valve body shall have flanged ends. Flanges shall be ANSI B16.1, Class 125.

D. Materials and Construction:
   1. Valve body and plug shall match or be compatible with pipe material.
   2. Valve shall be furnished complete with operating mechanism and accessories suitable for accomplishing specified operations.

E. Valve Operating Mechanism:
   1. Valve shall be equipped with a traveling cross-head type operator and shall operate plug by means of a cross-head linked to a rotator lever.
   2. Rotator lever shall impart rotary motion to plug shaft.
   3. Provide an indicator to show position of plug with respect to body opening.

F. Actuators:
   1. Manual Actuators:
      a. Valve shall open counterclockwise.
      b. Provide non-rising stem mechanism self-locking in all positions.

G. Testing: Furnish certified copies of results of tests performed in compliance with Section 13, AWWA C507.

H. Valve Schedule: Refer to Drawings for Valve Schedule.

I. Shop Painting: Apply interior epoxy coating conforming to AWWA C550 and NSF to exposed ferrous metal surfaces. Provide affidavit or certificate of compliance per AWWA C550 and NSF.

J. Valve Schedule:

VALVE TAG	SIZE (IN)	OPERATING PRESSURE (PSI)	LOCATION	INSTALLATION	VALVE ENDS	ACTUATOR			MEDIA	SYSTEM PIPE

2.05 PINCH VALVES:

A. Acceptable Manufacturers:
   1. Onyx Valve Company.
   2. Red Valve Company.
   3. RF Valves.

B. Design:
   1. Valves shall be full cast metal body mechanical pinch type with integral flanges on body and flexible sleeve.
   2. All internal metal parts are to be isolated from the process fluid by the flexible rubber sleeve.

C. Materials and Construction:
   1. Valve body shall be ductile iron, stem and pinch bar shall be stainless steel, and sleeve shall be rubber.
   2. Suitable for 150 psi operating pressure.
   3. Valve body shall have flanged ends. Flanges shall be ANSI B16.1, Class 125.

D. Valve Operating Mechanism:
   1. The steel mechanism shall be double acting with pinching of the sleeve trim occurring equally from two sides.
   2. Rotating the handle counterclockwise shall lower a pinch bar above the sleeve, while raising a pinch bar below the sleeve, pinching the sleeve closed at the center of the valve.

E. Actuators:
   1. Manual Actuators:
      a. Valve shall open counterclockwise.
      b. Provide non-rising stem mechanism.
   2. Motor Actuators:
      a. Provide electric motor actuators as specified in sub-section 2.12 ELECTRIC MOTOR ACTUATORS herein.

F. Testing: Furnish certified copies of results of tests prior to shipment.

G. Valve List:

Parameter	**GRSC-VLV-312**	**GRSC-VLV-314**
Size, (in)	4”	4”
Max P (psig)	15	15
Max T (deg F)	100	100
Full Port?	Yes	Yes
Media	Grit Slurry	Grit Slurry
Valve Ends	FLG x FLG	FLG x FLG
Actuator Type	Handwheel	Motor Actuator
Actuator Shaft Position	Horizontal	Horizontal
System Pipe	DIP Vertical	DIP Vertical
Service	Open/Close	Open/Close
PID	Y302	Y302
Installation	Headworks Building Interior Above Grade	Headworks Building Interior Above Grade

2.06 PRESSURE REDUCING VALVES:

A. Provided as indicated on Contract Drawings.

B. Acceptable Manufacturers less than 3-inches in diameter:
   1. Watts Automatic Control Valve Company – Model 500 Series LF223
   2. Wilkins – Model 500 Series
   3. Engineer-approved equal.

C. Acceptable Manufacturers 3-inches and larger in diameter:
   1. Watts Automatic Control Valve Company – Model ACV Series 115
   2. Cla-Val Company – Model 90-01
   3. Engineer-approved equal.

D. Design:
   1. Valves shall be of flanged globe body type.
   2. Inlet flange shall be ANSI B16.1, Class 125. Outlet flange shall be ANSI B16.1, Class 125.
   3. Suitable for operation as follows:
      a. Maximum flow rate condition: 215 GPM.
      b. Normal system inlet pressure: 75 psi to 135 psi.
      c. Regulate downstream pressure at Headworks: 85 psi.
      d. Regulate downstream pressure at Solids Handling Building: 85 psi.
   4. Such that internal main valve assembly can be dismantled without removing valve body from pipeline.

E. Materials and Construction:
   1. Body shall be cast iron, ductile iron, or stainless steel.
   2. Trim shall be bronze or stainless steel.
   3. Seats shall be leather or other resilient material and shall be replaceable.

F. Operational Requirements:
   1. Suitable for pressure-reducing service.
   2. Operation of the valve will be frequent.
   3. Cushioned to permit operation without causing shock or water hammer.
   4. Operate without continuous waste of water.
   5. Provide tight closure when shut and full pipeline opening when open.
   6. The valve shall maintain accurate control of the downstream pressure regardless of fluctuation in flow or upstream pressure.
   7. Adjustable for speed of open and close operation and control pressure.

G. Valve Controls:
   1. Control Function:
      a. Pressure regulation - maintain preadjusted downstream pressure for varying rates of flow and upstream pressure.
      b. Open and close according to downstream pressure transmitter indication.
   2. Include all pilot valves, needle valves, strainers, interconnecting piping, fittings, cylinders, positioners, solenoid valves, limit switches, and other accessories essential to valve function factory assembled on valve body.
      a. Pilot shall be self-cleaning and self-flushing by locating the outlet in the bottom of the pilot ninety degrees to the inlet
      b. Small control valves shall be bronze or brass; pilot tubing shall be stainless steel braided with Teflon lining. Copper/brass fittings and pilot.

2.07 PRESSURE SAFETY VALVES:

A. Provided as indicated on Contract Drawings.

B. Acceptable Manufacturers:
   1. Watts Automatic Control Valve Company – Model ACV Series 116
   2. Cla-Val Company - Model 50-01
   3. Engineer-approved equal.

C. Design:
   1. Valves shall be of flanged globe body pattern.
   2. Inlet and outlet flanges shall be 6-inch ASME B16.1 Class 125.
   1. Valves shall be external pilot actuated with spring to adjust pressure setting.
   2. Provide indicator rod to show position of opening of the piston or diaphragm.
   3. Suitable for operation as follows:
      a. Pump shutoff head 360-460 feet (155-200 psi).
      b. Normal system operating pressure 75 psi to 150 psi.
      c. Open at 160 psi.
   4. Such that internal main valve assembly can be dismantled without removing valve body from pipeline.
   5. Provide shutoff cocks and Y-strainers on control tubing.
   6. Valve shall have a protective fusion bonded epoxy coating internally and externally. The coating shall conform to AWWA C116.

B. Materials and Construction:
   1. Body shall be cast iron, ductile iron, or stainless steel.
   2. Trim shall be bronze or stainless steel.
   3. Seats shall be EPDM rubber and shall be replaceable.

D. Operational Requirements:
   1. Suitable for pressure-reducing service.
   2. Operation of the valve will be intermittent.
   3. Cushioned to permit operation without causing shock or water hammer.
   4. Operate without continuous waste of water.
   5. Provide tight closure when shut and full pipeline opening when open.
   6. Adjustable for speed of open and close operation and control pressure.

E. Valve Controls:
   1. Control Function:
      a. Open when line pressure exceeds preset value.
   2. Include all pilot valves, needle valves, strainers, interconnecting piping, fittings, cylinders, positioners, solenoid valves, limit switches, and other accessories essential to valve function factory assembled on valve body.
      a. Small control valves shall be bronze or brass; piping shall be copper.
      b. Provide orifice plate assembly for flow control function.

2.08 TELESCOPING VALVES:

A. Telescoping Valves shall be specified herein and have the characteristics and dimensions as shown in the drawings

B. Acceptable Manufactures
   1. Watermann Valves
   2. Whipps, Inc
   3. Troy Valve

C. Design

1. The valve shall utilize a low friction seal to mount to engage the slip tube and mount to the flange of the receiving pipe.
2. All welds shall be performed by welders with AWS certification.
3. Finish: Mill finish on stainless steel. Welds shall be sandblasted to remove weld burn and scale.

D. Slip Tube and Bail
1. The slip tube shall be constructed of Schedule 10 minimum thickness stainless steel pipe. The the overflow end slip tube shall be fitted with a V-notch weir and shall be Schedule 10 stainless steel.
2. The bail shall be constructed of stainless steel and shall be bolted to the stem and welded to the slip tube. The bail style shall be comptible for v-notch weir slipe tube.
3. The maximum travel distance of the slip tube shall be 48 inches. The maximum depth of slip tube shall extend more than 12 inches past the center line of the receiving flange into the recieving pipe at a travel distance of 0 inches.
4. Slip tubes shall be equipped with a grease fitting to allow the operator to apply grease to the slip tube from the operator level.

E. Seal Flange
1. The telescoping valve shall be provided with a self-adjusting seal system to restrict leakage between the slip tube and the receiving pipe.
2. If a neoprene seal and separate companion flange is provided, the neoprene seal shall have a minimum thickness of 1/4-inch and the companion flange shall be stainless steel and shall have a minimum thickness of 3/8-inch.
3. The slipe tube gasket shall be replaceable without the rmeoval of the slip tube assmbly from the reciver pipe, or actuator.
4. The companion flange shall be provided with a bolt pattern suitable for attachment to the flange on the receiving pipe.

F. Stem
1. A threaded operating stem shall be utilized to connect the operating mechanism to the bail which in turn is attached to the slip tube. The threaded portion of the rising stem valves shall engage the operating nut in the manual operator and shall provide autmoatic self-locking, infinite valve positioning.
2. The threaded portion of the stem shall have a minimum outside diameter of 1-1/2 inches. Stem extension pipes are not acceptable.
3. The stem shall be constructed of solid stainless steel bar for the entire length, the metal having a tensile strength of not less than 75,000 psi.
4. Maximum L/R ratio for the unsupported part of the stem shall not exceed 200.
5. In compression, the stem shall be designed for a critical buckling load caused by a 40 lb effort on the handwheel with a safety factor of 2, using the Euler column formula.
6. The stem shall be designed to withstand the tension load caused by the application of a 40 lb effort on the handwheel without exceeding 1/5 of the ultimate tensile strength of the stem material.
7. The threaded portion of the stem shall have machine rolled double lead threads of the full Acme type with a 16 microinch finish or better. Stub threads are not acceptable.
8. Stems shall be provided with adjustable stop collars to prevent over travel.

G. Stem Guides
1. Stem guide shall be provided when necessary to ensure that the maximum L/R ratio for the unsupported part of the stem is 200 or less.
2. Stem guide brackets shall be fabricated of stainless steel and shall be outfitted with UHMW or bronze bushings.

3. Adjustable in two directions.

H. Anchor Bolts
1. Anchor bolts shall be provided by the valve manufacturer for mounting the pedestal and appurtenances.
2. Quantity and location shall be determined by the valve manufacturer.

I. Materials of Construction
1. Slip tube and bail shall be stainless steel, Type 304L
2. Stem shall be stainless steel, Type 304L
3. Anchor Studs, Fasteners and Nuts shall be stainless steel, Type 316
4. Seal shall be Urethane, Neoprene or Buna-N
5. Lift Nuts shall be stainless stainless steel, Type 304.
6. Pedestals and wall bracks shall be stainless steel, Type 304L
7. Operator Housing shall be cast aluminum
8. Stem cover shall be a clear plastic Butyrate
9. Companion flange shall be cast iron

J. Valve Operator
1. Valves shall be operated by a manual handwheel. The operator shall be mounted on a pedestal
2. The valve manufacturer shall select the proper gear ratio to ensure that the valve can be operated with no more than a 40 lb effort.
3. An arrow with the word "OPEN" shall be permanently attached or cast onto the operator to indicate the direction or rotation to open the valve
4. Handwheel operators shall be fully enclosed and shall have a cast aluminum housing.
5. The handwheel shall be removable. Pedestals shall be constructed of stainless steel. Aluminum pedestals are not acceptable.
6. The pedestal height shall be such that the handwheel is located approximately 36-in above the top of the tank walls.
7. Operators shall be equipped with fracture-resistant clear butyrate.
   a. The top of the stem cover shall be closed.
   b. The bottom end of the stem cover shall be mounted in a housing or adapter for easy field mounting.
   c. Stem covers shall be complete with a mylar strip type position indicator, calibrated in ¼ inch increments to illustrate valve position. The mylar strip, provided by the manufacturer, will be affixed by the CONTRACTOR after installation to provide a true and accurate indication of the tube elevation by comparing it to the top of the rising stem.
8. Valve Schedule:

Parameter	**WAS-VLV-001**	**WAS-VLV-002**
Size, (in)	6”	6”
Max T (deg F)	100	100
Media	Thin Sludge Decant	Thin Sludge Decant
Actuator Type	Manual, Handwheel	Manual, Handwheel
System Pipe	DIP Vertical	DIP Vertical
Service	Open/Close	Open/Close
PID	Y401	Y401
Installation	Exterior-Exposed	Exterior-Exposed

2.09 TAPPING SADDLES:

A. Provide tapping saddles for services as indicated on the Contract Drawings.
B. Acceptable Manufacturers:
   1. A.Y. McDonald 73805
   2. Ford S90-xxx-NL
   3. Mueller
      a. H-13000 Series
      b. H-13400 Series
      c. S-13000 Series
   4. Engineer approved equal.

2.10 CORPORATION STOPS:

A. Provide corporation stops for service reactivations as indicated on the Contract Drawings.
B. Acceptable Manufacturers:
   1. A.Y. McDonald 74701
   2. Cambridge Brass 302NL Series
   3. Ford FB-600-x-NL
   4. Mueller B25000N
   5. Engineer approved equal.

2.11 SAMPLE/DRAIN TAPS:

A. Provide sample/drain taps on all suction and discharge pump connections and on all common pump headers after last pump connection to main header.
B. Connecting fittings and pipe shall of the same material as the receiving pipe and rated for 150 psi service.
C. Sample/drain taps shall be 1 inch and connected through corporation stops.
D. Isolation valves shall be provided with all sample/drain taps and shall be Crane bronze ball valves or Engineer-approved equal.

2.12 ELECTRIC MOTOR ACTUATORS:

A. Provide factory-mounted electric motor actuators conforming to AWWA C540 for open-close and modulating service to operate on 480V, 3 phase, 60-hertz, ac supply. Motor and control compartment enclosure shall be totally enclosed rated NEMA 4X.
C. For valves installed in Class 1, Division 1 or Class 1, Division 2 areas, motor and control compartment enclosures shall be explosionproof and listed for the classification of the area. Refer to Contract Drawings' Hazardous Area Classification Site Plan for requirements.
D. Motor shall be AC induction type, TEFC, rated 460V.
E. Duration for actuator to move from fully-open to fully-closed position, or reverse as indicated:
   1. Approximately 30 Seconds for eccentric plug valves.
   2. Approximately 5 seconds per diameter inch, but not less than 20 seconds for air service butterfly valves.
F. Equipped with a direct position readout at the valve by means of a mechanical dial-position indicator showing percent of valve opening.
G. Provide with manual handwheel operator and lockable de-clutch mechanism. Handwheel shall not rotate when electrically driven.
H. Provide the following integral accessories:
   1. Integral reversing motor starter.

2. Separate non-fused disconnects. Disconnects shall be operable from outside the enclosure and shall be integral to the assembly. Disconnect enclosure rating shall conform to the valve enclosure rating.
3. Local/Off/Remote (LOR) selector switch with auxiliary remote status contact.
4. Open/Close pushbuttons to operate actuator when LOR is in "Local".
5. Hard-wired I/O points as indicated on the Contract Drawings' Control Diagrams and Section 40 61 96A - I/O List. Discrete outputs shall be provided by dry contacts, rated minimum 2A at 120Vac.
6. Butterfly valves:
   a. Internal 480V to 24VDC power supply (PS).
      (1) PS shall be sized to operate starter, local indicating lights, internal heating systems, and provide sufficient volt-amperes to field power two digital inputs and two digital outputs to PLC.
7. Eccentric plug valves:
   a. Internal 480V to 120VAC control power transformer (CPT).
      (1) CPT shall be sized to operate starter, local indicating lights, internal heating systems, and provide sufficient volt-amperes to field power two digital inputs and two digital outputs to PLC.
8. Modulating Valves:
   a. Shall accept a 4-20mA input signal for position control.
   b. Shall provide an isolated 4-20mA isolated output signal (with integral power supply) for position indication.
9. Open/Close Valves:
   a. Provide with two indicating lights in limit switch compartment cover.
      (1) One red light indicating valve is fully open.
      (2) One green light indicating valve is fully closed.
      (3) Both lights shall be on while valve is in travel
   b. Provide 4 train mechanically driven limit switches and overtorque switches.
   c. Switches shall be gear driven from the actuator gear train, electronic switches with battery pack shall not be allowed.
10. Internal heater to prevent condensation.

I. Products of the following manufacturers shall be acceptable:
   a. Auma Actuators, Inc.
   b. Limitorque Corporation.
   C. Rotork Controls, Incorporated.

2.13 COMBINATION AIR VALVES:

A. Acceptable Manufacturers:
   1. Multiplex Manufacturing Co. Model: Crispin SA Series.
   2. Valve and Primer Corp., DeZurik/APCO Model: Series 401.

B. Design: Conform to AWWA C512 and as specified.
   1. Valve shall be heavy-duty combination air release, water style.
   2. Body and cover shall be cast or ductile iron.
   3. Float shall be stainless steel.
   4. All internal parts shall be stainless steel.

C. Operation:
   1. Release air when filling line.
   2. Admit air when emptying line.
   3. Release accumulated air while pipeline is full and operating under pressure.

D. Connection:
   1. Connect air valves 2 inches and smaller to pipeline through corporation stops.
   2. Connecting fittings and pipe shall be bronze, brass, or copper rated for 250 psi service.
   3. Isolation valves shall be provided for all air valves and shall be bronze gate valves for sizes 3 inches and smaller unless otherwise noted.
      a. Acceptable Manufacturers:
         (1) Crane Model: Figure 431.
         (2) Jenkins Model: Figure 47.
         (3) Lunkenheimer Co. Model: Figure 2151.
   4. Couplings or unions indicated between pipeline and air valve piping shall be insulated style.

2.14 FIRE HYDRANTS:

A. Acceptable Manufacturers:
   1. American Flow Control.
   2. Mueller Company, model Centurion.
   3. Engineer Approved Equal

B. Design:
   1. Conform to AWWA C502 and as specified.
   2. Provide compression type main valve designed to open against pressure. Valve facings shall be of nontoxic materials suitable for potable water service.
   3. Provide internal main valve seat opening of not less than 5 inches diameter.
   4. Design to open counterclockwise.
   5. Provide dry-type bonnet with lubricant reservoir protected by O- or Quad-ring seals.
   6. Provide mechanical joint bell on shoe.
   7. Furnish for minimum bury depth of 3.5 feet. Include extensions as required for blow-offs.
   8. Furnish with two 2-1/2-inch hose nozzles and one 4-1/2-inch pumper nozzle with NFPA 1963 standard threads. Nozzle caps shall be chained to hydrant.
   9. Provide traffic break-off joint located above and near ground surface designed to minimize accident repairs.

C. Shop Painting:
   1. Shop paint exterior of hydrants red.
   2. Interior Coating:
      a. Conform to AWWA C550.
      b. Apply to exposed interior ferrous metal surfaces.

2.15 CORPORATION STOPS:

A. Provide corporation stops as specified to isolate air valves or as manual air release or inlet valves.

B. Mueller Company Style H-10003, H-10013, or H-10045 or Engineer-approved equal as applicable.

2.16 CURB STOPS:

A. Provide curb stops for service isolation.

B. Acceptable Manufacturers:
   1. A.Y. McDonald 74701.
   2. Cambridge Brass 302NL Series.
   3. Ford FB-600-x-NL.

4. Mueller B25000N.

2.17 VALVE BOXES:

A. Acceptable Manufacturers:
   1. Clay and Bailey Manufacturing Company.
   2. Dresser Industries, Inc.
   3. Mueller Company.
   4. Neenah Foundry Company.
   5. Tyler Company.
   6. Engineer Approved Equal
B. Provide for all buried valves.
C. Design:
   1. Boxes shall consist of a cast-iron cover, lid, and base castings with 6-inch cast-iron pipe shaft.
   2. Provide extension stem to bring operating nut within 2 feet of valve box top.
   3. Drop cover shall be marked for the appropriate system (i.e., "WATER", “SEWER”).

2.18 CURB STOP SERVICE BOXES:

A. Provide curb stops and service boxes for all curb stops installed.
B. Acceptable Manufacturers:
   1. Tyler Union, Star Pipe, Castings – SB94ES, SB95ES.

2.19 VALVE IDENTIFICATION TAGS:

A. Exposed interior or exterior valves: Provide heavy duty, permanent plastic ID tags with valve number printed on tag using indelible ink and contrasting colors. Minimum tag size shall be 2"x3" and minimum letter height shall be 1". Tag shall be easily removable and shall be mounted so as not to interfere with normal valve operations. Valve ID shall be as identified in the valve schedule.
B. Vault or Pit Installed Valves: Provide a cast bronze floor plate to be anchored into the top concrete slab of pit or valve adjacent to the floor box or floor stand. Plate shall be minimum of 4"x3"x 3/16". Valve number shall be engraved in plate with minimum letter height of 1 1/2". Plate shall be anchored into concrete using threaded lugs with split stud anchor or other suitable anchoring device. Valve number shall be as identified in the valve schedule.

2.20 VALVE ACCESSORIES:

A. Post Indicator:

2.21 SHOP PAINTING:

A. Prepare surfaces and paint or coat all valves, fire hydrants, floor stands, valve boxes, corporation stops, and all related accessories standard of the manufacturer unless otherwise specified herein.
B. Paint and coatings shall be suitable for the service intended.
C. Submit type of paint or coating proposed with drawings and data for Engineer approval prior to fabrication.

PART 3 - EXECUTION

3.01 INSTALLATION:

A. Comply with provisions of AWWA C600 and as specified.

B. Thoroughly clean and remove all shipping materials prior to setting. Operate all valves from fully opened to totally closed.
C. Install eccentric plug valves in reverse position, flow and pressure against the plug face when closed, in lines with solids or stringy materials. When installed horizontally with shaft in the horizontal, the plug shall rotate open to the top recess of the valve body.
D. Install double-door wafer check valves with hinge pin in the vertical position for horizontal flow applications.
E. Install single-door wafer swing check valves with hinge pin in the horizontal position for horizontal flow applications.
F. Equip with anchorage where indicated.
G. Set fire hydrants with lowest nozzle 18 inches above finished grade. Check and fill stem bonnet lubricant reservoir.

3.02 FIELD TESTING:

A. Perform on piping and valves as specified in Section 33 31 50 - Pipe Installation and for the following:
    1. Gate valves.
    2. Butterfly valves.
    3. Check valves.
    4. Eccentric plug valves.
    5. Ball valves.
    6. Air and air/vacuum valves.
    7. Fire hydrants.

ADMINISTRATION BUILDING MOCKUP FOUNDATION NOTES:

1. MOCKUP FOUNDATION IS DESIGNED TO BE REPRESENTATIVE OF THE ACTUAL FOUNDATION FOUND AT THE ADMINISTRATION BUILDING, AND TO REPRESENT THE INSTALLED CONDITION AT THE BUILDING.
2. PROVIDE ALL NECESSARY CONNECTORS TO CONNECT MOCKUP PANELS TO THE FOUNDATION.
3. SEE SPECIFICATION SECTION 01 43 39 FOR ADDITIONAL MOCKUP REQUIREMENTS.
4. SEE DRAWING S002 FOR GENERAL NOTES.
5. SEE DRAWING S003 THROUGH S014 FOR STANDARD DETAILS.
6. FOUNDATION SHALL BEAR ON NATIVE SUBGRADE PREPARED IN ACCORDANCE WITH THE PROJECT SPECIFICATIONS. GROUND IMPROVEMENT IS NOT REQUIRED.
7. CONCRETE WORK SHALL BE IN ACCORDANCE WITH SPECIFICATION SECTION 03 30 00.
8. THE DRAWING REPRESENT THE FINISHED MOCKUP. CONTRACTOR IS RESPONSIBLE FOR MEANS AND METHODS OF CONSTRUCTION, INCLUDING BUT NOT LIMITED TO, TEMPORARY BRACING AND SHORING DESIGNED IN ACCORDANCE WITH ASCE 37, DESIGN LOADS ON STRUCTURES DURING CONSTRUCTION AND OTHER APPLICABLE CODES AND STANDARDS.

EROSION CONTROL NOTES:

1. SEE SHEET C101 FOR LEGEND AND GENERAL NOTES.
2. ALL DOWNSTREAM CATCH BASINS AND STORM SEWER INLETS MUST BE LINED WITH GEOTEXTILE FILTER FABRIC TO PREVENT SOIL AND DEBRIS FROM ENTERING STORM SEWER SYSTEM. FABRIC MUST BE IN PLACE PRIOR TO ANY CONSTRUCTION ACTIVITY, AND MUST BE MAINTAINED THROUGHOUT AND KEPT FREE OF DEBRIS DURING ENTIRE CONSTRUCTION ACTIVITY. LINERS MUST BE REMOVED UPON COMPLETION OF CONSTRUCTION ACTIVITIES. SEE SECTION 31 20 50
3. EROSION CONTROL METHODS OTHER THAN THOSE SHOWN ON THE DRAWINGS MAY BE UTILIZED IF APPROVED IN WRITING BY ENGINEER PRIOR TO THEIR USE.
4. THE LOCATION AND SIZE OF EROSION CONTROL DEVICES ARE APPROXIMATE ONLY AND REPRESENT THE MINIMUM REQUIREMENTS. THE DEVICES SHALL BE LOCATED GENERALLY AS SHOWN BUT THEIR LOCATIONS SHALL FACILITATE MAXIMUM PROTECTION FOR THE METHOD OF CONSTRUCTION UTILIZED. ADDITIONAL EROSION CONTROL DEVICES MAY BE REQUIRED TO COMPLY WITH SWPPP.
5. CONTRACTOR SHALL PROVIDE DUST CONTROL DURING ENTIRE CONSTRUCTION PERIOD. ALL DISTURBED AREAS SHALL BE MAINTAINED WITH DUST SUPPRESSORS (WATER, ETC.) TO PROHIBIT ENVIRONMENTAL CONTAMINATION. CALCIUM CHLORIDE SHALL NOT BE USED FOR DUST CONTROL.
6. THE CONTRACTOR SHALL PLAN AND CONDUCT GRADING OPERATIONS IN A MANNER THAT WILL MINIMIZE THE EXTENT AND DURATION OF UNPROTECTED SOIL.
7. THE CONSTRUCTION ENTRANCE SHALL BE MAINTAINED IN A CONDITION THAT WILL PREVENT TRACKING OF MATERIALS ONTO PUBLIC PAVEMENT. ALL MATERIALS TRACKED ONTO PUBLIC ROADWAYS SHALL BE IMMEDIATELY REMOVED.
8. DITCH CHECKS SHALL BE CONSTRUCTED OF ROCK UNLESS OTHERWISE APPROVED BY ENGINEER.
9. ALL EROSION CONTROL METHODS SHALL REMAIN IN PLACE UNTIL VEGETATION IS ESTABLISHED.

KEYED NOTES:

1. POLYMER TOTES WILL REST ON A GRATED SUMP PIT (10' L X 5.5' W X 2' D). SEE DRAWING S710 FOR ADDITIONAL DETAILS.
2. SEE DRAWING D705 OR D708 FOR ADDITIONAL DETAILS FOR THE HYDROXICAL RADICAL ODOR CONTROL UNIT.
3. SPACE FOR FUTURE ROTARY DRUM THICKENER.
4. TWO (2) MOBILE ELEVATED PLATFORM SHALL BE INCLUDED TO PROVIDE OPERATOR ACCESS TO ROTARY DRUMTHICKENER THICKENED SLUDGE HOPPER. MOBILE ELEVATED PLATFORM SHALL BE A THREE STEP PLATFORM THAT IS OSHA AND ANSI COMPLIANT, WITH LANDING OF 3' X 3' MINIMUM.
5. THIN SLUDGE SUCTION LINES ROUTED BELOW FOUNDATION.

GENERAL NOTES:

1. PIPING WITHIN FOUR FEET OF FINISHED FLOOR SHALL BE SUPPORTED WITH SADDLE TYPE SUPPORT, UNLESS OTHERWISE SPECIFIED. SEE PS-1.
2. ALL PIPE SUPPORTS AT A MINIMUM, SHALL FOLLOW MSS-SP 69, UNLESS SPECIFIED ELSEWHERE.
3. ELEVATED AIR PIPING SHALL BE SUPPORTED WITH CLEVIS HANGER PIPE SUPPORT, UNLESS OTHERWISE SPECIFIED.
4. ALL PIPING BELOW STRUCTURES SHALL BE ENCASED PER STRUCTURAL DETAILS. REFERENCE SHEET S006. ENCASEMENT SHALL EXTEND 4 FEET BEYOND EDGE OF FOOTING.
5. FRP COVERS ON THE THICKENED SLUDGE HOLDING TANKS ARE NOT SHOWN FOR CLARITY. SEE D705 FOR COVER DETAILS.

KEYED NOTES:

1. EACH THICKENED SLUDGE TANK HAS A DEDICATED VALVE CONTROL PANEL FOR THE LARGE BUBBLE MIXING SYSTEM. LARGE BUBBLE MIXING SYSTEM DIFFUSERS SHALL BE INSTALLED PER MANUFACTURER'S DIRECTION AND DESIGN.
2. THE HYDROXYL RADICAL MIST ODOR CONTROL SHALL BE SIZED TO DISCHARGE OXIDANT, WATER AND AIR TO THREE (3) NOZZLES FOR EACH SLUDGE THICKENED HOLDING TANK. PVC CARRIER PIPE FOR OXIDANT AND WATER TUBING SHALL BE PROVIDED BY THE CONTRACTOR. CONTRACTOR SHALL COORDINATE NOZZLE ASSEMBLY INSTALLATION WITH ODOR CONTROL MANUFACTURER.

GENERAL NOTES:

1. FRP COVERS SHALL BE AIR TIGHT AND PITCHED SLIGHTLY TO PREVENT WATER FROM POOLING ON COVER. REFERENCE STRUCTURAL DRAWINGS, SUPPLIER PROVIDED DRAWINGS AND SECTION 06 85 81. 1
2. EACH THIN SLUDGE TANK HAS THE ABILITY TO DECANT VIA A TELESCOPING VALVE. DECANTED SUPERNATANT WILL BE ROUTED TO THE PLANT SEWER.
3. MEDIUM BUBBLE DIFFUSER SYSTEM TO PROVIDED THROUGHOUT EACH THIN SLUDGE HOLDING TANK. REFERENCE SECTION 46 51 21 AND SUPPLIER PROVIDED DRAWINGS.
4. LARGE BUBBLE MIXING SYSTEM TO BE PROVIDED THROUGHOUT EACH THICKENED SLUDGE HOLDING TANK. HOLDING TANK. REFERENCE SECTION 46 42 57 AND SUPPLIER PROVIDED DRAWINGS.

INVITATION TO BID

Project/Contract Numbers: 81000927/1698

Project Title: Todd Creek WWTP Expansion & Major Upgrade

The General Services Department of Kansas City, Missouri will receive sealed Bids until 2:00 PM, on **February 24, 2026** at 4800 E 63rd Street, Kansas City, Missouri 64130, for **Project No. 81000927/Contract No. 1698, Todd Creek WWTP Expansion & Major Upgrade.** Bids will be opened after that time at the same Location.

City desires that Disadvantaged Business Enterprises (DBE) have an opportunity to participate in the performance of City contracts. The goals for this specific Project are stated in the Missouri State Revolving Fund Procedures for Implementation.

Nondiscrimination in Employment:
Bidders on this work will be required to comply with the President's Executive Order Number 11246. Requirements for bidders and contractors under this order are explained in the specifications.

SRF Statement:
This project is being financed through the Missouri State Revolving Fund, by the Water and Wastewater Loan Revolving Fund and federal Capitalization Grants to Missouri.

Disadvantaged Business Statement (DBE):
The City of Kansas City, Missouri is an Equal Opportunity Employer and invites the submission of bids from Disadvantaged Business Enterprises.

Bidding Documents will be available online to all interested parties at the Kansas City, Missouri Plan Room, http://www.kcmoplanroom.org. All addenda will be posted at this location. Any document or plan may be viewed or downloaded from this location.

Bidders are requested to attend the **mandatory** Pre-Bid Conference at 2:00 PM, January 15, 2026, on TEAMs and in-person at Kansas City Water Services Department, 4800 E 63rd Street, Kansas City, Missouri 64130. Teams Meeting Link: Todd Creek Pre-Bid Conference | Meeting-Join | Microsoft Teams

POWER EQUIPMENT OPERATORS CLASSIFICATIONS

GROUP 1: Asphalt roller operator, finish; asphalt paver and spreader; asphalt plant operator; auto grader or trimmer or sub-grader; backhoe; blade operator (all types); boilers - 2; booster pump on dredge; bulldozer operator; boring machine (truck or crane mounted); clamshell operator; concrete mixer paver; concrete plant operator; concrete pump operator; crane operator; derrick or derrick trucks; ditching machine; dragline operator; dredge engineman; dredge operator; drill cat with compressor mounted (self-contained) or similar type self- propelled rotary drill (not air tract); drilling or boring machine (rotary-self-propelled); finishing machine operator; greaser; high loader-fork lift-skid loader (all types); hoisting engineer (2 active drums); locomotive operator (standard guage); mechanics and welders (field and plants); mucking machine operator; pile drive operator; pitman crane or boom truck (all types); push cat; quad track; scraper operators (all types); shovel operator; sideboom cats; side discharge spreader; skimmer scoop operators; slip form paver operator (CMI, Rex, Gomeco or equal); la tourneau rooter (all tiller types); tow boat operator; truck crane; wood and log chippers (all types).

GROUP 2: A-frame truck operator; articulated dump truck; back filler operator; boilers (1); chip spreader; churn drill operator; compressor; concrete mixer operator, skip loader; concrete saws (self-propelled); conveyor operator; crusher operator; distributor operator; elevating grader operator; farm tractor (all attachments); fireman rig; float operator; form grade operator; hoisting engine (one drum); maintenance operator; multiple compactor; pavement breaker, self-propelled hydra-hammer (or similar type); paymill operator; power shield; pumps; roller operator (with or without blades); screening and washing plant; self-propelled street broom or sweeper; siphons and jets; straw blower; stump cutting machine; siphons and jets; tank car heater operator (combination boiler and booster); welding machine; vibrating machine operator (not hand held); welding machine.

GROUP 3: (a) Oiler;
(b) Oiiler driver
(c) Mechanic.

HOURLY PREMIUMS:

THE FOLLOWING CLASSIFICATIONS SHALL RECEIVE ($ .25) ABOVE GROUP 1 RATE: Dragline operator - 3 yds. & over; shovel 3 yds. & over; clamshell 3 yds. & over; Crane, rigs or

piledrivers, 100' of boom or over (incl. jib.), hoist - each additional active drum over 2 drums

THE FOLLOWING CLASSIFICATIONS SHALL RECEIVE ($ .50) ABOVE GROUP 1 RATE: Tandem scoop operator; crane, rigs or piledrivers 150' to 200' of boom (incl. jib.)

THE FOLLOWING CLASSIFICATIONS SHALL RECEIVE ($ .75) ABOVE GROUP 1 RATE: Crane rigs, or piledrivers 200 ft. of boom or over (including jib.)

  erecting; boring machine, footing foundation; bull- float;

cherry picker; combination concrete hoist & mixer (such as mixer mobile); compressor (when operator runs throttle); concrete breaker (truck or tractor mounted); concrete pump, such as pump-crete machine; concrete saw (self-propelled), concrete spreader; conveyor, large (not self-propelled), hoisting or moving brick and concrete into, or into and on floor level, one or both; crane, hydraulic-rough terrain, self-propelled; crane hydraulic-truck or cruiser mounted-under 16 tons; drilling machines, self-powered use for earth or rock drilling or boring (wagon drills nd any hand drills obtaining power from other sources including concrete breakers, jackhammers and barco equipment-no engineer required); elevating grader; engineman, dredge; excavator or powerbelt machine; finishing machine, self-propelled oscillating screed; forklift; grader, road with power blade; highlift. greaser; hoist, stack, hydro-hammer; loading machine (such as barber-greene); machanic, on job site; mixer, pipe wrapping machines; plant asphalt; plant, concrete producing or ready-mix job site; plant heating-job site; plant mixing-job site; plant power, generating-job site; pumps, two through six self-powered over 2""; pumps, electric submersible, two through six, over 4""; quad-track; roller, asphalt, top or sub-grade; scoop, tractor drawn; spreader box; sub-grader; tie tamper; tractor-crawler, or wheel type with or without power unit, power take-offs and attachments regardless of size; trenching machine; tunnel boring machine; vibrating machine automatic, automatic propelled; welding machines (gasoline or diesel) two through six; well drilling machine

GROUP 3: Conveyor, large (not self-propelled); conveyor, large (not self-propelled) moving brick and concrete distributing) on floor level; mixer two or more mixers of one bag capacity or less; air tugger w/plant air; boiler, for power or heating on construction projects; boiler, temporary; compressor (mounted on truck; curb finishing machine; ditch paving machine; elevator; endless chain hoist; form grader; hoist, one drum regardless of size; lad-a-vator; manlift; mixer, asphalt, over 8 cu. ft. capacity, without side loader, 2 bag capacity or more; mixer, with side loader, regardless of size; pug mill operator; pump, sump-self-powered, automatic controlled over 2"" during use in connection with construction work; sweeper, street; welding machine, one over 400 amp.; winch operating from truck; scissor lift (used for hoisting); tractor, small wheel type 50 h.p. & under with grader blade & similar equipment; Oiler on dredge and on truck crane.

GROUP 4: Boat operator-outboard motor (job site); conveyor (such as con-vay-it) regardless of how used; sweeper, floor

HOURLY PREMIUMS:

Backhoe, hydraulic 2 cu. yds. or under without oiler	$2.00
Certified Crane Operator	1.50
Certified Hazardous Material Operator	1.50
Crane, climbing (such as Linden)	.50
Crane, pile driving and extracting	.50
Crane, with boom (including jib) over 100' (from pin to pin) add $.01 per foot to maximum of	4.00
Crane, using rock socket tool	.50
Derrick, diesel, gas or electric, hoisting material and erecting steel (150' or more above ground)	.50
Dragline, 7 cu. yds. and over	.50
Hoist, three (3) or more drums in use	.50
Scoop, Tandem	.50
Shovel, power - 7 cu. yds. or more	.50
Tractor, tandem crawler	.50
Tunnel, man assigned to work in tunnel or tunnel shaft	.50
Wrecking, when machine is working on second floor or higher	.50

GROUP 1 - Pick-up trucks; forklift, single axle; flatbed trucks; job site ambulance, and trucks or trailers of a water level capacity of 11.99 cu. yds. or less

GROUP 2 - Trucks or trailers of a water level capacity of 12.0 cu yds. up to 22.0 cu yds. including euclids, speedace and similar equipment of same capacity and compressors

GROUP 3 - Trucks or trailers of a water level capacity of 22.0 cu. yds & over including euclids, speedace & all floats, flatbed trailers, boom trucks, winch trucks, including small trailers, farm wagons tilt-top trailers, field offices, tool trailers, concrete pumps, concrete conveyors & gasoline tank trailers and truck mounted mobile concrete mixers

FOOTNOTE FOR TRUCK DRIVERS:

c. PAID HOLIDAYS: Christmas Day, Independence Day, Labor Day, Memorial Day, Veterans Day, New Years Day, Thanksgiving Day

d. PAID VACATION: 3 days paid vacation for 600 hours of service in any one contract year; 4 days paid vacation for 800 hours of service in any one contract year; 5 days paid vacation for 1,000 hours of service in any one contract year. When such an employee has completed 3 years of continuous employment with the same employer and then works the above required number of hours, he shall receive double the number of days of vacation specified above. When such an employee has completed 10 years of continuous employment with the same employer and then works the above required number of hours, he shall receive triple the number of days of vacation specified above. When such an employee has completed 15 years of continuous employment with the same employer and then works the above required number of hours, he shall receive 4 times the number of days of vacation specified above.

WELDERS - Receive rate prescribed for craft performing operation to which welding is incidental.

==========

Note: Executive Order (EO) 13706, Establishing Paid Sick Leave for Federal Contractors applies to all contracts subject to the Davis-Bacon Act for which the contract is awarded (and any solicitation was issued) on or after January 1, 2017. If this contract is covered by the EO, the contractor must provide employees with 1 hour of paid sick leave for every 30 hours they work, up to 56 hours of paid sick leave each year. Employees must be permitted to use paid sick leave for their own illness, injury or other health-related needs, including preventive care; to assist a family member (or person who is like family to the employee) who is ill, injured, or has other health-related needs, including preventive care; or for reasons resulting from, or to assist a family member (or person who is like family to the employee) who is a victim of, domestic violence, sexual assault, or stalking. Additional information on contractor requirements and worker protections under the EO is available at https://www.dol.gov/agencies/whd/government-contracts.

Note: Executive Order 13658 generally applies to contracts subject to the Davis-Bacon Act that were awarded on or between January 1, 2015 and January 29, 2022, and that have not been renewed or extended on or after January 30, 2022. Executive Order 13658 does not apply to contracts subject only to the Davis-Bacon Related Acts regardless of when they were awarded. If a contract is subject to Executive Order 13658, the contractor must pay all covered workers at least $13.30 per hour (or the applicable wage rate listed on this wage determination, if it is higher) for all hours spent performing on the contract in 2025. The applicable Executive Order minimum wage rate will be adjusted annually. Additional information on contractor requirements and worker protections under Executive Order 13658 is available at www.dol.gov/whd/govcontracts.

Unlisted classifications needed for work not included within the scope of the classifications listed may be added after award only as provided in the labor standards contract clauses (29CFR 5.5 (a) (1) (iii)).

The body of each wage determination lists the classifications and wage rates that have been found to be prevailing for the

type(s) of construction and geographic area covered by the wage determination. The classifications are listed in alphabetical order under rate identifiers indicating whether the particular rate is a union rate (current union negotiated rate), a survey rate, a weighted union average rate, a state adopted rate, or a supplemental classification rate.

Union Rate Identifiers

A four-letter identifier beginning with characters other than ""SU"", ""UAVG"", ?SA?, or ?SC? denotes that a union rate was prevailing for that classification in the survey. Example: PLUM0198-005 07/01/2024. PLUM is an identifier of the union whose collectively bargained rate prevailed in the survey for this classification, which in this example would be Plumbers. 0198 indicates the local union number or district council number where applicable, i.e., Plumbers Local 0198. The next number, 005 in the example, is an internal number used in processing the wage determination. The date, 07/01/2024 in the example, is the effective date of the most current negotiated rate.

Union prevailing wage rates are updated to reflect all changes over time that are reported to WHD in the rates in the collective bargaining agreement (CBA) governing the classification.

Union Average Rate Identifiers

The UAVG identifier indicates that no single rate prevailed for those classifications, but that 100% of the data reported for the classifications reflected union rates. EXAMPLE: UAVG-OH-0010 01/01/2024. UAVG indicates that the rate is a weighted union average rate. OH indicates the State of Ohio. The next number, 0010 in the example, is an internal number used in producing the wage determination. The date, 01/01/2024 in the example, indicates the date the wage determination was updated to reflect the most current union average rate.

A UAVG rate will be updated once a year, usually in January, to reflect a weighted average of the current rates in the collective bargaining agreements on which the rate is based.

Survey Rate Identifiers

The ""SU"" identifier indicates that either a single non-union rate prevailed (as defined in 29 CFR 1.2) for this classification in the survey or that the rate was derived by computing a weighted average rate based on all the rates reported in the survey for that classification. As a weighted

average rate includes all rates reported in the survey, it may include both union and non-union rates. Example: SUFL2022-007 6/27/2024. SU indicates the rate is a single non-union prevailing rate or a weighted average of survey data for that classification. FL indicates the State of Florida. 2022 is the year of the survey on which these classifications and rates are based. The next number, 007 in the example, is an internal number used in producing the wage determination. The date, 6/27/2024 in the example, indicates the survey completion date for the classifications and rates under that identifier.

?SU? wage rates typically remain in effect until a new survey is conducted. However, the Wage and Hour Division (WHD) has the discretion to update such rates under 29 CFR 1.6(c)(1).

State Adopted Rate Identifiers

The ""SA"" identifier indicates that the classifications and prevailing wage rates set by a state (or local) government were adopted under 29 C.F.R 1.3(g)-(h). Example: SAME2023-007 01/03/2024. SA reflects that the rates are state adopted. ME refers to the State of Maine. 2023 is the year during which the state completed the survey on which the listed classifications and rates are based. The next number, 007 in the example, is an internal number used in producing the wage determination. The date, 01/03/2024 in the example, reflects the date on which the classifications and rates under the ?SA? identifier took effect under state law in the state from which the rates were adopted.

WAGE DETERMINATION APPEALS PROCESS

1) Has there been an initial decision in the matter? This can be:

a) a survey underlying a wage determination
b) an existing published wage determination
c) an initial WHD letter setting forth a position on a wage determination matter
d) an initial conformance (additional classification and rate) determination

On survey related matters, initial contact, including requests for summaries of surveys, should be directed to the WHD Branch of Wage Surveys. Requests can be submitted via email to davisbaconinfo@dol.gov or by mail to:

Branch of Wage Surveys

Wage and Hour Division
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

Regarding any other wage determination matter such as conformance decisions, requests for initial decisions should be directed to the WHD Branch of Construction Wage Determinations. Requests can be submitted via email to BCWD-Office@dol.gov or by mail to:

Branch of Construction Wage Determinations
Wage and Hour Division
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

2) If an initial decision has been issued, then any interested party (those affected by the action) that disagrees with the decision can request review and reconsideration from the Wage and Hour Administrator (See 29 CFR Part 1.8 and 29 CFR Part 7). Requests for review and reconsideration can be submitted via email to dba.reconsideration@dol.gov or by mail to:

Wage and Hour Administrator
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

The request should be accompanied by a full statement of the interested party's position and any information (wage payment data, project description, area practice material, etc.) that the requestor considers relevant to the issue.

3) If the decision of the Administrator is not favorable, an interested party may appeal directly to the Administrative Review Board (formerly the Wage Appeals Board). Write to:

Administrative Review Board
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210.

==========

Note: Executive Order (EO) 13706, Establishing Paid Sick Leave for Federal Contractors applies to all contracts subject to the Davis-Bacon Act for which the contract is awarded (and any solicitation was issued) on or after January 1, 2017. If this contract is covered by the EO, the contractor must provide employees with 1 hour of paid sick leave for every 30 hours they work, up to 56 hours of paid sick leave each year. Employees must be permitted to use paid sick leave for their own illness, injury or other health-related needs, including preventive care; to assist a family member (or person who is like family to the employee) who is ill, injured, or has other health-related needs, including preventive care; or for reasons resulting from, or to assist a family member (or person who is like family to the employee) who is a victim of, domestic violence, sexual assault, or stalking. Additional information on contractor requirements and worker protections under the EO is available at https://www.dol.gov/agencies/whd/government-contracts.

Note: Executive Order 13658 generally applies to contracts subject to the Davis-Bacon Act that were awarded on or between January 1, 2015 and January 29, 2022, and that have not been renewed or extended on or after January 30, 2022. Executive Order 13658 does not apply to contracts subject only to the Davis-Bacon Related Acts regardless of when they were awarded. If a contract is subject to Executive Order 13658, the contractor must pay all covered workers at least $13.30 per hour (or the applicable wage rate listed on this wage determination, if it is higher) for all hours spent performing on the contract in 2025. The applicable Executive Order minimum wage rate will be adjusted annually. Additional information on contractor requirements and worker protections under Executive Order 13658 is available at www.dol.gov/whd/govcontracts.

Unlisted classifications needed for work not included within the scope of the classifications listed may be added after award only as provided in the labor standards contract clauses (29CFR 5.5 (a) (1) (iii)).

The body of each wage determination lists the classifications and wage rates that have been found to be prevailing for the type(s) of construction and geographic area covered by the wage determination. The classifications are listed in alphabetical order under rate identifiers indicating whether the particular rate is a union rate (current union negotiated rate), a survey rate, a weighted union average rate, a state adopted rate, or a supplemental classification rate.

Union Rate Identifiers

A four-letter identifier beginning with characters other than ""SU"", ""UAVG"", ?SA?, or ?SC? denotes that a union rate was prevailing for that classification in the survey. Example: PLUM0198-005 07/01/2024. PLUM is an identifier of the union whose collectively bargained rate prevailed in the survey for this classification, which in this example would be Plumbers. 0198 indicates the local union number or district council number where applicable, i.e., Plumbers Local 0198. The next number, 005 in the example, is an internal number used in processing the wage determination. The date, 07/01/2024 in the

example, is the effective date of the most current negotiated rate.

Union prevailing wage rates are updated to reflect all changes over time that are reported to WHD in the rates in the collective bargaining agreement (CBA) governing the classification.

Union Average Rate Identifiers

The UAVG identifier indicates that no single rate prevailed for those classifications, but that 100% of the data reported for the classifications reflected union rates. EXAMPLE: UAVG-OH-0010 01/01/2024. UAVG indicates that the rate is a weighted union average rate. OH indicates the State of Ohio. The next number, 0010 in the example, is an internal number used in producing the wage determination. The date, 01/01/2024 in the example, indicates the date the wage determination was updated to reflect the most current union average rate.

A UAVG rate will be updated once a year, usually in January, to reflect a weighted average of the current rates in the collective bargaining agreements on which the rate is based.

Survey Rate Identifiers

The ""SU"" identifier indicates that either a single non-union rate prevailed (as defined in 29 CFR 1.2) for this classification in the survey or that the rate was derived by computing a weighted average rate based on all the rates reported in the survey for that classification. As a weighted average rate includes all rates reported in the survey, it may include both union and non-union rates. Example: SUFL2022-007 6/27/2024. SU indicates the rate is a single non-union prevailing rate or a weighted average of survey data for that classification. FL indicates the State of Florida. 2022 is the year of the survey on which these classifications and rates are based. The next number, 007 in the example, is an internal number used in producing the wage determination. The date, 6/27/2024 in the example, indicates the survey completion date for the classifications and rates under that identifier.

?SU? wage rates typically remain in effect until a new survey is conducted. However, the Wage and Hour Division (WHD) has the discretion to update such rates under 29 CFR 1.6(c)(1).

State Adopted Rate Identifiers

The ""SA"" identifier indicates that the classifications and prevailing wage rates set by a state (or local) government were adopted under 29 C.F.R 1.3(g)-(h). Example: SAME2023-007 01/03/2024. SA reflects that the rates are state adopted. ME refers to the State of Maine. 2023 is the year during which the state completed the survey on which the listed classifications and rates are based. The next number, 007 in the example, is an internal number used in producing the wage determination. The date, 01/03/2024 in the example, reflects the date on which the classifications and rates under the ?SA? identifier took effect under state law in the state from which the rates were adopted.

WAGE DETERMINATION APPEALS PROCESS

1) Has there been an initial decision in the matter? This can be:

a) a survey underlying a wage determination
b) an existing published wage determination
c) an initial WHD letter setting forth a position on a wage determination matter
d) an initial conformance (additional classification and rate) determination

On survey related matters, initial contact, including requests for summaries of surveys, should be directed to the WHD Branch of Wage Surveys. Requests can be submitted via email to davisbaconinfo@dol.gov or by mail to:

Branch of Wage Surveys
Wage and Hour Division
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

Regarding any other wage determination matter such as conformance decisions, requests for initial decisions should be directed to the WHD Branch of Construction Wage Determinations. Requests can be submitted via email to BCWD-Office@dol.gov or by mail to:

Branch of Construction Wage Determinations
Wage and Hour Division
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

2) If an initial decision has been issued, then any interested party (those affected by the action) that disagrees with the decision can request review and reconsideration from the Wage and Hour Administrator (See 29 CFR Part 1.8 and 29 CFR Part 7). Requests for review and reconsideration can be submitted via email to dba.reconsideration@dol.gov or by mail to:

Wage and Hour Administrator
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210

The request should be accompanied by a full statement of the interested party's position and any information (wage payment data, project description, area practice material, etc.) that the requestor considers relevant to the issue.

3) If the decision of the Administrator is not favorable, an interested party may appeal directly to the Administrative Review Board (formerly the Wage Appeals Board). Write to:

Administrative Review Board
U.S. Department of Labor
200 Constitution Avenue, N.W.
Washington, DC 20210.

WORK CHANGE DIRECTIVE ("WCD") INSTRUCTIONS

[Note: Do not attach these instructions to the WCD Form]

A. GENERAL INFORMATION

This document was developed for use in situations involving changes in the Work which, if not processed expeditiously, might delay the Project. These changes are often initiated in the field and may affect the Contract Price or the Contract Times. This is not a Change Order, but only a directive to proceed with Work that may be included in a subsequent Change Order. If the WCD may result in an increase in the Contract Price, a contract impact cost analysis must be performed prior to issuing the WCD. Availability of funds and authorization to expend funds must be part of the analysis.

For supplemental instructions and minor changes not involving a possible change in the Contract Price or the Contract Times a Supplemental Design Instruction may be used.

B. COMPLETING THE WORK CHANGE DIRECTIVE FORM

Based on conversations between Design Professional, City's Representative and CONTRACTOR, Design Professional must complete the following:

DESCRIPTION: shall include a summary of the Work included in the WCD. Additional information may be attached to the WCD to further define the scope.

PURPOSE OF WORK CHANGE DIRECTIVE: will identify clearly if the Work included in the WCD is an addition, deletion, revision, or some combination.

ATTACHMENTS: shall identify all attachments included in and made a part of the WCD. Be certain that attachments are clearly labeled.

METHOD OF DETERMINING CHANGE, IF ANY, IN CONTRACT PRICE: Mark the method to be used in determining the final cost of Work involved and the estimated net effect on the Contract Price. If the change involves an increase in the Contract Price and the estimated amount is approached before the additional or changed Work is completed, another WCD must be issued to change the estimated price. Do not leave blank spaces or write "To be determined" (or "TBD"). An estimated dollar figure must be assigned to the Work. If the WCD is not likely to change the Contract Price, the space for estimated increase (decrease) should be marked "No Change in Price".

METHOD OF DETERMINING CHANGE, IF ANY, IN CONTRACT TIMES: Mark the method to be used in determining the change in Contract Times and the estimated increase or decrease in Contract Times. If the change involves an increase in the Contract Times and the estimated times are approached before the additional or changed Work is completed, another WCD must be issued to change the times or CONTRACTOR may stop the changed Work when the estimated times are reached. Do not leave blank spaces or write "To be determined" (or "TBD"). If the WCD is not likely to change the Contract Times, the space for estimated increase (decrease) should be marked "No Change in Times".

Once Design Professional has completed and signed the form, all copies should be sent to CITY for authorization because Design Professional does not have authority to authorize changes in Price or Times. Once authorized by CITY, a copy must be sent by Design Professional to CONTRACTOR. Price and Times may only be changed by Change Order signed by CITY, Design Professional, and CONTRACTOR. If the value of the work included in the WCD exceeds the contingency or budget available for the contract, staff must obtain written approval from the Director or his or her designee before the WCD is issued. A Director or his or her designee may not approve a WCD that will exceed City Council authorization. If the work included in the WCD is needed as a result of an emergency, staff may proceed with the issuance of the WCD without

prior written approval even if the value of the work added is expected to exceed the contract contingency balance.

Once the Work covered by this directive is completed or final cost and times are determined. CONTRACTOR must submit proper documentation for inclusion in a Change Order.

IF THIS IS A DIRECTIVE TO PROCEED WITH A CHANGE THAT MAY AFFECT THE CONTRACT PRICE OR THE CONTRACT TIMES A CHANGE ORDER, IF ANY, MUST BE PROCESSED PROMPTLY.

Clean Water State Revolving Fund
Specifications Requirements

State Revolving Fund: This project is being financed through the Missouri State Revolving Fund, by the Water and Wastewater Loan Revolving Fund and federal Capitalization Grants to Missouri.

Equal Employment Opportunity and Nondiscrimination in Employment – 41 CFR 60-4; E.O. 11246: 41 CFR 60-4 published April 7, 1978 and amended October 3, 1980, requires that the SRF funding applicant and selected bidders comply with Executive Order 11246 for bids, contracts, and subcontracts for all federally assisted construction contracts exceeding $10,000. The specifications explain the requirements for bidders and contractors under E.O. 11246.

- Bidders please see document titled "Standard Federal Equal Employment Opportunity Construction Contract Specifications (Executive Order 11246)"

Disadvantaged Business Enterprises (DBE) (includes Minority-owned Business Enterprises/Women-owned Business Enterprises, MBE/WBE) – 40 CRF Part 33, 10 CSR 20-4.040(17), E.O. 11625 and 12138: The applicant is an Equal Opportunity Employer and invites the submission of bids from Disadvantaged Business Enterprises.

- Bidders please see document titled "Missouri State Revolving Fund Procedures for Implementation Minority Business Enterprise/Women's Business Enterprise"

- The selected bidders must complete the "Missouri State Revolving Fund Disadvantaged Business Enterprise (Minority and Women's Business Enterprise) Utilization Worksheet"

Employment of Unauthorized Aliens Prohibited – §285.530 RSMo: Pursuant to §285.530.1, RSMo, the contractor assures that it, as well as its subcontractors, does not knowingly employ, hire for employment, or continue to employ an unauthorized alien to perform work within the State of Missouri, and shall affirm, by sworn affidavit and provision of documentation, its enrollment and participation in a federal work authorization program with respect to the employees working in connection with the contracted services. Further, the contractor assures that it, as well as its subcontractor shall sign an affidavit affirming that it does not knowingly employ any person who is an unauthorized alien in connection with the contracted services.

In accordance with §285.525 to 285.550, RSMo a general contractor or subcontractor of any tier shall not be liable when such contractor or subcontractor contracts with its direct subcontractor who violates subsection 1 of §285.530, RSMo if the contract binding the contractor and subcontractor affirmatively states that the direct subcontractor is not knowingly in violation of subsection 1 of §285.530, RSMo and shall not henceforth be in such violation and the contractor or subcontractor receives a sworn affidavit under the penalty of perjury attesting to the fact that the direct subcontractor's employees are lawfully present in the United States.

- The selected contractor(s) must complete the "Business Entity Certification, Enrollment Documentation, and Affidavit of Work Authorization" form.
- In addition, the selected contractor(s) must enroll in the federal E-verify system, provide supporting documentation of enrollment, and provide verification documentation for enrollment in the Federal E-Verify system.

Davis-Bacon Act:

- Bidders please see "Davis Bacon Act Requirements"
- Bidders please see "Davis-Bacon Act Requirements Funding Recipient Requirements"

Contract Work Hours and Safety Standards Act – 40 U.S.C. 327-330: The contractor(s) and subcontractor(s) shall comply with Sections 103 and 107 of the Contract Work Hours and Safety Standards Act (40 U.S.C. 327–330) as supplemented by Department of Labor regulations (29 CFR part 5).

U.S. Environmental Protection Agency Certification of Non-segregated Facilities:

- The selected bidders must complete this form.

OSHA Training – §292.675, RSMo: Any person signing a contract to work on the construction of public works for any public body shall provide a ten-hour Occupational Safety and Health Administration (OSHA) construction

safety program for their on-site employees which includes a course in construction safety and health approved by OSHA or a similar program approved by the Missouri Department of Labor and Industrial Relations which is at least as stringent as an approved OSHA program. All employees are required to complete the program within sixty days of beginning work on such construction project.

Debarment and Suspension – 10 CSR 20-4.040(17); E.O. 12549: The Code of Federal Regulations at Title 2, Part 180, prohibits participation in USEPA funded contracts by persons excluded or disqualified from doing business with the federal government. Bidders are responsible for advising the Owner if they are excluded or disqualified, and to check whether subcontractors they intend to use are excluded or disqualified. All tiers of subcontractors have the same responsibility to notify the one for which they are providing services if they are excluded or disqualified, and to check the status of any subcontractors they intend to use. Status can be checked on the System for Award Management (SAM) located on the Internet at https://www.sam.gov/SAM/. All subcontracts at any tier should include this language.

- The selected bidders must complete the "Certification Regarding Debarment and Suspension" form.

Small Business Act – P.L. 100-590: Prior to awarding contracts, the SRF funding applicant and any contractor awarding subcontracts must take the following affirmative steps in accordance with Section 129 of Public Law 100-590, Small Business Administration Reauthorization and Amendment Act of 1988:

a. Placing Small Business in Rural Areas (SBRA) on solicitation lists;
b. Ensuring that SBRAs are solicited whenever they are potential sources;
c. Dividing total requirements, when economically feasible, into small tasks or quantities to permit maximum participation by SBRAs;
d. Establishing delivery schedules, where the requirements of work will permit which would encourage participation by SBRAs; and
e. Utilizing the services of the Small Business Administration and the Minority Business Development Agency of the U.S. Department of Commerce, as appropriate.

Award of Contract – 10 CSR 20-4.040(18): The applicant will award the contract to the lowest responsive, responsible bidder. The contract must be for a firm fixed-price.

The contract award will be awarded only to responsible contractors possessing the ability to perform successfully, which will be determined by considering such matters as contractor integrity, compliance with public policy, record of past performance, and financial and technical resources.

Privity of Contract: The Missouri Department of Natural Resources, its divisions, nor its employees are or will be a party to the contract(s) at any tier.

Protests: Neither the U.S. Environmental Protection Agency (USEPA) nor the Missouri Department of Natural Resources will be involved in protest(s) and their resolution.

Domestic Products Procurement Law – 10 CSR 20-4.040(17); §§34.350 - 34.359 RSMo: All manufactured goods or commodities used or supplied in the performance of any contract or subcontract awarded on this project shall be manufactured, assembled or produced in the United States, unless obtaining American-made products would increase the cost of the contract by more than ten percent (10%). In accordance with §34.350 through 34.359 RSMo, a waiver may be requested from the owner.

- The selected bidders must complete the "Domestic Products Procurement Act – §§34.350 - 34.359 RSMo Certification" form.

Anti-Lobbying Act – P.L. 101-121: Sub-recipients who request or receive from the grant recipient a sub-grant, contract, or sub-contract exceeding $100,000, at any tier under a federal grant shall comply with the Anti-Lobbying Act, Section 319 of Public Law 101-121, and file an Anti-Lobbying Certification form, and the Disclosure of Lobbying Activities form, if required, to the next tier above.

- Selected bidders must complete one of the following forms:
  - If the selected bidder lobbied on the behalf of this project, the contractor will complete the "Disclosure of Lobbying Activities" form.
  - If the selected bidder did not lobby on the behalf of this project, the contractor will complete the "Certification Regarding Lobbying" form.

Record Retention: The contractor(s) and sub-contractor(s) shall retain all project related records for three years after final payment(s) and all other pending matters are closed.

Access to Construction Site and Contract Records – 10 CSR 20-4.040(17); Clean Water Act sec. 308 (B)i: The contractor shall provide access to the project site and project records by, the Missouri State Auditor, the Missouri Department of Natural Resources, the Missouri Clean Water Commission, the Environmental Improvement and Energy Resources Authority, the USEPA, the Comptroller General of the United States, or any of their duly authorized representatives to any books, documents, papers, and records of the contractor which are directly pertinent to that specific contract for the purpose of making audit, examination, excerpts, and transcriptions.

Payment Provisions – 10 CSR 20-4.040(20): The owner shall make payment to the contractor in accordance with §8.960, RSMo. Retainage can be no more than 5%.

False Claims Act: The contractor(s) and sub-contractor(s)s, if required by future OMB guidance, shall promptly refer to the State of Missouri or other appropriate Inspector General any credible evidence that a principal, employee, agent, contractor, sub-grantee, subcontractor or other person has submitted a false claim under the False Claims Act or has committed a criminal or civil violation of laws pertaining to fraud, conflict of interest, bribery, gratuity or similar misconduct involving those funds.

Clean Air Act - 42 U.S.C. 7506(C): The contractor(s) and sub-contractor(s) shall comply with the Clean Air Act.

Clean Water Act - 33 U.S.C. 1368: The contractor(s) and sub-contractor(s) shall comply with the Clean Water Act.

Energy Efficiency Requirements – Energy Policy and Conservation Act (P.L.94-163, 89 Stat. 871): The contractor(s) and sub-contractor(s) shall comply with the mandatory standards and policies relating to energy efficiency which are contained in the State energy conservation plan issued in compliance with the Energy Policy and Conservation Act (P.L. 94-163, 89 Stat. 871).

Recycled Materials – U.S.C. 6962 (RCRA Section 6002): In accordance with Section 6002 of the Resource Conservation and Recovery Act (RCRA), preference shall be given to the procurement of specific products containing recycled materials identified in guidelines developed by the USEPA. Current guidelines are contained in 40 CFR Part 247-254.

Historical and Archaeological – P.L. 93-291: If during the course of construction evidence of deposits of historical or archaeological interest is found, the contractor shall cease operations affecting the find and shall notify the owner who shall notify the Missouri Department of Natural Resources and the Director, Division of State Parks, P.O. Box 176, Jefferson City, Missouri 65102-0176, Telephone (573) 751-2479. The contractor shall halt any further disturbances of the deposits until notified by the owner that they may proceed. The owner will issue a notice to

proceed only after the state official has surveyed the find and made a determination to the Missouri Department of Natural Resources and the owner. Compensation to the contractor, if any, for lost time or changes in construction to avoid the find, shall be determined in accordance with changed conditions or change order provisions of the specifications.

Missouri Products – Chap. 71.140 RSMo: Preference shall be given to Missouri products in accordance with Chapter 71.140, Revised Statutes of Missouri.

- This applies to loan only funded projects. Please contact the solicitor to determine if applicable to this project.

Missouri Firms – §34.076 RSMo: Pursuant to §34.076, Revised Statutes of Missouri, preference shall be given to those persons doing business as Missouri firms, corporations, or individuals, or which maintain Missouri offices or places of business, when the quality of performance promised is equal or better and the price quoted is the same or less. In addition, in order for a non-domiciliary Missouri bidder to be successful, his bid must be that same percentage lower than a domiciliary Missouri bidder's bid, as would be required for a Missouri bidder to successfully bid in the non-domiciliary's state.

- This applies to loan only funded projects. Please contact the solicitor to determine if applicable to this project.

Prohibition on certain telecommunications and video surveillance services or equipment Certification – 2 CFR 200.216: In accordance with 2 CFR 200.216, recipients and sub-recipients are prohibited from obligating or expending loan or grant funds to procure or obtain, extend or renew a contract to procure or obtain, or enter into a contract (or extend or renew a contract) to procure or obtain equipment, services, or systems that uses covered telecommunications equipment or services as a substantial or essential component of any system, or as critical technology as part of any system. As described in Public Law 115-232, section 889, covered telecommunications equipment is telecommunications equipment produced by Huawei Technologies Company or ZTE Corporation (or any subsidiary or affiliate of such entities).

For the purpose of public safety, security of government facilities, physical security surveillance of critical infrastructure, and other national security purposes, video surveillance and telecommunications equipment produced by Hytera Communications Corporation, Hangzhou Hikvision Digital Technology Company, or Dahua Technology Company (or any subsidiary or affiliate of such entities).

Anti-Discrimination Against Israel Act – §34.600, RSMo: In compliance with §34.600 RSMo, the contracting company certifies that it is not currently engaged in and shall not, for the duration of the contract, engage in a boycott of goods or services from the State of Israel; companies doing business in or with Israel or authorized by, licensed by, or organized under the laws of the State of Israel; or persons or entities doing business in the State of Israel, in accordance with §34.600, RSMo. Any contract that fails to comply with the provisions of this section shall be void against public policy.

- This provision does not apply to contracts with a total potential value of less than one hundred thousand dollars or to contractors with fewer than ten employees.

American Iron and Steel – Sec. 608(a) of the Federal Water Pollution Control Act: In accordance with Sec. 608(a) of the Federal Water Pollution Control Act, the Participant assures that it, as well as its contractors and sub-contractors, will only use iron and steel products in the Project which are produced in the United States in a manner consistent with United States obligations under international agreements. The term “iron and steel products” means the following products made primarily of iron or steel: lined or unlined pipes and fittings, manhole covers and other municipal castings, hydrants, tanks, flanges, pipe clamps and restraints, valves, structural steel, reinforced precast concrete, and construction materials.

The Participant understands that this requirement may only be waived by the applicable federal agency in limited situations as set out in §608(d) of the Federal Water Pollution Control Act.

The contractor shall submit all AIS certifications for any iron and steel requested for reimbursement. No applicable items will be reimbursed without the necessary AIS documentation.

- Bidders please see AIS guidance titled "Implementation of American Iron and Steel provisions."
- Bidders please see AIS waivers:
  - De-Minimis Waiver
  - National Product Waiver for Pig Iron and Direct Reduced Iron for State Revolving Fund Projects
  - National Product Waiver for Minor Components within Iron and Steel Products (with cost ceiling) for State Revolving Fund Projects
- Contractors bidding on this project must complete and include with their bid the "American Iron and Steel Certification" form.

Stormwater Permit – 10 CSR 20-6.200

The Department requires the SRF funding applicant to verify their existing National Pollutant Discharge Elimination System (NPDES) permit(s) cover stormwater discharges or obtain the necessary permit(s). The following scenarios may be applicable:

1. The SRF funding applicant is a regulated Municipal Separate Storm Sewer System (MS4) per 10 CSR 20-6.200(1)(D)24 and their NPDES MS4 permit outlines compliance with construction stormwater requirements,
2. The design flow of the wastewater treatment plant is greater than or equal to 1 million gallon per day and the NPDES permit also regulates construction stormwater, or
3. Neither 1 or 2 above applies and the proposed project disturbs one (1) or more acres of total land area or less than one (1) acre as part of a common plan or sale resulting in the need for a land disturbance permit to discharge construction stormwater.

For further information, contact the Missouri Department of Natural Resources, Water Protection Program, Operating Permits Section, P.O. Box 176, Jefferson City, Missouri 65102. Telephone: (573) 522-4502.

STANDARD FEDERAL EQUAL EMPLOYMENT OPPORTUNITY
CONSTRUCTION CONTRACT SPECIFICATIONS
(EXECUTIVE ORDER 11246)

1. As used in these specifications:

a. "Covered area" means the geographical area described in the solicitation from which this contract resulted;

b. "Director" means Director, Office of Federal Contract Compliance Programs United States Department of Labor, or any person to whom the Director delegates authority;

c. "Employer identification number" means the Federal Social Security number used on the Employer's Quarterly Federal Tax Return, U.S. Treasury Department Form 941.

d. "Minority" includes:

(i) Black (all persons having origins in any of the Black African racial groups not of Hispanic origin);

(ii) Hispanic (all persons of Mexican, Puerto Rican, Cuban, Central or South American or other Spanish Culture or origin, regardless of race);

(iii) Asian and Pacific Islander (all persons having origins in any of the original peoples of the Far East, Southeast Asia, the Indian Subcontinent, or the Pacific Islands); and

(iv) American Indian or Alaskan Native (all persons having origins in any of the original peoples of North America and maintaining identifiable tribal affiliations through membership and participation or community identification).

2. Whenever the Contractor, or any Subcontractor at any tier, subcontracts a portion of the work involving any construction trade, it shall physically include in each subcontract in excess of $10,000 the provisions of these specifications and the Notice which contains the applicable goals for minority and female participation and which is set forth in the solicitations from which this contract resulted.

3. If the contractor is participating (pursuant to 41 CFR 60-4.5) in a Hometown Plan approved by the U.S. Department of Labor in the covered area either individually or through an association, its affirmative action obligations on all work in the Plan area (including goals and timetables) shall be in accordance with that Plan for those trades which have unions participating in the Plan. Contractors must be able to demonstrate their participation in and compliance with the provisions of any such Hometown Plan. Each Contractor or Subcontractor participating in an approved Plan is individually required to comply with its obligations under the EEO clause, and to make a good faith effort to achieve each goal under the Plan in each trade in which it has employees. The overall good faith performance by other Contractors or Subcontractors toward a goal in an approved Plan does not excuse any covered Contractor's or Subcontractor's failure to take good faith efforts to achieve the Plan goals and timetables.

4. The Contractor shall implement the specific affirmative action standards provided in paragraphs 7 a through p of these specifications. The goals set forth in the solicitation from which this contract resulted are expressed as percentages of the total hours of employment and training of minority and female utilization the Contractor should reasonably be able to achieve in each construction trade in which it has employees in the covered area. Covered Construction Contractors performing construction work in geographical areas where they do not have a Federal or federally assisted construction contract shall apply the minority and female goals established for the geographical area where the work is being performed. Goals are published periodically in the FEDERAL REGISTER in notice form, and such notices may be obtained from any Office of Federal Contract Compliance Programs office or from Federal procurement contracting officers. The Contractor is expected to make substantially uniform progress in meeting its goals in each craft during the period specified.

5. Neither the provisions of any collective bargaining agreement, nor the failure by a union with whom the Contractor has a collective bargaining agreement, to refer either minorities or women shall excuse the Contractor's obligations under these specifications, Executive Order 11246, or the regulations promulgated pursuant thereto.

6. In order for the nonworking training hours of apprentices and trainees to be counted in meeting the goals, such apprentices and trainees must be employed by the Contractor during the training period, and the Contractor must have made a commitment to employ the apprentices and trainees at the completion of their training, subject to the availability of employment opportunities. Trainees must be trained pursuant to training programs approved by the U.S. Department of Labor.

7. The Contractor shall take specific affirmative actions to ensure equal employment opportunity. The evaluation of the Contractor's compliance with these specifications shall be based upon its effort to achieve maximum results from its actions. The Contractor shall document these efforts fully, and shall implement affirmative action steps at least as extensive as the following:

a. Ensure and maintain a working environment free of harassment, intimidation, and coercion at all sites, and in all facilities at which the Contractor's employees are assigned to work. The Contractor, where possible, will assign

two or more women to each construction project. The Contractor shall specifically ensure that all foremen, superintendents, and other on-site supervisory personnel are aware of and carry out the Contractor's obligation to maintain such a working environment, with specific attention to minority or female individuals working at such sites or in such facilities.

b. Establish and maintain a current list of minority and female recruitment sources, provide written notification to minority and female recruitment sources and to community organizations when the Contractor or its unions have employment opportunities available, and maintain a record of the organizations' responses.

c. Maintain a current file of the names, addresses and telephone numbers of each minority and female off-the-street applicant and minority or female referral from a union, a recruitment source or community organization and of what action was taken with respect to each such individual. If such individual was sent to the union hiring hall for referral and was not referred back to the Contractor by the union or, if referred, not employed by the Contractor, this shall be documented in the file with the reason therefore, along with whatever additional actions the Contractor may have taken.

d. Provide immediate written notification to the Director when the union or unions with which the Contractor has a collective bargaining agreement has not referred to the Contractor a minority person or woman sent by the Contractor, or when the contractor has other information that the union referral process has impeded the Contractor's efforts to meet its obligations.

e. Develop on-the-job training opportunities and/or participate in training programs for the area which expressly include minorities and women, including upgrading programs and apprenticeship and training programs relevant to the Contractor's employment needs, especially those programs funded or approved by the Department of Labor. The Contractor shall provide notice of these programs to the sources compiled under 7b above.

f. Disseminate the Contractor's EEO policy by providing notice of the policy to unions and training programs and requesting their cooperation in assisting the Contractor in meeting it's EEO obligations; by including it in any policy manual and collective bargaining agreement; by publicizing it in the company newspaper, annual report, etc.; by specific review of the policy with all management personnel and with all minority and female employees at least once a year; and by posting the company EEO policy on bulletin boards accessible to all employees at each location where construction work is performed.

g. Review, at least annually, the company's EEO policy and affirmative action obligations under these specifications with all employees having any responsibility for hiring, assignment, layoff, termination or other employment decisions including specific review of these items with onsite supervisory personnel such as Superintendents, General Foremen, etc., prior to the initiation of construction work at any job site. A written record shall be made and maintained identifying the time and place of these meetings, persons attending, subject matter discussed, and disposition of the subject matter.

h. Disseminate the Contractor's EEO policy externally by including it in any advertising in the news media, specifically including minority and female news media, and providing written notification to and discussing the Contractor's EEO policy with other Contractors and Subcontractors with whom the Contractor does or anticipates doing business.

i. Direct its recruitment efforts, both oral and written, to minority, female and community organizations, to schools with minority and female students and to minority and female recruitment and training organizations serving the Contractor's recruitment area and employment needs. Not later than once month prior to the date for the acceptance of applications for apprenticeship or other training by any recruitment sources, the Contractor shall send written notification to organizations such as the above, describing the openings, screening procedures, and tests to be used in the selection process.

j. Encourage present minority and female employees to recruit other minority persons and women and, where reasonable, provide after school, summer and vacation employment to minority and female youth both on the site and in other areas of a Contractor's work force.

k. Validate all tests and other selection requirements where there is an obligation to do so under CFR Part 60-3.

l. Conduct, at least annually, an inventory and evaluation at least of all minority and female personnel for promotional opportunities and encourage these employees to seek or to prepare for, through appropriate training, etc., such opportunities.

m. Ensure that seniority practices, job classifications, work assignments and other personnel practices, do not have a discriminatory affect by continually monitoring all personnel and employment related activities to ensure that the EEO policy and the Contractor's obligations under these Specifications are being carried out.

n. Ensure that all facilities and company activities re nonsegregated except that separate or single-user toilet and necessary changing facilities shall be provided to assure privacy between the sexes.

o. Document and maintain a record of all solicitations of offers for subcontracts from minority and female

construction contractors and suppliers, including circulation of solicitations to minority and female contractor associations and other business associations.

p. Conduct a review, at least annually, of all supervisors' adherence to and performance under the Contractor's EEO policies and affirmative action obligations.

8. Contractors are encouraged to participate in voluntary associations which assist in fulfilling one or more of their affirmative action obligations (7a through p). The efforts of a contractor association, joint contractor-union, contractor-community, or other similar group of which the contractor is a member and participant, may be asserted as fulfilling any one or more of its obligations under 7a through p of these Specifications providing that the Contractor actively participates in the group, makes every effort to assure that the group has a positive impact on the employment of minorities and women in the industry, ensures that the concrete benefits of the program are reflected in the Contractor's minority and female workforce participation, makes a good faith effort to meet its individual goals and timetables, and can provide access to documentation which demonstrates the effectiveness of actions taken on behalf of the Contractor. The obligation to comply, however, is the Contractor's and failure of such a group to fulfill an obligation shall not be a defense for the Contractor's noncompliance.

9. A single goal for minorities and a separate single goal for women have been established. The Contractor, however, is required to provide equal employment opportunity and to take affirmative action for all minority groups, both male and female, and all women, both minority and non-minority. Consequently, the Contractor may be in violation of the Executive Order if a particular group is employed in a substantially disparate manner (for example, even though the Contractor has achieved its goals for women generally, the Contractor may be in violation of the Executive Order if a specific minority group of women is underutilized).

10. The Contractor shall not use the goals and timetables or affirmative action standards to discriminate against any person because of race, color, religion, sex, or national origin.

11. The Contractor shall not enter into any Subcontract with any person or firm debarred from Government contracts pursuant to Executive Order 11246.

12. The Contractor shall carry out such sanctions and penalties for violation of these Specifications and of the Equal Opportunity Clause, including suspension, termination and cancellation of existing subcontracts as may be imposed or ordered pursuant to Executive Order 11246, as amended, and its implementing regulations, by the Office of Federal Contract Compliance Programs. Any Contractor who fails to carry out such sanctions and penalties shall be in violation of these Specifications and Executive Order 11246, as amended.

13. The Contractor, in fulfilling its obligation under these Specifications, shall implement specific affirmative action steps, at least as extensive as those standards prescribed in paragraph 7 of these Specifications, so as to achieve maximum results from its efforts to ensure equal employment opportunity. If the Contractor fails to comply with the requirements of the Executive Order, the implementing regulations, or these Specifications, the Director shall proceed in accordance with 41-CFR 60-4.8.

14. The Contractor shall designate a responsible official to monitor all employment related activity to ensure that the company EEO policy is being carried out, to submit reports relating to the provisions hereof as may be required by the Government and to keep records. Records shall at least include for each employee the name, address, telephone numbers, construction trade, union affiliation if any, employee identification number when assigned, social security number, race, sex, status (e.g., mechanic, apprentice trainee, helper, or laborer), dates of changes in status, hours worked per week in the indicated trade, rate of pay, and locations at which the work was performed. Records shall be maintained in an easily understandable and retrievable form; however, to the degree that existing records satisfy this requirement, Contractors shall not be required to maintain separate records.

15. Nothing herein provided shall be construed as a limitation upon the application of other laws which establish different standards of compliance or upon the application of requirements for the hiring of local or other area residents (e.g., those under the Public Works Employment Act of 1977 and the Community Development Block Grant Program).

NOTICE OF REQUIREMENT FOR AFFIRMATIVE ACTION TO ENSURE EQUAL EMPLOYMENT OPPORTUNITY (EXECUTIVE ORDER 11246)

1. The Offeror's or Bidder's attention is called to the "Equal Opportunity Clause" and the "Standard Federal Equal Employment Specifications" set forth herein.

2. The goals and timetables for minority and female participation, expressed in percentage terms for the Contractor's aggregate workforce in each trade on all construction work in the covered area, are as follows:

Timetables	Goals for minority participation for each trade	Goals for female participation in each trade
All years	%	6.9%

These goals are applicable to all the Contractor's construction work (whether or not it is Federal or federally assisted) performed in the covered area. If the contractor performs construction work in a geographical area located outside of the covered area, it shall apply the goals established for such geographical area where the work is actually performed. With regard to this second area, the contractor also is subject to the goals for both its federally involved and nonfederally involved construction.

The Contractor's compliance with the Executive Order and the regulations in 41 CFR Part 60-4 shall be based on its implementation of the Equal Opportunity Clause, specific affirmative action obligations required by the specifications set forth in 41 CFR 60-4.3(a), and its efforts to meet the goals. The hours of minority and female employment and training must be substantially uniform throughout the length of the contract, and in each trade, and the contractor shall make a good faith effort to employ minorities and women evenly on each of its projects. The transfer of minority or female employees or trainees from Contractor to Contractor or from project to project for the sole purpose of meeting the Contractor's goals shall be a violation of the contract, the Executive Order and the regulations in 41 CFR Part 60-4. Compliance with the goals will be measured against the total work hours performed.

3. The Contractor shall provide written notification to the Director of the Office of Federal Contract Compliance Programs within 10 working days of award of any construction subcontract in excess of $10,000 at any tier for construction work under the contract resulting from this solicitation. The notification shall list the name, address and telephone number of the subcontractor; employer identification number of the subcontractor; estimated dollar amount of the subcontract; estimated starting and completion dates of the subcontract; and the geographical area in which the subcontract is to be performed.

4. As used in this Notice, and in the contract resulting from this solicitation, the "covered area" is (insert description of the geographical areas where the contract is to be performed giving the state, county and city, if any)

MISSOURI STATE REVOLVING FUND

Procedures for Implementation

Minority Business Enterprise/Women's Business Enterprise

Each bidder/offeror must fully comply with the requirements, terms, conditions of 40 CFR Part 33 and DNR's regulations to award a fair share of subagreements to minority and women's business enterprises. The bidder/offeror commits itself to taking affirmative steps and complying with the Six Good Faith Efforts contained herein. Bidders/offerors will take affirmative steps prior to submission of bids/proposals.

Affirmative Steps

1. When feasible, segmenting total work requirements to permit maximum minority business and women business enterprises (MBE/WBE) participation.

2. Assuring that MBEs and WBEs are solicited whenever they are potential sources of goods or services. This step may include:

    a. Sending letters or making other personal contacts with MBEs and WBEs (e.g. those whose names appear on lists prepared by the Missouri Office of Administration, the Missouri Department of Transportation, or the funding recipients and other MBEs and WBEs known to the bidder/offeror.) MBEs and WBEs should be contacted when other potential subcontractors are contacted, within reasonable time (fifteen days) prior to bid submission or closing date for receipt of initial offers. Those letters or other contacts should communicate the following:

        i. Specific description of the work to be subcontracted;

        ii. How and where to obtain a copy of plans and specifications or other detailed information needed to prepare a detailed price quotation;

        iii. Date the quotation is due to the bidder/offeror;

        iv. Name, address, and phone number of the person in the bidder/offeror's firm whom the prospective MBE/WBE subcontractor should contact for additional information.

    b. Sending letters or making other personal contacts with local, state, federal and private agencies and DBE associations relevant to the project. Such contacts should provide the same information provided in the direct contacts to DBE firms.

3. Where feasible, establishing delivery schedules which will encourage participation by MBEs and WBEs.

Determination of Compliance

It is to be noted that bidders/offerors must demonstrate compliance with DBE requirements in order to be deemed responsible. Demonstration of compliance shall include, but is not limited to, the following information:

1. Names, addresses and phone numbers of MBEs/WBEs expected to perform work;

2. Work to be performed by the MBEs and WBEs;

3. Aggregate dollar amount of work to be performed by MBEs and WBEs, showing aggregate to MBEs and aggregate to WBEs separately;

4. Description of contacts to MBE and WBE organizations, agencies and associations which serve MBEs/WBEs, including names of organizations, agencies and associations and dates of contacts;

5. Description of contacts to MBEs and WBEs, including number of contacts, fields, (i.e. equipment or material supplier, excavators, transport services, electrical subcontractors, plumbers, etc.) and dates of contacts.

The Six Good Faith Efforts, and Minority and Women's Business Enterprise Utilization Worksheet shall be included in the specifications.

All bidders/offerors should complete the Minority and Women's Business Enterprise Utilization Worksheet and submit to the funding recipient prior to contract award.

Additional information on DBE requirements can be found at https://www.epa.gov/osbp/dbe_team.htm

Lists of Certified Disadvantaged Business Enterprises – To help comply with the Six Good Faith Efforts, please visit the following web sites to access existing lists of certified DBEs:

Small Business Administration https://www.sba.gov/search?query=dynamic+small+business+search

Missouri Department of Transportation https://www.modot.mo.gov/ecr/index.htm

Office of Equal Opportunity https://oeo.mo.gov/

The contractor shall not discriminate on the basis of race, color, nation origin or sex in the performance of this contract. The contractor shall carry out applicable requirements of 40 CFR Part 33 in the award and administration of contracts awarded under EPA financial assistance agreements. Failure by the contractor to carry out these requirements is a material breach of this contract which may result in the termination of this contract or other legally available remedies.

(Funding recipients may establish alternative methods of compliance equivalent to or more stringent than the above.)

"Six Good Faith Efforts"

The Six Good Faith Efforts are required methods to be used by all Loan and Grant recipients to ensure that all disadvantaged business enterprises (DBEs) have the opportunity to compete for procurements funded by EPA financial assistance dollars.

The prime contractor must pay its subcontractor for satisfactory performance no more than 30 days from the prime contractor's receipt of payment from the recipient.

A recipient must be notified in writing by its prime contractor prior to any termination of a DBE subcontractor for convenience by the prime contractor.

If a DBE subcontractor fails to complete work under its subcontract for any reason, the recipient must require the prime contractor to employ the six good faith efforts described below if soliciting a replacement subcontractor.

A recipient must require its prime contractor to employ the six good faith efforts even if the prime contractor has achieved its Fair Share Goals. The current Fair Share Goals are 10% for Minority Business Enterprises and 5% for Women Business Enterprises in accordance with 40 CFR, Part 33, Subpart D.

The Six Good Faith Efforts are:

1. Ensure DBEs are made aware of contracting opportunities to the fullest extent practicable through outreach and recruitment activities. For Indian Tribal, State and Local Government recipients, this will include placing DBEs on solicitation lists and soliciting them whenever they are potential sources.

2. Make information on forthcoming opportunities available to DBEs and arrange time frames for contracts and establish delivery schedules, where requirements permit, in a way that encourages and facilitates participation by DBEs in the competitive process. This includes, whenever possible, posting solicitations for bids or proposals for a minimum of 30 calendar days before bid or proposal closing date.

3. Consider in the contracting process whether firms competing for large contracts could subcontract with DBEs. For Indian Tribal, State and Local Government recipients, this will include dividing total requirements when economically feasible into smaller tasks or quantities to permit maximum participation by DBEs in the competitive process.

4. Encourage contracting with a consortium of DBEs when a contract is too large for one of these firms to handle individually.

5. Use the services and assistance of the SBA and the Minority Business development Agency of the Department of Commerce.

6. If the prime contractor awards subcontracts, require the prime contractor to take the above steps.

RECEIVED & FILED

SEP 0 8 2005

SECRETARY OF STATE
COMMISSION DIVISION

EXECUTIVE ORDER
05-30

WHEREAS, since 1990, the Office of Administration, State of Missouri has endeavored to "establish and implement a plan to increase and maintain the participation of certified socially and economically disadvantaged small business concerns or minority business enterprises, directly or indirectly, in contracts for supplies, services, and construction contracts, consistent with targets determined after an appropriate study conducted to determine the availability of socially and economically disadvantaged small business concerns and minority business enterprises in the marketplace;" pursuant to Senate Bills 808 & 672 passed by the General Assembly and signed into law by then Governor Ashcroft; and

WHEREAS, such a study was conducted and found statistically significant disparities in state contractual expenditures for construction and the purchase of goods and services, as compared to the ready, willing and able minority and women-owned business enterprises (M/WBEs) in the state; and

WHEREAS, Executive Order 98-21 established goals to increase the percentage of goods and services procured from certified M/WBEs; and

WHEREAS, the goals for M/WBE participation established in Executive Order 98-21 have not been substantially met; and statistically significant disparities in state contractual expenditures for construction and the purchase of goods and services from minority and women-owned businesses in the state still exist; and

WHEREAS, on September 27, 2004, Behavioral Interventions, Inc. filed a lawsuit in the U.S. District Court, in the Western District of Missouri challenging the propriety of Missouri's M/WBE program. In January 2005, a preliminary injunction was issued ordering the Office of Administration, State of Missouri to suspend the placing of M/WBE requirements in any procurement by the State of Missouri. Because of the uncertainty created in the aftermath of the litigation, the program has undergone comprehensive revision not only to withstand constitutional scrutiny, but also to more adequately address the compelling needs and obstacles of minority and women-owned businesses to gain greater access to business opportunities, both public and private, within the state of Missouri; and

WHEREAS, the State of Missouri is dedicated to the compelling governmental interest in remedying race and sex based discrimination in a manner consistent with state and federal law; and

WHEREAS, the State of Missouri is committed to enhancing the economic health and prosperity of the state by promoting the greater use of minority and women-owned businesses. Job creation for Missouri residents, and therefore the success of minority and women-owned businesses, are paramount goals of this Administration; and

WHEREAS, the State of Missouri will gain enormously from improvements in expanded business opportunities for Missouri residents created by the expansion of minority and women-owned businesses and through the additional tax revenues generated by those individuals and businesses; and

WHEREAS, to further these goals, which are of the highest priority of this Administration, it is the policy of this Administration to develop economic opportunities for minority and women-owned businesses wherever possible.

NOW, THEREFORE, I, Matt Blunt, Governor of the State of Missouri, under the authority vested in me under the constitution and the laws of this state, to fulfill the mandate of the General Assembly in Senate Bills 808 & 672 and to pursue the compelling interest of remedying discrimination, do hereby declare the following narrowly tailored policies and procedures shall be adopted by the Executive Branch of state government in procuring all types of goods and services:

1. The Office of Supplier and Workforce Diversity (OSWD) is established to replace the Office of Equal Opportunity. All the authority, powers and privileges of the Office of Equal Opportunity is transferred to the OSWD. The Director of OSWD shall be appointed by the Governor. The Director of OSWD shall report to the Commissioner of Administration. The Director shall have primary responsibility for assisting in the coordination and implementation of affirmative action throughout all departments of the executive branch of state government, including programs to increase M/WBE participation, and advising the Governor on issues regarding equal employment opportunity, affirmative action, and efforts to administer affirmative action goals and timetables for implementation throughout the departments of the executive branch.

   The Office of State Compliance Officer is hereby abolished. The Director of OSWD shall be the State's chief compliance officer for the executive branch of state government to ensure that the State of Missouri is complying with all federal and state laws concerning equal employment opportunity and affirmative action. If needed, the Director shall assist each department in developing an Affirmative Action Plan of Implementation. Additionally, the Director of OSWD shall review progress reports of the departments and shall meet biannually with each department director to evaluate departmental results and determine the course of future affirmative action goals, timetables, recruiting, planning, and implementation. The results of each meeting shall be reported in writing to the Governor and Commissioner of Administration.

   Not later than January first of each calendar year, the Director of OSWD shall provide a report to the Governor and the Commissioner of Administration which summarizes the activities of each department pursuant to this Order and which contains recommendations for additional programs to accomplish the purposes of this Order.

   The Commissioner of Administration shall provide the Director of OSWD with such facilities, staff, resources, equipment, and supplies as are necessary to carry out the duties set forth herein. The Director of OSWD shall submit a proposal each fiscal year to the Commissioner of Administration detailing the needs of the Office of Supplier and Workforce Diversity.

2. All state agencies shall continue to make every feasible effort to target the percentage of goods and services procured from certified MBEs and WBEs to 10% and 5%, respectively. These efforts shall include participation in an Executive Branch Contract Compliance Council which shall, in cooperation with the OSWD, review procurement efforts to assist in meeting the requirements of this Executive Order.

3. The Divisions of Purchasing and Materials Management (PMM) and Facilities Management, Design and Construction (FMDC) within the Office of Administration shall be authorized to implement the following programs to increase M/WBE procurement:

   a. PMM shall be authorized to encourage prime contractors to subcontract with M/WBEs on all contracts of $100,000 or greater. OSWD contracts shall include a provision for participation which will allow the bidders to tailor a plan to fit the contract. Mandatory percentage goals of M/WBE participation shall not be established in violation of federal or state law. M/WBE participation shall be encouraged by PMM in consultation with OSWD and the user agency depending on the availability of M/WBE vendors in the applicable commodity/service and geographical area. PMM shall consider M/WBE participation as a significant factor in a contract bid. The M/WBE participation will be evaluated along with other criteria in the award of a bid. It is intended that 10% MBE and 5% WBE percentage is desired. The participation can be met through the use of prime contractors, subcontractors, suppliers, joint ventures, or other arrangements that afford meaningful opportunities for M/WBE participation.

OSWD in conjunction with PMM shall also appoint a M/WBE Purchasing Manager for the purpose of promoting and coordinating the participation of M/WBEs in State of Missouri contracts.

b. FMDC shall be authorized to evaluate M/WBE participation in design contracts, as part of the quality-based selection process, for construction projects worth $1.5 million or more. On contracts with lesser value, FMDC shall make special efforts to target M/WBEs as prime contractors. Overall participation targets for each fiscal year shall be 10% MBE and 5% WBE; however, mandatory percentage goals shall not be established in violation of federal or state law. The targets may be met through the use of prime contractors, subcontractors, joint ventures, or other arrangements that afford meaningful opportunities for M/WBE participation.

FMDC shall also be authorized to seek participation of M/WBEs on construction contracts. The targets shall be set on a project by project basis by FMDC in consultation with the OSWD, taking into account the availability of M/WBE contractors in the applicable geographic area and construction trade, with the overall participation targets for each fiscal year at 10% MBE and 5% WBE. The targets may be met through the use of prime contractors, subcontractors, suppliers, joint ventures, or other arrangements that afford meaningful opportunities for M/WBE participation.

c. Both FMDC and the PMM shall establish policies or rules to implement these programs which shall include a waiver provision for prime contractors who make a good faith effort to attain such targets but do not succeed. They shall also establish enforcement procedures in cooperation with the OSWD to assist contractors to meet subcontracting commitments. Their programs shall be reviewed annually to determine whether targets should be modified.

d. FMDC and PMM are authorized and directed to identify and consult with such entities as the St. Louis Minority Business Council, the Kansas City Minority Supplier Council and the Kansas City Council of Women Business Owners in identifying M/WBEs to participate in state procurements.

4. OSWD shall monitor the programs and work with FMDC and PMM in their implementation. The OSWD shall have the following responsibilities and carry out the following tasks:

a. to actively recruit, facilitate and serve as a clearinghouse for M/WBE contractors to participate in the programs;

b. to cooperate with the PMM and the FMDC in the administration and enforcement of the M/WBE participation programs;

c. to cooperate with the PMM and the FMDC in the development of policies, forms, and procedures to carry out the requirements of the M/WBE participation programs;

d. to participate in M/WBE target setting;

e. to perform fact-gathering and record-keeping to determine both the effectiveness of state participation programs and the availability and utilization of eligible M/WBEs on individual projects, including levels of participation and availability in specific areas;

f. to certify contractors as M/WBEs;

g. to assess the continuing need for M/WBE participation targets for specific contracting areas;

h. to monitor contractor participation with M/WBE targets; and

i. to recommend sanctions for contractors who fail to faithfully execute M/WBE participation plans during the course of contract performance.

5. The programs shall be reviewed annually to monitor the level of M/WBE participation achieved in state contracting areas during the previous year. An assessment of the programs and whether their continuation is necessary shall be delivered to the Governor and the General Assembly. After it is determined that M/WBEs participate in state contracts in a manner commensurate with their presence and capability in the state marketplace, the programs set forth in section 2 will be terminated.

6. Executive Order No. 98-21 (1998) and article II of Executive Order 94-03 (1994) are hereby superseded and replaced by this Executive Order.

IN WITNESS WHEREOF, I have hereunto set my hand and caused to be affixed the Great Seal of the State of Missouri, in the City of Jefferson, on this 8th day of September, 2005.

Matt Blunt
Governor

RECEIVED & FILED

OCT 21 2015

SECRETARY OF STATE
COMMISSIONS DIVISION

EXECUTIVE ORDER
15-06

WHEREAS, the State of Missouri is committed to enhancing the economic health and prosperity of Minority and Women Business Enterprises (M/WBEs) through the use of M/WBE contract benchmarks established in state contracts for supplies, services, and construction that are consistent with §§37.020 – 37.023, RSMo, and the findings of the most current disparity study; and

WHEREAS, upon funding being appropriated by the General Assembly in 2013, the Office of Administration (OA) commissioned a Disparity Study which was completed on October 24, 2014, that studied the utilization of M/WBEs in state contracts and the availability of M/WBEs in the applicable marketplace; and

WHEREAS, Executive Order 14-07 established the Disparity Study Oversight Review Committee to review the findings of the 2014 Disparity Study and to produce meaningful recommendations to assist the State of Missouri in developing a contracting process that is inclusive, promotes diversity, and provides greater opportunity for M/WBEs; and

WHEREAS, after conducting a thorough review and analysis of the findings of the 2014 Disparity Study, the Disparity Study Oversight Review Committee submitted its report to the Governor on January 27, 2015; and

WHEREAS, the Disparity Study Oversight Review Committee's report sets forth recommendations to help eliminate the lingering effects of discrimination to ensure a level playing-field for all Missouri business owners; and

WHEREAS, on September 14, 2015, the Ferguson Commission, created pursuant to Executive Order 14-15, released its final report which called for Missouri to implement a statewide M/WBE program "with outcomes measures that incorporate capacity building, mentoring, and education with respect to the state and local procurement system;" and

WHEREAS, the State of Missouri is dedicated to the compelling governmental interest of remedying race and sex based discrimination in a manner consistent with state and federal law.

NOW, THEREFORE, I, JEREMIAH W. (JAY) NIXON, GOVERNOR OF THE STATE OF MISSOURI, in recognition of the obligations of the State of Missouri and by virtue of the authority vested in me by the Constitution and the Laws of the State of Missouri, do hereby state that the following narrowly tailored policies and procedures shall be adopted by the Executive Branch of state government in procuring goods and services:

1. All state agencies shall make every feasible effort to increase the percentage of goods and services procured from certified M/WBEs in order to achieve the annual goals of 10% MBEs and 10% WBEs of all annual Executive Branch procurement funds. These efforts shall include participation in an Executive Branch Contract Compliance Council which shall, in cooperation with the Office of Administration, Office of Equal Opportunity (OEO), review procurement efforts to assist in meeting the requirements of this Executive Order.

2. Both the Division of Purchasing and Facilities Management, Design and Construction (FMDC) within the Office of Administration shall be authorized to implement the following program to increase M/WBE procurements:

   a. Division of Purchasing and FMDC shall encourage prime contractors to subcontract with M/WBEs on state contracts. Division of Purchasing and FMDC contracts are permitted to include a provision setting forth participation of M/WBEs as prime contractors or subcontractors who perform a commercially useful function. M/WBE participation requirements shall be determined by the Division of Purchasing and FMDC, in consultation with OEO and the user agency, by evaluating the availability of M/WBE vendors in the applicable commodity/service and geographical area as determined by the most recent disparity study and other applicable factors. Division of Purchasing and FMDC shall use individual contract percentages to help meet the

state's annual program goals. The M/WBE participation will be evaluated for responsiveness along with other criteria in the award of a bid. The participation can be met through the use of prime contractors, subcontractors, suppliers, joint ventures, or other arrangements that afford meaningful opportunities for M/WBE participation.

b. Division of Purchasing and FMDC shall revise their policies and regulations to further implement this program which shall include a waiver provision for prime contractors who make a good faith effort to take all necessary and reasonable steps to attain such percentages but are otherwise unable to achieve them. Division of Purchasing and FMDC shall also establish enforcement procedures, in cooperation with OEO and the Contract Oversight Office within the Office of Administration, which shall include consequences for failure to meet percentage commitments unless a good faith waiver is obtained from the Division of Purchasing or FMDC, respectively.

c. Division of Purchasing and FMDC are authorized and directed to identify and consult with such other certifying entities as recommended by OEO in order to facilitate M/WBEs to participate in state procurements.

3. The Office of Administration shall also be authorized to:

a. Conduct a comprehensive review of OEO and determine the need for increased funding and personnel to enable OEO to carry out the work it has been assigned.

b. Evaluate the state's current M/WBE eligibility standards and determine what revisions, if any, should be considered to applicable statutes and regulations. This includes an evaluation of whether M/WBE eligibility should be capped based upon a firm's gross income and/or personal net worth. The Office of Administration should refer to the Disparity Study and the Committee's report as a reference regarding potential revisions to the program's eligibility standards.

c. Research existing bonding and financing programs for small vendors that enhance access to bonding and working capital in order to reduce barriers to business development and success, and determine the feasibility of developing such a program within OEO.

d. Evaluate the existing experience and surety bonding requirements and determine what adjustments, if any, should be considered to facilitate increased M/WBE participation.

e. Evaluate the possibility of lengthening solicitation periods for vendors, whenever possible, in an effort to increase M/WBE participation.

f. Research the feasibility and consider establishing a Mentor-Protégé Program within OEO, whereby a larger firm provides instruction and training to an emerging firm to increase the protégé's skills, capacities, and business areas.

g. Educate and advise state agencies on implementing internal procedures that ensure compliance with §8.690 RSMo.

h. Implement an electronic contracting system that provides access to state contracting information and collects measureable data to document the achievement of M/WBE goals.

4. OEO shall work with the Division of Purchasing and FMDC in the implementation of this Executive Order, and shall have the following responsibilities:

a. Actively recruit, certify, and serve as a clearinghouse for M/WBEs to participate in the program.

b. Partner with agencies and organizations that conduct similar services that can provide technical assistance and supportive services.

c. Cooperate with the Division of Purchasing, FMDC, and the Contract Oversight Office in the administration and enforcement of the M/WBE participation program and contract requirements.

d. Cooperate with the Division of Purchasing and FMDC in the development of policies, forms, and procedures to carry out the requirements of the M/WBE participation program.

e. Provide guidance to the Division of Purchasing and FMDC in the setting of M/WBE individual contract percentages.

f. Review and record the effectiveness of the state agencies' participation in the program in light of the availability and utilization of eligible M/WBEs on individual contracts, and make recommendations to the agencies for improvement and enforcement of the program.

g. Provide outreach to M/WBEs to educate firms about the program, the state's procurement process, and business elements such as obtaining bonding, lines of credit, or other related services. Outreach efforts shall also serve to foster enhanced working relationships between M/WBEs and prime contractors.

h. Recommend sanctions for contractors who fail to faithfully execute M/WBE participation requirements during the course of contract performance.

5. OEO shall review the program annually to monitor the level of M/WBE participation achieved in state contracting areas during the previous fiscal year. An assessment of the program and whether the continuation is necessary shall be prepared by OEO and delivered to the Governor and the General Assembly by March after the completion of the fiscal year. After it is determined by OEO that M/WBEs participate in state contracts at a level commensurate with their presence and capability in the state marketplace, then the program set forth in this Executive Order shall be terminated. If the program is still deemed to be necessary on March 1, 2019, a new Disparity Study should be conducted and a new Disparity Study Oversight Review Committee should be appointed to review the results of that study.

6. This Order shall take effect immediately and supersedes Executive Order 05-30.

IN WITNESS WHEREOF, I have hereunto set my hand and cause to be affixed the Great Seal of the State of Missouri, in the City of Jefferson, on this 21st day of October, 2015.

Certification Regarding Debarment and Suspension

Applicant Name: _____

Project Name: _____

Project No.: _____ SAM.gov UEI No.: _____

The prospective participant certifies to the best of its knowledge and belief that it and its principals:

a) Are not presently debarred, suspended, proposed for debarment, declared ineligible, or voluntarily excluded from covered transactions by any governmental (federal, state, or local) entity;

b) Have not within a three-year period preceding this certification been convicted of or had a civil judgment rendered against them for:
    1) Commission of fraud or a criminal offense in connection with obtaining, attempting to obtain, or performing a public (federal, state, or local) transaction or contract under a public transaction;
    2) Violation of federal or state antitrust statutes relating to the submission of offers; or
    3) Commission of embezzlement, theft, forgery, bribery, falsification ordestruction of records, making false statements, or receiving stolen property;

c) Are not presently indicted for, or otherwise criminally or civilly charged by a governmental entity (federal, state, or local) with, commission of any of the offenses enumerated in paragraph (1)(b) of this certification; and

d) Have not, within a three-year period preceding this certification, had one or more public transactions (federal, state, or local) terminated for cause or default.

I understand that a false statement on this certification may be grounds for rejection of this proposal or termination of the award.

☐ I am able to certify to the above statements.

☐ I am unable to certify to the above statements and attached my explanation.

Certification Regarding Debarment and Suspension
Instructions

The Missouri Department of Natural Resources receives assistance from the federal government, and the funds provided to a community constitute a sub-agreement. Accordingly, each prospective recipient of a grant, loan, or cooperative agreement and any contractor or subcontractor must agree to fully comply with Executive Order 12549, 2 C.F.R. Part 180, and 2 C.F.R. Part 1532 regarding Debarment and Suspension.

"Principals," for the purposes of this certification, means officers; directors; owners; partners; and persons having primary management or supervisory responsibilities within an entity (e.g., general manager; plant manager; head of a subsidiary, division, or business segment, and similar positions).

The prospective grant, loan, or cooperative agreement recipient should return the signed certification, and explanation if needed, with its application to:

Missouri Department of Natural Resources
Financial Assistance Center
PO Box 176
Jefferson City, MO 65102-0176

Or email to fac@dnr.mo.gov.

The recipient of funding should also obtain a certification from their consulting engineer and prime contractor. The funding recipient shall also check the status on the System for Award Management (SAM) located on the Internet at https://www.sam.gov/portal/public/SAM/.

Each prospective subcontractor should submit a completed certification or explanation to the prime contractor for the project.

U.S. ENVIRONMENTAL PROTECTION AGENCY
WATER QUALITY OFFICE

CERTIFICATION OF NONSEGREGATED FACILITIES

(Applicable to federally assisted construction contracts and related sub-contracts exceeding $10,000 which are not exempt from the Equal Opportunity clause.)

The federally assisted construction contractor certifies that he does not maintain or provide for his employees any segregated facilities at any of his establishments, and that he does not permit his employees to perform their services at any location, under his control, where segregated facilities are maintained. The federally assisted construction contractor certifies further that he will not maintain or provide for his employees any segregated facilities at any of his establishments, and that he will not permit his employees to perform their services at any location, under his control, where segregated facilities are maintained. The federally assisted construction contractor agrees that a breach of this certification is a violation of the Equal Opportunity clause in this contract. As used in this certification, the term "segregated facilities" means any waiting rooms, work areas, rest rooms and wash rooms, restaurants and other eating areas, time clocks, locker rooms and other storage or dressing areas, parking lots, drinking fountains, recreation or entertainment areas, transportation, and housing facilities provided for employees which are segregated by explicit directive or are in fact segregated on the basis of race, creed, color, or national origin, because of habit, local custom, or otherwise. The federally assisted construction contractor agrees that (except where he has obtained identical certifications from proposed subcontractors for specific time periods) he will obtain identical certifications from proposed subcontractors prior to the award of subcontracts exceeding $10,000 which are not exempt from the provisions of the Equal Opportunity clause, and that he will retain such certifications in his files.

***In accordance with the Federal Water Pollution Control Act, Section 608, all iron and steel products used in a State Revolving Fund project should be produced in the United States. This requirement does not apply where the inclusion of iron and steel products produced in the United States will increase the cost of the overall project by more than 25 percent.**

Instructions for Completing the Business Entity Certification Form

Box A: Non-Business Entity

Fill in Box A only if applicant qualifies for one of the following types of entities:

1. Self-employed individuals with no employees,
2. State agencies,
3. Federal government entities, or
4. Entities utilizing the services of "direct sellers" as defined in §288.034.12(17), RSMo.

Box B or Box C: Business Entity

Complete Box B or C if the applicant is a "business entity" as defined in §285.525, RSMo. Business entity includes Missouri schools, Missouri universities (other than stated in Box C), out-of-state agencies, out-of-state schools, out-of-state universities, and *political subdivisions.*

Most State Revolving Fund applicants are political subdivisions; and therefore, would need to fill out Box B if they have not submitted documentation previously or Box C if they already had work authorization documentation on file with a state agency or public university on or after September 1, 2009.

For questions, contact the Missouri Department of Natural Resources' Financial Assistance Center at fac@dnr.mo.gov, 573-751-1192, or toll free 800-361-4827.

BUSINESS ENTITY CERTIFICATION, ENROLLMENT DOCUMENTATION, AND AFFIDAVIT OF WORK AUTHORIZATION

BUSINESS ENTITY CERTIFICATION:
The bidder/contractor must certify their current business status by completing either Box A or Box B or Box C on this Exhibit.

BOX A:	To be completed by a non-business entity as defined below.
BOX B:	To be completed by a business entity who has not yet completed and submitted documentation pertaining to the federal work authorization program as described at http://www.dhs.gov/xprevprot/programs/gc_1185221678150.shtm.
BOX C:	To be completed by a business entity who has already submitted documentation with a notarized date on or after **September 1, 2009**, to a Missouri state agency including Division of Purchasing and Materials Management.

Business entity, as defined in section 285.525, RSMo pertaining to section 285.530, RSMo is any person or group of persons performing or engaging in any activity, enterprise, profession, or occupation for gain, benefit, advantage, or livelihood. The term "**business entity**" shall include but not be limited to self-employed individuals, partnerships, corporations, contractors, and subcontractors. The term "**business entity**" shall include any business entity that possesses a business permit, license, or tax certificate issued by the state, any business entity that is exempt by law from obtaining such a business permit, and any business entity that is operating unlawfully without such a business permit. The term "**business entity**" shall not include a self-employed individual with no employees or entities utilizing the services of direct sellers as defined in subdivision (17) of subsection 12 of section 288.034, RSMo.

Note: Regarding governmental entities, business entity includes Missouri schools, Missouri universities (other than stated in Box C), out of state agencies, out of state schools, out of state universities, and political subdivisions. A business entity does not include Missouri state agencies and federal government entities.

BOX A – CURRENTLY NOT A BUSINESS ENTITY

I certify that _____ (Company/Individual Name) **DOES NOT CURRENTLY MEET** the definition of a business entity, as defined in section 285.525, RSMo pertaining to section 285.530, RSMo as stated above, because: (check the applicable business status that applies below)

- ❒ I am a self-employed individual with no employees, **OR**
- ❒ The company that I represent utilizes the services of direct sellers as defined in subdivision (17) of subsection 12 of section 288.034, RSMo.

I certify that I am not an alien unlawfully present in the United States and if _____ (Company/Individual Name) is awarded a contract for the services requested herein under _____ (Bid/SFS/Contract Number) and if the business status changes during the life of the contract to become a business entity as defined in section 285.525, RSMo pertaining to section 285.530, RSMo then, prior to the performance of any services as a business entity, _____ (Company/Individual Name) agrees to complete Box B, comply with the requirements stated in Box B and provide the _____(insert agency name) with all documentation required in Box B of this exhibit.

_____ Authorized Representative's Name (Please Print)

_____ Authorized Representative's Signature

_____ Company Name (if applicable)

_____ Date

BOX B – CURRENT BUSINESS ENTITY STATUS

I certify that _____ (Business Entity Name) **MEETS** the definition of a business entity as defined in section 285.525, RSMo pertaining to section 285.530.

As a business entity, the bidder/contractor must perform/provide the following. The bidder/contractor should check each to verify completion/submission:

- ☐ Enroll and participate in the E-Verify federal work authorization program (Website: http://www.dhs.gov/xprevprot/programs/gc_1185221678150.shtm; Phone: 888-464-4218; Email: e-verify@dhs.gov) with respect to the employees hired after enrollment in the program who are proposed to work in connection with the services required herein; AND
- ☐ Provide documentation affirming said company's/individual's enrollment and participation in the E-Verify federal work authorization program. Documentation shall include a page from the E-Verify Memorandum of Understanding (MOU) listing the bidder's/contractor's name and the MOU signature page completed and signed, at minimum, by the bidder/contractor and the Department of Homeland Security – Verification Division. If the signature page of the MOU lists the bidder's/contractor's name and company ID, then no additional pages of the MOU must be submitted.; AND
- ☐ Submit a completed, notarized Affidavit of Work Authorization provided on the next page of this Exhibit.

AFFIDAVIT OF WORK AUTHORIZATION:

The bidder/contractor who meets the section 285.525, RSMo definition of a business entity must complete and return the following Affidavit of Work Authorization.

Comes now _____ (Name of Business Entity Authorized Representative) as _____ (Position/Title) first being duly sworn on my oath, affirm _____ (Business Entity Name) is enrolled and will continue to participate in the E-Verify federal work authorization program with respect to employees hired after enrollment in the program who are proposed to work in connection with the services related to contract(s) with the State for the duration of the contract(s), if awarded in accordance with subsection 2 of section 285.530, RSMo. I also affirm that _____ (Business Entity Name) does not and will not knowingly employ a person who is an unauthorized alien in connection with the contracted services provided to the contract(s) for the duration of the contract(s), if awarded.

In Affirmation thereof, the facts stated above are true and correct. (The undersigned understands that false statements made in this filing are subject to the penalties provided under section 575.040, RSMo.)

CERTIFICATION REGARDING LOBBYING

CERTIFICATION FOR CONTRACTS, GRANTS, **LOANS AND COOPERATIVE AGREEMENTS**

The undersigned certifies, to the best of his or her knowledge and belief, that:

(1) No Federal appropriated funds have been paid or will be paid, by or on behalf of the undersigned, to any person for influencing or attempting to influence an officer or employee of any agency, a Member of Congress, an officer or employee of Congress, or an employee of a Member of Congress in connection with the awarding of any Federal contract, the making of any Federal grant, the making of any Federal loan, the entering into of any cooperative agreement, and the extension, continuation, renewal, amendment, or modification of any Federal contract, grant, loan, or cooperative agreement.

(2) If any funds other than Federal appropriated funds have been paid or will be paid to any person for influencing or attempting to influence an officer or employee of any agency, a Member of Congress in connection with this Federal contract, grant, loan, or cooperative agreement, the undersigned shall complete and submit Standard Form-LLL, “Disclosure Form to Report Lobbying,” in accordance with its instructions.

(3) The undersigned shall require that the language of this certification be included in the award documents for all sub-awards at all tiers (including sub-contracts, sub-grants, and contracts under grants, loans, and cooperative agreements) and that all sub-recipients shall certify and disclose accordingly.

This certification is a material representation of fact upon which reliance was placed when this transaction was made or entered into. Submission of this certification is a prerequisite for making or entering into this transaction imposed by section 1352, title 31 U.S. Code. Any person who fails to file the required certification shall be subject to a civil penalty of not less than $10,000 and not more than $100,000 for each such failure.

Disclosure of Lobbying Activities

Complete this form to disclose lobbying activities pursuant to 31 U.S.C. 1352
(See reverse for public burden disclosure)

1. Type of Federal Action: a. contract ____ b. grant c. cooperative agreement d. loan e. loan guarantee f. loan insurance	**2. Status of Federal Action:** a. bid/offer/application _____ b. initial award c. post-award	**3. Report Type:** a. initial filing _____ b. material change **For material change only:** Year _____ quarter _____ Date of last report_____
4. Name and Address of Reporting Entity: ____ Prime _____ Subawardee Tier_____, if Known: **Congressional District,** *if known*:	**5. If Reporting Entity in No. 4 is Subawardee,** Enter Name and Address of Prime: **Congressional District,** *if known*:	
6. Federal Department/Agency:	**7. Federal Program Name/Description:** CFDA Number, *if applicable*: _____	
8. Federal Action Number, *if known:*	**9. Award Amount**, *if known:* **$**	
10. a. Name and Address of Lobbying Registrant *(if individual, last name, first name, MI):*	**b. Individuals Performing Services** *(including address if different from No. 10a)* *(last name, first name, MI):*	
11. Information requested through this form is authorized by title 31 U.S.C. section 1352. This disclosure of lobbying activities is a material representation of fact upon which reliance was placed by the tier above when this transaction was made or entered into. This disclosure is required pursuant to 31 U.S.C. 1352. This information will be reported to the Congress semi-annually and will be available for public inspection. Any person who fails to file the required disclosure shall be subject to a civil penalty of not less than $10,000 and not more than $100,000 for each such failure.	**Signature: _____** **Print Name: _____** **Title: _____** **Telephone No.: _____ Date: _____**	
Federal Use Only	**Authorized for Local Reproduction** **Standard Form - LLL (Rev. 7-97)**	

INSTRUCTIONS FOR COMPLETION OF SF-LLL, DISCLOSURE OF LOBBYING ACTIVITIES

This disclosure form shall be completed by the reporting entity, whether subawardee or prime Federal recipient, at the initiation or receipt of a covered Federal action, or a material change to a previous filing, pursuant to title 31 U.S.C. section 1352. The filing of a form is required for each payment or agreement to make payment to any lobbying entity for influencing or attempting to influence an officer or employee of any agency, a Member of Congress, an officer or employee of Congress, or an employee of a Member of Congress in connection with a covered Federal action. Complete all items that apply for both the initial filing and material change report. Refer to the implementing guidance published by the Office of Management and Budget for additional information.

1. Identify the type of covered Federal action for which lobbying activity is and/or has been secured to influence the outcome of a covered Federal action.

2. Identify the status of the covered Federal action.

3. Identify the appropriate classification of this report. If this is a followup report caused by a material change to the information previously reported, enter the year and quarter in which the change occurred. Enter the date of the last previously submitted report by this reporting entity for this covered Federal action.

4. Enter the full name, address, city, State and zip code of the reporting entity. Include Congressional District, if known. Check the appropriate classification of the reporting entity that designates if it is, or expects to be, a prime or subaward recipient. Identify the tier of the subawardee, e.g., the first subawardee of the prime is the 1st tier. Subawards include but are not limited to subcontracts, subgrants and contract awards under grants.

5. If the organization filing the report in item 4 checks "Subawardee," then enter the full name, address, city, State and zip code of the prime Federal recipient. Include Congressional District, if known.

6. Enter the name of the federal agency making the award or loan commitment. Include at least one organizational level below agency name, if known. For example, Department of Transportation, United States Coast Guard.

7. Enter the Federal program name or description for the covered Federal action (item 1). If known, enter the full Catalog of Federal Domestic Assistance (CFDA) number for grants, cooperative agreements, loans, and loan commitments.

8. Enter the most appropriate Federal identifying number available for the Federal action identified in item 1 (e.g., Request for Proposal (RFP) number; Invitations for Bid (IFB) number; grant announcement number; the contract, grant, or loan award number; the application/proposal control number assigned by the Federal agency). Included prefixes, e.g., "RFP-DE-90-001."

9. For a covered Federal action where there has been an award or loan commitment by the Federal agency, enter the Federal amount of the award/loan commitment for the prime entity identified in item 4 or 5.

10. (a) Enter the full name, address, city, State and zip code of the lobbying registrant under the Lobbying Disclosure Act of 1995 engaged by the reporting entity identified in item 4 to influence the covered Federal action.

    (b) Enter the full names of the individual(s) performing services, and include full address if different from 10(a). Enter Last Name, First Name, and Middle Initial (MI).

11. The certifying official shall sign and date the form, print his/her name, title, and telephone number.

According to the Paperwork Reduction Act, as amended, no persons are required to respond to a collection of information unless it displays a valid OMB control Number. The valid OMB control number for this information collection is OMB No. 0348-0046. Public reporting burden for this collection of information is estimated to average 10 minutes per response, including time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding the burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to the Office of Management and Budget, Paperwork Reduction Project (0348-0046), Washington, DC 20503

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

MAR 2 0 2014

OFFICE OF WATER

MEMORANDUM

SUBJECT: Implementation of American Iron and Steel provisions of P.L. 113-76, Consolidated Appropriations Act, 2014

FROM: Andrew D. Sawyers, Director
Office of Wastewater Management (4201M)

Peter C. Grevatt, Director
Office of Ground Water and Drinking Water (4601M)

TO: Water Management Division Directors
Regions I- X

P.L. 113-76, Consolidated Appropriations Act, 2014 (Act), includes an "American Iron and Steel (AIS)" requirement in section 436 that requires Clean Water State Revolving Loan Fund (CWSRF) and Drinking Water State Revolving Loan Fund (DWSRF) assistance recipients to use iron and steel products that are produced in the United States for projects for the construction, alteration, maintenance, or repair of a public water system or treatment works if the project is funded through an assistance agreement executed beginning January 17, 2014 (enactment of the Act), through the end of Federal Fiscal Year 2014.

Section 436 also sets forth certain circumstances under which EPA may waive the AIS requirement. Furthermore, the Act specifically exempts projects where engineering plans and specifications were approved by a State agency prior to January 17, 2014.

The approach described below explains how EPA will implement the AIS requirement. The first section is in the form of questions and answers that address the types of projects that must comply with the AIS requirement, the types of products covered by the AIS requirement, and compliance. The second section is a step-by-step process for requesting waivers and the circumstances under which waivers may be granted.

Implementation

The Act states:

Sec. 436. (a)(1) None of the funds made available by a State water pollution control revolving fund as authorized by title VI of the Federal Water Pollution Control Act (33 U.S.C. 1381 et seq.) or made available by a drinking water treatment revolving loan fund as authorized by section 1452 of the Safe Drinking Water Act (42 U.S.C. 300j–12) shall be used for a project for the construction, alteration, maintenance, or repair of a public water system or treatment works unless all of the iron and steel products used in the project are produced in the United States.

(2) In this section, the term ''iron and steel products'' means the following products made primarily of iron or steel: lined or unlined pipes and fittings, manhole covers and other municipal castings, hydrants, tanks, flanges, pipe clamps and restraints, valves, structural steel, reinforced precast concrete, and construction materials.

(b) Subsection (a) shall not apply in any case or category of cases in which the Administrator of the Environmental Protection Agency (in this section referred to as the ''Administrator'') finds that—

(1) applying subsection (a) would be inconsistent with the public interest;

(2) iron and steel products are not produced in the United States in sufficient and reasonably available quantities and of a satisfactory quality; or

(3) inclusion of iron and steel products produced in the United States will increase the cost of the overall project by more than 25 percent.

(c) If the Administrator receives a request for a waiver under this section, the Administrator shall make available to the public on an informal basis a copy of the request and information available to the Administrator concerning the request, and shall allow for informal public input on the request for at least 15 days prior to making a finding based on the request. The Administrator shall make the request and accompanying information available by electronic means, including on the official public Internet Web site of the Environmental Protection Agency.

(d) This section shall be applied in a manner consistent with United States obligations under international agreements.

(e) The Administrator may retain up to 0.25 percent of the funds appropriated in this Act for the Clean and Drinking Water State Revolving Funds for carrying out

the provisions described in subsection (a)(1) for management and oversight of the requirements of this section.

(f) This section does not apply with respect to a project if a State agency approves the engineering plans and specifications for the project, in that agency's capacity to approve such plans and specifications prior to a project requesting bids, prior to the date of the enactment of this Act.

The following questions and answers provide guidance for implementing and complying with the AIS requirements:

Project Coverage

1) What classes of projects are covered by the AIS requirement?

All treatment works projects funded by a CWSRF assistance agreement, and all public water system projects funded by a DWSRF assistance agreement, from the date of enactment through the end of Federal Fiscal Year 2014, are covered. The AIS requirements apply to the entirety of the project, no matter when construction begins or ends. Additionally, the AIS requirements apply to all parts of the project, no matter the source of funding.

2) Does the AIS requirement apply to nonpoint source projects or national estuary projects?

No. Congress did not include an AIS requirement for nonpoint source and national estuary projects unless the project can also be classified as a 'treatment works' as defined by section 212 of the Clean Water Act.

3) Are any projects for the construction, alteration, maintenance, or repair of a public water system or treatment works excluded from the AIS requirement?

Any project, whether a treatment works project or a public water system project, for which engineering plans and specifications were approved by the responsible state agency prior to January 17, 2014, is excluded from the AIS requirements.

4) What if the project does not have approved engineering plans and specifications but has signed an assistance agreement with a CWSRF or DWSRF program prior to January 17, 2014?

The AIS requirements do not apply to any project for which an assistance agreement was signed prior to January 17, 2014.

5) What if the project does not have approved engineering plans and specifications, but bids were advertised prior to January 17, 2014 and an assistance agreement was signed after January 17, 2014?

If the project does not require approved engineering plans and specifications, the bid advertisement date will count in lieu of the approval date for purposes of the exemption in section 436(f).

6) What if the assistance agreement that was signed prior to January 17, 2014, only funded a part of the overall project, where the remainder of the project will be funded later with another SRF loan?

If the original assistance agreement funded any construction of the project, the date of the original assistance agreement counts for purposes of the exemption. If the original assistance agreement was only for planning and design, the date of that assistance agreement will count for purposes of the exemption only if there is a written commitment or expectation on the part of the assistance recipient to fund the remainder of the project with SRF funds.

7) What if the assistance agreement that was signed prior to January 17, 2014, funded the first phase of a multi-phase project, where the remaining phases will be funded by SRF assistance in the future?

In such a case, the phases of the project will be considered a single project if all construction necessary to complete the building or work, regardless of the number of contracts or assistance agreements involved, are closely related in purpose, time and place. However, there are many situations in which major construction activities are clearly undertaken in phases that are distinct in purpose, time, or place. In the case of distinct phases, projects with engineering plans and specifications approval or assistance agreements signed prior to January 17, 2014 would be excluded from AIS requirements while those approved/signed on January 17, 2014, or later would be covered by the AIS requirements.

8) What if a project has split funding from a non-SRF source?

Many States intend to fund projects with "split" funding, from the SRF program and from State or other programs. Based on the Act language in section 436, which requires that American iron and steel products be used in any project for the construction, alteration, maintenance, or repair of a public water system or treatment works receiving SRF funding between and including January 17, 2014 and September 30, 2014, any project that is funded in whole or in part with such funds must comply with the AIS requirement. A "project" consists of all construction necessary to complete the building or work regardless of the number of contracts or assistance agreements involved so long as all contracts and assistance agreements awarded are closely related in purpose, time and place. This precludes the intentional splitting of SRF projects into separate and smaller contracts or assistance agreements to avoid AIS coverage on some portion of a larger

project, particularly where the activities are integrally and proximately related to the whole. However, there are many situations in which major construction activities are clearly undertaken in separate phases that are distinct in purpose, time, or place, in which case, separate contracts or assistance agreement for SRF and State or other funding would carry separate requirements.

9) What about refinancing?

If a project began construction, financed from a non-SRF source, prior to January 17, 2014, but is refinanced through an SRF assistance agreement executed on or after January 17, 2014 and prior to October 1, 2014, AIS requirements will apply to all construction that occurs on or after January 17, 2014, through completion of construction, unless, as is likely, engineering plans and specifications were approved by a responsible state agency prior to January 17, 2014. There is no retroactive application of the AIS requirements where a refinancing occurs for a project that has completed construction prior to January 17, 2014.

10) Do the AIS requirements apply to any other EPA programs, besides the SRF program, such as the Tribal Set-aside grants or grants to the Territories and DC?

No, the AIS requirement only applies to funds made available by a State water pollution control revolving fund as authorized by title VI of the Federal Water Pollution Control Act (33 U.S.C. 1381 et seq.) or made available by a drinking water treatment revolving loan fund as authorized by section 1452 of the Safe Drinking Water Act (42 U.S.C. 300j–12)

<u>Covered Iron and Steel Products</u>

11) What is an iron or steel product?

For purposes of the CWSRF and DWSRF projects that must comply with the AIS requirement, an iron or steel product is one of the following made primarily of iron or steel that is permanently incorporated into the public water system or treatment works:

Lined or unlined pipes or fittings;
Manhole Covers;
Municipal Castings (defined in more detail below);
Hydrants;
Tanks;
Flanges;
Pipe clamps and restraints;
Valves;
Structural steel (defined in more detail below);
Reinforced precast concrete; and
Construction materials (defined in more detail below).

12) What does the term 'primarily iron or steel' mean?

'Primarily iron or steel' places constraints on the list of products above. For one of the listed products to be considered subject to the AIS requirements, it must be made of greater than 50% iron or steel, measured by cost. The cost should be based on the material costs.

13) Can you provide an example of how to perform a cost determination?

For example, the iron portion of a fire hydrant would likely be the bonnet, body and shoe, and the cost then would include the pouring and casting to create those components. The other material costs would include non-iron and steel internal workings of the fire hydrant (i.e., stem, coupling, valve, seals, etc). However, the assembly of the internal workings into the hydrant body would not be included in this cost calculation. If one of the listed products is not made primarily of iron or steel, United States (US) provenance is not required. An exception to this definition is reinforced precast concrete, which is addressed in a later question.

14) If a product is composed of more than 50% iron or steel, but is not listed in the above list of items, must the item be produced in the US? Alternatively, must the iron or steel in such a product be produced in the US?

The answer to both question is no. Only items on the above list must be produced in the US. Additionally, the iron or steel in a non-listed item can be sourced from outside the US.

15) What is the definition of steel?

Steel means an alloy that includes at least 50 percent iron, between .02 and 2 percent carbon, and may include other elements. Metallic elements such as chromium, nickel, molybdenum, manganese, and silicon may be added during the melting of steel for the purpose of enhancing properties such as corrosion resistance, hardness, or strength. The definition of steel covers carbon steel, alloy steel, stainless steel, tool steel and other specialty steels.

16) What does 'produced in the United States' mean?

Production in the United States of the iron or steel products used in the project requires that all manufacturing processes, including application of coatings, must take place in the United States, with the exception of metallurgical processes involving refinement of steel additives. All manufacturing processes includes processes such as melting, refining, forming, rolling, drawing, finishing, fabricating and coating. Further, if a domestic iron and steel product is taken out of the US for any part of the manufacturing process, it becomes foreign source material. However, raw materials such as iron ore, limestone and iron and steel scrap are not covered by the AIS requirement, and the

material(s), if any, being applied as a coating are similarly not covered. Non-iron or steel components of an iron and steel product may come from non-US sources. For example, for products such as valves and hydrants, the individual non-iron and steel components do not have to be of domestic origin.

17) Are the raw materials used in the production of iron or steel required to come from US sources?

No. Raw materials, such as iron ore, limestone, scrap iron, and scrap steel, can come from non-US sources.

18) If an above listed item is primarily made of iron or steel, but is only at the construction site temporarily, must such an item be produced in the US?

No. Only the above listed products made primarily of iron or steel, permanently incorporated into the project must be produced in the US. For example trench boxes, scaffolding or equipment, which are removed from the project site upon completion of the project, are not required to be made of U.S. Iron or Steel.

19) What is the definition of 'municipal castings'?

Municipal castings are cast iron or steel infrastructure products that are melted and cast. They typically provide access, protection, or housing for components incorporated into utility owned drinking water, storm water, wastewater, and surface infrastructure. They are typically made of grey or ductile iron, or steel. Examples of municipal castings are:

Access Hatches;
Ballast Screen;
Benches (Iron or Steel);
Bollards;
Cast Bases;
Cast Iron Hinged Hatches, Square and Rectangular;
Cast Iron Riser Rings;
Catch Basin Inlet;
Cleanout/Monument Boxes;
Construction Covers and Frames;
Curb and Corner Guards;
Curb Openings;
Detectable Warning Plates;
Downspout Shoes (Boot, Inlet);
Drainage Grates, Frames and Curb Inlets;
Inlets;
Junction Boxes;
Lampposts;
Manhole Covers, Rings and Frames, Risers;

Meter Boxes;
Service Boxes;
Steel Hinged Hatches, Square and Rectangular;
Steel Riser Rings;
Trash receptacles;
Tree Grates;
Tree Guards;
Trench Grates; and
Valve Boxes, Covers and Risers.

20) What is 'structural steel'?

Structural steel is rolled flanged shapes, having at least one dimension of their cross-section three inches or greater, which are used in the construction of bridges, buildings, ships, railroad rolling stock, and for numerous other constructional purposes. Such shapes are designated as wide-flange shapes, standard I-beams, channels, angles, tees and zees. Other shapes include H-piles, sheet piling, tie plates, cross ties, and those for other special purposes.

21) What is a 'construction material' for purposes of the AIS requirement?

Construction materials are those articles, materials, or supplies made primarily of iron and steel, that are permanently incorporated into the project, not including mechanical and/or electrical components, equipment and systems. Some of these products may overlap with what is also considered "structural steel". This includes, but is not limited to, the following products: wire rod, bar, angles, concrete reinforcing bar, wire, wire cloth, wire rope and cables, tubing, framing, joists, trusses, fasteners (i.e., nuts and bolts), welding rods, decking, grating, railings, stairs, access ramps, fire escapes, ladders, wall panels, dome structures, roofing, ductwork, surface drains, cable hanging systems, manhole steps, fencing and fence tubing, guardrails, doors, and stationary screens.

22) What is not considered a 'construction material' for purposes of the AIS requirement?

Mechanical and electrical components, equipment and systems are not considered construction materials. Mechanical equipment is typically that which has motorized parts and/or is powered by a motor. Electrical equipment is typically any machine powered by electricity and includes components that are part of the electrical distribution system.

The following examples (including their appurtenances necessary for their intended use and operation) are NOT considered construction materials: pumps, motors, gear reducers, drives (including variable frequency drives (VFDs)), electric/pneumatic/manual accessories used to operate valves (such as electric valve actuators), mixers, gates, motorized screens (such as traveling screens), blowers/aeration equipment, compressors, meters, sensors, controls and switches, supervisory control and

data acquisition (SCADA), membrane bioreactor systems, membrane filtration systems, filters, clarifiers and clarifier mechanisms, rakes, grinders, disinfection systems, presses (including belt presses), conveyors, cranes, HVAC (excluding ductwork), water heaters, heat exchangers, generators, cabinetry and housings (such as electrical boxes/enclosures), lighting fixtures, electrical conduit, emergency life systems, metal office furniture, shelving, laboratory equipment, analytical instrumentation, and dewatering equipment.

23) If the iron or steel is produced in the US, may other steps in the manufacturing process take place outside of the US, such as assembly?

No. Production in the US of the iron or steel used in a listed product requires that all manufacturing processes must take place in the United States, except metallurgical processes involving refinement of steel additives.

24) What processes must occur in the US to be compliant with the AIS requirement for reinforced precast concrete?

While reinforced precast concrete may not be at least 50% iron or steel, in this particular case, the reinforcing bar and wire must be produced in the US and meet the same standards as for any other iron or steel product. Additionally, the casting of the concrete product must take place in the US. The cement and other raw materials used in concrete production are not required to be of domestic origin.

If the reinforced concrete is cast at the construction site, the reinforcing bar and wire are considered to be a construction material and must be produced in the US.

Compliance

25) How should an assistance recipient document compliance with the AIS requirement?

In order to ensure compliance with the AIS requirement, specific AIS contract language must be included in each contract, starting with the assistance agreement, all the way down to the purchase agreements. Sample language for assistance agreements and contracts can be found in Appendix 3 and 4.

EPA recommends the use of a step certification process, similar to one used by the Federal Highway Administration. The step certification process is a method to ensure that producers adhere to the AIS requirement and assistance recipients can verify that products comply with the AIS requirement. The process also establishes accountability and better enables States to take enforcement actions against violators.

Step certification creates a paper trail which documents the location of the manufacturing process involved with the production of steel and iron materials. A step certification is a process under which each handler (supplier, fabricator, manufacturer,

processor, etc) of the iron and steel products certifies that their step in the process was domestically performed. Each time a step in the manufacturing process takes place, the manufacturer delivers its work along with a certification of its origin. A certification can be quite simple. Typically, it includes the name of the manufacturer, the location of the manufacturing facility where the product or process took place (not its headquarters), a description of the product or item being delivered, and a signature by a manufacturer's responsible party. Attached, as Appendix 5, are sample certifications. These certifications should be collected and maintained by assistance recipients.

Alternatively, the final manufacturer that delivers the iron or steel product to the worksite, vendor, or contractor, may provide a certification asserting that all manufacturing processes occurred in the US. While this type of certification may be acceptable, it may not provide the same degree of assurance. Additional documentation may be needed if the certification is lacking important information. Step certification is the best practice.

26) How should a State ensure assistance recipients are complying with the AIS requirement?

In order to ensure compliance with the AIS requirement, States SRF programs must include specific AIS contract language in the assistance agreement. Sample language for assistance agreements can be found in Appendix 3.

States should also, as a best practice, conduct site visits of projects during construction and review documentation demonstrating proof of compliance which the assistance recipient has gathered.
